counties, lies what has been called the garden of the state. This is the most populous part, and is about 150 miles long, and from fifty to 100 wide, comprising the counties of Mason, Fleming, Montgomery, Clarke, Bourbon, Fayette, Scott, Harrison, Franklin, Woodford, Mercer, Jessamine, Madison, Garrard, Logan, Casey, Lincoln, Washington, and Green. It is watered by Kentucky, Licking, Little Sandy, and Salt rivers, and their numerous branches. The soil is excellent, and the surface is agreeably diversified, gently rising and descending. These lands produce black walnut, black cherry, honey locust, buckeye, pawpaw, sugar-maple, mulberry, elm, ash, cotton-wood, white-thorn, with an abundance of grape vines.

There is a tract of country in the south-western part of the state, east and north of Cumberland River, and watered by Green and Barren rivers, about 100 miles in extent, called the Barrens, which a few years since was a beautiful prairie, destitute of timber. It is now covered with a young growth of various kinds of trees. These, however, do not prevent the growth of grass, and an almost endless variety of plants, which are in bloom during the whole of the spring and summer; when the whole region is a wilderness of the most beautiful flowers. The soil is of an excellent quality, being a mixture of clay, loam, and sand. Through this country there runs a chain of conical hills, called knobs. It is also distinguished for some most stupendous caves. This country, sometimes called the Green River country, is now rapidly settling. The principal towns in it are Russellville, Bowling Green, and Hopkinsville.

Ancient fortifications and mounds of earth are found in almost all parts of Kentucky. The caves in the south-western part of the state are great curiosities. One, styled Mammoth cave, 130 miles from Lexington, on the road leading to Nashville, is said to be eight or ten miles in length, with a great number of avenues and windings. Earth strongly impregnated with nitre is found in most of these caves, and there are many establishments for manufacturing it. From 100 lbs. of earth 50 lbs of nitre have frequently been obtained.

A number of the rivers in this state have excavated the earth, so as to form abrupt precipices, deep glens, and frightful gulfs. The precipices formed by Kentucky River are in many places awfully sublime, presenting perpendicular banks of 300 feet of solid limestone, surmounted with a steep and difficult ascent, four times as high. The banks of Cumberland River are less precipitous, but equally depressed below the surface of the surrounding country.

Wheat, tobacco, and hemp, are the staple productions; but Indian corn is the principal grain raised for home consumption. Rye, oats, barley, buckwheat, flax, potatoes, &c., are cultivated. Apples, pears, peaches, cherries, and plums, are the most common fruits. Domestic animals are large and beautiful, and particularly the horse.

Marble of excellent quality abounds, and the whole state may be said to repose on a bed of limestone. Salt and iron are among the minerals of this state. The most extensive works for the

manufacture of salt, established west of the Alleghany Mountains, are on the waters of Kentucky. These supply not only this state, but a great part of Ohio and Tennessee.

There is a college at Lexington, and academies are established at Augusta, Cynthia, Frankfort, Georgetown, Greensburg, Harrodsburg, Louisville, Newport, Paris, Russellville, Versailles, Washington, &c. The legislature has made an appropriation of lands for the support of public schools, in every county, but these appropriations, in many instances, have been injudiciously managed, and have, in some cases, turned to little account. Baptists, Methodists, and Presbyterians, are the most numerous denominations of Christians in Kentucky.

The legislature is composed of a senate, consisting of thirty-eight members, chosen by districts, for four years; and a house of representatives, not exceeding 100, chosen annually. The governor and lieutenant-governor are chosen by the people for four years, but are not eligible for the succeeding seven years. The legislature meets on the first Monday in November.

Kentucky, from its position, has become a manufacturing state. The amount of manufactured articles, in 1814, exceeded 13,000,000 of dollars. Of this sum, the looms produced 4,657,081; salt works, 725,870; rope-walks, 393,400; maple sugar, 903,932.

KEPTUCKY, a river, which rises in the south-east part of the state of that name, and runs north-west into the Ohio, seventy-seven miles above the rapids at Louisville. It is navigable in the winter for small boats, about 180 miles. The current is rapid, and the banks high and rocky.

KEPLER (John), one of the greatest astronomers of his age, was born at Wiew, in the county of Wirtemberg, in 1571. His father had been an officer in the imperial service, but was so much reduced as to be obliged to keep a public house. Young Kepler, however, studied astronomy and mathematics under Mæstlinus, and made such rapid progress, that in 1593 he was appointed professor of mathematics at Gratz. In 1595 he wrote an excellent work, which was printed at Tubingen in 1596, entitled *Prodromus dissertationum de proportione orbium cælestium, deque causis cælorum numeri, magnitudinis, motuumque periodicorum, genuinis et propriis*. Tycho Brahe having settled in Bohemia, under the patronage of the emperor Rodolphus, he prevailed upon Kepler to leave the university of Gratz, and remove into Bohemia with his family and library, in 1600. Upon Brahe's death, the emperor appointed him his mathematician for life, and he daily acquired additional reputation by his works. The emperor ordered him to finish the tables of Tycho Brahe, which were called the Rodolphine Tables. He died at Ratisbon, where he was soliciting payment of the arrears of his pension, in 1630. The principal works of this great astronomer are, 1. *Prodromus dissertationum*, above mentioned, which he also entitled *Mysterium Cosmographicum*, and esteemed more than any other of his works. He sometimes said, he would not give up the honor of having written what was

contained in that book for the electorate of Saxony. 2. *Harmonia mundi*, with a defence of that treatise. 3. *De cometis libri tres*. 4. *Epitome astronomiæ Copernicanæ*. 5. *Astronomia nova*. 6. *Chilias logarithmorum*, &c. 7. *Nova stereometria doliorum vinariorum*, &c. 8. *Dioptice*. 9. *De vero natali anno Christi*. 10. *Ad Vitellionem Paralipomena, quibus Astronomiæ pars optica traditur*, &c. 11. *Somnium, Lunarise Astronomiæ*; in which he began to draw up that system of comparative astronomy which was afterwards pursued by Kircher, Huygens, and Gregory. His death happened while the work was printing; upon which James Bartschius his son-in-law undertook the care of it, but was also interrupted by death: and Lewis Kepler his son, who was then a physician at Königsberg in Prussia, was with difficulty prevailed upon to attempt to finish it, lest it should prove fatal to him: he, however, completed the task.

KEPLER'S PROBLEM is the determining the true from the mean anomaly of a planet, or the determining its place, in its elliptic orbit, answering to any given time. The general state of the problem is this: To find the position of a right line, which, passing through one of the foci of an ellipsis, shall cut off an area which shall be in any given proportion to the area of the ellipsis; which results from this property, that such a line sweeps areas that are proportional to the times. Many solutions have been given of this problem, some direct and geometrical, others not: viz. by Kepler, who first proposed it; Bulliald, Ward, Newton, Keill, Machin, &c. See Newton's *Principia*, lib. 1, prop. 31; Keill's *Astronomy Lect.* 23; *Philosophical Transactions*, abr. vol. viii. p. 73, &c.

KEPPEL (Augustus), lord viscount Keppel, a celebrated British admiral, the second son of William earl of Albemarle. He accompanied Anson in his famous voyage round the world, and afterwards rose to the highest naval honors. In 1778 he commanded the channel fleet, and had Sir Hugh Palliser for his second. In the engagement between the British and French fleets, little was done, and the two admirals in consequence attacked each other. See ENGLAND. Admiral Keppel was acquitted, and in 1782 was created a peer, and was twice first lord of the Admiralty. He died in 1786.

KEPPEL BAY, a bay on the east coast of New Holland, found by captain Flinders to communicate with Port Curtis. It was discovered and named by captain Cook, in 1770. A ship going in will be deceived by the color of the water; for, the shores of the bay being soft and muddy, the water running out by the deep channels with the latter part of the ebb is thick; whilst the shallows over which the tide does not flow are covered with clear water. The deep water is therefore in the muddy channels.

KERAH, or HAWEEZA, or, as called by the Turks, Karasu, a river of Persia, formed by the junction of several streams, of the province of Ardelan, in Koordistan. It runs through the plain of Kermanshaw, where it receives the Kazawur and the Gamasu, by which, being greatly increased, it flows with a violent course

through Chusistan; passes on the west of the ruins of Shus to the city of Havezza, and enters the Shut-el-Arab about twenty miles below Korna.

KER'CHIEF, *n. s.* } Coverchief.—Chaucer.
KER'CHIEFED, *adj.* } French *couvre* to cover,
KER'CHIEFT, *adj.* } and *chef* the head; and hence a handkerchief to wipe the face or hands; a head-dress of a woman; any loose cloth used in dress: dressed; hooded.

Hire gilded heres with a golden threde
 I bounden were, untressed as she laie:
 And naked from the brest unto the hede,
 Men might her se; and sothly for to saie,
 The remenaunt covered well to my paie,
 Right with a lityl *kercheffe* of Valence;
 There n'as no thicker clothe of no defence.

Chaucer. *The Asseble of Foules.*

I see how thine eye would emulate the diamond;
 thou hast the right arched bent of the bow, that be-
 comes the ship-tire, the tire-valiant.—A plain *ker-
 chief*, Sir John; my brows become nothing else.

Shakspeare. *Merry Wives of Windsor.*

O! what a time have you chose out, brave Caius,
 To wear a *kerchief*. *Id.* Julius Cæsar.
 Every man had a large *kerchief* folded about the
 neck. Hayward.

The evening comes,

Kerchiefed in a comely cloud,
 While racking winds are piping loud. Milton.

The proudest *kerchief* of the court shall rest
 Well satisfied of what they love the best. Dryden.

While the fair populace of crowding beauties,
 Plebeian as Patrician cheered us on
 With dazzling smiles, and wishes audible
 And waving *kerchiefs*, and applauding hands
 Even to the goal!—Byron. *Two Foscari.*

KERF, *n. s.* Sax. *cœrfan*; Goth. *kerfa*;
 Swed. *karfiva*. To slit.

The sawn-away slit between two pieces of stuff is
 called a *kerf*. Morxon's *Mechanical Exercises.*

KERBELA, anciently Vologesia, a populous town of Irak Arabi, near the western bank of the Euphrates, with which it is connected by a magnificent canal. Its chief celebrity is derived from Hossein, the son of Ali by Fatima, the daughter of the prophet who was slain near this place; and from whom it is sometimes called Mesched Hossein. Since his time it has become the resort of numerous pilgrims of the sect of Ali, particularly from Persia. The environs contain extensive plantations of palm trees; and the walls are upwards of two miles in circumference. The town has five gates, a well supplied bazaar, and seven caravanseras, Nadir Shah embellished the tomb of Hossein with a gilded cupola, which forms a conspicuous object, fifty miles S. S. W. of Bagdad.

KERCKRING (Theodore), a famous physician of the seventeenth century, born at Amsterdam. He found out the secret of softening amber without depriving it of its transparency; and made use of it in covering the bodies of curious insects to preserve them. He was a member of the Royal Society of London, and died in 1693 in Hamburg, where he had spent the greatest part of his life, with the title of resident of the grand duke of Tuscany. His principal works are, 1. *Spicilegium Anatomicum*. 2. *Anthropogenike Ichonographia*. There is also

attributed to him an anatomical work, printed in 1671 in folio.

KERCOLANG, or **KARKALANG**, an island of Asia, in the Indian Ocean, between eighty and 100 miles in circumference, and, in general, of a good height. The face of the country seems to be steep hills and extensive valleys, and every part to be covered with trees and verdure, with some pleasant cultivated grounds. The houses stand on posts, and are well built, and thatched. The fishing hooks and lines are mostly European; and the inhabitants Mahommedans. Their clothing, in general, is made of a coarse kind of calico, though some wear silk, and most of them have a kind of turban round the head. A few are seen with a Chinese pointed hat. They are a mild and quiet people; and put great confidence in strangers. The Dutch had formerly a fort here; but about the year 1773 the inhabitants of Magindano exercised a jurisdiction over the island, and exacted a tribute, which was usually paid in slaves. It lies between 4° and 5° of N. lat., and about 126° 30' E. long.

KERGUELEN'S LAND, in the South Pacific Ocean, was visited by captain Cook, in 1779. From its sterility, it might properly have been called the Island of Desolation. Mr. Anderson, who accompanied captain Cook in this voyage, says, that no place hitherto discovered in either hemisphere affords so scanty a field for the naturalist as this spot. Some verdure indeed appeared when at a small distance from the shore, which might raise the expectation of meeting with a little herbage; but all this lively appearance was occasioned by one small plant resembling saxifrage, which grew upon the hills in large spreading tufts, on a kind of rotten turf, which, if dried, might serve for fuel, and was the only thing seen here that could possibly be applied to that purpose. Long. 69° 37' E., lat. 49° 3' S.

KERI (Francis Borgia), a Hungarian Jesuit, who published a History of the Emperors of the East, and a History of the Ottoman Emperors. He was also an astronomer, and made improvements on the telescope. He died in 1769.

KERI-CHETIB, in philology, the name given to various readings in the Hebrew Bible: *keri* signifies that which is read; and *chetib* that which is written. For, where any such various readings occur, the wrong reading is written in the text, and that is called the *chetib*; and the true reading is written in the margin, with \aleph under it, and called the *keri*. It is generally said by the Jewish writers, that these corrections were introduced by Ezra; but it is most probable, that they had their original from the mistakes of the transcribers after the time of Ezra, and the observations and corrections of the Masorites. Those *Keri-chetibs* which are in the sacred books written by Ezra himself, or which were taken into the canon after his time, could not have been noticed by Ezra himself; and this affords a presumption that the others are of late date. These words amount to about 1000; and Dr. Kennicott, in his *Dissertatio Generalis*, remarks, that all of them with the exception of fourteen are to be found in the text of MSS.

KERKOOK, the largest town in Lower Koor-distan, Asiatic Turkey, is situated on an eminence, nearly perpendicular, and retains the appearance of a Roman fortress. The population is estimated at 18,000; but Mr. Kinneir does not think it can exceed 13,000; consisting of Armenians, Nestorians, Turks, and Curds. There are twelve mosques here; but the streets are narrow and filthy, and the houses mean. The country around is hilly. Long. 43° 42' E., lat. 35° 29' N.

KERMES, in natural history, a roundish body of the size of a pea, of a brownish color, and containing a multitude of little distinct granules which when crushed yield a scarlet dye. Till lately it was believed to be a vegetable excretion, but it is now known to be the body of a species of *Coccus*, which see.

This insect hangs to the tree from which it is gathered by means of a cottony down, which, according to M. Chaptal, resembles the caoutchouc in many of its chemical characteristics. In Languedoc, about the middle of May, when this insect has attained to its proper size, the harvest commences, and the peasants begin to gather it. This harvest continues till about the middle of June, or later, but one heavy storm of rain puts an end to the gathering for that year. The persons employed in this business are women, who set out early in the morning, with a lantern and a glazed earthen pot, so as to pick off as many of the kermes as possible before day, which is the most favorable time for this business. A single person may gather from one to two pounds a day.

According as the winter has been more or less mild, the harvest of kermes is the more or less plentiful; and the people always presage themselves a fine season, when the spring has been free from frosts and fogs. It is observed, that the lowest and oldest shrubs are always the fullest of this insect; and the kermes produced on those trees, which are in the neighbourhood of the sea, is always larger and finer than from the inland places.

It is no uncommon thing to have two harvests of kermes in the year. Those of the latter season are smaller and less valuable than those of the first, and are found not on the branches, but on the leaves of the shrub; which is just analogous to the custom of the gall-insects of all other kinds; all which, about this age, leave the branches to feed on the leaves, where their yet tender trunks can find an easier entrance. See *Coccus*. When the kermes is dried there comes out of it an infinite number of small insects, and flies, so small that they are scarcely visible; insomuch, that the whole inward substance seems converted into them. This shell is nothing but the body of the mother, distended by the growth of the eggs. To prevent this inconvenience, they usually steep the kermes in vinegar before it be dry; and thus prevent the exclusion of the ova, and kill such animals as are already hatched. It is afterwards dried on linen cloths. This operation gives it a color like that of red wine. They draw the juice, or pulp, from the kermes, by pounding it in a mortar, and then training it through a sieve: of this they make a

syrup, by adding a sufficient quantity of sugar. Sometimes they dry the pulp separate from the husk; which pulp, thus dried, they call pastel of kermes. If the living insect be bruised, it gives out a red color.

Kermes is used in medicine also; and by it excellent effects may be produced. In kermes are united the exciting and evacuant virtues of the emetic preparations of antimony, with the tonic, aperitive, and resolving properties of the liver of sulphur. It is capable of answering two principal indications in the treatment of many acute and chronic diseases. Properly managed, it may become an emetic, a purgative, diuretic, sudorific, or an expectorant; and it is always attenuating and resolving. When seven or eight grains are taken at once, it chiefly acts upon the *primæ viæ*, generally as an emetic and a purgative. A dose of three or four grains is seldom emetic, and more is frequently purgative. When administered in smaller doses it passes almost into the lacteal, blood, and lymphatic vessels. In these it increases all secretions and excretions, but particularly those of urine, sweat, and expectoration, according to the dose, the nature of the disease, and to the disposition of the patient. Kermes may be administered in linctuses, in oily or in cordial potions, in any vehicle; or incorporated in a bolus, with other suitable remedies. Antacid and absorbent substances ought to be joined with it, if the patient has an acescent disposition of the *primæ viæ*; for as these acids saturate the alkali, by which the kermes is rendered in antimoniated liver of sulphur, and by which alone it differs from what is commonly called golden sulphur of antimony, they accordingly render the kermes entirely similar to the golden sulphur of antimony, the properties of which are very different from those of kermes.

KERMES MINERAL, so called from its color, which resembles that of vegetable kermes, is one of the most important antimimonial preparations, both with regard to its chemical phenomena and to its medicinal uses. The use of kermes mineral was not established in medicine before the beginning of this century. Some chemists, indeed, amongst others Glauber and Lemeris, had before that time mentioned in their works several preparations of antimony which approach more or less to kermes; but these preparations, being little known, were confounded with many others which are entirely neglected, although much praised by their authors. The fame of kermes was occasioned by friar Simon, apothecary to the Chartreux friars. He received this preparation from a surgeon called La Ligerie, who had procured it from a German apothecary, who had been a scholar of the famous Glauber. Friar Simon, from the commendations given to this new remedy by La Ligerie, administered it to a Chartreux friar, who was dangerously ill of a violent peripneumony, by which the friar was suddenly, and to all appearance miraculously cured. From that time the friar apothecary published the virtue of his remedy. Several other remarkable cures were performed by means of kermes. The public believed in its medicinal qualities, and called it powder of Chartreux; because it

was prepared only in the apothecary's shop belonging to these monks. The reputation of kermes increased more and more, till at length the duke of Orleans, then regent of France, procured the publication of the process by La Ligerie. Chizel gives the following process for obtaining a fine kermes, light, velvety, and of a deep purple-brown: One part of pulverised sulphuret of antimony, twenty-two and a half parts of crystallised subcarbonate of soda, and 200 parts of water, are to be boiled together in an iron pot. Filter the hot liquor into warm earthen pans, and allow them to cool very slowly. At the end of twenty-four hours the kermes is deposited. Throw it on a filter, wash it with water which had been boiled and then cooled out of contact with air. Dry the kermes at a temperature of 85°, and preserve in corked phials. Whatever may be the process employed, by boiling the liquor, after cooling and filtration, on new sulphuret of antimony, or upon that which was left in the former operation, this new liquid will deposit, on cooling, a new quantity of kermes. Besides the hydrosulphuretted oxide of antimony, there is formed a sulphuretted hydrosulphuret of potash or soda. Consequently, the alkali seizes a portion of the sulphur from the antimomial sulphuret, water is decomposed, and whilst, a portion of its hydrogen unites to the alkaline sulphuret, its oxygen, and the other portion of its hydrogen, combine with the sulphuretted antimony. It seems, that the resulting kermes remains dissolved in the sulphuretted hydrosulphuret of potash or soda; but, as it is less soluble in the cold than the hot, it is partially precipitated by refrigeration. If we pour into the supernatant liquid, after the kermes is deposited and removed, any acid, as the dilute nitric, sulphuric, or muriatic, we decompose the sulphuretted hydrosulphuret of potash or soda. The alkaline base being laid hold of, the sulphuretted hydrogen and sulphur to which they were united are set at liberty; the sulphur and kermes fall together, combine with it, and form an orange-colored compound, called the golden sulphuret of antimony. It is a hydrosulphuretted sulphuret of antimony. Hence, when it is digested with warm muriatic acid, a large residuum of sulphur is obtained, amounting sometimes to 12 per cent. Kermes is composed, by Thenard, of 20.3 sulphuretted hydrogen, 4.15 sulphur, 72.76 oxide of antimony, 2.79 water and loss; and the golden sulphuret consists of 17.87 sulphuretted hydrogen, 68.3 oxide of antimony, and twelve sulphur.

By evaporating the supernatant kermes liquid, and cooling, crystals form, which have been lately employed by the calico printer to give a topical orange. These crystals are dissolved in water, and the solution, being thickened with paste or gum, is applied to cloth in the usual way. When the cloth is dried, it is passed through a dilute acid, when the orange precipitate is deposited and fixed on the vegetable fibres.

KERN, *n. s.* Irish *cern*, contracted, says Mr. Thomson, from *ceathurn*; Scot. *caterane*. Irish foot-soldier; an Irish foot.

These wizards welter in wealths waves,
Pampered in pleasures deepe;

They han fat *kernes* and leany knaves,
Their fasting *hockes* to keepe.

Spenser. Sheppard's Calender.

Out of the fry of these rake-hell horseboys, growing up in knavery and villainy, are their *kearn* supplied.

Spenser.

Justice had with valour armed,
Compelled these skipping *kernes* to trust their heels.

Shakspeare.

If in good plight these northern *kerns* arrive,
Then does fortune promise fair.

Phillips's Briton.

KERN, *n. s.* A hand-mill consisting of two pieces of stone, by which corn is ground. It is written likewise *quern*, and still used in some parts of Scotland.

KERN, *v. n.* Teut. *kernen*. To harden, as ripened corn; to take the form of grains.

When the price of corn falleth, men break no more ground than will supply their own turn, where-through it falleth out that an ill *kerned* or saved harvest soon emptieth their old store.

Carew.

The principal knock is in making the juice, when sufficiently boiled, to *kern* or granulate.

Grew.

KER'NEL, *n. s. & v. n.* } Saxon *cynnel*, a
KER'NELLY, *adj.* } gland; Fr. *cerneuu*;
KER'NELWORT. } Belgic *karne*. The

edible substance contained in a shell; any thing included in a husk; the seed of fruits; the central part of any thing which is covered with concretions; glandular tumors. Kernel, to ripen to kernels. Kernelly, full of kernels. Kernelwort, an herb.

The sunne ysurmouseth the mone,
That troublen is, and chaungeth sone,—
And the nutte *kernell* dothe the shell,—
(I skorne nat that I you it tell.—)

Chaucer. Romaunt of the Rose.

I think he will carry this island home in his pocket, and give it his son for an apple.—And, sowing the *kernels* of it in the sea, bring forth more islands.

Shakspeare. Tempest.

As brown in hue

As hazel nuts, and sweeter than the *kernels*.

Shakspeare.

There can be no *kernel* in this light nut; the soul of this man is his clothes.

Id.

The apple inclosed in wax was as fresh as at the first putting in, and the *kernels* continued white.

Bacon's Natural History.

The *kernel* of a grape, the fig's small grain,
Can clothe a mountain, and o'ershade a plain.

Deuham.

The *kernel* of the nut serves them for bread and meat, and the shells for cups.

More.

In Staffordshire, garden-rouncivals sown in the fields *kernel* well, and yield a good increase.

Mortimer's Husbandry.

Oats are ripe when the straw turns yellow and the *kernel* hard.

Id.

A solid body in the bladder, makes the *kernel* of a stone.

Arbutnot

KERRERA, an island of Scotland, in Argyleshire, in the Sound of Mull, near the main land of Mid Lorn, and included in the parish of Kilbride. In this island king Alexander II., being upon an expedition against the Danes, died of a fever on the 8th of July 1249. His ships were anchored in the Greater Horse-Shoe Bay, whilst he, for the benefit of his health, was on shore, and his pavilion was erected on Dalree (i. e. the king's plain), by that natural harbour, whence his body was carried to the abbey of Melrose.

KERRY, a county or shire in the province of Munster, and kingdom of Ireland. It is bounded on the west by the Atlantic Ocean; on the east by parts of Cork and Limerick; on the north by the Shannon; and on the south by part of Cork and by the ocean. Its greatest length is about sixty-seven miles, and its maximum breadth about sixty-two: containing, according to Dr. Beaufort, 1,040,487 statute acres, or 1639 square miles. If Dr. Beaufort's returns of population and of houses be correct, both appear to have been *doubled* in thirty-five years.

Kerry is divided into eight baronies, Clannaurice, Corkaguinny, Dunkerron, Glanerought, Iraghticonnor, Iveragh, Magunihy, and Truaghnaemy, which are subdivided into eighty-three parishes, all of them being in the ancient dioceses of Ardfert, and Aghadoe, which have been annexed to the see of Limerick since the year 1663. Kerry comprehends a great part of the ancient Desmonia, and gives title of earl to the noble family of Petty. Many schools for the education of the peasantry are established here, and upwards of 15,000 children are daily receiving the benefits of a very sound and substantial system of instruction. This is effected almost entirely by pay-schools, or, at all events, by domestic support, the bounty of strangers being rejected except in a very few cases.

The northern part of this country, lying towards the Shannon, is comparatively low, having a fall or inclination towards the river Gale or Cashen: it is now in a very unprofitable condition, although well adapted for conversion into a good tillage country. The central district is an upland country, rising gradually into the boundary between Limerick and Cork, the upper stratum of which is an indurated clay-shiver, covering thin beds of culm, which, in the eastern extremity of the range, are found alternating with a good coal blende, similar to that of Kilkenny. This field is flanked by extensive beds of secondary limestone. The vales of the central district consist of an extensive and improvable bog, having a drainage southward towards Dingle Bay, and eastward by the Blackwater, towards Cork. The southern district is formed of an extensive and lofty mountain chain, commencing on the eastern side of Dingle Bay, and continuing, with little interruption, along the south side of the lakes of Killarney, and of the river Blackwater, as far as the county of Waterford. The vales between these hills are generally extensive bog fields, capable of reclamation, and peculiarly well situated for exportation of this produce, though they now lie totally waste. The prevailing and component rock of this mountain range is clay slate, the strata of which are so highly inclined, that they are easily decomposable by the weather; and this decomposition forms an adhesive loam well suited to the reception of grain crops. This clay slate has also been quarried for roofing in some places: but the convenience of export has hitherto confined the workings to Cahir, Begnish, and Valentia.

The culm and stone coal of Kerry are yet but imperfectly explored, and the waste lands and bog, exceeding 200,000 acres, remain in the same unoccupied, unimproved, and deplorable con-

dition in which they were found by the bog commissioners in the year 1814. The barony of Glanerough is particularly oppressed by poverty, scarcely one plough existing within that whole district, for which spade labor is necessarily substituted. Besides the coal and culm already mentioned, copper is found in considerable quantities in the Kerry mountains, occurring chiefly in the limestone district. It occurs on both sides of the river Kenmare, but on the south side is found in slate. On Ross Island, on the beautiful lake of Killarney, one of the richest mines of ruby copper ore in Ireland is now at full work: but this is also in the limestone region; and another vein, not now worked, occurs in the same matrix, near to the picturesque ruin of Mucress Abbey, on the same lake.

The roads, or rather the want of them, have hitherto militated against the improvement of the Kerry peasants; but the patronage and assistance of government, as well as the exertions of the fishery board, have succeeded in opening the wildest districts of a very retired country, by lines of road skilfully laid down and ably executed. A mail coach line is now completed from Limerick city by Listowel and Tralee to Dingle. Another line is finished from Limerick to Valentia, by Rathkeale, Abbyeale, Castleisland, and Cahir: and a most necessary, as well as most romantic road (particularly distinguished for its workmanlike execution, and its systematic and durable conformation), connects the towns of Killarney and Kenmare, skirting the beautiful lakes of Killarney, which were hitherto concealed from all but navigators of their surface, and affording a sublime view of their picturesque scenery. How great are the benefits that in all likelihood will follow, from these improvements, may easily be imagined from the incalculable advantage already derived to the peasantry, whose only staple is live cattle or butter, the latter of which was formerly carried in panniers, on horse-back, for distances exceeding fifty miles.

The rivers of this country do not afford any advantage as to inland navigation. The Kenmare is navigable for some miles, but this may be called an arm of the sea. The other rivers are the Blackwater, the Feale, Gale, Cashin, Maing, Lea, Flesk, Laune, Carrin, Fartin, Inny, and Roughty. The Flesk falls into the Lower Lake of Killarney, the waters of which are discharged into the sea by the Laune. The principal towns are Tralee the assizes town, Dingle, Killarney, Nedeem or Kenmare, Castleisland, Lixnaw, Listowel, and Milltown.

The line of sea coast is very extensive and much indented: the chief islets and bays are those of Tralee, Brandon, Dingle, Valentia, Ballinaskelligs, and Kenmare. The last, twenty miles in length, is capacious and safe, and Valentia (a name given by the Spaniards) is one of the safest in Ireland. Here it is now proposed, by the American and Colonial Steam Navigation Company, to establish a packet station, and vessels to ply regularly between this place and Nova Scotia. The coast, which is rather bold, is rendered dangerous by the great number of islands and rocks, above seventy, on two of the most conspicuous of which, the Skelligs, light-houses

are now erected. In the limestone caves on the sea shore, near to Dingle, Kerry Head, and many other places, very beautiful crystals, clear and hard, are often found. These, called Kerry stones and Irish diamonds, are deservedly esteemed by lapidaries. A few amethysts have also been detected, and some valuable pearls have been raised from the lakes and rivers of the county.

Cider was formerly made here in large quantities from the Cackigay apple, and obtained both a good price and estimation: but this traffic is now much neglected; and another species of apple, equally valued, called the Kerry pippin, is now most difficult to be procured.

KERTSCH, KERTZ, or KJERCH, a fortress and sea-port of European Russia, in the government of Taurida. It stands in a peninsula of this name, and has a good harbour, but is thinly peopled, containing, exclusive of the garrison, not more than 400 inhabitants, mostly Greeks. The fortress is of the greatest importance, as one of those commanding the passage which forms the communication between the Black Sea and the sea of Azoph. In the neighbourhood stood the ancient Panticapæum, remarkable for the death of Mithridates. Kertsch was taken by the Russians in 1771. Its Russian name is Vospor. Sixty miles N. N. E. of Caffa, and 100 E. S. E. of Perekop.

KERSEY, n. s. Fr. *cariséc*; Belg. *karsaye*, A coarse stuff.

Taffata phrases, silken terms precise,
I do forswear them; and I here protest,
Henceforth my wooing mind shall be exprest
In russet yeas, and honest *kersey* noes.

Shakspeare.

His lackey, with a linen stock on one leg, and a *kersey* boot-hose on the other.

Id.

The same wool one man felts into a hat, another weaves it into cloth, and another into *kersey* or serge.

Hale.

Thy *kersey* doublet spreading wide,
Drew Cicely's eye aside.

Gay.

KEST. The preter tense of cast. It is still used in Scotland.

Only that noise heaven's rolling circles *kest*.

Fairfax.

KESTREL, n. s. A little kind of bastard hawk.

His *kestrel* kind,

A pleasing vein of glory, vain did find.

Faerie Queene.

Kites and *kestrels* have a resemblance with hawks.

Bacon.

KESTZHELY, a town of Hungary, in the palatinate of Sala, on the Platten see, with a castle. It is noted for an agricultural seminary, in which are taught mathematics, natural history, botany, economics, and mechanics. The inhabitants are supported partly by woollen manufactures, partly by the culture of vineyards. Here, in an extensive garden, provided with ponds and ditches, are reared a number of land tortoises. Twenty-three miles south of Vasarhily. Inhabitants 9000.

KESSEL (John Van), an eminent painter, born at Antwerp in 1626. He not only excelled in fruits and flowers, but was eminent for painting portraits. He resembled Velvet Breughel,

and nearly equalled him in birds, plants, and flowers. The prodigious prices for which he sold his works occasioned the rich alone to be the purchasers; and the king of Spain admired his performances so much, that he purchased as many of them as he could procure, and at last prevailed on him to visit his court, where he was appointed painter to the queen, and was retained in her service as long as she lived. He painted portraits admirably, with a light free touch, and a tone of color that very much resembled Vanduyck; nor are his works in that style considered in Spain as inferior to that great master. He died in 1708, aged eighty-two.

KESWICK, a town of Cumberland, with a market on Saturday; seated in a vale surrounded by hills, near the rapid river Greta. It was formerly famous for its copper mines, which rendered it a considerable place; but it now consists only of one long street. Its chief trade is from the influx of travellers on visits to the lakes. The church stands nearly half a mile from the town, and is a beautiful object in the vale. A new market house was erected here a few years ago, which, viewed from any point, adds to the beauty of the scene. Here are a free-school and a Sunday school, and two museums, containing specimens of most of the minerals and other curiosities of Cumberland. It is twenty-five miles north-west by north of Kendal, and 291 N. N. W. of London.

KESWICK, VALE OF, a delightful spot in the south part of Cumberland, much visited by the admirers of nature. Here is the lake of Keswick, or, more properly, the Derwent-water. To the north of this romantic piece of water soars the lofty Skiddaw, one of the most distinguished mountains in England, the haunt of birds of prey. To the south is the dreary region of Borrowdale. The water of the Derwent is subject to violent agitations, and often without any apparent cause. It has one peculiar characteristic: namely, that it retains its form, viewed from any point, and never assumes the appearance of a river. See **DERWENT and CUMBERLAND**.

KESZDI VASARHELY, a handsome town of Transylvania, in the district of Haromsrek, separated from that of Kanta by a rivulet, and surrounded by mountains. One of them is decidedly volcanic, and yields tufa. Population 6500: seveny-two miles E. N. E. of Hermanstadt.

KET (William), a tanner of Norfolk, who in the reign of Edward VI. instigated a revolt against the government. The populace were at first excited by the complaints against enclosures; but finding their numbers increase, and amounting to 20,000 strong, they grew insolent, and proceeded to more exorbitant pretensions. They demanded the suppression of the gentry, the placing of new counsellors about the king, and the re-establishment of the popish religion. Ket assumed the government over them, and exercised his brief authority with the utmost arrogance. Having taken possession of Moushold Hill, near Norwich, he erected his tribunal under the branches of an old spreading oak, thence denominated the Oak of Reformation, and summoning

the gentry to appear before him, he gave such decrees as might be expected from his character and situation. At length the earl of Warwick was sent against the rebels and put them to flight. Ket being taken was hanged at Norwich Castle, and nine of his followers on as many boughs of the Oak of Reformation, and the insurrection was entirely suppressed in 1549.

KETCH, *n. s.* Ital. *caicchio*. A barrel; a heavy ship, as a bomb-ketch. Jack Ketch seems to derive his name from the Saxon ceocs, to choke or strangle.

I wonder

That such a *ketch* can with his very bulk
Take up the rays o' the' beneficial sun,
And keep it from the earth. *Shakespeare.*

KETCHES, in naval affairs, vessels with two masts, and usually from 100 to 250 tons burden, principally used as bomb-vessels. Bomb-ketches are built remarkably strong, as being fitted with a greater number of riders than any other vessel of war; and are furnished with all the apparatus necessary for a vigorous bombardment.

KETCHUP, in cookery, a most agreeable relish for fish, beef-steaks, &c., is manufactured from mushrooms, from cockles, and from walnuts. The first is generally most esteemed, but we shall present our readers with the methods of preparing each:—

Mushroom ketchup.—Take the largest broad mushrooms, break them in an earthen pan, strew salt over, and stir them now and then for three days. Then let them stand till there is a thick skum over them; strain and boil the liquor with Jamaica and black pepper, mace, ginger, a clove or two, and some mustard seed. When cold, bottle it and tie a bladder over the cork: in three months boil it again with fresh spice, and it will then keep for twelve months. Or; take a stew pan full of large flap mushrooms, that are not worm eaten, and the skins and fringe of those you have pickled; throw a handful of salt among them, and set them by a slow fire; they will produce a great deal of liquor, which you must strain, and put to it four ounces of shalots, two cloves of garlick, a good deal of pepper, cloves, ginger, mace, and a few bay leaves.—Boil and skim very well. When cold, cork close. In two months boil it up again with a little fresh spice, and a stick of horse-radish, and it will keep the year; which mushroom ketchup, if not boiled a second time, rarely does.

Cockle ketchup.—Open the cockles; scald them in their own liquor; add a little water when the liquor settles, if you have not enough; strain through a cloth; then season with every savory spice; and, if for brown sauce, add port, anchovies, and garlic:—if for white, omit these, and put a glass of sherry, lemon-juice, and peel mace, nutmeg, and white pepper. If for brown, burn a piece of sugar for coloring.

Walnut ketchup.—Boil or simmer a gallon of the expressed juice of walnuts, when they are tender, and skim it well; then put in two pounds of anchovies, bones and liquor; ditto of shalots; one ounce of cloves, ditto of mace, ditto of pepper, and one clove of garlick. Let all simmer till the shalots sink; then put the liquor into a pan till cold; bottle and divide the spice

to each; cork closely and tie a bladder over. It will keep twenty years, and is not good the first. Be very careful to express the juice at home; for it is very rarely unadulterated if bought.

KETSKEMET, a large town of Hungary, the chief place of a district, and the residence of many families of rank. It has manufactures of soap and leather; but the chief property of the district consists in cattle and sheep. Both the Catholics and Calvinists have churches and schools here. Forty-six miles N. N. W. of Szegedin, and fifty S. S. E. of Pest.

KETT (Henry), B. D., born at Norwich in 1761, was educated at the grammar-school, and entered as a commoner of Trinity College, Oxford, where he took his degree of M. A. in 1783. In 1790 he was Bampton lecturer, and in 1795 took the degree of B. D. In 1798 he published *History the Interpreter of Prophecy*, which attracted notice. In 1802 appeared his *Elements of General Knowledge*, which, though severely criticised by some members of the university of Oxford, passed through nine editions. His other performances are of a trifling cast; a novel entitled *Emily* is the only one that bears an original character. After holding his fellowship many years, he married, and obtained the living of Charlton in Gloucestershire. He was found drowned at the seat of his friend Sir J. Gibbon, Stanwell, where he had been bathing, June 30th, 1825.

KETTERING, a town of Northamptonshire, pleasantly seated on an ascent, and surrounded by a great number of gentlemen's seats. The church has an embattled tower, with a very elegant spire sixty-three yards high. There are four fairs, and a market on Friday. Seventy-five miles N. W. from London.

KETTLE, *n. s.* } Sax. *cetl*; Belgic *ketel*;
KETTLEDROM. } Swed. and Teut. *kettel*. A vessel in which liquor is boiled: *kettledrum*, a drum of which the head is spread over a body of brass.

The fire thus formed, she sets the *kettle* on;
Like burnished gold the little seether shone. *Dryden.*

As he drains his draughts of Rhenish down,
The *kettledrum* and trumpet thus bray out
The triumph of his pledge. *Shakespeare.*

KETTLE is also a term given by the Dutch to a battery of mortars, because sunk under ground.

KETTLE-DRUMS are formed of two large basins of copper or brass, rounded at the bottom, and covered over with vellum or goat-skin, which is kept fast by a circle of iron, with several holes in it, fastened to the body of the drum, and a like number of screws to screw up and down. The two basins are kept fast together by two straps of leather, which go through two rings, and are fastened the one before and the other behind the pommel of the kettle-drum's saddle.

KETTLEWELL (John), a learned divine, born in 1653, was descended from an ancient family in the North Riding of Yorkshire, and elected fellow of Lincoln College, Oxford. In 1675 he entered into orders; but, refusing to take the oaths to king William and queen Mary, was deprived of his living. He published several works which were collected and reprinted

together in 1718, in 2 vols folio. He died of a consumption in 1695.

KEYELS, in ship-building, a frame composed of two pieces of timber, whose lower ends rest in a sort of step or foot, nailed to the ship's side, whence the upper ends branch outward into arms or horns, serving to belay the great ropes by which the bottoms of the main-sail and fore-sail are extended.

KEW, a village of Surry, on the banks of the Thames, over which is a handsome stone bridge of seven arches to Brentford, seven miles west by south of London. It was formerly a hamlet to Kingston; but in 1769 an act of parliament was passed, forming Kew and Petersham into one vicarage. Kew House, a royal palace, is celebrated for its fine gardens, and his majesty's exotic garden. This last has been brought to great perfection by the introduction of numbers of new plants from Africa, New South Wales, and various parts of the world, and is known throughout all Europe. Kew gardens are open to the public every Monday, from Midsummer to the end of autumn.

KEY, *n. s.* Sax. *cæg*. An instrument by which the bolt of a lock is pushed forward or backward.

And he had the gode keping be [been kept]
Whilom of the universitee,
That kepeth the *kei* of Cristendome,
We had ben tourmented all and some. *Chaucer.*

If a man were porter of hell-gate, he should have
old turning the *key*. *Shakspeare.*

The glorious standard last to heaven they spread,
With Peter's *keys* ennobled, and his crown. *Fairfax.*

Yet some there be, that by due steps aspire
To lay their just hands on that golden *key*,
That tapes the palace of eternity. *Milton.*

He came, and knocking thrice without delay,
The longing lady heard, and turned the *key*. *Dryden.*

Conscience is its own counsellor, the sole master of
its own secrets; and it is the privilege of our nature
that every man should keep the *key* of his own breast. *South.*

The warder at the door his *key* applies,
Shoots back the bolt, and all his courage dies. *Cowper.*

An instrument by which something is screwed
or tur ed. *Swift.*

Hide the *key* of the jack. *Swift.*

An explanation of any thing difficult.

An emblem without a *key* to it is no more than a
case of a tub. *L'Estrange.*

These notions in the writings of the ancients
darkly delivered, receive a clearer light when com-
pared with this theory, which represents every thing
plainly, and is a *key* to their thoughts. *Burnet.*

These who are accustomed to reason have got the
true *key* of books. *Locke.*

The parts of a musical instrument which are
struck with the fingers.

Pamela loves to handle the spinnet, and touch the
keys. *Pamela.*

KEY, in music, a certain tone to which every
composition, whether long or short, ought to be
fitted: and this key is said to be either flat or
sharp, not in respect of its own nature, but with

relation to the flat or sharp third, which is joined
with it.

Te Deum amoris, sang the thrusted cocke
Tubal himself the first musician,
With *key* of armony coude not unlocke
So swete a tewne, as that the thrustel can
'The lorde of Love we praisen;' quod he than
'And so done al the foules gret and lite;
Honour we may, in fals lovers despite.

Chaucer. The Court of Love.

Hippolita, I wooed thee with my sword,
And won thy love doing thee these injuries;
But I will wed thee in another *key*,
With pomp, with triumph, and with revelling.

Shakspeare.

But speak you with a sad brow; or do you play
the flouting Jack? Come in what *key* shall a man
take you to go in the song? *Id.*

Not know my voice! Oh, time's extremity!
Hast thou so cracked and splitted my poor tongue
In seven short years, that here my only son
Knows not my feeble *key* of untuned cares? *Id.*

Fr. quai; *Dut. kaye*. A bank raised perpen-
dicular for the ease of lading and unlading
ships.

A *key* of fire ran along the shore,
And lightened all the river with a blaze. *Dryden.*

Key cold was a proverbial expression, now out
of use.

Poor *key cold* figure of a holy king!
Pale ashes of the house of Lancaster.

Shakspeare.

KEY. See **LOCK**. L. Molinus has a treatise
of keys, de Clavibus Veterum, printed at Upsal,
wherein he says, that the use of keys is yet un-
known in some parts of Sweden. The invention
of keys is ascribed to Theodore of Samos, ac-
cording to Pliny and Polydore Virgil; but this
must be a mistake, the use of keys having been
known before the siege of Troy; mention even
seems to be made of them in Gen. xix. 10. Mo-
linus is of opinion, that keys at first only served
for the untying certain knots, wherewith they
anciently secured their doors; but the Laconic
keys, he maintains, were nearly akin in use to
our own; they consisted of three single teeth,
and made the figure of an E; of which form there
are still some to be seen in the cabinets of the cu-
rious. There was another key called *Balavaypa*,
made in the manner of a male screw; which had
its corresponding female in a bolt affixed to the
door. Key is hence become a general name for
several things serving to shut up or close others.
See **LOCK**.

This word is also used for ecclesiastical ju-
risdiction; particularly for the power of excom-
municating and absolving. The Romanists say
the pope has the power of the keys, and can
open and shut Paradise as he pleases: ground-
ing their opinion on that expression of our Lord
to Peter, 'I will give thee the keys of the king-
dom of heaven.' In St. Gregory we read, that
it was the custom of the popes to send a golden
key to princes, wherein they enclosed a little of
the filings of St. Peter's chains, kept with great
devotion at Rome; and that these keys were
worn in the bosom, as being supposed to contain
some wonderful virtues.

KEY is used for an index of a cipher. See
CIPHER.

KEY in music, is the fundamental note or tone, to which the whole piece in cantata, sonata, concerto, &c., is accommodated, and with which it usually begins, but always ends.

KEY, or QUAY. See **QUAY**.

KEYS' ISLANDS, three islands in the Eastern Seas, lying N. N. E. of Timour Laut and near the coast of New Guinea. They are called Key Watalas, Little and Great Key; the last being said to be fifty miles in length, and from seven to twelve broad, but little is known of any of them.

KEYS OF AN ORGAN, HARPSICORD, &c., those little pieces in the fore part of those instruments, by means whereof the jacks play, so as to strike the strings. In large organs there are several sets of keys, some to play the secondary organ, some for the main body, some for the trumpet, and some for the echoing trumpet, &c.; in some there are but a part that play, and the rest are only for ornament. See **ORGAN, &c.**

KEYAGE, n. s. } Money paid for lying at

KEYHOLE, n. s. } the key or quay. Key-

KEYSTONE, n. s. } hole, the perforation in the lock through which the key is put. Key-stone, the middle stone of an arch.

Make doors fast upon a woman's wit, and it will out at the casement; shut that and it will out at the *keyhole.* *Shakspeare.*

I keep her in one room; I lock it

The *key*, look here, is in this pocket;

The *keyhole* is that left? Most certain.

Prior.

If you will add a *keystone* and chaptrels to the arch, let the breadth of the upper part of the *keystone* be the height of the arch. *Moxon.*

I looked at the *keyhole*, and saw a well-made man. *Tatler.*

Shylock and the Moor

And Pierre, cannot be swept or worn away—

The *Keystones* of the arch!

Byron. Childe Harold.

The **KEYSTONE OF AN ARCH OR VAULT** is the last stone placed at top; which, being wider and fuller at the top than bottom, wedges and binds all the rest. The key is different in the different orders; in the Tuscan and Doric it is a plain stone, only projecting; in the Ionic it is cut and waved somewhat after the manner of consoles; in the Corinthian and Composite it is a console enriched with sculpture, foliage, &c.

KEYSLER (John George), F. R. S., a learned German antiquary, born at Thourneau in 1689. After studying at the university of Halle, he was appointed preceptor to Charles Maximilian and Christian Charles, the counts of Giech; with whom he travelled through Germany, France, and the Netherlands, and gained great reputation among the learned, by illustrating several monuments of antiquity, particularly some fragments of Celtic idols discovered in the cathedral of Paris. In 1716 he was employed to superintend the education of two grandsons of baron Bernstorff, first minister of king George I., as elector of Brunswick Lunenberg. However, obtaining leave, in 1718, to visit England, he was elected F. R. S. for a learned essay *De Dea Nebelennia numine veterum Walachorum topico.* He also wrote on Stonehenge, and on the Consecrated Mistletoe of the Druids.

These detached essays, with others, he published on his return to Hanover, under the title of *Antiquitates selectæ Septentrionales et Celticæ, &c.* He afterwards made the grand tour with the young barons, to which we owe the publication of his *Travels*; which were translated into English, and published in 1756, in 4 vols. 4to. Mr. Keysler on his return spent the remainder of his life under the patronage of his noble pupils, who committed their fine library and museum to his care, with a handsome income. He died in 1743.

KHALIF, KALIPH, or CALIPH. Arab. *khalifah*, i. e. a successor or heir: successor of Mahomet in the spiritual as well as temporal empire erected by that legislator. After the death of Mahomet, Abubeker having been elected by the Mussulmans to supply this place, he would take no other title but that of *khalifah resoulallah*, i. e. vicar of the prophet, or messenger of God. Omar, who succeeded Abubeker, preferred the title of *emir moumenin*, i. e. prince of the believers: but his successors resumed that of *khalif*, which thus came to signify the supreme ecclesiastical dignity among the Saracens; or sovereign among the Mahomedans, vested with absolute authority in all matters relating both to religion and policy. It is still one of the grand seignior's titles, as successor of Mahomet. One of the chief functions of the *khalif*, in quality of imam, or chief priest of Mussulmanism, was to begin the public prayers every Friday in the chief mosque, and to deliver the *khothbak*, or sermon. In after times they had assistants for this latter office; but the *khalifs* always performed in person. The *khalif* was also obliged to lead the pilgrims to Mecca in person, and to march at the head of the armies of his empire.

He granted investiture to princes; and sent swords, standards, gowns, and the like, as presents to princes of the Mahomedan religion; who, though they had thrown off the yoke of the caliphate, nevertheless held of it as vassals. The *khalifs* usually went to the mosque mounted on mules; and the Seljukide sultans, though masters of Bagdad, held their stirrups, and led their mule by the bridle some distance on foot, till such time as the *khalifs* gave them the sign to mount on horseback. At one of the windows of the *khalif's* palace there always hung a piece of black velvet, twenty cubits long, which reached to the ground, and was called the *khalif's* sleeve; which the *grandees* of his court never failed to kiss with great respect every day. After the destruction of the caliphate, by Hulaku, the Mahomedan princes appointed a particular officer, in their respective dominions, who sustains the sacred authority of *khalif*. In Turkey he goes under the denomination of *mufli*, and in Persia under that of *sadne*. After the death of Mahomet (see **ARABIA** and **MAHOMET**), the succession of *khalifs* continued in Arabia and Bagdad till the 655th year of the Hegira, when Bagdad was taken by the Tartars. See **BAGDAD**, **EGYPT**, and **SARACENS**. After this, however, there were persons who claimed the *khaliphate*, as pretending to be of the family of the *Abasides*, and to whom the sultans of Egypt rendered great honors at Cairo, as the true successors of Mahomet; but this honor was

merely titular, and the rights allowed them only in matters relating to religion; and though they bore the sovereign title of khalifs, they were nevertheless subjects and dependents of the sultans. In the year of the Hegira 361 a kind of caliphate was erected by the Fatemites in Africa, and lasted till it was suppressed by Saladin. Historians also speak of a third caliphate in Gemen or Arabia Felix, erected by some princes of the family of the Jobites. The emperors of Morocco assume the title of grand cherifs; and pretend to be the true khalifs, or successors of Mahomet, though under another title.

KHAN, or **CHAM**, the title given to the princes of Tartary. The word in Persian signifies mighty lord; in the Slavonic, emperor. Sperlingius, in his Dissertation on the Danish term of majesty, *koning*, king, thinks the Tartarian *cham* may be derived from it; adding, that in the north they say *kan*, *konnen*, *konge*, *konning*, &c. The term is also applied among the Persians to the great lords of the court, and the governors of provinces.

KHANDESH, a Mahratta province of Hindostan, situated between 21° and 23° of N. lat. On the north it is bounded by Malwah, on the west by Gujerat, on the south by Aurrangabad, and on the east by Berar. It was long in possession of the Afghans, when the capital was Asseer or Hasseer, but was conquered by the emperor Akbar in the sixteenth century. It is remarkably strong in fortresses. Within one day's march nearly twenty are to be seen; and it is intersected by the Narbudda and Tapy rivers. The greater portion of it belongs to the descendants of Holkar; the remainder to the peshwa and Sindhia; but many of the strong places are in possession of refractory chiefs. The inhabitants are chiefly Hindoos. Cotton cloths called *baftahs* were formerly manufactured here. The chief towns are Boorhampore, Hindia, and Hasseer.

KHERASKOF (Michael), an eminent Russian poet of the eighteenth century, who published a poem *On the Use of Science*; and an epic poem called the *Russiada*, the subject of which is the conquest of Casan by John Basiliowitz II. He was appointed vice-president of the College of Mines, curator of the university of Moscow, and a counsellor of state.

KHILKOF, **PRINCE**, a Russian nobleman, who was ambassador to Charles XII.; and when the war broke out between Sweden and Russia, was, contrary to the law of nations, thrown into prison by that prince. During his confinement he wrote an *Abridgment of the Russian History*. He died after a captivity of eighteen years. His work was published by Mr. Muller in 1770, in 8vo.

KHOEE, a large and handsome town of Persia, in the province of Aderbijan, on the lake Ureemea. It is a principal channel of the trade with Turkey: the walls are in good condition; the streets regular and well-built, and adorned with avenues of trees. Population about 25,000. In the neighbourhood a battle was fought in 1514 between the sultan Selim I. and Shah Ismael, in which 30,000 Persians engaged 300,000 Turks.

KHOJUND, a populous city of Bukharia, subject to Koukan, or the khan of the Tartar tribe of Mengh. It is said to be larger than Samarcand. The *Sirr*, or *Sihon* (anciently the *Jaxartes*), flows under its walls, but is no where fordable; nor are boats or any bridge employed in passing it; the inhabitants being merely conveyed over in floats of reeds.

KHORASSAN, a considerable province of Persia, having Irak and Mazanderan to the west, Seistan to the south, Bukharia and Balk to the north and east. Though nominally included in Persia, it partakes largely both of the natural and political character of the bordering regions of Tartary; and the south part belongs in fact to the Afghans. It is in general a level country, though intersected by lofty and irregular ranges of mountains; some part of it also consists of sandy deserts. But the soil is fertile when cultivated, and yields corn, wine, rice, oil, and silk, in abundance. According to the elevation, the climate is sometimes extremely cold; and it is subject to a pestilential wind, called the *bad semum*, which is observed to blow for forty days in the year.

KHYRABAD, or **KATRABAD**, a district of the province of Oude, Hindostan, situated principally between 27° and 28° of N. lat: it is bounded on the west by the Ganges, and on the east by the Gogra; and is fertile and well watered, producing sugar, and all the grains of India. It is intersected by the Goomty River; and its chief towns are Khyrabad, Shahabad, and Mahommedy.

KIAKHTA, a town of Asiatic Russia, in the government of Irkoutsk, and district of Verschnei Oudinsk. It has of late become the emporium of the commerce between Russia and China; the latter allowing trade only at one point of each of its frontiers. Kiakhta was, in 1728, fixed upon by treaty as the medium of the communication. To the great fair, held in December, merchants flock from every part of the Russian empire, and bring cloths, beavers, furs, Russia and morocco leather, receiving in exchange tea, nankeens, silk stuffs, rhubarb, &c. Kiakhta is situated in a plain, traversed by a river of this name, and surrounded by high granitic and wooded mountains, on the most elevated of which is a fort. On another mountain are seen the boundaries of the two empires. The Russian boundary being a hillock, with a cross at the top, while the Chinese have a kind of cone or pyramid. The Chinese town close by is called *Naimatschin*. 330 miles south of Irkoutsk.

KIANG NAN, a province of China, and one of the most fertile, commercial, and opulent, in the empire. It is bounded on the west by Honan and Hou-quang; south by Tchekiang and Kiang-si; east by the gulf of Nanking; and north by Chan-tong. The emperors long kept their court in this province, till reasons of state obliged them to move nearer Tartary, and reside in Pekin. This province contains fourteen cities of the first class, and ninety-three of the second and third. They are all of them places of considerable trade. Large barks can go to them from all parts; the whole country being intersected by lakes, rivers, and canals, communi-

eating with the Yang-tse-kiang, which runs through the middle of the province. Silk stuffs, lacquer-ware, ink, paper, and every thing that comes from Nanking, as well as from the other cities of the province, are much more esteemed, and fetch a higher price than those brought from the neighbouring provinces. In the Chang-hai, and the villages dependent on it, there are said to be above 200,000 weavers of cotton cloths. In several places on the sea-coast are many saltpits, the produce of which is distributed all over the empire. This province is divided into two parts, each of which has a distinct governor. The governor of the east part resides at Southcheou, that of the west at Ngan-king. Each of them has under his jurisdiction seven cities of the first class. The official account of the population given to Sir George Staunton stated it to amount to 32,000,000.

KIANG-SI, a province of China, bounded on the north by that of Kiang-nan, west by Hou-quang, south by Quang-tong, and east by Fokien and Tchekiang. The country is extremely fertile, but so populous, that it can scarcely supply the wants of its inhabitants. They are people of great acuteness, and often rise to the highest dignities of the state. The mountains are covered with verdure, and contain mines of gold, silver, lead, iron, and tin. The rice produced here is very delicate, and several barks are loaded with it every year for the court. The porcelain is the most valuable in the empire. This province contains thirteen cities of the first class, and seventy-eight of the second and third.

KIAYAS, in Turkish polity, commanding officers of the janissaries, Arabs, &c., who, after the first year, lay down their employments, become veterans, and have a voice in the divan.

KIBBAN, or Madan, a considerable town of Koordistan, at the foot of a high mountain, and surrounded by narrow and deep defiles. The neighbourhood abounds with mines of copper and iron. It lies about a mile and a half from the Euphrates, and eighty miles west of Diarbekir.

KIBE, *n. s.* } From Germ. *kerb*, a cut—
KIBED', *adj.* } Skinner; from Welsh *kibwe*—
Minsheu. An ulcerated chilblain; a chap in the heel caused by the cold. Kibed, troubled with chilblains.

If 'twere a *kibe*, 'twould put me to my slipper.

Shakspeare.

The toe of the peasant comes so near the heel of our courtier, that it galls his *kibe*.

Id.

One boasted of the cure, calling them a few *kibes*.

Wiseman.

KIBITKA, the name of a Russian travelling carriage, which contains two persons. In shape it resembles a cart of about five feet in length, the hinder half being covered with a semicircular tilt like a waggon, made of laths, interwoven with bark. The Russians, when travelling, place a feather bed at the bottom of the kibitka, and having thus rendered bearable the jolts and concussions occasioned by the uneven timber roads, comfortably doze away the journey.

KICK, *v. a., v. n., & n. s.* } Teut. *kauchen*;
KICKER, *n. s.* } Lat. *calcare*. To strike with the foot; to beat the foot in anger or

contempt: a blow with the foot. Kicker, one who strikes with his foot.

Jeshurun waxed fat and *kicked*. *Deut.* xxxii. 15.

Wherefore *kick* ye at my sacrifice, which I have commanded? *1 Sam.* ii. 29.

For, trewely, ther n'is non of us all,

If any wight woll claw us on the gall,

That we n'il *kike* for that he saith us soth,

Assay, and he shall find it that so doth.

Chaucer. The Wife of Bathes Tale.

The doctrines of the holy Scriptures are terrible enemies to wicked men, and this is that which makes them *kick* against religion, and spurn at the doctrines of that holy book.

Tillotson.

What, are you dumb? Quick, with your answer, quick,

Before my foot salutes you with a *kick*.

Dryden's Juvenal.

He must endure and digest all affronts, adore the foot that *kicks* him, and kiss the hand that strikes him.

South.

It angered Turenne once upon a day,

To see a footman *kicked* that took his pay.

Pope.

Another, whose son had employments at court, valued not, now and then, a *kicking* or a caning.

Swift.

KICK'SHAW, *n. s.* This word is supposed to be only a corruption of *quelque chose*, something: yet Milton seems to have understood it otherwise; for he writes it kickshoe, as if he thought it used in contempt of dancing.—Johnson. But there is a Belgic *kyckshouw*, a trifle, from which it may directly come. Something uncommon, fantastical, or ridiculous; a dish so changed by the cookery that it can scarcely be known.

Some pigeons, a joint of mutton, and any pretty little tiny *kickshaws*.

Shakspeare. Henry IV.

Shall we need the monsieurs of Paris to take our youth into their slight custodies, and send them over back again transformed into mimicks, apes, and *kickshoes*?

Milton.

In wit, as well as war, they give us vigour;

Cressy was lost by *kickshaws* and soup-meagre.

Fenton.

KICK'SY-WICKSEY, *n. s.* From kick and wince. A made word, in ridicule and disdain of a wife.

He wears his honour in a box, unseen,

That hugs his *kicksy-wicksey* here at home,

Spending his manly marrow in her arms.

Shakspeare.

KID, *n. s. & v. a.* Dan. *kid*; Welsh *cidwlen*. The young of a goat; a bundle of heath: to bring forth kids.

Therto, she coude skip, and make a game,

As any *kid* or calf following his dame.

Chaucer. The Milleres Tale.

Next came fresh Aprill, full of lustyhed,

And wanton as a *kid*, whose home new buds;

Upon a Bull he rode, the same which led

Europa floting through the' Argolick fluds.

Spenser's Faerie Queene.

There was a herd of goats with their young ones, upon which sight Sir Richard Graham tells, he would snap one of the *kids*, and carry him close to their lodging.

Watton.

Sporting the lion ramped, and in his paw

Dandled the *kid*.

Milton.

So *kids* and whelps their sires and dams express; And so the great I measured by the less.

Dryden.

While bright the dewy grass with moon-beans shone,
 And I stood hurdling in my *kids* alone,
 How often have I said (but thou had'st found
 Ere then thy dark cold lodgment under ground)
 Now Damon sings, or springes set for hares,
 Or wicker-work for various use prepares.

Couper. Death of Damon.

KID'DER, *n. s.* Teut. *kauten*, to chaffer. An engrosser of corn to enhance its price.

KIDDERS, in law, are those that carry corn, dead victuals, or other merchandise, up and down to sell: every person being a common badger, kidder, lader, or carrier, &c., says the stat. 5 Eliz. cap. 12. They are called kidders, 13 Eliz. cap. 25.

KIDDER (Dr. Richard), a learned English bishop, born in Sussex, and educated at Cambridge. In 1689 he was installed dean of Peterborough; and, in 1691, was nominated bishop of Bath and Wells, in the room of Dr. Thomas Ken. He published, 1. *The Young Man's Duty*; 2. *A Demonstration of the Messiah*, 3 vols. 8vo.; 3. *A Commentary on the Five Books of Moses*, 2 vols. 8vo.; and several other valuable tracts. He was killed in his bed, together with his lady, by the fall of a stack of chimneys, in his palace at Wells, during the great storm in 1703. The bishop, in the dissertation prefixed to his commentary on the five books of Moses, having reflected upon Monsieur Le Clerc, some letters passed between them in Latin, which were published by Le Clerc, in his *Bibliothèque Choisie*.

KIDDERMINSTER, or **KEDDERMINSTER**, a market town and parish of Worcestershire, seated upon a hill on the Stour, near the Severn, 128 miles from London. It contains about 2000 houses, and 11,000 inhabitants, who carry on an extensive trade in the various branches of weaving. In 1735 a carpet manufactory was established with success, so as to employ above 250 looms; and there are upwards of 700 looms employed in the silk and worsted. Many hands are employed as spinners, &c., in the carpet looms only in the town and neighbourhood; others in preparing yarn, which is used in different parts of England in carpeting. The silk manufactory was established in 1755. The town is remarkably healthy; and has also an extensive manufacture of quilting in the loom, in imitation of Marseilles quilting. Woollen plush is also made here for the Portuguese market. The water of the river Stour is said to contribute much to the celebrity of the manufactures of this place, by its remarkable property of striking and securing their colors. The lord of the manor holds a court leet for the prevention of encroachments and public nuisances, and here is a court of requests for debts under 40s. The church, which stands in a commanding situation, is a venerable Gothic structure, very large, and has lately been ornamented and repaired at considerable expense. In it are several curious ancient monuments. The tower adjoining the church is a strong, lofty pile, containing eight bells. The town-hall is a large commodious brick building, being in part occupied by the prison; on the ground-floor are butchers' stalls; and, above, is the council-chamber, for transacting public business. There are also in Kidderminster a Presbyterian meeting-house, two good free

schools, a charity-school, and two alms-houses &c. It is governed by a bailiff, twelve burgesses, twenty-five common councillors, &c. And sends one member to parliament. By the inland navigation it has communication, by the junction of the Severn canals, with the rivers Mersey, Dee, Ribble, Ouse, Trent, Derwent, Severn, Humber, Thames, Avon, &c.; which navigation, including its windings, extends above 500 miles, in the counties of Lincoln, Nottingham, York, Lancaster, Westmoreland, Chester, Stafford, Warwick, Leicester, Oxford, Worcester, &c. The parish extends to Bewdly Bridge, has a weekly market, and three fairs.

KIDDLE, or **KIDEL**, a dam or wear in a river with a narrow cut in it, for laying pots or other engines to catch fish. The word is ancient; for in *Magna Charta*, cap. 24, we read, *Omnes kidelli deponantur per Thamesiam et Medweyam, et per totam Angliam, nisi per costeram maris*: And by king John's charter power was granted to the city of London, *de kidellis amovendis per Thamesiam et Medweyam*. A survey was ordered to be made of the wears, mills, stanks, and kiddles, in the great rivers of England, 1 Hen. IV. Fishermen of late corruptly call these dams kettles; and they are much used in Wales, and on the coasts of Kent.

KID'NAP, *v. a.* From Dut. *kind*, a child, and *nab*. To steal children; to steal human beings.

KID'NAPPER, *n. s.* From *kidnap*. One who steals human beings; a manstealer.

The man compounded with the merchant upon condition that he might have his child again; for he had smelt it out, that the merchant himself was the *kidnapper*. *L'Estrange*.

These people lye in wait for our children, and may be considered as a kind of *kidnappers* within the law.

Spectator.

KIDNAPPING the forcible abduction or stealing away of man, woman, or child, from their own country, and sending them into another. This crime was capital by the divine law: see *Exodus* xxi. 16. So likewise, in the civil law, the offence of stealing men and children, which was called *plagium*, and the offenders *plagiarii*, was punished with death. This is unquestionably a very heinous crime, as it robs the king of his subjects, banishes a man from his country, and may in its consequences be productive of the most cruel and disagreeable hardships; and therefore the common law of England has punished it with fine, imprisonment, and pillory. And also the statute 11 and 12 W. III., c. 7, though principally intended against pirates, has a clause that extends to prevent the leaving such persons abroad as are thus kidnapped or spirited away; by enacting, that if any captain of a merchant vessel shall (during his being abroad) force any person on shore, or wilfully leave him behind, or refuse to bring home all such men as he carried out, if able and desirous to return, he shall suffer three months' imprisonment.

KIDNEY, *n. s.* Goth. *kiud*, the belly, probably, and Sax. *nar*, the reins. A gland in the ABDOMEN. See that article.

A youth laboured under a complication of diseases, from his mesentery and *kidneys*.

Wiseman's Surgery.

Sort; kind: in ludicrous language.

Think of that, a man of my *kidney*; think of that, that am as subject to heat as butter; a man of continual dissolution and thaw. *Shakspeare.*

There are millions in the world of this man's *kidney*, that take up the same resolution without noise. *L'Estrange.*

KIDNEY, in anatomy, an abdominal viscus, shaped like a kidney-bean, that secretes the urine. There are two kidneys. One is situated in each lumbar region, near the first lumbar vertebra, behind the peritonæum. This organ is composed of three substances; a cortical, which is external, and very vascular; a tubulous, which consists of small tubes; and a papillous substance, which is the innermost. The kidneys are generally surrounded with more or less adipose membrane, and they have also a proper membrane, membrana propria, which is closely accreted to the cortical substance. The renal arteries, called also emulgents, proceed from the aorta. The veins evacuate their blood into the ascending cava. The absorbents accompany the blood-vessels, and terminate in the thoracic duct. The nerves of the kidneys are branches of the eighth pair and great intercostal. The excretory duct of this viscus is called the ureter. See **ANATOMY**.

KID'NEYBEAN, *n. s.* *Phaseolus*: so named from its shape. A leguminous plant.

Kidneybeans are a sort of cod ware, that are very pleasant wholesome food. *Mortimer's Husbandry.*

KIDNEY-BEAN. See **PHASEOLUS**.

KID'NEYVETCH, *n. s.* *Anthyllis*. A plant.

KID'NEYWORT, *n. s.* *Cotyledon*. A plant.

KIDNEY-WORT. See **SAXIFRAGA**.

KIEL, a considerable town of Denmark, the capital of the duchy of Holstein, with a castle, and a university founded in 1665. It stands upon a small peninsula in a bay of the Baltic, and has a very commodious harbour. It is one of the largest and most commercial places in Holstein; and the neighbourhood is better cultivated than any other parts of the duchy. By its canal, which unites the Northern Sea with the Baltic, the whole duchy has been improved and enriched. See **DENMARK**. The imports are cotton, sugar, coffee, tobacco, and salt; the exports, corn, butter, cheese, and bacon; but ship-building and mercantile agency are the principal occupations. Hats, tobacco, starch, and sugar refining, are the only manufactures. A great annual fair takes place in January; at other times Kiel displays little activity. The environs are beautiful. Population about 7000. Kiel is twenty-six miles south-east of Sleswic, and fifty-one north of Hamburg.

KIEMA, a promontory of Switzerland, on the west shore of the lake of Zug; of which the ground belongs to the canton of Lucern, and the wood to that of Zug.

KIEN-LONG, late emperor of China, was born in 1710, and, in 1735, succeeded his father, Yuntschin. Until 1759 he reigned in peace; then he engaged in war with the Songarians, and, taking possession of Calmuc Tartary, extended his dominions to the frontiers of Siberia. This gave him also the command of Thibet. He was now in his turn invaded by the sovereign of Ava, but the attempt finally failed. Kien-Long favored

privately the Christian religion it is said: the missionaries were however obliged to proceed with caution. Several of them were in the emperor's immediate service. On the suppression of the Jesuits, China being less visited by Europeans than heretofore, Kien-Long sent to Canton, and invited to his capital artists and learned men, particularly astronomers, of all the European nations. He possessed on his own part a taste for poetry and natural history; of which we have specimens in his panegyrics on the tea-plant, and on the city of Moukden, both of which have been translated into French by father Amiot. He supplied also a version of a poem by the emperor, on the conquest of Calmuc Tartary. Kien-Long engaged some French artists to copy the Chinese paintings of his victories; but Louis XV. had them engraved for him at his own expense. This emperor established a library of no fewer than 600,000 volumes; and admitted three books, written by the Jesuits, on the Christian religion. A description of the Chinese empire, which appeared in Busching's Magazine, was compiled by his order. He died at Pekin in 1786, after a reign of half a century.

KIERNANDER (John Zechariah), an early missionary of modern times, was born November 21st, 1711, at Akslad, in Sweden, and educated in the school of Lindkoping, and the university of Upsal. At the age of twenty-four he went to Halle, where he was patronised by professor Franke, who recommended him to the London Society for promoting Christian Knowledge. He was accepted as a missionary to the East; and, in 1740, arrived at Cuddalore, as colleague to Mr. Guester; but in 1744, on the removal of that gentleman to Madras, he had the sole charge of the mission. In 1749 Mr. Kiernander preached, in one day, a sermon in the same church, to the English, Tamilian, and Portuguese congregations there. In 1758, on the surrender of Cuddalore to the French, he went to Tranquebar; whence he removed to Calcutta, where he opened a school, and preached sometimes in English, at others in German, and occasionally in Portuguese. His celebrity was so great, that the emperor Shah Aulum solicited from him copies of the Psalter and New Testament in Arabic. In 1767 Mr. Kiernander laid the foundation of a church at Calcutta, which was opened in 1770, under the name of Beth Tephillah. The cost, which was about £8000, fell almost wholly upon himself: he also erected, close to it, a school capable of holding 250 children. Becoming however, by this means, involved in debt, the church which he built was seized, and would have been desecrated, had not the late Mr. Grant purchased it, and placed it in trust for pious uses. Mr. Kiernander, after this, officiated as chaplain to the Dutch at Chinsurah; but when that settlement was taken, in 1795, he became a prisoner of war to the English, and returned to Calcutta, where he died, April 10th, 1799.

KIEV, a government of the south-west of European Russia, comprising a part of the Ukraine, and bounded by the provinces of Podolia, Volhynia, Minsk, Tschernigov, and Poltava, from which last it is separated by the Dnieper. As constituted by the emperor Paul, in 1797, it

consisted of a territory lying on both sides of the Dnieper; but a subsequent arrangement by the emperor Alexander has given all the part on the east side of that river to the government of Tschernigov and Poltava; while that of Kiev received a large addition out of Poland on the west. It lies between $28^{\circ} 40'$ and $33^{\circ} 25'$ of E. long., and $48^{\circ} 30'$ and $51^{\circ} 50'$ of N. lat.; and has a territorial extent of 21,000 square miles. It is divided into twelve circles, and contains seventy-seven, great and small, towns. The surface is level, and the soil produces abundance of corn for exportation, and hemp, flax, fruit, and vegetables. It abounds also in pasturage, and exports a number of cattle and horses; honey, and Polish cochineal. The population is scattered, and the manufactures are few and small. The commerce of the country is chiefly in the hands of Jews. Population about 1,000,000.

KIEV, KIOV, or KROW, the capital of the preceding province, stands on an acclivity on the right bank of the Dnieper, and consists properly of three towns, viz. the Old Town, Podol or the Lower Town, and the fortress of Petscherski. The three parts are connected by entrenchments; but the last alone is regularly defended. Here are barracks, magazines, officers' houses, several churches, and a government-house, with public gardens. Below the monastery, founded in the eleventh century, are a number of subterranean vaults, divided into apartments and chapels, in which are kept a number of corpses in an undecayed state, the relics of saints and martyrs. In the old town is the residence of a Greek archbishop; and a cathedral. Agriculture, and the distilleries of Kiev, are the chief employments of the town and neighbourhood. Here is also a gymnasium, and an old established high-school, which formerly bore the name of an academy. It was erected into a university in 1803.

This dull town was founded, it is said, in 430, and it was long the capital of the kingdom of Russia. It fell, in 1240, into the hands of the Tartars, and afterwards into those of the Lithuanians and Poles; but was restored to Russia in the latter part of the seventeenth century; and the church of St. Sophia, being the earliest Christian church in Russia, has always been an object of great interest. Eighty-three miles east of Zytomiers, and 270 north by west of Cherson.

KIGGELARIA, in botany, bastard euonymus: a genus of the decandria order, and diœcia class of plants; natural order thirty-seventh, columniferæ. Male CAL. quinquepartite: COR. pentapetalous; there are five trilobous glandules; the antheræ are perforated at top. Female CAL. and COR. in the male; there are five styles: CAPS. unilocular, quinquevalved, and polyspermous. There is but one species, viz. K. Africana. It has an upright woody stem, and purplish branches, growing fifteen or eighteen feet high; obovate, serrated, alternate leaves; and diœcious, greenish-white flowers, in clusters from the sides of the branches; succeeded by globular rough fruit, the size of cherries, containing the seeds, which seldom ripen here. Being a native of warm climates, it must be constantly kept in a stove in this country. It is propagated by seeds, layers, or cuttings, but most readily by seeds.

KILDA (St.), one of the Western Islands of Scotland. It lies in the Atlantic, and is about three miles long from east to west, and two broad from north to south. The soil is better calculated for pasture than tillage. The natives prefer rearing sheep, and killing wild fowl, to the more toilsome business of husbandry. All the ground hitherto cultivated in this island lies round the village. The soil is thin, full of gravel, and naturally poor; but it is, however, rendered extremely fertile by the industry of the husbandmen, who manure every inch of their ground, so as to convert it into a kind of garden. Barley and oats are the only sorts of grain known at St. Kilda. Potatoes have been but lately introduced, and only small quantities raised. On the east side of the island, a quarter of a mile from the bay, lies the village, where the whole inhabitants of the island live together. Their houses are built in two rows, regular, and facing one another, with a tolerable causeway in the middle. These habitations are flat in the roof, or nearly so. The island being peculiarly subject to violent squalls and hurricanes, were their houses raised higher the first winter storm would bring them down about their ears. The walls are made of a rough gritty kind of stones huddled together, without lime or mortar, from eight to nine feet high. Their method of catching wild fowl is remarkable. The men are divided into fowling parties, each consisting of four persons distinguished for their agility. Each party must have at least one rope, about thirty fathoms long, made of a strong raw cow's hide, salted and cut circularly into three thongs of equal length, which, being closely twisted together, form a three-fold cord, able to sustain a great weight, and durable enough to last for two generations. To prevent the injuries it would receive from the sharp edges of the rocks, against which they often strike, the cord is covered with sheep skins, dressed in the same manner. This rope is the most valuable implement of which, in St. Kilda, a man can be possessed. In a testament it makes the first article in favor of the eldest son; should it fall to a daughter's share it is reckoned equal in value to two good cows. By the help of such ropes people, linked together in couples, each having either end of the cord fastened about his waist, go frequently through the most dreadful precipices: when one of the two descends, his colleague sets himself on a strong shelf, and takes care to have such sure footing that, if his fellow adventurer makes a false step, he may be able to save him.

KILDARE, a county of Ireland, bounded on the north by Meath, on the east by Dublin and Wicklow, on the south by Carlow, and on the west by King's and Queen's Counties. It is about forty-one miles long, and twenty-seven broad, and contains 392,397 English acres; of which four-fifths are arable, meadow, and pasture, and the remainder bog. It is in the province of Leinster, and archbishopric of Dublin: and there are fourteen baronies and half baronies, in all, in this county, subdivided into 113 parishes.

The surface of Kildare is undulating, and often presents a pleasing landscape: but its

climate is thought to be more humid than that of any other part of Ireland. On the west the bay of Allen and similar tracts occupy the greater part of the county.

Its rivers are the Liffey, Boyne, and Barrow; and it enjoys the advantages of the Grand and Royal Canals. The former, entering it from the north-east, proceeds in a west and north-west direction, till it passes into King's County. At Lowton a branch leaves the main trunk, and advances to the town of Athy, on the south-west boundary, and from this the navigation is continued southward on the river Barrow, which, soon after leaving Athy, becomes the boundary with Queen's County. The Royal Canal passes through its northern quarter from east to west, and then enters the county of Meath. The Boyne and Barrow rise in the bog of Allen and its neighbourhood.

Potatoes are every where cultivated: with regard to scientific agriculture, the course of cropping, with few exceptions, is the same as it has been for a century, viz. fallow, wheat, oats. Oxen are employed in ploughing, and horses for carriages; but in many instances four or six of these animals are mixed together in the plough. Mules are also kept on many farms. The rent of the arable and pasture land in 1807 was estimated at a little more than 20s. the Irish acre.

The great landowner of the county is the Duke of Leinster: it sends two members to the imperial parliament, but has no borough nor large towns. Common labor is said by Mr. Wakefield to yield 1s. 6d. a-day for men, and 10d. for women and children; and in hay and corn harvest 2s. 8d. Potatoes were at this time 5d. a stone, beef and mutton 6d. per pound, oatmeal 18s. per cwt. milk per quart 2d., and butter-milk ½d. in summer, and ¾d. in winter. Under these circumstances the population has doubled since 1790; and the Catholics are to the Protestants in the proportion of thirty to one. Athy on the Barrow in the south-west of the county, and Naas on the north-east, are alternately the assize towns; the others are Kildare, Monasterevan, Castle Dermot, on the south and west; Leixlip, Maynooth, and a few others, on the north and east. At Cellbridge on the Liffey is a small woollen manufactory. At Maynooth about 200 Catholic students are trained for the priesthood, and accommodated with lodgings and commons. Each pays a small sum as entrance money, which, with other expenses, may amount to £20 a year; the general charges of the establishment being supported by an annual parliamentary grant.

KILDARE, the county town, is situate on a rising ground, twenty-five miles south-west of Dublin, and is celebrated for its Curragh, the Newmarket of Ireland. This common, or lawn, containing nearly 5000 acres of the softest turf, on a fine dry loam, is generally covered with flocks of sheep. It was once a forest of oaks. The races are held in April, June, September, and October. Here was a celebrated nunnery, founded about the year 584 by St. Bridget. This place is also noted for the remains of other religious houses; and a round tower in good preservation, 130 feet high, built of white granite to about twelve feet above the ground, the rest

being of blue stone; the door is fourteen feet from the ground.

KIL'DERKIN, *n. s.* Dut. *kindekin*, a baby, says Dr. Johnson; but more probably from Lat. *quatuor*, four: as Teut. *chotern*, chaldron. A small barrel; the fourth part of a hog'shead.

Make in the *hilderkin* a great bung-hole of purpose.

Bacon.

A tun of man in thy large bulk is writ;
But sure thou'rt but a *hilderkin* of wit.

Dryden.

KILIAN (Lucas), an eminent German engraver, born at Augsburg, who flourished at the beginning of the seventeenth century. His style of engraving bears no small resemblance in many particulars to that of Henry Goltzius, and of John Mullar his disciple. He went to Italy to complete his studies. Few artists have manifested a greater command of the graver than Kilian, whether we consider the facility with which the strokes are turned upon each other, or the firmness with which they are executed; though, by paying too close attention to this part of the art, he neglected the correctness of the outlines, and fatigued the lights with unnecessary work; by which means he broke the masses, and often destroyed the effect of his prints. The naked parts of the human figure are seldom well expressed: the extremities especially are in general heavy, and sometimes incorrect. Upon the works of this master, however, it appears that Balechou formed his taste. His works are exceedingly numerous. There were several other engravers of the same name and family, but of inferior merit.

KILKENNY, a county of Ireland, in the province of Leinster, bounded on the south by that of Waterford, north by Queen's county, west by that of Tipperary, east by those of Wexford and Catherlogh, and north-west by Upper Ossory. Its greatest length from north to south is thirty-eight miles; and breadth from east to west eighteen. It contains ten baronies, and is one of the most healthy, pleasant, and populous counties in Ireland. It contains 287,650 Irish acres, 172 parishes, and one borough.

KILKENNY, the capital of the above county, lies seventy-five miles south-west of Dublin. It was named from the cell or church of Canice, a learned monk of this county; and is one of the most elegant cities in the kingdom. It is the seat of the bishop of Ossory, which was translated from Agabo in Ossory, about the end of Henry II.'s reign, by bishop O'Dullany. The city is pleasantly situated on the Neor, a navigable river that runs into the harbour of Waterford. It is said that its air is without fog, its water without mud, its fire without smoke, referring to the well-known Kilkenny coal, and its streets paved with marble, of which there are large quarries near the town. Its color is black, it takes a fine polish, and is beautiful, intermixed with white granite. The air too is very salubrious. The city is governed by a mayor, recorder, aldermen, and sheriffs. This city was once a place of great importance, as appears by the venerable ruins yet remaining of churches, monasteries, and abbeys; which, even in their dilapidated state, exhibit such specimens

of taste in architecture, as may vie with any modern improvements, and the remains of its gates, towers, and walls, show it to have been a place of great strength. Here too parliaments were anciently held. It has two churches, and several catholic chapels; barracks for a troop of horse and four companies of foot; a market twice a week, and seven fairs. The cathedral, which stands in a sequestered situation, is a venerable Gothic pile. The bishop's palace is a handsome building, and communicates by a covered passage with the church. The castle was built in 1195, on the site of one destroyed by the Irish in 1173. The site was originally a conoid, the elliptical side abrupt and precipitous, with the river running rapidly at its base; here the natural rampart was faced with a wall of solid masonry forty feet high; the other parts were defended by bastions, curtains, towers, and out-works; and on the summit the castle was erected, which is now in the possession of the Ormond family. The college, originally founded by the Ormond family, has been rebuilt in an elegant style. There are two very fine bridges of cut marble over the Nore. The Ormond family also built and endowed a free school in this city. Here are the ruins of three old monasteries, called St. John's, St. Francis's, and the Black Abbey. The chief manufactures are, coarse woollen clothes, fine blankets, and of starch. The Kilkenny coal-pits are within nine miles of the town. This city was incorporated by James I. in 1609. The borough of St. Canice, or Irishtown, enjoyed very ancient prescriptive rights. A close roll, of 5 Edward III. A. D. 1376, forbids the magistrates of Kilkenny to obstruct the sale of victuals in the market of Irishtown; and, lest the ample grants made to Kilkenny might be interpreted to include Irishtown, the corporation of the latter secured their ancient rights by letters patent, 15 Edward IV. A. D. 1474. These renew their former privileges, and appoint a portrieve to be chosen every 21st September, and sworn into office on the 11th October. The portrieve's prison was at Troy-gate. Whenever the mayor of Kilkenny came within Water-gate, he lowered the point of the city sword, to show he claimed no pre-eminence within the borough.

KILL, *v. a.* } Anciently to quell. Saxon
 KILLER, *n. s.* } cpellan; Dut. *kelen*. To deprive of life; to put to death, as an agent; to destroy animals for food; to deprive of life as an instrument; to deprive of vegetative life. Killer, one who destroys life.

Ye have brought us forth into this wilderness, to *kill* this whole assembly with hunger.

Exodus xvi. 3.

Shall I take my bread and my flesh, that I have *killed* for my shearers.

1 Sam. xxv. 11.

But at the lest—though I therewith me *kill*—
 I shall not spare to wail and wepe my fill.

Chaucer. Lament of Mary Magdaleine.

Wilt thou for the old lion hunt, or fill

His hungry whelps? and for the *killer kill*,

When couched in dreadful dens? *Sandys.*

Darest thou resolve to *kill* a friend of mine?

—Please you, I'd rather *kill* two enemies.

Shakspeare. Richard III.

Try with oil, or barm of drink, so they be such things as *kill* not the bough.

Bacon.

The medicines, if they were used inwards, would *kill* those that use them; and therefore they work potently, though outwardly.

Bacon.

What sorrow, what amazement, what shame was in Amphialus, when he saw his dear foster-father find him the *killer* of his only son!

Sidney.

So rude a time,

When love was held so capital a crime,
 That a crown'd head could no compassion find,
 But died, because the *killer* had been kind.

Waller.

If *kill*ing birds be such a crime,

(Which I can hardly see,)

What think you, Sir, of *kill*ing time,

With verse addressed to me!

Cowper. Beau's Reply.

When the rich soil teemed with youth's generous flowers,

I felt thee, sunshine.—Now thy rayless light,

Falls like the cold moon on a blasted heath,

Mocking thy desolation.—Speak thy vow—

I will not chide thee if the words should *kill* me.

Maturin. Bertram.

Would that the hour were come! we will not *kill* it,

But *kill*.

Byron. Marino Faliero.

KILLALA, a sea-port of Ireland, in the county of Mayo, formerly a bishop's see, twenty-one miles north of Castlebar. This town, during the rebellion, suffered much by the depredations of both rebels and loyalists: but the bishop of Killala, who was himself a very loyal subject, says that the latter were by far the most unmerciful; plundering, burning, and destroying wherever they went.

KILLALOE, a town and once a bishop's see in the county of Clare and province of Munster, in Ireland, one hundred and ten miles from Dublin, otherwise called Lounia. It was anciently written Kill-da-Lua, i.e. the church of Lua, from Lua, or Molua, who, about the beginning of the sixth century, founded an abbey near this place. St. Molua appears to have derived his name from Loania, the place of his residence, as was customary amongst the ancient Irish. On the death of St. Molua, St. Flannan his disciple, and son of the chief of the district, was consecrated bishop of this place at Rome about A. D. 639, and the church endowed with considerable estates, by his father Theodorick. Towards the close of the twelfth century, the ancient see of Roscrea was united to that of Killaloe. At Killaloe is a bridge over the Shannon of nineteen arches; and here is a considerable salmon fishery. There are many ancient buildings in and about this town. The cathedral is a Gothic edifice in form of a cross, with the steeple in the centre, supported by four arches; it was built by Donald, king of Limerick, in 1160. There is a building near it, once the oratory of St. Molua; and there is another of the same kind in an island on the Shannon, having marks of still higher antiquity. The see-house of the bishop is at Clarisford, near to Killaloe. Adjoining to the cathedral are yet the remains of the mausoleum of Brien Boru.

KILLARNEY, a post-town of Ireland, in the county of Kerry and province of Munster, seated near Lough Lean, or the Lake of Killarney. It is 224 miles from Dublin, and has two fairs. Within a mile and a half of this place are the

ruins of the cathedral of Aghadoe, an ancient bishopric united to Ardferit.

KILLARNEY, a beautiful lake of Ireland, in the county of Kerry, otherwise called Lough Lean, from its being surrounded by high mountains. It is divided into three parts, called the Lower, Middle, and Upper Lake. The northern, or lower lake, is six miles in length, and from three to four in breadth. On the side of one of the mountains is O'Sullivan's Cascade, which falls into the lake with a tremendous roar. The view of this sheet of water is uncommonly fine, appearing as if it were descending from an arch of wood, which overhangs it above seventy feet in height from the point of view. The islands are not so numerous in this as in the upper lake; but there is one of uncommon beauty, called Innisfallen, nearly opposite O'Sullivan's Cascade. The shore is formed into a variety of bays and promontories. Among the distant mountains Turk appears an object of magnificence; and Mangerton's more lofty, though less interesting summit, soars above the whole. Here is a celebrated rock, called the Eagle's Nest, which produces wonderful echoes; the report of a single cannon is answered by a succession of peals resembling the loudest thunder, which seem to travel the surrounding scenery, and die away among the distant mountains. The upper lake is four miles long, and from two to three broad. It is almost surrounded by mountains, from which descend a number of beautiful cascades. The islands in this lake are numerous, and afford an amazing variety of picturesque views. The centre lake, which communicates with the upper, is small in comparison with the other two, and cannot boast of equal variety; but the shores are, in many places, indented with beautiful bays, surrounded by dark groves of trees. The east boundary is formed by the base of Mangerton, down the steep side of which descends a cascade, visible for 150 yards. This fall of water is supplied by a circular lake near the summit of the mountain, called the Devil's Punch-Bowl; which, on account of its immense depth, and the continual overflow of water, is considered as one of the greatest curiosities in Killarney. One of the best prospects which this admired lake affords, is from a rising ground near the ruined cathedral of Aghadoe.

KILLAS, a genus of stones belonging to the argillaceous class, found chiefly in Cornwall in England. Its texture is either lamellar or coarsely granular; the specific gravity from 2630 to 2666. It contains sixty parts of siliceous earth, twenty-five of argillaceous, nine of magnesia, and six of iron. The greenish kind contains more iron, and gives a green tincture to the nitrous acid.

KILLICRANKIE, a noted pass of Perthshire, formed by the lofty mountains impending over the Garrie, which rushes through a deep, darksome channel beneath. In the last century this was a pass of much danger and difficulty; a path hanging over a tremendous precipice, threatened the traveller with destruction upon the least false step. At present a fine road, formed by the soldiery, gives an easy access to the Highlands; and the two sides are joined by

a fine arch. Near the north end of this pass, in its open and unimproved state, was fought, in 1689, the battle of Killicrankie, between the adherents of James II. under viscount Dundee, and of William III. under general Mackay. Dundee's army was very much inferior to that of Mackay's. When he came in sight of the latter, he found them formed in battalions ready for action. They consisted of 4500 foot, and two troops of horse. The Highlanders, under Dundee, amounted to little more than half that number. These he ranged instantly in order of battle. Maclean, with his tribe, formed the right wing. The Macdonalds of Sky, under their chieftain's eldest son, formed the left. The Camerons, the Macdonalds of Glengary, the followers of Clanronald, and a few Irish auxiliaries, were in the centre. A troop of horse was placed behind, under Sir William Wallace. The officers sent by James from Ireland were distributed through the whole line. His whole army stood in sight of the enemy for several hours on the steep side of a hill which faced the narrow plain where Mackay had formed his line. Dundee wished for the approach of night; a season suited for either victory or flight. At 5 P. M. a kind of slight skirmish began between the right wing of the Highlanders and the left of the enemy. But, neither army wishing to change their ground, the firing was discontinued for three hours. Dundee in the mean time flew from tribe to tribe, and animated them to action. At eight he gave the signal for battle, and charged the enemy in person at the head of the horse. The Highlanders, in deep columns, rushed suddenly down the hill. They kept their shot till they were within a pike's length of the enemy; and having fired their muskets, fell upon them sword in hand. Mackay's left wing could not for a moment sustain the shock. They were driven by the Macleans with great slaughter from the field. The Macdonalds on the left of the Highlanders were not equally successful. Colonel Hastings's regiment of foot stood their ground. They even forced the Macdonalds to retreat. Maclean with a few of his tribe, and Sir Evan Cameron at the head of his clan, fell suddenly on the flank of this gallant regiment, and forced them to give way. The slaughter ended not with the battle; 2000 fell in the field and the flight. The tents, baggage, artillery, and provisions of the enemy, and even king William's Dutch standard, which was carried by Mackay's regiment, fell into the hands of the Highlanders. The victory was now complete. But the Highlanders lost their gallant leader. Perceiving the unexpected resistance of colonel Hastings's regiment, and the confusion of the Macdonalds, Dundee rode rapidly to the left wing. As he was raising his arm, and pointing to the Camerons to advance, he received a ball in his side. The wound proved mortal; and with Dundee fell all the hopes of king James.

KILLIGREW (Thomas), son of Sir Robert Killigrew, knight, was born in 1611. He was page of honor to king Charles I., and groom of the bed-chamber to Charles II., with whom he suffered many years exile; during which he applied his leisure hours to the study of poetry, and

to the composition of several plays. After the Restoration he continued in high favor with the king; and, while he exercised his privilege as a jester, often uttered bold and useful truths. One anecdote will afford a specimen. One day Killigrew called on the king in his private apartments, habited like a pilgrim who was bent on a long journey. The king, surprised at the oddity of his appearance, asked him what was the meaning of it, and whether he was going? 'To fetch back Oliver Cromwell,' rejoined he, 'that he may take some care of the affairs of England, for his successor takes none at all.' Killigrew died in 1682, and was buried in Westminster Abbey.

KILLILEAGH, or **KILLY-LEAGH**, a town of Ireland, in the county of Down, eighty miles north-east from Dublin. It is the principal town in the barony of Duffrin; and seated on an arm of the lake of Strangford, from which it is supplied with a great variety of fish. The Hamiltons, earls of Clanbrassil, had a castle here at the upper end of the great street; at the lower end is a small bay, where ships lie sheltered from all winds; in the town are some good houses, a horse barrack, and a presbyterian meeting-house. On an eminence at a small distance from the town is a handsome church in the form of a cross. This place suffered much in the year 1641. A linen manufacture is carried on in it, and fine thread made, for which there is a great demand. The celebrated Sir Hans Sloane was born here, and his father Alexander Sloane was at the head of the Scottish colony which king James I. settled in it. The town was incorporated by that monarch.

KILLOUGH, or **Port St. Ann's** a sea-port town of Ireland, in the county of Down, seventy-six miles from Dublin. It lies north of St. John's Point, and has a good quay, where ships lie very safe. The town is agreeably situated; the sea flowing close by the houses, where ships ride in full view of the inhabitants. It has a good church, and a horse barrack, with good fishing in the bay; but the principal trade consists in the exportation of barley, and the importation of commodities for the adjacent country. A manufacture of salt is also carried on, and five fairs held in it. Near the town is a chartered working-school for the reception of twenty children. There is a remarkable well here, called St. Scordin's well, highly esteemed for the extraordinary lightness of its water. It gushes out of a high rocky bank upon the shore, and never diminishes its quantity in the driest season. There is also a mineral spring near the school, the waters of which are both purgative and emetic. At a small distance from the town near the sea is a rock in which there is an oblong hole, whence, at the ebbing and flowing of the tide, a strange noise is heard, resembling the sound of a huntsman's horn. The harbour is tolerably safe and commodious; some degree of caution is however necessary in entering it, for a rock stands in the middle of the entrance covered at half flood, commonly called the water rock. Either to the east or west of this rock is a secure passage, the inlet lying south by east and north by west. On the west side of the rock, open to Couey Island, is a strong quay,

and a basin for ships, where they are defended from all winds, within which the harbour on both sides affords good anchorage for vessels of 150 tons. At the end of the quay the channel is 400 yards wide.

KIL'LOW, *n. s.* This seems a corruption of coal, and low a flame, as soot is thereby produced.

An earth of a blackish or deep blue colour, and doubtless had its name from *hollow*, by which name, in the North, the smut or grime on the backs of chimneys is called. *Woodward.*

KILLYBEGS, a borough of Ireland, in the county of Donegal, and province of Ulster, 123 miles from Dublin. It is situated on the north side of Donegal Bay; but is a place of no great trade, though it has a harbour spacious enough to contain a large fleet; it has a bold and ample opening to the sea on the south, and is secured within by the shelter of high lands surrounding it: so that vessels may enter at any time of the tide, there being from five to eight fathom water. The herring fishery is the most considerable of any carried on here. It has two fairs.

KILMALLOCK, a town of Ireland, in the county of Limerick, sixteen miles from Limerick, and 107 from Dublin.—This town makes a conspicuous figure in the military history of Ireland. In the sixteenth century it was a populous place; and the remains of the wall, which entirely surrounded the town, are still to be seen. Edward the VI. granted a charter to it with many privileges, as did queen Elizabeth another, dated 24th of April 1584. In 1598 it was invested by the Irish forces, when the earl of Ormond hastened to its relief, and arrived in time to raise the siege: here was also some contest during the grand rebellion in 1641 and 1642. By an inquisition, 11th of August 29 Eliz. it appears that there had been an abbey in Kilmallock, called Flacisphaghe; on which a stone house was erected. Sir James Ware informs us that an abbey of Dominicans, was built here in the thirteenth century by the sovereign, brethren, and commonalty. The parish church was formerly an abbey for regular canons, founded by St. Mochoallog, who died between the years 639 and 656. A fair is held on Whitsun-Tuesday.

KILMARNOCK, a populous and flourishing town of Ayrshire, noted for its manufacture of carpets, milled hosiery, and Scotch bonnets. It is a burgh of barony, governed by two bailies and seventeen councillors. Its first charter was granted in 1541, in favor of Thomas lord Boyd; its second in 1572, to William earl of Kilmarnock. In 1700 the magistrates obtained a grant from the Kilmarnock family of the whole common good, customs, &c., of the burgh. It has five incorporations, and two flourishing public schools, besides many private ones. In 1810 two acts of parliament were passed for paving, lighting, and watching the burgh and suburbs, for erecting a bridewell and a work-house, and for various other purposes of public utility. Among the other edifices, built under these acts, are an elegant new town-house, an academy, and coffee-room. It is fifteen miles south-west of Glasgow.

KILMORE, a bishop's see of Ireland in the county of Cavan. It was called in former ages

Clunes, or Clunis, i. e. the sequestered place; and is situated near Loch Ern. St. Fedlimid founded this bishopric in the sixth century; it was afterwards removed to an obscure village called Triburna: where it continued until 1454, when Andrew Mac-Brady, bishop of Triburna, erected a church on the site of that founded by St. Fedlimid, to whose memory it was dedicated, and named Kilmore, or the great church. At present there is neither cathedral, chapter, nor canon, belonging to this see, the small parish church contiguous to the episcopal house serving the purpose of a cathedral.

KILN, *n. s.* Sax. *cýln*; Swed. *kolna*; Lat. *culina*, an oven. A stove; a fabric formed for admitting heat, in order to dry or burn things contained in it.

I'll creep up into the chimney.—There they always use to discharge their birding-pieces: creep into the *kin* hole. *Shakspeare.*

After the putting forth in sprouts, and the drying upon the *kin*, there will be gained a bushel in eight of malt. *Bacon.*

Physicians chuse lime which is newly drawn out of the *kin*, and not slacked.

Moxon's Mechanical Exercises.

KILN'DRY, *n. a.* Kiln and dry. To dry by means of a kiln.

The best way is to *kin*dry them. *Mortimer.*

KILWORTH, a town of Ireland, in the county of Cork, 108 miles south-west of Dublin. It is a flourishing place, with six fairs and a good church, at the foot of a large ridge of mountains called Kilworth mountains, through which a good turnpike road is carried from Dublin to Cork; below the town runs the river Funcheon, which is well stored with salmon and trout, and a mile south of this runs into the Blackwater. At this place is Moorpark, the superb seat of lord Mountcashel; and near it stands the castle of Clough-leagh, boldly situated on the Puncheon, and which has stood several sieges.

KIMBO, *adj.* Ital. *a schembo*. Crooked; bent; arched.

And set his hand in *kenebowe*, he lakked never a faute. *Chaucer. The Merchantes Second Tale.*

The *kimbo* handles seemed with bear's-foot carved, And never yet to table have been served.

Dryden's Virgil.

He observed them edging towards one another to whisper; so that John was forced to sit with his arms a *kimbo*, to keep them asunder. *Arbuthnot.*

KIMCHI. We have three learned rabbies of this name in the twelfth, and the commencement of the thirteenth centuries. David and Moses were the sons of rabbi Joseph, born in Spain: all three were of considerable literary attainments; yet David exceeded both his father and brother in reputation. He is considered as the best grammarian of his nation. His known works are, a Grammar and Lexicon of the Hebrew tongue, which furnished Buxtorf with the materials for his Thesaurus, and Lexicon Linguae Hebraeae. His commentaries on the books of the Old Testament are also esteemed. His grammar first appeared at Venice in 1545, and was soon followed by a treatise on the Hebrew radicals. Rabbi David passed the principal part of his life in Narbonne, and in the schism which took place between the Spanish and French Jews in 1232, respecting

the books of Maimonides, was appealed to as an arbitrator. He lived to an extreme old age, and died in 1240. The best edition of his Dictionarium Talmudicum is that of 1506, folio.

KIN, *n. s.*

KIND, *adj. & n. s.*

KIND'LY, *adv. & adj.*

KIND'NESS, *n. s.*

KIN'DRED, *n. s. & adj.*

Sax. *cynne*; Lat. *gigno*; Greek *γενος*. } Relation of consanguinity or affinity; of the same race, family, or general class; a diminutive termination from kind, a child, Dutch; as manikin, minikin, Thomkin, Wilkin. Kind; benevolent; favorable; affectionate; bland; mild: kindness, benevolence; goodwill; love: kindly, in a courteous or benevolent manner: kind, race; general class; relation: kindred, relative; congenial; cognate. Kin' in Teutonic English answers to genus, and sort to species; though this distinction, in popular language, is not always observed: particular nature, manner, way, or sort.

And though so be that your *kinrede* be more stedefast and siker than the *kin* of your adversaries; yet natheles youre *kinrede* is but a far *kinrede*; they ben litel sibbe to you and the *kin* of youre enemies ben nigh sibbe to them: and, certes, as in that, hir condition is better than yours. *Chaucer. Tale of Melibeus.*

There mighten men the roiall egle finde,

That with his sharpe loke persieth the son;

And other egles of a lower kinde,

Of whiche that clerkes well devisen can.

Id. The Assemble of Fowles.

Thus far we have endeavoured in part to open of what nature and force laws are, according to their *kinds*. *Hooker.*

The burst

And the ear-deafening voice of the oracle,

Kin to Jove's thunder, so surprised my sense,

That I was nothing. *Shakspeare. Winter's Tale.*

I sometimes lay here in Corioli,

At a poor man's house: he used me kindly.

Shakspeare.

The skilful shepherd peeled me certain w nds,

And in the doing of the deed of *kind*,

He stuck them up before the fulsome ewes. *Id.*

An old mothy saddle, and the stirrups of no *kindred*. *Id.*

Tumultuous wars

Shall *kin* with *kin*, and *kind* with *kind* confound. *Id.*

He did give the goods of all the prisoners unto those that had taken them, either to take them in *kind*, or compound for them. *Bacon's Henry VII.*

You must use them with fit respects, according to the bonds of nature; but you are of *kin*, and so a friend to their persons not to their errors.

Id. Advice to Villiers.

Then is the soul from God; so pagans say,

Which saw by nature's light her heavenly *kind*,

Naming her *kin* to God, and God's bright ray,

A citizen of Heaven, to earth confined. *Davies.*

Like them their armour seemed full near of *kin*: In this they only differ; the' elder bent

His higher soul to Heaven; the younger twin

'Mongst mortals here his love and *kindness* spent.

Fletcher's Purple Island.

This competency I beseech God I may be able to digest into *kindly* juice, that I may grow thereby.

Hammond.

Nor needs thy juster title the foul guilt
Of Eastern kings, who, to secure their reign,
Must have their brothers, sons, and *kindred* slain.

Denham.

These soft fires

Not only enlighten, but with *kindly* heat,

Of various influence, foment and warm,
Temper or nourish. *Milton's Paradise Lost.*

As when the total *kind*
Of birds, in orderly array on wing,
Came summoned over Eden, to receive
Their names of thee. *Id.*

That both are animalia
I grant; but not rationalia;
For though they do agree in *kind*,
Specifick difference we find. *Hudibras.*

The odour of the fixed nitre is very languid; but
that which it discovers, being dissolved in a little hot
water, is altogether differing from the stink of the
other, being of *kin* to that of other alcalizate salts.
Boyle.

From Tuscan Coritum he claimed his birth;
But after, when exempt from mortal earth,
From thence ascended to his *kindred* skies
A god. *Dryden.*
Through all the living regions do'st thou move,
And scatterest where thou goest the *kindly* seeds of
love. *Id.*

The' unhappy Palamon,
Whom Theseus holds in bonds, and will not free,
Without a crime, except his *kin* to me. *Id.*
Some of you, on pure instinct of nature,
Are led by *kind* to' admire your fellow-creature.
Id.

The father, mother, and the *kin* beside,
Were overborne by fury of the tide. *Id.*
Some of the ancients, like *kind* hearted men, have
talked much of annual refrigeriums, or intervals of
punishment to the damned, as particularly on the
great festivals of the resurrection and ascension.
South.

God and Nature do not principally concern them-
selves in the preservation of particulars, but *kinds*
and companies. *Id. Sermons.*

His grief some pity, others blame;
The fatal cause all *kindly* seek. *Prior.*
Love and inclination can be produced only by an
experience or opinion of *kindness* to us.
Rogers's Sermons.

Some acts of virtue are common to Heathens and
Christians; but I suppose them to be performed by
Christians after a more sublime manner than among
the Heathens; and even when they do not differ in
kind from moral virtues, yet differ in the degrees of
perfection. *Atterbury.*

The tax upon tillage was often levied in *kind* upon
corn, and called decumæ, or tithes. *Arbuthnot.*

He with a hundred arts refined,
Shall stretch thy conquest over half the *kind*. *Pope.*
Ye heavens, from high the dewy nectar pour,
And in soft silence shed the *kindly* shower! *Id.*

Who, with less designing ends,
Kindlier entertain their friends;
With good words, and countenance sprightly,
Strive to treat them all politely. *Swift.*
Heaven born who bringest our *kindred* home again,
Rescued, and givest eternity to Troy,
Long have the Laurentum and the Latian plains
Expected thee.

Cowper. Translation from Virgil's Æneid.

The separation of chief friends
Is what their *kindness* most intends;
Their sport is your dissension. *Id. Friendship.*
What avails it?

The wretched have no country: that dear name
Comprises home, *kind kindred*, fostering friends,
Protecting laws, all that binds man to man—
But none of these are mine. *Maturin. Bertram.*
Ripped from all *kindred*, from all home, all things
That make communion sweet, and soften pain—
Byron. Prophecy of Dante.

I say he's innocent! And, were he not so,
Is our own blood and *kin* to shrink from us
In fatal moments? *Id. Two Foscari.*

KINCARDINE, a town of Perthshire, in the
parish of Tulliallan. It is seated on the banks
of the Forth, and was formerly called West Pans,
from fifteen salt pans, wherein a salt manufacture
was anciently carried on in it. It has a post-
office and two weekly markets on Wednesday
and Saturday. It has a good road-stead, where
100 vessels may ride with safety. They import
wood, iron, flax, linseed, &c., from Holland
and the Baltic; barley from England, &c., and
export coals to Norway, Sweden, &c., and some
of them are in the Mediterranean and Levant
trade. Vessels of 200 and 300 tons have been
ouilt here.

KINCARDINESHIRE, or MEARNs. See
MEARNs.

KIN'DLE, *v. a. & v. n.* } Saxon cyndelan;
KIN'D'LER, *n. s.* } Welsh cinnu. To
set on fire; to make to burn; to inflame the
passions; to exasperate; to heat or fire the
mind; to catch fire; to bring forth young in
rabbits: a kindler, one who lights a fire, or irri-
tates and exasperates.

He hath *kindled* his wrath against me, and counteth
me as one of his enemies. *Job xix. 11.*

When thou walkest through the fire, thou shalt not
be burnt, neither shall the flame *kindle* upon thee.
Isaiah xliii. 2.

He will take thereof, and warm himself; yea, he
kindleth it, and baketh bread. *Id. xlv. 15*

—, but his enimie

Had *kindled* such coles of displeasure,
That the good man nould stay his leasure,
But home him hasted with furious heate
Increasing his wrath with many a threate.
Spenser. Shepherdes Calendar.

I've been to you a true and humble wife;
At all times to your will conformable:
Ever in fear to *kindle* your dislike. *Shakspeare.*

Are you native of this place?
As the covey that you see dwells where she is *kindled*.
Id.

I was not forgetful of those sparks, which some
men's distempers formerly studied to *kindle* in par-
liaments. *King Charles.*

'Thus one by one *kindling* each other's fire,
'Till all inflamed, they all in one agree. *Daniel.*
Each was a cause alone, and all combined
To *kindle* vengeance in her haughty mind.

Dryden.
If the fire burns vigorously, it is no matter by
what means it was at first *kindled*: there is the same
force and the same refreshing virtue in it, *kindled* by
a spark from a flint, as if it were *kindled* from the sun.
South.

Now is the time that rakes their revels keep
Kindlers of riot, enemies of sleep. *Gay.*
There soon ye shall perceive a *kindling* flame,
Glow for that infant God from whom it came.

Cowper. Nativity.
Thou sun! which shinest on these things, and Thou!
Who *kindlest* and who quenchest suns!—Attest!
I am not innocent—but are these guiltless?

Byron. Marino Faliere.

KINDRED, in law, persons related to one an-
ther, whereof the law reckons three degrees of
lines viz. the descending, ascending, and collate-
ral lines. See CONSANGUINITY, and INHERIT-

ANCE. On there being no kindred in the descending line, the inheritance passes in the collateral one.

KINE, *n. s.* Sax. *cuna*; plur. of *cow*.

To milk the *kine*,

Ere the milk-maid fine

Hath opened her eyne.

Ben Jonson.

A field I went, amid' the morning dew,

To milk my *kine*.

Gay.

When Aulus the nocturnal thief made prize

Of Hermes, swift-winged envoy of the skies,

Hermes, Arcadia's king, the thief divine,

Who, when an infant, stole Apollo's *kine*.

Cowper. A Thief.

— in this blazing palace,

And its enormous walls of reeking ruin,

We leave a nobler monument than Egypt

Hath piled in her brick mountains, o'er dead kings

Or *kine*, for none know whether those proud piles

Be for their monarch, or their ox-god Apis.

Byron. Sardanapalus.

KING, *n. s. & v. a.*

Teut. *cuning* or *cyming*.

KING'DOM, *n. s.*

Sovereign dignity.

KING'LY, *adj.*

the primitive tongue it

KING'LIKE, *adj.*

signifies stout or valiant,

KING'SHIP, *n. s.*

the kings of most nations

being, in the beginning, chosen by the people on account of their valor and strength.—Verstegan.

Monarch; supreme governor; used by Bacon in the feminine: a card with the picture of a king:

king at arms, a principal officer at arms, that has the pre-eminence of the society; of whom there are three in number, viz. Garter, Norroy, and Clarenceux.—Phillips. King, to supply with a king; to make royal; to raise to royalty: king-

dom, the territories subject to a monarch; a particular class or order of beings, in the language of naturalists; a region or tract of country: kingly, kinglike, royal; like a monarch; noble; august; magnificent; of or belonging to a king; with an air of superior dignity: kingship, royalty; monarchy.

With Arcita, in stories as men find,

The great Emetrius the *King* of Inde,

Upon a stede bay, trapped in stele,

Covered with cloth of gold diaped wele,

Came riding like the god of armes, Mars.

Chaucer. The Knightes Tale.

The great *King* of *kings*

Hath in the table of his law commanded

That thou shalt do no murder.

Shakspeare. Richard III.

True hope is swift, and flies with swallows' wings;

Kings it makes gods, and meaner creatures *kings*.

Shakspeare.

I am far better born than is the *king*;

More like a *king*, more *kingly* in my thoughts.

Id.

The watery *kingdom* is no bar

To stop the foreign spirits; but they come,

As o'er a brook, to see fair Portia.

Id.

England is so idly *kinged*,

Her sceptre so fantastically borne,

That fear attends her not.

Id. Henry V.

Sometimes am I a *king*;

Then treason makes me wish myself a beggar,

And so I am: then crushing penury

Persuades me, I was better when a *king*;

Then am I *kinged* again.

Id. Richard II.

Ferdinand and Isabella, *kings* of Spain, recovered

the great and rich *kingdom* of Granada from the

Moors.

Bacon.

And on his shield kind Jonatban imparts
To his soul's friend, his robes and princely name,
And *kingly* throne; which mortals so adore:

And round about was writ in golden oie,

Well might he give him all, that gave him life before

Fletcher's Purple Island.

Adam bowed low; he, *kingly* from his state

Inclined not.

Milton's Paradise Lost.

A letter under his own hand was lately shewed

me by Sir William Dugdale, *king* at arms. *Watton.*

He was not born to live a subject life, each action

of his bearing in it majesty, such a *kingly* entertain-

ment, such a *kingly* magnificence, such a *kingly* heart

for enterprizes. *Sidney.*

Yet this place

Had been thy *kingly* seat, and here thy race

From all the ends of peopled earth had come

To reverence thee. *Dryden's State of Innocence.*

The animal and vegetable *kingdoms* are so nearly

joined, that if you take the lowest of one, and the

highest of the other, there will scarce be perceived

any difference. *Lrcke.*

Thus states were formed; the name of *king* un-

known,

Till common interest placed the sway in one:

'Twas virtue only, or in arts or arms,

Diffusing blessings, or averting harms,

The same which in a sire the sons obeyed

A prince the father of a people made.

Pope.

His hat, which never veiled to human pride,

Walker with reverence took, and laid aside;

Low bowed the rest, he, *kingly*, did but nod.

Dunciad.

The cities of Greece, when they drove out their tyrannical *kings*, either chose others from a new family, or abolished the *kingly* government, and became free states.

Swift.

Ye shepherds, monarchs, sages, hither bring

Your hearts an offering, and adore your *king*!

Cowper. Nativity.

Ascend my son! thy father's *kingdom* share!

Id. Elegy.

Beset with all the thorns that line a *crowd*,

Without investing the insulted brow,

With the all-swaying majesty of *kings*.

Byron. Marino Faliero.

But not a *kingly* one—I'll none on't: or

If ever I indulge in 't, it shall be

With *kings* my equals. *Id. Sardanapalus.*

KING. This Latin word *rex*, the Scythian

reix, the Punic *resch*, the Spanish *rey*, and French

roy, come all, according to Postel, from the He-

brew *רשך*, *rosch*, chief, or head. Kings were

not known amongst the Israelites till the reign of

Saul, though Abimelech usurped a partial roy-

alty over the Shechemites. See ISRAELITES.

Most of the Grecian states were governed at first

by kings, who were chosen by the people to de-

cide differences, and execute a power which was

limited by laws. They commanded armies, pre-

sided over the worship of the gods, &c This

royalty was generally hereditary; but if the vices

of the heir to the crown were odious to the peo-

ple, or if the oracle had so commanded, he was

cut off from the succession; yet kings were sup-

posed to hold their sovereignty by the appoint-

ment of Jupiter. The ensign of majesty was the

sceptre, which was made of wood, adorned with

studs of gold, and ornamented at the top with

some figure; commonly that of an eagle, the

bird of Jove.

Rome also was governed at first by kings, who

were elected by the people, with the approbation

of the senate, and concurrence of the augurs. Their power extended to religion, the revenues, the army, and the administration of justice. The monarchy subsisted 244 years in Rome, under seven kings. See **ROME**. Among the Greeks, the king of Persia had anciently the appellation of the great king; the king of France has that of the most Christian king; and the king of Spain that of Catholic king. The kings of England, by the Lateran council, under pope Julius II., had the title of Christianissimus conferred on them; and that of defender of the faith was added by pope Leo X. The title of grace was first given to our kings about the time of Henry IV., that of majesty first to Henry VIII., before which time our kings were called grace, highness, &c. —In all public instruments and letters, the king styles himself nos, 'we;' though, till the time of king John, he spoke in the singular number.

In great Britain the power of the king is subject to great limitations: but they are the limitations of wisdom, and the sources of dignity; being so far from diminishing his honor, that they add a particular glory to his crown: for, while other kings are absolute monarchs over innumerable multitudes of slaves, the king of Britain has the distinguished glory of governing a free people, the least of whom is protected by the laws; he has great prerogatives, and a boundless power in doing good; he is at the same time only restrained from acting inconsistently with his own happiness, and that of his people. To understand the royal rights and authority in Britain, we may here briefly consider the *duties* of the king. By the British constitution there are certain duties incumbent on the monarch; in consideration of which, his dignity and prerogative are established by the laws of the land: it being a maxim in the law, that protection and subjection are reciprocal. And these reciprocal duties are what Blackstone apprehends were meant by the convention in 1688, when they declared that king James had broken the original contract between king and people. But, however, as the terms of that original contract were in some measure disputed, being alleged to exist principally in theory and to be only deducible by reason and the rules of natural law, in which deduction different understandings might very considerably differ; it was, after the Revolution, judged proper to declare these duties expressly, and to reduce that contract to a plain certainty. So that, whatever doubts might be formerly raised by weak and scrupulous minds about the existence of such an original contract, they must now entirely cease; especially with regard to every prince who has reigned since the year 1688. The principal duty of the king is, To govern his people according to law. *Nec regibus infinita zut libera potestas*. And this is not only consonant to the principles of nature, of liberty, of reason, and of society; but has always been esteemed an express part of the common law of England, even when prerogative was at the highest. 'The king (says Bracton, who wrote under Henry II.), ought not to be subject to man; but to God, and to the law: for the law maketh the king; for he is not truly king, where will and pleasure rule, and not the law.' And Fortescue lays it down as a principle, that 'the

king of England must rule his people according to the decrees of the laws thereof; insomuch, that he is bound by oath at his coronation to the observance and keeping of his own laws.' But, to obviate all doubts, it is expressly declared by statute 12 & 13 W. III. c. 2, 'that the laws of England are the birthright of the people thereof; and all the kings and queens who shall ascend the throne of this realm, ought to administer the government of the same according to the said laws, and all their officers and ministers ought to serve them respectively, according to the same; and therefore, all the other laws and statutes of this realm, for securing the established religion and the rights and liberties of the people thereof, and all other laws and statutes of the same now in force, are by his majesty, by and with the advice and consent of the lords spiritual and temporal, and commons, and by authority of the same, ratified and confirmed accordingly.' The terms of the original contract between the king and people are now therefore couched in the coronation oath, which, by the stat. 1 W. & M. c. 6, is to be administered to every king and queen who shall succeed to the imperial crown of these realms, by one of the archbishops or bishops of the realm, in the presence of all the people; who on their parts do reciprocally take the oath of allegiance.

It may not here be improper to take a short comparative review of the power of the executive magistrate, or prerogative of the crown as it stood in former days, and as it stands at present. And we cannot but observe, that most of the laws for ascertaining, limiting, and restraining this prerogative, have been made within little more than 150 years; or from the petition of right in 3 Car. I. to the present time. So that the powers of the crown are to all appearance greatly curtailed and diminished since the reign of king James I., particularly by the abolition of the star-chamber and high commission courts, in the reign of Charles I., and by the disclaiming of martial law, and the power of levying taxes on the subject, by the same prince; by the disuse of forest laws for a century past: and by the many excellent provisions enacted under Charles II.; especially the abolition of military tenures, purveyance, and pre-emption; the habeas corpus act; and the act to prevent the discontinuance of parliaments for above three years; and, since the revolution, by the strong and emphatical words in which our liberties are asserted in the bill of rights, and act of settlement; by the act of triennial, since turned into septennial elections; by the exclusion of certain officers from the house of commons; by rendering the seats of the judges permanent, and their salaries independent; and by restraining the king's pardon from obstructing parliamentary impeachments. Besides all this, if we consider how the crown is impoverished and stripped of all its ancient revenues, so that it greatly depends on the liberality of parliament for its necessary support and maintenance, we may perhaps be led to think that the balance is inclined pretty strongly to the popular scale, and that the executive magistrate has neither independence nor power enough left, to form that check upon the lords and commons which the founders of our constitution intended. But, on the other hand, it is to

be considered that every prince, in the first parliament after his accession, has by long usage a truly royal revenue settled upon him for life; and has never any occasion to apply further to parliament for supplies, but upon some public necessity. This restores to him that constitutional independence, which at his first accession seems to be wanting. And then, with regard to power, we may find perhaps that the hands of government are sufficiently strengthened; and that a British monarch is now in no danger of being overborne by either the nobility or the people.

The instruments of power are not perhaps so public and avowed as they formerly were, and therefore are the less liable to jealous and invidious reflections; but they are not the weaker upon that account. In short, our national debt and taxes (besides other inconveniences) have in their natural consequences, thrown such a weight of power into the executive scale of government, as our patriotic ancestors, who gloriously struggled for the abolition of the then formidable parts of the prerogative, would have been very unwilling to confer. Witness the commissioners, and the multitude of dependents on the customs, in every port of the kingdom; the commissioners of excise, and their numerous subalterns, in every inland district; the postmasters and their servants, planted in every town, and upon every public road; the commissioners of the stamps, and their distributors, which are fully as scattered and fully as numerous: the surveyors of houses and windows; the receivers of the land tax; and the commissioners of hackney-coaches; all which are either mediately or immediately appointed by the crown, and removeable at pleasure without any reason assigned: these must give that power, on which they depend for subsistence, an influence amazingly extensive. To this may be added the frequent opportunities of conferring particular obligations, by preference in loans, and other money transactions, which will greatly increase this influence; and that over those persons whose attachment, on account of their wealth, is frequently the most desirable. All this is the natural, though perhaps the unforeseen consequence of erecting funds of credit, and, to support them, establishing perpetual taxes; the whole of which is entirely new since the restoration in 1660; and by far the greatest part since the revolution in 1688. The same may be said with regard to the officers in our numerous army, and the places which the army has created. All which put together give the executive power so effective an influence with respect to the people as will amply make amends for the loss of external prerogative. But see our article LAW.

KING AT ARMS, an officer of great antiquity, and anciently of great authority, whose business is to direct the heralds, preside at their chapters, and have the jurisdiction of the armoury. In England there are three kings of arms, viz. **GARTER**, **CLARENCEUX**, and **NORROY**. See these articles. These two last are also called provincial heralds, as they divide the kingdom between them into provinces. They have power to visit noblemen's families, to set down their pedigrees, distinguish their arms, appoint persons their arms, and with

Garter to direct the other heralds. Anciently the kings at arms were created and crowned by the kings of England themselves; but of late the earl marshal has a special commission at every creation to personate the king. To these may be added Lyon, king at arms for Scotland, who is the second king at arms for Great Britain; and also Ulster, king at arms for Ireland. The regalia of Lyon are, a crown of gold, with a crimson velvet cap, a gold tassel, and an ermine lining; a velvet robe reaching to his feet, with the arms of the kingdom embroidered thereon before and behind in the proper tinctures; a triple row of gold chain round his neck, with an oval gold medal pendant thereto, on one side of which is the royal bearing, and on the other St. Andrew with his cross enamelled in proper colors, and a baton of gold enamelled green, powdered with the badges of the kingdom. Formerly Scotland was divided into two provinces, the one on the north, and the other on the south side of the Forth; and these provinces were under the management of two deputies appointed by the lord Lyon, to superintend the execution of all the business of his office. Before the revolution, the lord Lyon at his admission into office, was solemnly crowned by the sovereign or his commissioner, in presence of the nobility, the officers of state, &c., after a suitable sermon preached in the royal chapel; and his crown was of the same form with the imperial crown of the kingdom. On solemn occasions he wears the regalia above described; at all other times he wears the oval gold medal or badge on his breast, suspended by a broad green riband. He has the absolute disposal of all the offices in his own court, and of the heralds and pursuivant's places. The messengers at arms throughout Scotland are also created by him, and are amenable to his jurisdiction.

Ulster was substituted, as some say, in the room of Ireland king of arms, by Edward VI.; though the king himself in his journal takes notice of it as a new institution. 'There was a king of arms made for Ireland,' says he, 'whose name was Ulster, and his province was all Ireland: and he was the fourth king at arms, and the first herald of Ireland. The patent passed under the great seal of England, with an ample testimony of the necessity and dignity of the office. Whether Ulster was substituted in the room of Ireland king of arms, or else was newly erected, such an officer of the crown of England, on which Ireland is dependent, still continues, and may execute his heraldic order in this kingdom, though out of his province, in as extensive a manner as either Clarenceux or Norroy may do without the limits of either of their marches.

KING (Dr. John), a learned English bishop in the sixteenth century, born at Wornall in 1559, educated at Westminster, and at Christ Church, Oxford. He was appointed chaplain to queen Elizabeth. In 1605 he was made dean of Christ Church, and was for several years vice-chancellor of Oxford. In 1611 he was appointed bishop of London. Besides his Lectures upon Jonah, delivered at York, he published several sermons. King James I. used to style him the king of preachers; and lord chief-justice Coke often de-

clared, that he was the best speaker in the star-chamber in his time.

KING (John Glen), D.D., an English divine, chaplain to the factory at Petersburg, was born in Norfolk, and educated at Caius College, Cambridge, where he graduated. He was appointed medalist to the empress Catharine II. He wrote, 1. The Rites and Ceremonies of the Greek church; with its Doctrine, Worship, and Discipline: 2. Observations on the Climate of Russia, and the Northern Countries, with a View of the Flying Mountains near Petersburg: 3. Observations on the Barberini Vase. He died in 1787.

KING (Sir Peter), lord high chancellor of England, and nephew of the great John Locke, was born in Exeter, in 1669. His father was a grocer in that city, and intended him for the same business; but, his passion for learning soon appearing, he was allowed to follow his inclination. In this he was also encouraged by his uncle, who left him half of his valuable library. By his advice he went to Leyden, and on his return studied the law at the Inner Temple. In 1691 he published anonymously, *An Enquiry into the Constitution, Discipline, Unity, and Worship of the Primitive Church within the first 300 years after Christ*. London, 1691; 8vo. He afterwards published a second part of this work; which gave rise to a controversy with Mr. Elys. In 1669 he was elected M.P. for Beer-Alston; which he represented in seven successive parliaments. In 1702 he published his *History of the Apostles' Creed*, a work of great merit and learning. In 1708 he was chosen recorder of London, and knighted. In 1709 he was appointed one of the managers of Dr. Sacheverel's trial. In 1714, on the accession of king George I., he was made lord chief-justice of the common pleas: in 1725 created a peer, by the title of lord King, baron Ockham, &c., and on the 1st of June appointed lord-chancellor. He resigned the seals in 1733, and died in 1734, leaving four sons and two daughters.

KING (William), a facetious English writer in the beginning of the eighteenth century, who was allied to the noble families of Clarendon and Rochester. He was elected student of Christ Church from Westminster school, in 1681, when aged eighteen. He afterwards studied the civil law, and took the degree of J. C. D. He soon acquired a considerable reputation, and obtained great practice. He attended the earl of Pembroke, lord lieutenant of Ireland, into that kingdom, where he was appointed judge advocate, sole commissioner of the prizes, keeper of the records, and vicar-general to the lord primate of Ireland. He at length, however, returned to England, and retired to his student's place at Christ Church. He died December 25th, 1712. His principal writings are, 1. *Animadversions on a Pretended Account of Denmark*, written by Mr. Molesworth, afterwards lord Molesworth. This work procured Dr. King the place of secretary to princess Anne of Denmark. 2. *Dialogues of the Dead*. 3. *The Art of Love*, in imitation of Ovid *De Arte Amandi*. 4. A volume of poems. 5. *Useful Transactions*. 6. *An Historical Account of the Heathen Gods and heroes*. 7.

Several translations. Dr. King hated the business of an advocate; but proved an excellent judge, when appointed one of the court of delegates.

KING (William), D.D., archbishop of Dublin in the eighteenth century, was descended from an ancient family in the north of Scotland, but born in the county of Antrim in Ireland. In 1674 he entered into orders. In 1679 he was promoted by Dr. Parker, archbishop of Dublin, to the chancellorship of St. Patrick. In 1687 Peter Manby, dean of Londonderry, having published at London, in 4to., a pamphlet entitled *Considerations which obliged Peter Manby to embrace the Catholic Religion*, Dr. King immediately wrote an answer. Mr. Manby published a reply, entitled *A Reformed Catechism, &c.*, in Reply to Mr. King's Answer, &c. Dr. King rejoined in *A Vindication of the Answer*. Mr. Manby dropped the controversy; but dispersed a loose sheet, entitled *A Letter to a Friend, showing the Vanity of this Opinion, that every man's Sense and Reason are to Guide Him in Matters of Faith*. This Dr. King refuted in *A Vindication of the Christian Religion and Reformation, &c.* In 1689 he was twice confined in the tower by order of king James II. and the same year commenced D.D. In 1690, upon king James's retreat to France after the battle of the Boyne, he was advanced to the see of Derry. In 1692 he published at London, in 4to., *The State of the Protestants of Ireland under the late King James's Government, &c.* He had by him, at his death, attested vouchers of every particular fact alleged in this book, which are now in the hands of his relations. In 1693, finding the great number of Protestant dissenters in his diocese of Derry increased by a vast addition of colonies from Scotland, Dr. King, to persuade them to conformity to the established church, published *A Discourse Concerning the Inventions of Men in the Worship of God*. Mr. Joseph Boyle, a dissenting minister, wrote an answer. Replies and rejoinders followed. In 1702 he published at Dublin, in 4to., his celebrated *Treatise De Origine Mali*. Edmund Law, M.A. fellow of Christ's College, Cambridge, published a translation of this, with very valuable notes, in 4to. In the second edition he has inserted a collection of the author's papers on this subject, which he had received from his relations. In this excellent treatise Dr. King proves, that there is more moral good in the earth than moral evil. His sermon, preached at Dublin in 1709, was published under the title of *Divine Predestination and Foreknowledge Consistent with the Freedom of Man's Will*. This was attacked by Anthony Collins, esq. in a pamphlet entitled *A Vindication of the Divine Attributes, &c.* He published likewise, *A Discourse concerning the Consecration of Churches*; showing what is meant by dedicating them, with the grounds of that office. He died in 1720. Dr. King was witty as well as profound. Being disappointed in his expectations of the primacy of Ireland on the death of archbishop Lindsey, and hearing it was assigned as a reason for passing him over, that he was too far advanced in years, he received Dr. Boulter, the new primate, at his first visit, with

out the compliment of rising to salute him, apologising for the incivility by saying, 'My lord, I am sure your grace will forgive me, because you know I am too old to rise.'

KING (William), LL.D., principal of St. Mary's Hall Oxford, was born at Stepney in Middlesex in 1685. He graduated in 1715, was made secretary to the duke of Ormond, and earl of Arran, as chancellors of the university; and principal, on the death of Dr. Hudson, in 1719. When he stood candidate for M. P. for the university, he resigned his office of secretary, but enjoyed his other preferment to his death. Dr. Clark, who opposed him, carried the election; and after this disappointment, he, in 1727, went over to Ireland, where he wrote an epic poem, called *The Toast*, a political satire, printed and given away to his friends, but never sold. On the dedication of Dr. Radcliff's library, in 1749, he delivered a Latin oration in the theatre at Oxford, which was received with the highest acclamations; but when printed was attacked in several pamphlets. Again, at the contested election in Oxfordshire, 1755, his attachment to the Tory interest drew on him the resentment of the Whigs, and he was libelled in newspapers and pamphlets, against which he defended himself in an apology, and warmly retaliated on his adversaries. He wrote several other pieces, and died in 1762. He was a polite scholar, an excellent orator, an elegant and easy writer, and much esteemed for his learning and wit.

KING AND QUEEN COUNTY, a county of the east part of Virginia, bounded N. N. E. by Essex and Middlesex counties, east by Gloucester county, S. S. W. by King William county, and west by Caroline county. Distance from Washington 140 miles. Chief town, Dunkirk.

KING GEORGE, a county of the north-east part of Virginia, bounded north-west and north by the Potomac, east by Westmoreland county, south by the Rappahannock, and west by Stafford county. Distance from Washington west eighty miles.

KING GEORGE'S ISLANDS, two islands of the South Pacific Ocean, discovered by Byron, in 1765, and visited by captain Cook in 1773. On commodore Byron's attempting to land, he was opposed by the natives, and a shot or two being fired, one man was killed. The rest fled; but two canoes were brought off to the ship, of curious workmanship. One was thirty-two feet long; they consisted of well-wrought planks sewed together, and over every seam there was a strip of tortoise-shell, cleverly fastened. A mast was hoisted in each of them, and a matting sail. The houses were low hovels, thatched with cocoa-nut branches. The cocoa-nut tree furnished the natives with food, sails, cordage, timber, and vessels to hold water. The shore appeared to be covered with coral, and pearl oysters. Byron got several boat-loads of cocoa-nuts, a great quantity of scurvy-grass, and excellent fresh water here, but the last is scarce. Long. 149° 2' W., lat. 14° 35' S.

KING GEORGE'S SOUND, a name given by captain Cook to *NOOTKA SOUND*; which see.

KING GEORGE THE THIRD'S ARCHIPELAGO, an extensive group of islands, so called by Van-

couver, on the west coast of North America, extending from north to south about 130 miles. It is at its northern part about forty-five miles broad; but, gradually diminishes to little more than one mile. On the eastern shore of this archipelago Vancouver's party discovered some square grounds in a good state of cultivation, and producing a plant not unlike tobacco. Long. 223° 45' to 225° 37' 30" E., lat. 56° 10' to 58° 18' N.

KING GEORGE THE THIRD'S ISLAND, of OTAHEITE. See OTAHEITE.

KING GEORGE THE THIRD'S SOUND, a large bay on the south coast of New Holland, divided into two harbours, Princess Royal Harbour on the west, and Oyster Harbour on the east, which afford many conveniences for shipping. The entrance is between two distant points, Mount Gardner and Bald Head; and several islands are included within its limits. See HOLLAND, NEW.

KING-AN-FOU, or *KYGANFAN*, a city of China of the first rank, in the province of Kiang-see, and on the river Kankian, the navigation of which is rather dangerous here. The embassy under lord Amherst observed several new buildings going on, and extensive cotton and linen manufactures here. The gardens under the walls occupy a large space.

KING-APPLE, *n. s.* A kind of apple.

The *kingapple* is preferred before the *jennetting*.

Mortimer.

KING-CRAFT, *n. s.* King and craft. The art of governing. A word commonly used by king James,

KING-CUP, *n. s.* King and cup. The name is properly, according to Gerard, King Cob. The flower of the crowfoot; the plant itself.

Strow me the grounde with daffadown-dillies,
And cowslips, and *kingcups*, and loved lillies.

Spenser. Shepheard's Calender.

June is drawn in a mantle of dark grass green,
and upon his head a garland of bents, *kingcups*, and maidenhair.

Peueham.

Fair is the *kingcup* that in meadow blows,

Fair is the daisy that beside her grows. *Gay.*

KING-FISHER, *n. s.* Halcyon. A species of bird.

When dew refreshing on the pasture fields

The moon bestows, *kingfishers* play on shore.

Mary's Virgil.

Bitterns, herons, sea-gulls, *kingfishers*, and water-rats, are great enemies to fish.

Mortimer's Husbandry.

KING-FISHER. See ALCEDO.

KINGS, BOOKS OF, two canonical books of the Old Testament, containing the history of the Kings of Israel and Judah from the beginning of the reign of Solomon down to the Babylonish captivity, for the space of near 600 years. It is generally supposed, and seems very probable, that these books were composed by Ezra, who extracted them out of the public records.

KING'S BENCH. See BENCH.

KINGSBURY, a post town of Washington county, New York, on the east side of the Hudson; fifty-five miles north of Albany, Washington 432. Population 2272. It contains two Baptist meeting-houses.

KING'S COUNTY, a county of Ireland, in the

province of Leinster, so named from king Philip of Spain, husband to queen Mary I. It is bounded on the north by West Meath; on the east by Kildare; on the south by Tipperary and Queen's County, from which it is divided by the Barrow; and by part of Tipperary and Galway on the west, from which it is separated by the Shannon. It is a fine fruitful country, containing 257,510 Irish plantation acres, fifty-six parishes, eleven baronies, and two boroughs. It is about thirty-eight miles long, and from seventeen to thirty broad. The chief town is Philips-town.

KING'S COUNTY, a fertile and well cultivated county of New York, on the west end of Long Island, bounded on the east by Queen's County, north by New York county, west by Hudson's River and the Ocean, and south by the Atlantic. It is ten miles long and eight broad; is divided into six townships; and contained 3063 citizens, and 1432 slaves, in 1795.

KING'S COUNTY, a county of Nova Scotia, comprehending the lands on the south-west and south sides of the basin of Minas. It has considerable settlements on the Habitant, the Canaid, and the Cornwallis, which are navigable for about five miles up.

KING'S-EVIL, *n. s.* King and evil. A scrofulous distemper, in which the glands are ulcerated, commonly believed to be cured by the touch of a king.

Sore eyes are frequently a species of the *kingsevil*, and take their beginning from vicious humours inflaming the tunica adnata. *Wiseman's Surgery.*

KING'S EVIL. See **MEDICINE**.

KING'SHIP, *n. s.* From king. Royalty; monarchy.

They designed and proposed to me the new-modelling of sovereignty and *kingship*, without any reality of power, or without any necessity of subjection and obedience. *King Charles.*

We know how successful the late usurper was, while his army believed him real in his zeal against *kingship*; but when they found out the imposture, upon his aspiring to the same himself, he was presently deserted and opposed by them, and never able to crown his usurped greatness with the addition of that title which he passionately thirsted after. *South.*

KING'S ISLAND, an island at the west-end of Bass' Straits, about thirty miles long from north to south, and twelve or eleven broad. The highest part is 400 or 500 feet above the level of the sea. It is inhabited only by the kangaroo and wombat; but various species of seals are found on its shores. There is a lake of fresh water here. The hills are covered with wood. The north end of the island is in 39° 36' S. lat., and 143° 54' E. long. Distance from the main land forty-eight miles.

KING'S ISLAND, a small island in Behring's Straits, so called by captain Cook.

KING'S ISLAND, an island near the north-west coast of North America, so named by Vancouver. It is about thirty miles in length, and little more than six in breadth, being separated from the continental shore of New Albion, by Banke's canal, and by Fisher's canal from the Princess Royal Islands. Long. 232° 9' to 232° 43' W., lat. 51° 56' to 52° 26' N.

KING'S SPEAR, *n. s.* *Asphodelus*. A plant.

KINGSTON (Elizabeth, duchess of), born in 1720, was the daughter of colonel Chudleigh, governor of Chelsea College. From youth to age she was celebrated for intrigue, and owes her place in history to her remarkable trial for bigamy. She was at first maid of honor to the princess of Wales, the mother of George III.; in which situation she received a proposal of marriage from the duke of Hamilton: but being informed, though falsely, that he had forgotten her while on the continent, she gave her hand privately to captain Hervey, R. N., afterwards earl of Bristol. At about this period of her life, attending a masquerade where George II. came incog., his majesty laid his hand on her exposed bosom, and exclaimed, 'A soft place, Eve.' To which, regardless of his rank, she is said to have replied, laying her hand on the king's head, 'A softer place, your majesty.' Her marriage (August 4th, 1744) had been kept a secret, and her subsequent refusal of advantageous proposals of marriage having offended her mother, she now went abroad with a major in the army. They proceeded to Berlin, where they parted. Here she is said to have been well received by the king of Prussia, and on her return to England she resumed her situation at the British court. Desirous of terminating her union with captain Hervey, she adopted at this time the expedient of tearing the leaf out of the parish register, in which their marriage was entered; but, repenting of this step on his succeeding to the peerage, she contrived to have the leaf replaced. Through all these scenes she was only known to the public as Miss Chudleigh. Not long after, the duke of Kingston made her an offer, on which she endeavored to procure a divorce from lord Bristol. This he at first opposed, but at length assented to it, and the wished-for separation was arranged. On the 8th of March, 1769, she was married to Evelyn Pierrepont, duke of Kingston, on whose death in 1773 she found herself left mistress of a large fortune, under the condition of her not marrying again. But the heirs of the duke commenced a suit against her for bigamy, when she was tried before the house of lords, and found guilty: on her pleading the privilege of peerage, however, punishment of burning in the hand was remitted, and she was discharged on paying the fees. The remainder of her life was spent abroad, and she died at a seat near Fontainebleau in France, August 28th, 1783.

KINGSTON, a principal town of Jamaica, is seated on the north side of the bay of Port-Royal. It was founded in 1693, when the repeated desolations by earthquakes and fires had driven the inhabitants from Port Royal. It extends from a mile to a mile and a half, from north to south, and about as much from east to west on the harbour. According to the original plan it was to be built in the form of a parallelogram, one mile in length by half a mile in breadth; but it has of late years been much extended beyond this limit. The principal church is a large and elegant edifice, with four aisles, and a fine organ. There is also a Presbyterian church, a theatre, a free-school established

in 1729, a poor-house, and a public hospital here. The market is well supplied with poultry, butcher's meat, fish, fruits, and European vegetables. There are also great quantities of the finest pine apples and tropical fruits. This town enjoys the benefit of the sea breezes which blow regularly the greatest part of the year, and temper the heat of the climate; but the acclivity on which the town is situated has the inconvenience of admitting, during the wet season, a free passage to torrents of rain, which often render the streets impassable for wheel-carriages. It is governed by a mayor, twelve aldermen, and twelve common councilmen, a recorder, two solicitors, and a treasurer, and returns three members to the house of assembly. The thermometer ranges between 96° and 76°. Ten miles from Spanish Town.

KINGSTON, the capital of the island of St. Vincent's in the West Indies, is situated at the head of a bay of this name, on the south-western shore of the island, in St. George's parish. Long. 81° W., lat. 13° 6' N.

KINGSTON, a considerable town of Upper Canada, is seated on the north side of the river St. Lawrence, on the eastern extremity of Lake Ontario. It was founded in 1784, on the ground upon which formerly stood Fort Frontenac; it now presents a front of nearly three quarters of a mile, extending in depth about 600 yards. The streets run regularly at right angles with each other, but are not paved: the number of the houses may be estimated at about 450; some of them of stone, but the greater number of wood. The public buildings are a government and court-house, a Protestant and Catholic church, market-house, jail, and hospital, besides the garri-son, block-houses, and government magazines, wharfs, and spacious warehouses; in fact, this is now the main entrepôt between Montreal and the settlements along the lakes. The harbour is commodious and well sheltered for ships not requiring more than three fathoms water, and has good anchorage close to the north-eastern extremity of the town. The entrance is defended by a battery on Mississaga Point, and another on Point Frederick. Kingston also possesses one of the best harbours on lake Ontario, and it is a very important naval arsenal of Great Britain in this quarter. 190 miles north-west of Montreal. Long. 76° 40' W., lat. 44° 8' N.

KINGSTON, a township of the United States, in Addison county, Vermont. Population 324. There are numerous small towns of this name in the United States.

KINGSTON UPON HULL. See **HULL**.

KINGSTON UPON THAMES, a corporate town in Surry, with a market on Saturday. A national council was held here in 838, at which Egbert, the first king of all England, with his son Ethelwolf, were present; and several of the Saxon monarchs were crowned here; and close to the north side of the church is a large stone, on which, tradition says, they sat during the ceremony. On the same side was formerly a chapel, adorned with the figures of different kings who had been crowned here. By the inscriptions over these figures it appeared that some of them have been crowned in the market-place, and

others in the chapel.—This town sent members to parliament in the reigns of Edward II. and III.; but ceased afterward, in consequence of a petition from the corporation praying to be released from the burden! The Lent assizes are held at this place. Here is a free-school, founded by queen Elizabeth, the school-room of which was an ancient chapel to the hospital of St. Mary Magdalen. An alms-house for twelve poor persons was founded here by William Cleve, esq. alderman of London, which was endowed with lands, the present annual income of which is £120. The wooden bridge over the Thames was the most ancient on that river except London Bridge; it has been succeeded by a modern one at an expense of £40,000. It is ten miles south-west of London.

KING WILLIAM, a county of Virginia, bounded N. N. E. by King and Queen county, S. S. W. by York River, and west by Caroline county.

KING-YUEN-FOU, a city of China, in Quangsee, of the first rank. It is situated on a large river, surrounded by mountains, and inhabited by a very unpolished race. Gold is found in the district.

KINGSTONE, *n. s.* *Squatina*. A fish.

KINHOA-FOU, a Chinese city of the first rank, in Tche-kiang. It stands nearly in the centre of the province, on the banks of a considerable river, and was formerly of great extent. On the invasion of the Tartars it was almost destroyed, and has never been rebuilt on the same scale. The country round abounds with rice and wine; and a trade is carried on to all parts of the empire in dried plums and hams Long. 119° 16' E., lat. 29° 16' N.

KINIC ACID, in chemistry, acidum kinicum, from kini, the French name of cinchona, from which it is obtained. Let a watery extract from hot infusions of the bark in powder be made. Alcohol removes the resinous part of this extract, and leaves a viscid residue, of a brown color, which has hardly any bitter taste, and which consists of kinate of lime and a mucilaginous matter. This residue is dissolved in water, the liquor is filtered and left to spontaneous evaporation in a warm place. It becomes thick like syrup, and then deposits by degrees crystalline plates, sometimes hexædral, sometimes rhomboidal, sometimes square, and always colored slightly of a reddish-brown. These plates of kinate of lime must be purified by a second crystallisation. They are then dissolved in ten or twelve times their weight of water, and very dilute aqueous oxalic acid is poured into the solution, till no more precipitate is formed. By filtration the oxalate of lime is separated, and the kinic acid, being concentrated by spontaneous evaporation, yields regular crystals. It is decomposed by heat. While it forms a soluble salt with lime, it does not precipitate lead or silver from their solutions. These are characters sufficiently distinctive. The kinates are scarcely known; that of lime constitutes seven per cent. of cinchona. We are indebted for the discovery to a Mr. Deschamps, apothecary at Lyons, who described the salt in the 48th volume of the *Annales de Chimie*. He obtained it by macerating the bark in cold water; afterwards evaporating

the solution, and leaving it to crystallise. The crystals produced were equal to about seven per cent. of the bark employed. He did not prosecute his enquiry further; and it was not until some experiments which were afterwards undertaken, upon it by Vauquelin, that the salt in question was found to contain a new acid.

KINO, in chemistry, is an astringent black resinous substance, commonly called a gum, but very improperly; for, as Vauquelin has remarked, it has neither the physical nor chemical properties characteristic of those vegetable products. According to Dr. Duncan, the kino now known in the shops is principally imported from Jamaica; and is an extract from the coccoloba weifera, or sea-side grape. It is nearly wholly soluble in hot water and hot alcohol, and chiefly consists of tannin in a particular state; which has the property of precipitating the salts of iron of a green color, instead of black. With gelatine it forms a rose colored coagulum. It is in appearance very like the resin called sanguis draconis; much redder, more firm, resinous, and astringent than catechu. It is now in common use, and is one of the most efficacious vegetable astringents, or styptics, in the materia medica. Its dose is from twenty to thirty grains.

KINROSS, a populous town in a parish of the same name, the capital of the county Kinross, containing 2917 inhabitants in 1831. It is seated on the west side of Lochleven. The manufactures are cutlery ware, leather, shoes, &c. It was formerly a very mean place, but many good houses have been lately built, and the streets much improved: Silesias and coarse cottons are now a principal manufacture. It is twenty-four miles north of Edinburgh, and fifteen south of Perth.

KINROSS, or **KINROSS-SHIRE**, a small county of Scotland, bounded on the north-east, east, and south, by that of Fife; and on the west and north by Perthshire. It is almost circular, and about thirty miles in circumference. It sends a member to parliament, conjointly with Clackmannan. It contains only four parishes, viz. Cleish, Kinross, Orwell, and Portmoak. The middle part is occupied by that beautiful expanse of water Loch-Leven, and from its banks the ground rises towards the north, with a gentle declivity; but, towards the south, the rise is more abrupt and rugged. Agriculture is well attended to, and the county is in a high state of improvement, producing good crops; and on the sides of the lake are several seats. In the different districts are abundance of lime-stone and coal. Iron-stone is also met with.

KINSALE, a town of Ireland, in the county of Cork, situated at the mouth of the Bandon, 186 miles from Dublin. It is reckoned the third town in the kingdom, and inferior only to Cork in point of trade. It is neat, well built: is governed by a sovereign and a recorder, and defended by a strong fort, built by king Charles II. called Charles's Fort. On the opposite shore there are two well built villages, called Cove and Scilly. In the town and liberties are six parishes containing 6846 acres. The barracks hold twelve companies of foot. In the centre of the town is a good market-house, and a strong

built prison. During the war Kinsale was a place of much business, being frequented by rich homeward bound fleets, and ships of war. The harbour is very commodious, perfectly secure, and so large, that the English and Dutch Smyrna fleets have anchored in it at the same time. There is a dockyard for repairing ships of war, and a crane and gun wharf for landing and shipping heavy artillery. Ships may sail in or out of this harbour, keeping the middle of the channel, with the utmost safety. Within the haven on the west side lies a great shelf, which shoots far off from the land; but leaves an ample passage by the side of it, which is many fathoms deep. Lord Kinsale has the ancient privilege of keeping his hat on in the king's presence, being lineally descended from John de Courcy, earl of Ulster, who first obtained this privilege.

KINSFOLK, *n. s.* } See **KIN**. Persons of
KINSMAN, *n. s.* } the same family, or con-
KINSWOMAN, *n. s.* } sanguinity.

My *kinsfolk* have failed, and my familiar friends forgotten me. *Job xix. 14.*

The jury he made to be chosen out of the nearest *kinsmen*, and their judges he made of their own fathers. *Spenser.*

Those lords, since their first grants of those lands, have bestowed them amongst their *kinsfolks*. *Spenser.*

A young noble lady, near *kinswoman* to the fair Helen, queen of Corinth, was come thither. *Sidney.*

Both fair, and both of royal blood they seemed, Whom *kinsmen* to the crown the heralds deemed. *Dryden.*

Let me stand excluded from my right,
Robbed of my *kinsman's* arms, who first appeared in fight. *Id. Fables.*

There is a branch of the Medicis in Naples: the head of it has been owned as a *kinsman* by the great duke, and 'tis thought will succeed to his dominions. *Addison on Italy.*

Kinsman beloved, and as a son, by me!
When I behold this fruit of thy regard,
The sculptured form of my old favourite bard,
I reverence feel for him, and love for thee. *Couper. To John Johnson.*

A passing beggar hath remembered me,
When with strange eyes my *kinsmen* looked on me. *Maturin. Bertram.*

And now I take my leave, imploring you
In all things to rely upon my duty
As doth become your near and faithful *kinsman*,
And not less loyal citizen and subject. *Byron. Marino Faliero.*

KINTYRE, or **CANTYRE**, from Cantierre, i. e. a headland, the south division of Argyleshire. It is a peninsula, stretching thirty-seven miles from north to south, and seven in breadth. It is mostly plain, arable, and populous; inhabited promiscuously by Highlanders and Lowlanders; the latter being invited to settle by the Argyle family in this place to cultivate the lands. It is divided by Lochfyne from Argyle Proper. There are many villages in this district, but no town of consequence, except Campbeltown. Kintyre was granted to the house of Argyle, after suppressing a rebellion of the Macdonalds of the Isles, in the beginning of the seventeenth century, and the grant was afterwards ratified by parliament. The ancient inhabitants were the Macdonalds, Maceachans, Mackays, and Macmaths. See **ARGYLE**.

KINZIG, a circuit of the grand duchy of Baden, established in 1810. It comprises ten bailiwicks, and extends along the Kinzig, from the Rhine on the west, to Wirtemberg on the east; comprehending the southern part of the margraviate of Baden, the traek called the Ortenau, and the lordship of Wolfach. The chief town is Offenburg. Population 118,000.

KIPLING (Thomas), D.D., was a native of Yorkshire, and educated at St. John's College; Cambridge; where he proceeded B.A. in 1768; and M.A. in 1771; bachelor of divinity in 1779; and doctor in 1784; at which time he was appointed deputy professor of divinity, under bishop Watson. In 1793 he rendered himself obnoxious by leading the prosecution of Mr. William Frend, of Jesus College, for professing Unitarianism while he held a fellowship; in consequence of which, that gentleman was expelled the university. The doctor being afterwards selected to superintend the publication of the *Codex of Beza*, the zealots, who were already embittered against him, attacked this work with great acrimony. He was, however, consoled for the mortifications he endured by being made dean of Peterborough. He died at Holme, in Yorkshire, in 1822. The dean's works are—1. *The Elementary Parts of Dr. Smith's Complete System of Optics*, 4to. 1778; *Codex Theodori Bezae Cantabrigiensis, Evangelia et Apostolorum Acta Complectens, Quadratis Literis Græco-Latinus*, folio, 2 vols. 1793; *The Articles of the Church of England*, proved not to be Calvinistic, 8vo. 1802; and an 8vo. pamphlet, entitled *Certain Accusations brought lately by the Irish Papists against British and Irish Protestants examined*, 1809.

KIPPING, or **KIPPINGIUS** (Henry), a learned German Lutheran, born at Bostock; where, after having received the degree of M.A., he was met by some soldiers who pressed him into the service. This, however, did not prevent his following his studies. One day while he was upon duty, holding his musket in one hand and Statius's *Thebaid* in the other, a Swedish counsellor, who perceived him in that attitude, came up to him, entered into discourse with him, and then taking him to his house, made him his librarian, and procured him the under-rectorship of the college of Bremen, where he died in 1778. He wrote many works in Latin; the principal of which are, 1. *A Treatise on the Antiquities of the Romans*. 2. *Another On the Works of Creation*. 3. *Several Dissertations on the Old and New Testament*, &c.

KIPPIS (Andrew), D.D. F.R.S., and F.S.A., an English biographer and divine, born at Nottingham, and educated under Dr. Doddridge at Northampton. He first settled as a minister at Boston, Lincolnshire, in 1746; thence removed to Dorking, Surry, in 1750; and in 1753 to a congregation in Prince's Street, Westminster. He afterwards wrote in the *Monthly Review*, and in another periodical work called the *Library*, in 1761. In 1763 he was chosen philological tutor to an academy for educating dissenting ministers. In 1773 he published a *Vindication of the Protestant Dissenting Ministers*, with regard to their late application to par-

liament, which occasioned a controversy with dean Tucker. In 1777 he became editor of a new edition of the *Biographia Britannica*. Five volumes were published during his life, and the greater part of the sixth prepared before he died. In 1788 he published the *Life of captain Cook*, in 1 vol. 4to., and a *Life of Dr. Lardner*, prefixed to his works. He also wrote the *History of Knowledge, Learning, and Taste*, in Great Britain, contained in the *New Annual Register*; with various other tracts, sermons, &c. The university of Edinburgh presented him with the degree of D. D. He died at Westminster in 1795.

KIRCHER (Athanasius), a famous philosopher and mathematician, born at Fulde in 1601. In 1618 he entered into the society of the Jesuits, and taught philosophy, mathematics, the Hebrew and Syriac languages, in the university of Wirtzburg, with great applause till 1631. He then went to France on account of the ravages committed by the Swedes in Franconia, and lived some time at Avignon. He was afterwards called to Rome, where he taught mathematics in the Roman College, collected a rich cabinet of machines and antiquities, and died in 1680. His works amount to twenty-two vols. folio, eleven in 4to., and three in 8vo.; most of them are rather curious than useful; but they display great talent and deep erudition. The principal are, 1. *Prælectiones Magneticæ*. 2. *Primitiæ Gnomonicæ Catoptricæ*. 3. *Ars magnæ Lucis et Umbrae*. 4. *Murgia Universalis*. 5. *Obeliscus Pamphilus*. 6. *Oedipus Ægyptiacus*, 4 vols. folio. 7. *Itinerarium Extaticum*. 8. *Obeliscus Ægyptianus*, in 4 vols. folio. 9. *Mundus Subterraneus*. 10. *China Illustrata*.

KIRCHER (Conrad), a learned German, who published a Greek and Hebrew Concordance of the Old Testament; with the Hebrew words arranged alphabetically, and the corresponding Greek under them; in 1602.

KIRCHMAN (John), an eminent German divine, born at Lubec in 1575. He studied in several places of Germany; in 1602 was made professor of poetry at Rostock, and in 1613 rector of the university at Lubec. He exercised this last employment with extraordinary application during the rest of his life, and died in 1643. He wrote several works; the most esteemed of which are, 1. *De Funeribus Romanorum*. 2. *De Annulis, Liber Singularis*.

KIRIN OULA, an extensive government of Eastern Tartary, to the north of China. It lies between the sea of Japan, the northern frontier of Corea, and the River Seghalien Oula, and is upwards of 700 miles long, and 200 of medium breadth. The climate is severe, considering the latitude, so that no grain, except oats and millet, comes to perfection. It is thus very thinly peopled, containing only three towns surrounded with mud walls. The best plant produced in this country is the ginseng, called by the Manchews the Queen of Plants, and celebrated for its virtues in the cure of various diseases. The country is a favorite scene for the hunting excursions of the emperors of China. The capital of the same name is situated on the river Songarie, which falls into the Seghalien, in long. 126° 24', E., lat. 43° 48' N.

KIRJATH JEARIM, the city of the wood, a city of the Gibeonites, belonging to the tribe of Judah, nine miles from Ælia, in the road to Diospolis. It was also called Baala.—Joshua. The ark, after its recovery from the Philistines, stood for some time in this city. 1 Sam. viii.

KIRK, *n. s.* Sax. *cýrce*; Gr. *Κυριου οίκος*. An old word for a church, yet retained in Scotland.

And the fest hold was in tentis,
(As to tell you mine entent is,)
In a rome in a largè plane,
Under a wode in a champaine,
Betwixt a river and a well;
Where never had abbay, ne selle,
Yben, ne *kirke*, house, ne village,
In time of any manes age.

Chaucer's Dreame.

Home they hasten the posts to dight,
And all the *kirke* pillars ere day-light,
With hawthorn buds, and sweet eglantine.

Spenser.

What one party thought to rivet by the Scots,
that the other contemns, despising the *kirke* govern-
ment and discipline of the Scots. *King Charles.*

Nor is it all the nation hath these spots,
There is a church as well as *kirke* of Scots.

Cleaveland.

KIRKALDY, a royal burgh of considerable importance in Fifeshire, extending more than a mile in length, and is about three miles from Kinghorn. The name is supposed to be derived from the Culdees, or Keldes, as they are called in the old charters. The town extends along the sea-shore, consisting principally of one long street, and a few lanes of small extent opening on each side of it. There are from thirty to forty large vessels belonging to this port, which trade to the Mediterranean, Baltic, West Indies, and America. The relative consequence of this burgh may be judged of from the circumstance, that in all public assessments it is rated as the sixth burgh of Scotland, and one-fortieth of the whole supplies levied from it. The principal manufactures of Kirkaldy are cottons, linens, checks, ticks, leather, cotton-spinning, &c. Kirkaldy joins with the neighbouring burghs of Dysart, Kinghorn, and Burntisland, in sending a representative to the imperial parliament.

KIRKCUDBRIGHT, a county of Scotland, which makes a considerable part of Galloway, of which the earls of Nithisdale were hereditary stewards. The face of the country exhibits the appearance of one continued heath, producing nothing but pasture for sheep and small black cattle, which are generally sold in England; yet these dusky moors are intersected with pleasant valleys, and adorned with a great number of castles belonging to private gentlemen, every house being surrounded with an agreeable plantation. It is watered by the Dee; which, taking its rise from the mountains near Carrick, runs through a tract of land about seventy miles in length, and, entering the Irish sea, forms the harbour of Kirkcudbright. Of late years, agriculture has been much improved, and manufactures of cotton and linen have been established, although it wants all the natural advantages of the neighbouring counties. There are several small lakes in this county, but Loch-Kenmure is the largest, being ten miles long: in this loch large pikes

are caught, weighing from twenty to thirty pounds and upwards.

KIRKCUDBRIGHT, a royal burgh in the above county. This place, which lies 101 miles southwest from Edinburgh, is a neat, clean, well-regulated burgh. There are twenty-eight brigs and sloops belonging to this port; and it has a harbour equal to any on that coast of Scotland. The present castle is a strong massy building, almost entire, though built in 1582. The town bears several marks of having been at one period fortified. About the middle of the town is a large and elegant court-house, built about the year 1791, for the accommodation of the courts of justice, and the public meetings of the stewartry; and in 1816 a commodious new gaol in the Gothic style was erected near the court-house. A large and elegant academy, containing a room for the public library, was also built in the same year. It never had any considerable trade or manufacture; but about the year 1792 a manufacture of cotton was established, which continues to be carried on to a small extent.

KIRKLAND (Thomas), M. D., an eminent physician, born in 1720. He was a zealous enquirer after medical science, and a successful practitioner. He was a member of the Royal Medical Society in Edinburgh, and of the Medical Society in London. He published An Enquiry into the present State of Medical Surgery, and some other valuable works. He died at Ashby de la Zouch, in Leicestershire, in 1798, aged seventy-eight.

KIRK-SESSION, the fourth and lowest ecclesiastical judicatory in Scotland. Each parish, according to its extent, is divided into several particular districts; every one of which has its own elder or deacon to oversee it. A consistory of the ministers, elders, and deacons of a parish, form a kirk-session. These meet once a week, the minister being their moderator, but without a negative voice. They regulate matters relative to public worship, elections, catechising, visitations, &c. They judge in matters of minor scandal; but in all cases an appeal lies from it to the presbytery. Kirk-sessions have likewise the care of the poor's funds.

KIRKWALL, a royal borough, the capital of the Orkneys. It is built upon an inlet of the sea, near the middle of the island of Pomona, having a very safe road and harbour for shipping. It is governed by a provost, four bailies, and a common council. It was formerly possessed by the Norwegians, who bestowed upon it the name of Crucoviaca. From king James III. of Scotland they obtained a new Charter, empowering them to elect their own magistrates yearly, to hold borough courts, arrest, imprison, make laws and ordinances for the right government of the town; to have a weekly market and three fairs. He also granted them some lands adjoining to the town, with the customs and shore-dues, the power of *pit and gallows*, and exempted them from the expense of sending commissioners to parliament. This charter was confirmed by succeeding monarchs. At present Kirkwall is the seat of justice, where the steward, sheriff, and commissary, hold their several courts of jurisdiction: here is likewise a public grammar-

school, endowed with a competent salary for the master. The town consists of one narrow street about a mile in length; the houses are chiefly covered with slate. The principal edifices are the cathedral church and the bishop's palace. The former, called St. Magnus, from Magnus king of Norway, the supposed founder of the town, is a large Gothic structure; the roof is supported by fourteen pillars on each side, and the spire is built upon four large columns. The gates are decorated with a kind of Mosaic work, of red and white stones elegantly carved and flowered. By the ruins of the king's castle or citadel, it appears to have been a strong and stately fortress. At the north end of the town there is a sort of fortification built by the English in the time of Oliver Cromwell. It is surrounded with a ditch and rampart, and mounted with cannon for the defence of the harbour.

KIRRIEMUIR, a burgh of barony, of considerable antiquity. It is about sixteen miles from Dundee, twenty-five from Perth, and sixty-four from Edinburgh. Situated in a fertile, extensive, and populous district, it is the mart to which the inhabitants of the neighbouring parishes chiefly resort. Hence no town in the county has a better weekly market; in none of its size is more trade carried on. Nine carriers go regularly to Dundee twice, often thrice a-week. There are two great annual fairs here, in July and October.

KIRSTENIUS (Peter), professor of physic at Upsal, and physician extraordinary to the queen of Sweden, was born at Breslaw in 1577. He studied Greek, Latin, Hebrew, Syriac, natural philosophy, anatomy, botany, and other sciences. In order to be able to read Avicenna, he applied himself to the study of Arabic; and not only read Avicenna, but also Mesue, Rhasis, Abenzoar, Abukasis, and Averroes. He visited Spain, Italy, and England, and did not return home, till after seven years. He was chosen by the magistrates of Breslaw to superintend their college and schools. Sickness having obliged him to resign that employment, he went with his family into Prussia. Here he obtained the friendship of chancellor Oxenstiern, whom he accompanied into Sweden; where he was made professor of physic in the University of Upsal, and physician to the queen. He died in 1640. He wrote many works; among which are, 1. *Liber secundus Canonis Avicennæ, typis Arabicis, ex MSS. editus, et ad verbum in Latinum translatus, in folio.* 2. *De vero usu et abusu Medicinæ.* 3. *Grammatica Arabica, folio.* 4. *Vitæ quatuor Evangelistarum, ex antiquissimo codice MS. Arabico erutæ, in folio.* 5. *Notæ in Evangelium S. Matthæi, ex collatione textuum Arabicorum, Syriacorum, Ægyptiacorum, Græcorum, et Latinorum, in folio, &c.*

KIRTHIPORE, a town of Hindostan, in the province of Nepaul, and district of Patn. It was formerly the capital of an independent principality, but was taken by the rajah of Nepaul in the year 1768, who, for the resistance they made, most inhumanly ordered the noses of all the inhabitants to be cut off. Long. 85° 37' E., lat. 27° 30' N.

KIRTLE, *n. s.* Sax. *cýrtel*. An upper garment; a gown.

Yclad he was ful smal and proprely,
All in a *kirtel* of light waget,
Full faire and thicke ben the pointes set.
Chaucer. The Milleres Tale.

And in a *kirtel* of greene saye,
The greene is for maydens weare. *Spenser.*

All in a *kirtle* of discoloured say
He clothed was. *Færie Queene.*
What stuff wilt thou have a *kirtle* of? Thou shalt
have a cap to-morrow. *Shakspeare. Henry IV.*

Thy gowns, thy shoes, thy beds of roses,
Thy cap, thy *kirtle*, and thy posies,
Soon break, soon wither, soon forgotten,
In folly ripe, in reason rotten. *Raleigh.*

KIRWAN (Walter Blake), an Irish divine, and celebrated preacher, was born at Galway about 1754. He was educated in the English Catholic college at St. Omer's, and next at Louvain, where he entered into priest's orders, and became professor of philosophy. In 1778 he was appointed chaplain to the Neapolitan embassy in London; but in 1787 conformed to the established church in Dublin, where his popularity as a preacher was great to an unparalleled degree. In 1788 the governors of the general daily schools of several parishes in Dublin entered into a resolution, 'That from the effects produced by the sermons of the Rev. Walter Blake Kirwan, from the pulpit, his officiating in this metropolis was considered a peculiar national advantage, and that vestries should be called to consider the most effectual method to secure to the city an instrument, under providence, of so much public benefit.' He was presented this year to a prebend in the cathedral of Dublin, and the living of St. Nicholas; but resigned the former in 1800, on being promoted to the deanery of Killala. He died in 1805. A volume of his sermons has been printed, with an account of his life.

KIRWAN (Richard), a distinguished modern geologist, was a native of the county of Galway in Ireland, and educated in the University of Dublin, where he took the degree of LL.D. He devoted himself with great ardor to chemical and mineralogical researches, and became a member of the Royal Irish Academy, and fellow of the Royal Society. He published in the *Philosophical Transactions* for 1781, 1782, and 1783, *Experiments and Observations on the Specific Gravities and Attractive Powers of various Saline Substances*; which subject he farther prosecuted in the *Transactions* for 1785. His *Elements of Mineralogy*, 2 vols. 8vo., appeared in 1784, and were translated into German by Crell. In 1787 he published an *Essay on Phlogiston and the constitution of Acids*. This production was translated into French by the advocates for the anti-phlogistic hypothesis, and published with animadversions on the rival system, to which Dr. Kirwan became a convert. He was the author, besides the foregoing works, of *An Estimate of the Temperature of different Latitudes*, 1787, 8vo.; a *Treatise on the Analysis of Mineral Waters*, 8vo.; and another on *Logic*, 2 vols. 8vo., &c. He founded at Dublin an association for the purpose of cultivating mineralogy; and,

as a geologist, distinguished himself by advocating what has been called the Neptunian theory of the earth, in opposition to that of Dr. Hutton. His death took place in 1812.

KISHME, or **KISMIS**, or **Jezira Derauz**, (Long Island), the largest island in the Persian Gulf, is about ten miles from Ormus, and runs sixty miles parallel with the Persian shore. It is no where more than twelve miles broad. Formerly considered the granary of Ormus, it had 300 villages upon it, we are told, but it is now much declined. The soil is well adapted to wheat; and the sheep reared upon it are remarkably fine. It is under the rule of an independent Arab chief, who pays tribute to the Imam of Muscat. The town of Kishme, on the eastern side of the island, is defended by a wall and fort, and has a roadstead in which ships may ride securely during the westerly winds. The channel between Kishme and the main land varies from three to eight miles wide. Long. 56° 50' E., lat. 26° 57' 30' N.

KISIITAC, a large island in the North Pacific Ocean, in long. 152° 30' to 154° 50' W., lat. 57° to 58° 40' N. It is about 100 miles in length, and from thirty to fifty in breadth. Also an island on the north-west coast of North America, eastward of Foggy Cape, and opposite the mouth of Cook's River.

KISIITEWAR, a town and district of Hindostan, situated principally between 33° and 34° of N. lat. in the north-east extremity of the province of Lahore, or near the south range of the Cashmere Mountains. The district is in general hilly, cold, and covered with wood. Hence it retains its independence. It is intersected by the Chunaub, over which there are no bridges; but at the village of Nausman, where it is seventy yards wide, a large basket is slung to a tight rope, reaching from side to side, and well secured by posts, and in this the passage is effected.

KISS, *v. a. & n. s.* } Welsh *cusan*; Gr.
KISS'ER, *n. s.* } *κωω*. To touch or salute
KISS'ING-CRUST, *n. s.* } with the lips; to treat with fondness; to touch gently; a salute: kissing-crust, crust formed where one loaf touches another in the oven.

And, mekeley, she to the sergeant praide
(So as he was a worthy gentilman)
That she might *kisse* hire childe, er that it died:
And in her barme, this litel child she laid,
With full sad face; and gan the child to blisse,
And lulled it, and after gan to *kisse*.

Chaucer. The Clerkes Tale.

'Have mercie, Lord! upon us wimmen alle.'
And on hir bare knees adoun they falle;
And would have *kist* his feet ther as he stood.

Chaucer. The Knights Tale.

Thy love I dare not aske, or mutual fixing,
One *kisse* is all my love and prides aspiring,
And after starve my heart, for my too much desiring.

Spenser. Britain's Ida.

What sense had I of her stolen hours of lust?
I found not Cassio's *kisses* on her lips.

Shakspeare. Othello.

The hearts of princes *kiss* obedience,
So much they love it; but to stubborn spirits,
They swell and grow as terrible as storms.

Shakspeare.

Their lips were four red roses on a stalk,
And in their summer beauty *kissed* each other.

Id.

But who those ruddy lips can miss,
Which blessed still themselves do *kiss*?

Sidney.

Upon my livid lips bestow a *kiss*:
O envy not the dead, they feel not bliss!

Dryden.

These baked him *kissingcruste*, and those
Brought him small beer. *King's Cookery.*
No lordly patron's hand he deigned to *kiss*,
Nor luxury knew, save liberty, and bliss.

Cowper. A Fowler.

Woman, oh woman, and an urchin's *kiss*,
Rends from thy heart thy love of many years—
Go, virtuous dame, to thy most happy lord,
And Bertram's image taint your *kiss* with poison.

Maturin. Bertram.

With a swimmer's stroke
Flinging the billows back from my drenched hair,
And laughing from my lip the audacious brine,
Which *kissed* it like a wine-cup, rising o'er
The waves as they arose, and prouder still
The loftier they uplifted me. *Byron. Two Foscari.*

KISSER, a cape, bay, and town, on the south coast of Arabia, in long. 51° 20' E., and lat. 15° 19' N. No water is nearer than a mile west. There are two inferior towns beside in this bay.

KISSER, in geography, a town of Africa, the ancient Colonia Assuras, as appears from many inscriptions still to be met with in the place. Here is a triumphal arch done in a very good taste; there is also a small temple of a square figure, with several instruments of sacrifice carved upon it. The town is situated in the kingdom of Tunis, on the declivity of a hill, above a large fertile plain; which is still called the plain of Surso, probably from its ancient name Assuras.

KISSING, by way of salutation, or as a token of respect, has been practised in all nations. The Roman emperors saluted their chief officers by a kiss. Kissing the mouth or the eyes was the usual compliment upon any promotion or happy event. Soldiers kissed the general's hand when he quitted his office. The Romans affected such a degree of delicacy, that they never embraced their wives in the presence of their daughters; yet what people ever plunged deeper in the most abominable vices? Near relations were allowed to kiss their female kindred on the mouth, to discover if they smelt of wine; as the Roman ladies sometimes made too free with the juice of the grape. Slaves kissed their master's hand, who used to hold it out to them for that purpose. Kissing was a customary mode of salutation amongst the Jews, as we may collect from Judas approaching his master with a kiss. Relations used to kiss their kindred when dying, and when dead; when dying, out of a strange opinion that they should imbibe the departing soul; and when dead, by way of valedictory ceremony. They also kissed the corpse after it was conveyed to the pile, when it had been seven or eight days dead.

KISTNA, or **KRISHNA**, a river of the south of India, so called after the celebrated deity of this name. It takes its rise near Sattarah, in the province of Bejapore, fifty miles in a direct line from the western sea-coast. During its course east-

ward, it is joined by the Malpurba, Gutpurba, Reemah, and Toombuddra, and pours a prodigious volume of waters, by various mouths, into the Bay of Bengal. It is 650 miles in length; but, owing to sand at its mouths, it is not navigable by ships. This river formed the southern boundary of the Mahomedan kingdom of the Deccan.

KISTNAGHURRY, a town and fortress of Barramahal in the south of India. It is situated on a rock nearly 700 feet in perpendicular height, and has never yet been taken by force. In November 1791 the British troops were repulsed in attempting to storm it; but it came into our possession along with the province, in 1792, and has been since dismantled. It is surrounded by extensive rice fields. Long. 78° 23' E., lat. 12° 32' N.

KIT, *n. s.* *Dut. kitte.* A large bottle: a small diminutive fiddle. A small wooden vessel, in which Newcastle salmon is sent to London and elsewhere.

'Tis kept in a case fitted to it, almost like a dancing master's *kit*. *Grew's Museum.*

KITCH'EN, *n. s.* } Saxon *cycene* ;
KITCH'EN-GARDEN, *n. s.* } Welsh *kegin* ; Flem.
KITCH'EN-MAID, *n. s.* } *keg* ; Fr. *cuisine* ; Ital.
KITCH'EN-STUFF, *n. s.* } *cucina* ; Erse. *kyshen*.
KITCH'EN-WENCH, *n. s.* } The room in a house
KITCH'EN-WORK, *n. s.* } where the provisions
 are cooked : kitchen-garden, garden in which esculent plants are produced : kitchen-maid, a maid under the cook maid : kitchen-stuff, the fat of meat scummed off the pot, or gathered from the dripping pan : kitchen-wench, scullion ; maid employed to clean the instruments of cookery : kitchen-work, cookery, or work done in the kitchen.

These being culpable of this crime, or favourers of their friends, which are such by whom their *kitchens* are sometime amended, will not suffer any such statute to pass. *Spenser.*

Can we judge it a thing seemly for any man to go about the building of an house to the God of heaven, with no other appearance than if his end were to rear up a *kitchen* or a parlour for his own use ? *Hooker.*

Laura to his lady was but a *kitchenwench*.

Shakspeare.

He was taken into service in his court to a base office in his *kitchen* ; so that he turned a broach that had worn a crown. *Bacon.*

Gardens, if planted with such things as are fit for food, are called *kitchengardens*. *Id.*

As thrifty wench scrapes *kitchenstuff*,
 And barrelling the droppings and the snuff
 Of wasting candles, which in thirty year,
 Reliquely kept, perchance buys wedding cheer.

Donne.

To that arch city of this government,
 The first three pipes the ready feast convoy :
 The other three in baser office spent,
 Flinging out the dregs which else the *kitchen* cloy.

Fletcher's Purple Island.

Instead of *kitchenstuff* some cry

A gospel-preaching ministry. *Hudibras.*

A *kitchengarden* is a more pleasant sight than the finest orangery. *Spectator.*

We see no new-built palaces aspire,

No *kitchens* emulate the vestal fire. *Pope.*

Roasting and boiling leave to the *kitchenwench*.

Suiff.

The *kitchen* soon was all on fire,

And to the roof the flames aspire. *Couper.*

Mr. Griffin, Sir,—This is to let you know, that though I can't write nor read, our Peter writes this for me, and I hear all your papers read in our *kitchen*.
Canning. Microcosm.

KITCHEN, ARMY, is a space of about sixteen or eighteen feet diameter, with a ditch surrounding it three feet wide; the opposite bank of which serves as a seat for the men who dress the victuals. The kitchens of the flank companies are contiguous to the outline of the camp; and the intermediate space is generally distributed equally for the remaining kitchens. As each tent forms a mess, each kitchen must have as many fire-places as there are tents in the company.

KITCHEN, PUBLIC. See **PUBLIC KITCHEN.**

KITE, *n. s.* } Sax. *cýte* ; Welsh *cuđ.* A

KITES'FOOT, *n. s.* } bird of prey that infests farms and steals chickens ; a name of reproach denoting rapacity ; a fictitious bird made of paper : kitesfoot, a plant.

The starling that the counsails can bewrie ;

The tame ruddocke ; and the coward-kite.

Chaucer. The Assemlie of Fowles.

Detested *kite* ! thou liest.

Shakspeare. King Lear.

More pity that the eagle should be mewed,
 While *kites* and buzzards prey at liberty.

Shakspeare.

The heron, when she soareth high, so as sometimes she is seen to pass over a cloud, sheweth winds ; but *kites*, flying aloft, shew fair and dry weather.

Bacon.

A leopard and a cat seem to differ just as a *kite* doth from an eagle. *Grew.*

A man may have a great estate conveyed to him ; but if he will madly burn, or childishly make paper *kites* of his deeds, he forfeits his title with his evidence. *Government of the Tongue.*

KITE, in ornithology. See **FALCO.**

KIT'S, (*St.*), or *St. Christopher's*, one of the West India Islands. See **CHRISTOPHER'S.**

KITTEN, *n. s.* & *v. n.* Teut. *kæsgin.* The diminutive of cat. A young cat : to bring forth young cats.

So it would have done

At the same season, if your mother's cat

Had *kittened*, though yourself had ne'er been born.

Shakspeare.

That a mare will sooner drown than an horse, is not experienced ; nor is the same observed in the drowning of whelps and *kittens*.

Browne's Vulgar Errors.

The eagle timbered upon the top of a high oak, and the cat *kittened* in the hollow trunk of it.

L'Estrange.

Helen was just slipt into bed ;

Her eyebrows on the toilet lay,

Away the *kitten* with them fled,

As fees belonging to her prey. *Prior.*

It was scratched in playing with a *kitten*.

Wiseman.

Close by the threshold of a door nailed fast

Three *kittens* sat ; each *kitten* looked agnast.

Couper. Colubriad.

KIUTAHIA, a city of Asia Minor, the capital of Anatolia, is situated partly at the foot, and partly on the sides of the Poorsac Dag, a range of mountains bounding a fertile valley, on

the south. It occupies the position of the ancient Cotyæum. The town, covering a considerable extent of ground, is of course uneven in its site; but contains several handsome fountains, conveyed from the hills by aqueducts; and, though not so populous as formerly, is said still to contain between 50,000 and 60,000 inhabitants, Armenians and Greeks. There are said to be thirty hammams or public baths, fifty mosques, four Armenian and one Greek church, and twenty caravanseras. Here are also the ruins of a castle, which must have been once of great strength. Long. 29° 52' E., lat. 39° 25' N.

KIU-TCHEOU-FOU, a town of China of the first rank, in the province of Tchekiang. It is built on a fine river, and borders on Kiangsee and Footchien, from which last it is separated by a range of mountains, the ascent of which is by stairs. Long. 118° 39' E., lat. 29° 2' N.

KIZILERMAK, the ancient Halys, a considerable river of Asia Minor, which rises from Mount Argish, near Kaisarieh; and, after flowing westwards, turns to the south, and falls into the Black Sea, about forty miles south of Samsoon, in long. 36° 10' E., and lat. 41° 30' N. It is considered the finest river in Asia Minor.

KIZLAR, a fortified town and district of Asiatic Turkey, in the government of Caucasus. It is situated near the confluence of the Terek with the Caspian, and was built in 1736. It is garrisoned by battalions of the tribes who wander over the steppe between Kizlar and Astrakhan, chiefly Nogays, Troukhmen, and Kalmuks. It is an entrepôt for the commerce of Astrakhan with Persia and the Caucasus. Wine, brandy, and silk are produced and exported in considerable quantity; also the oil of sesamus. Long. 46° 29' 10" E., lat. 43° 51' N.

KLAPROTH (Martin Henry Von), professor of chemistry at Berlin, died there at a very advanced age, January 1st 1817, having been a writer on that science above forty years. He was the fortunate discoverer of uranium, the zirconia, and mellitic acid; and made various interesting experiments on cöpal, tellurium, and titanium. His works in German make 6 vols. 8vo.

KLATTAU, a circle and town of the south of Bohemia, bounded by Pilsen and Prachatitz, and in part by the north-east frontier of Bavaria. The area of the circle is 870 square miles, with 140,000 inhabitants. The town is well built, and has extensive woollen manufactures. In the neighbourhood are marble quarries, some silver mines, and a celebrated mineral water. The town is said to have been surrounded with walls in the year 1000. In 1810 part of it was destroyed by fire. Population 4000: sixty-nine miles south-west of Prague.

KLEBER (J. B.), a French general, was born in Strasburgh in 1759, and was educated for an architect. Accident led him to enter into the Austrian service, in which he continued eight years, and then, returning to his native country, he became inspector of the public buildings in Upper Alsace. The revolution of France rekindled his military ardor, and he obtained a commission in the service. He displayed great bravery and judgment at the siege of Mayence, after which he was employed in

La Vendée; but the sanguinary scenes of that province so disgusted him, that he obtained his recall, and was afterwards engaged in the north, where he defeated the Austrians, took Mous, and drove the enemy from Louvain. He also took Maestricht, and contributed to the capture of several other strong places. Discontented with the directory, he left the army and returned to Paris, where he led a private life, writing his military memoirs, till Buonaparte, being appointed general of the army of Egypt, chose Kleber as his companion. At the siege of Alexandria he was wounded on the head as he was climbing the ramparts, but did not retire till he received a second wound. He defeated the Turks in several actions, and Buonaparte, on quitting Egypt, left him in the chief command. In a short time he signed the treaty of El-Arish with Sir Sydney Smith, by which the French agreed to leave Egypt; but it was annulled by the British government, and hostilities were renewed. Kleber, though reduced, did not bend under his misfortunes, but defeated the Turks at the obelisk of Heliopolis. He next took Cairo by storm, and formed an alliance with Murat Bey; but was assassinated by a Turk named Solyman, who gave him four stabs with a dagger, in the year 1800.

KLEINHOFIA, in botany, a genus of the decandria order, gynandria class of plants; natural order thirty-seventh, columniferæ: CAL. pentaphyllous; the petals five; the nectarium campanulate and pedunculated, containing the stamina: CAPS. inflated and five seeded.

KLEIST (Edward Christian de), a celebrated German poet, and a soldier of distinguished bravery, was born at Zeblin, in Pomerania, in 1715. He studied at Cron in Poland, and afterwards at Dantzic and Koningsberg. Having in vain endeavoured to obtain preferment in the law, at twenty-one years of age he accepted a post in the Danish army. He then studied all the sciences connected with military affairs, with the same assiduity he had before studied civil law: In 1740, at the beginning of the reign of Frederick king of Prussia, he went to Berlin, and was presented to the king, who made him lieutenant of his brother prince Henry's regiment; and he was in all the campaigns which distinguished the first five years of Frederick's reign. In 1749 he was made a captain; and published his excellent poem on the Spring. Before the breaking out of the war with Russia, the king appointed him companion to prince Frederick William, and to eat at his table. In 1756 he was nominated major of Hausen's regiment. After the battle of Rosbach the king gave him, by an order in his own hand writing, the inspection of the great hospital established at Leipsic. In 1758, prince Henry coming to Leipsic, captain Kleist desired to serve in his army, which was readily granted. He also served that prince at the beginning of the campaign of 1759, in Franconia, and in all the expeditions of that army, till he was detached with the troops under general de Fink to join the king's army. On the 12th of August was fought the bloody battle of Kunersdorf, in which he fell. He might have recovered, but the fractured bones having cut

an artery, he died next day by loss of blood, after experiencing much kindness from the Russian huzzars. Though the city of Frankfort was then in the hands of the enemy, they buried this Prussian hero with all military honors: the governor, magistrates, professors, and students, with many of the Russian officers, forming the procession, preceded by the funeral music. His poems, which are greatly admired, are elegantly printed in the German tongue, in 2 vols. 8vo.

KLICK, *v. n.* From clack. To make a small sharp noise. In Scotland it denotes to pilfer, or steal away suddenly with a snatch.

KLOPSTOCK (Frederick Theophilus), a celebrated poet of Germany, born at Quedlinburg on the 2nd of July, 1724. After learning at home the elements of the languages, he proceeded in his sixteenth year to college, where his character displayed itself advantageously. He applied very diligently to compositions in prose and verse, and wrote, among other poetical essays, some pastorals, the favorite subjects of the youthful muse in the German universities. At so early a period as the present he took the resolution of writing an epic poem, which had hitherto not existed in the German language. The high opinion he had of Virgil, his favorite poet amongst the ancients; the honor he promised himself in being the first who should offer the German public a work like the *Æneid*; the warmth of patriotism that early animated him to raise the fame of German literature, in this particular, to a level with that of other European countries; all combined with the consciousness of his own superior powers, to spur him on to the execution of his purpose. He was, however, long undecided in the choice of his subject; he sought out some hero in the German history; but, after choosing and rejecting for some time, at length gave the preference to the Messiah. This was even before his acquaintance with Milton, whose *Paradise Lost* was but lately become an important subject of his study. In the autumn of the year 1745 he left the college, and repaired to the university at Jena. He now applied to the study of divinity. In the Easter of 1746 he left Jena and went to Leipsic in company with his cousin Schmidt, from Langensalza, afterwards privy counsellor at the court of Vienna. Here he soon became acquainted with the young favorites of the muses, who had formed themselves into a sort of literary society, in order to purify their taste by mutual criticisms on their essays, the best of which were published in the paper entitled *Bremen Contributions*. Their names were Gærtner, Cramer, Schlegel, Geiseke, Rabener, Zacharia, and others. Our poet was admitted into their society, and attended their meetings. About this time Klopstock began to display his genius in the lyric style, and produced many excellent odes of this description. These, together with the three cantos of the *Messiah*, appeared at first in the *Bremen Contributions*. The *Messiah* acquired, in the space of a few years, its merited attention from all ranks in Germany. It found friends and enemies, admirers and critics, every where; but its approbation was owing as much to the sacredness

of the matter as to the beauty of the poetry; Christian readers loved it as a book that afforded them, at length, amidst the themes of cold orthodoxy, some scope for devout feeling: young preachers quoted it in the pulpit, and coupled the name of Klopstock with that of the prophets.

Klopstock now, however, began to find Leipsic unpleasant to him; his friends had one by one left the university, and he felt himself alone. He therefore in 1748 repaired to Langensalza, in which place he remained till 1750, when he was invited by his friend Bodmer to visit him in Switzerland. Klopstock accordingly accompanied the philosopher Sulzer to Zurich, where he remained for a considerable time. He became indeed so pleased with the scenery of the country, and the simple manners of the inhabitants, that he intended to settle and spend the remainder of his life there, when he received an invitation from Bernstorff to settle at Copenhagen with an assurance that such a pension should be given him as should permit him to devote himself solely to literature. Klopstock set off in the spring of the year 1751 for Denmark. He took the road to Copenhagen by Saxony and Quedlinburg, where he saw his relations; and at Brunswick he visited some of his academical friends; at Hamburg he enjoyed the company of Hagedorn, became acquainted with Miss Muller, celebrated in his odes under the name of Cidli, and who was a great admirer of his *Messiah*. At Copenhagen Klopstock met with the most cordial reception from Bernstorff. He there lived a very secluded tranquil life, never obtruding his presence at court, but dedicating his time entirely to his poem. During his residence here he appears to have enlivened his mind by the works of Dr. Young and Samuel Richardson. With the former he even kept up a correspondence, and addressed an ode to him expressive of his very high esteem and regard. The lively interchange of letters that passed uninterruptedly between his beloved Cidli and himself, knit the bonds of affection still closer, and in 1754 he travelled to Hamburg, where she at length became his wife. But he enjoyed for a short time only the true bliss of connubial affection. This amiable and affectionate lady was snatched from him in child-bed about nine months after their marriage. To the year 1771 Klopstock made Copenhagen his usual place of residence; but after that time he lived mostly in Hamburg, in the character of royal Danish legate, and counsellor from the court of the Margrave of Baden. This latter title, together with a pension, was the grant of the elector Frederick of Baden, whose invitation to our poet was so pressing, that he spent the year 1775 at the court of Carlsruhe. While sinking into the grave, he was engaged to present posterity with a collection of his works, such as would be worthy the great poet. From the year 1798 they passed through the office of the famous Göschen three different times, and evince the high veneration in which the poet was held by his contemporaries. Klopstock died as he had lived March 14th, 1803. His *Messiah* will ever remain a monument of his genius, and on the

value of his odes all cultivated Germans have but one opinion. From the superior talents of this poet, in the epic style, it is usual to forget his dramatic pieces, which are, however, certainly of no mean value. Although his tragedies are more fitted for reading than representation, yet they discover the same traits of simplicity, dignity, and force of amplification, as well as elegant language, which characterise all his productions.

KLOSTER-NEUBURG, a town of Lower Austria, on the right side of the Danube, six miles north of Vienna. It was once a Roman colony. It contains several monuments of interest, and takes its name from a monastery of the order of St. Augustine, founded in 1114. The church has several curiosities; and in the treasury has been preserved, since 1616, the crown of the archduke of Austria, which is regularly carried to Vienna on the accession of a new sovereign. The library of this monastery contains 25,000 printed volumes, besides Hebrew, Arabic, and Latin MSS. The cellars are of great extent, and contain a celebrated tun, the largest in Germany, next to that of Heidelberg. In 1688 the lower town was burnt by the Turks, but the upper town resisted all their efforts. Here is a dock-yard for light-armed vessels, and a government manufacture of arms. Long. 16° 17' E., lat. 48° 19' N.

KLOTZ (Christian Adolphus), an eminent German critic, born in the year 1738 at Bischofswerden, near Dresden, where his father was settled as a clergyman. He displayed, at an early period, such an attachment to letters, that his parents spared no expense to gratify his taste, and to enable him to cultivate his talents to the best advantage. He employed those leisure hours, which other youths devote to amusements, in composing and reciting German verses. At Gorlitz he studied, under Baumgarten, the Greek and Roman classics, and gave a specimen of his powers in versification by a poem composed on the Destruction of the Zittau, which was laid waste in the year 1757. In 1758 he proceeded to Leipsic to study jurisprudence, and while here published several papers in the *Acta Eruditorum*, and some separate pieces. In 1761 he published his *Opuscula Poetica*, containing twenty-three odes, three satires, and as many elegies. From Leipsic he repaired to Jena, where he opened a school, which was well attended.

Having accepted of an invitation to a professorship at the University of Gottingen, in 1762, he set off for that place, and almost immediately after his arrival he was attacked by a severe illness, from which, however, he recovered, and immediately published a treatise, *De Verecundiâ Virgiliti*, to which were added three dissertations relative to the eclogues of the poet. He also published *Miscellanea Critica*, and applied himself to the study of ancient paintings, with which he became well acquainted. His celebrity had now so much increased, that he received two offers, one from the prince of Hesse Darmstadt, to be professor of the oriental languages at Giessen, and the other from his Prussian majesty, to be professor of eloquence at Halle.

While he was deliberating respecting the choice he should make, he was nominated by his Britannic majesty to be professor of philosophy at Gottingen, with an increased salary. He soon, however, quitted Gottingen, and accepted an offer made him by his Prussian majesty of being professor of philosophy and eloquence at Halle, with the rank and title of aulic counsellor. While preparing for his departure, he published *Historia Nummorum Contumeliosorum et Satyricorum*, containing a history of these coins; and on his removal to Halle he gave the public another work of the same kind, and at the same time effected the institution of a new society, called the Literary Society of Halle. In 1766 he was invited by his Polish majesty to Warsaw, to superintend the education of the children of the Polish nobility, which he would gladly have accepted, as it afforded him an opportunity of visiting new countries; but the king ordered him to remain at Halle, conferred upon him the rank of privy counsellor, and accompanied this mark of honor with a considerable addition to his salary. He died in 1771, leaving behind him many other works besides those to which we have referred. Before his death he revised every thing which he had written on coins, and published *Opuscula, Nummaria quibus Juris Antiqui Historiæque nonnulla Capita explicantur*.

KNAB, *v. a.* } Belg. *knappen*; Erse.

KNAB'BLE, *v. n.* } *knaap*. To bite. Perhaps properly to bite some brittle, that makes a noise when it is broken.

Horses will *knabble* at walls, and rats gnaw iron.

Brown.

I had much rather lie *knabbing* crusts, without fear, in my own hole, than be mistress of the world with cares.

L'Estrange.

An ass was wishing, in a hard winter, for a little warm weather, and a mouthful of fresh grass to *knab* upon.

Id.

KNACK, *n. s. & v. n.* } Sax. *cnappinge*, skill.

KNACK'ER, *n. s.* } A little machine; a petty contrivance; a toy. (This word is apparently formed from the knocking or snapping of the fingers, used by jugglers.) A readiness; facility; a dexterity; a nice trick: knock, to make a sharp quick noise; perhaps to knock: knacker, a maker of small work; a ropemaker.

The more quaint *knackes* that they make,
The more wol I stele when that I take.

Chaucer. The Reves Tale.

For thee, fond boy,
If I may ever know thou dost but sigh
That thou no more shall see this *knack*, as never
I mean thou shalt, we'll bar thee from success.

Shakspeare.

This cap was moulded on a porringer,
A velvet dish; fie, fie, 'tis lewd and filthy:

Why 'tis a cockle, or a walnut shell,
A *knack*, a toy, a trick, a baby's cap.

Id.

I'll teach you the *knacks*

Of eating flax,

And out of their noses

Draw ribbands and posies.

Ben Jonson's Gypsies.

But is't not presumption to write verse to you,
Who make the better poems of the two!
For all these pretty *knacks* that you compose,
Alas! what are they but poems in prose? *Denham*

He expounded both his pockets,
 And found a watch, with rings and lockets;
 A copper-plate, with almanacks
 Engraved upon't, with other *knacks*. *Hudibras*.
Knaves, who in full assemblies have the *knack*
 Of turning truth to lies, and white to black.

Dryden.

There is a certain *knack* in conversation that gives
 a good grace by the manner and address.

L'Estrange.

One part for plough-wright, *knacker*, and smith.

Mortimer.

My author has a great *knack* at remarks: in the
 end he makes another about our refining in contro-
 versy, and coming nearer and nearer to the church
 of Rome.

Atterbury.

For how should equal colours do the *knack*?

Cameleons who can paint in white and black?

Pope.

The dean was famous in his time,

And had a kind of *knack* at rhyme. *Swift*.

KNAG, *n. s.* } Dan. *knag*. A hard knot
KNAC'GY, *adj.* } in wood; knotty.

KNAP, *n. s.* Saxon *cnæp*, a protuberance;
 Welsh *cnap*, a protuberance, or a broken piece.
 A protuberance; a swelling; prominence.

You shall see many fine seats set upon a *knap* of
 ground, environed with higher hills round about it,
 whereby the heat of the sun is pent in, and the wind
 gathered as in troughs.

Bacon.

Hark on *knap* of yonder hill,

Some sweet shepherd tunes his quill. *Browne*.

It is a *knappe* of a mountaine very steepe and
 sharpe of all sides, with a narrow point like a pine
 apple, by reason whereof we do call it orthopagum.

North's Plut. Sylla.

KNAP, *v. a. & v. n.* } Dut. *knappen*; Erse.
KNAP'PLE, *v. n.* } *knaap*. To bite or
 break short; to make a short sharp noise like
 that of breaking: *knapple*, to break off with a
 sharp noise.

He *knappeth* the spear in sunder.

Common Prayer.

Knep a pair of tongs some depth in a vessel of
 water, and you shall hear the sound of the tongs.

Bacon's Natural History.

He will *knep* the spears a-pieces with his teeth.

More.

I reduced the shoulders so soon, that the standers-
 by heard them *knep* in before they knew they were
 out.

Wiseman.

KNAP'BOTTLE, *n. s.* *Papaver spumeum*. A
 plant.

KNAP'SACK, *n. s.* From Belg. *knappen*,
 bite, or to eat. The bag which a soldier carries
 on his back; a bag of provisions.

The constitutions of this church shall not be re-
 pealed, 'till I see more religious motives than sol-
 diers carry in their *knapsacks*.

King Charles.

If you are for a merry jaunt, I'll try for once who
 can foot it farthest: there are hedges in Summer,
 and barns in Winter: I with my *knapsack*, and you
 with your bottle at your back: we'll leave honour
 to madmen, and riches to knaves, and travel till we
 come to the ridge of the world.

Dryden.

KNAP'WEED, *n. s.* Lat. *jacea*. A plant.

KNAPWEED. See **CENTAUREA**.

KNARE, *n. s.* Germ. *knor*. A hard knot.

A forest

In which ther wonneth neyther man ne best;

With knotty, *knarry*, barren trees olde,

Of stubbes sharpe and hideous to behold.

Chaucer. The Knights Tale.

A cake of scurf lies baking on the ground,
 And prickly stubs instead of trees are found;
 Or woods with knots, and *knares* deformed and old,
 Headless the most, and hideous to behold. *Dryden*.

KNARESBOUOH, a market town and
 parish of Yorkshire, in the West Riding, 211 miles
 from London. The town is an ancient borough,
 and called by foreigners the Yorkshire Spa. It
 is almost encompassed by the Nid, which issues
 from the bottom of Craven Hills; and had a
 priory with a castle, which have long since been
 demolished, on a craggy rock, whence it took
 the name. It is about three furlongs in length;
 and the parish is famous for medicinal springs
 near each other, and yet of different qualities.

1. The sweet spa, or vitriolic well, in Knaresbo-
 rough Forest, three miles from the town, which
 was discovered in 1620. 2. The sulphureous
 spa, which is used only in bathing. 3. St. Mun-
 go's, a cold bath, four miles from the town. 4.
 The dropping-well, which is in the town, and the
 most noted petrifying spring in England, so
 called by reason of its dropping from the spongy
 rock hanging over it. The ground which re-
 ceives it, before it joins the well, is, for twelve
 yards long, become a solid rock. From the well
 it runs into the Nid, where the spring water has
 made a rock that stretches some yards into the
 river. It has a good market and six fairs. Here
 is a stone bridge over the river, near one end of
 which is a cell, dug out of the rock, called St.
 Robert's chapel. The town is 18 miles west by
 north of York. It sends 2 members to parliament.

KNAVE, *n. s.* } Sax. *cnapa*, a page;
KNAVE'RY, *n. s.* } a boy; a male child; a
KNAVE'ISH, *adj.* } servant: all these are
KNAVE'ISHLY, *adv.* } obsolete. A petty rascal;
 a scoundrel; a rogue; a card with a soldier
 painted on it: *knavery*, dishonesty; petty cheat-
 ing; mischievous tricks or practices: *knavish*,
 wicked; fraudulent; waggish; mischievous.

And to a *knave* a ring she gave, anon;

And prayed him by signes, for to gon

Unto the Queene, and beren hire that clothe.

Chaucer. Legende of Good Women.

Here's no *knavery*! See, to beguile the old folks,
 how the young folks lay their heads together!

Shakespeare.

Here she comes curst and sad;

Cupid is a *knavish* lad,

Thus to make poor females mad.

Id.

We'll revel it as bravely as the best,

With amber bracelets, beads, and all this *knavery*.

Id.

For 'twill return, and turn to account,

If we are brought in play upon't,

Or but by casting *knaves* get in,

What power can hinder us to win! *Hudibras*.

For as the moon the eye doth please

With gentle beams not hurting sight,

Yet hath sir sun the greater praise,

Because from him doth come her light:

So if my man must praises have,

What then must I that keep the *knave*?

Sidney.

The cunning courtier should be slighted too,

Who with dull *knavery* makes so much ado;

'Till the shrewd fool, by thriving too too fast,

Like Æsop's fox, becomes a prey at last. *Dryden*.

He eats and drinks with his domestic slaves;

A verier hind than any of his *knaves*.

Id.

An honest man may take a *knave's* advice ;
But idiots only may be cozened twice. *Id.*
When both plaintiff and defendant happen to be
crafty *knaves*, there's equity against both.

L'Estrange.

Most men rather brook their being reputed *knaves*,
than for their honesty be accounted fools ; *knave*, in
the mean time, passing for a name of credit. *South.*
'Tis foolish to conceal it at all, and *knaveish* to do
it from friends. *Pope's Letters.*

See all our fools aspiring to be *knaves*. *Pope.*

From man to man, or ev'n woman paid,

Praise is the medium of a *knaveish* trade,

A coin by craft for folly's use design'd,
Spurious, and only current with the blind.

Couper. Epistle to a Protestant Lady in France.

It is your knell—swell on thou lusty peal,
Now *knaves*, what ransom for your souls.

Byron. Marino Faliero.

Not to keep my readers longer in suspense, the
subject of the poem is, 'The Reformation of the
Knave of Hearts.' It is not improbable that some
may object to me, that a *knave* is an unworthy hero
for an epic poem ; that a hero ought to be all that is
great and good. *Canning. Microcosm.*

KNAUTIA, in botany, a genus of the mono-
gynia order, and tetrandria class of plants ; nat-
ural order forty-eighth, aggregatæ : common
CAL. oblong, simple, quinqueflorous : the proper
one simple, superior : the florets regular : the re-
ceptacle naked.

KNEAD, *v. a.* } Saxon, cneāban ;

KNEAD'ING-TROUGH, *n. s.* } Belg. *kneden.* To
beat or mingle any stuff or substance : kneading-
trough, a trough in which dough is mixed toge-
ther, and worked for making bread.

Frogs shall come into thy *kneading-troughs*.

Ezodus.

He goth and geteth him a *kneading-trough*,
And after, a tubbe,—and a kemelyn.

Chaucer. The Milleres Tale.

Here's yet in the word hereafter, the *kneading*, the
making of the cakes, and the heating of the oven.

Shakspeare.

It is a lump, where all beasts *kneaded* be,
Wisdom makes him an arc, where all agree.

Donne.

Thus *kneading* up with milk the new-made man
His kingdom o'er his kindred world began :
'Till knowledge misapplied, misunderstood,
And pride of empire, soured his balmy blood.

Dryden.

One paste of flesh on all degrees bestowed,
And *kneaded* up alike with moist ning blood. *Id.*
Prometheus, in the *kneading* up of the heart, seasoned
it up with some furious particles of the lion.

Addison's Spectator.

No man ever reapt his corn,
Or from the oven drew his bread,

Ere hinds and bakers yet were born,
That taught them both to sow and *knead*.

Prior.

The cake she *kneaded* was the sav'ry meat. *Id.*

KNEE, *n. s. & v. a.*

KNEED, *adv.*

KNEE'-DEEP, *adj. & adv.*

KNEE'-PAN, *n. s.*

KNEEL, *v. n.*

KNEE'-TRIBUTE, *n. s.*

KNEE'-GRASS, *n. s.*

KNEE'HOLM, *n. s.*

and so cut that the trunk and branch make an
angle : knee, to supplicate by kneeling : kneed,

Sax. cneogh ; Belg.

knie ; Syr. *cnea* ; Gr.

γονυ ; Lat. *genu*. The

joint of the leg where

the leg is joined to

the thigh : a knee is

a piece of timber

growing crooked,

and branch make an
angle : knee, to supplicate by kneeling : kneed,

having knees or joints, as inkneed, outkneed, and
kneed-grass : knee-deep, rising to the knees ; sunk
in up to the knees : knee-pan, knee and pan, a
little round bone which covers the knee joint,
convex on both sides, and covered with a smooth
cartilage on its foreside : kneel, to bend the
knee : knee-tribute, worship, or obedience, show
by kneeling : kneedgrass, a herb : kneeholm, a
herb.

A certain man *kneeling* down to him, said, Lord,
have mercy upon my son for he is lunatick.

Matt. xvii. 14.

And they with humble herte ful buxumly,

Kneling upon hir *knees* ful reverently,

Him thonken all. *Chaucer. The Clerkes Tale.*

Ere I was risen from the place that shewed
My duty *kneeling*, came there a reeking post,
Stewed in his haste, half breathless, panting forth
From Goneril his mistress, salutations.

Shakspeare.

When thou dost ask me blessing, I'll *kneel* down,
And ask of thee forgiveness. *Id. King Lear.*

Go you that banished him, a mile before his tent
fall down, and *knee* the way into his mercy.

Id. Coriolanus.

Thy royal father

Was a most sainted king : the queen that bore
thee,

Ofteener upon her *knees* than on her feet,

Died every day she lived. *Id. Macbeth.*

Such dispositions are the fittest timber to *make*
great politicks of : Like to *knee* timber, that is good
for ships that are to be tossed ; but not for building
houses, that shall stand firm. *Bacon.*

The *kneepan* must be shown, with the knitting
thereof, by a fine shadow underneath the joint.

Peacham on Drawing.

As soon as you are dressed *kneel* and say the Lord's
prayer. *Taylor's Guide to Devotion.*

I beg and clasp thy *knees*.

Milton.

Receive from us

Kneetribute yet unpaid, prostration vile. *Id.*

Wearied with length of ways, worn out with toil,

To lay down, and leaning on her *knees*,

Invoked the cause of all her miseries ;

And cast her languishing regards above,

For help from Heaven, and her ungrateful Jove.

Dryden.

The country peasant meditates no harm,
When clad with skins of beast to keep him warm ;
In winter weather unconcerned he goes,
Almost *kneedeep*, through mire in clumsy shoes.

Id.

Him, entering, thou shalt haply see

Beside his spouse, his infant on his *knee*.

Cowper. Elegy IV.

And tortuous arms,

The shipwright's darling treasure, didst present

To the four quartered winds, robust and bold ;

Warped into tough *knee* timber many a load !

But the axe spared thee. *Id. Yardley Oak.*

Ha ! art thou there ?

Come, *kneel* with me, and witness to the vow

I offer to renounce thee, and to die.

Maturin. Bertram.

Now—now—he *kneels*—and now they form a cir-
cle,

Round him, and all is hidden—but I see

The lifted sword in air.—Oh ! Hark ! it falls !

Byron. Marino Faliero.

KNEE, in anatomy, the articulation of the thigh
and leg bones. See ANATOMY.

KNEE, in ship building, is a crooked piece of

timber, having two branches or arms used to connect the beams of a ship with her sides. The branches of the knees form an angle of greater or smaller extent, according to the mutual situation of the pieces which they are designed to unite. One branch is securely bolted to one of the deck-beams, whilst the other is in the same manner attached to a corresponding timber in the ship's side. Besides the great utility of knees, in connecting the beams and timbers into one compact frame, they contribute greatly to the strength and solidity of the ship, in the different parts of her frame to which they are bolted; and thereby enable her with greater firmness to resist the effects of a turbulent sea. In fixing these pieces, it is occasionally necessary to give an oblique direction to the vertical or side branch, to avoid the range of an adjacent gun-port, or because the knee may be so shaped as to require this disposition; it being sometimes difficult to procure so great a variety of knees as may be necessary in the construction of a number of ships of war. In France the scarcity of these pieces has obliged their shipwrights frequently to form their knees of iron. Knees are either said to be lodging or hanging. The former are fixed horizontally in the ship's frame, having one arm bolted to the beam, and the other across two or three timbers; the latter are fixed vertically, as we have described above.

KNEE OF THE HEAD, a large flat piece of timber, fixed edgewise upon the fore part of a ship's stem, and supporting the ornamental figure or image placed under the bowsprit. See **SHIP-BUILDING**. The knee of the head, which may properly be defined a continuation of the stem, as being prolonged from the stem forwards, is extremely broad at the upper part, and accordingly composed of several pieces united into one. It is let into the head, and secured to the ship's bows by strong knees fixed horizontally upon both, and called the cheeks of the head. The heel of it is scarfed to the upper end of the fore foot; and it is fastened to the stem above the knee, called a standard. Besides supporting the figure of the head, this piece serves to secure the boom, by which the fore tack is extended to windward; and, by its great breadth, prevents the ship from falling to leeward when close hauled so much as she would otherwise do. It also affords a greater security to the bowsprit, increasing the angle of the bob-stay, so as to make it act more perpendicularly on the bowsprit. The knee of the head is a phrase peculiar to shipwrights; as this piece is always called the cut-water by seamen.

KNEE-PAN. See **ANATOMY**.

KNELL, *n. s.* Sax. *cnýllan*, to ring; Welsh *cnll*, funeral pile. The sound of a bell rung at a funeral.

I would not wish them to a fairer death:
And so his *knell* is knolled. *Shakespeare.*

All these motions, which we saw,
Are but as ice, which crackles at a thaw:
Or as a lute, which in moist weather rings
Her *knell* alone, by cracking of her strings. *Donne.*

Unhappy slave, and pupil to a bell,
Which his hour's work, as well as hours do tell;
Unhappy 'till the last, the kind releasing *knell*.

Cowley.

At dawn poor Stella danced and sung;
The am'rous youth aroung her bowed:
At night her fatal *knell* was rung;
I saw, and kissed her in her shroud. *Prior.*
He, who dies 'mid clarions swelling,
He who dies 'mid requiem's *knelling*.

Maturin. Bertram.

It is our *knell*, or that of Venice.—On.

Byron: Marino Faliero.

KNELLER (Sir Godfrey), a celebrated painter, born at Lubeck in 1648. He received his first instructions under Rembrandt, next under Ferdinand Bol; and afterwards travelled to Rome, where he fixed his particular attention on Titian and the Caracci. He afterwards visited Venice, and distinguished himself so effectually in that city, by his historical pictures and portraits, that his reputation became considerable in Italy. He came at last to England, where he gained the favor of the duke of Monmouth, and, by his recommendation, drew the picture of king Charles II. more than once; who was so taken with his skill that he used to come and sit to him at his house in Covent Garden. The death of Sir Peter Lely left him without a competitor in England, and from that time his fortune and fame were thoroughly established. No painter could have more incessant employment, and no painter could be more distinguished by public honor. He was state painter to Charles II., James II., William III., queen Anne, and George I., equally esteemed and respected by them all: the emperor Leopold I. made him a knight of the Roman empire, and king George I. created him a baronet. Most of the nobility and gentry had their likenesses taken by him, and no painter excelled him in a sure outline, or the graceful disposition of his figures: his works were celebrated by the best poets in his time. He built an elegant house at Whitton near Hampton Court; where he spent the latter part of his life, and died in 1726.

KNEW, the preterite of know. See **KNOW**.

KNIFE, *n. s.* plural knives. Sax. *cnip*; Dan. *kniff*. An instrument edged, and sometimes pointed, wherewith meat is cut, and animals killed.

Myne handes ben not shapen for a *knife*,
As for to reven no man of his life:
What devill have I with the *knife* to do?

Chaucer. Legende of Good Women.

The *knuff* I gave my fader was yistriday yfound,
Sith I hym apele, let him be fast ybound.

Id. The Merchantess second Tale.

Like raging Ino, when, with *knife* in hand,
She threw her husband's murdered infant out;
Or fell Medea, when on Colchicke stand,
Her brother's bones she scattered all about.

Spenser. Faerie Queene.

In his one hand, as fit for harvests toyle,
He held a *knife*-hook, and in the other hand
A paire of waights. *Id.*

Come, thick night!

And pall thee in the dunnest smoke of hell,
That my keen *knife* see not the wound it makes.

Shakespeare

With him went many a fiend, and ugly spright,
Armed with ropes and *knives*, all instruments of spite.

Fletcher's Purple Island.

Blest powers! forbid thy tender life
Should bleed upon a barbarous *knife*. *Crashaw.*

The sacred priests with ready *knives* bereave
The beast of life, and in full bowls receive
The streaming blood. *Dryden's Æneid.*

Even in his sleep he starts, and fears the *knife*,
And, trembling, in his arms takes his accomplice
wife. *Dryden.*

Pain is not in the *knife* that cuts us; but we call
it cutting in the *knife*, and pain only in ourselves.
Watts.

Tell me, *knife-grinder*, how came you to grind *knives*,
Did some rich man tyrannically use you?
Was it the squire, or parson of the parish?
Or the attorney?
Canning.

KNIGHT (Richard Payne), esq., a late eminent patron of learning and the fine arts, was the son of a man of large landed property, who, from a dread of the effect of the discipline of a public school on his constitution, kept him at home till his fourteenth year. On his father's decease, which took place at that period, Mr. Knight was placed at a seminary, where he soon distinguished himself by his progress in classical literature. This was ever after his favorite study and principal relaxation from his duties, as representative of Ludlow, for which borough he sat in several successive parliaments. The collection of ancient bronzes, medals, pictures, and drawings, assembled in his museum at his house in Soho Square, was an equal proof of his taste and his liberality. The whole of this he bequeathed at his death to the British Museum. As an author, he distinguished himself by great critical acumen, and his perfect familiarity with the domestic habits and customs of the ancients. His principal writings are, An Account of the Remains of the Worship of Priapus, lately existing at Isernia in the kingdom of Naples, and its connexion with the Mystic Theology of the Ancients, 4to. 1786; an Analytical Essay on the Greek Alphabet, 4to. 1791; Analytical Enquiry into the Principles of Taste, 8vo. 1805; and Prolegomena in Homerum, reprinted in the Classical Journal. He published also the Landscape, a didactic poem, 8vo. 1794, a review of which he afterwards printed in 1795; The Progress of Civil Society, a didactic poem, 4to. 1796; and a monody to the memory of Fox, 8vo. 1806; his last work was The Romance of Alfred. He died April 28th, 1824, aged seventy-six.

KNIGHT, *n. s. & v. a.* } Sax. *cnip̄t*; Germ. *knecht*, a servant or
KNIGHTLY, *adj.* } pupil. A man ad-
KNIGHTHOOD, *n. s.* } vanced to a certain
KNIGHTLESS, *adj.* } degree of military rank. It was anciently the custom to knight every man of rank or fortune, that he might be qualified to give challenges, to fight in the lists, and to perform feats of arms. When the name was not known, it was usual to say *sir knight*. Shakspeare uses it of a female, and it must then be understood in its original meaning, pupil or follower; a champion: to create one a knight, which is done by the king, who gives the person kneeling a blow with a sword, and bids him rise, *Sir*: knightly, befitting a knight: knighthood, the character and dignity of a knight; knightless, (obsolete); unbecoming a knight.

A *knight* ther was, and that a worthy man,
That for the time that he first began
To ride out, he loved chivalrie,
Trouthe and honour, freedom and curtesie.
Chaucer. Prologue to Canterbury Tales.

I say as fer as man may ride or go
The world was his; what should I more devise?
For though I wrote or told ever mo
Of his *knighthode*, it might not suffice.
Chaucer. The Man of Lawes Tale.

Arise, thou cursed miscreant,
That hast with *knighthless* guile, and treacherous train,
Fair *knighthood* foully shamed. *Faerie Queene.*

The sword which Merlin made,
For that his nursing, when he *knighthood* swore,
Therewith to doen his foes eternal smart. *Id.*

Sir *knight*, if *knight* thou be,
Abandon this forestalled place. *Spenser.*

Pardon, goddess of the night,
Those that slew thy virgin *knight*;
For the which, with songs of woe,
Round about her tomb they go. *Shakspeare.*

Speak truly, on thy *knighthood*, and thine oath,
And so defend thee, Heaven, and thy valour. *Id.*

The lord protector *knighthed* the king: and immediately the king stood up, took the sword from the lord protector, and dubbed the lord mayor of London *knight*. *Hayward.*

He suddenly unties the poke,
Which out of it sent such a smoke,
As ready was them all to choke,
So grievous was the pother;
So that the *knights* each other lost,
And stood as still as any post. *Drayton.*

Is this the sir, who some waste wife to win,
A *knighthood* bought, to go a-wooing in?
Ben Jonson.

This *knight*; but yet why should I call him *knight*,
To give impiety to this reverent stile?
Favours came thick upon him: the next St. George's
day he was *knighthed*. *Wotton.*

Did I for this my country bring
To help their *knights* against their king,
And raise the first sedition? *Denham.*

No squire with *knight* did better fit
In parts, in manners, and in wit. *Hudibras.*

Let us take care of your wound, upon condition
that a more *knighthly* combat shall be performed between us. *Sidney.*

How dares your pride presume against my laws:
As in a listed field to fight your cause:
Unasked the royal grant, nor marshal by,
As *knighthly* rites require, nor judge to try? *Dryden.*

If you needs must write, write Caesar's praise,
You'll gain at least a *knighthood*, or the bays.
Pope.

The hero William, and the martyr Charles,
One *knighthed* Blackmore, and one pensioned Quarles. *Id.*

Arthur the chief, who even now prepares,
In subterraneous being, future wars,
With all his martial *knights*, to be restored,
Each to his seat, around the federal board;
And Oh, if spirit fail me not, disperse
Our Saxon plunderers, in triumphant verse.
Cowper. Manso.

KNIGHT, IN CHESS. See CHESS. The move of this piece in that interesting game has given rise to a curious problem with regard to the various methods by which the chess-board may be covered by the knight. In the life of Kempelen we have given an account of the attempt of an anonymous author to investigate the secret of his celebrated automaton. From his work we

now extract the following account of this problem :—The curious operation of covering the board by the moves of the knight was often exhibited by the automaton, both over the whole and over half of the board, and the author was thus induced to study the subject, and to determine that this operation might be performed on any parallelogram consisting of twelve squares and upwards, with the exception of fifteen and eighteen squares.

“The path of the knight over the board is of two kinds, terminable and interminable. It is, interminable, whenever the last or concluding move of a series is made in a square which lies within the knight’s reach of that from which he originally set out; and terminable in every other instance.”

The celebrated Euler published a paper on this subject in the Memoirs of the Academy of Berlin for 1759, and has there given a method of filling up all the squares, setting out from one of the corners. He has likewise given an endless or interminable route, and he explains a principle by which the routes may be varied so as to end upon any square. Solutions of the same problem have also been given by Montmort, Demoiivre, and Mairan. These are represented in plate KNIGHT’S MOVES IN CHESS, in the following order :—

Terminable Routes over the whole Board.

KNIGHTS, in a ship, two short thick pieces of wood, commonly carved like a man’s head, having four shivers in each, three for the balyards, and one for the top to run in; one of them stands fast bolted on the beams abaft the fore-mast, and is therefore called the fore-knight; and the other standing abaft the main-mast is called the main-knight.

KNIGHTS OF THE SHIRE, or KNIGHTS OF PARLIAMENT, are two gentlemen of worth, chosen on the king’s writ in pleno comitatu, by such of the freeholders of every county as can expend 40s. per annum, to represent such county in parliament. These, when every man who held a knight’s fee in capite of the crown was customarily constrained to be a knight, were of necessity to be milites gladio cincti, for so the writ runs to this day; but now custom admits esquires to be chosen to this office. They must have at least £500 per annum freehold, and their expenses are to be defrayed by the county, though this is seldom now required.

KNIGHTS OF WINDSOR, or POOR KNIGHTS OF THE CHAPEL, were instituted by Henry VIII. in his testament. Their number was at first thirteen, but has been since augmented to twenty-eight.

They assist in the funeral services of the kings of England; they are subject to the office of the canons of Windsor, and live on pensions assigned them by the order of the garter. They bear a blue or red cloak, with the arms of St. George on the left shoulder.

KNIGHT ER’RANT. Chevalier errant. A wandering knight; one who went about in quest of adventures.

Like a bold knight errant did proclaim
Combat to all, and bore away the dame.

Denham.

The ancient errant knights
Won all their mistresses in fights
They cut whole giants into fritters,
To put them into amorous twitters.

Hudibras.

KNIGHT ER’RANTRY. From knight errant. The character or manners of wandering knights.

That which with the vulgar passes for courage is a brutish sort of knight errantry, seeking out needless encounters.

Norris.

KNIGHTHOOD is a military order or honor; a mark or degree of ancient nobility, or the reward of personal virtue and merit.

Military KNIGHTHOOD is that of the ancient knights, who acquired it by high feats of arms. They are called milites in ancient charters and titles, by which they were distinguished from mere bachelors, &c. These knights were girt with a sword, and a pair of gilt spurs; whence they were called equites aurati. Knighthood is not hereditary, but acquired. It does not come into the world with a man like nobility; nor can it be revoked. The sons of kings, and kings themselves, with all other sovereigns, heretofore had knighthood conferred on them as a mark of honor. They were usually knighted at their baptism or marriage, at their coronation, before or after a battle, &c.

Regular KNIGHTHOOD is applied to all military orders which profess to wear some particular habit, to bear arms against the infidels, to succour and assist pilgrims in their passage to the Holy Land, and to serve in hospitals where they should be received; such were the knights templars, the knights of Malta, &c.

KNIGHTHOOD, as a system, known under the denomination of chivalry, is to be dated only from the eleventh century. All Europe being reduced to a state of anarchy, on the decline of the Charlemagne empire, every proprietor of a manor became a petty sovereign; the mansion-house was fortified by a moat, defended by a guard, and called a castle. The possessor had a party of 700 or 800 men at his command; and with these he used frequently to make excursions, which commonly ended in a battle with the lord of some petty state of the same kind, whose castle was then pillaged, and the women and treasures carried off by the conqueror. During this state of universal hostility, there was no friendly communication between the provinces, nor any high roads from one part of the kingdom to another: the wealthy traders, who then travelled from place to place with their merchandise and their families, were in perpetual danger; the lord of almost every castle extorted something from them on the road; and, at last,

some one more rapacious than the rest seized upon the whole cargo, and carried off the women for his own use. Thus castles became the warehouses of all kinds of rich merchandise, and the prisons of the distressed females, whose fathers or lovers had been plundered or slain, and who, being therefore seldom disposed to take the robber or murderer into favor, were in continual danger of a rape. At length many lords associated to repress these sallies of violence and rapine, to secure property and protect the ladies. Among these were many proprietors of great fiefs; and the association was at length strengthened by a solemn vow, and received the sanction of a religious ceremony. As the first knights were men of the highest rank, and the largest possessions, admission into the order was deemed the highest honor; many extraordinary qualifications were required in a candidate, and many new ceremonies were added at his creation. After having fasted from sun-rise, confessed himself, and received the sacrament, he was dressed in a white tunic, and placed by himself at a side-table, where he was neither to speak, to smile, nor to eat; while the knights and ladies, who were to perform the principal parts of the ceremony, were eating, drinking, and making merry at the great table. At night his armour was conveyed to the church where the ceremony was performed; and here, having watched it till the morning, he advanced with his sword hanging about his neck, and received the benediction of the priest. He then kneeled down before the lady who was to put on his armour, who, being assisted by persons of the first rank, buckled on his spurs, put a helmet on his head, and accoutred him with a coat of mail, a cuirass, bracelets, cuisses, and gauntlets. Being thus armed cap-a-pee, the knight who dubbed him struck him three times over the shoulder with the flat side of his sword, in the name of God, St. Michael, and St. George. He was then obliged to watch all night in all his armour, with his sword girded, and his lance in his hand. From this time the knight devoted himself to the redress of wrongs, to secure merchants from the rapacious cruelty of banditti, and women from ravishers, to whose power they were, by the particular confusion of the times, continually exposed. The principal lords who entered into the confraternity of knights, used to send their sons to each other at seven years of age, to be educated far from their parents, in the mystery of chivalry. These youths at fourteen were made squires, and at twenty-one were qualified to receive the order of knighthood. See CHIVALRY, and FEUDAL SYSTEM.

Chivalry flourished most during the time of the crusades. These gave rise to new orders of knighthood; hence the knights of the Holy Sepulchre, the Hospitallers, Templars, and an infinite number of religious orders. Various other orders were at length instituted by sovereign princes: the Garter by Edward III. of England; the Golden Fleece, by Philip the Good, duke of Burgundy; and St. Michael, by Louis XI. of France. For an account of these orders see the various titles in the body of the work; as knights of the garter, &c. See GARTER,

&c. From this time ancient chivalry declined to an empty name; when sovereign princes established regular companies in their armies, knights bannerets were no more, though it was still thought an honor to be dubbed by a great prince or victorious hero; and all who professed arms without knighthood assumed the title of esquire.

KNIGHT OF THE POST. A hireling evidence; a knight dubbed at the whipping post, or pillory.

KNIGHTON, county of Radnor, South Wales. It is united, under the Reform bill, with Radnor and four other places, in returning one member to parliament.

KNIGHT-SERVICE, *servitium militare*, and in old French law, chivalry, a species of tenure, the origin and nature of which are explained under the articles CHIVALRY, and FEUDAL SYSTEM. The knights produced by this tenure differed most essentially from the knights above described. See KNIGHTHOOD. The one class of knights was of a high antiquity; the other was not heard of till the invention of a fee. The adorning with arms, and the blow of the sword, made the act of the creation of the ancient knight; the new knight was constituted by an investment in a piece of land. The former was the member of an order of dignity which had particular privileges and distinctions; the latter was the receiver only of a feudal grant. Knighthood was an honor; knight-service a tenure. The former communicated splendor to an army; the latter gave it strength and numbers. The knight of honor might serve in any station whatever; the knight of tenure was in the rank of a soldier. It is true at the same time, that every noble and baron were knights of tenure, as they held their lands by knight-service. But the number of fees they possessed, and their creation into rank, separated them widely from the simple individuals to whom they gave out grants of their lands, and who were merely the knights of tenure. By the tenure of knight-service, the greatest part of the lands in England was holden, and principally of the king in capite, till the middle of the seventeenth century. It was created, as Sir Edward Coke testifies, for a military purpose, viz. for defence of the realm by the king's own principal subjects, which was judged to be much better than to trust to hirelings or foreigners. The description here given is that of knight-service proper, which was to attend the king in his wars. There were also some other species of knight-service; so called, though improperly, because the service was of a free and honorable nature, and equally uncertain as to the time of rendering, as that of knight-service proper, and because they were attended with similar consequences. Such was the tenure by grand serjeanty, *per magnum servitium*, whereby the tenant was bound, instead of serving the king generally in his wars, to do some special honorary service to the king in person; as to carry his banner, his sword, or the like; or be his butler, champion, or other officer, at his coronation. It was, in most other respects, like knight-service, only he was not bound to pay aid or escuage; and, when tenant

by knight-service paid £5 for a relief on every knight's fee, tenant by grand sergeanty paid one year's value of his land, were it much or little. Tenure by cornage, which was to wind a horn when the Scots or other enemies entered the land, in order to warn the king's subjects, was like other services of the same nature a species of grand sergeanty. These services, both of chivalry and grand sergeanty, were all personal, and uncertain as to their quantity or duration. But the personal attendance in knight-service growing troublesome and inconvenient in many respects, the tenants found means of compounding for it, by first sending others in their stead, and in process of time making a pecuniary satisfaction to the lords in lieu of it. This pecuniary satisfaction at last came to be levied by assessments, at so much for every knight's fee; and therefore this kind of tenure was called *scutagium* in Latin, or *servitium scuti*; *scutum* being then a well-known denomination of money; and in like manner it was called, in the Norman French, *escuage*; being indeed a pecuniary instead of a military service. The first time this appears to have been taken was in the 5 Henry II., on account of his expedition to Toulouse; but it soon came to be so universal, that personal attendance fell quite into disuse. Hence we find in history, that, from this period, when the kings of England went to war, they levied *scutages* on their tenants, that is, on all the landholders of the kingdom, to defray their expenses, and to hire troops: and these assessments, in the time of Henry II., seem to have been made arbitrarily, and at the king's pleasure. Which prerogative being greatly abused by his successors, it became matter of national clamor; and king John was obliged to consent, by his *magna charta*, that no *scutage* should be imposed without consent of parliament. But this clause was omitted in his son Henry III.'s charter; where we only find, that *scutages* or *escuage* should be taken as they were used to be taken in the time of Henry II.; that is, in a reasonable and moderate manner. Yet afterwards, by stat. 25 Edw. I. c. 5 and 6, and many subsequent statutes, it was enacted, that the king should take no aids or tasks but by the common assent of the realm. Hence it is held, that *escuage* or *scutage* could not be levied but by consent of parliament; such *scutages* being indeed the ground-work of all succeeding subsidies, and the land-tax of later times. Had the *escuage* been a settled invariable sum, payable at certain times, it had been neither more nor less than a mere pecuniary rent; and the tenure, instead of knight-service, would have been of another kind, called *soccage*. By the degenerating of knight-service, or personal military duty, into *escuage* or pecuniary assessments, all the advantages either promised or real of the feudal constitutions were destroyed, and nothing but the hardships remained. Instead of forming a national militia, composed of barons, knights, and gentlemen, bound by their interest, honor, and oaths, to defend their king and country, the whole of this system of tenures now tended to nothing else but a wretched means of raising money to pay an army of occasional merce-

naries. In the mean time, the families of all the nobility and gentry groaned under these intolerable burdens, which in consequence of the fiction adopted after the conquest were introduced and laid upon them by the subtlety and finesse of the Norman lawyers. For, besides the *scutages* to which they were liable in defect of personal attendance, which, however, were assessed by themselves in parliament, they might be called upon by the king or lord paramount for aids, whenever his eldest son was to be knighted, or his eldest daughter married; not to forget the ransom of his own person. The heir, on the death of his ancestor, if of full age, was plundered of the first emoluments arising from his inheritance, by way of relief and primer seisin; and if under age, of the whole of his estate during infancy. And then, as Sir Thomas Smith complains, 'when he came to his own, after he was out of wardship, his woods decayed, houses fallen down, stock wasted, and lands let forth and ploughed to be barren,' to make amends, he was yet to pay half a year's profits as a fine for suing out his livery; and also the price or value of his marriage, if he refused such wife as his lord and guardian had bartered for, and imposed upon him; or twice that value, if he married another woman. Add to this, the untimely and expensive honor of knighthood, to make his poverty more completely splendid. And when, by these deductions, his fortune was so shattered and ruined, that perhaps he was obliged to sell his patrimony, he had not even that poor privilege allowed him, without paying an exorbitant fine for a licence of alienation. A slavery so complicated and so extensive as this called aloud for a remedy in a nation that boasted of her freedom. Palliatives were from time to time applied by successive acts of parliament, which assuaged some temporary grievances; till at length the humanity of king James I. consented, for a proper equivalent, to abolish them all. King James's plan for exchanging our military tenures seems to have been nearly the same as that which has been since pursued; only with this difference, that, by way of compensation for the loss which the crown and other lords would sustain, an annual fee farm rent should be settled and inseparably annexed to the crown, and assured to the inferior lords, payable out of every knight's fee within their respective seignories. An expedient, seemingly much better than the hereditary excise which was afterwards made the principal equivalent for these concessions. For at length the military tenures, with all their heavy appendages, were destroyed at one blow by the statute 12 Car. II. c. 24, which enacts, 'that the court of ward or liveries, and all wardships, liveries, primer seisins, and ousterleins, values, and forfeitures of marriages, by reason of any tenure of the king or others, be totally taken away. And that all fines for alienations, tenures by homage, knight-service, and *escuage*, and also aids for marrying the daughter or knighting the son, and all tenures of the king in capite, be likewise taken away. And that all sorts of tenures, held of the king or others, be turned into free and common *soccage*; save only

tenures in frankalmoign, copyholds, and the honorary services without the slavish part of grandsergeanty.' A statute which was a greater acquisition to the civil property of this kingdom than even magna charta itself; since that only pruned the luxuriances that had grown out of the military tenures, and thereby preserved them in vigor; but the statute of king Charles extirpated the whole, and demolished both root and branches.

KNIGHT'S ISLAND, one of the Snares Islands of Vancouver, in the Pacific Ocean. It is the largest of them, and was discovered by Mr. Broughton, commander of the Chatham, November 23d, 1791. The south point is in long. 166° 44' E., lat. 48° 15' S.

KNIGHT'S ISLAND, an island of Prince William's Sound, about thirty miles in length from north to south, and from two to five broad. Long. 212° 52' E., lat. 60° 24' N. Also a small island in Behring's Bay, situated a little to the north-west of Eleanor's Sound, and separated from the continent of America by a narrow navigable channel. Long. 220° 47' E., lat. 59° 45' N.

KNISTENEAX, an indigenous tribe of copper-colored Indians, in the British possessions of North America, north of Lake Superior. They are of moderate stature, well proportioned, and of great activity. Mackenzie describes their women as the handsomest of all the Indian females.

KNIT, *v. a., v. n. & n. s.* } Saxon *cnætan*.
KNIT'ER, *n. s.* } Preter knit or knit-
KNIT'TING-NEEDLE, *n. s.* } ted. To make or
KNIT'TLE, *n. s.* } unite by texture

without a loom; to tie; to join or unite; to contract; to tie up; to weave without a loom; knit, texture: knitter, one who weaves or knits: knitting-needle, a wire which is used in knitting: knittle, a string that gathers a purse round.

Nature, the vicaire of the almightie Lorde,
 That hote and colde; hevie, light; moiste, and drie
 Hath knit, by even number of accorde,—
 In esie voice began to speke and saie.

Chaucer. The Asseble of Foules.

Not anie damzell, which her vaunteth most
 In skilful knitting of soft silken twyne;
 Nor anie weaver, which his worke doth boast
 In diaper, in damaske, or in lyrie,
 Might with their diverse cunning ever dare
 With this so curious networke to compare.

Spenser. Muipotmos.

The spinsters and the knitters in the sun,
 And the three maids that weave their thread with
 bones,

Do use to chant it. *Shakspeare. Twelfth Night.*
 Let their heads be sleekly combed, their blue coats
 brushed, and their garters of an indifferent knit.

Shakspeare.

These, mine enemies, are all knit up
 In their distractions: they are in my power. *Id.*
 Our severed navy too
 Have knit again: and float, threatening most sea-
 like. *Id.*
 Ye knit my heart to you by asking this question.

Bacon.

These two princes were agreeable to be joined in
 marriage, and thereby knit both realms into one.

Hayward.

Pride and impudence, in faction knit,
 Urrup the chair of wit! *Ben Jonson's New Inn.*

God gave several abilities to several persons, that each might help to supply the publick needs, and, by joining to fill up all wants, they be knit together by justice, as the parts of the world are by nature.

Taylor's Rule of Holy Living.

Come, knit hands, and beat the ground
 In a light fantastick round. *Milton.*

A young shepherdess knitting and singing: her voice comforted her hands to work, and her hands kept time to her voice's musick. *Sidney.*

A thousand Cupids in those curls do sit;
 Those curious nets thy slender fingers knit. *Waller.*

Make the world distinguish Julia's son
 From the vile offspring of a trull, that sits
 By the town-wall, and for her living knits. *Dryden.*

What are the thoughts that knit thy brow in frowns,
 And turn thy eyes so coldly on thy prince? *Addison.*

He gave her a cuff on the ear, she would prick
 him with her knittingneedle. *Arbuthnot's John Bull.*

A single emanation from one body,
 Together knit for our oppression!
Byron. Marino Faliero.

KNOB, *n. s.* } Sax. *cnæp*; Dut. *knoop*.
KNOBBED, *adj.* } A protuberance; any part
KNOB'BINESS, *n. s.* } bluntly rising above the
KNOB BY, *adj.* } rest; having knobs or
 protuberances; hard; stubborn: sometimes writ-
 ten knob.

Ne oile of tartre non,
 Ne oiment, that wolde clense or bite,
 That him might helpen of his whelkes white,
 Ne of the knobbes sitting on his chekes.

Chaucer. Prologue to Canterbury Tales.

The informers continued in a knobby kind of obstinacy, resolving still to conceal the names of the authors. *Hewel.*

Just before the entrance of the right auricle of the heart is a remarkable knob or bunch, raised up from the subjacent fat. *Ray.*

The horns of a roe deer of Greenland are pointed at the top, and knobbed or tuberos at the bottom. *Grew.*

KNOCK, *v. n., v. a. & n. s.* } Sax. *cnucian*;
KNOCK'ER, *n. s.* } Welsh *cnocre*, a

blow. To clash; to be driven suddenly together; to beat at a door for admittance: to knock under, a common expression, which denotes that a man yields or submits. Submission is expressed among good fellows by knocking under the table. Followed commonly by a particle: as, to knock up, to rouse by knocking; to knock down, to fell by a blow; to dash together or come in collision: to knock on the head, to kill by a blow; to destroy: knock, a sudden stroke or blow; a loud rap at the door: knocker, he that knocks; the hammer which hangs at the door for strangers to strike.

Go up, quod æe unto his knave, anon;
 Clepe at his dore, or knocke with a ston;
 Loke how it is and tell me boldly,
 This knave goth him up, ful sturdely,
 And at the chambre dore while that he stood,
 He cried and knocked as that he were wood. *Chaucer. The Milleres Tale.*

How do ye mean moving him?
 —Why, by making him incapable of Othello's place;
 knocking out his brains. *Shakspeare. Othello.*

Villain, I say, knock me at this gate,
 And rap me well, or I'll knock your knave's pate. *Shakspeare*

Whether to *knock* against the gates of Rome,
Or rudely visit them in parts remote,
To fright them, ere destroy. *Id. Coriolanus.*
Any hard body thrust forwards by another body
contiguous, without *knocking*, giveth no noise.

Bacon's Natural History.
So when the cook saw my jaws thus *knock* it,
She would have made a pancake of my pocket.
Cleveland.

Some men never conceive how the motion of the
earth should wave them from a *knock* perpendicularly
directed from a body in the air above.

Browne's Vulgar Errors.

Guiscard, in his leathern frock,
Stood ready, with his thrice-repeated *knock* :
Thrice with a doleful sound the jarring grate
Rung deaf and hollow. *Dryden's Boccace.*
At him he launched his spear, and pierced his
breast ;

On the hard earth the Lycian *knocked* his head,
And lay supine ; and forth the spirit fled. *Dryden.*
Knock at your own breast, and ask your soul,
If those fair fatal eyes edged not your sword. *Id.*
He that has his chains *knocked off*, and the prison
doors set open to him, is perfectly at liberty.

Locke.

Excess, either with an apoplexy, *knocks* a man on
the head ; or with a fever, like fire in a strong-water
shop, burns him down to the ground.

Grew's Cosmology.

He betook himself to his orchard, and walking
there was *knocked on the head* by a tree. *South.*

'Tis the sport of statesmen,

When heroes *knock* their knotty heads together,
And fall by one another. *Rowe.*
He began to *knock down* his fellow citizens with a
great deal of zeal, and to fill all Arabia with blood-
shed. *Addison.*

They may say, the atoms of the chaos, being va-
riously moved according to this catholic law, must
needs *knock* and interfere. *Bentley.*

Shut, shut the door, good John ! fatigued, I said,
Tie up the *knocker*, say I'm sick, I'm dead. *Pope.*

Time was, a sober Englishman would *knock*

His servants up, and rise by five o'clock ;

Instruct his family in every rule,

And send his wife to church, his son to school.

Id.

KNOLL, *v. a. & v. n.* See KNELL. To sound
as a bell.

If ever you have looked on better days,
If ever been where bells have *knolled* to church.

Shakspeare.

Had I as many sons as I have hairs,
I would not wish them to a fairer death :
And so his knell is *knolled*. *Id. Macbeth.*

KNOLL, *n. s.* A little hill.

KNOLLES (Richard), an English historian,
born in Northamptonshire about the middle of the
sixteenth century, and educated at Oxford, after
which he was appointed master of the free school
at Sandwich in Kent. He composed *Grammaticæ
Latinæ, Græcæ, et Hebraicæ Compendium,
cum radicibus*, London, 1606. He also compiled
The General History of the Ottoman Empire,
&c. He died in 1610, and this history has been
since continued by several hands : the best by
Paul Ricaut, consul at Smyrna, folio, London,
1680. Knolles wrote also *The Lives and Con-
quests of the Ottoman Kings and Emperors to
the year 1610* ; printed in 1621 ; and *A Brief
Discourse of the Greatness of the Turkish Em-
pire, &c.*

KNOP, *n. s.* A corruption of knap. Any
tufty top.

KNOP, *n. s.* Ranunculus. A flower

KNOT (Edward), a native of Northumber-
land, born in 1580, who, having taken orders,
entered among the Jesuits in 1606. His real
name was Matthias Wilson. He taught at Rome
in the English College, and was afterwards ap-
pointed sub-provincial, and was twice sent thir-
ther as provincial. He was present as provincial
at Rome in 1636, and chosen definitor. He died
in London in 1646. He published several
pieces, particularly *Mercy and Truth, or Charity
Maintained by the Catholics* ; against Dr. Pot-
ter, who had charged the church of Rome with
wanting charity ; but is principally known as the
antagonist of Chillingworth, on whose Religion
of Protestants he wrote some severe strictures,
under the title of *Infidelity Unmasked*.

KNOR, *n. s.* Sax. *cnotta* ; Goth. *knutt* ;
Germ. *knot* ; Dut. *knutte* ; Erse. *knotte*. A
complication of a cord or string not easily to be
disentangled.

With that her glistening helmet she unlaced,
Which doth, her golden locks, that were upbound,
Still in a *knot*, unto her heeles downe traced,
And like a silken veile in compass round,
About her backe, and all her bodie wound.

Spenser. Faerie Queene.

He found that Reason's self now reasons found
To fasten *knots*, which fancy first had bound.

Sidney.

As the fair vestal to the fountain came,
Let none be startled at a vestal's name,
Tired with the walk, she laid her down to rest,
And to the winds exposed her glowing breast,
To take the freshness of the morning air,
And gathered in a *knot* her flowing hair.

Addison.

Any figure of which the lines frequently in-
tersect each other.

Garden *knots*, the frets of houses, and all equal
figures, please : whereas unequal figures are but de-
formities. *Bacon.*

Our sea-walled garden, the whole land,
Is full of weeds, her fairest flowers choked up,
Her *knots* disordered. *Shakspeare's Richard II.*
It fed flowers worthy of paradise, which not nice
art

In beds and curious *knots*, but nature boon,
Poured forth profuse on hill and dale, and plain.

Milton.

Their quarters are contrived into elegant *knots*,
adorned with the most beautiful flowers. *More.*

Henry in *knots* involving Emma's name,
Had half-expressed, and half-concealed his flame
Upon this tree ; and as the tender mark
Grew with the year, and widened with the bark,
Venus had heard the virgin's soft address,
That as the wound, the passion might increase.

Prior.

Any bond of association or union.

And, for to fasten his hood under his chin,
He hadde of gold ywrought a curious pinne,—
A love-*knotte* in the gretten ther was.

Chaucer. Prologue to the Canterbury Tales.

Whereas I find that what is what,
And cold is cold by course of kind ;
So shall I knit an endless *knot* :
Such fruit in love alas I find.

H'quatt.

Confirm that amity
With nuptial *knot*, if thou vouchsafe to grant
That virtuous lady Bona.

Shakspeare. Henry VI.

Richmond aims
At young Elizabeth, my brother's daughter,
And by that *knot* looks proudly on the crown.

Id.

I would he had continued to his country
As he began, and not unknit himself
The noble *knot* he made.

Id. Coriolanus.

Why left you wife and children,
Those precious motives, those strong *knots* of love ?

Id.

Not all that Saul could threaten or persuade,
In this close *knot*, the smallest looseness made,

Cowley.

A hard part in a piece of wood caused by
the protuberance of a bough, and consequently
by a transverse direction of the fibres. A joint
in a herb.

Take in the very refuse among those which served
to no use, being a crooked piece of wood, and full
of *knots*, he hath carved it diligently, when he had
nothing else to do.

Wisdom.

Such *knots* and crossness of grain is objected here,
as will hardly suffer that form, which they cry up
here as the only just reformation, to go on so
smoothly here as it might do in Scotland.

King Charles.

Difficulty; intricacy.

Some man preiseth his neighbour by a wicked en-
tente, for he maketh, alway, a wicked *knotted* at the
last ende; alway he maketh a but at the last ende,
that is digne of more blame than is worth all the
preising.

Chaucer. The Persones Tale.

A fretful temper will divide
The closest *knot* that may be tied,
By ceaseless sharp corrosion.

Cowper. Friendship.

A man shall be perplexed with *knots* and problems
of business, and contrary affairs, where the deter-
mination is dubious, and both parts of the contra-
riety seem equally weighty; so that, which way
so ever the choice determines, a man is sure to ven-
ture a great concern.

South's Sermons.

Any intrigue, or difficult perplexity of affairs.
When the discovery was made that the king was
living, which was the *knot* of the play untied, the
rest is shut up in the compass of some few lines.

Dryden's Dufresnoy.

A confederacy; an association; a small
band.

Oh you panderly rascals! there's a *knot*, a gang;
a conspiracy against me.

Shakspeare's Merry Wives of Windsor.

What is there here in Rome that can delight thee,
Where not a soul, without thine own foul *knot*,
But fears and hates thee.

Ben Jonson's Catiline.

A *knot* of good fellows borrowed a sum of money
of a gentleman upon the king's highway.

L'Estrange.

I am now with a *knot* of his admirers, who make
request that you should give notice of the window
where the knight intends to appear.

Addison's Spectator.

A cluster; a collection.

The way of fortune is like the milky way in the
sky, which is a meeting or *knot* of a number of small
stars, not seen asunder, but giving light together.

Bacon's Essays.

In a picture, besides the principal figures which
compose it, and are placed in the midst of it, there
are less groups or *knots* of figures disposed at proper

distances, which are parts of the piece, and seem to
carry on the same design in a more inferior manner.

Dryden.

But not for any *knot* of men,
Nor sect, nor faction, did I bleed or sweat!

Byron. Marino Faliero.

KNOT, v. n. & v. a. } To complicate in
KNOT'TED, adj. } *knots*; to entangle and
KNOT'TINESS, n. s. } perplex; to unite; to
KNOT'TY, adj. } knit *knots* for fringes;
KNOT'LESS, adj. } to form buds or joints,
in vegetation: *knotted*, *knottiness*, *knotty*, full of
knots; unevenness, or intricacy; hard; rugged;
rough: *knotless*, free from *knots* or obstruc-
tions.

But God it wote, er fully monthes two,
She was full ferre fro that entencion;
For bothè Troilus and Troiè toun
Shall, *knottedlesse*, thorought her hertè sliage;
For she wol take a purpose to abide.

Chaucer. Troilus and Creseide.

Where bene the nosegages that she dight for thee?
The coloured chaplets wrought with a-chiefe,
The *knotted* rush-ringes, and gilt rosemaree!

Spenser. Shepherdes Calender.

I have seen tempests, when the scolding winds
Have rived the *knotty* oaks.

Shakspeare. Julius Cæsar.

The timber in some trees more clean, in some
more *knotty*: try it by speaking at one end, and lay-
ing the ear at the other; for if it be *knotty*, the voice
will not pass well.

Bacon.

King Henry, in the very entrance of his reign, met
with a point of great difficulty, and *knotty* to solve,
able to trouble and confound the wisest kings.

Bacon.

The party of the papists in England are become
more *knotted*, both in dependence towards Spain and
amongst themselves.

Id.

Virtue was represented by Hercules naked, with
his lion's skin and *knotted* club: by his oaken club is
signified reason ruling the appetite; the *knottiness*
thereof the difficulty they have that seek after virtue.

Peacham on Drawing.

Some on the bench the *knotty* laws untie.

Dryden.

The *knotted* oak shall showers of honey weep. *Id.*

Happy we who from such queues are freed,
That were always telling beads;
But here's a queen when she rides abroad
Is always *knottling* threads.

Sedley.

Princes exercised skill in putting intricate ques-
tions; and he that was the best at the untying of
knotty difficulties, carried the prize.

L'Estrange.

They compliment, they sit; they chat,
Fight o'er the wars, reform the state;
A thousand *knotty* points they clear,
'Till supper and my wife appear.

Prior

Yet is thy root sincere, sound as the rock,
A quarry of stout spurs, and *knotted* fangs,
Which, crooked into a thousand whimsies, clas
The stubborn soil, and hold thee still erect.

Cowper. Yardley Oak.

KNOT, Fr. nœud et bouton fait au bout d'un
cordage, a large knob, formed on the extremity of
a rope, generally by untwisting the ends thereof,
and interweaving them regularly amongst each
other. Among seamen there are several sorts of
knots, which differ in their form, size, and name,
according to the uses for which they are de-
signed; as,

Bowline Knot, Fr. *nœud de boutine*, is made by laying the end of a rope *a* over the standing part *b*, and turning a bight over the standing part; then leading the end round the standing part, through the bight again. When this knot is drawn close, it makes a loop, and, when fastened to the cringles of the sails, they must break, or the sails split before it will slip. See diagram.

Buoy-rope Knot, *nœud de l'orin de l'ancre*, is made by unlaying the strands of the cable-laid rope, and also one of the small strands out of each large one; laying the large ones again as before, and leaving the small ones out; then single and double wall the small strands round the rope, worm them along the divisions, and stop their ends with spun yarn.

Diamond Knot, Fr.

nœud de diamant, is made by unlaying the end of a hawser-laid rope for a considerable length, and with the strands from three bights down its side, holding them fast. Put the end of the strand *a* over the strand *b*, and through the bight of the strand *c*, as represented in the figure: then put the strand *b* over the strand *c*, and through the bite

formed at the strand *a*; and the end *c* over *a* and through the bight of *b*. This knot is used for the side ropes, jib-guys, bell-ropes, &c.

Double diamond Knot, Fr. *double nœud de diamant*, is made with the strands opened out again, following the lead of the single knot through two single bights, the ends coming out at the top of the knot, and leading the last strand through two double bights; then by laying the rope up again as before to where the next knot is to be made.

KNOT'BERRYBUSH, *n. s.* *Chamæmorus*. A plant.—Ainsworth.

KNOT'GRASS, *n. s.* Knot and grass: polygonum. A plant.

You minimus of hindering *knotgrass* made.

Shakspeare.

KNOUT, a punishment inflicted in Russia, with a kind of whip called knout, and made of a long strap of leather prepared for this purpose. With this whip the executioners dexterously carry off a slip of skin from the neck to the bottom of the back, laid bare to the waist; and repeating their blows, in a little while rend away all the skin off the back in parallel strips. In the common knout the criminal receives the lashes suspended on the back of one of the executioners; but in the great knout he is raised into the air by means of a pulley fixed to the gallows, and a cord fastened to the two wrists

tied together; a piece of wood is placed between his two legs also tied together; and another of a crucial form under his breast. Sometimes his hands are tied behind over his back: and when he is pulled up in this position his shoulders are dislocated. The executioners can make this punishment more or less cruel; and, it is said, so dexterous, that when a criminal is condemned to die, they can make him expire either by one or several lashes.

KNOW, *v. a. & v. n.*

KNOW'ABLE, *adj.*

KNOW'ER, *n. s.*

KNOW'ING, *adj. & n. s.*

KNOW'INGLY, *adv.*

KNOW'LEDGE, *n. s. & v. a.*

Saxon, *cnapan*; Armoric, *knau*; Goth. *kna, kunna*; Preter. I knew, I have known. To perceive with certainty, whether intuitive or discursive; to be informed or taught; to distinguish or recognise; to be familiar with; to have clear perception; to have commerce with another sex; not to be ignorant: to know *for*, to have knowledge of: to know *of*, to examine: knowable, possible to be discovered or understood: knower, one who has skill: knowing, skilful; well instructed; intelligent; conscious: knowing, an old word for knowledge: knowledge, certain perception; learning; mental illumination; skill; acquaintance with any fact or person; information: to acknowledge; to avow.

And Adam *knew* Eve his wife.

Genesis.

Shipmen that have *knowledge* of the sea.

Kings.

And, right anon, she for her conseil sente:

And they, ben comen to *know* what she mente;

And whan assembled was this folk in fere,

She set hire down; and sayd as ye shul here.

Chaucer. The Man of Lawes Tale.

But many one with hire loke she herte;

And that sate hire full lyte at herte,

For she *knewe* nothing of hir thought:

But wher she *knewe* or *knewe* it nought,

Algate she ne rougt of hem a stre.

Id. Boke of the Duchesse.

I *know* to seek the track of my desired foe,

And fear to find that I do seek: but chiefly this I

know,

That lovers must transform into the thing beloved

And live, alas! who could believe? with sprite from

life removed.

Earl of Surrey.

No soul, ye *know*, entereth heaven-gate,

Till from the body he be separate:

And whom have ye known die honestly,

Without the help of Potcary?

Heywood. The Four P's.

What art thou, thus to rail on me, that is neither

known of thee, nor *knows* thee?

Shakspeare.

Let him be so entertained as suits gentlemen of

your *knowing* to a stranger of his quality.

Id.

Ignorance is the curse of God,

Knowledge the wing wherewith we fly to heaven.

Id.

O that a man might *know*

The end of this day's business ere it come.

Id.

Do but say to me what I should do,

That in your *knowledge* may by me be done,

And I am pressed unto it.

Id. Merchant of Venice.

You have heard, and with a *knowing* ear,

That he, which hath your noble father slain,

Pursued my life.

Id. Hamlet.

He said the water itself was a good healthy water;

but for the party that owned it, he might have more

diseases than he *knew* for.

Id. Henry IV.

When they *know* within themselves they speak of that they do not well *know*, they would nevertheless seem to others to *know* of that which they may not well speak. *Bacon.*

The prophet Hosea tells us that God saith of the Jews, they have reigned, but not by me; which proveth plainly, that there are governments which God doth not avow: for though they be ordained by his secret providence, yet they are not *known*ed by his revealed will. *Id. Holy War.*

A state's anger should not take *Knowledge* either of fools or women. *Ben Jonson.*

The first in order (nor in worth the last) is *knowledge*, drawn from peace, and Muse's spring, Where, shaded in fair Sinai's groves, his taste He feasts with words, and works of heavenly king. *Fletcher's Purple Island.*

'Tis grief to *know* of grief, and ill to *know* of ill. *Id.*

Not from experience, for the world was new, He only from their cause their natures *knew*. *Denham.*

Not to *know* of things remote, but *know* That which before us lies in daily life, Is the prime wisdom. *Milton.*

These are resolved into a confessed ignorance, and I shall not pursue them to their old asylum; and yet it may be, there is more *knowable* in these, than in less acknowledged mysteries. *Glanville.*

If we look on a vegetable, and can only say 'tis cold and dry, we are pitiful *knowers*. *Id.*

The dog straight fawned upon his master for old *knowledge*. *Sidney.*

He *knowingly* and wittingly brought evil into the world. *More.*

There is but one mineral body, that we *know* of, heavier than common quicksilver. *Boyle.*

The *knowingest* of these have of late reformed their hypothesis. *Id.*

In the other world there is no consideration that will sting our consciences more cruelly than this, that we did wickedly, when we *knew* to have done better; and chose to make ourselves miserable, when we understood the way to have been happy. *Tillotson.*

Bellino, one of the first who was of any consideration at Venice, painted very drily, according to the manner of his time: he was very *knowing* both in architecture and perspective. *Dryden.*

They who were rather fond of it than *knowingly*, admired it, might defend their inclination by their reason. *Id.*

One would have thought you had *known* better things than to expect a kindness from a common enemy. *L'Estrange.*

When a man makes use of the name of any simple idea, which he perceives is not understood, he is obliged by the laws of ingenuity, and the end of speech, to make *known* what idea he makes it stand for. *Locke.*

Knowledge, which is the highest degree of the speculative faculties, consists in the perception of the truth of affirmative or negative propositions. *Id.*

'Tis plain, that under the law of works is comprehended also the law of nature, *knowable* by reason, as well as the law given by Moses. *Id.*

What makes the clergy glorious is to be *knowing* in their profession, unspotted in their lives, active and laborious in their charges. *South.*

All animals of the same kind, which form a society, are more *knowing* than others. *Addison.*

These two arguments are the voices of nature, the unanimous suffrages of all real beings and substances created, that are naturally *knowable* without revelation. *Bentley.*

To the private duties of the closet he repaired, as often as he entered upon any business of consequence: I speak *knowingly*. *Atterbury.*

Verse graced of old the feasts of kings, ere yet Luxurious dainties destined to the gulph Immense of glutony were *known*, and ere Lyacus deluged yet the temperate board.

Cowper. To his Father.
This patron may be sounded; I will try him, I *know* the people to be discontented.

Byron. Marino Faliero.
But bring me to the *knowledge* of your chiefs. *Id.*

KNOWLER (William), LL. D., a learned English divine, born in 1699, educated at St. John's College, Cambridge, and chaplain to the first marquis of Rockingham, who appointed him rector of Irthingborough and Boddington. He was editor of the earl of Strafforde's Letters, in folio, 1739; and translated St. Chrysostom's Commentary on Paul's Epistle to the Galatians, 1766. He died in 1767, aged sixty-eight.

KNOX (John), the hero of the Reformation in Scotland, was born in 1505, at Gifford near Haddington. His ancestors were originally proprietors of the lands of Knock, in the parish of Renfrew, whence the family derived the surname of the Knocks, or Knox. They afterwards obtained the lands of Craigen and Ranfurly, both in this parish, and resided long at the castle of Ranfurly. He was educated at the University of St. Andrew's, where he took the degree of A. M. and commenced teacher very early in life. At this time the new tenets of Martin Luther were but little known in Scotland. Knox therefore at first was a zealous Roman Catholic; but attending the sermons of a black friar, named Guillian, he began to waver in his opinions; and afterwards conversing with the famous Wishart, who, in 1544, came to Scotland with the commissioners sent by Henry VIII., he renounced the Romish religion, and became a zealous reformer. Being appointed tutor to the sons of the lairds of Ormistoun and Lang Nidery, he began to instruct them in the principles of the Protestant religion; and on that account was so violently persecuted by the bishop of St. Andrew's, that with his two pupils he was obliged, in 1547, to take shelter in the castle of that place. But the castle was besieged and taken by twenty-one French galleys. He continued a prisoner on board a galley two years, till the end of 1549; when being set at liberty he landed in England, and, having obtained a license, was appointed preacher, first at Berwick, and afterwards at Newcastle. Strype conjectures that in 1552 he was appointed chaplain to Edward VI. He certainly obtained an annual pension of £40, and was offered the living of All-hallows in London; which he refused, not choosing to conform to the liturgy. Soon after the accession of queen Mary I. he retired to Geneva; whence he removed to Frankfort, where he preached to the exiles; but a difference arising on account of his refusing to read the English liturgy, he went back to Geneva; and thence, in 1555, returned to Scotland, where the Reformation had made considerable progress during his absence. He now travelled from place to place, preaching and exhorting the

people with unremitting zeal and resolution. About this time he wrote a letter to the queen regent, earnestly entreating her to examine the Protestant doctrine, which she treated with contempt. In 1556 he was invited by the English Calvinists at Geneva to reside among them, and accepted their invitation. Immediately after his departure from Scotland the bishop summoned him, and, he not appearing, condemned him to death for heresy, and burnt his effigy at the cross of Edinburgh. He continued abroad till 1559, during which time he published his *First Blast against the Monstrous Regiment of Women*. Being now returned to Scotland, he resumed the great work of reformation with his usual ardor, and was appointed minister at Edinburgh. In 1561 queen Mary arrived from France, and, being attached to the religion in which she was educated, was exposed to continual insults from her reformed subjects. Knox himself frequently insulted her from the pulpit; and when admitted to her presence, regardless of her sex and her high rank, behaved to her with the most unjustifiable freedom. In 1571 he was obliged to leave Edinburgh, on account of the confusion and danger from the opposition to the earl of Lenox, then regent: but he returned in 1572, and resumed his pastoral functions. He died at Edinburgh in November 1572, and was buried in the church-yard of St. Giles's in that city.—His *History of the Reformation* was printed with his other works at Edinburgh in 1584, 1586, 1644, 1732. He published many pieces, several of which are preserved in Calderwood's *History of the Church of Scotland*. He left also a considerable number of MSS. Dr. Robertson says, 'Zeal, intrepidity, disinterestedness, were virtues that he possessed in an eminent degree. He was acquainted too with the learning cultivated in that age; and excelled in that species of eloquence which is calculated to rouse and to inflame. His maxims, however, were often too severe, and the impetuosity of his temper excessive. Rigid and uncompromising, he showed no indulgence to the infirmities of others. Regardless of the distinctions of rank and character, he uttered his admonitions with an acrimony and vehemence more apt to irritate than to reclaim; and this often betrayed him into indecent expressions with respect to queen Mary's person and conduct. Those very qualities, however, which now render his character less amiable, fitted him to be the instrument of providence for advancing the reformation among a fierce people, and enabled him to face dangers, and to surmount opposition, from which a person of a more gentle spirit would have been apt to shrink back. By an unwearied application to study and to business, as well as by the frequency and fervor of his public discourses, he had worn out a constitution naturally strong. During a lingering illness he discovered the utmost fortitude, and met the approach of death with a magnanimity inseparable from his character. He was constantly employed in acts of devotion, and comforted himself with those prospects of immortality which not only preserve good men from desponding, but fill them with exultation in their last moments. The earl of Morton, who was

present at his funeral, pronounced his eulogium in few words, the more honorable to Knox, as they came from one whom he had often censured with peculiar severity: 'Here lies he who never feared the face of man.'

Knox (Vicesimus), D.D. a modern divine and polite writer, was born December 8th, 1752, and educated at Merchant Tailors' school, whence he proceeded to St. John's College, Oxford. On the death of his father, he was chosen his successor in the head-mastership of Tunbridge school, over which he presided thirty-three years, till, retiring in 1812, he was himself succeeded by his son. He held also the livings of Riemwell and Ramsden Crays in Essex, and the chapelry of Shipbourne in Kent. His works are, *Essays Moral and Literary*, 3 vols. 8vo. and 12mo.; *Liberal Education*, 2 vols. ditto; *Winter Evenings*, 3 vols. ditto; *Personal Nobility, or Letters to a Young Nobleman*, 1 vol. 12mo.; *Christian Philosophy*, 2 vols. 12mo.; *Considerations on the Nature and Efficacy of the Lord's Supper*, 1 vol. 8vo.; and a pamphlet *On the National Importance of Classical Education; Sermons, &c.* He published, for the use of his school, expurgated editions of Horace and Juvenal, and a series of selections from the works of the best English authors, generally known as *Elegant Extracts and Elegant Epistles*. On the breaking out of the French Revolution, several opposition pamphlets were attributed to him, and a translation of Erasmus's *Bellum dulce inexpertis*. He is also said to have been the author of a tract, entitled *The Spirit of Despotism*, published anonymously in 1794. Dr. Knox wrote Latin with great purity and elegance. He died in September 1821.

KNOX, a county in the south-west part of Indiana, United States. Chief town, Vincennes. 2. A county of the south side of Kentucky. Chief town Barbourville: and, 3. A county of East Tennessee. Chief town, Knoxville.

KNOXVILLE, a post town and capital of Knox county Tennessee, is on the Holston, four miles below the mouth of French Broad River, and twenty-two above the junction of the Holston with Tennessee River. It is 134 miles W. S. W. from Abingdon, 190 south of Lexington, and 541 from Washington. Long. 83° 44' W., lat. 35° 45' N. It is pleasantly situated and well laid out, contains a court house, jail, state barrack, barracks for 700 men, and three places of public worship. It was once the seat of the state government and is still the largest town in East Tennessee. Hampden's Literary Academy established here is a respectable foundation.

KNOXIA, in botany, a genus of the monogynia order, and tetrandria class of plants: natural order forty-seventh, stellata: cor. monopetalous, and funnel-shaped: there are two furrowed SEEDS: CAL. has one leaf larger than the rest. Species two, natives of Ceylon.

KNUB'BLE, *v. a.* Dan. *knippler*. To beat.—*Skinner*.

KNUCK'LE, *n. s. & v. n.* } Saxon *cnucle*; }
 KNUCK'LED, *adj.* } Dut. *knockle*. The joints of the fingers protuberant when the fingers close; the knee joint of a calf; the articulation

or joint of a plant: knuckle (from the noun), to submit; perhaps from an odd custom of striking the under side of the table with the knuckles, in confession of an argumental defeat: knuckled, jointed.

Divers herbs have joints or *knuckles*, as it were stops in their germination; as gillyflowers, pinks, and corn.

Bacon.

The reed or cane is a watery plant, and groweth not but in the water: it hath these properties, that it is hollow, and it is *knuckled* both stalk and root; that, being dry, it is more hard and fragile than other wood; that it putteth forth no boughs, though many stalks out of one root. *Id. Natural History.*

Jelly, which they used for a restorative, is chiefly made of *knuckles* of veal.

Id.

Thus often at the Temple stairs we've seen
Two tritons, of a rough athletic mien,
Sourly dispute some quarrel of the flood,
With *knuckles* bruised, and face besmeared in blood.

Garth.

KNUFF, *n. s.* Perhaps corrupted from *knave*, or the same with *chuff*. A lout: an old word preserved in a rhyme of prediction.

The country *knuffs*, Hob, Dick, and Hick,
With clubs and clouted shoon,
Shall fill up Dussendale

With slaughtered bodies soon.

Hayward.

KNUR, *n. s.* } Germ. *knor*. A knot; a
KNURLE, *n. s.* } hard substance.

The stony nodules found lodged in the strata, are called by the workmen *knurs* and knots.

Woodward.

KNUTZEN (Matthias), a native of Holstein, the only person on record, before the era of the French Revolution, who openly professed and taught atheism. It is said he had about 1000 disciples in different parts of Germany. They were called Conscienciaris, because they asserted there is no other God, no other religion, no other lawful magistracy, but conscience, which teaches every man the three fundamental principles of the law of nature: to hurt nobody, to live honestly, and to give every one his due. Several copies of a letter of his from Rome were spread abroad, containing the substance of his system. It is to be found entire in the last edition of Meærius. This speculatist made considerable noise in his day. He is not to be confounded with

KNUTZEN (Martin), professor of philosophy at Königsberg, who was born in 1713, and died in 1751. He left some learned and excellent works the principal of which are, *Systema Causarum efficientium*; *Elementa Philosophiæ Rationalis*, *Methodo Mathematico demonstrata*; *Theoremata de Parabolis Infinitis*; and a Defence of the Christian Religion, 4to. in German.

KODIAK, a group of islands in the north-west coast of America, and fifty miles from the entrance of Cook's inlet. They extend about 130 miles in length from south-west to north-east and about fifty miles in breadth. According to the Russian charts, as they were shown to Vancouver, the largest extends from Cape Trinity to Cape Greville, where a separation takes place between it and the land to the westward of St. Hermogenes's Island, and forms, with the land to the southward, what captain Cook called Whitsuntide Bay. A passage, however, leading west-

ward into those straits separates the island of Kodiak from the continent to the southward of Cape Douglas. These straits are said by the Russian navigators to be in general upwards of ten leagues wide, and free from interruption. Long. 206° 12' to 208° 45' E., lat. 56° 45 to 58° 28' N.

KOEHLER (John Bernard), a distinguished classical scholar of the last century, was a native of Lubeck. At the age of seventeen he published a Dissertation on the Deities who presided among the Greeks and Romans over marriage. In 1766 he became professor of history and philosophy in the university of Kiel; and from 1781 to 1786 occupied the chair of the Greek and Oriental languages, at Königsberg. His death took place April 3d, 1802. His chief works are, *Remarks on Dion Chrysostom, 1765*; *Notes and Observations on Theocritus, 1767*; *Tracts on Roman Law*; and a German translation of the *Iphigenia in Aulis* of Euripides.

KOEI-TCHEOU, a province of China, one of the smallest and most rugged in the kingdom, bounded on the south by Quang-si, east by Hou-quang, north by Setcheuen, and west by Yunnan. The whole country is almost a desert, and covered with inaccessible mountains: it may justly be called the Siberia of China. The people who inhabit it are mountaineers, accustomed to independence, and who seem to form a separate nation, being no less ferocious than the savage animals among which they live. The mandarins and governors who were sent to this province are sometimes disgraced noblemen, whom the emperor does not think proper to discard entirely. Numerous garrisons are entrusted to their charge, to over-awe the inhabitants; but these troops are found insufficient, and the court despairs of being ever able thoroughly to subdue it. It produces a herb much resembling our hemp: the cloth made of it is used for summer dresses. Mines of gold, silver, quicksilver, and copper, are found here: and of the last metal those small pieces of money are made which are in common circulation throughout the empire.—Koei-tcheou contains ten cities of the first class, and thirty-eight of the second and third. The population was reported to Sir G. Staunton at 9,000,000.

KOEI-TCHOO-FOU, a city of China, in Setcheuen of the first rank. Situated on the river Yang-tse-kiang, its trade is very extensive, and, though the country around is mountainous, it is highly cultivated, and abounds with fruits, particularly the orange and lemon. Long. 109° 50' E., lat. 31° 9' N.

KEMPFER (Engelbert), a German physician born in 1651, at Lemgow, in Westphalia. After studying in several towns, he went to Dantzic, where he gave the first public specimen of his proficiency by a dissertation *De majestatis divisione*. He then went to Thorn; and thence to the university of Cracow, where he took his degree of doctor in philosophy; after which he went to Königsberg in Prussia, and staid there four years. He next travelled into Sweden, where he was appointed secretary of the embassy to Persia. He set out from Stockholm with the presents for that emperor and went through

Aaland, Finland, and Ingermanland, to Narva, where he met Fabricius the ambassador, who had been ordered to take Moscow in his way. The ambassador, having ended his negotiations at the Russian court, set out for Persia. During their stay (two years) at Ispahan, Dr. Kœmpfer took every possible advantage of so long an abode in the capital of the Persian empire. The ambassador, towards the close of 1685, preparing to return into Europe, Dr. Kœmpfer entered into the service of the Dutch East India Company, in quality of chief surgeon to the fleet, then cruising in the Persian Gulf, and which, after touching at many Dutch settlements, came to Batavia in September 1689. He here applied himself chiefly to natural history. Hence he set out for Japan, as physician to the embassy which the Dutch East India Company sends annually to Japan. He returned to Europe in 1692. In 1694 he took his degree of M. D. at Leyden: on which occasion he communicated, in his Inaugural Thesis, several very curious and singular observations made by him in foreign countries. He was afterwards made physician to the count de Lippe; and died in 1716. His principal works are, 1. *Amœnitatis Exoticæ*, in 4to; a work which contains many curious particulars respecting the civil and natural history of the countries through which he passed. 2. *Herbarium Ultra Gangeticum*. 3. The History of Japan in German, which is much esteemed; and for which the public is indebted to the late Sir Hans Sloane, who purchased all his curiosities, drawings, and MSS. and prevailed on Dr Scheuchzer to translate this history into English.

KOENIG (Daniel), a Swiss writer, elder brother of Samuel. He translated Arbutnot's *Fables of Ancient Coins* into Latin; which were printed at Utrecht in 1756. He died at Rotterdam, in consequence of ill usage from the mob at Franeker, who mistook him for a French spy.

KOENIG (Samuel), a learned philosopher and mathematician, professor of philosophy at Franeker, and afterwards at the Hague; where he became librarian to the Stadtholder, and died in 1757. He wrote several works which are esteemed.

KOKORO, or **BALEE**, a rapid river of Western Africa, rising in Manding, not far from the Niger, and flowing through Fooladoo. Here it enters the Brooko, and receives the Ba Woolima. On entering Kajaaga it falls into the Basing or Senegal, eighty miles east of Saltern.

KOLBE, or **KOLBEN (Peter)**, a Dutch writer only known as the author of an obsolete account of the Cape of Good Hope, and a tract *De Aquis Capitis Bonæ Spei in the Acta Eruditorum* of Leipsic, 1716.

KOLF, a Dutch game played in an enclosed rectangular area of sixty feet by twenty-three. The floor, composed of sand, clay, and pitch, is made as level as a billiard-table: the enclosing walls are, for two feet upwards, faced with polished stone or sheet lead, to make the ball rebound accurately. At about ten feet from each end wall a circular post, five inches in diameter, is placed in the middle of the breadth of the area. These two posts are about forty feet distant from each other. The balls are about the size of cricket-

balls, quite round and elastic, covered with soft leather and sewed with wire. The clubs are from three to four feet long, with stiff shafts. The head is of brass, and the face, which strikes the ball, perfectly smooth. The game may be played by any number, either in parties, or each for himself. The contest is, who shall hit the two posts in the fewest strokes, and make his ball retreat from the last one, so that it shall lie nearest the opposite end wall. Five points make game; and such is the difference between a capital and an ordinary player, that the former will often give four points, and yet be the winner. This game combines the address required both in **GOLF** and **BILLIARDS**, which see.

KOLKOKRO, a large lake of Kamtschatka, connected with the river of the same name, and supposed to be about 112 miles in circumference. It abounds in sea calves, called by the natives *nerpis*, a name by which they often call the lake itself.

KOLOMNA, a town and bishop's see in the government of Moscow, European Russia, situated on the Oka, near its junction with the Moskwa. Its traffic is in corn, tallow, and salt meat. Inhabitants 5800.

KOLOR, a large town of Woolly, Central Africa, where Park first saw the exhibition of Mumbo Jumbo.

KOLYVAN, a district of the government of Tomsk, in Asiatic Russia, situated on the upper part of the Obi. Here are extensive copper mines, containing a considerable proportion of silver, and gold. M. Demidoff first discovered their value in 1727, and began in 1730 to extract publicly the copper; but the gold and silver being declared the property of the government, he clandestinely separated those metals. His assistant of the name of Steyger, however, made known his secret, and the mines were confiscated. According to the accounts of the Russian board of mines, these works, from 1725 to 1786, produced about 3,500,000 pounds of silver, and 48,000 pounds of gold, and were once the most considerable in the Altay, but they have of late declined. A line of forts was built here in 1745 to defend them from the incursions of the Tartars. The town of Kolyvan is small and situated on the right bank of the Berda, near its junction with the Obi, in long. 81° 50' E., lat. 54° 48' N.

KONG, i. e. a mountain, according to Park, a kingdom of Central Africa, to the south of the Niger, traversed by a high chain of mountains. A large one, Toolilescena, is situated near the capital. The market is supplied from Houssa. The country is populous, and the language is a corruption of the Bambarra or Mandingo. It abounds in horses and elephants. The people fight with spears, and bows and arrows. According to Mr. Bowdich, Kong is nearly midway between Ashantee and Bembarra, or about 200 miles south from the one, and north from the other.

KONG-CHANG-FOU, a city of China, in the province of Shensee, of the first rank. It is near the western frontier, in a mountainous country, abounding with the animal which produces musk. By the river Hoehoi, which falls into the Yellow River, it is enabled to carry on a considerable trade. Long 104° 19' E., lat. 34° 56' N

KONGBERG, a large town of Norway, in the government of Christiana, situated on the River Lowe. In the mountains were formerly silver mines; but they are now exhausted: and gold is occasionally found. The town still contains a mint; a seminary for the education of youth in metallurgy. Population 6800, mostly Germans, engaged in the mines. Thirty-six miles west of Christiana.

KONJEUR, a Mahratta district of Hindostan, province of Orissa, situated principally between 21° and 22° N. lat. It is watered by several streams. Chief towns Konjeur, Ogurapore, and Andapoorgur. Konjeur is the capital. Long. 85° 45' E., lat. 21° 34' N.

KONIG (George Matthias), a learned German, born at Altorf in Franconia, in 1616. He became professor of poetry and Greek, and librarian to the university; in which he succeeded his father. He gave several specimens of his learning, particularly by a biographical dictionary, entitled *Bibliotheca Vetus et Nova*, 4to. Altorf, 1674: which, though defective, is useful to biographers. He died in 1699.

KONIGINGRATZ, a circle of Bohemia, on the Elbe; contiguous to Silesia, Moravia, and Glatz. The northern parts are mountainous, being penetrated by the *Reisengebirge*: but in the central portion of the circle are many fertile valleys. The linen manufacture is extensive and superior: cotton and woollen stuffs are also made.

The capital is a bishop's see, neatly built and containing 5700 inhabitants. In 1758 and 1762 the Russians attacked this place; and on the latter occasion the powder magazine was blown up, and destroyed a large part of the town. It is 139 miles north of Vienna, and sixty-four east by north of Prague.

KONIGSBERG, a city and government of the Prussian states, comprising the north and west parts of the province of East Prussia. The government contains an area of 8960 square miles, and a population of about 491,000.

The city of Konigsberg is the capital of East Prussia, and stands on the River Pregel, which falls into the sea at the Frische Haff about four miles distant. Part of the city stands on an island formed by the river, and is connected with the other part by bridges. Including the suburbs, Konigsberg is about seven miles in circumference, and contains various stately and magnificent public buildings, with many large and elegant houses. Most of the inhabitants are Lutherans, and several of their churches are handsome. The university is in high repute. This city, which dates its origin in the thirteenth century, was one of the Hanse towns: it is well fortified, and is the most commercial place in the Prussian dominions. But, as the river only admits small vessels to ascend to the town, the merchants have found it expedient to make a depôt at Pillau, which is situated on a bay of the Frische Haff, about thirty miles below. In 1817 the number of vessels that entered the harbour amounted to 1098.

KONKODOO, a mountainous country of Western Africa, between the upper part of the courses of the Faleme and Senegal, bordering on Jallonkadoo, Satadoo, and Dentila. It is considered by Golberry as a district of Bambouk. The streams descending from the mountains are

impregnated with gold dust, which the natives separate by a mechanical process. The sand being put into a calabash, water is copiously poured over it, and a constant agitation kept up till the gold dust only remains. The mountains are said in some parts to be cultivated to the very summit. Park was much pleased with the entire appearance of this country.

KOOM, a ruined city of Persia, built by the Saracens in the year 806, on the site of the ancient Choana. It is said by some writers to have been erected out of the ruins of seven towns, which had been destroyed in a civil war. It became one of the first cities of Persia, especially in its silk manufacture; but was taken and completely destroyed in 1722, by the Afghauns. It still however contains a very beautiful college, with a mosque and sanctuary, erected to the memory of Fatima, the daughter of Iman Reza. In the mosque are the tombs of Sefi the First, and Shah Abbas the Second. Long. 50° 29' E., lat. 34° 45' N.

KOPAUL, a town and fortress of Bejapore, Hindostan, district of Guginderghur, belonging to the Nizam. This place, a sugar-loaf mountain surrounded by three lines of fortifications, is reckoned one of the strongest in the south of India. The magazines, store-houses, &c., are excavated out of the rock. But in the year 1790 it was taken from Tippoo Sultan, by the Mahrattas: the garrison having in a siege of six months expended all their provisions, were forced to capitulate. Long. 76° 6' E., lat. 15° 28' N.

KO'RAN, *n. s.* The alcoran, the bible of the Mahomedans. See *ALCORAN*.

KORDOFAN, a country of Central Africa, to the west of the Bahr-el-Abiad, between the kingdom of Darfur and that of Sennaar. About the time Mr. Bruce returned from Abyssinia, the Kordofanese renounced the allegiance of Sennaar; but, at the period when Mr. Browne visited the country, it had again been subdued: still the disposition to insurrection had entirely interrupted the communication of Darfur with the eastern regions. The language is Arabic. Ibeil is the chief town.

KORIAKS, a barbarous tribe of Siberia, who inhabit part of the government of Okhotsk, around the gulf of Penginskaia, and north as far as the banks of the Anadir. They do not amount to more than 2000.

KOROS, *BLACK*, a river of Hungary, which, rising in the palatine of Bihar, passes through that of Sarand, in which it receives the *White Koros*, coming from Transylvania, enters the palatinate of Bekesch, and falls into the Theysse near Czongrad. The *Schnelle Koros* rises also in the palatinate of Bihar, and joins the two others near Bekesch.

KOS, in Jewish antiquity, a measure of capacity, containing about four cubic inches: this was the cup of blessing out of which they drank when they gave thanks after solemn meals, like that of the passover.

KOSCIUSCO (Thaddeus), a Polish general and patriot, was born of a respectable family, and educated at the military school of Warsaw; after which he went to France and America, where he served as aid-de-camp to general Washington. On his return home he was made

major-general, and distinguished himself in the war of 1792, but without effect. Two years afterwards the Poles again took up arms, and were headed by him; but all his exertions for his country were fruitless, and

Freedom shrieked when Kosciusko fell.

He was made prisoner by the Russians, who treated him with great respect. The emperor Paul gave him an estate. Kosciusko now visited America a second time; and in 1798 returned to Europe, and settled in France, where Buonaparte in vain endeavoured to tempt him into his service. He died at Soleure, in Switzerland, 16th of October, 1817.

KOSIE, a kingdom of Western Africa, on the east bank of the Lagos, about sixty miles from its mouth. The people of Kosie command the trade of all the slaves which are brought down the river.

KOSTROMA, a considerable government of European Russia, lying between 40° 20' and 48° 20' of E. long., and 56° 45' and 59° 13' of N. lat., and bounded by Vologda, Viatka, Niznei-Novgorod, Vladimir, and Jaroslav. It is in the latitude of Scotland, and its territorial extent 38,400 square miles, divided into twelve circles or districts. It is watered by the Volga, the Vetluga, and the Kostroma, and has several lakes. The surface is in general an undulating plain; but the soil is very various, and in many places covered with heath and wood. The inhabitants are chiefly pastoral. Population about 1,150,000.

KOSTROMA, a town of European Russia, the capital of the preceding government, is situated on the left bank of the Wolga, near the influx of the Kostroma. It is the see of a bishop, and has manufactures of linen, Russian leather, Prussian blue, salt, wax, and soap, and a trade in corn and wine: 435 miles east by south of St. Petersburg. Population 9000.

KOTTER, or KOTTERUS, (Christopher), one of the three fanatics whose visions were published at Amsterdam in 1657, with the title of *Lux in Tenebris*. He lived at Sprotta in Silesia, and his visions began in 1616. As most of his predictions promised felicity to the elector palatine, and unhappiness to his imperial majesty, the emperor's fiscal in Silesia seized him, set him in the pillory, and banished him the emperor's dominions. Upon this he went to Lusatia, and there lived unmolested till his death in 1647.

KOTZEBUE (Augustus Von), was born at Weimar, May 30th, 1761. He was sent, at the age of sixteen, to the college of Jena, and from thence to Duisburg, where he raised a company of juvenile performers. In 1779 he returned to Jena, and studied the law; but most of his time was spent in the theatre. In 1781 he became secretary to general Bauer, whom he accompanied to Petersburg, and produced there his tragedy *Demetrius*, Czar of Muscovy, and married a Russian lady. He was now appointed president of the civil government at Revel, and wrote a number of dramas; some of which obtained great popularity. He lost his wife in 1789, on which he went to Paris, and then to Vienna, where he became superintendant of the imperial theatre; but resigned that place, and returned to Russia. Here he was immediately arrested by

the emperor Paul, and sent to Siberia, but did not remain long in exile; and on his arrival at Petersburg, was taken into the capricious despot's favor. In 1813 he was appointed consul-general at Konigsberg; but, the climate disagreeing with him, he resigned the situation to reside at Mannheim, where he was assassinated, March 23rd, 1819, by a fanatical student of Jena, named Sand, who also stabbed himself, but, recovering from his wound, was tried for the murder, and beheaded.

KOUANGNAN-FOU, a city of China, of the first rank, in Yunnan, situated on the border of Koei-tchoo, and separated from the rest of the province by mountains. The soil is fertile, but the inhabitants barbarous. Long. 106° 14' E., lat. 30° 32' N.

KOUANG-SI-FOU, a city of China, in Yunnan, of the first rank. It is situated on a plain, by the side of a lake, and surrounded by mountains, in long. 103° 28' E., lat. 24° 40' N.

KOUANGSIN, a city of China of the first rank, situated on a stream which falls into the Poyang Lake. It is surrounded by lofty mountains, but the sides are fertile, and highly cultivated. Here are manufactures of paper and candles. Long. 117° 44' E., lat. 28° 27' N.

KOUANIN, in the Chinese theology, the tutelary deity of woman. The Chinese make great numbers of the figures of this deity in white porcelain, and send them to all parts of the world, as well as keep them in their own houses. The figure represents a woman with a child in her arms. The women who have no children pay a sort of adoration to these images, and suppose the deity they represent to have power to make them fruitful. The statue always represents a handsome woman modestly attired.

KOUC, KOUCH, or KOECK (Peter), a celebrated painter in the sixteenth century, born at Alost. He studied under Bernard Van Orley, who lived with Raphael. He visited Rome, and by studying there formed an excellent taste, and became a very correct designer. On his return home he superintended the execution of some tapestry work after the designs of Raphael. He was afterwards persuaded to go to Constantinople; but finding that the Turks were not allowed, by their religion, to paint any figure, and that there was nothing for him to do but to draw designs for tapestry, he spent his time in designing the particular prospects in the neighbourhood of Constantinople, and the manners of the Turks, of which he has left many prints, that alone suffice to give an idea of his merit. After his return he settled at Antwerp, where he drew several pictures for the emperor Charles V. He was also a good architect, and wrote a Treatise on Sculpture, Geometry, and Perspective; and translated Vitruvius and Serlix into the Flemish tongue. He died in 1550.

KOULI KULAN (Thamas), or Schah Nadir, was the son of the chief of a branch of the tribe of Affchars, and governor of a fortress erected by that people against the Turks. Upon his father's death his uncle usurped his government, under pretence of taking care of it during the minority of young Nadir. Disgusted at this affront, he commenced adventurer, and entered

into the service of Beglerbeg, governor of Muschada, in the Khorassan; who, discovering in him a military genius, promoted him to the command of a regiment of cavalry; and, in 1720, when the Usbec Tartars invaded the Khorassan with 10,000 men, raised him to the rank of general, when he defeated the Tartars, and took their commander prisoner. But Beglerbeg, after this, becoming jealous, and not fulfilling his promises of farther promotion, Kouli-khan publicly complained of the governor's ingratitude, who thereupon broke him, and ordered him to be punished with the bastinado so severely, that the nails of his great toes fell off. This affront occasioned his flight, and his joining a banditti of robbers. After various adventures, he was, in 1729, made general of Persia by Schah Thamas, and permitted to take his name Thamas, and that of Khuli, which signifies slave: his title therefore was, The slave of Thamas; but he was ennobled by that of Khan. In 1736 he excited a revolt against his master, for having made an ignominious peace with the Turks; and, having the army at his command, he procured his deposition, and his own advancement to the throne. In 1739 he conquered the Mogul empire; and at length met with the usual fate of tyrants, being assassinated by one of his generals, in league with his nephew and successor, in 1747, aged sixty. See PERSIA.

KOUMISS, a sort of wine made in Tartary, where it is used by the natives as their common beverage, and often serves them instead of all other food. It is said to be so nourishing and salutary, that the Baschkir Tartars, who, towards the end of winter are much emaciated, no sooner return in summer to the use of koumiss, than they become strong and fat. From the Tartars it has been borrowed by the Russians, who use it medicinally. It is made with fermented mare's milk, according to the following recipe communicated by Dr. Grieve:—'Take of fresh mare's milk, on one day any quantity; add to it a sixth part of water, and pour the mixture into a wooden vessel; use then, as a ferment, an eighth part of the sourest cow's milk that can be got; but at any future preparation a small portion of old koumiss will better answer the purpose of souring; cover the vessel with a thick cloth, and set it in a place of moderate warmth; leave it at rest twenty-four hours, at the end of which time the milk will have become sour, and a thick substance will be gathered on the top; then with a stick, made at the lower end in the manner of a churn staff, beat it till the thick substance above mentioned is blended intimately with the subjacent fluid. In this condition leave it again at rest for twenty-four hours more; after which pour it into a higher and narrower vessel, resembling a churn, where the agitation must be repeated as before, till the liquor appears to be perfectly homogeneous; and in this state it is called koumiss. Agitation must be employed every time before it is used.' To prevent changing the vessel, the milk must be put at once into a pretty high and narrow vessel; and, to accelerate the fermentation, some warm milk may be added to it, and more souring. The process may be shortened by heating the milk before the

souring is added to it, and as soon as the parts begin to separate, and a thick substance to rise to the top, by agitating it every hour or oftener. It is common among some Tartars to prepare it in one day during summer, and that with only two or three agitations. And though it is commonly used within a few days after the preparation, yet when well secured in close vessels, and kept in a cold place, it may be preserved for three months, or more, without any injury to its qualities. The acid fermentation may also be produced by sour milk, as above, by a sour paste of rye-flower, by the rennet of a lamb's stomach, or by a portion of old koumiss. Pallas says, that cows' milk is also susceptible of the vinous fermentation, and that the Tartars prepare a wine from it in winter, when mares' milk fails them; that the wine prepared from cows' milk they call airen; but that they always prefer koumiss when it can be got, as it is more agreeable and contains a greater quantity of spirit; that koumiss on distillation yields of a weak spirit one-third, but that airen yields only two-ninths of its whole quantity, which spirit they call arika. It appears that cows' milk may be fermented with, or even without souring, provided sufficient time and agitation be employed; that no spirit can be produced from any one of its constituent parts taken separately, nor from any two of them, unless inasmuch as they are mixed with some part of the third; that the milk with all its parts, in their natural proportion, is the most productive of spirit. From six pints of milk, fermented in a close vessel, and set to repose, a Russian chemist, Oscretskowsky, obtained three ounces of ardent spirit, of which one was consumed by burning; but from the same quantity of the same milk, fermented in an open vessel, he could scarcely obtain an ounce.

KOUTOUSOFF, or **KUTUZOW SMOLENSKY** (Michael Lavrionovitch Golemitcheff, prince of), a modern Russian general and minister of state, was born in 1745, and educated at Strassburgh. At the age of sixteen, he was a corporal in the artillery; and shortly after he became lieutenant in a regiment commanded by Suwarow. In 1762 he rose to the rank of captain, and went to Livonia; here he made five campaigns against the Poles: he then served under count Romanzow in the war with Turkey, and was distinguished at the battles of Pruth and Kagoul; and in the Crimea in 1772 and 1773. He was appointed a major-general in November 1784, and succeeded against the enemy on various occasions, until in June, 1791, he added to his fame at the battle of Matchine, which terminated the Turkish war. In 1793 and 1794 he was the Russian ambassador at Constantinople; and on his return commanded in Finland. Under Paul I. he was afterwards sent into Holland. Alexander appointed him military governor of St. Petersburg; and Kutuzow commanded the Russian army first sent to assist the Austrians. He was present at the battle of Austerlitz, which was, however, fought in opposition to his advice. In 1809 he was governor of Lithuania. He concluded the treaty of Bucharest with the Turks, May 16th, 1812, on which he was made a prince of the Russian empire. In 1812 the emperor nominated him

president of the council of state, and generalissimo of his armies; and, though he failed to repulse the enemy in the bloody battle of Borodino, he most ably conducted the Russian forces afterwards, and followed the French into Prussia. He was suddenly attacked at Breslaw with a mortal disease, and died there April 16th, 1813.

KOZLOV, a large town of European Russia, on the Voronet, in the government of Tambov. Its chief trade is derived from horned cattle, which are sold to the Don Cossacks, and in tallow and salt meat with Moscow. Population 7100. Forty-eight miles W.N.W. of Tambov.

KRAKEN is the name given to an imagined monster of the deep, concerning which, so many traditions have been cited, and so much credulity exercised, that the following abridged account of it, from bishop Pontoppidan's History of Norway will probably suffice. As a full grown kraken, says he, has never been seen in all its parts and dimensions, an accurate survey of which must employ some time, it is *impossible* to give a complete description of one. 'Our fishermen unanimously and invariably affirm, that when they are several miles from the land, particularly in the hot summer days, and by their distance, and the bearings of some points of land, expect from eighty to 100 fathoms depth, and do not find but from twenty to thirty; more especially if they find a more than usual plenty of cod and ling, they judge that the kraken is at the bottom; but if they find by their lines that the water in the same place still shallows on them, they know he is rising to the surface, and row off with the greatest expedition till they come into the usual soundings of the place; when, lying on their oars, in a few minutes the monster emerges, and shows himself sufficiently, though his whole body does not appear. Its back or upper part, which seems an English mile and a half in circumference (some have affirmed more), looks at first like a number of small islands, surrounded with something that floats like sea-weeds; at last several bright points of horns appear, which grow thicker the higher they emerge, and sometimes stand up as high and large as the masts of middle sized vessels. In a short time it slowly sinks, which is thought as dangerous as its rising; as it causes such a swell and whirlpool as draws every thing down with it, like that of Malestrom. This slow motion may be necessary to the security of ships of the greatest force and burden, which must be overwhelmed on encountering such an immense animal, if his velocity were equal to his weight; the Norwegians supposing that if his arms, on which he moves, and with which he takes his food, were to lay hold of the largest man of war, they would pull it down to the bottom!'

KRANTZIUS (Albertus), a native of Hamburgh, and a celebrated historian, who travelled over several parts of Europe, and was made rector of the university of Rostoch in 1482. He went thence to Hamburgh in 1508, where he was elected dean of the chapter in the cathedral; and was so famed for his abilities and prudence, that John king of Denmark, and Frederick duke of Holstein, made him umpire in a dispute they had with the Dittmars. He wrote 1. *Chronica*

Regnorum Aquilonum, Daniae, Sueciae, Norvegiae; 2. *Saxonia, sive de Saxonicae Gentis vestustâ origine, &c.*; 3. *Vandalia, sive Historia Vandalorum*; 4. *Metropolis, sive Hist. Eccles. Saxonicae*; 5. *Institutiones Logicae, 4to.* He died in 1517.

KRASICKI (Ignatius), count de Ciczin, a prince, bishop of Warmia, and archbishop of Gnesnia, in the eighteenth century. The partition of Poland in 1772 deprived him of his functions in the senate of his country; and Frederick the Great, who took pleasure in his conversation, having one day said to him, I hope you will take me into Paradise under your episcopal mantle, the archbishop replied—'No, sire, your majesty has cut it too short for it to conceal any contraband commodity.' He excelled in exposing the ridiculous in national manners. Among his works are *Myszeidos*, an heroic-comic poem, in ten cantos; *Monachomachia*, or the War of the Monks, in six cantos, thought to be his chef-d'œuvre; *Anti-Monachomachia*, in six cantos; *Fables*; *The War of Choczim*; and imitations of Ossian. He died March 14th, 1801, aged sixty-six.

KRASNOIARSK, a flourishing town of Asiatic Russia, in the government of Tomsk, situated on a river which falls into the Yenisei. It carries on a trade in furs; and the great road from Tomsk to Irkoutsk passes through it. The surrounding country is of remarkable fertility. Population 3450.

KRASSOVA, an extensive palatinate of Hungary, bounded on the east by the palatinate of Hunyad, in Transylvania, and on the east and south by the tract of country adjacent to Turkey, and called the Military Frontier. The western boundary is formed by the palatinate of Temesvar, as far as the Marosch, and the rest by the palatinate of Arad. Population 200,000.

KRISHNA, in Hindoo mythology, one of the avatas or incarnations of the god Vishnu, in which he is said by the sectaries, who exclusively worship him under this name, to have magnified himself in a degree of power and glory far exceeding any other of his forms. They maintain indeed, that under the other avatas he assumed only an *ansa*, or portion of his divinity, while Krishna was Vishnu himself in mortal mould. A numerous sect called Gokalasta, from Gokala, one of Krishna's names, worship him exclusively, or conjointly with his consort Radha. This sect are immeasurably lavish in their praises, and vehement in their adoration of this deity, while other sects of Hindoos call Krishna a merciless tyrant, an incarnate demon, now expiating his crimes in hell. As information is received from these different descriptions of zealots, so consequently will it differ in the account of the character and actions of this motley personage, of whom as much is recorded as of any of the Hindoo deities. His life and actions have occupied the attention of many voluminous writers; and if taken literally he led a life of excessive libertinism, but his followers maintain such appearances to have been the result of *maya*, or delusion, for that in reality his life was chaste and holy. The *Gita Govinda*, a beautiful poem, is a series of mystical rhapsody in praise of Krish-

na, and a relation of his loves with his consort Radha; and although loose, in a degree not admitting of literal translation into our language, is said to be purely mystical, and to signify the 'reciprocal attraction between the divine goodness and the human soul.' This poem was translated or imitated by Sir W. Jones, and appears in his works, and in the third volume of the Asiatic Researches. Krishna's names, like other deified personages, are numerous. He being Vishnu, they enjoy several in common, Murari, Heri, Madhava, and Baghavan, among them; Govinda Gopala, Gokala, are derived from his occupation of herdsman; Gopinatha, or the Gopia's god; Murlidur, the tuneful; Kessu, Kesava, or Kesavi, are said to refer to the fineness of his hair; Vanimali, to his pendent garland; Yadava, Varshneya, and Vasudeva, to his tribe and family. In a curious work translated by Wilkins, entitled Bhagavat-Gita, Arjun, the son of Pandu, addresses Krishna as 'the supreme Brahm; the most holy; the most high god; the divine being before all other gods; without birth; the mighty lord; god of gods; the universal lord.' In different parts of the Gita he says of himself, 'I am, of things transient, the beginning, the middle, and the end; the whole world was spread abroad by me in my invisible form. At the end of the period kalpa all things return into my primordial source; and, at the beginning of another kalpa, I create them all again. I am the creator of all mankind, uncreated, and without decay. There is not any thing greater than I, and all things hang on me, as precious gems on a string. I am the understanding of the wise, the glory of the proud, the strength of the strong. I am the eternal seed of all nature; I am the father and mother of this world, the grandsire and the preserver; I am death and immortality; I am entity and nonentity; I am never failing time; I am all-grasping death, and I am the resurrection.—I am the emblem of the immortal, and of the incorruptible; of the eternal, of justice, and of endless bliss.—Neither the sun nor the moon, nor the fire, enlighteneth that place, whence there is no return, and which is the supreme mansion of my abode.' Sanjay, one of the interlocutors of the Gita, describes Krishna as he revealed his 'million forms divine,' to Arjun, 'covered with every marvellous thing—the eternal god, whose countenance is turned on every side. The glory and amazing splendor of this mighty being may be likened to the sun, rising at once into the heavens with a thousand times more than usual brightness. The son of Pandu then beheld within the body of the god of gods, standing together, the whole universe divided forth into its vast variety.' Arjun, terrified at this wondrous exhibition, exclaims—'Thou art the supreme being! I see thee without beginning, without middle, and without end; of valor infinite, of arms innumerable; the sun and the moon thy eyes; thy mouth a flaming fire; and the whole world shining with thy reflected glory. Having beheld thy dreadful teeth, and gazed on thy countenance, emblem of time's last fire, I know not which way to turn; I find no peace. Have mercy then, O god of gods! thou mansion of the universe! and show me thy celestial form, with the diadem on thy

head, and thy hands armed with the club and chakra. Assume then O god of a thousand arms! image of the universe! thy four-armed form.'

KROUTE, CROUTE, or SOUR CROUTE, (Germ. Sauer Kraut, i. e. sour herb), a preparation of cabbage, which has been found of great efficacy as a preservative in long voyages from the seascurvy. The process for making it is this:—The soundest and most solid cabbages are selected, and cut crosswise very small, with a knife or an instrument made for the purpose, like that used for slicing cucumbers. The cabbage thus sliced is put into a barrel in layers, hand high, and over each is strewed a handful of salt and carraway seeds; in this manner it is rammed down with a rammer till the barrel be full, when a cover is put over it, and pressed down with a heavy weight. After standing some time in this state it begins to ferment; and, when the fermentation has entirely subsided, the head is fitted to it, and the barrel is finally shut up and preserved for use. There is not a drop of vinegar employed. Great quantities of sour kroute are consumed in Germany and Holland.

KRUDENER (baroness Valerie de), an enthusiast, the Joanna Southcott of the continent, was born in 1765 at Riga, being the daughter of the governor, count de Wittenkoff. At an early age she became the wife of baron de Krudener, ambassador from the empress of Russia to the court of Berlin, and afterwards at Venice, where the secretary of legation fell in love with her, and committed suicide; on which subject she wrote a romance called Valerie. At the commencement of the revolution in France, madame Krudener resided in that country, but afterwards returned to Germany; and in 1806 first appeared in her character of prophetess, avowing that she had a mission to establish the reign of Christ. She followed the emperor Alexander to Paris, and declared that he was the appointed regenerator of mankind. Her predictions excited great attention, and, when the sovereigns left Paris, she went into Switzerland, where she preached the advent of the millennium, and thousands flocked to her from the mountains. At length the States interfered, and madame Krudener, after making, it is said, a convert of Benjamin Constant, went into the Crimea, and died at Karasubassar, December, 25th, 1824.

KUARA, a very mountainous and unhealthy province, at the western extremity of Abyssinia, near the banks of the Bahr-el-Abiad. It abounds in gold, it is said, not however of its own produce, but brought hither by the Shangalla and other tribes. In the low country, near Sennaar, there is a settlement called Ganjum, which often acts independently of the government.

KUBAN or KUBIX, a town of Hungary, in the Bannat, opposite to Semendria. It has 2400 inhabitants, who carry on a brisk trade with the Turks.

KUFT, or KEFT, the ancient Coptos, a city of Upper Egypt, which, during the time of the Ptolemies, was the great emporium of its commerce. The productions of Lower Egypt and of Europe were landed from the Nile and conveyed to Berenice, on the coast of the Red Sea. It became still more flourishing under the Roman empire. Coptos, in the early ages of Christi-

anity, was distinguished by the number of its convents, and of those who fled here to escape from persecution. Dioclesian reduced it to ashes. The old city was never afterwards inhabited, but an Arab town has been built in its vicinity, and most of the commerce with the Red Sea is transferred to Kene. The ruins of the ancient city, destroyed by Dioclesian, remain it is said nearly in the same state in which they were left by the fire, and exhibit splendid fragments of porphyry and granite columns.

KUHNIUS, (Joachim), a learned German critic, born at Gripswalde in Pomerania, in 1647. He was, in 1669, made principal of the college at Oettingen in Suabia; in 1676 Greek professor in the college at Strasburg; and ten years after Greek and Hebrew professor. His uncommon skill in the Greek language attracted a great number of scholars from distant parts; and he published some classic authors with very learned explanatory and critical notes. He died in 1697.

KULLA or QUALLA, a country and river of Central Africa, to the south-east of Wangara, represented to Browne as an important state, but he did not enter it.

KUMANIA, GREAT and LITTLE, the name of two districts, in the central part of Hungary, granted in the twelfth and thirteenth centuries to a foreign tribe. They consist properly of three parts; the most northerly, Great Kumania, or Nagy Kunsag, is separated from the others by the great river Theyss, as well as by a considerable tract of country, and forms a plain of 420 square miles of area, with 33,000 inhabitants, chiefly Calvinists. Their chief town is Kardszag. The two other parts are each called Little Kumania, or Kis Kunsag: both being situated on the right side of the Theyss, and the left of the Danube, near the middle of Hungary. The two together are larger than Great Kumania, having an extent of 1000 square miles, with 41,000 inhabitants.

KUNASHIR, a mountainous island of the Eastern seas, forming part of the archipelago of the Kuriles. It is about 100 miles long and thirty-five broad. It contains many valleys capable of cultivation; but is almost uninhabited, not containing more than sixty-eight men, and about twice the number of women. The Russians make occasional excursions, for the purpose of hunting and fishing, and have erected a small fort here.

KUNCKEL (John), a celebrated Saxon chemist, born in Sleswick, in 1630. He became chemist to the elector of Saxony, the elector of Brandenburg, and Charles XI. king of Sweden, who gave him the title of counsellor in metals, and letters of nobility, with the surname of Louwensteing. He employed fifty years in chemistry; in which, by the help of the furnace of a glass-house which he had under his care, he made several excellent discoveries, particularly of the phosphorus of urine. He died in Sweden in 1702; and left several works, some in German, and others in Latin: among which that entitled *Observationes Chemicæ*, and the *Art of Making Glass*, printed at Paris in 1752, are the most esteemed.

KUR, the ancient Cyrus, the largest river of Georgia. It rises in Armenia, flowing north for about sixty miles, when it flows in a south-west direction into the Caspian. The banks are high and wooded. Its largest tributary is the Arar and Araxes.

KURDISTAN, or CURDISTAN, a mountainous country of Asia, whence issue the different branches of the Tigris, which, surrounding the upper part of the great Zab, passes to the southward, as far as the frontiers of the Irak-Adjemi, or Persian Irak. It has been regarded as one of the divisions of the Turkish province of Diarbekir, anciently known as Assyria Proper. It lies chiefly on the east side of the Tigris, towards Persia, being bounded by that kingdom on the east, and by the Tigris on the west, by Irak on the south, and Turcomania on the north, and some writers extend it into Armenia, and the Persian province of Irak-Adjemi. Towards the south it scarcely exceeds ninety miles in breadth; but northwards it stretches nearly 300 miles from east to west, or, from 41° to 47° of E. long. from north to south it reaches from $35^{\circ}30'$ to $37^{\circ}20'$ N. lat. The mountain of Coatras separates it from Persia on the east, and the Tigris on the west, from Mesopotamia and Chaldæa.

According to the ancients this country was rich and fertile; but it is now desolate, and abounds with deserts, except in those few parts which lie near towns. It was in former ages the field of battle between the Parthians and Romans, and at a later period between the Turks and Persians. Its chief towns and hamlets are Bellis, the capital, Scheresal, Arbela, Harpel, Nineveh, Rehobo, Rhesen, Van, and Holwan.

The Kurds are divided into tribes, which are dispersed over Lower Asia, and have widely extended themselves within the last 100 years. Volney suggests that Gord and Kurd are the same; and they are supposed to be the same people who are mentioned by Xenophon under the denomination of Card-uchi, and who opposed the retreat of the 10,000. In their modern state they are as independent; for, though apparently tributaries to the Porte, they pay little respect to the orders of the grand seignior. According to the account of Niebuhr, who travelled in these countries in 1769, they are subject, in their mountains, to a sort of feudal government, similar to that of the Druses their neighbours. Each village has its chief, and the whole nation is divided into different and independent commands. The disputes inseparable from this state have detached from the nation a great number of tribes and families, which have adopted the wandering life of the Arabs. These are dispersed in the Diarbekir, and over the plains of Arzroum, Erivan, Sivas, Aleppo, and Damascus; and all their tribes are estimated to exceed 140,000 armed men. Like the Turkmans, these Kurds are pastors and wanderers; often shifting their position in search of pasture for their numerous flocks and herds. Their tents are large, and formed of a sort of coarse brown cloth; some houses are constructed for temporary use of cane hurdles, disposed in a square form, and having the floor matted, so as to answer the purposes both of bed and board. When they dislodge, u

order to migrate, they take their huts to pieces, and load their oxen and cows with them. The children go almost naked in the coldest weather. The men are generally well mounted, and take great care of their noble horses: the lance is their chief weapon. The women ride both on horses and on oxen. Both sexes are naturally stout and nimble; but not agreeable in their persons, having small eyes, wide mouths, and bad complexions. The Kurds differ from the Turkmans in various respects. The latter give their daughters a marriage portion; the former receive a premium for them. The Turkmans pay no respect to nobility or extraction; the Kurds highly honor it. The Turkmans do not steal; the Kurds are almost every where plunderers; and they are therefore much dreaded in the neighbourhood of Aleppo and Antioch. In this pachalic, and in that of Damascus, their number sometimes exceeds 20,000 tents and huts. They are reputed Mahomedans; but do not trouble themselves about religious rites or opinions. Several of them, distinguished as the Yazdia, worship 'Shaitan' or Satan, according to the ancient system of the good and evil principles, which has more or less prevailed in Diarbekir, and the frontiers of Persia. There are also some few professed Christians among them, under two patriarchs. The Kurds' language is divided into three dialects. It has neither the aspirations nor the gutturals of the Arabic, and Volney says it does not resemble the Persian. Considering the antiquity of the people who speak it, and that they are related to the Medes, Assyrians, Persians, and even the Parthians, he conjectures, that a knowledge of this tongue would throw light on the history of these countries.

Colonel Squire says, 'the Kurds, like the Turcomans, lead a pastoral life; in Syria they occupy the mountains between Aleppo and the sea; and never pass farther to the southward than Antioch. Their number amounts to between 4000 and 5000. The Kurds have villages amongst them, though in summer, like the Turcomans, their ordinary residence is under tents. They also exact a tribute from travellers, though, their faith once plighted in your favor, you need never suspect their sincerity. Their women make a coarse sort of carpet, which is tinged with different colors.' When a Koordish chief takes the field, says Mr. Kinneir, 'his equipment varies but little from that of the knights in the days of chivalry; and the Saracen who fought under the great Salah-ed-deen (Saladin) was probably armed in the very same manner as he who now makes war against the Persians. His breast is defended by a steel corslet, inlaid with gold and silver; whilst a small wooden shield, thickly studded with brass nails, is slung over his left shoulder, when not in use. His lance is carried by his page, or squire, who is also mounted; a carbine is slung across his back; his pistols and dagger are stuck in his girdle, and a light scymitar hangs by his side: attached to the saddle, on the right, is a small case, holding three darts, each about two feet and a half in length; and on the left, at the saddle-bow, you perceive a mace, the most deadly of all his weapons; it is two feet and a half in length,

sometimes embossed with gold, at others set with precious stones. The darts have steel points, about six inches long, and a weighty piece of iron or lead at the upper part, to give them velocity when thrown by the hand.' 'The Vâlî of Sineh,' he adds, 'resides in a sumptuous palace, where he maintains a degree of state and splendor superior to any thing seen in Persia, except at court. His house is ever open for the entertainment of strangers, and he always retains about his person a chosen body of horse. In short, it was impossible to contemplate this chief, sitting at the head of his hall, surrounded by his friends and relations, without calling to mind the Percys and Douglasses of our own country.'

KURILES. The islands north of Jesso are included by the Japanese in the general name of Kuriles, which it would appear signifies the country of sea-weeds. The natives of Jesso reckon thirty-five islands, but the recent charts of Krusenstern mark only twenty-six. This chain is separated into two groups by the Boussole channel of la Perouse, and which may be properly distinguished by the names of the Great, or Japanese Kuriles, and the Less, or Kamshatka Kuriles; the former are inhabited by the Mosins, who have been called the Hairy Kurilians, to distinguish them from the natives of the Little Kuriles, who are of the Kamtschatdale race, and without beards.

The principal islands of the Great Kuriles are Chicotan, or Chi-Kutan (Kutan in the Mosin dialect signifying country), separated from Jesso by a narrow strait: this island is claimed by Japan. Kunaschir, the next island to the north, is diversified by mountains and valleys, covered with maples, pines, and the pinus cembra. Etorpu or Atorku (Staten-Eyland of the Dutch) is also covered with pine forests, and has a burning volcano. Urup (Company's land of the Dutch) is clothed with pines and alders, and is separated from Etorpu by Strait de Vries. Mareekan, the northernmost of the Great Kuriles, has only the same trees as the last: it is twelve leagues long, with an apparently volcanic peak in the centre. On the north-east is a large bay, but whose narrow entrance is crossed by a bar, with only two fathoms. The Russians formed an establishment here, but which had been abandoned before Broughton visited it.

The Little Kuriles, extending to Cape Lopotka of Kamtschatka, present a chain of rugged, sterile, and generally volcanic islands, through whose straits the tides run with great velocity. The names of these islands are so differently written by travellers and geographers, that it is difficult to give a correct list of them. They seem to stand thus from south to north: Raschaooa, in which is a volcanic peak, named Peak of Saritscheff; Rakhooa, or Kockkake; Motua, or Mutova, twenty miles long, on the south has a lofty volcano, in a state of ignition, on the north it is tolerably fruitful, but has not above 100 inhabitants; Keyto, or Ketoi, uninhabited, is nearly the size of the last, rocky, but with wood; Syas, or Schiasch-Kutan, an extinct volcano, uninhabited; Ekarma, or Ikurma, a burning volcano, with sulphurous springs; Etrama-kutan, an extinct volcano, uninhabited; Ana-kutan, twenty

leagues long, with two volcanic peaks, has little wood; Schioutschey; Makan; Kur-assey; Schirinki has steep rocky shores, covered with moss; Poromuschir, or Poroluschir, high and woody; Mavil; Shoom, or Shoomska, four leagues south of Cape Lopatka; Alaid, a conical volcano.

These islands are considered as an appendage of Kamtschatka, belonging to Russia; and their few inhabitants are subject to a tribute of skins, of the different kinds of foxes and of sea otters, with which these islands abound, but of which they have been much thinned. The entire population of the Kurile Islands is not supposed to exceed 1500.

KURSK, a considerable province or government of European Russia, between 35° and 39° of E. long., and 50° 30' and 52° 30' of N. lat. It is bounded by the governments of Orel, Voronez, Slobodsk, Ukraine, and Czernigov, and has a territorial extent of 15,000 square miles, divided into fifteen circles. It is reckoned to contain no fewer than thirteen large, and nearly 500 small streams, of which the principal are the Sem, the Donez, the Isla, and the Oskol. Corn is the chief product. Its population is about 1,200,000. Kursk, the capital, stands on the river Tuskara, and has 16,000 inhabitants, a Protestant consistory, and sixteen churches.

KUSTER (Ludolf), a learned writer of the eighteenth century, born at Blomberg in Westphalia. When very young, he was recommended by baron Spanheim as tutor to the two sons of the count de Schwerin, prime minister to the king of Prussia, who, upon our author's quitting that station, procured him a pension of 400 livres. He was promised a professorship in the university of Joachim; and till there should be a vacancy, being then but twenty-five, he resolved to travel. He read lectures at Utrecht; visited England and France, where he collated Suidas with three MSS. in the king's library, which furnished him with many fragments never before published. He was made LL. D. by the university of Cambridge, who made him several advantageous offers to continue there; but he was called to Berlin, where he was installed in the professorship promised him. He afterwards went to Antwerp, and abjured the Protestant religion. The king of France rewarded him with a pension, and ordered him to be admitted supernumerary associate of the academy of inscriptions. But he did not enjoy this new settlement long; for he died in 1716, aged forty-six. He was a great Latin scholar, but chiefly excelled

in the Greek language, to which he almost entirely devoted himself. He wrote many works; the principal of which are, 1. *Historia critica Homeri*. 2. *Jamblicus de vitâ Pythagoræ*. 3. An excellent edition of Suidas, in Greek and Latin, 3 vols. fol. 4. *Aristophanes, Greek and Latin fol.* 5. A new Greek edition of the New Testament, with Dr. Mill's Variations, in folio.

KUTTORE, a celebrated fortress of the province of Cafristan, Hindostan. It is situated on the top of a perpendicular mountain, and was with difficulty taken by Timour, in the fourteenth century. It is the capital of a district of the same name.

KUTTUBDEA, an island of the bay of Bengal, adjacent to the district of Chittagong. It is about thirteen miles long by four broad, and is covered with wood. Ships, in case of distress, may run in between it and the main land; but there is an extensive sand-bank to the westward. Long. of the north end 91° 48' E., lat. 21° 55' N.

KYD, *v. n.* Corrupted probably from Sax. *cuð*. To know.

But, ah! unwise and witlesse Colin Cloute,
That *kydst* the hidden kindes of many a weede,
Yet *kydst* not ene to cure heart-roots,
Whose ranckling wound as yet does rifely bleede.
Spenser. Shepheardes Calendar.

KYNASTON (John), A. B., an English divine, born at Chester in 1728, and educated at Oxford, of which he was elected fellow, June 4th. 1752. He acquired great reputation by an oration entitled *De impietate C. Cornelio Tacito falsè objectata, oratio, &c.* Oxon. 1761. He took an active part in the trial of the notorious parricide, Miss Blandy; and published some other pieces. He died in June 1783, in consequence of a broken arm.

KYPHONISM, **KYPHONISMUS**, or **CYPHONISMUS**, an ancient punishment inflicted on the primitive martyrs; wherein the body of the person was anointed with honey, and so exposed to the sun, that the flies and wasps might be tempted to torment him. This was performed in three ways; sometimes they tied the patient to a stake; sometimes they hoisted him up into the air, and suspended him in a basket; and sometimes they stretched him out on the ground with his hands tied behind him. Suidas gives us the fragment of an ancient law, which punished those who contemned the laws with kypionism for twenty days; after which they were to be precipitated from a rock, dressed in women's clothes.

L.

L, a liquid consonant, which preserves always the same sound in English. In the Saxon it was aspirated as hlaf, loaf; hlæfdig, lady. At the end of a monosyllable it is always doubled: as, shall, still, full, except after a dipthong; as, fail, feel, veal, cool. In a word of more than one syllable it is written single; as, channel, canal, tendril. It is sometimes put before *e*, and sounded feebly after it; as, bible, title.

L is used, 1. as a letter; 2. as a numeral; and 3. as an abbreviation. 1. As a Letter, **L** is the eleventh of the alphabet, and the eighth consonant. It was derived from the old Hebrew lamed, ל, or Greek lambda, λ. It is sounded by intercepting the breath between the top of the tongue and fore part of the palate, with the mouth open; and makes a sweet sound, with something of an aspiration; and therefore the Britons and Spaniards usually doubled it, or added an *h* to it, in the beginning of words, as in llan, or lhan, a temple, sounding nearly like fl, &c. 2. As a numeral, **L** denotes fifty; and with a dash over it, thus \overline{L} , 5000. 3. As an Abbreviation, **L** stands for Lucius; **LL.D.** for Doctor of Laws; **L.S.** in copies of deeds, charters, &c. for locus sigilli, the place of the seal; and **L.L.S.** for a sesterce. See **SESTERCE**.

LA! *interj.* Sax. and Teut. *lo, la*, the imperative of look, behold. An exclamation of surprise.

La you! if you speak ill of the devil,
How he takes it at heart.

Shakspeare. Twelfth Night.

LAB, or } Belg. *labben, klappen.*
LABBE, *v. a. & n. s.* } To blab, babble, or slander. A babbler. Obsolete.

Quod tho this sely man: I am no *labbe*,
Ne though I say it I nam not lefe to gabbe.

Chaucer. Cant. Tales.

But natheles, as trewe as any stele,
I have a wif, though that she poure be,
But of hire tonge a *labbing* shrewe is she;
And yet she hath an hepe of vices mo. *Id.*

LABADIE (John), a celebrated French enthusiast, son of John Charles Labadie, governor of Bourges, and gentleman of the bed-chamber to the French king, was born in 1610. He entered, when young, into the Jesuits' college at Bourdeaux; which, however, he afterwards quitted. He became a popular preacher; but, being repeatedly detected in improper behaviour towards female devotees, his loss of character among the Catholics is said to have driven him among the Protestants. A reformed Jesuit being thought a great acquisition, he was precipitately accepted as a pastor at Montauban, where he officiated for eight years; but, here again being accused of licentious conduct, and quarrelling with the Catholic priest about the right of interring a dead body, he was at length driven out, and went to seek an asylum at Orange, and then at Geneva. He was afterwards invited to Middleburg, where his eloquence and imposing pretensions procured him many followers, distinguished by the name of Labadists. They increased so ra-

pidly that he excited the attention of the other churches, whose authority he disputed, till he was formally deposed by the synod of Dort. Instead of obeying, he procured a tumultuous support from a crowd of his devotees, broke open the church of Middleburg, and administered the sacrament. At length he formed a little settlement between Utrecht and Amsterdam, where he erected a printing-press, which sent forth many of his works. Some of his followers, however, left him, and exposed his loose private life, until he was finally obliged to retire to Altona in Holstein, where he died in 1674. The sect soon fell into oblivion after his death.

LABARUM, the banner or standard carried before the Roman emperors in the wars. It consisted of a long lance, with a staff a-top, crossing it at right angles; from which hung a rich streamer, of a purple color, adorned with precious stones. Till the time of Constantine it had an eagle painted on it; but that emperor, in lieu thereof, added a cross, with a cipher expressing the name of Jesus. This standard the Romans borrowed from the Germans, *Dacæ*, *Sarmatæ*, *Pannonians*, &c., whom they had overcome. The name *labarum* was not known before the time of Constantine; but the standard itself in the form we have described, abating the symbols of Christianity, was used by the preceding emperors. Some derive the word from labor, as if this finished their labors; some from Gr. *εὐλαβεία*, reverence, piety; others from *λαμβάνειν*, to take; and others from *λαφύρα*, spoils. See the life of **CONSTANTINE**.

LABAT (John Baptist), a celebrated traveller, of the order of St. Dominic, born at Paris. He taught philosophy at Nancy, and in 1693 went to America as a missionary. He returned to France in 1705, spent several years in Italy, and died in Paris in 1738. His principal works are, 1. A New Voyage to the American Islands, 6 vols. 12mo. 2. Travels in Spain and Italy, 8 vols. 12mo. 3. A New Account of the Western parts of Africa, 5 vols. 12mo. He also published Chevalier des Marchais's Voyage to Guinea, in 4 vols. 12mo.; and An Historical Account of the western parts of Ethiopia, translated from the Italian of Cavazzi, 5 vols. 12mo.

LABBE (Philip), born at Bourges in France, in 1607, professed philosophy, divinity, and the languages, with great applause; and died in 1667, aged sixty. He was a laborious writer and a good critic; and wrote, 1. *Nova Bibliotheca MS. librorum*, in 2 vols. fol. 2. *De Byzantinæ historiae Scriptoribus*. 3. *Galenii vita*. 4. *Bibliotheca Bibliothecarum*. 5. *Concordantia Chronologica*, &c. He began the last edition of The Councils, and died while the ninth volume was printing. They were finished in 17 vols. by F. Cossart.

LABDANUM, or **LADANUM**, exudes from a tree of the *cistus* kind. It is said to have been formerly collected from the beards of goats who browsed the leaves of the *cistus*: at present a kind of rake, with several straps or thongs of skins fixed to it, is drawn lightly over the shrub,

so as to take up the unctuous juice, which is afterwards scraped off with knives. It is rarely met with pure, even in the places which produce it; the dust, blown upon the plant by the wind, mingling with the tenacious juice: the inhabitants are also said to mix with it a certain black sand. In the shops two sorts are met with. The best, which is very rare, is in dark-colored masses, almost black, of the consistence of a soft plaster, which grows still softer upon being handled; of a very agreeable smell, and of a light pungent bitterish taste. The other sort is harder, not so dark colored, in long rolls coiled up; of a much weaker smell than the first, and has a large admixture of fine sand, which, in the labdanum examined by the French Academy, made up three-fourths of the mass. It is used externally, to attenuate and discuss tumors; internally, it is more rarely used, but is greatly extolled by some against catarrhs and in dysenteries. Rectified spirit of wine almost entirely dissolves pure labdanum, leaving only a small portion of gummy matter, which has no taste or smell; and hence this resin may be thus excellently purified for internal purposes. It is a useful ingredient in the stomachic plaster, now styled *emplastrum ladani*.

LA BEDOYERE (Charles Angélique François Huchet, count de), descended from an ancient and noble family, was born at Paris in 1786. At the age of twenty he entered the army, and served at the battle of Eylau as an officer in the imperial guard. In 1808 and 1809 he was aide-de-camp to Eugene Beauharnois. He afterwards served in Spain under Lannes, and was severely wounded at Tudela. We find La Bedoyere colonel of the 112th French regiment of infantry during the retreat from Moscow, and again distinguished at the battles of Lutzen and Bautzen, in 1813. On the abdication of Napoleon he was in 1815 made colonel of the seventh regiment of infantry, stationed at Grenoble; and, when his former master landed from Elba, he joined him at Vizille, being the first who brought him a regiment. He was now made general of brigade, lieutenant-general, and aide-de-camp to Napoleon; and raised to the peerage. He is said to have been one of the last officers who left the field of Waterloo, and, retiring to Paris, took his seat in the chamber of peers. On the capitulation of the metropolis, he followed the army, and afterwards was preparing to emigrate to America, but, being discovered in Paris, he was tried by a military commission, August 4th, 1815, and condemned to suffer death: which sentence was executed in a few days.

LAB'EFY, Lat. *labefacio*. To weaken, impair, says Dr. Johnson, but neither his reading nor our own supplies an instance of the word. Perhaps it is connected with the foregoing, lab, obsolete.

LAB'EL, *n. s.* Lat. *labellum*. Originally, perhaps, derived from the legal use of the word; i. e. a slip or parchment affixed to a deed, or paper, to hold the seal. Minshew says 'à labando, falling down.' Hence any small slip of paper, or writing, attached to a thing.

When waked, I found

This *label* on my bosom; whose containing

Is so from sense in hardness, that I can

Make no collection of it. *Shakspeare. Cymbeline.*

God joined my heart to Romeo's; thou our hands;
And ere this hand, by thee to Romeo sealed,
Shall be the *label* to another deed,
Or my true heart with treacherous revolt
Turn to another, this shall stay them both.

Shakspeare.

On the *label* of lead, the heads of St. Peter and St. Paul are impressed from the papal seal.

Ayliffe's Parergon.

LABEL, in heraldry, is a chief usually placed in the middle along the chief of the coat, without touching its extremities. Its breadth ought to be a ninth part of the chief. It is adorned with pendants; and when there are above three of these, the number must be specified in blazoning. It is used on the arms of eldest sons while the father is alive, to distinguish them from the younger; and is esteemed the most honorable of all differences. See **HERALDRY**.

LABERIUS (Decimus Junius), a Roman knight, who wrote mimes, or short satirical pieces for the stage. Julius Cæsar obliged him, contrary to his inclination, to perform one of his own mimes; whereupon he delivered a prologue, in which he severely satirised Cæsar. This piece is preserved in Aulus Gellius; and fragments of his other works are also extant.

LAB'IAL, *adj.*, } Lat. *labialis*. Formed
LAB'LATED, *part. adj.* } or uttered by the lips:
LABIODENTAL, *adj.* } formed with lips: labio-
dental is a compound of Holder's, from *labium* and *dentalis*, and means formed by the co-operation of the lips and teeth.

The Hebrews have assigned which letters are *labial*, which *dental*, and which *guttural*.

Bacon's Natural History.

Some particular affection of sound, in its passage to the lips, will seem to make some composition in any vowel which is *labial*. *Holder's Elements of Speech.*

The dental consonants are very easy; and first the *labiodentals*, *f*, *v*, also the *linguodentals*, *t*, *h*, *d*, *h*.

Holder.

The nine Mutes are divided into *tenuis*, or smooth, *media*, or intermediate, and *aspirate*, or rough; of which the *labials* or lip letters, the *palatines*, or palate letters, and the *dentals*, or teeth letters, are related respectively, and frequently exchanged for each other, one *labial* for another *labial*, &c.

Parkhurst.

Those are called *labials* which are formed by the lips.

Murray.

LA BLANCHERIE (Mammes Claude Pahin de), a French writer and emigrant, was born at Langres in 1752. He made a voyage early in life to the French colonies, but, disgusted at the treatment of the negro slaves, speedily returned home, and opened at Paris a general board of correspondence, to spread the knowledge of the improvements of different countries throughout Europe. He emigrated afterwards to England, and resided in London in a house once occupied by Sir Isaac Newton. The duke of Buccleugh kindly procured him a pension from government, to which he was principally indebted for his support. He died in London in 1811, being the author of *Extrait du Journal de mes Voyages*, ou *Histoire d'un jeune Homme pour servir d'École aux Peres et aux Meres*, Paris, 1776, 2

vols. 12mo.; and a literary journal commenced in January 1779, and continued under different titles to 8 vols. 4to.

LABON, a town of Sumatra, on the west coast, 150 miles S. S. E. of Acheen. It is famous for its camphire and gold dust. Long. 96° 40' E., lat. 3° 10' N.

LABOOAN, an island of the Eastern Seas, on the north-west coast of Borneo, opposite the mouth of the river of that name. Long. 115° E., lat. 5° 20' N.

LABORANT, *n. s.* } Lat. *laborans*; Fr. }
LABORATORY. } *laboratoire*. A chemist: the operating room or apartment of a chemist.

I can shew you a sort of fixt sulphur, made by an industrious *laborant*.

Boyle.

It would contribute to the history of colors, if chemists would in their *laboratory* take a heedful notice, and give us a faithful account, of the colors observed in the steam of bodies, either sublimed or distilled.

Id.

The flames of love will perform those miracles they of the furnace boast of, would they employ themselves in this *laboratory*.

Decay of Piety.

The human body is itself somewhat analogous to a *laboratory*, in which, by the varied functions of secretion, absorption, &c., composition and decomposition, are perpetually going on.

Purke's Chemical Catechism.

LABORATORY, in chemistry, a place fitted up with various chemical apparatus, and entirely devoted to the different operations of chemical research.

Although very many of the most distinguished laborers in chemical science have been content with such rude apparatus as they had themselves constructed, or converted from the common domestic utensils, it must nevertheless be obvious that they would have succeeded better with well constructed and appropriate apparatus—that we should not then have had so often to complain of investigations so general, of results so inaccurate. The gaseous products of the various substances under examination were indeed entirely neglected by the ancient chemist: he was in the constant habit of cutting a hole in the top of his retort, to admit of the escape of those elastic vapors for the preservation and examination of which instruments innumerable are now constructed.

Under our article CHEMISTRY we have already given a description of most of the principal chemical apparatus with appropriate plates; it is now our task to notice their arrangement in the place destined for their use.

And first, the situation of a laboratory ought to be elevated and dry; the advantages of a low situation for obtaining water, &c., being more than counterbalanced by the dampness of the atmosphere. Constant moisture indeed, though not very considerable and sensible, in many cases is a very great inconvenience in a chemical laboratory. In a damp situation most saline substances become moist, the inscriptions fall off, the bellows rot, the metals rust, the furnaces moulder, and every thing almost spoils. A laboratory, therefore, should never be placed below the ground, and should be as dry as possible.

The air must have free access to it; and it should be so constructed that, by means of one or two opposite openings, a current of air may be admitted to carry off noxious vapors, &c.

A chimney ought to be constructed in the laboratory, so high that a person may easily stand under it, and arched forward from one wall to another. The funnel of this chimney ought to be as high as possible, and sufficiently contracted to make a good draught. As charcoal only is burnt under this chimney, it need not be so wide as to allow a chimney-sweeper to pass up into it. Under this chimney may be constructed the brick furnaces, particularly a melting furnace, a furnace for distilling with an alembic, and one or two ovens. The rest of the space ought to be filled up with stands for portable furnaces of all kinds. These furnaces are the most convenient, from the facility of disposing them at pleasure; and they are the only furnaces which are necessary in a small laboratory. A double pair of bellows, of moderate size, must also be placed as commodiously under the chimney as the place will allow, and ought to have a pipe directed towards the hearth where the forge is to be placed. The necessary furnaces are, the simple furnace, for distilling with a copper alembic; a lamp furnace; two reverberatory furnaces of different sizes, for distilling with retorts; an air or melting furnace; an assay furnace: and a forge furnace. Under the chimney, at a convenient height, should be a row of hooks driven into the back and side walls; on which are to be hung small iron shovels, tongs, straight and crooked pincers, pokers, and other utensils for managing the fuel and crucibles.

To the walls of the laboratory ought to be fastened shelves of different breadths and heights, to contain glass vessels, the products of operations, &c. In a laboratory where many experiments are made there cannot be too many shelves. The most convenient place for a stone cistern, to contain water, is a corner of the laboratory; and under it a sink ought to be placed with a waste pipe. As the vessels are always cleaned under this cistern, cloths and bottle brushes ought to be hung upon hooks fastened in the walls near it. In the middle of the laboratory a large table is to be placed, on which mixtures are to be made, preparations for operations, solutions, precipitations, small filtrations; in a word, whatever does not require fire. In convenient parts of the laboratory are to be placed blocks of wood upon mats; one of which is to support a middle-sized iron mortar; another to support a middle-sized hard stone mortar; a third to support an anvil. Near the mortars are to be hung searces of different sizes and fineness; and near the anvil a hammer, files, pincers, shears, and other small utensils, necessary to give metals a form proper for the several operations.

Two moveable trestles ought to be in a laboratory, which may serve to support a large filter mounted upon a frame, when it is required.

Charcoal is an important article in a laboratory, and it therefore must be placed within reach; but, as the black dust which flies about it

whenever it is stirred is apt to soil every thing in the laboratory, it had better be in some lumber-room near, together with furze, which is very convenient for kindling fires. This place serves, at the same time, for containing bulky things which are not often wanted; such as furnaces, bricks, tiles, fire-clay, quicklime, sand, &c.

Lastly, a middle-sized table, with solid feet, ought to be enumerated among the large moveables of a laboratory, the use of which is to support a porphyry, or levigating stone, or a very hard and dense gritstone, together with a muller made of the same kind of stone.

The other small moveables or utensils of a laboratory are, small hand-mortars of iron, glass, agate, and Wedgewood's ware, and their pestles; earthen, stone, metal, and glass vessels, of different kinds, funnels, and measures.

Some white writing paper, and unsized paper for filters; glass tubes for stirring and mixing corrosive liquors; spatulas of wood, ivory, metal, and glass, should also be if possible provided. Thin pasteboards and horns are very convenient for collecting matters bruised with water upon the levigating stone, or in mortars. Bladders and linen strips for luting vessels, a good portable pair of bellows, a glue-pot, and boxes of various sizes, to be placed upon the shelves, will also be found convenient.

The best construction of a furnace has not been well ascertained from experience. There are facts which show, that a fire made on a grate near the bottom of a chimney, of equal width throughout, and open both above and below, will produce a more intense heat than any other furnace. What may be the limits for the height of the chimney is not ascertained from any precise trials; but thirty times its diameter would not probably be too high. It seems to be an advantage to contract the diameter of a chimney, so as to make it smaller than that of the fireplace, when no other air is to go up the chimney than what has passed through the fire.

M. Chenevix has constructed a wind furnace, which is in some respects to be preferred to the usual form. The sides, instead of being perpendicular, are inverted, so that the hollow space is pyramidal. At the bottom the opening is thirteen inches square, and at the top but eight. The perpendicular height is seventeen inches. This form appears to unite the following advantages: 1. A great surface is exposed to the air, which, having an easy entrance, rushes through the fuel with great rapidity; 2. The inclined sides act in some measure as reverberating surfaces; and, 3. The fuel falls of itself, and is always in close contact with the crucible placed near the grate. The late Dr. Kennedy of Edinburgh, whose opinion on this subject claims the greatest weight, found that the strongest heat in our common wind-furnaces was within two or three inches of the grate. This, therefore, is the most advantageous position for the crucible, and still more so when we can keep it surrounded with fuel. It is inconvenient and dangerous for the crucible to stir the fire often to make the fuel fall, and the pyramidal form renders this unnecessary.

In the diagram annexed *a* is a grate; *c* and *c* are two bricks, which can be let in at pleasure to diminish the capacity; *b* is another grate, which can be placed upon the bricks *c* and *c* for smaller purposes; *d* and *d* are bricks, which can be placed upon the grate *b* to diminish the upper capacity, so that, in fact, there are four different sizes in the same furnace. The bricks should all be ground down to the slope of the furnace, and fit it with tolerable accuracy.

Charcoal is the material most commonly used in furnaces. It produces an intense heat without smoke, but it is consumed very fast. Coke or charred pit-coal produces a very strong and lasting heat. Neither of these produce a strong heat at a distance from the fire. Where the action of flame is required, wood or coal must be burned.

Frequently, however, the flame of an Argand lamp may be employed very conveniently for chemical purposes, a lamp furnace, as it is perhaps not very properly called, will be found very useful. It consists of a brass rod screwed to a foot of the same metal, loaded with lead. On this rod, which may be unscrewed in the middle for rendering it more portable, slide three brass sockets with straight arms, terminating in brass rings of different diameters. These rings serve for supporting glass alembics, retorts, Florence flasks, evaporating basins, gas bottles, &c.; for performing distillations, solutions, evaporations, saline fusions, analyses with the pneumatic apparatus, &c. If the vessels require not to be exposed to the naked fire, a copper sand-bath may be interposed, which is to be previously placed in the ring. By means of a thumb-screw, acting on the rod of the lamp, each of the brass rings may be set at different heights, or turned aside, according to the pleasure of the operator. Below these rings is a fountain-lamp on Argand's plan, which slides on the main brass rod by means of a socket and thumb-screw. It is therefore easy to bring it nearer, or to move it further, at pleasure, from the vessel, which may remain fixed; a circumstance which, independent of the elevation and depression of the wicks of the lamp, affords the advantage of heating the vessels by degrees after they are duly placed, as well as of augmenting or diminishing the heat instantly; or for maintaining it for several hours at a certain degree, without in the least disturbing the apparatus suspended over it. It may therefore be used for producing the very gentle heat necessary for the rectification of ethers, or the strong heat requisite for distilling mercury. The chief improvement of this lamp consists in its power of affording an intense heat by the addition of a second cylinder, added to that of the common lamp of Argand. This additional cylinder encloses a wick of an inch and a half

in diameter, and it is by this ingenious contrivance, which was first suggested by Mr. Webster, that a double flame is caused, and more than three times the heat of an Argand's lamp of the largest size is produced.

In our article FURNACES we have already described the principles on which these most necessary instruments are constructed, and, in the description of the plates annexed to the article CHEMISTRY, notice is taken of the different kinds now in use. In the latter article will also be found a description of Nooth's and Wolfe's apparatus, Hope's eudiometer, and in fact of almost all the different implements necessary to a chemical laboratory. We shall therefore refer the reader to these articles, as well as to BLOWPIPE, ALEMBIC, BALANCE, and GAS for an account of them.

Under the article BLOWPIPE, however, we have omitted to notice some of the very important modern improvements in that instrument. It has deservedly of late years been considered as an essential instrument in a chemical laboratory; and several attempts have been made to facilitate its use by the addition of bellows, or some other equivalent instruments. These are doubtless very convenient, though they render it less portable for mineralogical researches. It will not here be necessary to enter into any description of a pair of double bellows fixed under a table, and communicating with a blowpipe which passes through the table. Smaller bellows, of a portable size for the pocket, have been made for the same purpose. The ingenious chemist will find no great difficulty in adapting a bladder to the blowpipe, which, under the pressure of a board, may produce a constant stream of air, and may be replenished as it becomes empty, by blowing into it with bellows or the mouth, at another aperture furnished with a valve opening inwards.

The chief advantage these contrivances have over the common blowpipe is, that they may be filled with oxygen gas, which increases the activity of combustion to an astonishing degree. The vapor from alcohol has likewise been employed, and an ingenious contrivance for this purpose by Mr. Hooke is represented in the annexed diagram:

a is a hollow sphere for containing alcohol, resting upon a shoulder in the ring *o*. If the bottom be made flat instead of spherical, the action of the flame will then be greater: *b* is a bent tube with a jet at the end, to convey the alcohol in the state of vapor into the flame at *q*; this tube is continued in the inside up to *c*, which admits of *a* being filled nearly, without any alcohol running over: *d* is a safety valve, the pressure of which is determined at pleasure, by screwing

higher or lower on the pillar *e*, the two milled nuts *f* and *g* carrying the steel arm *h*, which rests on the valve: *i* is an opening for putting in the alcohol: *k* is the lamp, which adjusts to different distances from *a*, by sliding up or down the two pillars *l*. The distance of the flame *q* from the jet is regulated by the pipe which holds the wick being a little removed from the centre of the brass piece *m*, and of course revolving in a circle: *n* the mahogany stand.

Dr. Robert Hare, professor of natural philosophy in the university of Philadelphia, published, in the first volume of Bruce's Mineralogical Journal, an account of very intense degrees of heat, which he had produced and directed on different bodies, by a jet of flame, consisting of hydrogen and oxygen gases, in the proportion requisite for forming water. The gases were discharged from separate gasometers, and were brought in contact only at a common orifice or nozzle of small diameter, in which their two tubes terminated.

In the first number of the Journal of Science and Arts is a description of a blowpipe contrived by Mr. Brooke, and executed by Mr. Newmann, consisting of a strong iron box, with a blowpipe, nozzle, and stop-cock, for regulating the emission of air, which had been previously condensed into the box, by means of a syringe screwed into its top.

John George Children, esq., first proposed to Sir H. Davy the application of Newmann's apparatus to the mixture of oxygen and hydrogen, immediately after Sir H. had discovered that the explosion from oxygen and hydrogen would not communicate through very small apertures; and he first tried the experiment himself with a fine glass capillary tube. The flame was not visible at the end of this tube, being overpowered by the brilliant star of the glass ignited at the aperture.

Dr. Clarke, after being informed by Sir H. Davy that there would be no danger of explosion in burning the compressed gases, by suffering them to pass through a fine thermometer tube one-eighth of an inch diameter, and three inches in length, commenced a series of experiments, which were attended with most important and striking results. By the suggestion of Professor Cumming there has been enclosed in the iron box a small cylinder of safety, about half filled with oil, and stuffed at top with fine wire gauze. The condensed gases must pass from the large chamber into this small one, up through the oil, and then across the gauze before they can reach the stop-cock and blowpipe nozzle. By this means the dangerous explosions, which had occurred so frequently as would have deterred a less intrepid experimenter than Dr. Clarke, are now obviated. It is still, however, a prudent precaution, to place a wooden screen between the box and the operator. The box is about five inches long, four broad, and three deep. The syringe is joined to the top of the box by a stop-cock. Near the upper end of the syringe, a screw-nozzle is fixed in it at right angles, to which the stop-cock of a bladder containing the mixed gases may be

attached. When we wish to inject the gases, it is proper to draw the piston to the top, before opening the lower stop-cock, lest the flame of the jet should be sucked backward, and cause explosion. It is likewise necessary to see that no little explosion has dislodged the oil from the safety cylinder. A bubbling noise is heard when the oil is present. A slight excess of hydrogen is found to be advantageous.

Platinum is not only fused the instant it is brought in contact with the flame of the ignited gases, but the melted metal runs down in drops. Dr. Clarke has finally fused the astonishing quantity of half an ounce at once by this jet of flame. In small quantities it burns like iron wire. Palladium melted like lead. Pure lime becomes a wax-yellow vitrification. A lambent purple flame always accompanies its fusion. The fusion of magnesia is also attended with combustion. Strontites fused with a flame of an intense amethystine color, and after some minutes there appeared a small oblong mass of shining metal in its centre. Silix instantly melted into a deep orange-colored glass, which was partly volatilised. Alumina melted with great rapidity into globules of a yellowish transparent glass. In these experiments, supports of charcoal, platinum, or plumbago, were used with the same effect. The alkalis were fused and volatilised the instant they came in contact with the flame, with an evident appearance of combustion.

The following refractory native compounds were fused:—Rock crystal, white quartz, noble opal, flint, calcedony, Egyptian jasper, zircon, spinelle, sapphire, topaz, cymophane, pycnite, andalusite, wavellite, rubellite, hyperstene, cyanite, talc, serpentine, hyalite, lazulite, gadolinite, leucite, apatite, Peruvian emerald, Siberian beryl, potstone, hydrate of magnesia, subsulphate of alumina, pagodite of China, Iceland spar, common chalk, Arragonite, diamond.

Gold, exposed on pipe clay to the flame, was surrounded with a halo of a lively rose color, and soon volatilised. Stout iron wire was rapidly burned. Plumbago was fused into a magnetic bead. Red oxide of titanium fused, with partial combustion. Red ferriferous copper blende, oxides of platinum, gray oxide of manganese, crystallised oxide of manganese, wolfram, sulphuret of niobium, siliceo-calcareous titanium, black oxide of cobalt, pecublenite, siliciferous oxide of cerium, chromate of iron, and ore of iridium, were all, except the second last, reduced to the metallic state, with peculiar, and for the most part, splendid phenomena. Jade, mica, amianthus, asbestos, melt like wax before this potent flame.

But the two most surprising of Dr. Clarke's experiments were the fusion of the meteoric stone from L'Aigle, and its conversion into iron; and the reduction of barium from the earth barytes and its salts. Some nitrate of barytes, put into a cavity, at the end of a stick of charcoal, was exposed to the ignited gas. It fused with vehement ebullition, and metallic globules were clearly discernible in the midst of the boiling fluid, suddenly forming, and as suddenly disappearing. On checking the flame, the cavity of the charcoal was studded over with innume-

erable globules of a metal of the most brilliant lustre and whiteness, resembling the purest platinum after fusion. Some globules were detached and dropped into naphtha, where they retained for some time their metallic aspect. Their specific gravity was 4.00.

Dr. Clarke fused together a bead of barium and one of platinum, each weighing one grain. The bronze-colored alloy weighed two grains, proving a real combination. The alloy of barium and iron is black and brittle. Barium is infusible before the blow-pipe per se; but with borax it dissolves like barytes, with a chrysolite green color, and disclosing metallic lustre to the file. The alloy of barium and copper is of a vermilion color. When silix is mixed into a paste with lamp-oil, and exposed on a cavity of charcoal to the flame, it runs readily into beads of various colors. If these be heated, in contact with iron, an alloy of silicium and iron is obtained, which discloses a metallic surface to the file. Magnesium and iron may be alloyed in the same way.

By using from two to three volumes of hydrogen to one of oxygen, and directing the flame on pure barytes, supported on pincers of slate, Dr. Clarke more lately revived barium in larger quantities, so as to exhibit its qualities for some time. It gradually, however, passes again into pure barytes. Muriate of rhodium, placed in a charcoal crucible, yielded the metal rhodium, brilliant like platinum. It is malleable on the anvil. Oxide of uranium, from Cornwall, was also reduced to the metallic state.

In order to expel air from solid substances, by means of heat, a gun-barrel, with the touch-hole screwed up and rivetted, may be used instead of an iron retort. The subject may be placed in the chamber of the barrel, and the rest of the bore may be filled with dry sand, that has been well burned, to expel whatever air it might have contained. The stem of a tobacco pipe, or a small glass tube, being luted in the orifice of the barrel, the other extremity must be put into the fire, that the heat may expel the air from its contents. This air will of course pass through the tube, and may be received under an inverted vessel, in the usual manner.

But the most accurate method of procuring air from several substances, by means of heat, is to put them, if they will bear it, into phials full of quicksilver, with the mouths inverted in the same, and then throw the focus of a burning lens or mirror upon them. For this purpose, their bottoms should be round and very thin, that they may not be liable to fly with the sudden application of heat.

Some substances, more especially powders, cannot conveniently be put into a phial, or passed through a fluid. When air is to be extricated from, or added to these, there is no better method, than to place them on a stand under the receiver of the air-pump, and exhaust the common air, instead of excluding it by water or mercury. This process requires a good air-pump, and careful management, otherwise the common air will not be well excluded.

It is frequently an interesting object to pass the electric spark through different kinds of air, either alone or mixed together. In this case 2

metallic wire may be fastened in the upper end of a tube, and the sparks or shock may be passed through this wire to the mercury or water used to confine the air. If there be reason to apprehend that an expansion in the air may remove the mercury or water beyond the striking distance, another wire may be thrust up to receive the electricity; or two wires may be cemented into opposite holes in the sides of an hermetically sealed tube. Holes may be made in glass, for this and other chemical uses, by a drill of copper or soft iron, with emery and water; and where this instrument is wanting, a small round file with water will cut a notch in small vessels, such as phials or tubes, though with some danger of breaking them. In some electrical experiments, of the kind here mentioned, there is reason to expect a fallacious result from the wires being burned by the explosion or spark. For this reason, the electricity may be made to pass through the legs of a syphon, containing the air which is under consideration in the upper part of its curvature. One of the vessels, in which the legs of the syphon rest, must therefore be insulated; and, if any watery fluid be used to confine the air, it is generally supposed that no combustion takes place.

We subjoin a list of the chemical substances necessary to be kept in a chemical laboratory. These are divided into wet and dry substances. The first of these must, of necessity, be kept in well-stopped bottles. The latter should also be kept in bottles, the necks of which should be wider than those for liquids.

Substances in common use should be kept in larger quantity than those which are kept as mere specimens, or only used occasionally and in small quantity.

Liquids in Common Use.

Sulphuric acid, pure.
 _____ common
 Nitric acid, pure.
 _____, common.
 Muriatic acid, pure.
 _____, common.
 Acetic acid.
 Solution of potassa.
 _____ carbonate of potassa.
 _____ potassa.
 _____ super-carbonate of potassa.
 _____ soda, and carbonate of soda.
 _____ carbonate of ammonia.
 Lime water.
 Distilled water.
 Alcohol, pure.
 _____, common.

The bottles in which the above are kept should hold from a pint to a quart each.

After a change of temperature in the air, from cold to hot, we find at the tops of bottles, about the stopper, a quantity of the liquid which has distilled up to the stopper, and been forced out by the expansion of the air in the bottle. This is very troublesome, especially with acids, and may be remedied by giving to the mouth of the bottle a slight funnel shape, which forms a recess for the liquid.

The following are the dry substances in common use:—

Oxide of manganese and common salt.
 Filings and rods of iron, tin, zinc, copper, and lead.
 Chalk and powdered marble.
 Quick-lime, pipe-clay, and sand.
 Magnesia, common and calcined.
 Sulphurets of potassa, iron, and lime
 Isinglass and nutgalls.
 Brasil wood and turmeric.
 Calcined plaster of Paris, and bone ashes
 Black flux and white flux. See FLUX.
 Charcoal powder and saw dust.
 Sulphate of lead, as a body for lutes.
 Nitre in crystals.
 Borax and alum.

The following are bodies in solution, used as tests and kept in small quantities, in bottles from one to two ounces in size. The bottles should be shaped at the mouth as above recommended, and the diameter should be half the height in the cylindrical part:—

Sulphate of potassa.
 _____ soda.
 _____ alumine.
 _____ ammonia.
 _____ magnesia.
 _____ zinc.
 _____ silver.
 Oxisulphate of iron.
 Nitrate of potassa.
 _____ soda.
 _____ barytes.
 _____ strontian.
 _____ lime.
 _____ silver.
 _____ copper.
 _____ lead.
 _____ bismuth.
 Muriate of potassa.
 _____ soda.
 _____ barytes.
 _____ strontian.
 _____ lime.
 _____ ammonia.
 _____ gold.
 _____ platina.
 _____ tin.
 _____ cobalt.
 Oximuriate of mercury.
 Phosphate of soda.
 _____ ammonia.
 Fluete of potassa.
 _____ ammonia.
 Borate of soda.
 Carbonate of potassa.
 _____ soda.
 _____ ammonia.
 Acetate of potassa.
 _____ barytes.
 _____ strontian.
 _____ alumine.
 _____ silver.
 _____ copper.
 _____ lead.
 Oxiacetate of iron.
 Oxalate of soda and ammonia.
 Succinate of ammonia.
 Tartrate of ammonia.

Prussiate of potassa and iron.
 ——— lime and iron.
 Pure gallic acid in alcohol.
 Infusion of galls in alcohol.
 ——— litmus.
 Acetic acid, pure.
 Hydrosulphuret of potassa.

The following substances should be kept in the solid state, and free from the contact of air and moisture:—

Sulphate of iron kept in alcohol.
 Muriate of lime.
 Oximuriate of potassa.
 Barytic earth.
 Strontian earth, and all pure earths.
 Pure potassa.
 ——— soda

Every vessel and utensil in a chemical laboratory, says the celebrated Macquer, ought to be well cleansed as often as it is used, and put again into its place; labels ought to be put upon all the substances. These cares, which seem to be trifling, are however very fatiguing and tedious; but they are also very important, though frequently little observed. When a person is keenly engaged, experiments succeed each other quickly; some seem nearly to decide the matter, and others suggest new ideas; he cannot but proceed to them immediately, and he is led from one to another: he thinks he shall easily know again the products of the first experiments, and therefore he does not take time to put them in order; he prosecutes with eagerness the experiments which he has last thought of; and in the mean time the vessels employed, the glasses and bottles, so accumulate, that he cannot any longer distinguish them; or, at least, he is uncertain concerning many of his former products. This evil is increased, if a new series of operations succeed, and occupy all the laboratory; or if he be obliged to quit it for some time, every thing then goes into confusion. Thence it frequently happens, that he loses the fruits of much labor, and that he must throw away almost all the products of his experiments.

When new researches and inquiries are made, the mixtures, results, and products of all the operations ought to be kept a long time, distinctly labelled and registered; for these things, when kept some time, frequently present phenomena that were not at all suspected. Many fine discoveries in chemistry have been made in this manner; and many have certainly been lost by throwing away too hastily, or neglecting the products.

LA'BOUR, or LABOR, *n.s., v.n.* Fr. *labour*; LABO'RIOUS, *adj.* [*& v.a.*] Span. & Lat. LABO'RIOUSLY, *adv.* } labor, which LABO'RIOUSNESS, *n.s.* } Minshew and LA'BORER, } Parkhurst derive from the LA'BORSOME, *adj.*

Heb. לָבַט. Work; the exertion of strength; exercise; travail in child-birth: as a verb neuter, to toil; take pains; act with painful efforts; be diseased or distressed; be in child-birth: as an active verb to work at or upon; to form with toil; proceed in, or accomplish with difficulty; to beat: laborer, laboriousness, and the adjectives

and adverb, follow these senses: laborious is also used as meaning assiduous, diligent.

Let more work be laid upon the men that they may labour therein. *Erod. v. 9.*

That in the night they may be a guard to us, and labour in the day. *Neh. iv. 22.*

Epaphras saluteh you, always labouring fervently for you in prayers, that ye may stand perfect.

Col. iv. 12.

A labouring man that is given to drunkenness, shall not be rich. *Eccles. xix. 1.*

To use brevity, and avoid much labouring of the work, is to be granted to him that would make an abridgement. *2 Mac.*

Sith of women's labours thou hast charge,
 And generation goodly doest enlarge,
 Incline thy will to effect our wishful vow.

Spenser.

Being a labour of so great difficulty, the exact performance thereof we may rather wish than look for.

Hooker.

If I find her honest, I lose not my labour; if she be otherwise, it is labour well bestowed. *Shakspeare.*

The base o' the mount

Is ranked with all deserts, all kind of natures,

That labour on the bosom of this sphere

To propagate their states. *Id.*

Sir, I am a true labourer; I earn that I eat; get that I wear; owe no man hate; envy no man's happiness. *Id.*

If you had been the wife of Hercules,

Six of his labours you'd have done, and saved

Your husband so much sweat. *Id. Coriolanus.*

He hath, my lord, by laboursome petition,

Wrung from me my slow leave. *Id. Hamlet.*

If a state run most to noblemen and gentlemen, and that the husbandmen be but as their work-folks and labourers, you may have a good cavalry, but never good stable foot. *Bacon.*

They abound with horse,

Of which one want our camp, doth only labour.

Ben Jonson.

The parallel holds in the gainlessness, as well as the laboriousness of the work; those wretched creatures, buried in earth and darkness, were never the richer for all the ore they digged; no more is the insatiate miser. *Deacy of Piety.*

The folly of him who pumps very laboriously in a ship, yet neglects to stop the leak. *Id.*

Moderate labour of the body conduces to the preservation of health, and curing many initial diseases; but the toil of the mind destroys health, and generates maladies. *Harvey.*

The matter of the ceremonies had wrought, for the most part, only upon light-headed, weak men, whose satisfaction was not to be laboured for.

Clarendon.

I to the evil turn

My obvious breast; arming to overcome

By suffering, and earn rest from labour won. *Milton.*

Not one woman of two hundred dies in labour. *Grant.*

Take, shepherd, take a plant of stubborn oak,

And labour him with many a sturdy stroke. *Dryden.*

Not knowing 'twas my labour, I complain
 Of sudden shootings and of grinding pain;

My throws come thicker, and my cries increased,

Which with her hand the conscious nurse suppressed. *Id.*

To this infernal lake the fury flies,
 Here hides her hated head, and frees the labouring
 skies. *Id.*

Had you required my helpful hand
The' artificer and art you might command,
To labour arms for Troy. *Id. Æneid.*

There lay a log unlighted on the earth,
When she was labouring in throes of birth;
For the' unorn chief the fatal sisters came,
And raised it up, and tossed it on the flame.

Id. Ovid.

As a man had a right to all he could employ his
labour upon, so he had no temptation to labour for
more than he could make use of. *Locke.*

His heart is in continual labour; it even travails
with the obligations, and is in pangs till it be deli-
vered. *South's Sermons.*

That which makes the clergy glorious, is to be
knowing in their professions, unspotted in their
lives, active and laborious in their charges, bold and
resolute in opposing seducers, and daring to look
vice in the face; and, lastly, to be gentle, courteous,
and compassionate to all. *South.*

Do'st thou love watchings, abstinence, and toil,
Laborious virtues all? learn them from Cato.

Addison.

To his laborious youth consumed in war,
And lasting age, adorned and crowned with peace.

Prior.

I was called to another, who in childbed laboured
of an ulcer in her left hip. *Wiseman.*

Labourers and idle persons, children and striplings,
old men and young men, must have divers diets.

Arbutnot.

The stone that labours up the hill,
Mocking the lab'rer's toil, returning still,
Is love.

Granville.

This exercise will call down the favour of Hea-
ven upon you, to remove those afflictions you now
labour under from you.

Wake's Preparation for Death.

A person who is too nice an observer of the bu-
siness of the crowd, like one who is too curious in
observing the labour of the bees, will often be stung
for his curiosity. *Pope.*

Here, like some furious prophet, Pindar rode,
And seemed to labour with the inspiring God.

Id.

Not balmy sleep to lab'ers faint with pain,
Not showers to larks, or sun-shine to the bee,
Are half so charming, as thy sight to me. *Id.*

I chuse laboriously to bear

A weight of woes, and breathe the vital air. *Id.*

The prince cannot say to the merchant, I have no
need of thee; nor the merchant to the labourer, I
have no need of thee. *Swift.*

O how laborious is thy way to ruin. *Young.*

Which consideration, as it suggesteth to us the
strongest motive to induce us to labour after a true
knowledge of them ourselves, so it directs us at the
same time how we may attain this knowledge. *Mason.*

Ah, Melancholy! how I feel thy power!
Long have I lab'oured to elude thy sway!

But, 'tis enough, for I resist no more. *Beattie.*

LA'BRA. Span. A lip.

Word of denial in thy labras here;

Word of denial: froth and scum, thou ly'st.

Shakspeare.

LABOUREUR (John Le), a French histori-
cal writer, was born in 1623, at Montmorency.
In 1644 he attended the embassy to Poland.
On entering into orders he was made almoner to
the king, and commander of the order of St. Mi-
chael. He died in 1675, leaving as his works,
1. The History of Charles VI. 2. History of
the Marshal Guebriant. 3. Genealogies of No-

ble Families. 4. Memoirs of Michael du Cas-
telnau, 2 vols. fol. It was an uncle of this
writer, Claude le Laboureur, provost of the
abbey of St. Barbe, who wrote the history of
that house; a Treatise on the Origin of Arms;
History of the House of St. Colombe; and Notes
on the Breviary of Lyons.

LABRADOR, an extensive barren region of
North America, lying between 50° and 60° of
N. lat., being bounded south by Canada and
the Gulf of St. Lawrence; north by Hudson's
Straits; west by Hudson's Bay; and east by the
Atlantic Ocean.

Its general aspect is most dreary, the whole
district being mountainous and rugged, and
every part of the soil strewn with stones.
Coarse plants, adapted to the sustenance of the
deer and wild goats, are its chief productions;
but in the interior iron ore and some inferior tim-
ber is found. Here also the arctic fox and bear
appear. Black peat earth appears occasionally
in patches; according to Mr. Cartwright, who
resided here about sixteen years; but he fully
confirms the report of other travellers as to the
general infertility of this region. The waters only
seem animated with life; and here fish and fowl
and a variety of amphibious creatures abound.
A few miles from the sea, he says, the air is
warm and agreeable. He describes the black,
white, and red spruce, larch, silver fir, birch,
and aspen, as valuable trees; but they do not
grow to a large size. The alimentary vegetables
found here are wild celery, scurvy-grass, and
other antiscorbutic plants. The fruits are cur-
rants, raspberries, partridge-berries, apples, pears,
empetrum nigrum, whortle-berries, crane-berries,
and a small pink berry, the plant of which re-
sembles the strawberry, but the fruit, which is
delicious, is granulated like the mulberry. The
birds of the country are the white-tailed eagle,
the falcon, hawks, owls; the raven, grouse,
ptarmigan, spruce game, curlew, plover, sand-
piper, geese and ducks, swallows, martins,
snipes, and doves.

The natives are of two races. The Moun-
taineers, or Indians, who it would seem have a
mixture of French Canadian blood, are Chris-
tians, and live in wigwams, or huts of birch-rind
and deers' skins. Their sole employment is
hunting, and the skins of the animals they take
they dispose of to the Canadians.

The Esquimaux are a totally different race, of
very short stature, with small limbs, of a copper
color, flat-visaged, with short noses, black and
very coarse hair. In language, person, and
manners, they much resemble the Greenlanders.
Their dress is entirely of skins, and their food
chiefly seals, deer, and birds' flesh and fish.
Their winter dwellings are sunk in the ground;
and in summer they construct huts with poles,
covered with skins. Unlike the Indians they
have no relish for spirits. They are not known
to have any religion, nor any object of worship,
and are without government or laws. The men
take a plurality of wives, who are considered as
the property of the husband, and are transferred,
hartered, or lent from one to another. On them
falls all the labor except procuring food, which
is the sole occupation of the men. They cannot

reckon numerically beyond six, and their compound arithmetic goes no farther than twenty-one. Their chief occupations consist in hunting deer and seals, and collecting furs. They are wonderfully sagacious at the first of these occupations, otherwise they would starve; and when they are in a part of the country, in the winter time, where deer are scarce, they will follow a herd day and night, until they tire them quite down, when they are sure to kill them all, if the night is light enough; they rest only four or five hours, and then pursue again; which space of time being too short for the deer to obtain either food or rest, they are jaded out by the fourth day. The Esquimaux were formerly settled in different parts of the coast; but in consequence of their quarrels with the Mountaineers, with whom they wage perpetual hostility, they have removed farther north.

Their canoes are of ribs of wood, covered with seal-skins; they are twenty feet long, and but two broad, holding but one man. Their arms are the dart, and bow and arrow. They keep great numbers of dogs, as well for food as for their skins, and to draw their sledges in winter. These animals cannot bark, but make a hideous howl. The chief establishment of the Moravians is at Nain, on the east coast, in lat 57°. The whole settlement includes about 600 inhabitants. The English visit the country for furs, whalebone, oil, and cod fish.

LABRADOR STONE, a curious species of feldspar, or rhombic quartz, which exhibits all the colors of a peacock's tail. It was discovered first by the Moravians, who have a colony among the Esquimaux in Labrador. It is found of a light or deep gray color, but for the most part of a blackish-gray. When held in the light in various positions it discovers a variety of colors, such as the blue of lapis lazuli, grass-green, apple-green, pea-green, and sometimes, but more seldom, a citron yellow. Sometimes it has a color between that of red copper and tom-buck-gray; at other times the colors are between gray and violet. For the most part these colors are in spots, but sometimes in stripes on the same piece. The stones are found in pretty large angular pieces, appear foliated when broken, and the fragments are of a rhomboidal figure. Their specific gravity is about 2.755.

LABRUS, in ichthyology, a genus of fishes belonging to the order of thoracici. The characters are these: the covers of the gills scaly; the branchiostegous rays unequal in number: teeth conic, long, and blunt at their ends: one tuberculated bone in the bottom of the throat: two above, opposite to the other: one dorsal fin reaching the whole length of the back: a slender skin extending beyond each ray, with a rounded tail. There are forty-one species, which vary from each other, even those of the same species, almost infinitely in color; some of them being of a dirty red mixed with a certain duskiness; others most beautifully striped, especially about the head, with the richest colors, such as blue, red, and yellow. Care must therefore be taken not to multiply the species from these accidental tints, but to attend to the form, which never varies. Pennant mentions his having seen a

species of labrus taken about the Giant's Causeway in Ireland, of a most beautiful vivid green, spotted with scarlet; and others at Bandooran, in the county of Sligo, of a pale green. To this genus belongs the fish called by the English the old wife.

LABUN, a town in the government of Volhynia, European Russia, containing a population of about 3000 souls.

LABY, a large town of Western Africa, in the kingdom of Foota Jallo. It is said to be two miles and a half in circumference, and trades with Timbuctoo, which is four months' journey beyond. This place manufactures narrow cloth and leather, wood, iron, and various articles in silver. Population about 5000.

LABYRINTH, *n. s.* Lat. *labyrinthus*; Gr. *λαβυρινθος*. A maze; an intricate edifice or combination of walks. Any thing puzzling or perplexing.

My clamours tear

The ear's soft *labyrinth*, and cleft the air. *Sandys.*
Suffolk, stay!

Thou may'st not wander in that *labyrinth*;
There Minotaurs, and ugly treasons lurk.

Shakespeare.

Words, which would tear

The tender *labyrinth* of a maid's soft tear. *Donne.*
My soul is on her journey; do not now
Divert, or lead her back, to lose herself
I' th' maze and winding *labyrinths* o' the world.

Denham.

The earl of Essex had not proceeded with his accustomed wariness and skill; but ran into *labyrinths* from whence he could not disentangle himself.

Curendon.

How shall the blessed day of our discharge
Unwind, at once, the *labyrinths* of fate,
And straighten its inextricable maze! *Young.*
(Not that I have not several merits more,
But this will more peculiarly be seen)

They so embellish, that 'tis quite a bore

Their *labyrinth* of fables to tread through,
Whereas this story's actually true.

Byron.

LABYRINTH, among the ancients, was a large intricate edifice cut out into various aisles and meanders running into each other, so as to render it difficult to get out of it. Mention is made of several of these edifices, but the most celebrated are the Egyptian and the Cretan labyrinths. The word literally signifies a circumscribed space, intersected by a number of passages, some of which cross each other in every direction, like those in quarries and mines, and others make larger or smaller circuits round the place from which they depart, like the spiral lines on certain shells. In a figurative sense it was applied to obscure and captious questions, to indirect and ambiguous answers, and to those discussions which, after long digressions, bring us back to the point from which we set out.

The **LABYRINTH OF CRETE** is the most noted in history or fable; having been rendered particularly remarkable by the story of the Minotaur, and of Theseus, who found his way through all its windings by Ariadne's clue. Diodorus Siculus relates as a conjecture, and Pliny as a fact, that Dædalus constructed this labyrinth on the model of that of Egypt, though on a smaller scale. They add, that it was formed by the command of Minos, who kept the Minotaur

shut up in it: and that in their time it no longer existed. Diodorus and Pliny, therefore, considered this labyrinth as a large edifice; while other writers represent it simply as a cavern hollowed in the rock, and full of winding passages. But if this labyrinth had been constructed by Dædalus under Minos it is surprising that we find it mentioned, neither in Homer, who more than once speaks of Minos and Crete; nor in Herodotus, who describes that of Egypt, after having said that the monuments of the Egyptians are much superior to those of the Greeks; nor in the more ancient geographers; nor in any of the writers of the ages when Greece flourished. Diodorus and Pliny suppose, that in their time no traces of the labyrinth existed in Crete, and that even the date of its destruction had been forgotten. Yet it is said to have been visited by the disciples of Apollonius of Tyana, who was contemporary with those two authors. The Cretans, therefore, then believed that they possessed the labyrinth. 'I would request the reader,' says abbé Barthelemi, 'to attend to the following passage in Strabo. At Napulia, near the ancient Argos (continues that judicious writer) are still to be seen vast caverns, in which are constructed labyrinths that are believed to be the work of the Cyclops: the meaning of which is, that the labors of men had opened in the rock passages which crossed and returned upon themselves, as is done in quarries. Such is the idea we ought to form of the labyrinth of Crete. Were there several labyrinths in that island? Ancient authors speak only of one, which the greater part place at Cnossus, and some at Gortyna. Belon and Tournefort have given us the description of a cavern at the foot of Mount Ida, on the south side of the mountain, at a small distance from Gortyna. This was only a quarry, according to the former; and the ancient labyrinth, according to the latter, whose opinion I have followed.' The abbé has some farther conjectures on this subject, for which see his *Travels of Anacharsis*, vol. VI. p. 441.

THE LABYRINTH OF EGYPT, according to Pliny, was the oldest of all the known labyrinths, and was subsisting in his time, after having stood 3600 years. He says it was built by king Petesucus, or Tithoes, but Herodotus makes it the work of several kings. It stood on the banks of the lake Mæris, and consisted of twelve large contiguous palaces, containing 3000 chambers, 1500 of which were under ground. Strabo, Diodorus Siculus, Pliny, and Mela, speak of this monument with the same admiration as Herodotus: but not one of them says it was constructed to bewilder those who went into it; though it is manifest that, without a guide, they would be in danger of losing their way. It was this danger, no doubt, which introduced a new term into the Greek language.

LABYRINTH ISLES, a cluster of small islands in the Pacific Ocean, discovered by Roggewein in 1722; seventy-five miles west from the Perincious Islands.

LAC, Fr. *laque*; Hind. and Sans. *lakh*. A substance deposited by the coccus lacca, used in varnishes. See the article following.

Lac is usually distinguished by the name of a gum, but improperly, because it is inflammable, and not soluble in water. We have three sorts of it, which are all the product of the same tree. 1. The stick *lac*. 2. The seed *lac*. 3. The shell *lac*. Authors leave us uncertain whether this drug belongs to the animal or the vegetable kingdom. *Hill*.

White *lac* is a peculiar substance distinct from the shell *lac* and stick *lac* of commerce, and is brought from the East Indies. This substance, which has a resemblance to bees'-wax, is secreted by an opaque rough insect, of a grey colour.

Parques's Chemical Catechism.

LAC, in the arts, is a substance well known in Europe, under the different appellations of stick-lac, shell-lac, and seed-lac. The first is the lac in its natural state, encrusting small branches or twigs. Seed-lac is the stick-lac separated from the twigs, appearing in a granulated form, and probably deprived of part of its coloring matter by boiling. Shell-lac is the substance which has undergone a simple purification, as mentioned below. Beside these we sometimes meet with a fourth, called lump-lac, which is the seed-lac melted and formed into cakes.

Lac is the product of the coccus lacca, which deposits its eggs on the branches of a tree called bilhar, in Assin, a country bordering on Thibet, and elsewhere in India. It appears designed to answer the purpose of defending the eggs from injury, and affording food for the maggot in a more advanced state. It is formed into cells, finished with as much art and regularity as a honeycomb, but differently arranged; and the inhabitants collect it twice a-year, in the months of February and August. For the purification, it is broken into small pieces, and put into a canvas bag of about four feet long, and not above six inches in circumference. Two of these bags are in constant use, and each of them held by two men. The bag is placed over a fire, and frequently turned, till the lac is liquid enough to pass through its pores; when it is taken off the fire, and twisted in different directions by the men who hold it, at the same time dragging it along the convex part of a plantain-tree prepared for this purpose; and, while this is doing, the other bag is heating, to be treated in the same way. The mucilaginous and smooth surface of the plantain-tree prevents its adhering; and the degree of pressure regulates the thickness of the coating of lac, at the same time that the fineness of the bag determines its clearness and transparency.

Analysed by Mr. Hatchett, stick-lac gave in 100 parts, resin 68, coloring extract 10, wax 6, gluten 5.5, extraneous substances 6.5; seed lac, resin 88.5, coloring extract 2.5, wax 4.5, gluten 2; shell-lac, resin 90.9, coloring extract 0.5, wax 4, gluten 2.8. The gluten greatly resembles that of wheat, if it be not precisely the same; and the wax is analogous to that of the myrica cerifera.

In India, lac is fashioned into rings, beads, and other trinkets; sealing-wax, varnishes, and lakes for painters, are made from it; it is much used as a red dye, and wool tinged with it is employed as a fucus by the ladies; and the resinous part, melted and mixed with about thrice its weight of finely-powdered sand, form-

polishing stones. The lapidaries mix powder of corundum with it in a similar manner.

The coloring matter is soluble in water; but one part of borax to five of lac, renders the whole soluble by digestion in water, nearly at a boiling heat. This solution is equal for many purposes to spirit varnish, and is an excellent vehicle for water-colors, as, when once dried, water has no effect on it. Lixivium of potassa, soda, and carbonate of soda, likewise dissolve it. So does nitric acid, if digested upon it in sufficient quantity forty-eight hours.

The coloring matter of the lac loses considerably of its beauty by keeping any length of time; but when extracted fresh, and precipitated as a lake, it is less liable to injury. Mr. Stephens, a surgeon in Bengal, sent home a great deal prepared in this way, which afforded a good scarlet to cloth previously yellowed with quercitron: but it would probably have been better, if, instead of precipitating with alum, he had employed a solution of tin, or merely evaporated the decoction to dryness.

Lac is the basis of the best sealing-wax. Lac is likewise employed for medicinal purposes. The stick-lac is the sort used. It is of great esteem in Germany, and other countries, for laxity and sponginess of the gums proceeding from cold or a scorbutic habit: for this use the lac is boiled in water, with the addition of a little alum, which promotes its solution; or a tincture is made from it with rectified spirit. This tincture is recommended also internally in the flnor albus, and in rheumatic and scorbutic disorders; it has a grateful smell, and not unpleasant, bitterish, astringent taste.

LAC DE LA PLUÏE, a lake of Upper Canada, North America, formed by the water connecting Lake Superior with the Lake of the Woods.

LAC DES ILLINOIS, the connecting lake between lakes Huron and Michigan, North America. It is fifteen miles long, and of an oval figure.

LACCARRY (Giles), a learned Jesuit of the seventeenth century, born in the diocese of Castres in Languedoc in 1605. He taught philosophy and theology: was rector of the college of Cahors, and well skilled in history. He wrote many works; among which are, 1. *Historia Galliarum sub Præfectis Prætorii Galliarum*, 4to. a work which is much esteemed, and extends from the reign of Constantine to that of Justinian. 2. *Historia Romana a Julio Cesare ad Constantinum Magnum, per numismata et marmora antiqua*, an excellent work. 3. *Epitome Historiæ Reg. Franciæ, ex Dionysio Petavio excerpta*, also much esteemed. 4. An edition of Velleius Paterculus, with learned notes.

LACCADIVA, or LACCADIVE ISLANDS, are a cluster of low islands lying off the Malabar coast, at the distance of thirty-eight leagues, and between lat. 12° and 10°. Thirty-two have been counted. They are all low, surrounded by reefs of coral; producing abundance of cocoanuts, areka, plantains, and other fruits. Generally the islands are on the east edge of the reefs, and the latter stretches off from them to the west. They are inhabited by Malabar Mopleys, who visit the Malabar coast in boats, constructed

of the trunks of the cocoa-palm, loaded with cocoa-nuts, coir cordage of their manufacture (from the fibrous parts of the cocoa-nut), jagory, and areka. Vessels also visit these islands from the coast for coral-reef stone (madrepore), for the purpose of making Hindoo images and burning into lime. Ambergris is also found on the beaches. These islands are under nominal allegiance to Cannanore.

Being rarely visited by European ships, they are little known in detail; the two southernmost are Seuhelipar and Kalpeni, each composed of two islets: those of Seuhelipar are distant eight miles from each other, but surrounded by reefs. Kalpeni is also two islets joined by a reef; it is four miles long, and one broad. On the south-west side is a town, and an opening in the reef for the boats to land. Underoot, north of Kalpeni, is less than the latter, and has a village of a few scattered houses on the north side, whose inhabitants are poor and inoffensive.

The bank of Cherbaniani is a dangerous reef, north-west of the Laccadivas. The sea breaks violently on it; and in the north-east monsoon some of the rocks are dry. The safest channel of this neighbourhood is between Manicoy Island and the Laccadivas, and is called by the Arabs Mamal, and by the Europeans the Nine Degree Channel: that between it and the Maldivas is named by the former Sindal, and by the latter the Eight Degree Channel.

LACCIC ACID (*acidum laccicum*, from lac, the substance in which it exists). 'Dr. John made a watery extract of powdered stick-lac, and evaporated it to dryness. He digested alcohol on this extract, and evaporated the alcoholic extract to dryness. He then digested this mass in ether, and evaporated the ethereal solution; when he obtained a syrupy mass of a light yellow color, which was again dissolved in alcohol. On adding water to this solution, a little resin fell. A peculiar acid united to potassa and lime remains in the solution, which is obtained free, by forming with acetate of lead an insoluble laccate, and decomposing this with the equivalent quantity of sulphuric acid. Laccic acid crystallises; it has a wine-yellow color, a sour taste, and is soluble, as we have seen, in water, alcohol, and ether. It precipitates lead and mercury white; but it does not affect lime, barytes, or silver, in their solutions. It throws down the salts of iron white. With lime, soda, and potassa, it forms deliquescent salts, soluble in alcohol.'

LACE, *n. s. & v. a.* } Fr. *lace, luct*; Ital. }
LACE'MAN, *n. s.* } *laccio*; Teut. *less, lasse*;
LACE'D, *part. adj.* } Span. *lazo*; all, perhaps, }
from Lat. *laqueus*, a noose. A string or cord; twisted or worked threads; a particular kind of net-work¹ formed of cotton, linen, or silk; see below. Prior uses it in a cant way for sugar. As a verb, to fasten or adorn with cord or lace; to embellish: also, to beat (i. e. with a lace or cord): laced 'mutton' is a pun used by Shakespeare (with Lat. *muto*) for a loose woman: a laceman, one who sells lace.

There the fond fly entangled, struggled long,
Himself to free thereout; but all in vain:
For striving more, the more in laces strong

Himself he tied, and wrapt his wings twain
In limy snares, the subtil loops among.

Spenser.

Look, love, what envious streaks
Do lace the severing clouds in yonder East;
Night's candles are burnt out, and jocund day
Stands tiptoe on the misty mountains' tops.

Shakspeare.

O! cut my lace, lest my heart cracking, it

Break too.

Id.

Aye, sir, I, a lost mutton, gave your letter to her
a laced mutton, and she gave me nothing for my labour.

Id.

It is but a night-gown in respect of yours; cloth
of gold and coats, and laced with silver.

Id.

Our English dames are much given to the wearing
of costly laces; and, if they be brought from Italy,
they are in great esteem.

Bacon.

The king had snared been in love's strong lace.

Fairfax.

He wears a stuff, whose thread is coarse and round,
But trimmed with curious lace.

Herbert.

These glittering spoils, now made the victor's gain,
He to his body suits; but suits in vain:

Messapus' helm he finds among the rest,
And laces on, and wears the waving crest.

Dryden.

At this, for new replies he did not stay,

But laced his crested helm, and strode away.

Id.

Go, you, and find me out a man that has no
curiosity at all, or I'll lace your coat for ye.

L'Estrange.

I met with a nonjuror, engaged with a *luceman*,
whether the late French king was most like Augustus
Cæsar, or Nero.

Addison. Spectator.

When Jenny's stays are newly laced,

Fair Alma plays about her waist.

Prior.

If aptly he the sect pursues,

That read and comment upon news;

He takes up their mysterious face,

He drinks his coffee without lace.

Id.

Like Mrs. Primly's great belly; she may lace it
down before, but it burnishes on her hips.

Congreve.

I caused a fomentation to be made, and put on a
laced sock, by which the weak parts were strengthened.

Wiseman.

Then clap four slices of pilaster on't,

That, laced with bits of rustic, makes a front.

Pope.

Doll ne'er was called to cut her lace,

Or throw cold water in her face.

Swift.

But with our damsel this was not the case:

Her dress was many-coloured, finely spun;

Her locks curled negligently round her face,

But through them gold and gems profusely shone;

Her girdle sparkled, and the richest lace

Flowed in her veil, and many a precious stone

Flashed on her little hand; but, what was shocking,

Her small snow feet had slippers, but no stocking.

Byron.

LACE, in the arts, is formed of cotton, thread,
or silk, and is in the manufacture a species of
weaving. See WEAVING.

We may notice in this place, however, the
manner in which it is made by hand in Bedford-
shire, Buckinghamshire, &c. A pillow or cushion
being furnished with a stiff piece of parchment,
having a number of holes pricked in it, through
these holes pins are stuck into the pillow and
the threads wound upon bobbins are woven
round the pins, and twisted round each other so
as to form the required pattern. The process is
tedious, and since the invention of the Notting-

ham machinery confined to a small part of the
country. Still there is this difference between
Nottingham and Buckinghamshire lace. In the
hand-made, or pillow lace, the net or meshes may
be described, by supposing a number of ropes,
each formed of two or more threads twisted
round each other: these are extended parallel;
but, at every two or three spiral turns of these
ropes, the strands or threads composing one rope
are twisted round with those of its neighbour,
and then return to be twisted with its own: and
this reciprocally of the whole number forms a
netting; the figure of the meshes depending
upon the number of turns which are made, be-
fore the twist is changed from one rope to the
next. To form a lace of this description, it is
essential that the ends of each thread be detach-
ed, and capable of being twisted over the adja-
cent threads. This is easily done by the hand
upon the pillow, by twisting the bobbins round
each other; but has difficulties which prevent
its performance by machinery. The Nottingham
lace is a modification of the stitch or loop of
which stockings are made; all the meshes being
formed by a continuance of one thread, which is,
by the machine, formed into loops a whole course
(that is, length of the intended piece of lace) at
once, by pressing it down alternately over and
under between a number of parallel needles; a
second course is then made of similar loops on
the same needles, and the loops of the first are
drawn through those of the second, in such a
manner as to form meshes by retaining the first
loops; the second are then retained by a third
course, and this by a fourth, and so on. The
machine is very nearly like a common stocking-
frame, but provided with an additional apparatus.
It consists of a frame, containing a number of
needles, or points; these are introduced be-
tween the fixed needles of the stocking-frame,
and a certain number (one half, for instance) of
the loops in the thread are taken off the fixed
needles upon these points, which are moved end-
ways, the space of two, three, or more fixed
needles, and put down upon them again. Ano-
ther set of loops is now taken upon the points,
and moved in the opposite direction; by this
means, crossing the loops over each other, and
forming meshes, the figure of which will depend
upon the number of needles it is thus carried
over. But, as this admits of no great variety of
patterns, another machine has been invented,
which is much more extended in its applications.
Like the former, it has the parts of the stocking-
frame, but differently made. The thread is, in
this, rolled upon a cylinder, in the same manner
as the weaver's beam; as many being wound
round it as there are needles in the frame. These
threads pass through eyes in the ends of small
points, called guides, which are opposite the
needles; and these guides are fixed on two bars,
each of which has half the guides fastened in it,
that is, one guide is fast in one bar, and the next
in the other, and so on alternately of the whole.
Each of the guides presents a thread to its
needle, and they are all at once moved by the hand
to twist the threads two or three times round the
needles which are opposite them: the loop is
now made in a manner similar to the other

NATURAL HISTORY.

frame. The next time, the alternate guides are shifted endways, so as to apply themselves to other needles than those they were opposite before. This crosses the thread, so as to make a net: but the quantity which is shifted endways is altered every time, by means of the machinery, so as to move a certain number of needles; which number is altered every time, to produce the pattern. All the parts of this machine, except the guides, are moved by means of treddles, instead of using the hands, as in the common stocking-frame. The net produced by these frames is woven in bands of the width of the intended lace, leaving a wider mesh than the others, to separate the lace into narrow strips. Before cutting up, the lace is spread in a frame, and a common needle with a thick thread is worked in the meshes, to imitate the gimp, or thicker threads of the pattern.

LACE, BLOND, is the finer lace made in the manner we have first described. Its finest specimens, however, have been imported into this country from Flanders.

LACE, GOLD AND SILVER, is similarly made, and until lately the importation of these finer laces was entirely prohibited. The excellent alterations of Mr. Huskisson now, however, only impose a protecting duty on them of thirty to fifty per cent. until October 1828. See SILK MANUFACTURE.

LACEDÆMON, in fabulous history, a son of Jupiter and Taygete, the daughter of Atlas. He married Sparta the daughter of Europa, by whom he had Amyclas and Eurydice the wife of Acrisius. He was the first who introduced the worship of the Graces into Laconia, and built them a temple. From Lacedæmon and his wife the capital of Laconia was called Lacedæmon and Sparta.

LACEDÆMON, in ancient geography, a city of Peloponnesus, called also Sparta; these names differing in this, that the latter was the ancient name of the city, the former of the country, which afterwards came to be applied to the city (Strabo and Stephanus). Homer also makes this distinction; and calls this country holy, because encompassed with mountains. It has also been severally known by the name of Lelegia, from the Leleges, the first inhabitants of the country, or from Lelex, one of their kings; and Oebalia from Oebalus, the sixth king from Eurotas. It was also called Hecatompolis, from 100 cities which the whole province once contained.

The city was the capital of Laconia, situated on the right or west side of the Eurotas: it was less in compass than Athens, however equal, or even superior to it in power. Polybius makes it forty-eight stadia, a circuit much inferior to that of Athens. Lelex is supposed to have been the first king of Lacedæmon. His descendants, thirteen in number, reigned successively after him, till the reign of the sons of Orestes, when the Heraclidæ recovered the Peloponnesus, about eighty years after the Trojan war. Procles and Eurysthenes, the descendants of the Heraclidæ, usurped the crown together; and after them it was decreed that the two families should always sit on the throne together. The monarchical power was abolished, and the race of the Heraclidæ

was extinguished at Sparta, about A. A. C. 219. Lacedæmon in its flourishing state had no walls, the bravery of its citizens serving instead of them (Nepos). At length in Cassander's time, or after, when the city was in the hands of tyrants, distrusting the defence by arms and bravery, a wall was built round it, at first slight, and in a tumultuary or hasty manner; which the tyrant Nabis made very strong (Livy, Justin). Pausanias ascribes the first walls to the times of Demetrius and Pyrrhus, under Nabis. They were pulled down A. A. C. 188, by Philopœmen, who was then at the head of the Achæan league, and Laconia some time after became a Roman province, when reduced by Mummius. See SPARTA.

The site of the town of Lacedæmon has been called by modern travellers Paleo Chori (the Old Town); the modern town MISITRA, which see, is at some distance to the west.

LACEPEDE, B. G. Etienne, the French naturalist, was born at Agen, in 1756, and from his boyhood exhibited a strong attachment to that study in which he afterwards attained such eminence. His friends and instructors, Buffon and Daubenton, obtained for him the correctorship of Natural History in the *Jardin des plantes*. Napoleon conferred advantages and dignities upon him, and made him chancellor of the Legion of Honor. During the hundred days the emperor appointed him general master of the university, but he did not act, having then resolved to abandon politics and embrace science altogether. He published an edition of Buffon's History: his History of Fishes is his most celebrated production; and his civil and military history has appeared since his death, which took place at Epinay, near St. Denis, in the year 1825.

LACERATE, *v. a.* } Fr. *lacerer*; Lat. *la-*
LACERABLE, *adj.* } *cerro*. To tear; rend;
LACERATION, *n. s.* } separate with violence;
LACERATIVE, *adj.* } mark by tearing: lace-
rable is that which may be or is liable to be torn.

LACERNA, a coarse thick garment worn by the Romans over their gowns like a cloak. It was first used in the camp, but afterwards admitted into the city. The emperors wore the lacerna of a purple dye. It was at first very short, but it lengthened after it became common, which was not till the civil wars and the triumvirate. Senators were forbidden to wear it in the city by Valentinian and Theodosius. Martial mentions lacernæ worth 10,000 sesterces. Some found this garment with the penula; but it seems rather to have resembled the chlamys.

LACERTA, in zoology, a genus of amphibia belonging to the order of reptilia, the characters of which are: that the body is naked, with four feet and a tail. The principal species are,

L. alligator, the alligator or American crocodile. So very great is the general resemblance between this animal and the crocodile, that many naturalists have considered it as a mere variety, rather than a distinct species. The count de Cèpede declares, that on examining several specimens of American crocodiles, and collating them with those of the Nile, he could not but consider them as of the same species; and the slight difference observable between them as owing merely to the effect of climate. Both ani-

mals agree in the number of teeth; and the general manners and habits of both are found to be similar in the old and new continents. The more accurate discrimination, however, of Blumenbach, and some others, seems in reality to prove that the American crocodile is specifically distinct from the Nilotic. The leading difference appears to be, that the head of the alligator is smooth on the upper part, and not marked with those very strong rugosities and hard carinated scales which appear on that of the crocodile; the snout is considerably flatter and wider, as well as more rounded at the extremity. The alligator arrives at a size not much inferior to that of the crocodile, specimens having often been seen of eighteen or twenty feet in length.

‘Though the largest and greatest numbers of alligators,’ says Catesby, ‘inhabit the torrid zone, the continent abounds with them ten degrees more north, particularly as far as the river Neus, in North Carolina, in the latitude of about 33°, beyond which I have never heard of any, which latitude nearly answers to the northernmost parts of Africa, where they are likewise found. They frequent not only salt rivers near the sea, but streams of fresh water in the upper parts of the country, and in lakes of salt and fresh water, on the banks of which they lie lurking among reeds, to surprise cattle and other animals. In Jamaica, and many parts of the continent, they are found about twenty feet in length: they cannot be more terrible in their aspect, than they are formidable and mischievous in their natures, sparing neither man nor beast they can surprise, pulling them down under water, that, being dead, they may with greater facility, and without a struggle or resistance devour them. As quadrupeds do not so often come in their way, they almost subsist on fish; and as, by the close connexion of the vertebræ they can neither swim nor run away, but strait forward, and are consequently disabled from turning with that agility requisite to catch their prey by pursuit, therefore they do it by surprise in the water as well as by land.

L. Carolinensis, the green lizard of Carolina, is so denominated from its color. This species is very slender; the tail is near double the length of the body, and the whole length about five inches. It inhabits Carolina; where it is domestic, familiar, and harmless. It sports on tables and windows, and amuses with its agility in catching flies. Cold affects the color; in that uncertain climate, when there is a quick transition in the same day from hot to cold, it changes instantly from the most brilliant green to a dull brown. They are a prey to cats and ravenous birds. They appear chiefly in summer; and at the approach of cold weather retire to their winter recesses, and lie torpid in the hollow crevices of rotten trees. A few warm sun-shiny days often so invigorate them, that they will come out of their holes and appear abroad; when on a sudden the weather, changing to cold, so enfeebles them, that they are unable to return to their retreats, and die of cold.

L. caudiverbera has a depressed pinnatifid tail, and palmated feet. It is larger than the

common green lizard, is found in Peru, and has obtained its name from its beating the ground with its tail.

L. Cayman, or the Antilles crocodile, has been confounded with the alligator and *Gangetica*, but is evidently different from both; and has accordingly been properly distinguished by the abbé Bonaterre in the *Encyclopedie Methodique*. The greatest strength of this animal, according to M. Merian, consists in its teeth, of which there are two rows crossing one another, by means of which it grinds with the greatest ease whatever it seizes upon. The Cayman is so called from some small isles of that name among the Antilles, where these creatures are said to be very numerous. They are of exceeding strength, and equally the dread both of men and animals; for they live on land as well as in the water, and devour every creature they meet with. See **CAYMAN**.

L. chamæleon, the chamæleon, has a crooked cylindrical tail. The head of a large chamæleon is almost two inches long, and thence to the beginning of the tail it is four inches and a half. The tail is five inches long, and the feet two and a half. The thickness of the body is different at different seasons; for sometimes from the back to the belly it is two inches, and sometimes one; for he can blow up and contract himself at pleasure. This swelling and contraction is not only of the back and belly, but also of the legs and tail. The chamæleon will continue blown up for two hours together, and then grow less and less insensibly; for the dilatation is always more quick and visible than the contraction. In this last state he appears extremely lean; the spine of the back is sharp, and all his ribs might be told; the tendons of the arms and legs might also be seen distinctly. The skin is very cold to the touch; and, notwithstanding he seems so lean, there is no feeling the beating of the heart. The surface of the skin is unequal, and has a grain not unlike shagreen, but very soft, because each eminence is as smooth as if it was polished. Some of these are as large as a middling pin's head on the arms, legs, belly, and tail; but on the shoulders and head they are of an oval figure, and a little larger. Those under the throat are ranged in the form of a chaplet, from the lower lip to the breast. Some of the head and back are amassed together in clusters, with spaces between them, on which are almost imperceptible spots of a pale red and yellow color, as well as the ground of the skin itself, which plainly appears between these clusters. This ground changes color when the animal is dead, becoming of a grayish-brown, and the small spots are whitish. The head is like that of a fish, being joined to the breast by a very short neck, covered on each side with cartilaginous membranes resembling gills. There is a crest directly on the top of the head, and two others on each side above the eyes, and between these there are two cavities near the top of the head. The muzzle is blunt, like that of a frog: at the end there is a hole on each side for the nostrils; but there are no ears, nor the sign of any. The jaws are furnished with a bone in the form of teeth, of which he makes but little use, as he lives by swallow-

ing flies and other insects without chewing them; and hence arose the vulgar notion of his living upon air, because he was never seen to eat. The tongue, which Linnæus says resembles an earth-worm, is of considerable length, and is enlarged and somewhat flattened at the end. From this member there continually oozes out a very glutinous liquor, by means of which it catches such insects as come within its reach, and it is surprising to see with what quickness it retracts its tongue the instant it has arrested any prey. The form, structure, and motion of the eyes, have something very peculiar; for they are very large, being almost half an inch in diameter, of a globular figure, and stand out of the head. They have a single eye-lid like a cap, with a small hole in the middle, through which the sight of the eye appears, no bigger than a pin's head, and a shining brown, encircled by a little ring of a gold-color. This eye-lid has a grain like shagreen, as well as the other parts of the skin; and when the rest of the body changes color, and assume spots of different shape, those on the lid always keep the same form, though they are tinged with the same color as the skin. But the most extraordinary thing relating to the eyes is, that this animal often moves one when the other is entirely at rest; nay, sometimes one eye will seem to look directly forward and the other backward, and one will look up to the sky when the other regards the earth. The trunk of the body comprehends the thorax and the belly, but is almost all thorax, with little or no belly. The four feet are all of equal length; but those before are turned backwards, and those behind forwards. There are five toes on each paw, which have a greater resemblance to hands than feet. They are all divided into two, which gives the appearance of two hands to each arm, and two feet to each leg; and though one of these parts has three toes, and the other but two, yet they seem to be all of the same size. These toes lie together under the skin; their shape, however, may be seen through the skin. With these paws the chamæleon can lay hold of the small branches of trees like a parrot. When he is about to perch he parts his toes differently from birds, placing two behind and two before. The claws are little, crooked, very sharp, and of a pale yellow, proceeding but half way out of the skin, while the other half is hid beneath it. His walk is slower than that of a tortoise, and he seems to move along with an affectation of gravity. He seems to seek for a proper place to set his feet upon; and, when he climbs up trees, he does not trust to his feet like a squirrel, but endeavours to find out clefts in the bark, that he may get a surer hold. His tail is like that of a viper when it is puffed up and round; at other times the bones may be seen in the same manner as on the back. He always wraps his tail round the branches of trees, and it serves him instead of a fifth hand. He is a native of Africa and Asia. Wormius believes the change of color to depend upon the feelings of the animal, or upon the different degrees of heat or cold to which it is subjected. It seems similar to blushing, and is probably produced by the greater or less quantity of blood sent into the minute vessels,

assisted also by the distension of their immense lungs, which, being expanded with air, render the animal nearly transparent. Mr. Barrow observes, that 'previously to the chamæleon's assuming a change of color, it makes a long inspiration, the body swelling out to twice its usual size; and, as this inflation subsides, the change of color gradually takes place. The only permanent marks are two small dark lines passing along the sides.' According to D'Olsonville, the blood of the chamæleon is of a violet blue color; the vessels and cutis yellow; the epidermis transparent: hence he conceives, that, in consequence of more or less blood being sent to the external arteries, all the shades of color which the animal presents may be produced.

L. crocodylus, the crocodile, has a compressed jagged tail, five toes on the fore, and four on the hind feet. This is the largest animal of the genus. A young one that was dissected at Siam, an account of which was sent to the Royal Academy at Paris, was eighteen feet and a half long; the tail was no less than five feet and a half, and the head and neck above two and a half. He was four feet nine inches in circumference where thickest. The hinder legs, including the thigh and the paw, were two feet two inches long; the paws from the joint to the extremity of the longest claws, were above nine inches. They were divided into four toes; of which three were armed with large claws, the longest of which was an inch and a half, and seven lines and a half broad at the root. The fourth toe was without a nail, and of a conical figure; but was covered with a thick skin like shagreen leather. These toes were united with membranes like those of ducks, but much thicker. The fore legs had the same parts and conformation as the arms of a man, but were somewhat shorter than those behind. The hands had five fingers, the last two of which had no nails, and were of a conical figure, like the fourth toe on the hind paws. The head was long, and had a little rising at the top; but the rest was flat, especially towards the extremity of the jaws. It was covered with a skin, which adhered firmly to the skull and jaws. The skull was rough and unequal in several places; and about the middle of the forehead there were two bony crests, about two inches high. They were not quite parallel, but separated from each other in proportion as they mounted upwards. The eye was very small in proportion to the rest of the body; and so placed within its orbit, that the outward part, when shut, was only a little above an inch in length, and ran parallel to the opening of the jaws. The nose was placed in the middle of the upper jaw, near an inch from its extremity, and was perfectly round and flat, being two inches in diameter, of a black, soft, spongy substance, like the nose of a dog. The form of the nostrils was somewhat like the Greek Σ ; and there were two caruncles which filled and closed them very exactly, and which opened as often as he breathed through the nose. The jaws seemed to shut one within another by means of several apophyses, which proceeded from above downwards, and from below upwards, there being cavities in the oppo-

site jaw to receive them. They had twenty-seven dog-teeth in the upper jaw, and fifteen in the lower, with several void spaces between them. They were thick at the bottom, and sharp at the point; being all of different sizes, except ten large hooked ones, six of which were in the lower jaw, and four in the upper. The mouth was fifteen inches long, and eight and a half broad where broadest; and the distance of the two jaws, when opened as wide as possible, was fifteen inches and a half. The skull, between the two crests, was proof against a musket ball, which only rendered the part a little white that it struck against. The color of the body was dark brown on the upper part, and whitish citron below, with large spots of both colors on the sides. From the shoulders to the extremity of the tail he was covered with large square scales, disposed like parallel girdles, fifty-two in number; but those near the tail were not so thick as the rest. In the middle of each girdle were four protuberances, which became higher as they approached the end of the tail, and composed four rows; of which the two in the middle were lower than the other two, forming three channels, which grew deeper the nearer they came to the tail, and were confounded with each other about two feet from its extremity. The skin was defended by a sort of armour, which, however, was not proof against a musket-ball. Probably, however, if the ball had struck obliquely against the shell, it would have flown off. The parts of the girdles under the belly were whitish, and made up of scales of divers shapes. They were about one-sixth of an inch thick, and not so hard as those on the back. Some crocodiles have measured forty feet in length. They have no tongue, but in place of it a membrane, attached by its edges to the two sides of the under jaw. The crocodile lays eggs which she leaves to be hatched by the heat of the sun. The Egyptians use the fat against the rheumatism and stiffness of the tendons, esteeming it a powerful external remedy. They say the gall is good for the eyes; they use it as a certain remedy for barrenness in women, taking about six grains internally, and outwardly they apply a pessus made of cotton and the gall of a crocodile. The eyes of the crocodile are the best aphrodisiacs of any known by the Arabs; who prefer them to all confections, and even to ambergris. In the stomach of one of these animals, dissected before the English consul, they found the bones of the legs and arms of a woman, with the rings which they wear in Egypt as ornaments. These animals are seen in some places lying for hours, and even whole days, stretched in the sun, and motionless; so that one not used to them might mistake them for trunks of trees covered with rough and dry bark: but the mistake would soon be fatal: for the seemingly torpid animal, at the near approach of any living creature, instantly darts upon it, and carries it to the bottom. In the times of an inundation they sometimes enter the cottages of the natives, where they seize the first animal they meet with. The crocodile, however, except when pressed with hunger, or with a view of depositing its eggs, seldom leaves the water. Its usual method is to float along

upon the surface, and seize whatever animals come within its reach; but, when this method fails, it then goes close to the bank. There it waits in patient expectation of some land animal that comes to drink; the dog, the bull, the tiger, or man himself. It seizes the victim with a spring, and goes at a bound much faster than such an unwieldy animal could be supposed to do; then, having secured the creature both with teeth and claws, it drags it into the water, instantly sinks with it to the bottom, and in this manner quickly drowns it. Sometimes it happens that the creature wounded by the crocodile makes its escape; in which case the latter pursues it with great celerity, and often takes it a second time. In these depredations, however, this terrible animal often seizes on another as formidable as itself and meets with desperate resistance. Combats often occur between the crocodile and the tiger. All tigers are continually oppressed by a parching thirst, that makes them frequent great rivers, whither they descend to drink. On these occasions they are seized by the crocodile, upon whom they instantly turn with the greatest agility, and force their claws into his eyes, while he plunges with his fierce antagonist into the river. There they continue to struggle, till at last the tiger is drowned. A negro, however, with no other weapon than a knife in his right hand, and his left arm wrapped round with a cow-hide, will often venture boldly to attack this animal in its own element. As soon as he approaches the crocodile, he presents his left arm, which the animal swallows, but as it sticks in his throat, the negro has time to give it several stabs below the chin, where it is easily vulnerable; and the water also getting in it at the mouth, which is held involuntarily open, the creature soon expires. The natives of Siani are particularly fond of the capture of crocodiles, which they take by throwing three or four strong nets across a river, at proper distances; so that if the animal breaks through the first it may be caught by one of the rest. When first taken it employs the tail, which is the grand instrument of strength, with great force; but, after many unsuccessful struggles, the animal's strength is at last exhausted.

M. Denon, speaking of the French army in Egypt, says that the soldiers and himself bathed in the Nile, and yet they were never once attacked by them, nor did they ever meet with a single crocodile at a distance from the water. Hence he inferred that they find in the river a sufficient quantity of easily procured food, which they digest slowly, being, like the lizard and serpent, cold blooded, and of an inactive stomach. 'Besides,' says the traveller, 'having in the Egyptian part of the Nile no enemies but each other and man, they would be truly formidable, if, covered as they are with an almost impenetrable defensive armour, they were skilful and alert in making use of those means which nature has given them for attack.' He farther adds, that they saw three crocodiles, one of which was nearly twenty-five feet in length; they were all asleep, so that they could approach them within about twenty yards, and had an opportunity of distinguishing them very accurately. He says, that in that position they resembled dismounted

cannon: he fired on one, the ball struck him and rebounded from his scales. He made a leap of ten feet, and dived into the river.

All crocodiles breed near fresh waters, though they are sometimes found in the sea. They produce their young by eggs, and for this purpose the female chooses a place by the side of the river, or some fresh water lake, to deposit her brood in. She always pitches upon an extensive sandy shore, where she may dig a hole without danger of detection from the ground being fresh turned up. The shore must be gentle and shelving to the water, for the greater convenience of her going and returning; and a convenient place must be found near the edge of the stream, that the young may have a shorter way to go. When all these requisites are adjusted, the animal is seen cautiously stealing up on shore to deposit her burden. The presence of a man, a beast, or even a bird, is sufficient to deter her at that time; and, if she perceives any creature looking on, she infallibly returns. If, however, nothing appears, she then goes to work, scratching up the sand with her fore-paws, and making a hole pretty deep in the shore. There she deposits from eighty to 100 eggs, of the size and form of a tennis-ball, covered with a tough white skin like parchment. She takes above an hour to perform this task; and then, covering up the place so artfully that it can scarcely be perceived, she goes back to return again the next day. Upon her return, with the same precaution as before, she lays about the same number of eggs; and the day following also a like number. Thus having deposited her whole quantity, and having covered them closely up in the sand, they are soon vivified by the heat of the sun; and at the end of thirty days the young ones begin to break open the shell. At this time the female is instinctively taught that her young ones want relief; and she goes upon land to scratch away the sand and set them free. Her brood quickly avail themselves of their liberty; a part run unguided to the water; another part ascend the back of the female, and are carried thither in greater safety. But the moment they arrive at the water, when the female has introduced her young to their natural element, the male becomes their formidable enemy, and devours as many of them as he can. The whole brood scatters into different parts at the bottom; by far the greatest number are destroyed, and the rest find safety in their agility or minuteness. The eggs of this animal are not only a delicious feast to the savage, but are eagerly sought after by every beast and bird of prey. The ichneumon was erected into a deity among the ancients, for its success in destroying the eggs of these monsters: at present the gallinazo, a species of vulture, is their most prevailing enemy. All along the banks of great rivers, for thousands of miles, the crocodile propagates in such numbers as would soon over-run the earth, were not the vulture appointed by providence to counteract its fecundity. Among the various animals that were produced to fight in the amphitheatre at Rome, the combat of the crocodile was one. Marcus Scaurus produced them living in his unrivalled exhibitions.

One of the greatest curiosities in the fossile world, which the late ages have produced, is the skeleton of a large crocodile, almost entire, found at a great depth under ground, bedded in stone. This was in the possession of Linkius, who wrote many pieces in natural history, and particularly an accurate description of this curious fossile. It was found in the side of a large mountain, in the midland part of Germany, and in a stratum of a black fossile stone, somewhat like our common slate, but of a coarser texture, the same with that in which the fossile fish of many parts of the world are found. This skeleton had the back and ribs very plain, and was of a much deeper black than the rest of the stone, as is also the case in the fossile fishes, which are preserved in this manner. The part of the stone where the head lay was not found, this being broken off just at the shoulders, but that irregularly, so that, in one place, a part of the back of the head was visible in its natural form. The two shoulder bones were very fair, and three of the feet were well preserved; the legs were of their natural shape and size, and the feet preserved, even to the extremities of the five toes of each.

L. Gangetica, or Gangetic crocodile. This animal has long, roundish, or sub-cylindric jaws: its tail on the upper side has two crests running into one. This species is found in the Ganges, where it is nearly equal in size to the common crocodile. In this the structure of the snout is very remarkable, it being nearly three times as long as the head. The eyes are extremely prominent, and it is said they are so constructed, that they may be raised above the water, when the rest of the body is under the surface, by which the animal is enabled to see its prey either on the surface of the water, or on the banks of rivers. In the general form and color of the body and limbs, this species resembles the common crocodile. In the British Museum is a specimen of this creature, measuring eighteen feet in length.

L. gecko has a cylindrical tail, concave ears, and a warty body. It is the Indian salamander of Bontius. 'This animal is very frequent in Cairo,' says Hasselquist, 'both in the houses and without them. Its poison is very singular, as it exhales from the lobuli of the toes. The animal seeks all places and things impregnated with sea-salt, and, passing over them several times, leaves this very noxious poison behind. In July, 1750, I saw two women and a girl at Cairo at the point of death, from eating cheese new salted, bought in the market, and on which this animal had dropt its poison. Once, at Cairo, I had an opportunity of observing how acrid the exhalations of the toes of this animal are, as it ran over the hand of a man who endeavoured to catch it; there immediately rose little pustules over all those parts the animal had touched; these were red, inflamed, and smarted a little, greatly resembling those occasioned by the stinging of nettles. It emits an odd sound, especially in the night, from its throat, not unlike that of a frog.'

L. iguana, or guana, has the top of the back and tail, and the gullet, strongly serrated, and is

sometimes found five feet long. It has small teeth, and bites hard. It inhabits the rocks of the Bahama Islands, and turks in cliffs or hollow trees. It feeds entirely on vegetables; and the fat of the abdomen assumes the color of that which it has last eaten. It is slow of motion, and has a most disgusting look; yet it is esteemed a most delicate and wholesome food. It is not amphibious, yet on necessity will continue long under water; it swims by means of the tail, keeping its legs close to the body. Guanars are the support of the natives of the Bahama Islands, who go in their sloops from rock to rock in search of them. They are taken with dogs trained for the purpose; and, as soon as caught, their mouths are sewed up, to prevent them from biting. Some are carried alive for sale to Carolina; others salted and barrelled for home consumption.

L. palustris has a lanceolated tail, and four toes on the fore feet; and inhabits the stagnant waters of Europe. It has a slow and crawling pace. Pennant more than once found, under stones and old logs, some very minute lizards that had much the appearance of this kind: they were perfectly formed, and had not the least vestiges of fins; which circumstance, joined to their being found in a dry place remote from water, seems to indicate, that they had never been inhabitants of that element, as many of our lizards are in their first state. At that period they have a fin above and below their tail; that on the upper part extends along the back as far as the head; but both drop off as soon as the animal takes to the land, being then no longer of any use. Ellis has remarked certain pinnated fins at the gills of one very common in most of our stagnated waters, and which is frequently observed to take a bait like a fish.

L. salamandra, the salamander, has a short cylindrical tail, four toes on the fore feet, and a naked porous body. This animal has been said, even in the Philosophical Transactions, to live in the fire: but this is a mistake. It is found in the southern countries of Europe. The following account of this species is extracted from the count de la Ceppe's Natural History of Serpents. Whilst the hardest bodies cannot resist the violence of fire, the world have endeavoured to make us believe that a small lizard can not only withstand the flames, but even extinguish them. As agreeable fables readily gain belief, every one has been eager to adopt that of a small animal so highly privileged, so superior to the most powerful agent in nature, and which could furnish so many objects of comparison to poetry, so many emblems of love, and so many brilliant devices to valor. The ancients believed this property of the salamander; and wishing that its origin might be as surprising as its power, and, desirous of realising the fictions of the poets, they pretended that it owes its existence to the purest of elements, which cannot consume it, and called it the daughter of fire, giving it however a body of ice. The moderns have followed the ridiculous tales of the ancients; and some have gone so far as to think that the most violent fire could be extinguished by the land salamander. Quacks sold this small

lizard, affirming that, when thrown into the greatest conflagration, it would check its progress. It was necessary that philosophers should prove by facts what reason might have demonstrated; but it was not till after the light of science was diffused abroad, that the world gave over believing in this wonderful property of the salamander. This lizard, which is found in so many countries of the ancient world, and even in very high latitudes, has been very little noticed, because it is seldom seen out of its hole, and because for a long time it has inspired much terror. Even Aristotle speaks of it as of an animal with which he was scarcely acquainted. One of the largest of this species, preserved in the late French king's cabinet, is seven inches five lines in length, from the end of the muzzle to the root of the tail, which is three inches eight lines. The skin does not appear to be covered with scales, but it is furnished with a number of excrescences like teats, containing many holes, several of which may be very plainly distinguished by the naked eye, and through which a kind of milk oozes, that generally spreads itself in such a manner as to form a transparent coat of varnish above the skin of this oviparous quadruped, naturally dry. The eyes are placed in the upper part of the head, which is a little flattened; their orbit projects into the interior part of the palate, and is there almost surrounded by a row of very small teeth, like those in the jaw bones: these teeth establish a near relation between lizards and fishes; many species of which have also several teeth placed in the bottom of the mouth. The color of this species is very dark: upon the belly it has a bluish cast, intermixed with pretty large irregular yellow spots, which extend over the whole body, and even to the feet and eye-lid; some of these spots are besprinkled with small black specks; and those which are upon the back often touch without interruption, and form two long yellow bands. The color must, however, be various; and some salamanders are found in the marshy forests of Germany, which are quite black above, and yellow below. To this variety we must refer the black salamander, found by Mr. Laurenti in the Alps, which he considered as a distinct species. The salamander has no ribs; neither have frogs, to which it has a great resemblance in the general form of the anterior part of its body. When touched, it suddenly covers itself with that kind of coat of which we have spoken, and it can also very rapidly change its skin from a state of humidity to a state of dryness. The milk which issues from the small holes in its surface is very acrid; when put upon the tongue, one feels as it were a kind of scar at the part which it touched. This milk, which is considered as an excellent substance for taking off hair, has some resemblance to that which distils from the esula and euphorbium. When the salamander is crushed, or when it is only pressed, it exhales a peculiarly bad smell. Salamanders are fond of cold damp places, thick shades, tufted woods, high mountains, and the banks of streams that run through meadows: they sometimes retire in great numbers to hollow trees, hedges, and below old rotten stumps; and

they pass the winter, in places of high latitude, in a kind of burrows, where they are found joined and twisted together. The salamander being destitute of claws, having only four toes on each of the fore feet, and no advantage of conformation making up its deficiencies, its manner of living must be very different from that of other lizards. It walks very slowly; far from being able to climb trees with rapidity, it often appears to drag itself with great difficulty along the surface of the earth. It seldom goes far from its place of shelter; it passes its life under the earth, often at the bottom of old walls during summer; it dreads the heat of the sun, which would dry it; and it is only when rain is about to fall that it comes forth from its asylum, to bathe itself, and to imbibe an element to which it is analogous. Perhaps it finds then with greatest facility those insects upon which it feeds. It lives upon flies, beetles, snails, and earth worms; when it reposes, it rolls up its body in several folds like serpents. It can remain some time in the water without danger, and it casts a very thin pellicle of a greenish gray color. Salamanders have even been kept six months in water without food; care only being taken to change the water often. Every time a salamander is plunged into the water, it attempts to raise its nostrils above the surface as if to seek for air, which is a new proof of the need that all oviparous quadrupeds have to breathe during the time they are not in a state of torpor. The salamander has apparently no ears, and in this it resembles serpents. It has even been said that it does not hear, and on this account it has got the name of sord in some provinces of France. This is very probable, as it has never been heard to utter any cry, and silence in general is coupled with deafness. Having then perhaps one sense less than other animals, and being deprived of the faculty of communicating its sensations to those of the same species, even by imperfect sounds, it must be reduced to a much inferior degree of instinct; it is therefore very stupid; and not bold, as has been reported: it does not brave danger, but it does not perceive it. Whatever gestures one makes to frighten it, it always advances without turning aside; however, as no animal is deprived of that sensation necessary for its preservation, it suddenly compresses its skin when tormented, and spurts forth upon those who attack it that corrosive milk which is under it. If beaten, it begins to rattle its tail; afterwards it becomes motionless, as if stunned by a kind of paralytic stroke; for we must not, with some naturalists, ascribe to an animal so devoid of instinct, so much art and cunning as to counterfeit death. In short, it is difficult to kill it; but when dipped in vinegar, or surrounded with salt reduced to powder, it expires in convulsions, as is the case with several other lizards and worms. The ancients, and even Pliny have affirmed, that the poison of the salamander is the most dangerous of all, and that it might even cause the destruction of whole nations. The moderns also for a long time believed the salamander to be very poisonous; but they have at length had recourse to observation, by which they ought to have be-

gun. The famous Bacon wished naturalists would endeavour to ascertain the truth respecting the poison of the salamander. Gesner proved by experiment, that it did not bite, whatever means were used to irritate it; and Wurf-bainus showed that it might safely be touched, and that one might without danger drink the water of those wells which it inhabited. M. de Maupertuis studied also the nature of this lizard. In making researches to discover what might be its pretended poison, he demonstrated experimentally, that fire acts upon the salamander in the same manner as upon all other animals. He remarked, that it was scarcely upon the fire, when it appeared to be covered with the drops of its milk, which, rarefied by the heat, issued through all the pores of the skin, but in greater quantity from the head and dugs, and that it immediately became hard. It is needless to say, that this milk is not sufficiently abundant to extinguish even the smallest fire. M. de Maupertuis, in the course of his experiments, in vain irritated several salamanders; none of them ever opened their mouths; he was obliged to open them by force. As the teeth of this lizard are very small, it was very difficult to find an animal with a skin sufficiently fine to be penetrated by them: he tried without success to force them into the flesh of a chicken stripped of its feathers; he in vain pressed them against the skin: they were displaced, but they could not enter. He, however, made a salamander bite the thigh of a chicken, after he had taken off a small part of the skin. He made salamanders newly caught bite also the tongue and lips of a dog, as well as the tongue of a turkey; but none of these animals received the least injury. M. de Maupertuis afterwards made a dog and a turkey swallow salamanders whole, or cut into pieces; and yet neither of them appeared to be sensible of the least uneasiness.—Mr. Laurenti since made experiments with the same view: he forced gray lizards to swallow the milk proceeding from the salamander, and they died very suddenly. The milk, therefore, of the salamander, taken internally, may hurt, and even be fatal to certain animals, especially those which are small; but it does not appear to be hurtful to large animals. It was long believed that the salamander was of one sex; and that each individual had the power of engendering its like, as several species of worms. This is not the most absurd fable which has been imagined with respect to the salamander; but, in the manner in which they come into the world is not so marvellous as has been written, it is remarkable in this, that it differs from that in which most other lizards are brought forth, as it is analogous to that in which the chalcide and the seps, as well as vipers and several kinds of serpents, are produced. On this account the salamander merits the attention of naturalists much more than on account of the false and brilliant reputation it has so long enjoyed. M. de Maupertuis, having opened some salamanders, found eggs in them, and at the same time some young perfectly formed; the eggs were divided into two long bunches like grapes, and the young were enclosed in two transparent bags; they were equally well formed as the old

ones, and much more active. The salamander, therefore, brings forth young from an egg hatched within its belly, as the viper; and her fecundity is very great; naturalists have long said that she has forty or fifty at once; and M. de Maupertuis found forty-two young ones in the body of a female salamander, and fifty-four in another. The young salamanders are generally black, almost without spots; and this color they preserve sometimes during their whole lives in certain countries, where they have been taken for a distinct species. Mr. Thunberg has given, in the Memoirs of the Academy of Sweden, the description of a lizard, which he calls the Japanese lizard, and which appears not to differ from our salamander but in the arrangement of its colors. This animal is almost black, with several whitish and irregular spots, both on the upper part of the body and below the paws; on the back there is a stripe of dirty white, which becomes narrow to the point of the tail. This whitish stripe is interspersed with very small specks, which form the distinguishing characteristic of our land salamander. We, therefore, may consider this Japanese lizard as a variety of our land salamander, modified a little by the climate of Japan. It is found in Nippon, the largest island of that empire, inhabiting mountains and rocky places.

LACERTA, the lizard, in astronomy, a constellation of the northern hemisphere. See ASTRONOMY.

LACHES (from Fr. *lascher*, to slacken, or *lasche*, idle), in English law, signifies slackness or negligence, as it appears, in Littleton, where laches of entry is a neglect of the heir to enter. It seems to be an old English word for lack.

LACHESIS, in mythology (from *λαχαια*, to measure out by lot), one of the Fates. She presided over futurity, and was represented as spinning the thread of life; or, according to others, holding the spindle. She is painted covered with a garment variegated with stars, and holding spindles in her hand.

LACHISH, in ancient geography, a city south of the tribe of Judah. Eusebius and St. Jerome tell us that, in their time, there was a village called Lachish, seven miles south of Eleutheropolis. Sennacherib besieged Lachish, but did not take it. Thence he sent Rabshakeh against Jerusalem. Here king Amaziah was slain by his rebel subjects.

LACHNEA, in botany, a genus of the monogynia order and octandria class of plants; natural order thirty-first, *repiculæ*: CAL. none: COR. quadrifid, with the limb unequal: SEED one, a little resembling a berry. Species five, all Cape plants.

LACHRYMAL, *adj.* } Fr. *lachrymal*; Lat. }
 LACHRYMARY, *adj.* } *lachryma*. Producing }
 LACHRYMATION, *n. s.* } or containing tears: }
 LACHRYMATORY. } the act of weeping. }
 For lachrymatory, see below.

It is of such an exquisite sense, that, upon any touch, the tears might be squeezed from the *lachrymal* glands, to wash and clean it,

Cheyne's Philosophical Principles.

How many dresses are there for each particular

deity! what a variety of shapes in the ancient urns, lamps, and *lachrymary* vessels! Addison.

LACHRYMATORIES, in antiquity, small glass or earthen phials, with a long neck, found in ancient sepulchres. Many antiquaries have supposed that these vessels served to collect the tears of the weeping friends, or of persons hired for that purpose. This belief was grounded on the appearance of the opening of those phials, which is generally furnished with a round concave part well adapted for embracing the convexity of the eye-ball. On some lachrymatories are even found impressions of an eye, and sometimes of a pair of eyes. But here, as in many other cases, the eye appears to be merely emblematical:—The opinion of tears being preserved in those vessels is indeed unsupported by any ancient custom with which we are acquainted, or by any well interpreted passage in ancient authors. It was first broached by Chiflet; it soon spread over Europe, and was, in spite of its improbability, adopted and supported by Kirchman, Kipping, and many other antiquaries. At last it was combated by Schoepflin and Paciaudi; at present it appears to be agreed that the lachrymatories never contained any thing but balms destined to moisten the funeral pile or the ashes of the dead. There is in the Capitol a bas relief which is much in favor of this idea: on this marble, which represents the funeral rites at the death of Meleager, a woman approaches the pile, holding in one hand a large-bellied vessel, and in the other a long slender phial with elongated neck and bottom, and in every respect similar to several earthen lachrymatories preserved in collections. This woman is in the act of pouring out of the large into the small vessel what may be supposed to be balms or odoriferous oil for the purpose of perfuming the funeral pile of Meleager. Many specimens of them are preserved in the cabinets of the curious, particularly in the British Museum.

LACHSA, or Hajar, a province of Arabia Felix, bounded on the north by Arabia Deserta, and extending along the whole south-west coast of the Persian Gulf. Its camels and asses are much valued; and some thousands annually sold into Syria. It has also a pearl-fishery and some foreign trade. The interior is fertile in rice, dates, and cotton, where it is capable of cultivation: but a large portion is sand.

The sheik, formerly subject to Turkey, is independent and very powerful. The piracies committed on this coast some years since induced the British government (in 1809) to fit out an expedition against them from Bombay. The principal port (Ras-el-khima) was taken on this occasion by assault, and seventy vessels burnt.

LACINIUM, in ancient geography, a promontory of Bruttii, in Italy, the southern boundary of the Sinus Tarentinus and the Adriatic; all to the south of it being deemed the Ionian Sea. It was famous for a rich temple to Juno Lacinia, with a pillar of solid gold standing in it; which Hannibal intending to carry off was, according to Cicero, dissuaded by a dream. It is now called Capo delle Colonne, from the columns of Juno's temple still standing on the north-east coast of Calabria Ultra.

LACK, *v. a., v. n. & n. s.*
LACK'BRAIN, *n. s.*
LACK'LINEN, *adj.*
LACK'LOSTRE.

Saxon *lecan*, to
lessen; Goth. and
Swed. *lacka*; Belg.
luacken. To want;

be in need: want; need; failure: lackbrain, and lacklinen, he who is in need of these useful articles: lacklustre, wanting brightness.

Peradventure there shall *lack* five of the fifty righteous; wilt thou destroy all the city for *lack* of five?
Genesis viii. 28.

A land wherein thou shalt eat bread without scarceness; thou shalt not *lack* any thing in it.

There was nothing *lacking* to them: David recovered all.
1 Sam. xxx. 19.

That which was *lacking* on your part, they have supplied.
1 Cor. xvi. 17.

The lions do *lack* and suffer hunger.

Common Prayer.

No saphire of Inde, nor rube riche of price,
There *lacked* then, nor emeraude so Greene

Balis Turkis, ne thing to my devise
That may the castel makin to shene. *Chaucer.*

Wherefore cease of such cruelty,
And take me wholly in your grace,
Which *lacketh* will to change his place.

Wyatt.

Every good and holy desire, though it *lack* the form, hath notwithstanding in itself the substance, and with him the force of prayer who regardeth the very moanings, groans, and sighs of the heart.

Hooker.

He was not able to keep that place three days, for *lack* of victuals.

Kiviles.

Many that are not mad
Have sure more *lack* of reason.

Shakspeare.

What a *lackbrain* is this! Our plot is as good a plot as ever was laid.

Id. Henry IV.

You poor, base, rascally, cheating, *lacklinen* mate; away, you mouldy rogue, away.

Id.

And then he drew a dial from his poke,
And, looking on it with *lacklustre* eye,
Says very wisely, it is ten o'clock.

Shakspeare.

Intreat they may; authority they *lack*.

Daniel.

The trenchant blade, Toledo trusty,

For want of fighting was grown rusty,

And eat into itself for *lack*

Of somebody to hew and hack. *Hudibras.*

And once so near me he alit

I could have smote, but *lacked* the strength.

Byron.

A LACK OF RUPEES is 100,000 rupees; which, supposing them siccas, or standard, at 2s. 6d. each, amount to £12,500 sterling. See RUPEE.

LACKER, or LAC'QUER, *n. s. & v. a.* From LAC, which see. A kind of varnish: to varnish or cover with lacquer.

What shook the stage, and made the people stare?
Cato's long wig, flowered gown, and *lackered* chair.

Pope.

In forming a true judgment of yourself then, you must entirely set aside the consideration of your estate and family,—your wit, beauty, genius, health, &c., which are all but the appendages or trappings of a man: a smooth and shining varnish, which may *lacker* over the basest metal. *Mason.*

Where it is desired to have the *lacquer* warmer or redder than this composition, the proportion of *annotto* must be increased. *Imison's Elements.*

LACKERS, or LACQUEES, are varnishes applied upon tin, brass, and other metals, to preserve them from tarnishing, and to improve their color. The basis of lackers is a solution of the resinous substance called seed-lac in spirit of wine. See LAC. The spirit ought to be very much dephlegmated, to dissolve much of the lac. For this purpose some authors direct dry potash to be thrown into the spirit. This alkali attracts the water, with which it forms a liquid that subsides distinctly from the spirit at the bottom of the vessel. From this liquid the spirit may be separated by decantation. The spirit is thus greatly dephlegmated, but becomes impregnated with part of the alkali, which depraves its color, and communicates a property to the lacker of imbibing moisture from the air. These inconveniences may be prevented by distilling the spirit; or, if the artist has not an opportunity of performing that process, he may cleanse the spirit in a great measure from the alkali by adding to it some calcined alum; the acid of which, uniting with the alkali remaining in the spirit, forms with it a vitriolated tartar, which, not being soluble in spirit of wine, falls to the bottom, together with the earth of the decomposed alum. To a pint of the dephlegmated and purified spirit about three ounces of powdered shell-lac are to be added; and the mixture to be digested during the same day with a moderate heat. The liquor ought then to be poured off, strained, and cleared by settling. This clear liquor is now fit to receive the required color from certain resinous coloring substances, the principal of which are gamboge and annotto; the former of which gives a yellow, and the latter an orange color. To give a golden color, two parts of gamboge are added to one of annotto; but these coloring substances may be separately dissolved in the tincture of lac, and the color required may be adjusted by mixing the two solutions in different proportions. When silver leaf or tin is to be lackered, a larger quantity of the coloring materials is requisite than when the lacker is intended to be laid on brass.

LAC'KEY, *n. s., v. a. & v. n.* Goth. *lacka*, to hire; Dan. and Swed. *lacher*; Fr. *laquais*. A servant; a footboy or man: to attend upon in service, or personally; to act as a lackey or footman.

Oft have I servants seen on horses ride,
The free and noble *lacquey* by their side. *Sandys.*

They would shame to make me

Wait else at door; a fellow counsellor,

'Mong boys and grooms, and *lackeys*!

Shakspeare. Henry VIII.

This common body,

Like to a vagabond flag upon the stream,
Goes to, and back, *lacqueying* the varying tide,
To rot itself with motion.

Id. Antony and Cleopatra.

So dear to heaven is saintly chastity,

That, when a soul is found sincerely so,

A thousand liveried angels *lackey* her,

Driving far off each thing of sin and guilt.

Milton

Though his youthful blood be fired with wine,

He's cautious to avoid the coach and six,

And on the *lackeys* will no quarrel fix.

Dryden's Juvenal

Our Italian translator of the *Æneis* is a foot poet; he *lackeys* by the side of Virgil, but never mounts behind him.

Dryden.
Lacqueys were never so saucy and pragmatical as they are now-a-days.

Addison. Spectator.
Words are but *lackeys* to sense, and will dance attendance without wages or compulsion.

Swift.
LACOMBE (James), a French historian born in Paris, in 1724. He published several useful abridgments of histories; but his best work is *Histoire de Christine Reine de Suede*: 12mo. 1762.

LACOMBE DE PREZEL (Honorius), brother to James, was born in Paris in 1725. He published, 1. *Dictionnaire du Citoyen*, 2 vols. 8vo. 1761: 2. *Dictionnaire de Jurisprudence*, 3 vols. 8vo. 1763: 3. *Les Pensees de Pope*, avec sa vie, 12mo. 1766: 4. *Dictionnaire de Portraits et d'Anecdotes des Hommes Celebres*, 2 vols. 8vo.

LACONIA, or **LACONICA**, a country in the south of Peloponnesus, having Argos and Arcadia on the north, Messenia on the west, the Mediterranean on the south, and the bay of Argos on the east. Its extent from north to south was about fifty miles. It was watered by the Eurotas. The capital was called Sparta, or Lacedæmon. See **LACEDÆMON** and **SPARTA**. The brevity with which the Laconians always expressed themselves became proverbial.

LACONIC, or **LACONICK**, *adj.* } Fr. *laconique*; Lat *laconicus*; Gr. *λακωνικος*, a short pithy speech,

LACONISM, *n. s.* } *μῆκος*, a short pithy speech,
LACONICALLY, *adv.* } after the manner of the Lacedæmonians. Short; brief; sententious: laconism, a short concise speech or style of speaking or writing.

Alexander Nequam, a man of great learning, and desirous to enter into religion there, writ to the abbot *laconically*.

Camden's Remains.
As the language of the face is universal, so it is very comprehensive: no *laconism* can reach it. It is the short hand of the mind, and crowds a great deal in a little room.

Collier of the Aspect.
I grow *laconick* even beyond laconicism; for sometimes I return only yes, or no, to questionary or petitionary epistles of half a yard long.

Pope to Swift.
LACTANTIUS FIRMIANUS (Lucius Cœlius), a celebrated author in the beginning of the fourth century. According to Baronius, he was an African; but others say he was born at Fermo in Ancona, whence he was called Firmianus. He studied rhetoric under Arnobius; and was afterwards a professor of that science in Africa and Nicomedia, where he was so admired that the emperor Constantine appointed him preceptor to his son Crispus Cæsar. His works are written in elegant Latin. The principal are, 1. *De irâ Divinâ*. 2. *De Operibus Dei*, in which he treats of creation and providence. 3. *Divine Institutions*, in seven books. This is his principal work, in which he defends the truth of Christianity, refutes the objections that had been raised against it, and with great strength attacks the illusions of paganism. His style is pure, clear, and natural, and his expressions noble and elegant, on which account he has been called the Cicero of the Christians. There is also attributed to him a treatise *De Morte Persecuto-*

rum; but several critics doubt its being written by Lactantius. The best edition of his works is that of Paris in 1748, 2 vols. 4to.

LACTARY, *adj. & n. s.* } Latin *lactareus*, relating to milk; **LACTATION**, } *lactarium*, a milk house or place. **LACTEAL**, *adj. & n. s.* } **LACTEUS**, *adj.* } Milky; juicy: **LACTESCENCE**, *n. s.* } **LACTESCENT**, *adj.* } **LACTIFEROUS**, *adj.* } or dairy: *lactæus*, a vessel containing or conveying chyle: *lacteous*, milky or conveying chyle: *lactescence*, tendency to milkiness, in appearance or reality: *lactescens*, producing milk or milky juice: *lactiferous*, producing or conveying milk.

From *lactary*, or milky plants, which have a white and *lacteous* juice dispersed through every part, there arise flowers blue and yellow.

Brown's Vulgar Errors.
Though we leave out the *lacteous* circle, yet are there more by four than Philo mentions.

Id.
This *lactescence* does commonly ensue, when wine, being impregnated with gums, or other vegetable concretions that abound with sulphureous corpuscles, fair water is suddenly poured upon the solution.

Boyle on Colours.
As the food passes, the chyle, which is the nutritive part, is separated from the excrementitious by the *lactæal* veins; and from thence conveyed into the blood.

Locke.
He makes the breasts to be nothing but glandules, made up of an infinite number of little knots, each whereof hath its excretory vessel, or *lactiferous* duct.

Ray on the Creation.
The mouths of the *lactæals* may permit aliment, acrimonious or not sufficiently attenuated, to enter in people of lax constitutions, whereas their sphincters will shut against them in such as have strong fibres.

Arbuthnot.
Amongst the pot-herbs are some *lactescens* plants, as lettuce and endive, which contain a wholesome juice.

Id.
The lungs are suitable for respiration, and the *lacteous* vessels for the reception of the chyle.

Bentley.

LACTEALS. See **ANATOMY**.

LACTIC ACID, in chemistry (*acidum lacticum*), from Lat. *lac*, milk. By evaporating sour whey to one-eighth, filtering, precipitating with lime-water, and separating the lime by oxalic acid, Scheele obtained an aqueous solution of what he supposed to be a peculiar acid, which has accordingly been termed the lactic. To procure it separate, he evaporated the solution to the consistence of honey, poured on it alcohol, filtered this solution, and evaporated the alcohol. The residuum was an acid of a yellow color, incapable of being crystallised, attracting the humidity of the air, and forming deliquescent salts with the earths and alkalis.

Bouillon Lagrange afterward examined it more narrowly; and from a series of experiments concluded, that it consisted of acetic acid, muriate of potassa, a small portion of iron probably dissolved in the acetic acid, and an animal matter. This judgment of Lagrange was afterwards supported by the opinions of Fourcroy and Vauquelin. But Berzelius has since investigated its nature very fully, and has obtained, by means of long and repeated series of different experiments, a complete conviction that the lactic acid is a peculiar

acid, very distinct from all others. It has, when purified, a brown-yellow color, and a sharp sour taste, which is much weakened by diluting it with water. It is without smell in the cold, but emits, when heated, a sharp sour smell, not unlike that of sublimed oxalic acid. It cannot be made to crystallise, and does not exhibit the slightest appearance of a saline substance, but dries into a thick and smooth varnish, which slowly attracts moisture from the air. It is very easily soluble in alcohol. Heated in a gold spoon, over the flame of a candle, it first boils, and then its pungent acid smell becomes very manifest, but extremely distinct from that of the acetic acid; afterwards it is charred, and has an empyreumatic, but by no means an animal smell. A porous charcoal is left behind, which does not readily burn to ashes. When distilled, it gives an empyreumatic oil, water, empyreumatic vinegar, carbonic acid, and inflammable gases. With alkalies, earths, and metallic oxides, it affords peculiar salts: and these are distinguished by being soluble in alcohol, and in general by not having the least disposition to crystallise, but drying into a mass-like gum, which slowly becomes moist in the air.

LACTIFEROUS, and **LACTESCENT**, are appellations given to plants abounding with a milky juice, as the sow-thistle, &c. It is applied to all those plants which abound with a thick-colored juice, without regarding whether it is white or not. Most lactiferous plants are poisonous, except those with compound flowers, which are generally innocent. Of the poisonous lactescent plants, the most remarkable are sumach, agaric, maple, burning thorny plant, cassada, celandine, puccoon, prickly poppy, and the plants of the natural order contortæ, as swallow-wort, apocynum, cynanchum, and cerbera. Among the lactescent plants with compound flowers that are innocent, may be mentioned dandelion, pieris, hyoseris, wild lettuce, gum-succory, hawk-weed, bastard hawk-weed, hypochaeris, goat's beard, and most species of lettuce.

LACTUCA, in botany, a genus of the polygamia æqualis order, and syngenesia class of plants: natural order forty-ninth, compositæ: receptacle naked: cal. imbricated, cylindrical, with a membranaceous margin: the pappus simple, stipated, or stalked. There are several species, most of which are of no use, and never cultivated but in botanic gardens for variety. Those commonly cultivated in the kitchen-garden for use, are, 1. The common or garden lettuce. 2. Cabbage lettuce. 3. Silesia lettuce. 4. Dutch brown lettuce. 5. Aleppo lettuce. 6. Imperial lettuce. 7. Green capuchin lettuce. 8. Versailles or upright white cos lettuce. 9. Black cos. 10. Red cos. 11. Red capuchin lettuce. 12. Roman lettuce. 13. Prince lettuce. 14. Royal lettuce. 15. Egyptian cos lettuce. The first sort is very common in gardens, and is sown for cutting very young, to mix with other salads in spring. The second is the same, only improved by culture. It may be sown in all seasons, but in the hot months requires shady borders. To have it in continuation, the first crop should be sown in February in an open situation; the others at three weeks distance; the later ones under covert, but not

under the drippings of trees. The Silesia, imperial, royal, black, white, and upright cos lettuces, may be first sown in the end of February or beginning of March, on a warm light soil, and in an open situation; when they come up they must be thinned to fifteen inches distance every way, they will then require no further care than to be kept clear of weeds. The black cos, as it grows large, should have its leaves tied together to whiten the inner part. Succeeding crops of these should be sown in April, May, and June; and toward the end of August, for a winter crop, should be preserved under glasses, or in a bed arched with hoops and covered with mats. The most valuable of all the English lettuces are the white cos, or the Versailles, the Silesia, and the black cos. The brown Dutch and the green capuchin are very hardy, and may be sown late under walls, where they will stand the winter, and be valuable when no others are to be had. The red capuchin, Roman, and prince lettuces, are very early, and are sown for variety; as are also the Aleppo ones for their beauty. The several sorts of garden lettuces are very wholesome, emollient, cooling salads, easy of digestion, and somewhat laxative. Most writers suppose that they have a narcotic quality; and, indeed in many cases they contribute to procure rest, by abating heat, and relaxing the fibres.

L. virosa, the strong-scented wild lettuce, which is indigenous in Britain, and grows in some places in considerable abundance, differs very essentially in its qualities from the garden lettuce. It smells strongly of opium, and resembles it in some of its effects; and its narcotic power, like that of the poppy, resides in its milky juice. An extract from the expressed juice is recommended in small doses in dropsy. In dropsies of long standing, proceeding from visceral obstructions, it has been given to the extent of half an ounce a-day. It is said to agree with the stomach, to quench thirst, to be gently laxative, powerfully diuretic, and somewhat diaphoretic.

LACYDAS, or **LACYDES**, a Greek philosopher, born at Cyrene, who was the disciple of Arcesilaus, and his successor in the academy. He taught in a garden given him by Attalus, king of Pergamus; but, on that prince sending for him to court, he replied, 'That the pictures of kings should be viewed at a distance.' He had a goose which followed him every where by night as well as by day; and when she died he made a magnificent funeral for her! He died A. A. C. 212.

LAD, Sax. leode; Goth. *laud*; Teut. *laed*. A boy; youth; stripling; an unmarried man. The Swed. *ledig* signifies single; unmarried; as the corresponding word *lass*, in our language, is from the Sax. *lesan*; Teut. *lassen*, to loose.

For grief whereof the *lad* would after joy,
But pined away in anguish, and self-willed annoy.
Spenser.

We were
Two *lads*, that thought there was no more behind,
But such a day to-morrow as to-day,
And to be boy eternal. *Shakspeare. Winter's Tale.*

The shepherd *lad*,
Whose offspring on the throne of Judah sat
So many ages. *Milton.*

The poor *lad* who wants knowledge must set his invention on the rack, to say something where he knows nothing. *Locke.*

Too far from the ancient forms of teaching several good grammarians have departed, to the great detriment of such *lads* as have been removed to other schools. *Watts.*

Enough, enough my little *lad*!

Such tears become thine eye;

If I thy gaileless bosom had,

Mine own would not be dry. *Byron.*

LAD'DER, Sax. *hlæpe*; Teut. *leiter*, à *leadan* or *leiten*, to lead up.—Minsheu. Goth. *leid*, *led*, away.—Thomson. A set of steps framed together for climbing; any instrument for climbing or ascending.

Whose compost is rotten, and carried in time,
And spread as it should be, thrift's *ladder* may climb. *Tusser.*

I must climb her window,

The *ladder* made of cords. *Shakspeare.*

Northumberland, thou *ladder*, by the which
My cousin Bolingbroke ascends my throne. *Id.*

Lowliness is young ambition's *ladder*,

Whereto the climber upward turns his face. *Id.*

Your hearts make *ladders* of your eyes,
In show to climb to heaven, when your devotion
Walks upon crutches. *Massinger.*

Then took she help to her of a servant near about her husband, whom she knew to be of a hasty ambition; and such a one, who, wanting true sufficiency to raise him, would make a *ladder* of any mischief. *Sidney.*

Now streets grow thronged, and busy as by day,
Some run for buckets to the hallowed quire;

Some cut the pipes, and some the engines play,
And some, more bold, mount *ladders* to the fire. *Dryden.*

The worst of it is, our modern fortune-hunters are those who turn their heads that way, because they are good for nothing else. If a young fellow finds he can make nothing of Coke and Littleton, he provides himself with a *ladder* of ropes, and by that means very often enters upon the premises. *Hughes.*

Easy in words thy stile, in sense sublime;

'Tis like the *ladder* in the patriarch's dream;

Its foot on earth, its height above the skies. *Prior.*

I saw a stage erected about a foot and a half from the ground, capable of holding four of the inhabitants, with two or three *ladders* to mount it. *Gulliver's Travels.*

Endowed with all these accomplishments, we leave him in the full career of success, mounting fast towards the top of the *ladder* ecclesiastical, which he hath a fair probability to reach. *Swift.*

Hearken to the armour's clank!

Look down o'er each frowning warrior,

How he glares upon the barrier:

Look on each step of each *ladder*,

As the stripes that streak an adder. *Byron.*

LADDERS, SCALING, in the military art, are used in scaling, when a place is to be taken by surprise. They are made several ways. In England generally of flat staves, so that they may move about their pins, and shut like a parallel ruler, for convenience of carriage. The French make them of several pieces, so as to be joined together, and to be made of any necessary length: sometimes they are made with single ropes, knotted at proper distances, with iron hooks at each end; one to fasten them upon the wall above, and the other in the ground; and some-

times they are made with two ropes, and staves between them, to keep the ropes at a proper distance. When they are used in scaling walls, they ought to be rather too long than too short, and to be given in charge only to the stoutest of the detachment. The soldiers should carry them with the left arm passed through the second step, taking care to hold them upright close to their sides, and very short below to prevent any accident in leaping into the ditch. The first rank of each division, provided with ladders, should set out with the rest at the signal, marching resolutely with their firelocks slung, to jump into the ditch; when they arrive, they should apply their ladders against the parapet, observing to place them towards the salient angles rather than the middle of the curtain, because the enemy have less force there. The ladders must be placed within a foot of each other, without too much or too little slope, that they may not be overturned or broken by the weight of the soldiers mounting upon them. The ladders being applied, those who have carried them, and those who follow, should mount up, and rush upon the enemy sword in hand: if he who goes first happens to be overturned, the next should take care not to be thrown down by his comrade; but immediately mount himself, so as not to give the enemy time to load. As the soldiers who mount first may be easily tumbled over, and their fall may cause the attack to fail, their breasts should be protected by the fore parts of cuirasses; for, if they can penetrate, the rest may easily follow. The success of an escalade is infallible, if they mount the four sides at once, and shower a number of grenades amongst the enemy, especially when supported by some grenadiers and picquets, who share the enemy's fire.

The late ingenious general Sir William Congreve, of the royal artillery, very much improved upon the construction of these ladders. As the heights of different works vary, and the ladders when too long afford purchase to the besieged, he contrived a set of ladders having an iron staple at the lower part of each stem, so that if one, two, or three, should be found insufficient to reach the top of the work, another may with facility be joined to the lowest, and that be pushed up until a sufficient length can be obtained.

LADÉ, *n. s. & v. a.* } Saxon *lade*, *hladan*,
LA'DING, *n. s.* } *hlæbe*; Teut. *leyde*, *laden*.
LA'DLE, } See LOAD. To throw out
LA'DLE-FUL. } a fluid; hence to freight,
load, burden: lading is a weight or burden:
ladle, a spoon or instrument for throwing out or conducting liquid

And they *laded* their asses with corn, and departed thence. *Gen. xlii. 26.*

Every tre well for his fellow grew,
With branchis brode *ladin* with levis new,
That sprongin out agen the sonne shene,
Some very rede, and some a glad light grene.

Some stirred the molten ore with *ladles* great. *Chræcer.*

He hides the sea that sunders him from them,
Saying, he'll *lade* it dry to have his way. *Spenser.*

Shakspeare.

The experiment which showeth the weights of several bodies in comparison with water, is of use in *lading* of ships, and shewing what burthen they will bear.

Some we made prize, while others, burnt and rent, With their rich *lading* to the bottom went.

Bacon.

Waller.

When the materials of glass have been kept long in fusion, the mixture casts up the superfluous salt, which the workmen take off with *ladles*.

Boyle.

They never let blood; but say, if the pot boils too fast, there is no need of *lading* out any of the water, but only of taking away the fire; and so they allay all heats of the blood by abstinence, and cooling herbs.

Temple.

The vessels, heavy *laen*, put to sea With prosperous winds; a woman leads the way.

Dryden.

It happened to be foul weather, so that the mariners cast their whole *lading* over-board, to save themselves.

L'Estrange.

Though the peripatetick doctrine does not satisfy, yet it is as easy to account for the difficulties he charges on it, as for those his own hypothesis is *laden* with.

Loche.

If there be springs in the slate marl, there must be help to *lade* or pump it out.

Mortimer.

The storm grows higher and higher, and threatens the utter loss of the ship: there is but one way to save it, which is, by throwing its rich *lading* over-board.

South.

A *ladle* for our silver dish

Is what I want, is what I wish.

Prior.

Why should he sink where nothing seemed to press?

His *lading* little, and his ballast less.

Swift.

If a footman be going up with a dish of soup, let the cook with a *ladle-ful* dribble his livery all the way up stairs.

Id.

Lade is the mouth of a river, and is derived from the Saxon *lade*, which signifies a purging or discharging; there being a discharge of the waters into the sea, or into some great river.

Gibson's Camden.

Melt them in an iron *ladle*, and pour them, when melted, into water lukewarm.

Imison's Elements.

LADENBURG, a town of Germany, in the palatinate of the Rhine, seated on the Neckar, on the east bank of the Rhine, six miles east of Manheim, and forty south-east of Mentz. It belongs to the elector palatine. Long. 8° 42' E., lat. 49° 27' N.

LADOGA, the largest lake in Europe, is situated opposite the gulf of Finland, and is surrounded by the Russian governments of Petersburg, Viburg, and Olonetz. Its length is about 130 miles, its breadth seventy-five, and its whole extent equal to 6200 square miles, or to about one-eighth part of England. It abounds in fish, particularly salmon. Its shores are flat: and the numerous shoals it contains, and the frequent storms by which it is agitated, so impede its navigation, that a canal has been cut along its southern shore. Ladoga receives several rivers, but the river Neva is its only outlet.

The **LADRONE**, or **MARIAN ISLANDS**, are a cluster of islands in the North Pacific Ocean, in about 145° to 148° long. E., and between 13° and 21° lat. N. They were first discovered by Magellan, who gave them the name of Ladrone Islands, or the Islands of Thieves, from the dishonest disposition of the inhabitants. Towards the latter end of the seventeenth century they

obtained the name of the Mariana Islands, from the queen of Spain, who sent missionaries hither to propagate the Christian faith. They are situated north of the Carolines, and are fifteen or sixteen in number, extending through a space of about 450 miles from north to south. The principal islands are: Guam or St. John, the largest, Zarpone or Rota, Aguijan or St. Ann, Tinian, Saypan or St. Joseph, Anatachan or St. Joachim, Sarigan or St. Charles, Guguam or St. Philip, Amalagan or Conception Isle, Pagon or St. Ignatius, Agrigan or St. Xavier, Assonsong or Assumption Island, and Urac, a desert isle. The coasts are composed of a dark-colored rock, and their general aspect was, by the early navigators, represented as highly beautiful and picturesque, the mountains being clad with forests, and the soil exhibiting the utmost fertility. Later voyagers, however, have not confirmed this account: but they agree in representing the climate as very temperate for the latitude.

When these islands were discovered, the natives, it is said, were totally unacquainted with any country besides their own; and, having no account of their own origin, supposed that the author of their race was formed of a piece of the rock of Funa, one of their smallest islands. They had no animals, it is added, but one species of birds, resembling turtle doves, which they never killed, but only tamed them, and taught them to imitate articulate sounds. They were much astonished on seeing a horse which a Spanish captain left among them in 1673. But what is most incredible is, that they were utterly unacquainted with fire till Magellan, provoked by their repeated thefts, burned one of their villages. When they saw their wooden houses blazing, they thought that the fire was a beast which fed upon the wood.

The largest of these islands is **GUAM**, which see. Here Anson landed in 1742, when his crew were debilitated by disease, and they became much refreshed. The author of his Voyages has contributed, therefore, in no small degree to impress the public with a favorable opinion of the island and its inhabitants. Cotton and indigo trees abound in all the islands; and most of the fruits of the tropics: wild hogs, remarkably fierce when attacked, are also met with in considerable herds, particularly in the island of Saypan. The fish of the coasts have been represented as remarkably unwholesome. Mosquitoes and other annoying insects are numerous.

The islanders of the group are olive-colored, but not of such a deep dye as those of the Philippines; their stature is good, and their limbs well proportioned. Though their food consists entirely of fish, fruits, and roots, yet they are so fat, that to strangers they appear swelled. They often live to 100 years or more, yet retain the health and vigor of men of fifty. The men go quite naked, but the females are partially covered. They admire black teeth and white hair. Hence one of their principal occupations is to keep their teeth black by the help of herbs, and to whiten their hair by sprinkling upon it a certain water. The women have their hair very long; but the men generally shave it

close, except a single lock on the crown of the head, after the Japanese manner. Their language is agreeable to the ear, having a soft and easy pronunciation.

LADRONES is also the name of a small cluster of isles in the gulf of Sa, at the southern extremity of China. They are about ten in number, and, together with the Lema Islands, form a semi-circular chain before the gulf. The Great Ladrone, or Tyman-Shan, is distinguished, as its name denotes, by an elevated domed summit that is seen ten leagues. The Ass's Ears, or Keam-Cheum-Mee, another of them, has its name from two remarkable peaks rising from the same base almost perpendicularly from the sea, and surrounded by rocky islets.

The inhabitants are acute and lively in their disposition, and very audacious thieves. The groupe is a nursery of pirates, who are very able seamen. They have vessels which would sail twenty miles in an hour. Sometimes they mount ten to twelve carriage-guns. Depredations are chiefly on the Chinese trading junks, the European vessels frequenting these seas being generally too strong for them. A Chinese squadron of war junks often cruises here; but every precaution seems taken to avoid a rencounter; and for this purpose the war-junks are said on their part to beat their gongs night and day.

The Ladrone pirates have sometimes carried their depredations to the mouth of the Canton River. In 1805 they had conquered the whole of Hainan, and the southern part of the island of Formosa. They seem not to have any regular form of government: and hostilities are frequent between the inhabitants of different islands and districts. Their religion consists in the belief of an evil spirit whom they endeavour to appease by various ceremonies.

LADVOCAT (John Baptist), an ingenious French lexicographer, who was a professor and librarian in the Sorbonne. He published, 1. Dictionnaire Geographique portatif, 8vo, under the fictitious name of Volgien, and pretended it to be a translation from the English. 2. Dictionnaire Historique portatif, 2 vols. 8vo. 3. A Hebrew Grammar, 8vo, 1744. He died in 1766.

LA'DY, *n. s.* } Sax. hlæfōig, from leof, high, or eminent, and dia, a female. A woman of rank or respectability; a title of the wives of knights, and all degrees above them: lady-bird, and lady-fly, are names of an insect: LA'DY'S-SMUCK, } lady-day is the day of the annunciation of the Blessed Virgin: lady-mantle, lady's-slipper, and lady's-smock, are plants: ladylike, elegant; delicate; becoming a lady: ladyship, the title of a lady.

Ah, *Ladie*, sayd he, shame were to revoke
The forward footing for an hideous shade
Vertue gives herself light through darkness for to wade. *Spenser. Faerie Queene.*

O foolish fairy's son, what fury mad
Hath thee incensed to haste thy doleful fate?
Were it not better I that *lady* had,
Than that thou hadst repented it too late?

Spenser.

A *lady*
So fair, and fastened to an empery,
Would make the greatest king double.

Shakspeare.

I am much afraid, my *lady*, his mother played false with a smith. *Id.*

I would thy husband were dead; I would make thee my *lady*.—I your *lady*, Sir John! alas, I should be a wifful *lady*.

Shakspeare. Merry Wives of Windsor.

When dazies pied, and violets blue,
And *lady's-smocks* all silver-white,
Do paint the meadows much bedight.

Shakspeare.

Say, good Cæsar,
That I some *lady* trifles have reserved,
Immortal toys, things of such dignity
As we greet modern friends withal.

Id. Antony and Cleopatra.

Of all these bounds. even from this line to this,
With shadowy forests, and with champignons riched,
With plenteous rivers, and wide-skirted meads,
We make thee *lady*.

Id. King Lear.

Madam, he sends your *ladyship* this ring.

Shakspeare.

Before Homer's time this great *lady* was scarce heard of.

Raleigh.

If they be nothing but mere statesmen,
Your *ladyship* shall observe their gravity,
And their reservedness, their many cautions,
Fitting their persons.

Ben Jonson's Catiline.

Plutarch says, Telesilla, a noble *lady*, being dangerously sick, was advised to apply her mind to poetry.

Peacham.

I am sorry my relation to so deserving a *lady* should be any occasion of her danger and affliction.

King Charles.

In vaine shee wishth long Alchmæna's night,
Cursing the hasty dawning of the light;
And, with her cruell *ladie*-starre uprose,
She seeks her third roust on her silent toes.

Bp. Hall's Satires.

See here a boy gathering lilies and *lady-smocks*,
and there a girl cropping culverkeys and cowslips,
all to make garlands.

Walton's Angler.

May every *lady* an Evadne prove,
That shall divert me from Aspasia's love.

Waller.

I the wronged pen to please,
Make it my humble thanks express
Unto your *ladyship* in these.

Id.

The *ladies* will make a numerous party against him, for being false to love in forsaking Dido.

Dryden.

Should I shun the dangers of the war,
With scorn the Trojans would reward my pains,
And their proud *ladies* with their sweeping trains.

Id.

Her tender constitution did declare,
Too *lady-like* a long fatigue to bear.
'Tis Galla; let her *ladyship* but peep.

Id. Juvenal.

I hope I may speak of women without offence to the *ladies*.

Guardian.

Fly *lady-bird*, north, south, or east or west,
Fly where the man is found that I love best.

Gay.

This *lady-fly* I take from off the grass,
Whose spotted back might scarlet red surpass.

Id.

We find on medals the representations of *ladies*, that have given occasion to whole volumes on the account only of a face. Addison on Ancient Medals.

Her summoning handmaids bore

Their *lady* to her couch with gushing eyes.

Byron.

LÆLIUS (Caius), surnamed Sapiens, a Roman consul and orator, who distinguished himself in Spain in the war against Viriathus. He is highly praised by Cicero, who gives an admirable description of the intimate friendship which subsisted between Lælius and Scipio Africanus the Younger. His eloquence, his modesty, and his abilities, acquired him a great reputation; and he is said to have assisted Terence in his comedies. He died about 126 B. C.

LÆNA, in antiquity, a gown worn by the Roman augurs, and peculiar to their office. With this gown they covered their heads when they made their observations on birds, &c. See **AUGUR**.

LÆRTES, in fabulous history, king of Ithaca, the son of Arcesius and Chalcomedusa, and father of Ulysses. Apollodorus says he was one of the Argonauts.

LÆSTRYGONES, in fabulous history, the most ancient inhabitants of Sicily. Some suppose them to be the same as the people of Leontium, and to have been neighbours to the Cyclops. They fed on human flesh; and, when Ulysses came on their coasts, they sunk his ships, and devoured his companions. They were of a gigantic stature, according to Homer. A colony of them, as some suppose, passed over into Italy with Lamus at their head, where they built the town of Formia; whence the epithet of Læstrygonia is often used for that of Formiana.

LAET (John De), a writer in the seventeenth century, born at Antwerp. He was director of the West India Company, and acquired great skill in philology, history, and geography. He wrote, 1. A Description of the East Indies, in French; 2. Novus Orbis, Leyden, 1633, fol.; 3. De Hispaniæ Regibus et Opibus; 4. Respublica Belgarum; 5. Gallia; 6. Turcici imperii Status; 7. Persici imperii Status; and other works. He died in 1749.

LAETIA, in botany, a genus of the monogynia order, and polyandria class of plants: cor. pentapetalous, or none: CAL. pentaphyllous; the fruit unilocular and trigonal: SEEDS have a pulpy arillus or coat. There are four species, all natives of America. L. apetala, the gum wood, Dr. Wright informs us, is very common in the woodlands and copses of Jamaica, where it rises to a considerable height and thickness. The trunks are smooth and white; the leaves are three inches long, a little serrated, and somewhat hairy. The stamina are yellow, without petals: the fruit is as large as a plum; and, when ripe, opens and shows a number of small seeds in a reddish pulp. Pieces of the trunk or branches, suspended in the heat of the sun, discharge a clear turpentine or balsam, which concretes into a white resin, and which seems to be the same as gum sandarach.

LÆVINUS TORRENTINUS, called also Vander Bekin, or Torrentin, a native of Ghent, educated at the university of Louvain. He afterwards made the tour of Italy, where he obtained the friendship of the most illustrious personages of his age. On his return to the Low Countries he was made canon of Liege, and vicar-general to Ernest de Baviere, bishop of that see. Having

executed a successful embassy to Philip II. of Spain, he was rewarded with the bishopric of Antwerp; whence he was translated to the metropolitan church of Mechlin, where he died in 1595. He founded a college of Jesuits at Louvain, to which he left his library, medals, and curiosities.

LÆVIUS, a Latin poet, who is supposed to have lived before the time of Cicero. He wrote a poem entitled Erotopagnia, i. e. love games. Aulus Gellius and Apuleius quote it. Lævius also composed a poem entitled The Centaurs, which Festus quotes under the title of Petrarum.

LA FERTE IMBAULT (M. Theresa Geoffrin, marchioness de) was the daughter of madame Geoffrin, and born at Paris in 1715. She married, in 1733, the marquis de la Ferte, great grandson of marshal Ferte. The marchioness de la Ferte drew up a series of extracts from the writings of the Pagan and Christian philosophers, for the instruction of the grandchildren of Louis XV.; and was grand mistress of the LANTREREBUS, which see. She distinguished herself by her able opposition to the philosophical French literati of the last century, with whom her mother had been connected. She died at Paris in 1791.

LAFITAU, a French Jesuit, who was a missionary in America. He wrote Mœurs des Sauvages Americains, comparées aux Mœurs des premiers Temps, Paris, 1723, 2 vols. 4to. He died about 1775.

LAFITE (Mary Elizabeth de), a French lady, born at Paris about 1750, and who died in London in 1794, published Reponses à Dêméler, ou Essai d'une Manière d'exercer l'Attention, Lausanne, 1791, 12mo.; Entretiens, Drames, et Contes Moraux à l'Usage des Enfants, 2 vols. 12mo., dedicated to the queen, and several times reprinted. She also translated into French various works of Wieland, Gellert, and Lavater.

LAG, *v. n., adj. & n. s.* † M. Goth. *laggan*; *LAG'GER*, *n. s.* † † Sax. *larigan*. To say behind; move tardily; loiter: as an adjective, coming behind; sluggish; slow; deficient; last: as a substantive, the lag end; the lowest class; he who comes last: lagger, an idler, a loiterer.

Behind her far away a dwarf did lag.

Faerie Queene.

I could be well content
To entertain the lag end of my life
With quiet hours. *Shakspeare. Henry IV.*

He, poor man, by your first order died,
And that a winged Mercury did bear;
Some tardy cripple had the countermand,
That came too lag to see him buried.

Id. Richard III.

The rest of your foes, O gods, the senators of Athens, together with the common lag of people, what is aniss in them, make suitable for destruction
Shakspeare.

The slowest footed who come lag, supply the show of a reward.
Carew's Survey.

I shall not lag behind, nor err
The way, thou leading. *Milton.*
The knight himself did after ride,
Leading Crowdero by his side,
And towed him, if he lagged behind,
Like boat against the tide and wind. *Hudibras.*

We know your thoughts of us, that laymen are
Lag souls, and rubbish of remaining clay,
 Which Heaven, grown weary of more perfect work,
 Set upright with a little puff of breath,
 And bid us pass for men. *Dryden's Don Sebastian.*

She passed, with fear and fury wild ;
 The nurse went *lagging* after with the child.
Dryden.

If he finds a fairy *lag* in light,
 He drives the wretch before, and lashes into night.
Id.

The last, the *lag* of all the race. *Id. Virgil.*
 What makes my ram the *lag* of all the flock? *Pope.*

The remnant of his days he safely past,
 Nor found they *lagged* too slow, nor flowed too fast.
Prior.

She hourly pressed for something new ;
 Ideas came into her mind
 So fast, his lessons *lagged* behind. *Swift.*

LAGAN, or **LAGOM** (from Sax. *legan*, to lie),
 in sea laws, shipwrecked goods, left on the sand,
 or ashore: or goods cast overboard by seamen
 in danger of shipwreck.

LAGEMAN (*lagammannus*), homo habens
legem, or homo legalis seu legitimus, such as
 we call now good men of the jury. The word
 is often used in Domesday Book, and the Laws
 of Edward the Confessor, c. 38.

LAGEN, **LAGENA**, in antiquity, a measure of
 wine, containing six sextarii: whence some
 derive the word flagon. The lieutenant of the
 tower has the privilege to take unam lagenam
 vini ante malum et retro, of all wine ships that
 come upon the Thames; and Sir Peter Leicester,
 in his Antiquities of Cheshire, interprets lagena
 vini a bottle of wine.

LAGESTROEMIA, in botany, a genus of
 the monogynia order and polyandria class of
 plants: cor. hexapetalous, and curled: cal.
 sixfid, and campanulated; there are many stam-
 ina, and of these the six exterior ones are
 thicker than the rest, and longer than the petals.
 Species five, natives of the East Indies.

LAGO MAGGIORA, a lake of Italy. See
MAGGIORA.

LAGO NEGRO. See **NEGRO**.

LAGOON ISLAND, an island in the South
 Sea, of an oval form, with a lake in the middle,
 which occupies the greatest part of it. It
 abounds with trees. The natives are tall, cop-
 per-colored, and have long black hair. Their
 weapons are poles or spikes twice as long as
 themselves. Their habitations are under clumps
 of palm trees, which form very beautiful groves.
 This island was discovered by captain Cook in
 April 1769. Within a mile no bottom could be
 found with 130 fathoms of line, and no anchorage
 appeared to be near. Long. 139° 28' W., lat.
 18° 47' S.

LAGOS, an ancient sea-port town of Portu-
 gal, in the province of Algarva, with a castle
 near the sea, and a harbour having good anchor-
 age, but open to the south-east, and of difficult
 entrance. It contains about 4000 inhabitants,
 and the neighbourhood yields excellent wine:
 134 miles south of Lisbon.

LAGOON, **MIDDLE**, **NORTH**, and **SOUTH**,
 three gulfs of the bay of Honduras, Yucatan, in
 about long 88° 59' W., and lat. 17° 54' to 18°
 40' N.

LA GRANGE (Joseph Louis), an eminent
 mathematician and philosopher, was born at Tu-
 rin, November 25th 1736. He at first was more
 inclined to classical than to mathematical pur-
 suits, but, having met with a memoir of Halley,
 he made such progress in the latter, at the age
 of sixteen, that he became professor at the Royal
 Artillery school. He selected from this period
 the most able of his pupils as his intimate
 friends, and thus originated the academy of
 Turin. In 1759 this institution published the
 first volume of its Transactions, wherein La
 Grange first applied the theory of recurring
 consequences, and the doctrine of chances, to
 the differential calculus. He soon after corrected
 Newton's calculations of the motions of fluids,
 and made such an impression in his favor on
 Euler, that he soon procured him to be
 chosen a member of the Berlin academy. He
 now visited Paris, where he published his famous
Mecanique Analytique, and in 1766 was ap-
 pointed director of the academy of Berlin in
 physical and mathematical science. On the
 death of Frederick II. he returned to Paris;
 and, though he at first lost his pension, when the
 new institutions were formed he was appointed
 professor of the Normal and then of the Poly-
 technic school. He now announced his *Fonctions*
Analytiques; *Leçons sur le calcul*, and
Traité de Relations numériques des Equations;
 and undertook a new edition of his *Mecanique*
Analytique. But he labored in these pursuits
 with an assiduity unsuitable to his health and
 age, and died in the midst of them on the 10th
 of April, 1813, in his seventy-seventh year. He
 condescended to be greatly distinguished by
 Napoleon, and was member of his Imperial
 Institute and Board of Longitude, senator, and
 count of the empire, grand officer of the Legion
 of Honor, and grand cross of the Imperial Order
 of Re-union.

LA GUERRE (Louis), a painter of history
 on ceilings, staircases, &c., being an imitator of
 the celebrated Verrio. His father being master
 of the menagerie, at Versailles, Louis XIV. was
 the godfather of our artist. He studied under
 Le Brun, and came to England at the age of
 twenty, when he was immediately employed by
 Verrio upon the work at St. Bartholomew's
 Hospital. He was subsequently engaged to
 paint The Labors of Hercules, at Hampton
 Court, and will long be known by the line of
 Pope,

Where sprawl the saints of Verrio and La Guerre.
 He died of apoplexy in 1721.

LAGULLAS CAPE, the most southerly point
 of Africa, east of the Cape of Good Hope.
 The name, says governor Phillips, in his voyage
 to Botany Bay, is corrupted from the original
 Portuguese *Das Agulhas*, i. e. Needle Cape,
 which is descriptive of its form.

LAGUNA, or San Christoval de Lagune, a
 considerable town in the island of Teneriffe,
 near a lake so named, on the declivity of a hill.
 It has several handsome buildings, and a fine
 square. Long. 16° 20' W., lat. 28° 30' N. See
TENERIFFE.

LAGUNES OF VENICE are marshes or lakes
 in Italy, on which Venice is seated. They com-

municate with the sea, and are the security of the city. There are about sixty islands in them, which together make a bishop's see. Euranio is the most considerable, next to those on which Venice stands.

LAGUNAS, the name of four lakes of Peru; three in Venezuela; and three others in the province of Nicaragua.

LAGURUS, in botany, a genus of the digynia order and triandria class of plants; natural order fourth, gramina: CAL. bivalved, with a villous awn; exterior petal: COR. terminated by two awns, with a third on its back retorted. Species one only, *L. ovatus*, a native of Gournesey.

LAHDACK, a town and mountainous district on the northern frontier of Hindostan, situated between the thirty-fourth and thirty-seventh degrees of north latitude. It is bounded on the north and east by Thibet, and on the west by Cashmere, tributary to the lama of Thibet.

Lahdack, the capital, is a large trading town, having considerable commerce with Cashmere and China, the principal article of which is goats' hair. The inhabitants are of the religion of Boodh, but pay great respect to the lama of Thibet. Long. 78° 10' E., lat. 35° N.

LAHN, a large river of Germany, which flows through the duchy of Nassau, and Upper Hesse, passing Marburg, Giessen, Wetzlar, Nassau, &c. It joins the Rhine near Upper Lahnstein, and is navigable as far as Dietz.

LAHORE, a province of Hindostan, belonging to the Seiks, situated between the thirtieth and thirty-fourth degrees of north latitude, and about 320 miles in length, by 220 in breadth. This province is watered by numerous rivers, and under a good government would be very fertile; but owing to its various revolutions, and its being possessed by a number of petty chiefs, it is now one of the most barren and worst cultivated districts of India. It however produces all the eastern grains and fruits; sugar, tobacco, cotton, salt, &c.; and in its mountains are found the woods and fruits of Europe. It also produces fine cattle, and excellent horses. Its rivers are the Suttelege, the Beyah, Ravey, Chunab, Jhylum or Behut, and the Indus. As well as its Seik inhabitants, here are a great number of Mahomedans and Jauts, and other Hindoos. The north-west part belongs to the Afghauns, and Lahore and its neighbourhood to Rajah Runjeet Singh. The Seik government is a military aristocracy. They can bring an army of 100,000 cavalry, it is said, into the field. This province was the territory of Porus, who opposed Alexander. A. D. 977, it was governed by an independent rajah, named Jeipal. The chief towns are Lahore and Amretsir.

LAHORE, the capital of the province, is situated on the south-east bank of the Ravey, which is here at all times about 300 yards broad; but in the rainy season frequently overflows its banks. At an early period of Hindoo history this city was well known, and was taken by the Mahomedans early in the eleventh century. It formed their frontier garrison till about 1157, when we find sultan Khusero making it his residence. After being the capital of Hindostan, for about twenty-eight years, it was

taken by Mohammed Ghory. This city was afterwards the residence of an Afghaun provincial government; but in 1520 was seized by the emperor Baber, and became the occasional residence of the Great Moguls. Akber founded the palace still existing, and the emperor Jehangire much improved the city. In 1609 it is described as 'a magnificent city, nearly ten miles in length, surrounded by a fortification having twelve gates. The walls and ceilings of the palace were covered with gold and silver; and the royal garden, called Shah al Imaret, was superior to any thing of the kind in Europe.' At present this city is daily falling into decay; the rich inhabitants emigrate to the modern Seik capital Amretsir. Still the city contains some handsome temples of the Mogul emperors, and manufactories for all kinds of warlike instruments, and a foundry of brass guns. Long. 73° 48' E., lat. 31° 50' N.

On the other side of the Ravey at Shah Durra, about two miles north of Lahore, is the celebrated mausoleum of Jehangire, occupying nearly 600 yards square. It is sixty-six paces in length on each side, and still in tolerably good condition. To the southward is to be seen the tomb of Noorjehan Begum, a building thirty-six paces square.

LAHOU, a considerable sea-port on the Ivory coast of Africa. It is of the greatest commercial importance of any town on this coast, and said to be a league in extent. Long. 5° 5' W., lat. 5° 20' N.

LAHR, a manufacturing town of Baden, next to Pforzheim, the most active town in that duchy. Its manufactures are of linens, woollens, cottons, tobacco, and leather, and have wholly arisen since the year 1780, when this was a mere village. It is eighteen miles S. S. E. of Strasburg, and twenty three north of Freyburg.

LAIIC, } Fr. *laique*; Lat. *laicus*;
LA'ICK, *n. s.* }
LA'ICAL, *adj.* } Gr. *λαος*. The people, as
LA'ITY, *n. s.* } distinct from the clergy.

In all ages the clerical will flatter as well as the *laical*. *Camden*.

To say that the *laity* should govern the church, when all ecclesiastical ministries are committed to the clergy, is to say, Scripture means not what it says. *Bishop Taylor*.

Some prophesied, some interpreted; and, therefore, it is an ignorant fancy to think that he must needs be a *laick*, whoever in the ages apostical was not a preacher. *Id.*

The more usual cause of this deprivation is a mere *laity*, or want of holy orders. *Ayliffe's Pavergon*.

An humble clergy is a very good one, and an humble *laity* too, since humility is a virtue that equally adorns every station of life. *Suq't.*

LAINÉZ (James), a Spaniard, companion of Ignatius Loyola, and the second general of the Jesuits. Having procured from the pope Paul IV. the perpetual generalship of the order, he induced the pontiff to ratify the following privileges:—1. The right of making all sorts of contracts (without the privity of the community) vested in the generals and their delegates. 2. That of giving authenticity to all comments and explanations of their constitutions. 3. The

power of making new, and altering the old constitutions; this opened the door to their bloody political tenets, which are not to be attributed to Loyola. 4. That of having prisons independent of the secular authority, in which they put to death refractory brethren. Lainez died in 1565, aged fifty-three.

LAING (Malcolm), a modern Scottish historian, was born at Stryorey in Orkney in 1762, and educated at Kirkwall. He was removed to the university of Edinburgh, with a view to the bar. On the death of Dr. Henry he completed the unfinished volume of his History of England. But his chief work is a History of Scotland, 4 vols. 8vo. He was brought into parliament by the Whigs in 1806. He edited also a new edition of Ossian of some repute, and died in 1819.

LAING (Alexander Gordon), was born at Edinburgh, in 1794, entered the army, served for several years in the West Indies, and, in 1820, was sent to Sierra Leone. In 1821—22, he was despatched on several missions from Sierra Leone, through the Timannee, Kooranko, and Soolima countries, with the view of forming commercial arrangements. In 1826, he undertook to penetrate to Timbuctoo, and started from Tripoli, crossing the desert by way of Ghadamir. On his journey he was attacked by a band of Tuaricks, who wounded him severely, and left him for dead. He, however, recovered, and reached Timbuctoo, August 18, where he remained upwards of a month. Being obliged to leave Timbuctoo by the sultan of Masina, into whose power the city had fallen, he hired a Moorish merchant to accompany and protect him on his route by Sego to the coast. Three days after leaving the city, he was murdered by the person who had undertaken to guard him.

LAIR, *n. s.* Fr. *lai*, a forest: Goth. *ligr*; Dan. *ligr*. The habitation of a wild beast.

LAIRD, *n. s.* Sax. *lafaorn*. The lord of a manor in Scotland.

LAIRESSE (Gerard), an eminent Flemish painter, born at Liege in 1640. He received his chief instructions from his father Reniere de Lairesse, though he was also a disciple of Bar-tolet. He first settled at Utrecht, but, removing to Amsterdam, soon rose to affluence and reputation. His historical designs are distinguished by grandeur of composition: and the back grounds are rich in architecture. He had a singular method of working, playing on the violin, and dancing, alternately. He had three sons, two of whom were painters; and three brothers, Ernest, James, and John; Ernest and John painted animals, and James flowers. He also engraved in aquafortis; and wrote an excellent work on the art, which has been translated into English, and printed in London both in 4to. and 8vo. He died at Amsterdam, in 1711.

LAIS, a celebrated courtesan, daughter of Timandra, the mistress of Alcibiades, born at Hycara in Sicily. She sold her favors first at Corinth for 10,000 drachms, and the vast number of her lovers of all ranks sufficiently prove her personal charms. The extravagant price of her embraces became proverbial:—

Non cuivis homini contingit adire Corinthum.

Demosthenes himself, the celebrated orator, is said to have visited Corinth for her sake; but, when he was informed of her terms, he departed, saying, he would not purchase repentance at so dear a price. She ridiculed the austerity of the philosophers who pretended to have gained a superiority over their passions, and yet were at her door as often as others. She was assassinated in Thessaly in the temple of Venus, about A. A. C. 350.

LAI-TCHIEOU-FOU, a city of China of the first rank in the south coast of the gulf of Petchee-lee in the province of Shatong. It is on a tongue of land terminating on one side in the gulf, and on the other in a lofty range of hills. Long. 114° 46' E., lat. 37° 9' N.

LAKE (Gerard), lord viscount Lake, a distinguished English general, was born in 1744, and at the age of fourteen obtained an ensigncy in the guards. During the seven years' war, he served in Germany, and in 1781 in America, under Cornwallis. After the taking of New York he returned home, and became aid-de-camp to the king. In Holland he commanded the first brigade of the guards, and was distinguished in several engagements in 1793 and 1794. In 1800 he became commander-in-chief of the British forces in India; and in September 1803 gained a victory over the Mahratta army and the French general Perron, which resulted in the capture of Delhi. He afterwards defeated Scindia and Holkar, and returned to England in September 1807, when he was created lord Lake, baron of Delhi and Laswarri. Soon after he was raised to the rank of viscount, and made governor of Plymouth. He died after a short illness, February 21st 1808.

LAKE, *n. s.* Sax. *lac*; Fr. *lac*; Lat. *lacus*; Ital. *lago*. A large inland piece of water. See below.

Now nearer to the Stygian lake they draw,
Whom from the shore the surly boatman saw,
Observed their passage through the shady wood,
And marked their near approaches to the flood.

Dryden.

He adds the running springs and standing lakes,
And bounding banks for winding rivers makes. *Id.*

A brow like a Midsummer lake,

Transparent with the sun therein,
When waves no murmur dare to make,
And heaven beholds her face within.

Byron.

A LAKE is a collection of waters contained in some cavity in an inland place, of a large extent, surrounded with land, and having no communication with the ocean. Lakes may be divided into four kinds. 1. Such as neither receive nor send forth rivers. 2. Such as emit rivers, without receiving any. 3. Such as receive rivers, without emitting any. And, 4. Such as both receive and send forth rivers. Of the first kind some are temporary and others perennial. Most of those that are temporary owe their origin to the rain, and the cavity of depression of the place in which they are lodged. There are also several of this kind formed by the inundations of the Nile and Niger; and in Russia, Finland, and Lapland, many lakes are

formed, partly by the rains, and partly by the melting of the ice and snow; but the perennial lakes, which neither receive nor emit rivers, are supposed to arise from subterraneous springs, by which they are constantly supplied. The second kind of lakes, which emit without receiving rivers, is very numerous. Many rivers flow from these as out of cisterns: where their springs being situated low within a hollow, first fill the cavity and make it a lake, which not being capacious enough to hold all the water, it overflows and forms a river. Of this kind are Lake Odium, at the head of the Tanais; lake Adac, whence a head water of the Tigris flows; Lake Ozero or White Lake, in Russia, the source of the Shaksna; and the great Lake Chaamay, whence flow four very large rivers, which water the countries of Siam, Pegu, &c., viz. the Menan, the Asa, the Caipoumo, and the Laquia, &c. The third species of lakes, which receive rivers but emit none, apparently owe their origin to those rivers, which, in their progress from their source, falling into some extensive cavity, are collected together, and form a lake of such dimensions as may lose as much by exhalation as it continually receives from these sources; of this kind is that great lake called the Caspian Sea; the lake Asphaltites, also called the Dead Sea; and several others. Of the fourth species, which both receive and emit rivers, are reckoned three kinds, as the quantity they emit is greater, equal, or less, than they receive. If it be greater, they must be supplied by springs at the bottom; if less, the surplus of the water is probably spent in exhalations; and if equal, their springs just supply as much water as runs off, and is evaporated by the sun. Lakes are also distinguished into fresh-water and salt-water lakes. Dr. Halley is of opinion that all great perennial lakes are saline, either in a greater or lesser degree; and that this saltness increases with time. Large lakes answer the most valuable purposes in the northern regions, the warm vapors that arise from them moderating the extreme cold; and in warmer climates, at a great distance from the sea, the exhalations raised from them by the sun cause the countries that border upon them to be refreshed with frequent showers, and consequently prevent their becoming barren deserts.

LAKE OF A THOUSAND ISLANDS, is a lake of the St. Lawrence, formed after it leaves Lake Ontario, and so called from the number of islands with which it is interspersed. It is twenty-five miles in length, and about six broad.

LAKE OF THE HILLS a large lake of North-West America, in length about 200 miles, and from fifty to twenty-five miles broad.

LAKE OF THE WOODS, or LAKE DU BOIS, a lake of North America, seventy miles long, and forty wide. Its name is taken from the quantities of oak, fir, pine, &c., which grow on its banks; and it has a few small islands. Long. 95° 20' W., lat. 54° 36' N.

LAKE, n. s. A color. See *LAC*.

I have been told that tungsten has been employed in France to precipitate the coloring matter from certain woods for the purpose of forming lakes for the limners' use. *Parker's Chemical Catechism.*

LAKE, a preparation of different substances

into a kind of magistery for the use of painters: one of the finest and first invented of which was gum lacca, or laque, from which all the rest are called by the common name lakes. The principal lakes are carmine, Florence-lake, and lake from madder.

For the preparation of carmine, four ounces of finely pulverised cochineal are to be poured into four or five quarts of distilled water, that has been previously boiled in a pewter kettle, and boiled with it for the space of six minutes longer (some advise to add during the boiling two drachms of pulverised crystals of tartar). Eight scruples of Roman alum in powder are then to be added, and the whole kept upon the fire one minute longer. As soon as the gross powder has subsided to the bottom, and the decoction has become clear, the latter is to be carefully decanted into large cylindrical glasses, covered over, and kept undisturbed, till a fine powder is observed to have settled at the bottom. The superincumbent liquor is then to be poured off from this powder, and the powder gradually dried. From the decanted liquor, which is still much colored, the rest of the coloring matter may be separated by means of the solution of tin, when it yields a carmine but little inferior to the other.

For the preparation of Florentine lake, the sediment of cochineal, that remained in the kettle after the carmine has been taken, may be boiled with the requisite quantity of water, and the red liquor likewise, that remained after the preparation of the carmine, mixed with it, and the whole precipitated with the solution of tin. The red precipitate must be frequentlyedulcorated with water. Exclusively of this, two ounces of fresh cochineal, and one of crystals of tartar, are to be boiled with a sufficient quantity of water, poured off clear and precipitated with the solution of tin, and the precipitate washed. At the same time two pounds of alum are also to be dissolved in water, precipitated with a lixivium of potassa, and the white earth repeatedly washed with boiling water. Finally, both precipitates are to be mixed together in their liquid state, put upon a filter and dried. For the preparation of a cheaper sort, instead of cochineal, one pound of Brasil wood may be employed in the preceding manner.

For the following process for making a lake from madder, the Society of Arts voted Sir H. C. Englefield their gold medal. Enclose two ounces troy of the finest Dutch crop madder in a bag of fine and strong calico, large enough to hold three or four times as much. Put it into a large marble or porcelain mortar, and pour on it a pint of clear soft water, cold. Press the bag in every direction, and pound and rub it about with a pestle, as much as can be done without tearing it, and, when the water is loaded with color, pour it off. Repeat this process till the water comes off but slightly tinged, for which about five pints will be sufficient. Heat all the liquor in an earthen or silver vessel, till it is near boiling, and then pour it into a large basin, into which a troy ounce of alum dissolved in a pint of boiling soft water has been previously put. Stir the mixture together, and, while stir-

ring, pour in gently about an ounce and a half of a saturated solution of subcarbonate of potassa. Let it stand till cold to settle; pour off the clear yellow liquor; add to the precipitate a quart of boiling soft water, stirring it well; and, when cold, separate by filtration the lake, which should weigh half an ounce. If less alum be employed, the color will be somewhat deeper; with less than three-fourths of an ounce, the whole of the coloring matter will not unite with the alumina.

Almost all vegetable coloring matters may be precipitated into lakes, more or less beautiful, by means of alum or oxide of tin. For instance of turmerica fine lake may be thus made:—Take a pound of turmeric root in fine powder, three pints of water, and an ounce of salt of tartar; put all into a glazed earthen vessel, and let them boil together over a clear gentle fire, till the water appears highly impregnated with the root, and will stain a paper to a beautiful yellow. Filter this liquor, and gradually add to it a strong solution of rock alum in water, till the yellow matter is all curdled together and precipitated; after this pour the whole into a filter of paper, and the water will run off and leave the yellow matter behind. It is to be washed many times with fresh water, till the water comes off insipid, and then is obtained the beautiful yellow called lake of turmeric, and used in painting. In this manner may a lake be made of any of the tinging substances that are of a strong texture, as madder, logwood, &c. A yellow lake for painting is made from broom flowers thus:—Make a lie of potassa and lime pretty strong; in this boil, at a gentle fire, fresh broom flowers till they are white, the lie having extracted all their color; then take out the flowers, and put the lie to boil in earthen vessels over the fire; add as much alum as the liquor will dissolve; then empty this lie into a vessel of clean water, and it will give a yellow color at the bottom. Let all settle, and decant off the clear liquor. Wash the powder found at the bottom with more water, till all the salts of the lie are washed off; then separate the yellow matter, and dry it in the shade. It proves a very valuable yellow. A beautiful lake may be prepared from Brasil wood, by boiling three pounds of it for an hour in a solution of three pounds of common salt in three gallons of water, and filtering the hot fluid through the paper; add to this a solution of five pounds of alum in three gallons of water. Dissolve three pounds of the best pearl ashes in a gallon and a half of water, and purify it by filtering; put this gradually to the other, till the whole of the color appear to be precipitated, and the fluid be left clear and colorless. But if any appearance of purple be seen, add a fresh quantity of the solution of alum by degrees, till a scarlet hue be produced. Then pursue the directions given in the first process with regard to the sediment. If half a pound of seed-lac be added to the solution of pearl-ashes, and dissolved in it before its purification by the filter, and two pounds of the wood, and a proportional quantity of the common salt and water be used in the colored solution, a lake will be produced that will stand well in oil or water, but is not so transparent in oil as without

the seed-lac. The lake with Brasil wood may be also made by adding half an ounce of anotto to each pound of the wood; but the anotto must be dissolved in the solution of pearl-ashes. There is a kind of beautiful lake brought from China; but as it does not mix well with either water or oil, though it dissolves entirely in spirit of wine, it is of no use in our painting. This has been erroneously called safflower. Orange Lake is the tinging part of anotto precipitated together with the earth of alum. This pigment, which is of a bright orange color, and fit for varnish painting, and also for putting under crystal to imitate the vinegar garnet, may be prepared by boiling four ounces of the best anotto and one pound of pearl-ashes half an hour in a gallon of water, and straining the solution through paper. Mix gradually with this solution a pound and a half of alum in another gallon of water; desisting when ebullition ceases. Treat the sediment in the manner already directed for other kinds of lake, and dry it in square or round lozenges.

LAKTHO, or LACTHO, a province of the interior of India, beyond the Ganges, tributary to Cochin China. It is bounded on the south by Laos, on the north and east by Tungquin, and on the west by China. It has never been explored by any European.

Laktho is described by the Tungquinese as throughout mountainous, rocky, covered with jungle, and destitute of navigable rivers; the air, it is added, is pestilential to the constitutions of strangers, and the water extremely unwholesome. But the climate is cooler than Tungquin. Between Tungquin and Laktho travellers are obliged to traverse for three or four days a wild uninhabited tract, and in the interior of the latter country the population is dispersed in small and savage communities, whose dialects are unintelligible to each other. They are governed by hereditary chiefs, who are engaged in perpetual hostilities.

Salt fish, oil, and some silk stuffs for the chiefs, are imported from Tungquin; the exports are chiefly buffaloes and cotton. There is no coin current here except what is procured from Tungquin, the general traffic being carried on by barter, in which buffaloes are the medium of exchange. But in some parts shells, or cowries, are used in dealing for articles of little value. The Tungquinese speak of several extraordinary natural caverns, which are found here. One is said to be a mile across.

LALAND, or LAALAND, an island of Denmark, at the entrance of the Baltic, the third of the Danish islands in size, is eleven leagues long, and six to three broad, containing 240 square miles, and 40,000 inhabitants. It is so low, that considerable portions of its coasts are inundated during the elevations of the sea, and the climate is not considered healthy; it is, however, so fertile, that it is said to produce as much wheat, rye, barley, oats, peas, beans, lentils, hops, and flax, as all the other islands together. It has besides considerable forests of oaks, whose acorns feed vast herds of swine, and produces a great quantity of pearl herb. It is also much frequented by aquatic birds, whose feathers

afford a profitable export. It has five towns, viz. Naskow, the chief place, on the west, 1500 inhabitants; Saxekøbing on the north, Nysted on the south-east, Rodby on the south, and Mariabø on a lake in the centre of the island.

LALANDE, a celebrated astronomer, born in France about the middle of the last century. Before the age of twenty-five he was admitted into almost all the learned academies of the world, and pensioned by the principal monarchs of the continent. He travelled through nearly all the states of Europe, and was every where received with demonstrations of the most enthusiastic respect, not only by the learned of every description, but by all who were most distinguished in rank or fortune. In Italy he was overwhelmed with attentions by Clement XIII., and pursued, from the remotest extremities of that country, by its most distinguished ornaments. He found his bust in most of the observatories of Germany. His reception in England was also of the most flattering kind. His works embrace more than sixty ponderous volumes, and correspond, by their learning and utility, to the high reputation which he enjoyed. Lalande, if not the most profound and original, was certainly one of the most learned astronomers France ever produced. But he was remarkable for egregious vanity, and for the broadest eccentricities of character. By a singular perversion of intellect, he became a professed atheist about the commencement of the revolution, pronounced in the year 1793, in the Pantheon, a discourse against the existence of a God, with the bonnet rouge upon his head, and displayed on this subject the most absolute insanity during the rest of his life. This monstrous infatuation betrayed him into the most whimsical acts of extravagance; and particularly into the publication of a Dictionary of Atheists, in which he enregistered not only many of 'the illustrious dead,' but a great number of his contemporaries, and among these some of the principal dignitaries of the empire. This circumstance led to the following occurrence in the Institute:—At an extraordinary sitting of all the classes convoked for the purpose, when Lalande was present, a letter from the emperor was announced, and read aloud, in which it declared that M. de Lalande had fallen into a state of dotage, and was forbidden to publish thereafter any thing under his own name. The old astronomer rose very solemnly, bowed low, and replied, that he would certainly obey the orders of his majesty. His atheistical absurdities deserved, no doubt, to be repressed, but, besides the singularity of this form of interdiction, there was an unnecessary degree of severity in it, as the end might have been attained without so public a humiliation. Lalande had the misfortune of living to see a maxim verified in his own regard, which has been exemplified in every age and country,—that some disciples may become superior to their masters. But he was, nevertheless, at all times among the luminaries of science, and to him astronomy was indebted for more substantial and unremitted services, than to any one of his contemporaries. He died, we believe, in Paris in 1810.

LALLY (Thomas Arthur, count), a native of Ireland, who attached himself to the house of Stuart, and entered into the French service. He distinguished himself at the battle of Fontenoy, and became appointed brigadier-general. In 1756 he was made governor of Pondicherry, which he was compelled to surrender to the English, when public clamor ran so high against him that he was beheaded by a most unjust sentence in 1766. His son, M. Lally de Tollendal, obtained the restoration of the estates of his father, and a reversal of the proceedings against him.

LALUZERNE (Cæsar William de), cardinal, was descended of an ancient Norman family, and born at Paris in 1738. He studied in the seminary of St. Magloire, and the house of Navarre, and obtained orders in 1762. In 1765 he was elected agent-general of the French clergy. In 1770 Louis XV. nominated him to the ducal episcopal see of Langres; and in 1773 he pronounced his majesty's funeral oration. In 1788 he became a deputy of the clergy to the states-general, and was one of the first who proposed the establishment in France of a representative system. He was president of the constituent assembly on the 31st of August 1789; but soon after emigrated to Switzerland, whence he removed to Italy. In 1802 he published a pastoral letter, announcing his submission to Napoleon's concordat; and, on the return of the Bourbons, was invited to re-assume his rank of duke, soon after which he was made a cardinal. He died at Paris in 1822. His works are numerous, and include *Dissertation sur la liberté de l'homme*. *Sur l'Existence et les Attributs de Dieu*. *Instructions Pastorales sur le Schisme de France*, 1808, 2 vols. 12mo. *Dissertation sur les Eglises Catholiques-Protestantes*, 1816, 2 vols. 12mo. *Dissertation sur la Verité de la Religion*, 2 vols. 12mo. *Sur la Différence de la Constitution Française de la Constitution Anglaise*, 1816, 8vo. *Sur la Responsabilité des Ministres*, 1816, 8vo.

LAMA, the sovereign pontiff, or rather god, of the Asiatic Tartary. The lama is not only adored by the inhabitants of the country, but also by the kings of Tartary, who send him rich presents, and go in pilgrimage to pay him adoration, calling him *lama congiu*, i. e. god, the everlasting father of heaven. He is never to be seen but in a secret place in his palace, amidst a great number of lamps, sitting cross-legged on a cushion, and adorned with gold and precious stones. They prostrate themselves before him at a distance, it not being lawful for any to kiss even his feet. He is called the great lama, or lama of lamas; that is, priest of priests. The orthodox opinion is, that when the grand lama seems to die, either of old age or infirmity, his soul in fact only quits a crazy habitation to look for another younger or better; and it is discovered again in the body of some child, by certain tokens known only to the lamas or priests, in which order he always appears. A particular account of the pompous ceremonies attending the inauguration of the infant lama in Thibet is given in the first volume of the Asiatic Researches.

LAMA, in zoology. See **CAMELUS**

LAMALMON, a mountain of Abyssinia, in the ridge called Samen, by some supposed to be the highest in that empire, situated on the road to Gondar. It stands on the north-west part of the mountains of Samen, and is higher than those of Tigre; but Mr. Bruce reckons it inferior to those on the south-east. The very highest part of the mountain, which from below appears to be sharp-pointed, is a large plain, full of springs, which are the sources of most of the rivers in this part of Abyssinia. The villages of this mountain are occupied by some of the most ancient Abyssinian tribes.

LAMARQUE, Maximilian, a French general, born in the year 1772, and entered the army as a private soldier, at an early age. His ability and spirit soon elevated him to the rank of captain of grenadiers, and when he reached the age of twenty years, he was adjutant-general. He was distinguished in the wars of the Republic. Austerlitz, Tyrol, Naples, Wigram, witnessed his brilliant actions, and Italy and Spain were also theatres of his celebrity. Upon the return of Napoleon from Elba, Lamarque was appointed to the command of Paris, and general-in-chief of the army of La Vendée. The Bourbons proscribed this brave officer, but the integrity of his character obtained for him a permission to return to his country in 1818, when he employed himself wholly in literary pursuits. He published an Essay on the Necessity of a Standing Army, wrote for some of the public journals, and was returned to the chamber of deputies in 1826. The death of this upright and brave man either excited the dormant embers of genuine republicanism in the Parisians, or was seized by the discontented as an advantageous moment to excite confusion, and in the tumultuous proceedings that occurred five hundred of the rioters are supposed to have been killed by the military. He died on the first day of June, 1832.

LAMARTIERE, COUNT DE, a French general of artillery, who lived through the Revolution, commenced his career as a sub-lieutenant in 1757. Having served with distinction in the seven years' war, he was employed in the island of Guadaloupe, and published several tracts on artillery, which procured him great reputation. He was made colonel in 1789, and contributed much to the success of various important operations in the revolutionary wars. In 1795 he was employed, with the rank of general of division, in the army of the Rhine and Moselle, and in January 1802 was called to the senate, and nominated a grand officer of the legion of honour. In 1814 Louis XVIII. made him a peer of France, and a member of the council for the improvement of the Polytechnic school. He died in 1819.

LAMB, *n. s.*

LAMB'KIN,

LAMB'ATIVE, *adj. & n. s.*

LAMB'S WOOL

the young of a sheep: lambkin, is a little lamb: lambative, as an adjective, is taken by licking; as a substantive, a medicine of this sort: Shakspeare uses lamb's-wool for ale mixed with the pulp of roasted apples (Sax. *lomp ol*, soft ale).

Clean as young *lambkins*, or the goose's down,
And like the goldfinch in her Sunday gown. *Gay.*

The *lamb* thy riot dooms to bleed to-day,
Had he thy knowledge, would he skip and play? *Pope.*

In affections both of lungs and weazon, physicians make use of syrups, and *lambative* medicines.

Browne.

I stitched up the wound, and let him blood in the arm, advising a *lambative*, to be taken as necessity should require. *Wiseman's Surgery.*

LAMB, in zoology. See OVIS. A male lamb of the first year is called a wedder hog, and the female a ewe hog; in the second year it is called a wedder, and the female a theave. The best season for weaning them is at sixteen or eighteen weeks old; and about Michaelmas the males should be separated from the females, and such males as are not designed for rams, gelded.

LAMB (Sir James Bland Burges, D. C. L.) bart., an ingenious English writer in general literature, was the son of George Burges, esq., an officer of the army, holding the situation of comptroller-general of the customs in Scotland. Our author was born at Gibraltar June 8th, 1752, and educated at Westminster school, and University College, Oxford. On quitting the University he made a tour of Europe; and on his return entered of Lincoln's Inn, by which society he was called to the bar in 1777. He had early in life contracted an acquaintance with Mr. Pitt, which induced him to embark in politics, and in 1787 he took his seat in the house of commons, as member for Helston in Cornwall. Two years after he was appointed to one of the under secretaryships in the foreign office, and in 1794 made joint commissioner of the privy seal. About this period he assisted in establishing the Sun newspaper. In 1795 he retired from office, and obtained a baronet's patent. In 1821 he obtained permission to assume the name of Lamb. His writings are, Considerations on the Law of Insolvency, 1783, 8vo., and a Letter to the earl of Effingham on the same subject; an Address to the Country Gentlemen of England on County Courts, 8vo., 1789; Letters on the Spanish Aggression at Nootka, published under the signature Verus, in 1790; the Birth and Triumph of Love, 4to., 1796: a poem written to illustrate a series of designs by the princess Elizabeth; an Epic Poem, in eighteen books, on the History and Achievements of Richard Cœur de Lion, 8vo. 2 vols. 1801; The Exodiad, a sacred epic, written in conjunction with Cumberland, 4to., 1807, 1808; Riches, a play, altered from Massinger's City Madam, 1810, reprinted afterwards with other dramatic works, in 2 vols. 8vo.; and The Dragon Knight, a romance. At the close of his life he turned his attention to the study of divinity, and published, in 1819, Reasons for a New Translation of the Bible, apparently suggested by that respectable critic Mr. John Bellamy. They largely quote his Literal Translation of the Old Testament; and are altogether unworthy Sir James Lamb's previous fame.

LAMBALLE (Maria Therese Louise de Savoie Carignan, princesse de), born at Turin, September 8th, 1749, was married to the duke

of Bourron Penthièvre, whom she soon lost by death, in the flower of her youth. She was superintendant of the household of Marie Antoinette, queen of France, with whom she became a great favorite; and mournfully remarkable for her attachment to that unhappy princess. On the flight of the royal family to Varennes, madame de Lamballe proceeded to Dieppe and reached England; but, hearing of the queen's imprisonment, she returned to France to share the prison of the Temple with her, where she continued till the commune of Paris ordered her removal to that of La Force. On the 3d of September, 1792, she was summoned to appear before her iniquitous judges; and, on being interrogated as to her connexion with the queen, answered, 'I have nothing to say. It is indifferent to me whether I die sooner or later: I am prepared for the worst.' Several voices demanded her life amidst faint expressions of pity, but violence prevailed, and, being stabbed on the spot with sabres, she was dragged through a heap of mangled bodies, and murdered with circumstances of disgusting cruelty. See ANTOINETTE.

LAMBAYEQUE, a town in the intendency of Truxillo, Peru. It has an elegant stone church, and the river Lambayeque runs through it, and fertilises the environs. Some wine is made here, and coarse cottons. The road to Lima passes through Lambayeque. Population 8000, consisting of Spaniards, Mestizoes, and Indians. Ninety-five miles W. N. W. of Truxillo.

LAM'BENT, *adj.* Lat. *lambens*. Playing about; gliding over without harm.

LAMBETH, a parish of England, in the county of Surrey. It contains a population exceeding 80,000 souls, and was created a borough by the reform bill of 1832, with the privilege of sending two members to parliament. Here is the palace of the archbishop of Canterbury. See LONDON and SURREY.

LAMBERT, a Benedictine monk of Aschaffenburg, in the eleventh century, who wrote several works, among which is a History of Germany from 1050 to 1077, which is esteemed.

LAMBERT (John), general of the parliamentary forces during the civil wars of the seventeenth century. He was of a good family, and for some time studied the law; but, upon the breaking out of the civil war, espoused the cause of the parliament, and soon rose to the rank of colonel. When Cromwell seemed inclined to assume the title of king, Lambert opposed it with great vigor, and even refused to take the oath required by the assembly and council, to be faithful to the government; on which the protector deprived him of his commission, but granted him a pension of £2000 a year. Lambert then retired to Wimbleton House, where he turned florist, but amidst these rural amusements he still nourished his ambition; for, when Richard Cromwell succeeded, he acted so effectually with Fleetwood, Desborough, Vane, Berry, &c., that the new protector was obliged to surrender his authority; and the members of the long parliament dismissed by Oliver, on the 20th of April, 1653,

were restored to their seats. Lambert was now appointed one of the council of state, and colonel of a regiment of horse and foot. For this service the parliament presented him with £1000, but he distributed it among his officers. The parliament concluded that he intended to secure a party in the army: they therefore courteously invited him to London, resolving as soon as he should arrive to secure him. Apprehensive of this, Lambert delayed his return, refused to resign his commission when it was demanded of him, and, marching up to London with his army, dislodged the parliament by force in October 1659. He was then appointed, by a council of the officers, major-general of the army, and one of the new council for the management of public affairs; and sent to command the forces in the north. But general Monk marching from Scotland into England to support the parliament, against which Lambert had acted with violence; the latter, being deserted by his army, was obliged to submit, and was committed prisoner to the tower. Escaping thence, however, he soon appeared in arms, with four troops under his command, but was defeated and taken prisoner by colonel Ingoldsby. At the Restoration he was excepted out of the act of indemnity: being brought to his trial on the 4th of June, 1662, he behaved with great submission; was reprieved at the bar, and confined for life in the island of Guernsey.

LAMBERTI (Lewis), a learned modern Greek scholar, was born at Reggio in Lombardy in 1758, and studied jurisprudence at Modena. He then became secretary to the papal nuncio at Bologna, went to Rome, and was introduced to the Borghese family, to whom he recommended himself by a work which he composed on the antiquities of the villa of the family. When the effects of the French revolution threatened Italy, Lamberti returned to Reggio and Milan; and in 1796 aided Buonaparte in establishing a national republic. He had afterwards a place in the executive directory of the Cisalpine republic. Lamberti was also a member of the Italian Institute, professor of the belles lettres at the college of Brera, and keeper of the public library. His most important work was an edition of Homer, in Greek, printed in folio by Bodoni at Parma. He went to Paris to present a copy of this production on vellum to Buonaparte, who made him a present of 12,000 francs. Among his original works are Italian poems, a volume of translations from the Greek poets, &c. He died in 1813.

LAMBTON (William), an English officer of distinguished science, was for more than twenty years a lieutenant-colonel in India, where he conducted a grand trigonometrical survey of that continent. He died January 20th, 1823, at Kingin Ghaut, fifty miles south of Nagpou, having enriched the Transactions of the Royal and Asiatic Societies with numerous and important papers.

LAMBDAL, *n. s.* Gr. *λὰμδα* and *ἕδος*, form. Having the form of the letter lambda or Λ.

The course of the longitudinal sinus down through the middle of it, makes it advisable to trepan at the

lower part of the os parietale or at least upon the lamboidal suture.

Sharp's Surgery.

LAME, *adj.* & *v. a.* } Sax., Goth., Belg.,
LAMELY, *adv.* } and Swed. lam Crip-
LAMENESS, *n. s.* } pled; weak; hobbling;
hence, imperfect; unsatisfactory; deficient: as
a verb, to cripple; make lame or weak.

And Peter and Joon wenten up into the temple at the nynthe our of preying; and a man that was lame from the wombe of moder was borun, and was leed ech dai at the ghate of the temple that is seid fair.

Wiclif. Acts iii.

I never heard of such another encounter, which lames report to follow it, and undoes description to do it.

Shakspeare.

Shrubs are formed into sundry shapes, by moulding them within, and cutting them without; but they are but lame things, being too small to keep figure.

Bacon.

Who reproves the lame, must go upright.

Daniel.

The son and heir

Affronted once a cock of noble kind,

And either lamed his legs, or struck him blind.

Dryden.

Our authors write,

Whether in prose, or verse, 'tis all the same;

The prose is fustian, and the numbers lame. *Id.*

Let blindness, lameness, come; are legs and eyes Of equal value to so great a prize? *Id. Juvenal.*

If the story move, or the actor help the lameness of it with his performance, either of these are sufficient to effect a present liking. *Id. Spanish Fryar.*

Look not ev'ry lineament to see;

Some will be cast in shades, and some will be

So lamely drawn, you scarcely know 'tis she.

Dryden.

A greyhound, of a mouse colour, lame of one leg, belongs to a lady.

Arbutnot and Pope.

Those muscles become callous, and, having yielded to the extension, the patient makes shift to go upon 't, though lamely.

Wiseman's Surgery.

Lameness kept me at home. *Digby to Pope.*

If you happen to let the child fall, and lame i, never confess.

Swift.

Swift, who could neither fly nor hide,

Came sneaking to the chariot-side;

And offered many a lame excuse,

He never meant the least abuse.

Id.

Should a barbarous Indian, who had never seen a palace or a ship, view the separated and disjointed parts, he would be able to form but a very lame and dark idea of either of those excellent and useful inventions.

Watts.

LAMECH, in scripture biography, the son of Methusael, of the race of Cain, the fifth in descent from him. He married two wives, Adah and Zillah, and is supposed to have introduced polygamy. To his wives he said, 'Hear my voice, ye wives of Lamech: for I have slain a man to my wounding, and a young man to my hurt: if Cain shall be avenged seven-fold, surely Lamech seventy and seven-fold.' Gen. iv. 24, 25. These words have perplexed biblical critics. Some interpretations have been given of this passage, which, as they are founded on mere fables, are not worthy of recital. Onkelos, who wrote the first Chaldee paraphrase on the Pentateuch, reads the words with an interrogation: 'Have I slain a man to my wounding, and a young man to my hurt?' and accordingly he paraphrases it thus: 'I have not killed a man, that I should bear the sin of it; nor have I destroyed a young

man, that my offspring should be cut off for it.' Dr. Shuckford supposes that Lamech was endeavouring to reason his wives and family out of their fear of having the death of Abel revenged upon them, who were of the posterity of Cain. As if he had said, 'what have we done, that we should be afraid? We have not killed a man, nor offered any injury to our brethren of any other family; and if God would not allow Cain to be killed, who had murdered his brother, but threatened to take seven-fold vengeance on any that should kill him, doubtless they must expect much greater punishment, who should presume to kill any of us. Therefore we may surely look upon ourselves as safe under the protection of the law and of the providence of God.'

LAMEGO, a town of the province of Beira, Portugal, on the river Balsamao. It is a bishop's see, and celebrated as the place where the states-general of Portugal entered into a confederation in 1143, confirming the election of Alphonso I. Population 6600. Forty-six miles east of Oporto.

LAMELLA. Lat. A plate.

LAM'ELLATED, *adj.* Covered with films or plates.

The lamellated antennæ of some insects are surprisingly beautiful, when viewed through a microscope. *Derham.*

Talc has a plated texture, the lamella being easily separated from each other.

Parkes's Chemical Catechism.

LAMENT', *v. n., v. a., &*

Fr. *lamentar*;

LAM'ENTABLE, *adj.* [*n. s.*]

Ital. *lamentare*;

LAM'ENTABLY, *adv.*

Port. and Span.

LAMENTATION, *n. s.*

lamentar;

LAMEN'TER.

Lat. *lamentor*.

To mourn; wail; grieve: to bemoan; to express sorrow or regret for: as a substantive, expressing sorrow; lamentation: lamentable, to be lamented; causing, or expressing sorrow; miserable: the other compounds follow these senses.

Jeremiah lamented for Josiah, and all the singing-men and women spake of Josiah in their lamentations. *2 Chron.*

Ye shall weep and lament, but the world shall rejoice. *John.*

His sons buried him, and all Israel made great lamentation for him. *1 Mac. ii. 10.*

The night has been unruly where we lay; And chimney-vents were blown down: and, as they say, Lamentings heard i' the air, strange screams of death. *Shakspeare.*

As you are weary of this weight, Rest you, while I lament king Henry's corse. *Id.*

To add to your laments, Wherewith you now bedew king Henry's hearse, I must inform you of a dismal fight. *Id.*

The lamentable change is from the best; The worst returns to laughter. *Id.*

Our fortune on the sea is out of breath, And sinks most lamentably. *Id. Antony and Cleopatra.*

Be't lawful that I invoke thy ghost, To hear the lamentations of poor Anne. *Id. Richard III.*

Far less I now lament for one whole world Of wicked sons destroyed, than I rejoice For one man found so perfect and so just, That God vouchsafes to raise another world From him. *Milton.*

We, long ere o'er approaching, heard within
Noise, other than the sound of dance, or song!
Torment, and loud *lament*, and furious rage.

Milton.

Not until the earth was become no tolerable habitation but a theatre of *lamentable* tragedies, a seat of horrid iniquity, a sink of loathsome impurity!

Barrow.

A *lamentable* tune is the sweetest musick to a woe-ful mind.

Sidney.

The matter in itself *lamentable*, *lamentably* expressed by the old prince, greatly moved the two princes to compassion.

Id.

This bishop, to make out the disparity between the heathens and them, flies to this *lamentable* refuge.

Stillingfleet.

The loud *laments* arise

Of one distressed, and mastiff's mingled cries.

Dryden.

The pair of sages praise;

One pitied, one condemned the woful times,

One laughed at follies, one *lamented* crimes. *Id.*

The victors to their vessels bear the prize,
And hear behind loud groans, and *lamentable* cries.

Id.

Such a complaint good company must pity,
whether they think the *lamenting* ill or not.

Spectator.

It is a most *lamentable* thing, that there should be a dispute raised upon a man's saying another is what he plainly takes pains to be thought.

Steele.

We gaze around;

We read their monuments, we sigh; and while

We sigh we sink; and are what we deplored:

Lamenting or *lamented* all our lot! *Young.*

But he, who through life's dreary way

Must pass when heaven is veiled in wrath,

Will long *lament* the vanished ray

That scattered gladness o'er his path.

Byron.

The good old gentleman was quite aghast,

And made a loud and pious *lamentation*;

Repented all his sins, and made a last

Irrevocable vow of reformation. *Id.*

LAMENTATIONS, a canonical book of the Old Testament, written by the prophet Jeremiah, on occasion of Josiah's death, according to archbishop Usher and some other learned men, who follow the opinion of Josephus and St. Jerome. But as this opinion does not agree with the subject of the book, the lamentation composed by Jeremiah on that occasion is probably lost. The first two chapters are employed in describing the calamities of the siege of Jerusalem: in the third the author deploras the persecutions he himself had suffered: the fourth treats of the desolation of the city and temple, and the misfortune of Zedekiah: the fifth is a prayer for the Jews in their dispersion and captivity: and at the close of all he speaks of the cruelty of the Edomites, who had insulted Jerusalem in her misery. All the chapters in this book, except the last, are in verse, and digested in the order of the alphabet; with this difference, that in the first, second, and fourth chapters, the first letter of every verse follows the order of the alphabet; but in the third the same initial letter is continued for three verses together. The style is lively, pathetic, and affecting. In this kind of writing the prophet Jeremiah was a great master, according to the character which Grotius gives of him, *Mirus in affectibus concitandis*.

LAMIA, in ancient geography, a town of Thessaly, in the district of Phthiotis, famous for the bellum Lamiacum, waged by the Greeks against the Macedonians after Alexander's death.

LAMIACUM BELLUM, the Lamian war, happened after the death of Alexander, when the Greeks, particularly the Athenians, incited by their orators, resolved to free Greece from the Macedonian garrisons. Leosthenes was appointed commander of a numerous force, and marched against Antipater, who then presided over Macedonia. Antipater entered Thessaly at the head of 13,000 foot and 600 horse, and was beaten by the superior force of the confederates. Antipater after this blow fled to Lamia, where he resolved to maintain a siege with about 8000 or 9000 men that had escaped from the battle. Leosthenes, unable to take the city by storm, began to make a regular siege. His operations were disturbed by the frequent sallies of Antipater: and, being soon after killed by a stone, Antipater made his escape out of Lamia, and, with the assistance of Craterus's army from Asia, gave the Athenians battle near Cranon; who, though only 500 of their men were slain, became so dispirited, that they sued for peace. Antipater consented, provided they would raise taxes in the usual manner, receive a Macedonian garrison, defray the expenses of the war, and deliver into his hands Demosthenes and Hyperides, the orators whose eloquence had excited their countrymen against him. These disadvantageous terms were accepted by the Athenians, but Demosthenes escaped and poisoned himself. Hyperides was carried before Antipater, who ordered his tongue to be cut out, and afterwards had him put to death.

LAMIE, in pagan mythology, a sort of demons, who were supposed to devour children. Their form was human, resembling beautiful women. Horace mentions them in his Art of Poetry. They are also called Larvæ and Lemures.

LAM'INA, *n. s.* } Lat. Thin plate; one
LAM'INATED, *adj.* } coat laid over another:
plated: used of bodies whose contexture is in layers, or plates lying over one another.

From the apposition of different coloured gravel arises, for the most part, the *laminated* appearance of a stone. *Sharp.*

These rocks, however, instead of being disposed in *laminae* or strata, form basaltic or angular columns, so closely attached to each other, that, though perfectly distinct from top to bottom, scarcely any thing can be introduced between them.

Parkes's Chemical Catechism.

LAMINITANUS AGER, in ancient geography, a territory of the Carpetani, in Hispania Citerior, now called Campo de Montiel.

LAMINIUM, a town of the Carpetani, in the above territory, seven miles from the head of the Anas, or Guadiana; now called Montiel, a citadel of New Castile.—Clusius.

LAMIUM, dead nettle, in botany; a genus of the gymnospermia order, and didynamia class of plants: natural order forty-second, verticillatæ: cor. upper lip entire, arched, the under lip bilobous; the throat with a bent or tooth on each side the margin. There are several species

L. album, white archangel, or dead-nettle, grows frequently under hedges, and in waste places. The flowers, which appear in April and May, have been particularly celebrated in uterine fluors and other female weaknesses; also in disorders of the lungs; but they appear to be of very weak virtue; and have now no place in our pharmacopœia.

2. *L. purpureum*, red archangel, is very common in corn fields and gardens. The young leaves of both species are boiled and eaten in some places like greens.

LAMP' MAS. Sax. hlāfmas. Of Goth. *lama*, contribution, says Mr. Thomson. But see the extract from Brand's Antiquities.

In 1578 was that famous *lammus aay*, which buried the reputation of Don John of Austria.

Bacon.

Some suppose it is called *Lammass-day*, quasi Lamb-Masse, because on that day the tenants that held lands of the Cathedral Church in York, were bound by their tenure to bring a live lamb into the church at high mass on that day.

Brand's Antiquities.

LAMOIGNON (Christian Francis de), marquis of Baviile, and president of the parliament of Paris, was born in 1644, and educated by his father. He studied rhetoric in the Jesuits' college, and afterwards made the tour of England and Holland. Literature, however, was only his amusement; the law was his profession, and the eloquence of the bar at Paris owes its reformation from bombast and affected erudition, to the plain and judicious pleadings of M. Lamoignon. He was appointed king's advocate-general in 1673; which he discharged until 1698, when the presidentship of the parliament was conferred on him. This post he held nine years, when he was allowed to resign in favor of his eldest son: he was chosen president of the royal academy of inscriptions in 1705. The only work he suffered to see the light was his *Pleader*, which is a monument of his learning and eloquence. He died in 1709.

LAMP, n. s. Sax. *leoma*, flame; Fr. *lampe*; **LAMP'ASS,** } Lat. *lampas*; Gr. *λαμπας*. A
LAMP'BLACK, } light made of oil or spirits; the
LAMP'ING. } instrument of such artificial light: lampass, a fleshy excrescence in a horse's mouth, so called, according to Minsheu, because burned or seared away with a lamp: lamp-black, the soot of lamps: lamping, shining; brilliant.

Thy word is a *lamp* unto my feet, and a light unto my path.

Psalms.

Happy lines, on which with starry light
Those *lamping* eyes will deign sometimes to look.

Spenser.

Marry, sir, she's the kitchen wench, and all grease; and I know not what use to put her to, but to make a *lamp* of her, and run from her by her own light. I warrant her rags, and the tallow in them, will burn a Poland winter: if she lives till dooms-day, she'll burn a week longer than the whole world.

Shakspeare.

His horse possess with the glanders, troubled with the *lampass*, infected with the fashions.

Id.

O thievish night,
Why should'st thou, but for some felonious end,
In thy dark lanthorn thus close up the stars
That nature lung in heaven, and filled their *lamps*

With everlasting oil, to give due light
To the misled and lonely traveller?

Milton.

Thy gentle eyes send forth a quickening spirit,
And feed the dying *lamp* of life within me.

Rowe.

Cynthia, fair regent of the night,
O may thy silver *lamp* from heaven's high power,
Direct my footsteps in the midnight hour.

Gay.

In *lamp* furnaces I used spirit of wine instead of oil, and the same flame has melted foliated gold.

Boyle.

You with light gas the *lamps* nocturnal feed,
Which dance and glimmer o'er the marshy mead.

Darwin.

Lamp-black is the soot of oil, collected after it is formed by burning.

Imeson's Elements.

To keep the *lamp* alive

With oil we fill the bowl;

'Tis water makes the willow thrive,

And grace that feeds the soul.

Cowper.

As, in far realms, where eastern kings are laid,
In pomp of death, beneath the cypress shade,
The perfumed *lamp* with unextinguished light
Flames through the vault, and cheers the gloom of night:—

So mighty Burke! in thy sepulchral urn,
To fancy's view, the *lamp* of truth shall burn;
Thither late times shall turn their reverent eyes,
Led by thy light, and by thy wisdom wise.

Canning.

LAMPS. The mode of producing artificial illumination by means of carbonated hydrogen gas, has already been pretty fully discussed under the head of **GAS LIGHT**; and we must in the present instance confine ourselves to the more simple arrangements employed in domestic economy, by which gas is generated and light produced by means of a portable apparatus.

In the common lamp there are three circumstances which particularly demand our attention, the oil, the wick, and the supply of air. It is required that the oil should be perfectly inflammable, without containing any fetid substance, mucilage, or other matter, to obstruct the channels of the wick. The office of the wick appears to be chiefly, if not solely, to convey the oil by capillary attraction to the place of combustion. As the oil is consumed and flies off, other oil succeeds, and in this way a continued current of oil and maintenance of the flame are effected. It is certain that the flame afforded by a wick of rush differs very considerably from that afforded by cotton; though perhaps this difference may, in a great measure, depend on the relative dimensions of each. And, if we may judge from the different odor that results from extinguishing a candle of each sort, there is some reason to suspect that the decomposition of the oil is not effected precisely in the same manner in each. We have also some obscure accounts of prepared wicks for lamps, which are stated to possess the property of facilitating the combustion of very impure oils, so that they shall burn for many hours without smoke or smell.

In lamps of the most common structure the wick should not be elevated too high above the surface of the oil, for, in that case, the capillary action by which the oil rises between the filaments of the cotton will not be able to raise it to so great a height. If the wick is too little elevated, above the surface of the oil, there will not be a sufficient quantity of the oil converted into

the gas, whose combustion constitutes the flame, and the flame will be too small.

The access of air is of the first importance in every process of combustion. When a lamp is fitted up with a very slender wick, the flame is small, and of a brilliant white color: if the wick be larger, the combustion is less perfect, and the flame is brown: a still larger wick not only exhibits a brown flame, but the lower internal part appears dark, and is occupied by a portion of volatilised matter, which does not become ignited until it has ascended towards the point. When the wick is either very large or very long, part of this matter escapes combustion, and shows itself in the form of coal or smoke. The different intensity of the ignition of flame, according to the greater or less supply of air, is remarkably seen by placing a lamp with a small wick beneath a shade of glass not perfectly closed below, and more or less covered above. While the current of air through the glass shade is perfectly free, the flame is white; but, in proportion as the aperture above is diminished, the flame becomes brown, long, wavering, and smoky; it instantly recovers its original whiteness, when the opening is again enlarged. The inconvenience of a thick wick has been long since observed, and attempts made to remove it; in some instances by substituting a number of small wicks instead of a larger; and in others by making the wick flat, instead of cylindrical. The most scientific improvement of this kind, though perhaps less simple than the ordinary purposes of life demand, is the well-known lamp of Argand. In this the wick forms a hollow cylinder or tube, which slides over another tube of metal, so as to afford an adjustment with regard to its length. When this wick is lighted, the flame itself has the figure of a thin tube, to the inner as well as the outer surface of which the air has access from below. And a cylindrical shade of glass serves to keep the flame steady, and in a certain degree to accelerate the current of air. In this very ingenious apparatus many experiments may be made with the greatest facility. The inconvenience of a long wick, which supplies more oil than the volume of flame is capable of burning, and which consequently emits smoke, is seen at once by raising the wick; and, on the other hand, the effect of a short wick, which affords a diminutive flame merely for want of a sufficient supply of combustible matter, is observable by the contrary process.

The best form of the Argand lamp is that contrived by Mr. Quarrill, under the name of the *sinumbra*, or shadowless lamp. It is represented at fig. 1, plate LAMPS, from which it will be apparent that the oil reservoir is so shaped as to conform with the direction of right lines issuing from the brightest part of the flame, a portion of the light of which is thrown down by a small reflector upon the circular plate of ground glass which fills the lower part of the lamp, and which is surrounded by the oil vessel. The chimney of the lamp is constructed as usual, and the whole is surmounted by a ground-glass light-distributor, so formed as to do away all shadow from any portion of the lamp, and, at the same

time, not to offend the eye by any want of elegance in shape or dimension.

Light-houses are now generally lighted with Argand lamps; which have hollow cylindrical wicks placed before reflecting mirrors. Several of these lamps are fixed on a frame, and protected from the weather by glass windows. The lamps of light-houses are fed with oil, and in some places with pit-coal gas, as in a light-house near Trieste.

In many of the light houses on the British coast the frame on which the lamps are fixed is made to revolve by means of clock-work, so that to a spectator, situated in the circle of which the light-house is the centre, the light appears at its brightest at the end of a stated period of time, which is generally one or two minutes. The revolving of the light enables seamen to distinguish the light-house from the light of lime-kilns or other fires upon the coast. This distinction is of great importance, for shipwrecks have happened in consequence of mistaking the light of lime-kilns for the light of a light-house. The light is, in some light-houses, made of a red tinge, to distinguish it from some other light-house not far distant. The red color of the light is produced by placing windows of red glass before the lamps. Red is the only color that can be given to the light in this way. When stained glass of other colors is placed before the lamp, it is not found to produce a change in the color of light seen at a distance; the blue or green color of the glass becomes insensible when seen through a great body of air, which has itself a blue color.

The *flame* in a lamp never consumes the wick, till the wick is exposed to the air by the flame's falling downward; and from thence it may be inferred, that a way found out to keep the fuel, and consequently the flame, at the same height upon the wick, would make it last a long time. Many ways have been devised to arrive at this important desideratum, but it seems only possible to be done, in any degree of perfection, by reference to hydrostatic pressure. Thus, let a lamp be made two or three inches deep, with a pipe coming from the bottom almost as high as the top of the vessel; let it be filled so high with water, as to cover the whole of the pipe at the bottom, to the end that the oil may not get in at the pipe, and so be lost. Then let the oil be poured in, so as to fill the vessel almost to the surface, which must have a cover, pierced with as many holes as there are wicks designed. When the vessel is thus filled, and the wicks are lighted, if water falls in by drops at the pipes, it will always keep the oil at the same height, or very near; the weight of the water being to that of the oil as 20 $\frac{1}{2}$ to 19, which in two or three inches makes no great difference. If the water runs faster than the oil wastes, it will only run over at the top of the pipe, and what does not run over will come under the oil, and keep it at the same height.

In the lamp contrived by Mr. Kier, of Kentish Town, the oil is raised to the wick, and sustained by a column of a solution of salt in water. This liquid, being as we have already stated, of

a greater specific gravity, a column of it counterbalances a taller column of oil. The solution of salt is made of such a specific gravity, that it will support a column of oil four-thirds of its own height. This is nearly the specific gravity of the heaviest saline solution that is known to exist in any great body of natural water, namely, in the Dead Sea; the weight of the waters of this sea, of distilled water, and of oil, being in the relative proportions of 120, 100, 92. To convey an idea of this lamp, we may suppose a syphon with two upright branches, and the junction of the branches at the bottom. The shortest branch has a bulb at top. The longest branch has a bulb near its lower extremity. The shortest branch is filled with a solution of salt, whose upper surface is in the superior bulbs. The longer branch contains the oil, and in its upper extremity the wick is placed. In the lower bulb the surface of the oil rests upon the surface of the solution of salt.

The bulbs serve as reservoirs, prolonging the action of the machine; by means of the bulbs, and the greater specific gravity of the solution, it is effected, that the abstraction of a considerable quantity of oil by the combustion in the wick occasions but a small depression in the upper surface of the solution; the height of the sustaining column of solution will become shorter in proportion as the column of oil which it counterbalances is consumed; but this diminution of the height of the column of oil will be slow, and therefore the column of oil will for a considerable time be of sufficient length to reach the wick. Suppose an inverted syphon, of equal diameter throughout, the shorter leg of which contains a column of solution of salt, whose height is seventy-five, and this counterbalances a column of oil whose height is 100, in the longer leg; if now the column of oil in the longer leg be diminished in height by ten, the counterbalancing column of solution will diminish to 67·5, being 7·5 shorter than at first. But if the syphon, instead of being of equal diameter, has two dilatations or reservoirs, whose horizontal section is ten times the area of the tube of the syphon, one of the reservoirs being placed at the top of the short branch, so as to contain the upper surface of the solution of salt, and the other at the bottom of the long branch, so as to contain the surface where the oil rests upon the solution, then, if the same quantity of oil, as in the former example, is taken from the top of the longer leg of the syphon, the column of oil will only fall one-tenth of what it did in the undilated syphon of equal diameter, and the solution of salt will diminish one-tenth of what it did in the syphon of equal diameter.

The oil reservoir and the wick remain stationary, and do not descend as the oil is consumed. This descent takes place in two lamps now to be mentioned, because in these two lamps the oil reservoir swims in liquid that acts as a counterpoise.

In the lamp contrived by the Chevalier Edelcrantz, of Stockholm, the oil reservoir floats in mercury, and the column of oil is maintained at the requisite height by the counterpoise of a column of mercury; in proportion as the oil is

consumed, the oil reservoir and the wick which is connected with it sink.

The general structure of this lamp may be understood by conceiving a flask, with a long narrow neck, and enlarged at the under part. The flask is heavy enough to swim, when it is placed in mercury, with part of its under part immersed. The bottom of the flask is open. The flask, being placed in mercury, is made to float with its neck perpendicular. Oil is poured in at the neck till the flask is full. Then the surface of the mercury at the bottom of the flask and within the flask will be depressed by the weight of the column of oil that rests upon it, and the surface of the mercury on the outside of the bulb, or lower part of the flask, will stand higher than the surface of the mercury within the flask. The height which measures the difference of level of the two surfaces of mercury will be the height of a column of mercury of equal weight with the column of oil that is in the flask; and, as mercury is about $14\frac{1}{2}$ times the weight of oil, the difference of level of the two surfaces of mercury will be $\frac{10}{15}$ of the height of the oil in the flask. In proportion as oil is abstracted from the upper end of the tube, by the combustion in the wick, the height of the column of oil is thereby diminished, and the two surfaces of mercury will come nearer to each other, the flask sinking a little in the mercury. As the area of the horizontal section of the lower part of the flask is much greater than the area of the section of the neck, and as the specific gravities of mercury and oil are very different, it follows, that, to restore the equilibrium after the abstraction of a column of oil from the neck, the surface of the mercury within the lower part of the flask will rise by a much shorter column.

In the lamp invented by Mr. Barton, controller of his majesty's mint, a solution of salt in water is used as a counterpoise to the oil. The combination consists of a light flask, open at the bottom, floating in a solution of salt, so that, when oil is poured into the flask, the surface of the oil in the neck of the flask stands at a higher level than the surface of the saline solution in which the flask swims. The wick is at the upper end of the neck of the flask, and as the area of the horizontal section of the bulb or lower part of the flask is much greater, suppose twenty times greater, than the area of the section of the neck of the flask, it will happen, that when a column of oil an inch high is abstracted from the neck of the flask, the height of the rise of the surface of the solution in the bulb or lower part of the flask will be only $\frac{1}{20}$ of an inch.

At Paris, oil of rape-seed, and oil of poppy-seed, are clarified for the lamp by filtering through cotton, wool, and other processes. In the south of France and Italy the inferior kind of olive oil is used in lamps, and sometimes the oil of the plant called *arachis hypogana*, or earth-nut. In Italy, lamp-oil has been pressed from the stones of the grape. In Piedmont, walnut-oil is used for lamps. On the eastern and southern coasts of the Mediterranean, and in China, the inferior kind of oil of sesamum. In tropical countries, cocoa-nut oil, which in the temperature of heat of Britain, is solid and white like

tallow. It is burnt in lamps made of the shell of the cocoa-nut, and of bamboo. Much of the oil used in China is obtained by expression from the seeds of the tree called by botanists *camellia oleifera*, which is extensively cultivated for that purpose, as is the shrub called *croton sebiferum*, for the solid oil or tallow that the Chinese press from its fruit. Essential oils, extracted from plants by distillation, are too volatile, and, in consequence of their volatility, are too easily inflamed.

The lamp commonly used in rooms at Florence consists of a round reservoir, with four beaks projecting from as many opposite points of its circumference; through the middle of the reservoir a vertical stalk passes, and on this stalk the lamp may be raised or slid down. The stalk is fixed in a foot that rests on the table. The whole is made of brass.

A lamp which affords a faint light is made of a waxed wick, an inch long, passed through the centre of a thin round piece of cork, and of a piece of card placed above the cork. Some oil is placed on the surface of water in a glass tumbler, and the cork, with its wick, is laid upon the surface of the oil. This lamp, called a *veil-leuse*, is commonly used in Paris for burning in bedrooms during the night, as rush-lights are in London.

There is a very useful little lamp which is now much employed called the self-generating gas lamp. In this simple apparatus, a small cup is furnished with a tube capable of supplying as much oil as is required for combustion, and the capillary attraction, aided by a small addition of hydrostatic pressure, serves to raise the oil to the surface of the aperture. The best mode of lighting this lamp is to take a piece of small twine, and, having immersed one extremity in the oil, apply it when inflamed to the top of the tube. The moment that this is heated, sufficiently to decompose the oil, flame results. A section of the best form of this lamp is given at fig. 2.

The method of measuring the comparative intensities of light is one of the first requisites in an enquiry concerning the art of illumination. Two methods of considerable accuracy are described in the *Traité d'Optique* of Bouguer, of which an abridged account is given by Dr. Priestley in his *Optics*. The first of these two methods has been used by others since that time, and probably before, from its very obvious nature, but particularly count Rumford, who has given a description and drawings of an instrument called the photometer, in the *Philosophical Transactions* for 1794. The principle it is grounded upon is, that if two lights shine upon the same surface at equal obliquities, and an opaque body be interposed, the two shadows it will produce must differ in blackness or in intensity in the same degree. For the shadow formed by intercepting the greater light will be illuminated by the smaller light only, and reversely the other shadow will be illuminated by the greater light. That is to say, in short, the stronger light will be attended with the deeper shadow. But it is easy, by removing the greater light to a greater distance, to render the illumination it produces at the common surface,

equal to that afforded by the less. Experiments of this kind may be conveniently made by fastening a sheet of white paper against the wall of a room. The two lights or candles, intended to be compared, must then be placed so that the ray of light from each shall fall with nearly the same angle of incidence upon the middle of the paper. In this situation, if a book or other object be held to intercept part of the light which would have fallen on the paper, the two shadows may be made to appear as in fig. 3, where A represents the surface illuminated by one of the lights only; B, the surface illuminated by the other light; C the perfect shadow from which both lights are excluded. It will easily be understood that the lights about D and E, near the angle F, will fall with equal incidences when the double shadow is made to occupy the middle of the paper: and, consequently, if one or both of the lights be removed directly towards or from the paper, as the appearances may require, until the two shadows at E and D have the same intensity, the quantities of light emitted by each will be as the squares of the distances from the paper.

By experiments of this kind many useful particulars may be shown. Thus, for example, the light of a candle, which is so exceedingly brilliant when first snuffed, is very speedily diminished to one-half, and is usually not more than one-fifth, or one-sixth before the uneasiness of the eye induces us to snuff it. Whence it follows, that, if candles could be made so as not to require snuffing, the average quantity of light afforded by the same quantity of combustible matter would be more than doubled. In the same way, likewise, since the cost and duration of candles, and the consumption of oil in lamps, are easily ascertainable, it may be shown, whether more or less of light is obtained at the same expense during a given time, by burning a number of small candles instead of one of greater thickness.

It is almost unnecessary to describe a thing so universally known as a candle. This article is formed of a consistent oil, which envelops a porous wick of fibrous vegetable matter. The cylindrical form and dimensions of the oil are given either by casting it in a mould, or by repeatedly dipping the wick into the fused ingredient. Upon comparing a candle with a lamp, two very remarkable particulars are immediately seen. In the first place, the tallow itself, which remains in the unfused state, affords a cup or cavity to hold that portion of melted tallow which is ready to flow into the lighted part of the wick. In the second place, the combustion, instead of being confined, as in the lamp, to a certain determinate portion of the fibrous matter, is carried, by a slow succession, through the whole length. Hence arises the greater necessity for frequent snuffing the candle; and hence also the station of the freezing point of the fat oil becomes of great consequence. For it has been shown that the brilliancy of the flame depends very much on the diameter of the wick being as small as possible; and this requisite will be most attainable in candles formed of a material that requires a higher degree of heat to fuse it. The wick of a tallow candle must be

made thicker in proportion to the greater fusibility of the material, which would otherwise melt the sides of the cup, and run over in streams. The flame will therefore be yellow, smoky, and obscure, except for a short time immediately after snuffing. Tallow melts at 92° of Fahrenheit's thermometer; spermaceti at 133°; the fatty matter formed of flesh after long immersion in water melts at 127°; the tallow of the Chinese at 145°; bees' wax at 142°; and bleached wax at 155°. Two of these materials are well known in the fabrication of candles. Wax in particular does not afford so brilliant a flame as tallow; but, on account of its less fusibility, the wick can be made smaller; which not only affords the advantage of a clear perfect flame, but from its flexibility it is disposed to turn on one side, and come in contact with the external air, which completely burns the extremity of the wick to white ashes, and thus performs the office of snuffing. We see, therefore, that the important object to society of rendering tallow candles equal to those of wax, does not at all depend upon the combustibility of the respective materials, but upon a mechanical advantage in the cup, which is afforded by the inferior degree of fusibility in the wax; and that, to obtain this valuable object, one of the following effects must be produced: either the tallow must be burned in a lamp, to avoid the gradual progression of the flame along the wick; or some means must be devised to enable the candle to snuff itself, as the wax candle does; or, lastly, the tallow itself must be rendered less fusible by some chemical process.

A lamp for burning tallow has been contrived by Mr. Close. Its construction will be best understood by reference to fig. 4. A represents a cup made in the form of a cone; it contains the tallow, and is supported, with the point downwards, by the thumb-screw *i*, upon the piece of iron D, which is firmly fixed into the circular wood bottom E. The widest diameter of this cup is about two inches and a half, and the diameter of a small aperture in the point is rather less than one-eighth part of an inch. This cup must be made of iron, brass, or copper, and the joint on the side closed with hard solder. A circular plate of iron is made to fit the widest diameter, and firmly fixed therein by the sides of the cup being turned over it a little: near one side of this circular plate a circular hole less than one inch in diameter is made, and into it is fixed the ring *d*, which forms the mouth of the cup, and may be closed with a cork, &c.

a b represents a piece of wire which passes through a hole made in the circular piece, and through the aperture in the point of the cup. This wire is rather more than one-eighth part of an inch in diameter; it converges near the point, and exactly closes the same aperture when thrust down: it serves to regulate the descent of tallow into the cup B, according to the quantity consumed by the flame: and therefore, when it is required not quite to close the aperture, it is drawn up a little, and a small spring of brass, in the inside of the cup at C, presses against it, and holds it in the place.

The spring passes through the circular plate, and is fixed on the outside by a small screw.

B represents a small cup, in which the tallow is burned: it is about one inch in diameter, and about half an inch in depth. Into the bottom of this cup is soldered the tube *f*, which is about two inches and a half long, and slides into the tube *g*, which is soldered into the bottom of the cup *c*.

e represents a piece of bent wire, which supports the wick of the lamp. The ends of this piece of wire are thrust into a piece of soft wood, fitted into the tube *f*. Another tube, represented by *h*, is soldered to one side of the cup B, above the brim: the use of this tube is to contain a quantity of clean wick, and to serve for a handle to lift the tube *f* out of the socket *g* when the lamp is to be lighted.

C represents a cup to receive any tallow that may chance to run over the sides of the cup B. It is rather more than one inch deep, and two inches in diameter.

Lastly, by the help of the thumb screws *i*, *i*, the height of the cups B, C, and A, and the distance between B and A, may be regulated at pleasure.

A wick of cotton being put into the tube *h*, and brought through the ring *e*; a quantity of tallow put into the conical cup; and the small cup filled with melted tallow; the lamp may be lighted: if the point of the cup A be raised two or three inches above the brim of the cup B, and the air in the room at rest, the tallow in the cup A will be fused in a few minutes, and if the wire *a b* be properly adjusted, a constant supply of tallow will drop to the flame.

Small particles of dust and other impurities in the tallow sometimes impede the drops, but the light continues undiminished, until all the tallow in the little cup is consumed, and the cup is then easily filled again by holding up the wire, after which the drops must be regulated again. To lessen this inconvenience as much as possible, nothing but clean tallow, or hog's lard, must be burned. Tallow and hog's lard will burn with a very clear bright flame, of the same intensity, for a long time.

The small cup, when detached from the rest of the apparatus, will supply the different uses of a candle: it may be carried about by the tube *h*, or occasionally placed with the tube *f* in a small wooden stand. The tallow is not very liable to be spilled.

Every time before the lamp is lighted, a new portion of wick must be drawn through the ring. This is not easily effected when the tallow is cold; therefore to avoid this trouble, it is the best method always to draw up the wick immediately before the flame is extinguished; for which purpose, a small forceps, made of one piece of bended iron, will be most convenient.

Lastly, it may be necessary to remark, that after the lamp is lighted, when the tallow in both cups is cold, the tallow in the small cup must be broken and stirred up, that a sufficient quantity may be fused immediately to supply the flame; and, the sooner to fuse the tallow in the conical cup, the flame should be raised near to its point,

LAMPS.

Fig. 4.

and when there is a strong current of air in the room, in that situation it ought to remain.

The *hydro-pneumatic* lamp must now be noticed. The discovery of professor Döbereiner, of the ignition of spongy platinum by hydrogen, naturally led to its application as a means of affording an instantaneous light-giving machine. Different instruments have accordingly been constructed for this purpose; the first of which was that some time ago recommended by Gay Lussac, for keeping a store of hydrogen, and improved by Mr. Garden of London. It is, however, expensive, and not easily managed by those not accustomed to the use of chemical apparatus.

Another has been invented by Mr. Adie, which, though much less complicated, may, by many, be considered also as too expensive. The one contrived by Dr. Fyfe, combines the advantages of simplicity, cheapness, and facility of management, while it answers the purpose equally well with those above mentioned.

It consists merely of a bent glass-tube ABC fig. 5, the internal diameter of which is nearly an inch. It is open at both ends; fixed into a wooden stand B. The short limb, C, is five, and the long one, A, eight inches in length. To the mouth C there is ground a glass-tube, to which is fixed a stop-cock D. At E there is a brass ring fitted closely to the tube, and from which there proceeds a piece of brass, to which the spongy platinum F is fixed by very fine wire.

As the platinum loses its power of ignition by exposure to air, or rather requires a large supply of hydrogen, Dr. Fyfe has it covered with a cap, represented by K, and which is ground accurately on the cylinder L. When the lamp is required for use, a piece of zinc is put into the short limb as at G, and which is prevented from coming nearer than about an inch from the bending, by a tube of glass as at H. Diluted sulphuric acid is then poured in, so as to fill, as far up as I, after which the stopper and stop-cock are introduced. By the action of the acid on the metal hydrogen is generated, which fills the short limb, and raises the fluid in the opposite one: and, the production of gas ceasing when the acid gets below the zinc, there is thus always a supply of gas subjected to the pressure of a column of fluid of from six to seven inches. When the stop-cock, therefore, is opened, the hydrogen is propelled against the platinum; the fluid falls into the short limb; and, as the zinc is thus again surrounded by acid, more gas is generated to serve for the next time. The distance of the platinum depends on the size of the bore of the stop-cock; but, as the ring E is moveable, it can be easily adjusted.

The apparatus described contains only about a cubic inch of gas; but Dr. Fyfe found it sufficient for affording a light; for, though it does not ignite the platinum long enough to kindle the gas, yet there is sufficient heat to set fire to a sulphuric match. The moment, then, that the platinum becomes red-hot, a small sulphuric match must be applied to it. The only circumstance to be attended to is to allow the match to remain ignited for a few seconds, with a view of driving off any sulphur that may be left adhering,

and which prevents the ignition when the gas is again impelled on it.

The merit of that very ingenious and most useful contrivance the *safety lamp* is wholly due to Sir Humphry Davy. After having made many experiments for the purpose of forming a lamp to give light in coal mines affected with fire-damp, without occasioning explosions which frequently prove fatal to the miners, he found that wire-gauze of which the apertures occupy more space than the cooling or radiating surface of the wire, so as to be permeable to air and light, offered a perfect barrier against explosion; because, although the gas was inflamed within the enclosures formed by the wire gauze, yet, the heat being communicated to the numerous surfaces of the wire, the gas on the outside of the wire enclosure was not inflamed. Wire gauze is the best material for safety lamps, as it affords the greatest extent of radiating surface, and, by cooling, prevents all explosions that require a temperature higher than the temperature of the atmosphere. An example of the radiating and cooling action of wire is seen in the fire guards of wire, which are hung upon the ribs of fire places in rooms to prevent sparks from being thrown into the room. These fire-guards, although they are very near the fire, do not become hot. The apertures of the wire gauze must be smaller, and the wire which is the radiating and cooling surface, must be in greater quantity; in proportion as the gas in which the lamp is to be used is more inflammable. The fire-damp in coal-mines is in almost all cases carbureted hydrogen; and, for excluding explosion from a lamp in that gas, it is found that the wire gauze should contain 784 apertures in a square inch.

The wire gauze should be of iron or copper. Fine brass wire is improper, because it is too easily combustible by reason of the zinc it contains. The iron wire should not be tinned, tin being too easily combustible. The body of the lamp should be of copper riveted together, or of massy cast-brass or cast-iron. The screws should fit tight; no aperture, however small, should be suffered to exist in the body of the lamp; and the trimming wire should move through a long tight tube.

LAMPA, a district in the intendency of Cuzco, Peru, commencing thirty leagues south from Cuzco, and stretching among the mountains between thirty and forty leagues. It is bounded by the chain of Vilcomoto, which separates it from Asangara, in the kingdom of Plata on the east. Its climate is cold, producing little else than pasturage.

LAMP DARY, an officer in the ancient church of Constantinople, so called from his employment, which was to take care of the lamps, and to carry a taper before the emperor or patriarch when they went to church or in procession.

LAMPEDOSA, a pleasant and fertile, but uninhabited island of the Mediterranean, between the coast of Tunis and Malta, about twenty miles in circumference. There is a church on it; but the place is said to have been abandoned on account of the spectres who haunted it. In the discussions respecting Malta

in 1803, which occasioned the late war, there was a question of this little island, and Buonaparte actually proposed that it should become a British settlement, on condition that Malta were surrendered to the king of Naples, to become eventually a French settlement. Lampedosa is seventy miles W. S. W. of Malta, and sixty-one from the Barbary coast. Long. $12^{\circ} 20' E.$, lat. $35^{\circ} 40' N.$ Lampedosa is well watered, level, and fertile. On the north coast it is inaccessible, and has no anchorage on the south; a bank runs off to a considerable distance, and on this side is a noble bay, sheltered from all but south and south-west winds. Depth sixteen to eighteen fathoms, and the bottom fine sand. At its head is a creek, whose entrance is ninety fathoms broad, and running half a mile into the island. It is capable at a little expense of making an excellent harbour. The depth in the entrance is fifteen fathoms, decreasing gradually to the head, where is one fathom close to the shore. On the west side of the creek, about half way up, a projecting point forms a little cove, in which small vessels may anchor perfectly sheltered from the S. S. W. wind, which blows right up the creek, and makes a considerable swell. On the same side below this point is another cove entirely land-locked, but with only three to five feet water, the bottom soft sand. This cove might easily be deepened and considerably enlarged, the land surrounding it being low, and composed of sand and clay. The bay is occasionally visited by the Maltese vessels, as well as the Barbary cruisers. Ships from Turkey, having the plague on board, also run for this island, and remain until the malady has ceased, when they return to the port of Turkey they sailed from, to receive a fresh clearance and bill of health; by this means they save both ship and cargo, which would be burnt were they to go into any European port. The island has the ruins of a castle and town: a league from the W. S. W. point is a rock with a safe channel between them, and four leagues from the same point is the island of Lampion, a high round uninhabited rock.

LAMPIC ACID, acidum lampsicum, from Gr. λαμπω, to shine. Sir H. Davy, during his admirable researches on the nature and properties of flame, announced the singular fact, that combustible bodies might be made to combine rapidly with oxygen, at temperatures below what were necessary to their visible inflammation. Among the phenomena resulting from these new combinations, he remarked the production of a peculiar acid and pungent vapor from the slow combustion of ether; and from its obvious qualities he was led to suspect, that it might be a product yet new to the chemical catalogue. Faraday, in the third volume of the Journal of Science and the Arts, has given some account of the properties of this new acid; but, from the very small quantities in which he was able to collect it, was prevented from performing any decisive experiments upon it.

In the sixth volume of the same Journal we have a pretty copious investigation of the properties and compounds of this new acid, by Daniell. From the slow combustion of ether during six

weeks, by means of a coil of platina wire sitting on the cotton wick of the lamp, he condensed with the head of an alembic, whose beak was inserted in a receiver, a pint and a half of the lamic acid liquor.

When first collected it is a colorless fluid of an intensely sour taste, and pungent odor. Its vapor, when heated, is extremely irritating and disagreeable; and, when received into the lungs, produces an oppression at the chest very much resembling the effect of chlorine. Its specific gravity varies according to the care with which it has been prepared, from less than 1.000 to 1.008. It may be purified by careful evaporation; and it is worthy of remark, that the vapor which rises from it is that of alcohol, with which it is slightly contaminated, and not of ether. Thus rectified, its specific gravity is 1.015. It reddens vegetable blues, and decomposes all the earthy and alkaline carbonates.

LAMPONG, a district of the southern extremity of the island of Sumatra, beginning on the west coast, at the river of Padanguchi, and extending across as far as Palembang, on the north-east side. On the south and east sides it is washed by the sea, having several ports in the straits of Sunda, particularly Keyzers and Lampong bays; and the great river Tulangbawang runs through the heart of it, rising from a considerable lake between the ranges of mountains. The land in the neighbourhood of the rivers is overflowed during the rainy season, and the villages appear like islands. Here is a wide and deep bay, affording good anchorage. See SUMATRA.

LAMPOON, *n. s.* & *v. a.* } Fr. *lampen*;

LAMPOONER. } Lat. *lambo*, the tongue. Slander; personal satire.

They say my talent is satire; if so it is a fruitful age; they have sown the dragon's teeth themselves, and it is but just they should reap each other in *lampoons*. *Dryden.*

We are naturally displeas'd with an unknown critick, as the ladies are with a *lamponer*, because we are bitten in the dark. *Id.*

The squibs are those who are called libellers, *lamponers*, and pamphleteers. *Tatler.*

The world is so full of ill nature, that I have *lampoons* sent me by people who cannot spell, and satires composed by those who scarce know how to write. *Spectator.*

Lampoons and satires, that are written with wit and spirit, are like poisoned darts, which not only inflict a wound, but make it incurable. *Addison.*

Make satire a *lampon*. *Pope.*

Satires and *lampoons* on particular people circulate more by giving copies in confidence to the friends of the parties, than by printing them. *Sheridan.*

LAMPREY, *n. s.* } Fr. *lamproye*; Belg. *LAMPRON.* } and Dut. *lampreye*, both of Lat. *lampetra* (à *lambendis petris*, from its sucking stones). A kind of fish.

Many fish much like the eel frequent both the sea and fresh rivers; as the lamprel, *lamprey*, and *lamperne*. *Walton.*

These rocks are frequented by *lampoons*, and greater fishes, that devour the bodies of the drowned.

Broome on the Odyssey.

LAMPREY. See PETROMYZON.

LAMPRIIDIUS (*Ælius*), a Latin historian, who lived under Dioclesian and Constantine the Great. His lives of four emperors, Antoninus, Commodus, Diadumenus, and Heliogabalus, are extant. Some attribute the life of Alexander Severus to him; but the MS. in the Palatine library ascribes it to Spartian.

LAMPRIIDIUS (*Benedict*), of Cremona, a celebrated Latin poet of the sixteenth century. He taught Greek and Latin at Rome and Padua, until he was invited to Mantua, by Frederic Gonzaga, to undertake the tuition of his son. His epigrams and lyric verses, in Greek and Latin, were printed separately, as well as among the *Deliciæ* of the Italian poets.

LAMPACUM, or **LAMPACUS**, in ancient geography, a considerable city of Mysia; called *Pilyea* by Homer, because abounding in pine-trees, a circumstance confirmed by Pliny; situated at the north end or entrance of the Hellespont into the Propontis, with a commodious harbour, opposite to Callipolis in the Thracian Chersonesus. It was assigned by Artaxerxes to Themistocles, for furnishing his table with wine, in which the country abounded. It was saved, by the address of Anaximenes the historian, from the ruin threatened by Alexander, because in the interest of Persia. See **ANAXIMENES**. It is now called *Lampsaki*.

LAMPYRIS, the fire fly, a genus of insects belonging to the coleoptera order; the characters of which are:—The antennæ are filiform; the elytra are flexible; the thorax is flat, of a semiorbicular form, surrounding and concealing the head. The segments of the abdomen terminate in papillæ, which are turned up towards the elytra, and partly fold one over the other. The females in general are apterous. There are several species; of which the most remarkable is the *L. noctiluca*. The male of this insect is less than the female: its head is shaped exactly in the same manner, and covered likewise by the plate of the thorax, only it appears rather longer than that of the female. Both the head and antennæ are black. The thorax of the male, which is smaller and shorter than that of the female, has the folds and papillæ on its sides much less remarkable: but the greatest difference between the two sexes is, that the male is covered with brown elytra, shagreened, and marked with two lines longitudinally. The elytra are longer than the abdomen, and under them lie the wings. The two last rings of the abdomen are not so bright as those of the female, only there appear four luminous points, two upon each of the two last rings. The glow-worm, which is frequently met with towards evening, in June, in woods and meadows, is the female of this species. By the shining light which it emits, it attracts the male. As a proof that the light depends on a phosphorous matter, the animal, though dead and bruised, leaves a luminous substance on the hand, that only loses its lustre when dried. The perfect insect flies about during the evening in autumn, and frequents the grassy plantations of juniper trees.

LAMY, or **LAMI** (*Bernard*), a learned French protestant and Cartesian philosopher, born at Mans in 1640. He studied there under the fathers of the oratory; and, in 1658, went to

Paris, and entered into the institution. He became priest in 1667, and taught philosophy at Saumur and Angiers; which last he was obliged to quit by an order from court, having adopted the new philosophy instead of that of Aristotle. In 1676 he went to Grenoble, where cardinal Camus was bishop; who conceived such an esteem for him that he retained him, and derived considerable services from him in the government of his diocese. He went at last to reside at Rouen, where he died, in 1715. He wrote a Dissertation on the Sciences; The Art of Speaking; and several other scientific works, besides others in divinity.

LANA (*Francis de*), an Italian mathematician, and the first who suggested the inflation of balloons, was born at Brescia in 1637. He became a Jesuit, and was celebrated as a teacher of mathematics. He published in 1670 a work, under the title of *Prodromo all' arte Maestra*; of which another edition appeared in 1684, under the title of *Magisterium Naturæ et Artis*, 3 vols. folio. In this production he first gave the hint of the principle of exploring the air by the aid of machines inflated with gas; and, in 1784, his treatment of this subject was printed separately at Naples. He died about 1700.

LANARK, or **LANARKSHIRE**, a county of Scotland, called also *Clydesdale*, from the Clyde, by which it is watered; though this name belongs properly only to the southern district of Lanarkshire. See **CLYDESDALE**. It is bounded on the north by Dumbartonshire and Stirling; east by Edinburgh, Linglithlow, and Peebles; on the south by Dumfries; and on the west by Ayr and Renfrew shires. Its extent from north to south is about forty-eight miles, and from east to west thirty-two. It is said to contain 870 square miles, or 556,800 English acres. The Clyde, descending from the south part of this county, divides it naturally into two almost equal parts; and after a course of about fifty miles meets the tide a little below Glasgow. See **GLASGOW**. It is also divided into three wards; the Upper in which Lanark is situated, and which contains two-thirds of the county; the Middle, containing the town of Hamilton; and the Lower in which Glasgow is situated. It is a whole mountainous, and one-half of the area it contains is incapable of productive cultivation. The parishes are forty-seven in number, eleven of which belong to the presbytery of Lanark, fourteen to that of Hamilton, and thirteen to that of Glasgow, all in the Synod of Glasgow and Ayr; and nine to the Presbytery of Biggar, in the Synod of Lothian and Tweeddale.

Proceeding up the river, from Glasgow, the country is rich and well cultivated. Bothwell Castle here stands on an eminence, which overlooks the Clyde. Some of its walls measure fifteen feet in thickness and sixty feet in height. Between it and the priory of Blantyre on the opposite side of the Clyde, there is said to have been in ancient times a subterraneous passage under the river. A little above stands Bothwell Bridge, celebrated for the defeat of the Covenanters, in June 1769. East from Bothwell Castle, in an elevated situation, and amid a wild and barren country, is the Kirk of Shots.

This dreary waste is covered with heath; and, though a high situation, is flat, and very marshy. It is chiefly employed as sheep-walks; and, notwithstanding the vicinity of coal and lime, seems scarcely capable of cultivation. This want is, however, compensated by the abundance of iron-stone and coal. Nor is this advantage confined to the barren tract in the north-east corner of the shire. The whole county abounds with these valuable minerals. One of the most considerable iron-works in the county is that of Cleugh, a few miles south-east from the Kirk of Shots. The Clyde near this place runs for several miles between high rocks covered with wood; and in its course exhibits many beautiful cataracts. See CLYDE.

From Lanark, passing Carstairs a few miles to the east, we meet the town of Carnwath. In this neighbourhood, and along the Clyde to the south-east, there is much cultivation and rich pasture. To the south of Carnwath is Biggar; where is seen the ruin of a collegiate church, founded in 1545. The lands about Coulter and Lumington are fertile; but farther up the Clyde we principally meet with sheep-walks and pasture grounds. In the south part of the shire, called Clydesdale, the country is not less wild. Among the mountains here, or rather in a hollow near their summit, we meet with the village of Leadhills; and the famous lead mines of the earl of Hopetown. Gold it is said was discovered in this region in the reign of James III. North from this mountainous region lies Crawfordmuir.

About nine miles north of Leadhills, on the east side of the Douglas, which falls into the Clyde a few miles below, stands Douglas Castle, for many ages the residence of the second family in Scotland; and near it is the town of Douglas. A few miles to the north-east is Tinto, a remarkable conic mountain, round the base of which the Clyde makes a noble sweep. Westward, beyond Douglas, the Netham descends into the Clyde through the parish of Lismahago. Hamilton House, the seat of the duke of Hamilton, stands in a plain between the Clyde and Avon. It is a magnificent structure, surrounded by venerable oaks. In the vicinity is the town of Hamilton, and at a little distance an elegant appendage to it, called Chatterhault, from the ancient lordship held here by the family in France. On the west of Hamilton is the town of Kilbride; and to the south that of Strathaven, surrounded by the fertile tract from which it derives its name. The mountains of Lanarkshire sometimes reach an elevation of 3000 feet, as in the upper ward on the borders of Dumfries: and Leadhills is 1564 feet above the level of the sea: the only large plains are along the banks of the Clyde. The rock formations are sandstone, and limestone, and on the high grounds argillaceous schistus, prevails. In the Cathkin hills a number of basaltic columns are found, more than forty feet high, inclined at an angle of about 70°.

The most important mineral production of this county is coal, which is calculated to stretch through between 60,000 and 70,000 acres at an average thickness of five feet. The cannel or

candle coal, so called from the abundance of gas or inflammable matter it contains, is much used by the lower classes for its light.

Western and south-western winds blow here through the greater part of the year, and the atmosphere is generally humid; so that the harvests are late: but the county is not thought unhealthy, and neither snow nor frosts are of long duration.

The farms are not large, and the dairy is a chief object of agriculture. In the Middle and Lower wards a great number of cows are kept, the milk of which is wholly applied to the making of butter, new milk, and skim milk, cheese. This county has also long been noted for its draught horses.

The fruit trees are apples, pears, and plums: 300 acres were supposed to be laid out in orchards twenty years ago; and their extent is rather increased of late than diminished. Many new plantations of timber trees are forming. 'A kind of Jewish abhorrence of swine', we are told in the Agricultural Surveys, 'seems to have taken place, about the rigid times of the Reformation, in the western counties of Scotland. They were unclean beasts; it was sinful to eat their flesh, and neither creditable nor profitable to keep them. And, though these prejudices are now pretty much worn out, pork is not yet, in general, a favorite food, and, of course, the number of hogs kept and fed is not considerable.'

The roads, once intolerably bad, are much improved of late years: and the river Clyde is connected with some of the finest specimens of our INLAND NAVIGATION: see our article of that name, for a description of the Forth and Clyde Canal. The county contains also the Monkland Canal, from the coal works in that parish, to the Forth and Clyde at Port Dundas; and the Ardrossan Canal, which from Port Eglinton, near Glasgow, to Ardrossan, on the coast of Ayrshire, will measure thirty-three miles. The county has a corresponding agricultural society of considerable repute.

The greater part of the inhabitants are engaged in the cotton manufactures, the iron or the coal works: each considerable establishment having its adjacent village occupied by the workmen. At New Lanark is the well known cotton spinning manufactory, lately conducted by Mr. Owen. The county returns one member to the imperial parliament. Glasgow, by the regulation of the reform bill, has the privilege of sending two; and Lanark shares in the franchise with Linlithgow, Falkirk, Airdrie, and Hamilton. The county formerly sent two representatives; and Glasgow contributes with Rutherglen and other places.

LANCASHIRE. Mr. Whitaker conjectures that the aboriginal inhabitants of this district were the *Setanii* mentioned by Ptolemy. This appellation he conjectures to signify the 'country of water,' or 'the interior and southerly country of water.' The Romans found this part of the country occupied by the people whom they afterwards called *Brigantes*, who possessed a tract of country extending from the south shore

of the Humber to that of the Tyne on the eastern coast; and from the estuary of the Mersey to the Eden on the western coast. On their conquest of the island, Lancashire was made part of the division named *Maxima Cæsariensis*. After the establishment of the Saxons, this county was incorporated with the kingdom of Northumberland; and so it remained till the time of Egbert and his union of all the Saxon states.

Lancashire is a maritime county, bounded on the south by Cheshire; on the east by Yorkshire; on the north by Westmoreland; and on the west by the Irish Sea. Its form resembles that of England and Scotland collectively; the populous town of Manchester standing in the same relative situation as that of London in the maps of this island, while Liverpool may be well imagined to approach the Land's End in Cornwall, lying nearly in the same comparative situation as the south-eastern borders of Devonshire. The county town, Lancaster, lies nearly in the same situation, with respect to the north-eastern coast of the Irish Sea, as does the county itself in the general map with respect to the same sea; or rather it may be supposed that Lancaster occupies the place of Carlisle in Cumberland. According to Mr. Yates's survey, the greatest length of this county is seventy-four miles, and the greatest breadth forty-four miles and a half. Passing over the river Ribble, at Nesketh bank, its circumference is about 342 miles, containing 1765 square miles, and 1,129,600 acres. Here are six hundreds, twenty-seven market-towns, sixty-two extensive parishes, and 894 villages. This county is in the diocese of Chester and the province of York, and is included in the northern circuit. In point of importance, in almost every light in which it can be viewed, there is not another county equal to it, Middlesex alone excepted; and even that, exclusive of London and Westminster, bears but a very trifling comparison with the county of Lancaster. With the exception of London and Yorkshire, the population will be found to average the amount of four counties.

The climate of this county is distinguished for its humidity, owing, no doubt, to its local situation, between the Irish Sea, and the range of hills which form its eastern border. According to a Liverpool register, the least quantity of rain yearly, from 1784 to 1792, was twenty-four inches and one-eighth in 1788, and the greatest fifty-four and a quarter in 1792. At Lancaster, in the latter year, the quantity of rain was sixty-six inches. Four inches have been known to fall in the course of a night. The mean heat at Lancaster, from 1784 to 1790, was $51^{\circ} 8'$. In 1819-20, when the thermometer in gardens near London fell 10° below Zero, in the botanic garden of Liverpool it never touched that point. The eastern side is more subject to rains than the side bordering on the coast; for, as the clouds are wafted over the Irish Sea from the Atlantic Ocean, they are first checked and broken by the mountainous ridge, which has a direction north and south; and thence the rains are almost continually on the western side of

those intercepting eminences. It is, however, said that this ridge of mountains, which bounds this county on the eastern side next Yorkshire, and which runs through not only Yorkshire, but Cheshire, Derbyshire, and Staffordshire, and is called the back bone of the kingdom, being the most elevated ground in the island, screens Lancashire more particularly from the severe eastern blasts, the frosts, blights, and insects, which infest the counties bordering on the German Ocean; and, though the high mountains may cause a greater quantity of rain to fall in this district than in the interior parts of the kingdom, yet this county, fanned by the western breezes, has a salubrity of air to which may be attributed the vigor and activity of the inhabitants, who are, if temperate, generally long lived. The prevailing winds are from the south, south-west, and north-east.

Mr. Britton, on the authority of Mr. Holt's Agricultural Survey, remarks, that the soil and surface of this county are various; and that its features in some parts, towards the north, and all along its eastern border, are strongly marked. Here the hills are bold and lofty, and the valleys narrow and irriuous. Near the sea-coast, and nearly the whole of the southern side of the county, following the course of the river Mersey, the land is low and flat. In various fields, at Formby, near the shore, there is soil above two feet below the sand, which lies between the present green-sward; and there are the strongest reasons for believing, that this soil (which is about four inches thick), originally formed the surface of the ground, and was gradually buried by sand from the neighbouring hills. Few counties produce greater variety; and yet this does not change so rapidly as in some others. The greatest proportion of that district which lies between the river Ribble and the river Mersey, has for its superficies a sandy loam, well adapted to the production of almost every vegetable that has yet been brought under cultivation, and that to a degree which renders it impossible to estimate the advantage which might be obtained by improved and superior management. The substratum of this soil is generally the red-rock, or clay-marle, an admirable sandy loam, perhaps one of the most desirable soils that can be found. The quantity of moss-lands has been very great in this county, but they are rapidly declining. Chat-Moss, Trafford-Moss, Risely-Moss, and Pilling-Moss, are all extensive tracts; but some of these have now become, for a large portion, fine meadow land, owing in a great degree to the laudable and patriotic exertions of his grace the duke of Bridgewater, and Mr. Roscoe, of Liverpool.

Its principal minerals are copper, lead, iron, and coal. The last is in the greatest abundance. The great tract commences below Prescott on the south, and, crossing the county in a north-east direction, passes into Yorkshire; but coal abounds to the south-east of this district near Manchester, and to the north beyond Lancaster. It is chiefly of a bituminous description. Cannel coal is found at Wigan, and often in contact with black coal. Copper appears towards the northern extremity of the high Furness, or Fell

district, at Conston, Muckle Gill, and Hartriggs. Towards the north and north-east parts, lead is met with in small quantities. Iron is wrought in the liberty of Furness to the north of Lancaster sands, and though found in other quarters the working of it has not been profitable. In the northern parts of the liberty, blue slate quarries have been opened. Sandstone and limestone are also wrought here, and on the Lancaster side.

This county is amply supplied with water. The principal rivers are the Irwell, the Mersey, the Douglas, the Ribble, the Calder, the Wyer, and the Lune, besides numerous smaller streams. Few counties are so materially benefited by the conveniences of inland navigation. The Sankey Canal, the oldest canal in England, originated with a company of merchants and gentlemen in 1755, who obtained an act of Parliament, authorising them to make Sankey Brook navigable from the river Mersey, which it joins about two miles west of Warrington, to near St. Helen's. It has proved one of the most profitable concerns of the kind in the kingdom. The Ashton-under-Line Canal communicates between Manchester and the town of Ashton. It commences on the east side of Manchester; and, passing the pleasing little Moravian settlement at Fairfield, enters a long tunnel at Ashton, in front of Duckenfield lodge, near which it is joined by the Peak Forest Canal, a branch having previously broken off at Fairfield, leading to New Mills, near Oldham. The whole length of the canal is eleven miles, with a rise of 152 feet. The duke of Bridgewater's canal, though belonging more particularly to the county of Cheshire, has a branch which exclusively belongs to this county. This commences at Castle Field, Manchester, and terminates at Pennington, near the ancient town of Leigh, in Atherton parish. At Manchester there is a communication with the Mersey and Irwell navigation, and Manchester, Bolton, and Bury Canal, by means of Medlock Brook. Under the town of Manchester are arched tunnels for a portion of this canal, of considerable length, from one of which coals are hoisted up by a coal-gin, through a shaft, out of the barges below into a large coal-yard or store-house, in the main street; at which place the duke and his successors are by the first act bound to supply the inhabitants of Manchester at all times with coals at only 4*d.* per hundred weight of 140 lbs. At Worsley is the entrance into the famous underground works or tunnels, where, by an archway, partly bricked, and partly formed by the solid rock, wide enough to admit long flat-bottomed boats of ten to twelve tons burden, towed by means of rings and hand-rails on each side, the canal penetrates about three quarters of a mile before it reaches the first coal-works, where it divides into two branches, to the right and left. There are at certain distances shafts or funnels perpendicular to the surface, for the circulation of air, &c. To Mr. James Brindley the inhabitants of Manchester are principally indebted for the original successful execution of this navigation. But see our article INLAND NAVIGATION.

Lancashire does not rank high as an agricultural county. Arable land is less prevalent than grass; but great attention has been paid to the culture of potatoes, both by farmers and cottagers; the former generally cultivate them in drills, and horse hoed; the latter in beds or dibbled in rows and hand hoed. In this county potatoes first appeared in England. Onions are cultivated extensively near Warrington, and rhubarb and madder have been tried, and grown to very great perfection, but are not so easily dried and prepared for sale, as to induce a continuance of the practice.

The grass lands are chiefly coarse upland pastures, but there are some good meadows and productive marsh lands. There are excellent market gardens of course near the large towns. 'About eight miles north-east from Liverpool is a certain farm in Kirkby, the soil of a small part of which is a black loamy sand, and which produces great quantities of early and strong asparagus, and another farm, a part of which is of the same nature, at a place called Orrel, about four miles north-west of Liverpool: both which produce this plant with less attention and less dung than are requisite in the rich vale of Kirkdale, about two miles from Liverpool, where the greatest quantity of land in any place of this neighbourhood is appropriated solely to horticulture.' There is an orchard of sixty-four acres on the banks of the Irwell, near Manchester, and some others in sheltered places near the principal towns; but the prevailing west wind are much against their increase. The long-horned or Lancashire breed of cattle is distinguished by the length of their horns, the thickness and firm texture of the hides, the length and closeness of the hair, the large size of the hoofs, and their coarse, leathery, thick necks: they are likewise deeper in their fore-quarters, and lighter in their hind quarters than most other breeds; narrower in their shape, less in point of weight than the short horns, though better weighers in proportion to their size; and, though they give considerably less milk, it is said to afford more cream in proportion to its quantity. They are more varied in their color than any of the other breeds; but, whatever the color be, they have in general a white streak along their back, which the breeders term finched, and mostly a white spot on the inside of the hough.

Lancashire is a county palatine, of which the king is duke. It returns twenty-four members to parliament; four for the county, two for each of the places following, viz.: Lancaster, Preston, Wigan, Liverpool, Manchester, Bolton, Blackburn, Oldham: one each for the following places, namely, Clitheroe, Ashton-under-Lyne, Bury, Rochdale, Salford, and Warrington. It has given birth to Robert Ainsworth, lexicographer, born at Clifton in the parish of Eccles 1660, died 1745.—Wm. Allan, Alen, or Aleyn, Cardinal Rossal, born 1532, died 1594.—Thomas Barnes, D. D., Protestant dissenting minister, born at Warrington, 1747, died 1810.—Richard Arkwright, spinner, born at Preston, 1732, died 1792.—J. Bradshaw, the regicide judge, born near Bolton.—The pious and ingenious poet and stenographer John Byrom,

born at Kersal in the year 1691, died 1763.—Rev. Dr. Edward Harwood, an excellent classical scholar, born 1729, died January 14th 1794.—Jeremiah Horrox, a memorable astronomer, born 1619, died 1641, who first observed the transit of Venus over the sun's disk.—Dr. John Leland, author of *A View of Deistical Writers, &c.*, born at Wigan, 1691, died January 21st, 1766.—Dr. Thomas Perceval, an eminent physician and medical and miscellaneous writer, born at Warrington 1740, and died at Manchester, August 30th 1804.—George Romney, a celebrated painter, born at Dalton in Furness, December 15th, 1734, died at Kendal, November 15th, 1802.—Edwin Sandys, archbishop of York, born 1519, died 1588.—Dr. John Taylor, author of the *Hebrew and English Concordance*, and *Key to the Apostolic Writings* prefixed to a *Paraphrase on the Romans, &c.*, a dissenting minister, born at Lancaster, 1694, died 1761.—Rev. John Whitaker, the celebrated historian of Manchester, &c., born at Manchester about 1735, died 1808.

Manchester is the great centre of the cotton trade. Its market on Tuesday exhibits a scene but little inferior to the bustle of the Royal Exchange at London. Here merchants from all parts of the country flock for the purpose of buying and selling cotton goods of every description, cotton, twist, weft, yarn, and wool. Bolton is the ancient and great mart for these goods, particularly for cambric and fancy muslins. Spinning is also carried on here to an almost incredible extent. The whole commercial world has rung with the praises of the late Sir Richard Arkwright, whose invention of the water machine, &c., has certainly given an impulse to manufactures, to which they were before entirely strangers; and which has since been universally aided by the application of steam. But for that fine and compact article called mule yarn, of which are manufactured all those beautiful cotton goods called jaconets, bucks, gauzes, and other fine Scotch fabrics and cambrics; also all fine cottons, laces, and threads, the commercial world is wholly indebted to the persevering ingenuity of Mr. Samuel Crompton, who first invented the machines called *Hall-i'-th'-Wood-Wheels*, or *Mules*. Parliament, above thirty years after the discovery, granted to Mr. Crompton the sum of £5000, clear of all fees, though, in the opinion of most persons, an annual pension to that amount would hardly have been a compensation adequate to the merits of Mr. Crompton's services. The neighbourhood of Bolton abounds with extensive factories, bleaching grounds, &c. Chowbent, five miles west of Bolton, is a thriving village, where formerly large quantities of nails were manufactured for the navy, and for domestic uses. The trade is still carried on, but the cotton trade has taken the lead. Wigan has long been celebrated for its brass and copper manufactures; but here also the cotton and linen weaving has gained a considerable ascendancy. At Preston the cotton business is very extensive, as also at Blackburn, Chorley, Ashton, Newton, &c. The woollen and cotton businesses are carried on at Bury, a handsome town of considerable extent; and at

Prescot the finest tools are made for the use of watchmakers: the manufacturers there seem to inherit a peculiar method of cutting files. Liverpool, as a commercial sea-port, is second only to London; the abolition of the Slave Trade had a partial effect on the trade of this town; but, as Mr. Roscoe has well said, 'A crime was never necessary in the course of human affairs.'

LANCASTER, a market and sea-port town, the capital of the county of Lancashire, is situated on the banks of the Layne or Lune, and appears to have been originally a Roman station. Camden says its Roman name was Longovicum, and Mr. Whitaker thinks it the Ad-Alaunum of Richard of Cirencester. For an account of various Roman remains that have been discovered here, the reader may consult Mr. Leigh's *Dissertation in the Archæologia*, vol. v.

After the Romans had retired from this neighbourhood the place appears to have been desolated by the incursions of the Picts and Scots; but was rebuilt by the Saxons, made the metropolis of the county, and constituted one of their chief places of defence northward. In *Domesday-book*, Lancaster, and Cherca-Longcastre, appear as two vills, or Berwic, among the twenty-two which then composed the manor of Halton: the name of Cherca-Longcastre being affixed to one of them, renders it probable that it had a church, which had been destroyed by the Danes. Lancaster was granted either by the Conqueror or William Rufus to Roger de Poitou, who erected a castle upon its hill, and founded the church of St. Mary; as a cell to the abbey of Sees, in Normandy. To this monastery it continued annexed until the reign of Henry V., when, on the alien priories being abolished, it was given to the Carthusian abbey of Sion, in Middlesex, and remained thus attached till the dissolution of the monasteries at the Reformation. The towers of the castle remaining are excellent specimens of the massive architecture adopted in that age. In 1109 this castle was besieged by Hubert, archbishop of Canterbury, it being held by the brother of king John in trust for that monarch. In the seventh year of John's reign it was in possession of Ranulph Blundevil, earl of Chester: in the early part of the reign of Henry III. it was held by William de Ferrars, earl of Derby; but it owes its chief importance in history to Edward III. This monarch created his son, the celebrated John of Gaunt, Duke of Lancaster, and granted a charter which constituted the dukedom a kind of independent state: within the county, indeed, almost all the regal privileges were enjoyed by the duke. It suffered greatly in the wars of the houses of York and Lancaster, so that in the time of Camden it was nearly depopulated: but Charles II. having renewed its charter, and granted it additional privileges, it has ever since flourished. At present the area included within the castle walls is about 380 feet square. The round towers seem to have been about twenty-six paces distant from each other, and joined by a wall and open gallery; two towers on the western side remain entire, and the remains of five others may be traced. One of these towers is called *Adrian's*. On the top is a large square tower, called *John of Gaunt's Chair*, whence is

a most extensive prospect. In this castle are now found the shire-hall, county courts, in which the assizes are held, and the county gaol. Here also was formerly an hospital for lepers, and a house for Dominican friars.

On an eminence near is the parish church, a spacious building, with a lofty tower, which serves as a land-mark for vessels ascending the river. It has eight good bells. At the east end of the church is an elegantly carved wooden screen; and among the monuments one by Roubiliac, for William Stratford, L. L. D. In the church-yard is the shaft of a stone cross, with a Runic inscription. Lancaster contains also two commodious chapels of ease, one of which has an elegant steeple, recently rebuilt; places of worship for Presbyterians, Quakers, Methodists, Independents, and Roman Catholics. The town-hall and exchange, in the centre of the town, is a fine building, and has a noble portico. Here is also a neat theatre, a free-school, and a public library. The custom-house is a small building, with a portico, supported by four Ionic pillars, each fifteen feet and a half high, consisting of a single stone. The shambles in the market are built in the form of a street, every butcher having a shop with his name painted over the door. The town is incorporated under a mayor, aldermen, recorder, bailiffs, &c., and sends two members to parliament: the returning officers are the mayor and two bailiffs; the right of election being vested in the freemen, to the amount of 3000. The markets are on Wednesday and Saturday.

The Lancaster canal communicates with the Mersey, Dee, Ribble, Ouse, Trent, Derwent, Severn, Humber, Thames, Avon, &c. An elegant aqueduct bridge carries it over the Lune: it consists of five arches, erected at an expense of £45,000. The principal commerce of the town is in hardware, woollen goods, and cabinetware. The new bridge over the Lune is a handsome building, of five equal arches, is 549 feet long, and cost £12,000.

Five miles to the north-east of the town is a cave in the middle of a common, called Dunald Mill Hole. A brook nearly as large as the New River at London, and which turns a corn-mill just at the entrance of the cave, runs in at its mouth by several beautiful cascades, whence, continuing its course for two miles under a large mountain, it makes its appearance again at Carnford.

LANCASTER, a county of Pennsylvania, North America; east of the Susquehanna; bounded north by Dauphine county; north-east by Berks; south-east by Chester; south by Maryland; and south-west by the Susquehanna, which divides it from York county. It is well cultivated, and the northern hills are abundant in minerals, especially iron.

LANCASTER, a city and capital of Lancaster county, is one mile and a half west of Conestoga Creek, which falls into the Susquehanna, nine miles S. S. W. of the city; thirty-six E. S. E. of Harrisburg, and sixty-two west of Philadelphia. It is a pleasant, healthy, and flourishing place, situated in a delightful, fertile, and highly cultivated country, and contains a court house,

a jail, a market house, a poor house, a hospital, a register's office, a college, two banks, and nine houses of public worship, one for German Lutherans, one for German Calvinists, one for English Presbyterians, one for Episcopalians, one for Roman Catholics, one for Moravians, one for Friends, one for Methodists, and one for Africans. The court-house, the Lutheran church, and many of the private houses are spacious and elegant. The houses are chiefly of brick and stone. This city has an extensive trade with the surrounding country, and considerable manufactures in hats, rifles, hand-screws, nails, &c. About a mile from the city there is a very large cotton manufactory. The inhabitants, mostly of German descent, speak very commonly the German language, but the English predominates, and most parents are in the practice of giving their children an English education. There are six newspapers published here, three in English, and three in German. Franklin College was founded here in 1787. It has a large brick building and some funds: But the seminary is not at present in operation, and the building is appropriated to schools.

LANCASTER, a county of the east part of Virginia, bounded north-east by Northumberland county; east by Chesapeake Bay; south and south-west by the Rappahannock, and west by Richmond county. Distant from Washington 168 miles. Chief town, Kilmarnock. This is the name of several post towns in the United States.

LANCASTER (James), an English navigator, whose name is connected with the oft attempted north-east passage. He made a voyage to America in 1591; and afterwards sailed round the Cape of Good Hope, and visited Ceylon and Pulo Penang. He engaged in 1524 in a predatory expedition to South America, and captured several prizes. In 1600 he went to the East Indies, and formed a commercial treaty with the king of Achen and the state of Bantam, in Java. He returned to his country in 1603, having procured some information relative to a north-west passage to the East Indies, which occasioned the expeditions of Hudson and others. Baffin in honor of him gave the name of Lancaster's Sound to an inlet which he discovered in 74° of N. lat. He is said to have received the honor of knighthood: he died in 1620.

LANCASTER (Joseph), the promulgator of the system of mutual instruction, may be regarded as one of the most useful men of his age. He was born in 1771, was bred a quaker, and still maintains the habits and manners of that persuasion. It has been made a subject of dispute whether Dr. Bell or Mr. Lancaster is the inventor of the system of mutual or monitorial instruction. The facts in the case seem to be these: the Rev. Dr. Bell, an English chaplain in the East Indies, practised a system of mutual instruction in Madras, which he found, at least in part, already in existence among the natives. On his return to England, in 1797, he published a pamphlet (Education pursued in the Madras Asylum), giving some account of the method and his experience. A few years after, Lancaster began to apply the method, and intro-

duced some improvements, enabling him to manage and teach a greater number of children than had previously been attempted. It is evident that neither of these gentlemen can be strictly called the inventor of the system, although both are entitled to great praise for the improvements which they introduced. It has, in fact, been long in use among the Oriental nations. Dr. Bell, as we have mentioned, borrowed it from the natives in Hindostan, and Shaler speaks of it as employed in Algiers. To Lancaster, however, is due the nobler praise of having disinterestedly devoted himself to the task of diffusing a knowledge of this plan of instruction in two worlds. He began his labors in England, in 1803. The object was at first to procure a cheap means of instruction for the poorer classes, who, it is well known, were then unprovided for in most countries of Europe. Lancaster received great encouragement from many persons of the highest rank in England, which enabled him to travel over the kingdom, delivering lectures, giving instruction, and forming schools. Flattered by splendid patronage, and by promises of support which were never realized, he was induced to embark in an extensive school establishment at Tooting, to which his own resources proving unequal, he abandoned his establishment, and threw himself on his own talents, and on the liberality of the public at large; but, being disappointed in his expectations, and unwilling to submit to prescribed terms, which he considered as implying some fault on his part, when no fault really existed, he left England in disgust, and, about 1820, visited America. He had previously published *Improvement in Education*; a *Letter on the best Means of Educating and Employing the Poor in Ireland*; *Outlines of a Plan for the Education of Children*; *Account of the Progress of J. Lancaster's Plan for the Education of Children*; and *Report on the Progress of his Plan from the Year 1793*. He died in indigent circumstances, in 1834.

LANCE, *n. s. & v. a.* Fr. and Arm. *lance*,
LANCE'LY, *adj.* } *lancer*; Ital. *lancia*;
LANCE'PESEDE, *n. s.* } Lat. *lancia*. A long
LAN'CET, } spear, or javelin: as a
LANCE, *v. a.* } verb, to thrust, pierce,

or cut; to open chirurgically: lancepedade, an old military non-commissioned officer (Fr. *lance spezzade*), under the corporal: lancet, the surgeon's instrument for blood-letting, &c.: to lanch, to let fly, dart, or cast, as a lance.

They shall hold the bow and the lance.

Jeremiah 1. 42.

Platè sin with gold,

And the strong lance of justice hurtless breaks;

Arm it in rags, a pigmy's straw doth pierce it.

Shakespeare.

With his prepared sword he charges home

My unprovided body, lanced my arm. *Id.*

The' infernal minister advanced

Seized the due victim, and with fury lanced

Her back, and piercing through her inmost heart,

Drew backward. *Dryden.*

LANCELOTTI (Gianpaolo), an eminent jurist, was born at Perugia about the year 1510.

He was first noticed as a teacher of the law at his native place, and was engaged by pope Paul IV. to draw up an institute of canon law, in imitation of Justinian's Institutes of civil law. This was published in 1653, and went very quickly through several editions. It was annexed to the body of canon law, and still retains its place in the modern editions of that compilation. He was the author of other treatises on legal subjects, and of a life of Bartolus. He died at Perugia in 1591.

LANCELOT (Claude), a learned French writer, born in 1616. He was a Benedictine of St. Cyran, whence he was exiled to Lower Brittany, where he died in 1695. He wrote, 1. *Nouvelle Methode pour apprendre la Langue Latine*, 8vo. 2. *Nouvelle Methode pour apprendre le Grec*, 8vo. Both have been translated into English, under the title of *Port Royal Grammars*.

LANCEROTA, one of the group of the Canary Islands, remarkably subject to volcanoes. One took place in 1730, on so great a scale as to destroy nine villages, and spread desolation over a highly fertile and cultivated region. The whole western side is still black, parched, and stripped of vegetable mould. But the eastern part contains plains of considerable fertility, and the camel thrives here. M. Humboldt estimates the height of the volcanic mountain at not more than 1800 feet, though from the sea it has a much loftier appearance. The ancient inhabitants are said to have been more polished than those of the other Canaries, and had the singular custom of one woman having several husbands. Lancerota at present contains about 10,000 inhabitants; and it produces a little cotton, sugar, honey, and wool. They export corn, and a large quantity of dried goats' flesh. The island is about thirty miles in length, and eight in breadth. On the south-east side are two good ports within reefs, called Puerto de Naos and Puerto Cavallos. The former, which is the northern, is well sheltered from the north-east; and, the reefs breaking off the swell, the water is perfectly smooth, and here vessels in want of refitting usually put in. It has two entrances between the reefs; the north one has only fourteen feet at high water, and the south seventeen feet; the depth within is twenty-seven to ten feet, rise of tide ten feet. Puerto Cavallos is one mile south of Puerto Naos; it is formed on the north-east by a small island joined to the main by a bridge; on the island are the ruins of a castle: on the south-west it is bounded by a rocky ledge running off from the shore in the middle of the channel, which has but twelve feet; within the depth is seventeen feet.

The LANCET is sharp-pointed and two-edged, chiefly used for opening veins in the operation of bleeding; also for laying open abscesses, tumors, &c.

LANCETI, a name given by the ancient laws of England to a kind of vassals, who were obliged to work for the lord one day in a week, from Michaelmas to autumn, either with fork, spade, or flail, at the option of the lord.

LANCIANO, a large town of Naples, in Abruzzo Citra, about four miles from the coast

of the Adriatic, stands on a river of the same name. It has two great annual fairs, and a considerable trade. Population 9000. Eighty-five miles E. N. E. of Rome, and eighty-four north of Naples.

LANCISI (John Marc), an eminent Italian physician, born at Rome in 1654. From his earliest years he attended to natural history; and studied botany, chemistry, anatomy, and medicine. In 1688 pope Innocent XI. appointed him his physician and private chamberlain, notwithstanding his youth; and cardinal Altieri Camerlinga made him his vicar for the installation of doctors in physic, which pope Clement XI. continued to him, with the other appointments conferred on him by his predecessor. He died in 1710, after giving his fine library of more than 20,000 volumes to the hospital of the Holy Ghost, for the use of the public. It was opened in 1716, in the presence of the pope and most of the cardinals. He wrote many works which are esteemed. They were collected and printed at Geneva, in 1718, in 2 vols. 4to.

LANCRINCK (Prosper Henry), a painter of considerable note, born in 1628, and educated in the school at Antwerp. He studied principally after Titian and Salvator; and met with encouragement in England suitable to his merit. His landscapes show a good invention, good coloring, and harmony; they are chiefly of rough rude country, with broken ground and striking scenery. He died in 1692.

LAND, *n. s., v. a., & v. n.*
 LAND'BRED, *adj.*
 LAND'ED, *adj.*
 LAND'CARRIAGE, *n. s.*
 LAND'FLOOD, *n. s.*
 LAND'FORCES,
 LAND'HOLDER,
 LAND'ING,
 LANDING-PLACE,
 LAND'-JOBBER,
 LAND'LADY,
 LAND'LESS, *adj.*
 LAND'LOCKED,
 LAND'LOPER, *n. s.*
 LAND'LORD,
 LAND'MARK,
 LAND'SCAPE,
 LANDS'MAN,
 LAND'-TAX,
 LAND'-WAITER,
 LAND'WARD, *adv.*

Saxon, land; Goth. *land*, and so in all the northern dialects. A country, or region, &c.; hence, a people, its inhabitants; earth; ground; a real estate; also (obsolete, Saxon *hlond*), urine: to land is to set or come on shore: landed having an estate in land: landloper (Belg. *landlooper*) a landsman, one who is used to run about on shore. See ELOPE. Land-scape (Belg. *landschape*) the shape or appearance of the land: land-waiter, a custom-house-officer, who waits or attends on the landing of goods. We believe the other compounds will explain themselves.

Notethless I sey to you that to the *land* of Sodom it schal be lesse payne in the dai of dome than to thee. *Wiclif. Matt. xi.*

Abraham sojourned in the *land* of promise as in a strange country, dwelling in tabernacles. *Heb. xi. 9.*

And in a *launde*, upon a hill of floures,
 Was set this queene, this noble goddesse Nature;
 O braunchis were her hallis and her boures
 I wrought after her craft and her mesure. *Chaucer.*

They are invincible by reason of the overpouring mountains that back the one, and slender fortification of the other to *landward*. *Sandys' Journey.*

The nations of Scythia, like a mountain flood, did overflow all Spain, and quite washed away whatsoever reliques there were left of the *landbred* people. *Spenser's State of Ireland.*

This regard shall be had, that in no place, under any *landlord*, there shall be many of them placed together, but dispersed. *Id.*

He kept himself within the bounds of loyalty, and enjoyed certain *lands* and towns in the borders of Polonia. *Knolles*

The legions, now in Gallia, sooner landed in Britain. *Shakspeare. Cymbeline.*

Let him *land*,
 And solemnly see him set on to London. *Shakspeare.*

A *landless* knight makes thee a *landed* squire. *Id.*

Thy ambition,
 Thou scarlet sin, robbed this bewailing *land*
 Of noble Buckingham. *Id. Henry VIII.*

To forfeit all your goods, *lands*, and tenements,
 Castles and goods whatsoever, and to be
 Out of the king's protection. *Id.*

Land ye not, none of you, and provide to be gone
 from this coast within sixteen days. *Bacon's New Atlantis.*

Men, whose living lieth together in one shire, are commonly counted greater *landed* than those whose livings are dispersed. *Bacon.*

Let the stairs to the upper rooms be upon a fair, open *newel*, and a fair *landing-place* at the top. *Id.*

With eleven thousand *land* soldiers, and twenty-six ships of war, we within two months have won one town. *Id.*

This man is freed of servile hands,
 Of hope to rise, or fear to fall:

Lord of himself, though not of *lands*,
 And having nothing, yet hath all. *Wotton.*

By *land* they found that huge and mighty country. *Abbot.*

Probably *land-damn* was a coarse expression in the cant strain, formerly in common use, but since laid aside and forgotten, which meant the taking away a man's life. For *land* or *lant* is an old word for urine, and to stop the common passages and functions of nature is to kill. *Hanmer.*

Apprehensions of the affections of Kent, and all other places, looked like a *landflood*, that might roll they knew not how far. *Clarendon.*

The *land-marks*, by which places in the church had been known, were removed. *Id.*

I' the midst, an altar, as the *land-mark*, stood,
 Rustick, of grassy sod. *Milton*

The sun, scarce uprisen,
 Shot parallel to the earth his dewy ray,

Discovering in wide *landscape* all the east
 Of Paradise, and Eden's happy plains. *Id.*

Necessity makes men ingenious and hardy; and, if they have but *land-room* or *sea-room*, they find supplies for their hunger. *Hale's Origin of Mankind.*

The princes delighting their conceits with confirming their knowledge, seeing wherein the sea-discipline differed from the *land-service*, they had pleasing entertainment. *Sidney.*

Cromwell's officers, who were for levelling *lands* while they had none, when they grew *landed*, fell to crying up magna charta. *Temple.*

We behold in France the greatest *land-forces* that have ever been known under any Christian prince. *Temple.*

Fate and the gods, by their supreme command,
 Have doomed our ships to seek the *Latian land*. *Dryden's Æneid.*

He who rules the raging wind,
 To thee, O sacred ship, be kind,

Thy committed pledge restore,
And land him safely on the shore.

Id. Horace.

I land with luckless omens : then adore
Their gods.

Id. Æneid.

They turn their heads to sea, their sterns to land,
And greet with greedy joy the Italian strand.

Dryden.

I writ not always in the proper terms of navigation,
or Land-service.

Id. Æneid.

These answers, in the silent night received,
The king himself divulged, the land believ'd.

Dryden.

Though they are not self-evident principles, yet, if they have been made out from them by a wary and unquestionable deduction, they may serve as *landmarks*, to shew what lies in the direct way of truth, or is quite besidea it.

Locke.

Money, as necessary to trade, may be considered as in his hands that pays the labourer and *landholder*; and, if this man want money, the manufacture is not made, and so the trade is lost.

Id.

If mortgages were registered, *land-taxes* might reach the lender to pay his proportion.

Id.

Once in three years feed your mowing lands, if you cannot get manure constantly to keep them in heart.

Mortimer.

The *landing-place* is the uppermost step of a pair of stairs, the floor of the room you ascend upon.

Moron.

A house of commons must consist for the most part of *landed men*.

Addison's Freeholder.

There is a staircase that strangers are generally carried to see, where the easiness of the ascent, the disposition of the lights, and the convenient *landing*, are admirably well contrived.

Id. on Italy.

There are few natural parts better *landlocked*, and closed on all sides, than this seems to have been.

Id.

Upon our arrival at the inn, my companion fetched out the jolly *landlord*, who knew him by his whistle.

Addison.

We are like men entertained with a view of a spacious *landscape*, where the eye passes over one pleasing prospect into another.

Id.

What the Romans called *vestibulum* was no part of the house, but the court and *landing-place* between it and the street.

Arbuthnot on Coins.

The species brought by *land-carriage* were much better than those which came to Egypt by sea.

Arbuthnot.

Beneath his steely casque he felt the blow,
And rolled, with limbs relaxed, along the land.

Pope.

Oft in her glass the musing shepherd spies
The watery *landscape* of the pendant woods,
And absent trees, that tremble in the floods.

Id.

LANDA, a territory of the island of Borneo, on a northern arm of the river Pontiana. The rajah's residence is on the projecting corner of a mountain, to which there is an ascent by 118 steps, and two rivers flow right and left of the base. It has a strong capital of this name, well provided with artillery, and in the territory are gold mines of some importance.

LANDAFF. See LLANDAFF.

LANDAU, a small but ancient and celebrated town of Germany, in Lower Alsace, annexed to France before the revolution, but now included in the Bavarian circle of the Rhine. It was formerly imperial, and in 1291 was endowed with the same privileges as Haguenau. In 1680 it

was confirmed to Louis XIV. and strongly fortified by Vauban; yet, in 1702, it was taken by the Austrians. In 1703, 1704, and 1713, it was alternately retaken by the French and Austrians. In 1714 it was ceded to France by the treaty of Baden. In 1793 the Austrians and Prussians attacked it but without success. It contained about 4000 citizens in 1789. It is seated on the Queich, six miles east of Strasburg, and 347 east of Paris; and has a collegiate church, common to the Lutherans and Catholics, a lyceum lately founded by the Bavarian government, two monasteries, and 4250 inhabitants. The French retained it in the treaty of Paris of 1814, but the following year it was assigned to Bavaria.

LANDEN (John), F.R.S., an eminent mathematician, born at Peakirk, near Peterborough, in Northamptonshire, in January 1719. He became very early a proficient in the mathematics; for we find him contributing, in the Philosophical Transactions for 1754, An Investigation of some Theorems which suggest several very remarkable properties of the circle. In 1755 he published a volume of about 160 pages, entitled *Mathematical Lucubrations*. In 1762 he was appointed agent to earl Fitzwilliam, an employment which he retained till within two years of his death. About the end of 1759 he published proposals for printing by subscription *The Residual Analysis*, a new branch of the Algebraic Art; and in 1758 published a small tract in 4to. entitled *A Discourse on the Residual Analysis*, in which he resolved a variety of problems by a mode entirely new. In the fifty-first volume of the Philosophical Transactions for 1763 he gave A new method of computing the sums of a great number of infinite series. He published in 1764 the first book of *The Residual Analysis*, in a 4to. vol. of 218 pages, with several copper-plates. In this treatise, besides explaining the principles on which this new analysis was founded, he applied it to drawing tangents and finding the properties of curve lines, &c. On the 16th of January, 1766, he was elected F.R.S. In the fifty-eighth volume of the Philosophical Transactions for 1768 he gave a Specimen of a new method of comparing curvilinear areas. In the sixtieth volume, Some new theorems for computing the whole areas of curve lines, where the ordinates are expressed by fractions of a certain form, in a morce concise and elegant manner than had been done by Cotes, De Moivre, and others, who had considered the subject before him. In the sixty-first he investigated several new and useful theorems for computing certain fluents, which are assignable by arcs of the conic sections. In 1771 he also published, *Animadversions on Dr. Stewart's computation of the Sun's distance from the Earth*. He continued in this manner contributing, to the Philosophical Transactions, various papers on mathematical subjects for the greater part of his life. He in 1780 published a volume of *Memoirs*; with a valuable and extensive appendix containing Theorems for the Calculations of Fluents. The tables which contain these theorems are more complete than any to be found elsewhere. The second volume of his *Memoirs* was written and revised during the intervals of dreadful fits of the stone. This volume, besides a

solution of the general problem concerning rotatory motion, contains the resolution of the problem concerning the motion of a top; an investigation of the motion of the equinoxes, in which Mr. Landen was the first who pointed out the cause of Sir Isaac Newton's mistake in his solution of this celebrated problem: and some other papers of considerable importance. He just lived to see this work finished, and received a copy of it the day before his death, which happened on the 15th of January 1790, at Milton, near Peterborough.

LANDEN, a small town of the Netherlands, in the ci-devant province of Austrian Brabant. Two bloody battles have been fought near it a century distant in point of chronology. The first was on the 22th of July 1693, between the allied forces under king William III. and the French under the duke of Luxemburg, where in the latter were twice repulsed, and, though at last victorious, had about 15,000 men killed, and about 10,000 wounded. The French army amounted to 80,000 men, and that of the allies to little more than 40,000. The second battle was fought on the 18th of March 1793, between the French republicans and the Austrians; when the former were so completely defeated, that they were compelled for a time to evacuate the whole Austrian Netherlands. Landen is seated on the Beck, nineteen miles south-east of Louvain.

LANDER, (Richard), the African Traveller, was the attendant of Captain Clapperton on his second expedition into the interior of Africa. He started with his master from the Bight of Benin, and after the death of that gentleman, at Soccatoo, in April 1827, Lander returned to the coast. In 1830, he set out again, accompanied by his brother John, upon another exploring journey, and landed at Badagry, on the 25th of March. They reached the river at Boussa, from thence ascended to Youri, and the Cubbie, which comes from Soccatoo. They next descended the river which flows nearly south from Bussa, and which, after receiving the Shary, expands into a large lake, and thence empties itself, by several mouths, into the Bight of Benin. The mouth by which the Landers reached the sea is called the Nun; and the point where Park began his descent upon the same river is 2000 miles, by the river's course, from the mouths discovered by the Landers. To establish fully the truth of this last discovery, Lander again undertook the cause of geographic science, and having purchased an Island in the river Nun, about 300 miles from its mouth, established a factory upon it. Here he sent an iron steam-boat, prepared for a voyage up the Niger, and in the very act of following the steamer to commence the great object of his life, was killed by a party of natives, who first fired upon him and his party from the beach, and then followed in their war-canoes to complete the cruel work begun in so dastardly a manner. Lander's death occurred in the spring of 1834.

LANDES, or LANDES DE BORDEAUX, France, a country formerly comprehended in the province of Gascony. It extends about ninety miles from the Adour to Bourdeaux, and now forms the greater part of the departments of Landes and

the Gironde. It has received its name from the circumstance of the soil being poor, sandy, and covered with furze; and has indeed the appearance of a desert, with here and there a patch of pasture, and richly cultivated land. On the sea-coast is a range of sandy downs of from six to nine miles broad, part of which is covered with fine plantations of firs, the planting of which is much encouraged by the government, and will perhaps finally tend to the covering and fertilising this long range of hills.

LANDES, DEPARTMENT DES, France, is formed of part of the former province of Gascony, and derives its name as above. The principal place of this prefecture is Mont de Marsan; it has three arrondissements; Mont de Marsan, containing 82,364 inhabitants; Dax, 90,362; and St. Sever, 83,585; making a total population of 256,311 souls, twenty-eight cantons, and 352 communes. It extends over an area of 4212 square miles, yielding a revenue of 7,537,000 francs, is included in the eleventh military division, has a royal court at Pau, and is in the diocese of Bayonne. It is divided into two electoral arrondissements, and sends three members to the chamber of deputies.

This department is bounded on the north by that of the Gironde, on the east by those of Lot et Garonne and the Gers, on the south by that of the lower Pyrenees, and on the west by the sea. The territory presents two natural divisions, formed by the course of the Adour: the first, which lies to the south of this river, bears the name of Chalosse, presenting to the eye plains covered with wheat and maize, and delightful hills adorned with vines: the second, which is the far larger portion, is almost entirely covered with heath, woods, marshes, ponds, and vast plains of sand. An immense forest of pines spreads between these lands and the sea, with a small population thinly scattered over it. Sandy and naked downs, from three to nine miles broad, and sixty miles long, spread over the coast, opposing an insuperable barrier to the violence of its waves, and rendering the shore inaccessible to navigators; these are intersected with plots of excellent pasturage, feeding a great number of horned cattle and sheep, as well as horses of a small size, but excellent for service. The climate is temperate, but rather hot than cold.

The inhabitants of so wild a country must necessarily be almost savages; yet in these lands there are some well-built houses, provided with good furniture; some of the peasants are even rich, but the greater part may be considered as shepherds; their isolated and ill-built cottages have no allurements to attach them to the soil, and they can very easily remove them. The chief person in the cottage takes the direction of the tillage and rustic labors, and seldom goes out to any distance; but the young people go out into the forests to cut wood, to the distance of twenty-four or thirty miles, and make charcoal of a part of it: others go to an equal distance to feed their flocks. In these excursions each person carries with him a few cheesies, a bundle of pilchards, and a little saucepan to cook his maize and bacon. Having arrived at the place of destination, they construct their huts of the branches of trees, and

proceed to feed their flocks or prepare their charcoal. They are also furnished with fowling-pieces to hunt during their leisure moments; they are skillful marksmen, and generally supply Bourdeaux, Dax, Bazas, and other places round, with game. As it is unpleasant to walk on the sands, in this country, the inhabitants make use of sticks four or five feet long, to which they attach a piece of an ox's bone to rest their feet on. On these stilts, which they call *changees*, they walk so easily and quickly that a horse can with difficulty keep pace with them.

The soil, being mostly so sandy and covered with heath, requires horses to cultivate it; and its harvests are very inadequate to the wants of the people. There are in this department 127,412 hectares of forests, and 19,500 of vineyards, and the mean produce of the tilled land is six francs twenty-five centimes. Its productions comprise a small quantity of wheat, rye, buck-wheat, maize, millet, vegetables, panic or Hungarian corn, potatoes, flax, hemp, excellent fruits, highly esteemed wines, wood, fine natural and artificial meadows, saffron, woad, madder, pine apples, cork; large and small game, such as red and gray partridges, ortolans, &c.; fish of all kinds, particularly turtles, leeches, &c.: horses, mules, oxen, numerous flocks of sheep, a great number of goats, pigs that run wild in the woods, the flesh of which is preferred for hams; poultry, especially geese and ducks; and bees. There are also mines of iron, coal, and bitumen; quarries of marble, brown freestone, plaster, mill-stones, stones for lithographic purposes, basalt, pozzollona, peat, porcelain clay and clay for crucibles. Mineral and warm springs are found at Dax, Tercis, Canjac, Macey, Meylis, Saubaise, Pouillon, Ponson, and Préhac.

The manufactures consist of cloth for veils, table-linen, liqueurs, wine vinegar, resin, pitch, tar, sail-canvas, and lamp-black. Their tanneries are celebrated, as also are their potteries, china factories, glass-houses, forges, and blast-furnaces. They also work, in various ways, the firs with which the country is covered, and prepare delicately flavored hams, known by the name of Bayonne hams. Their commerce consists in grain, wines, brandies, vegetables, linseed oil, hams, wood for masts and building, firs, resinous materials, &c. This country is the mart of the trade between France and Spain.

The principal rivers which water this department are the Adour and the Gave de Paw navigable, the Luys, the Leyre, the Gabas, the Louts, the Midou, and the Douze. The great roads from Bourdeaux, Bayonne, and Pau, cross it.

LANDGRAVE (from land, German, earth, and grave and grave, a judge or count) was a title given to those who executed justice in behalf of the emperors, with regard to the internal policy of the country. It does not seem to have been used before the eleventh century. Those judges were first appointed within a certain district of Germany; in time the title became hereditary, and the judges assumed the sovereignty of the several districts over which they presided. Landgrave is now applied, by way of eminence, to those sovereign princes of the empire, who

possess by inheritance certain estates called *landgravates*, and of which they receive the investiture from the emperor. There are also other landgraves, who are not princes, but counts of the empire.

LAND-LOCKED is when land lies all round the ship, so that no point of the compass is open to the sea. If she is at anchor in such a place, she is said to ride land-locked, and is therefore concluded to ride safe from the violence of the winds and tides.

LANDSBERG, a well-built town of Brandenburg, Prussia, which has a good bridge over the Wartha, and carries on a brisk trade in wool, woollens, cottons, and corn, with Silesia and Poland. In 1758 it was besieged by the Russians; and in 1768 suffered severely from fire. Population 6000. Twenty-four miles E. N. E. of Custrin, and seventy-four east of Berlin.

LANDSCAPE, or **LANDSKIP**, *n. s.* 1. A region; the prospect of a country. 2. A picture representing an extent of space, with the various objects in it.

LANDSCAPE GARDENING is a branch of the picturesque that was scarcely at all attended to in this country prior to the close of the last century. The interminable alleys, and closely clipped yew tree hedges, then began to give place to picturesque arrangements more in accordance with those of nature; and, as art began to attain a higher degree of eminence, its presence became less and less perceptible. As the great object with the landscape gardener is to produce a series of picturesque views from the mansion, or principal edifice, we must commence with this part of the subject.

The residence should be approached by a line of gravel road winding up a commanding slope, so that the ornamental offices would be seen between and above the plantations as they are passed. The house itself would then be occasionally viewed through the intervening masses of trees, and the grounds should gradually open to an increased display, towards which its elevated terrace in front would contribute, besides affording an ample platform on which the building would stand. The terrace becomes a means of uniting the building with the grounds, removing the field-like approximation of the lawn on the spot where the objection commonly existing to its introduction would be the most apparent, and from this platform the scenery will combine a park-like effect with home views. From the southern side, the expanse must be varied by a series of undulations, and enriched by groups, masses, and single trees, in the foreground. Mr. Papworth, who has written an interesting book on this subject, recommends the introduction of a long corridor, and series of covered ways, with an aviary and pheasantry. 'This corridor, being entered from the vestibule, would lead the spectator forward to a considerable length, and until he would arrive at the rosiary. Along this extensive line of covered way, statues, vases, plants, and other embellishments of art and nature might be placed to advantage, and receive the protection of ample shelter.'

The rosiary at the extremity of the avenue is circular, and contains in the centre a fountain and receptacles for gold and silver fish. As this portion of the garden is usually placed upon the projecting point of the hill on which the house is situate, it commands views of the surrounding country, and that of the house grounds, in which water should be a leading feature. It is in these select spots, in the neighbourhood of the house, that evergreen shrubs are chiefly placed, and about which walks are planned, for the purpose of being benefited by verdure in all seasons of the year. By these means, buildings and works of art are connected with both natural as well as landscape scenery; and, being mixed with trees of the deciduous kind, they may be made gradually to yield their compact and deep-toned effects, and insensibly unite with the park arrangements.

The kitchen garden should form a part of the arrangements for walks, and be so connected with the pleasure grounds that it may be entered from a variety of points. This circumstance, to many, is not of value; but, although the kitchen garden is not arranged for pleasure, its utility and perpetually changing culture give it importance as a feature in landscape gardening.

LAND SURVEYOR, *Agriculture*, the common name of one whose business is the planning and surveying of lands or estates.

It is remarked by Mr. Marshall that land surveyors are not only useful merely to measure, and map the whole or parts of estates, but to assist in matters of arbitration and the amicable adjustment or settlement of disputes, as well as being highly useful in the management of landed property. See SURVEYING and MAPPING.

LANDED PROPERTY. All the particulars essential to a right understanding of the legal value of this species of property will be found amply discussed in the articles LAW, LEASE, COPYHOLD, &c., and we propose in the present case to confine ourselves to the best mode of valuing. The particular circumstances that require to be considered, as giving value to land, are chiefly these:—1. The quantity of the land, which is the ground-work of the calculation; though it has little weight in the scale of valuation. The fee-simple value of an acre of land may be less than 20s., or it may be more than £100. Nevertheless, it is on the quantity the rental value is calculated; and it is usual for the person who parts with it to exhibit a 'Particular' of the estate or property on its disposal, showing, or which ought to show, not only the aggregate quantity, but the number of acres that each piece or parcel contains, as well as other matters; and ought, most particularly, to specify the distinct quantities of the lands of different qualities, in order that their several rental values may be ascertained with greater ease and accuracy.

2. The intrinsic quality of the land, which is essential in forming the estimate. But even this, in a general view of the value of lands throughout the kingdom, is often, it is said, of secondary consideration; for in many cases their values

are given by situation, rather than by soil and substrata. In some cases, as has been seen, the value of the situation may be a great many times more than that of the intrinsic value of land. But this excessive influence of situation is, however, limited in its effects, and is chiefly confined to the environs of large towns, and other extraordinary markets for produce of the farm kind. A great majority of the lands of this country owe their values less to situation than to intrinsic quality; and to come at this with sufficient accuracy is the most requisite, and at the same time the most difficult part of valuation, as it depends almost wholly on extemporary judgment, exercised on the frequently few data which rise to the eye in passing over the field of estimation. It is therefore almost needless to state that to acquire the degree of judgment which is necessary to the execution of this difficult critical task, it is required to know and be perfectly acquainted with the nature and productiveness of lands of different appearances—a sort of knowledge which scarcely any thing but mature practice in the cultivation and use of lands of different qualities can sufficiently teach; though long habit may do much in ordinary cases towards hitting off the value of lands, without an extensive knowledge of the practice of agriculture.

There are cases however, it is said, in which both of these qualifications are found insufficient to give any accuracy of judgment, even among provincial valuers of land; and a person who ventures to step forward as a universal valuer should have either an extraordinary talent for the purpose, or should, after a suitable initiation, have had great experience in rural concerns in different parts of the kingdom.

3. The situation, which, although it has been already stated that the value of the lands of this country, aggregately considered, depends less on situation than on intrinsic quality, yet in every part it has great influence. Thus an acre of land, the intrinsic quality of which renders it, in an ordinary situation, in what regards locality, merely worth 20s. the acre, would not, it is observed, in some districts or places, be worth more than 15s., while in others it would bear to be estimated at 25s., or even a higher price of rent, to a farmer on a large scale, and away from the immediate environs of a town, or any populous district of manufacture, for reasons that will be seen in examining the different particulars of situation. In the temperature of situation, too, whether it be given by elevation, aspect, or exposure, a powerful influence is formed, which is capable of altering exceedingly the value of lands. The same sort of soil and subsoil, it is said, which is not unfrequently seen on exposed mountains, and hanging to the north, and which in that situation is not worth more than 5s. an acre, would, if situated in a sheltered vale tract, and lying well to the sun, be worth 20s. or a greater rent. Even on climate, something considerable in the business, it is thought, depends. In the southern part of the country, the harvest is in general a month earlier than in those of the north, though it is not regulated exactly

by the climate or the latitude of the places. This is consequently a circumstance that requires to be attended to by those who estimate the value of estates or lands; for an early harvest is not only advantageous in itself, but gives time to till the ground, or to take an autumnal crop, which are advantages that a late harvest will not admit of being had. And another kind of temperature of situation has still, it is supposed, more influence on the value of lands, which is that of the moistness of the atmosphere. A moist situation not only gives an uncertain and often late harvest, but renders it difficult and hazardous; as is too frequently experienced on the western coast sides of this island. Even in the turn of the surface, exercise is found, it is said, for the judgment. Lands lying from too steep or too flat surfaces, particularly when of the arable kind, and retentive, are of less value than those which are greatly shelving, so as to give a sufficient discharge to surface-water, without their being difficult of cultivation. Steep-lying lands are not only troublesome and expensive under the operations of tillage, but in taking out manures, and getting off the produce. Lands lying with an easy descent, or on a gently billowy surface, may be worth more by many pounds an acre, in the money they will bring, than others of the same intrinsic quality, hanging on a steep. Another consideration of the same weight in valuing an estate, or other landed property, is a supply of water for domestic purposes, for the uses of live stock, and for the purposes of irrigation. There are situations, it is said, in which a copious stream of calcareous water would enhance the fee-simple value of a large estate some thousands of pounds. Likewise a sufficient supply of manure, whether dung, lime, marle, or other melioration, being at a moderate price, and within a moderate distance of land-carriage, materially adds to the intrinsic value of lands: and the established practice of management of the district or county in which an estate or land lies is capable of enhancing or depressing the value of it exceedingly. Even the single practical point of ploughing light and loamy lands with two oxen, or two active horses, instead of four heavy ones, is capable of making a difference on good land which is kept alternately in herbage and corn crops of from 5s. to 10s. a year, on the acre; or £10 an acre in the money value which it is worth.

The price of labor is also stated as another regulation of the marketable value of land in a given district. It is always right, however, to compare this with the habits of exertion and industry which prevail among farm workmen, before the net amount of labor can be safely set down. The price of living too, or expense of house-keeping, prevalent among farmers, has its share of influence on the value of lands. In the more reclusive parts of the north of this country, the farmers, especially of the lower and the more inferior classes, and their servants, are fed, clothed, and accommodated, at nearly half the expense of those of a similar degree in many parts of the more central and southern districts. In a county where frugality prevails, too, lands of a given quality will even, it is said,

bear a higher rent than they will where a more profuse manner of living has gained a footing. Hence, likewise, the spirit of improvement, or the prejudice against it, which prevails in a district, is a circumstance of some value, it is supposed, in this intention; for if the former be in a progressive state, especially if it be still in the more early stages of its advancement, a rapid increase of rent may with a degree of certainty be expected; whereas, under the leaden influence of the latter, half a century may, it is thought, pass away, before the golden chariot of improvement can be profitably put in motion. And, lastly, may be noticed, it is said, the attractive centre to which the labors of the husbandman will ever tend—markets, in which, more than in any other circumstance, we are to look for the existing value of lands.

LANDSCRONA, a sea-port town of Sweden, four leagues south of Helsingborg, is a staple town, and has a small well-sheltered port, with twenty feet water. It is defended by a fort on a little sandy island, and by a citadel on the main. Between Helsingborg and Landscrona is the village of Rosa; and between Landscrona and Malmø, those of Bairebeck, Hut, Berby, and Allart. Inhabitants 4000. It has manufactures of gloves, and a brisk annual fair.

LAND'S END, a promontory of Cornwall, the most westerly point of Great Britain. It was called by Ptolemy Bolerium, and *Αρτινισταον* or Antivestæum, and by Diodorus Belerium, as Cambden conjectures, from the British word Pell, signifying remote. The ancient British bards called it Penrighnaed, or the Promontory of Blood; and their historians Penwith, or the promontory to the left. The Saxons called it Penwithsteort, and the inhabitants Pen-von-las, or the land's end. A tradition obtains that this head ran further out into the sea, and that the ground now covered was denominated Lioness. On the outermost rocks are to be seen veins of lead and copper at low water. Long. 5° 45' W., lat. 50° 6' N.

LANDSHUT, a well-built town of Bavaria, capital of a district. It has two electoral palaces, a college, and two churches. The steeple of one of them is the highest in Germany, being 456 feet in elevation. The university of Ingolstadt was removed to Landshut in the year 1800; and having been re-organised, and richly endowed by that monarch, received the name of the University of Louis Maximilian. There are thirty-four ordinary and four extraordinary professors; the number of students varies from 500 to 600. The principal building is the once spacious Dominican convent. Its revenue is derived, in a great measure, from the funds of the suppressed monasteries; and it is said to average about £9000 sterling a-year. There is besides an academy and a divinity school at Landshut. Brewing and distilling are carried on to a great extent, and there are also manufactures of leather, cloth, and watches. The position of the town always exposes it to suffer severely in war: as appeared in 1742 and 1743; and also in the invasions of the French in 1796, 1800, 1805, and 1809. It is seated on the Iser, thirty-two

miles north-east of Munich, and thirty-six south-east of Ingolstadt.

There is also a manufacturing town of Prussia in Silesia of this name. Population about 3000. Twenty miles W. S. W. of Schweidnitz.

LANE, *n. s.* Sax. *lana*; Swed. *lana*; Belg. *laan*. A narrow pass or road in the fields; an alley; any confined passage.

All flying

Through a strait *lane*, the enemy, full-hearted,
Struck down some mortally. *Shakspeare. Cymbeline.*

The earl's servants stood ranged on both sides,
and made the king a *lane*. *Bacon's Henry VII.*

I know each *lane*, and every alley green,
Dingle or bushy dell, of this wild wood,
And every bosky bourn. *Milton.*

Through a close *lane* as I pursued my journey.

Otway.

A pack-horse is driven constantly in a narrow *lane*
and dirty road. *Locke.*

There is no street, nor many *lanes*, where there
does not live one that has relation to the church.

Sprat's Sermons.

LANFRANC, an Italian, born at Pavia, who became archbishop of Canterbury in 1070. He disputed against Berengarius in the council held at Rome in 1059, and wrote against him concerning the real presence in the eucharist. He courageously resisted the authority of pope Gregory VII. and died in 1089.

LANFRANC (John), an eminent Italian history painter, born at Parma in 1581. He was the disciple of Augustin Caracci; and, after his death, of Hannibal, whose taste in design and coloring he so happily attained, that he was entrusted to execute some of his designs in the Farnesian palace at Rome. These he finished in so masterly a manner, that the difference is imperceptible to this day between his work and that of his master. He had a peculiar facility in designing and in painting large compositions, either in fresco or in oil: he did indeed aspire to the grace of Correggio, but could never arrive at his excellence; his greatest power being manifested in composition and foreshortening. He was deficient in correctness and expression; and his coloring, though sometimes admirable, was frequently too dark. By order of pope Urban VIII. he painted, in St. Peter's church at Rome, the representation of St. Peter walking on the water, which afforded the pope so much satisfaction that he knighted him. He died in 1647.

LANGBAINE (Gerard), D. D., a learned English writer, was born in 1608. He was educated at Queen's College, Oxford; and became keeper of the archives of that university, provost of his college, and D. D. He was highly esteemed by archbishop Usher, Selden, and several other learned men; and died in 1657-8. He published, 1. *Longinus*, in Greek and Latin with notes. 2. *A Review of the Covenant*; and other works.

LANGE (Charles Nicholas), an ingenious Swedish naturalist, who published, 1. *Historia Lapidum figuratorum Helvetiæ*. 2. *Origo eorundorum, et methodus Testaceæ Marinæ distribuendi*.

LANGE (Joseph), professor of Greek at Friburgh, in the end of the sixteenth century. He published, 1. *Polyantha*, in 2 vols. folio.

2. *A Florilegium*, and, 3, *Elements of Mathematics*.

LANGELAND (Robert), an English poet of the fourteenth century, born in Shropshire, and one of the first disciples of Wickliffe the reformer. He wrote *The Visions of Pierce Plowman*; a piece which abounds with imagination and humor, though dressed in very uncouth versification and obsolete language. It is written without rhyme, an ornament which the poet has endeavoured to supply by making every verse begin with the same letter. Dr. Hickee observes, that this kind of alliterative versification was adopted by Langeland from the practice of the Saxon poets; and that these visions abound with Saxonisms: he styles him *celeberrimus ille satirographus, morum vindex acerrimus, &c.* Chaucer and Spenser have attempted imitations of his visions, and the learned Selden mentions him with honor.

LANGENSALZA, a town of Prussian Saxony, the capital of Thuringia, situated upon the Salza, near its confluence with the Unstrut. It has two parish churches, a castle, a theatre, a high-school in great repute; and has manufactures of silk, woollen, cotton, gunpowder and starch. Population 5400. Fourteen miles west of Erfurt.

LANGER-OOG, a narrow sandy island, subject to Hanover, on the north-west coast of Germany. It is thirteen miles in circuit, and does not contain more than 100 inhabitants. Long. 7° 35' E., lat. 53° 44' N.

LANGHORNE (John), D. D., son of the Rev. Joseph Langhorne of Winston, was born at Kirkby-Stephen, in Westmoreland. His father died when he was young. After entering into orders, he became tutor to the sons of Mr. Crockcroft, a Lincolnshire gentleman, whose daughter he married. Dr. Langhorne held the living of Blagden in Somersetshire at the time of his death, which happened April 1st 1779. He was the author of, 1. *Poems* in 2 vols. 1766. 2. *Sermons* in 2 vols. 1773. 3. *Effusions of Fancy*, 2 vols. 4. *Theodosius and Constantia*, 2 vols. 5. *Solyman and Almena*. 6. *Frederick and Pharamond, or the Consolations of Human Life*, 1769. 7. *A Dissertation on the Eloquence of the Pulpit*; and, 8, another on *Religious Retirement*. He also published the *Works of St. Evremond*; the *Poems of Collins*; and some other articles.

LANGIUS (John), M. D., a physician of Silesia, born in 1485. He graduated at Pisa, and became physician to four electors Palatine. He published at Basil, in 4to. 1553, *Medical Epistles*, which are curious. He died in 1565.

LANGLAND, or Long Island, an island of Denmark, between Funen and Laaland, is ten leagues long and only one broad, containing seventy square miles, and 12,000 inhabitants. It produces some corn, potatoes, and flax; and exports salted meat, hides, honey, and wax. Rudkæbing, the only town, on the west, contains 700 inhabitants.

LANGOE, an island of the North Sea, about ninety-three miles in circumference. It is forty-six miles from the coast of the bishopric of Aggerhuus, Norway.

LANGPORT, a well frequented market-town of Somersetsbire, 128 miles from London, on the Parrot, between Bridgewater and Crewkern. It is divided into two parts, called Langport-Eastover, and Langport-Westover. It has a church, with a handsome tower, and a little to the east is a small ancient building, called the Hanging chapel, in which is a free-school, founded by Thomas Gillet, in the seventeenth century. Its lighters constantly fetch coals, &c., from Bridgewater; and it is a stage for the Taunton waggon, which drops the goods here from London to be carried farther by water. It has a market on Saturday, and four fairs.

LANGREL SHOT, used at sea, consists of two bars of iron joined by a chain or shackle, and having half a ball of iron fixed on each end; by means of which great execution is done among the enemy's rigging. See **CHAIN-SHOT**.

LANGRES, a town of France, in the department of the Upper Marne, and late province of Champagne. In Cæsar's time it was the capital of the Lingones. It was burnt by Attila, and in

A. D. 407 by the Vandals. Its chief trade is in cutlery, serges, cotton cloth, and sulphuric acid. The last is a considerable manufacture here. It affords a grand prospect, being seated on a mountain near the source of the Marne; but the cathedral is the only building worth notice: among the public institutions is an Ecole Chretienne, where 300 poor children are educated. Thirty-five miles north-east of Dijon, and 100 north by east of Rheims. Long. 5° 24' E., lat. 47° 52' N.

LANGTON (Stephen), one of the most erudite men of his age, was born in England, but educated in Paris, and greatly esteemed for his learning by the king and nobility of France. He was chancellor of Paris, a cardinal of Rome, and in the reign of king John was made archbishop of Canterbury by pope Innocent III. in opposition both to the monks of Canterbury, and to the king. Langton continued archbishop twenty-two years, and died in 1228. A catalogue of his works is given by Bale and Tanner.

L A N G U A G E.

LANGUAGE, *n. s.* } Fr. *langage*; Lat. *lingua*. Speech; the
LAN'GUAGED, *adj.* } vernacular tongue
LAN'GUAGE-MASTER, *n. s.* } of a people: languaged, having various languages.

Thus lovers, with their moral documents,
 And eloquent *language*, can exemplifye
 The Craft of Love what it doth signifie.

Chaucer.

O! good my Lord, no Latin,
 I am not such a tyrant since my coming,
 As not to know the *language* I have lived in.

Shakspeare.

We may define *language*, if we consider it more materially, to be letters, forming and producing words and sentences; but if we consider it according to the design thereof, then *language* is apt signs for communication of thoughts.

Holder.

He not from Rome alone, but Greece,
 Like Jason, brought the golden fleece;
 To him that *language*, though to none
 Of the' others, as his own was known.

Denham.

Methinks the highest expressions that *language*, assisted with all its helps of metaphor and resemblance, can afford, are very languid and faint in comparison of what they strain to represent when the goodness of God towards them who love him comes to be expressed!

Barrow.

Though his *language* should not be refined,
 It may not be obscure and impudent.

Roscommon.

Some know no joy like what a word can raise,
 Hauled through a *language's* perplexing maze;
 Till on a mate that seems t' agree they light,
 Like man and wife that still are opposite.

Stillington.

Latin is a more succinct *language* than the Italian, Spanish, French, or even than the English, which, by reason of its monosyllables, is far the most compendious of them.

Dryden.

They were divided into little independent societies, speaking different *languages*.

Locke.

The third is a sort of *language-master*, who is to instruct them in the style proper for a minister.

Spectator.

I have known men, grossly injured in their affairs,
 depart pleased, at least silent, only because they
 were injured in good *language*, ruined in caresses,
 and kissed while they were struck under the fifth rib.

South.

Others for *language* all their care express,
 And value books, as women men, for dress;
 Their praise is still—the stile is excellent;
 The sense, they humbly take upon content.

Pope.

He wandering long a wider circle made,
 And many *languaged* nations has surveyed. Id.

The common fluency of speech in many men, and most women, is owing to a scarcity of matter, and a scarcity of words; for whoever is a master of *language*, and has a mind full of ideas, will be apt in speaking to hesitate upon the choice of both; whereas common speakers have only one set of ideas, and one set of words to clothe them in; and these are always ready at the mouth: so people come faster out of a church when it is almost empty, than when a crowd is at the door.

Swift.

He now busied his mind with literary projects,
 and formed the plan of a society for refining our *lan-
 guage* and fixing its standard.

Johnson.

With eyes that were a *language* and a spell,
 A form like Aphrodite's in a shell!

Byron.

SECT. I.—OF THE ORIGIN OF LANGUAGE.

As it is evident that there is no instinctive articulated language, it has become an enquiry of some importance, how mankind were first induced to fabricate articulate sounds, and to employ them for the purpose of communicating their thoughts. Children learn to speak by insensible imitation; and, when advanced some years in life, they study foreign languages under proper instructors: but the first men had no speakers to imitate, and no formed language to study; by what means then did they learn to speak? On this question only two opinions can be formed. Language must either have been originally revealed from heaven, or the fruit of human invention. The greater part of Jews and

Christians, and even some of the wisest pagans, have embraced the former opinion; which seems so far to be supported by the authority of Moses, that he represents the Supreme Being as teaching our first parents the names of animals. The latter opinion is held by Diodorus Siculus, Lucretius, Horace, and many other Greek and Roman writers, who consider language as one of the arts invented by man. The first men they represent as uttering for some time only confused and indistinct noises; till, associating for mutual assistance, they came by degrees to use articulate sounds mutually agreed upon. This opinion sprung from the atomic cosmogony framed by Mochus the Phœnician, and afterwards improved by Democritus and Epicurus; and though it is part of a system, in which the first men are represented as having grown out of the earth, like trees and other vegetables, it has been adopted by several modern writers of high rank in the republic of letters; particularly Father Simon, Voltaire, the abbé Condillac, Dr. Adam Smith, the late lord Monboddo; and last, not least, professor Adelung. We shall return to an examination of his elaborate work on this subject.

Drs. Warburton, Delaney, Johnson, Beattie, Blair, and Stanhope Smith of New Jersey, who think that language was originally revealed from heaven, consider all accounts of its human invention as a series of mere suppositions, hanging loosely together, and the whole depending on no fixed principle. The opinions of Diodorus, Vitruvius, Horace, Lucretius, and Cicero, frequently quoted in its support, are in their estimation of no greater authority than the opinions of other men; for, as language was formed and brought to a great degree of perfection long before the era of any historian with whom we are acquainted, the antiquity of the Greek and Roman writers, who are comparatively of yesterday, gives them no advantage in this enquiry over the philosophers of France and England. Aristotle has defined man to be *ζῷον μμητικόν*: and the definition is certainly so far just, that man is much more remarkable for imitation than invention; and therefore, say the reasoners on this side of the question, had the human race been originally mutum et turpe pecus, they would have continued so to the end of time, unless they had been taught to speak by some superior intelligence.

The oldest book extant contains the only rational cosmogony known to the ancient nations; and that book represents the first human inhabitants of this earth, not only as reasoning and speaking animals, but also as in a state of high perfection and happiness, of which they were deprived for disobedience to their Creator. Moses, setting aside his claim to inspiration, deserves, from the consistency of his narrative, at least as much credit as Mochus, or Democritus, or Epicurus; and from his prior antiquity, if antiquity could on this subject have any weight, he would deserve more, as having lived nearer to the period of which they all write. But the question respecting the origin of language may be decided without resting on authority of any kind, merely by considering the nature of speech, and the mental and corporeal powers of man.

Those who maintain it to be of human invention suppose men at first to have been solitary animals; afterwards to have herded together without government or subordination; then to have formed political societies, and by their own exertions to have advanced from the grossest ignorance to the refinements of science. But, say the reasoners whose cause we are now pleading, this is a supposition contrary to all history and all experience. There is not upon record a single instance, well authenticated, of a people emerging by their own efforts from barbarism to civilisation. There have indeed been many nations raised from the state of savages; but it is known that they were polished, not by their own repeated exertions, but by the influence of individuals, or colonies from nations more enlightened than themselves. The original savages of Greece were tamed by the Pelasgi, a foreign tribe; and were afterwards further polished by Orpheus, Cecrops, Cadmus, &c., who derived their knowledge from Egypt and the East. The ancient Romans, a ferocious and motley crew, received the blessings of law and religion from a succession of foreign kings; and the conquests of Rome, at a later period, contributed to civilise the rest of Europe. In America the only two nations which, at the invasion of the Spaniards, could be said to have advanced a single step from barbarism, were indebted for their superiority over the other tribes, not to the gradual and unassisted progress of the human mind, but to the wise institutions of foreign legislators.

Experience teaches us, continue these writers, that in every art it is much easier to improve than to invent. The human mind, when put into the proper track, is indeed capable of making great advances in arts and sciences; but it has not, in a people sunk in ignorance and barbarity, sufficient vigor to discover that track, or to conceive a state different from the present. If the rudest inhabitants of America and other countries have continued (as there is every reason to believe they have), for ages in the same unvaried state of barbarism; how is it imaginable that people so much ruder than they, as to be ignorant of all language, should think of inventing an art so difficult as that of speech, or even to form a conception of it? In building, fishing, hunting, navigating, &c., they might imitate the instinctive arts of other animals; but there is no other animal that expresses its sensations and affections by arbitrary articulate sounds. It is said that, before language could be invented, mankind must have existed for ages in large political societies, and have carried on in concert some common work; but if inarticulate cries, and the natural visible signs of the passions and affections, were modes of communication sufficiently accurate to keep a large society together for ages, and to direct its members in the execution of some common work, what could be their inducement to the invention of an art so useless and difficult as that of language?

In a word, daily experience informs us, that men who have not learned to articulate in their childhood, never afterwards acquire the faculty of speech, but by such helps as savages cannot obtain; and therefore, if speech was invented at

all, it must have been either by children who seem incapable of invention, or by men who were incapable of speech. A thousand, nay a million, of children could not think of inventing a language. While the organs are pliable, there is not understanding enough to frame the conception of language; and, by the time that there is understanding, the organs are too stiff for the task. And, therefore, say the advocates for the divine origin of language, reason, as well as history intimates, that mankind in all ages must have been speaking animals; the young having constantly acquired this art by imitating those who were elder; and we may warrantably conclude, that our first parents received it by immediate inspiration.

To this account of the origin of language, one objection readily occurs: if the first language was communicated by inspiration, it must have been perfect, and held in reverence by those who spake it, i. e. by all mankind. But a vast variety of languages have prevailed in the world; and some of those which remain are known to be very imperfect, whilst there is reason to believe that many others are lost. If different languages were originally invented by different nations, all this would naturally follow from the mixture of these nations; but what could induce men possessed of one perfect language, of divine original, to forsake it for barbarous jargons of their own invention, and in every respect inferior to that with which their forefathers or themselves had been inspired?

To this it is replied, that nothing was given by inspiration but the faculty of speech and the elements of language; for, when once men had language, it is easy to conceive how they might have modified it by their natural powers, as thousands could improve what they could not invent. The first language, if given by inspiration, must, in its principles, have had all the perfection of which language is susceptible; but, from the nature of things, it could not be very copious. The words of language are either proper names, or the signs of ideas and relations; but it cannot be supposed that the All-wise Instructor would load the memories of men with words to denote things then unknown, or with the signs of ideas which they had not then acquired. It was sufficient that a foundation was laid, of such a nature as would support the largest superstructure which they might ever after have occasion to raise upon it, and that they were taught the method of building by composition and derivation. This would long preserve the language radically the same, though it could not prevent the introduction of different dialects in the different countries over which men spread themselves.

Adelung, in his *Mithridates*, treats professedly of the history of languages: and it is the most extensive and profound work on that subject that has ever yet issued from the European press. Materials for such an undertaking have been accumulating from all the parts of the world during the last fifty years. Since the voyages of Cook, every navigator and traveller in distant regions has considered it a part of his duty to collect specimens of the dialects of their

inhabitants. The ancient idioms of Persia, Hindostan, and Siam, which were either wholly unknown to Europeans, or enveloped in a cloud of mystery, have been thoroughly investigated; and the languages of the African and American hordes have been studied. Yet, though our knowledge had increased so much in particulars, scarcely any attempt had been made to compare the data which were collected, and to obtain any general results. The author of *Mithridates* had already obtained celebrity as a lexicographer, with the reputation of extensive learning, and he brought to this undertaking all the qualifications which were necessary to ensure success. It is much to be regretted that he died before the completion of his work, but it is at the same time fortunate for the world that his manuscripts fell into the hands of so enlightened a successor as professor Vater. That much remains in this department for future writers to perform, will not be questioned; but what Mr. Adelung has accomplished claims for him, in our opinion, the decided approbation of the public.

Its full title is, *Mithridates oder allgemeine Sprachenkunde*. *Mithridates*; or, a General History of Languages, with the Lord's Prayer as a Specimen, in nearly five hundred Languages and Dialects. By Johann Christoph Adelung, Aulic Counsellor and Librarian at Dresden. Berlin, 8vo. Vol. I., 1806. Vol. II., 1809. Vol. III., 1812. Part II., 1813. Vol. II. and III. are continued by Professor Vater from the papers of the author.

'The idea,' he tells us, 'must be given up that language was communicated to the first men by their Creator, or that they were taught the use of articulate words by angels or superior intelligences.' There was a time, according to him, when the human race claimed but little privilege over the brutes; when they crept upon the earth a 'mutum et turpe pecus.' 'This is a proposition which, on a little reflection, offers itself to the mind as a first principle, and requires no proof.' (We confess that to us it does not appear so fully self-evident.) 'It is true,' he adds, 'that when we consider the artificial and complicated structure of a European language, which is capable of expressing all the shades of thought and sentiment that arise in civilised society, and of representing all the metaphysical reasonings of a Plato or a Voltaire, the production of so wonderful a contrivance seems beyond the reach of the human faculties.' 'A European war-ship, which with a burden of 2500 tons, and bearing 1000 men and 100 cannons, rides triumphantly through the ocean, and defies the rage of conflicting elements, would appear to the wondering eyes of a naked Huron, or to the miserable savage of Oonalashka, as a phenomenon altogether supernatural, and it would be impossible for him to conceive that such a work was produced by the hands of his fellow creatures. But if he were enabled to trace the art of the modern ship-builder backwards through all its stages to the fragile raft or the hollow trunk, on which the first trembling barbarian committed himself to the unstable element, his astonishment would gradually subside, and the supernatural being created by his

'magination would gradually dwindle into a simple man.' The case is similar, according to our author, when we enquire into the history and progress of language. 'It only requires a little observation to discover the stages of its advancement, and to trace it backwards to the first articulate sounds uttered by the uncouth child of nature.'—'Even when we examine attentively the whole fabric, in its complete form, we discover clear vestiges of its homely beginning. The language which flows from the mouth of a Cicero or a Newton still bears traces of those infant ages of the world, when men referred all the movements of external nature to the same voluntary powers of which they were conscious within themselves; when they fancied that the wind blows, that the sun goes down, and that the ocean roars, and when with similar ignorance they feigned mountains and rivers to be males and females.'

It is clear that the first words which a savage would utter would naturally be mere vocal sounds pronounced with the open mouth, without articulation. Accordingly words of this character abound in the vocabularies of many barbarous nations, as the South Sea Islanders, the Hurons, the Algonquins, Galibis, and Esquimaux. Some well known languages preserve many of these first attempts to form words. The Greek expresses the most simple ideas by mere vocal sounds, such as *aw, ew, ee, ew, aiw, hw, ow, aie, aia*. The addition of consonants was a considerable step in advance, and that it was a matter of some difficulty we may learn by observing how many languages are still very defective in this respect. La Hontan found it impossible to teach a Huron to articulate the labials *b, p, and m*. Scarcely are there two dialects which agree in the number of consonants. The Otaheiteans imitated the name of Cook by the word *Tutu*, and the Chinese, in the place of *Christus*, were obliged to substitute *Ki-li-tu-su*. Next to mere vocal sounds, the most simple class of words are those in which a single vowel follows a consonant, as *ba, lo, ma, &c.* These are the words which a child first pronounces. The dialects of the southern islanders are replete with such sounds, and the whole Chinese vocabulary contains scarcely any other words. On this account Mr. Adelung considers this as the nearest representative of the primitive language of mankind.

The first application of names to objects, or the invention of significant words, has often been supposed to have taken its rise from the imitation of the voices of animals, or the sounds produced by various natural causes. The serpent hisses, the bees hum, the thunder peals, the tempest roars, the wind howls among the mountains. The savage listens and imitates the sound which salutes his ears, and the word which he pronounces serves afterwards to recall to himself and his companions the idea of the object which first gave occasion to its utterance. In fact all such phenomena as are accompanied by an audible sound are distinguished in most languages by tones which are clearly imitative, and the names of animals which utter loud and distinct cries are of the same nature. Having

once by these simple efforts formed the habit of communicating and receiving ideas, it is easy to conceive that a further progress could be made by associating analogous perceptions and objects. A stone falling to a great depth was frequently observed to occasion a peculiar sound. The imitation of this sound afforded a word to signify deep: the same word was afterwards extended to the opposite but connected sense of height, and it came at length to designate haughtiness, magnanimity, loftiness of mind, and whatever excites the sentiment of the sublime, either in animated or inanimate nature. How far these analogies may be carried, and how remote the derived sense of a word may become from the idea which first occasioned its invention, may be conceived by observing the terms which in several languages designate the soul or intellectual spirit, and which took their rise from words first applied to the act of breathing, or formed in imitation of the sound which a breeze produces in the foliage of a wood. As these analogies are for the most part arbitrary, and depend on peculiar habits of feeling and thinking, it may thus be imagined that every little society of men would form a language in a great measure peculiar, and that the diversities would chiefly consist in words which have a figurative sense, and therefore owe their origin to real or fancied resemblances. We find in reality that the terms furnished by natural objects, and by those analogies which are so accessible as to be universally perceived, are often similar in idioms which differ in their more abstract words. The structure of a language will thus bear the character of the nation by whom it was formed. Among the Oriental people the fancy takes a bolder flight, and discovers or invents analogies which escape the feeble perceptions and colder genius of the north.

But, if we suppose a sufficient number of words to be thus formed, we are still far from possessing a complete language. 'We have now indeed formed a canoe out of the unshapen trunk, but a rudder and sails are wanting, and we can only grope with labor and difficulty along the coast.' The distinction of nouns and verbs, and the addition of numbers, declensions, and conjugations, are necessary before our dialect can assume a sufficiently perfect state for expressing our thoughts with precision and facility. These advantages have been obtained by different nations in degrees, and by methods very various. The Chinese and other languages of similar character are absolutely destitute of inflections. Simple monosyllables are incapable of variation; they are a sort of monads or primitive particles; all the connexions and shades of ideas are performed by them in the rudest manner; variation of tone sustains an important part, and even gesticulation is used to render language more expressive. The composition of words is precluded by the mechanism of these dialects, which admits of no aggregates, and its place is rudely supplied by mere juxtaposition. In other languages our author supposes composition to be the source of all the modifications of words, and attributes declension, conjugation, &c., to this sole principle; but he has not resolved

the problem, how some languages originally monosyllabic, for such he supposes all to have been, have in the sequel entirely changed their character, and have become capable of combinations. This account of the invention of speech, though it contains little that is altogether new, appears to us on the whole well imagined and illustrated.

Having explained to his own satisfaction the origin of language, Mr. Adelung endeavours to confirm his views by enquiring what part of the earth is the native seat of the human race; but into this topic we cannot follow him.

SECT. II.—HISTORICAL DEVELOPMENT OF THE PROGRESS OF LANGUAGE.

Our author's geographical arrangement of languages is ill adapted to the purpose of a connected essay. We, therefore, present our readers with a table in which they are distributed according to their affinities, as the foundation of some few further remarks on their history.

MONOSYLLABIC LANGUAGES.

1. Chinese languages.
2. Tangut or Tibetan.
3. Barma or Birman.
Rukheng or dialect of Arracan.
4. Mon or Peguan.
5. T'hay or Siamese.
T'hay-j'hay or old Siamese.
Lào or Laos.
6. Khômên or Cambojan.
7. Anam or Cochîn-Chinese.
8. Corean languages?

POLYSYLLABIC LANGUAGES.

9. Ancient Indian or Sacerdotal.

BRANCHES.

- | | |
|--------------|--------------|
| A. Sanscrit. | E. Celtic. |
| B. Bali. | F. German. |
| C. Zend. | G. Slavonic. |
| D. Pelasgic. | |

DIALECTS.

A. OF THE SANSCRIT.

1st. *Pracrits or ancient dialects.*

- a. Saraswati bâla bâni or poetical Pracrit.
- b. Hindi.
- c. Gaura or Bengali.
- d. Mart-hila or Tirhut.
- e. Odradesa or Orissan.
- f. Tamul or Malabar language.
- g. Mahârâshtra or Mahratta.
- h. Karnata or Canarese.
- i. Tailanga or Telinga.
- k. Gurjara or Guzeratti.

2d. *Bhashas or vulgar dialects.*

Dialect of Multan. Gipsej language, &c. &c.

B. BALI.

The Bali is not properly the parent of any living dialect, but has contributed to modify many of the monosyllabic languages and the polysyllabic idioms of Japan and Ceylon.

C. ZEND.

- | | | |
|------------------------------------|--|-------------|
| a. Pahlavi. | | c. Kurdish. |
| b. Parsi, parent of modern Persic. | | d. Afghaun? |

D. PELASGIC.

1. *Thracian Tribes.*

- a. Phrygians.
- b. Bithynians.
- c. Heneti and Paphlagonians.
- d. Mysians and Trojans.
- e. Lydians.
- f. Carians.
- g. Lycians.
- h. Cimmerii.
- i. Taurians.
- k. Proper Thracians.
- l. Getæ or Daci.
- m. Mœsians.
- n. Macedonians.
- o. Epirots.
- p. Abantes.
- q. Illyrians?
- r. Veneti.
- s. Pannonians.

2. *Grecian Dialects.*

- | | |
|----------------|--------------------------|
| a. Pure Æolic. | b. Celto-Æolic or Latin. |
| Doric. | Italian. |
| Ionic. | French. |
| Attic. | Spanish. |
| | Portuguese. |
| Hellenic. | Romanish. |
| | |
| Romaic. | |

E. CELTIC.

- | | |
|--------------------|----------|
| a. Cambro-British. | b. Erse. |
| Welsh. | Irish. |
| Armorican. | Gaëlic. |
| Cornish. | Manks. |
| Old Helvetican. | |

F. GERMANIC.

1st. *Branch. Dutch or proper German.*

A. SOUTH GERMAN OR GOTHIC.

Ancient Dialects.

- | | |
|--------------|------------------|
| Mæso-Gothic. | Herulic. |
| Vandalian. | Longobardic, &c. |

Modern Dialects.

- | | |
|---------------------|---------------------|
| Bavarian. | Dialects of Suabia, |
| Austrian. | Alsace, Upper and |
| Swiss and Tyrolese. | Middle Rhine. |

B. MIDDLE GERMAN.

- | | |
|-------------|-----------------|
| Thuringian. | Franconian, &c. |
|-------------|-----------------|

C. LOW DUTCH.

- | | |
|---------------|-------------------|
| Frieslandish. | Holland or Dutch. |
| Lower Saxon. | Belgian. |

D. HIGH DUTCH.

Upper Saxony, since Luther's time, the polite language of Germany.

2d *Branch. Scandinavian.*

- | | |
|------------|-----------|
| Danish. | Icelandic |
| Norwegian. | Swedish. |

3d *Branch. English.*

10. HEBRAIC.

A. ETHIOPIIC.

- | | |
|-------------|------------------|
| 1. Geez. | 3. Old Egyptian? |
| 2. Amharic. | |

B. CANAANITISH.

- | | |
|-------------------|---------------|
| 1. Hebrew. | Rabbinical. |
| Hebræo-Chaldeaic. | 2. Phœnician. |
| Samaritan. | 3. Punic. |
| Galilæan. | |

C. ARABIC.

- | | |
|-------------------|--------------|
| 1. Old Arabic. | 4. Mapulian. |
| 2. Modern Arabic. | 5. Maltese. |
| 3. Moorish. | |

D. ARAMEAN OR SYRIAC.

E. ASSYRIAN OR PROPER CHALDAIC.

11. IBERIAN.

- Cantabric or Basque.
- Ligurian and Sicilian, extinct.

LANGUAGES OF NORTHERN NATIONS.

- 12. Tchudic.
 - A. Finnish.
 - Livonian.
 - Esthonian.
 - B. Lapponic.
 - C. Hungarian.
- 13. Permian.
- 14. Vogulic.
- 15. Language of Ostiaks on the Oby.
- 16. _____ of Chermises.
- 17. _____ Votiaks.
- 18. _____ Morduines.
- 19. _____ Teptjeris.
- 20. _____ Samoides.
- 21. _____ Jenisean Ostiaks.
- 22. _____ Kamtsckatkans.
- 23. _____ Tschuktschi.
 - B. Koriaks.
 - C. Oonalashka.
 - D. Esquimaux.
 - E. Greenland.

NATIONS OF CAUCASUS.

- 25. Abassians.
- 26. Circassians.
 - B. Cossacs of the Don.
- 27. Ossetes.
 - B. Alani.
 - Albanians of Epirus.
- 28. Ingushi.
- 29. Lesgi.
- 30. Armenians.
- 31. Georgians.

ULTRA CASPIAN NATIONS.

32. Tartar or Scythian.

A. TARTARIAN STEM.

- | | |
|---------------|-------------|
| 1. Nogays. | 3. Kasan. |
| 2. Comanians. | 4. Kirguis. |

B. TURKISH STEM.

- | | |
|----------------|-----------------|
| 1. Turkmans. | 4. Karamanians. |
| 2. Usbecks. | 5. Osman Turks. |
| 3. Bukharians. | |

C. MIXED WITH MONGOLES.

- | | |
|---|---------------|
| 1. Chulymes. | 3. Chuvashes. |
| 2. Krasmojars. | 4. Yakutes. |
| 33. Mongolian. <ul style="list-style-type: none"> A. Mongole Proper. B. Kalmuc. C. Burættes. | |
| 34. Mantchurian. <ul style="list-style-type: none"> A. Mantchu Proper. B. Tungusian. | |
| 35. Sagalien. | |
| 36. Kurilian. | |
| 37. Japanese. | |
| 38. Formosan. | |
| 39. Ceylonese. | |
| 40. Polynesian. | |

A. Savage Races.

- 1. Andamaners.
- 2. Malacca Negroes.
- 3. Papuas.
- 4. New Holland.
- 5. New Hebrides.
- 6. Feejee, &c.

B. Tattooed Races.

- 1. Battas.
- 2. Bugis.
- 3. Pintados.
- 4. New Zealand.
- 5. Friendly Isles.
- 6. Society Isles.
- 7. Sandwich Isles, &c.
- 8. Easter Isle.

C. Menankabow Race.

- 1. Sumatra Malays.
- 2. Malays Proper.
- 3. Coast of the Indian Islands Magindano, &c.

The African and American Languages are too numerous and too little distinguished to be enumerated here.

Of the monosyllabic languages.—Thibet, the Chinese empire, and the whole of India, beyond the Ganges, contain a population much greater than that of all Europe. The languages of all these nations, with the exception of a few tribes on the coast of the Malay Peninsula, are monosyllabic. The people themselves are distinguished from the rest of mankind by their physical traits, the most striking of which are a broad flattened countenance, with their cheek bones extending laterally, compressed features, and oblique orbits. These characters do not, however, prevail among them universally, or in the same degree. Some of the tribes of the Eastern peninsula scarcely differ from some castes of Hindoos. There are few problems in the history of mankind more curious than the uniform picture which these nations present, and the unvarying character which they have preserved through so many ages. The cause of this phenomenon must be sought partly in their insulated situation, in a remote corner of the world where they are cut off from other nations by natural boundaries; and partly in the multitude of their population, which is so great as to swallow up in its mass the more warlike tribes who have occasionally penetrated their boundaries, and have exercised a temporary dominion over them.

A remarkable fact with respect to these nations is the almost endless variety of their oral languages. The same written character is used throughout the Chinese empire, and the same writing is intelligible in all its provinces. Europeans, from this circumstance, have imagined that there is one language proper to the whole nation; but this is so far from being the case, that, as Mr. Barrow informs us, there are scarcely any two provinces in China which have the same oral language; and Dr. Leyden, to whom we owe much valuable information on the literature of this family of men, declares that the same written words are read and understood by at least twenty different nations, who would scarcely un-

derstand a word of one another's speech, and would all use different words to express the same meaning. The dialect which has obtained by distinction the title of Chinese, is the Kuan-hoa, the language of the court and of the Mandarines, which was originally the proper speech of the province Kiang-nan, where the native emperors of China formerly held their residence. Still greater is the diversity which prevails beyond the limits of the empire. It is only by comparing the internal structure of these dialects, and by considering the monosyllabic form and the uniform system of intonation which they all retain, that we derive an argument for the common origin of the nations who use them; an opinion which is, however, amply confirmed by their very striking resemblance in physical peculiarities and moral traits.

The boundless variations of these languages, and their great mutability, is a fact scarcely reconcilable with the high antiquity which Mr. Adelung imputes to them. Rude unformed jargons, consisting of monosyllables unconnected by any rules of structure, are in their very nature so liable to perpetual fluctuation, that it seems absurd to consider them as relics of ancient times; and when we add to this the fact that the written characters have no relation to the vocal dialect, and therefore give no aid towards fixing and preserving the speech, as they do among nations whose letters represent sounds, the languages of this group are reduced to the same ever-changing condition with the mere oral jargon of savages, which often differs totally in contiguous districts, as in New Holland, where two neighbouring tribes call even the sun and moon by names quite distinct from each other. Since the proofs of antiquity so entirely fail in this quarter, we are naturally invited to turn our eyes to the boasted literature of China, for something in aid of the tottering hypothesis of our author. But here, as he himself confesses, we find only a glimmering and unsteady light. The famous History of China, translated by the Jesuit Joseph Anne Marie de Moyriac de Mailla, and published by the abbé Grozier in 12 vols. 4to., sets out from an epoch sufficiently remote: but what sort of documents do we draw forth from this precious store?—'Stories of emperors who find out arts and sciences by the dozen, who give command to their august consorts to invent manufactures, and who, in long-winded harangues, convince their mathematicians of the importance of discovering astronomy.' Even in that part of these annals, which is commonly considered as of unshaken authority, beginning with the year 207 B. C., our author has fallen upon a most awkward stumbling-block. The great wall of China, perhaps the most stupendous monument of human labor that exists, is declared by the Chinese Annals to have been completed 240 years B. C.

So prodigious a work, which has attracted the chief wonder of Europeans since their first acquaintance with China, could scarcely have remained unknown to any nation who carried on intercourse with that country. Yet Ptolemy, who describes the march of caravans into the country of Seres, never gives the smallest hint of

its existence. The Arabian travellers, whose voyages Renaudot has published, were equally unacquainted with it: and, what is still more strange, Marco Polo, who served three years in the army of Kublai Khan, and travelled to the north of China in 1270, and who must actually have passed under the great wall, if it had existed in his time, has omitted entirely to mention it, though he is minutely accurate in noting down all that he saw worthy of observation. This fact, when taken together with the modern aspect of the structure, shows us what degree of reliance can be placed on the Chinese history, even in those parts which are reputed most authentic. It is probable, indeed, that fragments are preserved among the Chinese as among other nations from remote times; but they are neither so well ascertained, nor so definite in time and circumstances, as to give us any insight into the history of the people.

Yet we wonder to find Mr. Adelung so quietly giving up a resource which promised support to his hypothesis, and we cannot but look upon it as an extraordinary piece of magnanimity. But when he acquiesces in the conjecture of Sir W. Jones, to which for our own parts we have no particular objection, that the Chinese are the offspring of a tribe which is mentioned in the Institutes of Menu to have emigrated from India, he seems to throw to the ground the whole fabric which he has been laboring to erect; for the 'Chinas mentioned by Menu were a branch of the Hindoo stock, had been subjected to the system of castes, and, of consequence, spoke the tongue of Hindostan. What then becomes of the Ogygian antiquity of China, and her primeval language?

We have no room to enter at length into our author's observations on the structure of these languages in particular. In general he seems to have made a good use of the resources of which he was possessed, and has given a very good digest of all the information which had been acquired on the subject of the Chinese language prior to the date of his work. Some progress had been made subsequently by our countrymen in the east, and we trust that what we have hitherto obtained is only the prelude to more important contributions. With respect to the nations of the eastern peninsula from the Ganges to China, and their dialects and literature, more valuable information is contained in the late Dr. Leyden's work, in the tenth volume of the Asiatic Researches, than the whole amount of our previous knowledge.

Of polysyllabic languages.—The chain of Mount Imaus separates the jargons of China and Thibet from a tribe of languages which has performed a much more important part as an instrument of human thought. If men had always been limited to the use of the rude uninflected dialects of north-eastern Asia, it would scarcely have been possible for them to have risen above the rank of barbarians.

The Sanscrit and its cognate dialects present the strongest contrast to the monosyllabic languages. We have observed that the latter are incapable of inflection. The relations and modes of the chief words in a sentence are

partly expressed by particles which are in themselves distinct roots, and are partly left to be understood: nouns express in themselves neither numbers, cases, nor genders; nor the verbs, moods, tenses, or persons. The Sanscrit, on the contrary, exhibits all these shades of ideas by inflections, which are in this more complicated and extensive than in any other language. A single word in Chinese is capable only of one application. In Sanscrit it gives origin to a numerous class of words, the whole of which the primitive idea pervades under an indefinite number of modifications. All the derivatives from one stock bear a certain stamp of affinity, and illustrate each other by their mutual relations. Hence this language and its sister dialects are exceedingly copious, and capable of expressing even the most general or abstract ideas with precision and at the same time with variety: they are applicable to all the purposes to which the human faculties can direct the use of words. Accordingly it is only among nations who use these dialects that the sciences have advanced, or that philosophy has flourished. Another consequence of this organised and systematic structure is the wonderful durability of this class of idioms, and the constancy with which they preserve their affinities and individual character, though scattered many thousands of years over distant parts of the earth. Their affinities are every where easily recognised, and the same families of words are traced back to similar origins: a sort of living principle seems to pervade them which preserves their organisation in vigor, and propagates it to perpetuity. It is quite the reverse with the monosyllabic tongues; each word in them is an unconnected individual. When lost, its place is supplied by another without difficulty. Hence these languages are in their nature fluctuating, and subject to constant change.

Mr. Adelung has given a rather confused and imperfect account of the Sanscrit and its dialects; at which we cannot be surprised, as he was unacquainted with what Mr. Colebrooke and other learned members of the society at Calcutta have done of late years in opening the stores of Asiatic literature, and depended chiefly for information on the presumptuous and half-learned missionary Paulinus à S. Bartholomeo, whose crude misrepresentations have frequently been opposed by foreign writers to the authority of Sir W. Jones and Mr. Colebrooke. The invidious disposition towards the English, which has been fostered of late among all ranks of people on the continent, has even extended itself to men of letters. We find symptoms of this feeling even in the work of Mr. Adelung. He takes an opportunity of informing us, that 'India since the ruin of the Mogul power has fallen under the tyranny of Mahrattas, Seiks, and Britons; the former of whom have exercised their wonted atrocity: the latter have been more systematic, but not less oppressive in their conduct.' He takes every opportunity of lessening the reputation of our countrymen as oriental scholars, and of exalting, at their expense, the fame of any pitiful Romish monk, who can be forced into competition with them. There is as

much folly as injustice in this attempt. The achievements of our learned men in the literature of India have been as pre-eminent as those of our arms upon her soil. But we hope that the time has passed by when every pedant of the continent looked for patronage by insulting England, and when high Dutch philosophers were vain of receiving the *ton* from the frivolous Parisians.

As Mr. Adelung has been so unfortunate in the choice of his authorities, we shall pass by his account of the language of India, and shall present our readers with a brief sketch of what he might have done; availing ourselves of the documents which have been brought to light by our illustrious countrymen in the east; and some able comments of the late British Review.

In adverting to the opinions which have been entertained concerning the Sanscrit, it is scarcely necessary to mention the notion, that it owes its origin to the invasion of Alexander and the Macedonian colony settled in Bactria, which was proposed in order to account for the refined character of the language, and its affinity with the Greek. It would be just as reasonable to imagine that our Teutonic dialect was introduced into this country by a regiment of hussars from Hesse Cassel, or by an ambassador from the Hague. But the copious inflections of the Sanscrit, and the exquisite refinement of its grammatical system, seemed to afford somewhat better ground for the opinion that it never was the popular speech of any nation; but was formed by the concerted efforts of the Brahmins, who, by polishing and reducing to more complex rules the vulgar tongue of Hindostan, gradually constructed an artificial language, adapted only to literary composition. Mr. Colebrooke has, however, fully refuted this notion, and has shown that there is no reason to doubt that the Sanscrit was once universally spoken in India, and that it was the parent of the modern dialects which are spread through that country from Mount Imaus to Cape Comorin. 'It evidently,' he says, 'derives its origin (and some steps of its progress may even now be traced) from a primeval tongue, which was gradually refined in various climates, and became Sanscrit in India, Pahlavi in Persia, and Greek on the shores of the Mediterranean.' He might have added that the Celtic, the German, and the Slavonian, were less ornamented dialects of the same ancient language.

The Hindoo grammarians distinguish three eras in the history of their national language. 1st. That of the ancient or classical Sanscrit. This is the idiom to which Adelung applies the term Déva Nágari, which is well known to every tyro to belong to no language whatever, but to be the designation of the alphabet used in Sanscrit composition. The second era is that of the Pracrit, under which name are included the ten provincial languages of India. The third, termed the Magad'hi, comprehends the popular dialects, or Bhasias.

The ten Pracrits are the written dialects which are now used in conversation, and are cultivated by literary men. There is reason to believe that

tén polished dialects formerly prevailed in as many different civilised nations, who once occupied all the fertile provinces of Hindostan and the Deccan. They are thus enumerated by the Hindoo grammarians:—1. The *Sáraswati bála báni*, or ‘speech of children on the banks of the *Saraswati*,’ was the dialect of the *Saraswati*, a nation inhabiting the vicinity of the river *Saraswati*. This idiom is the *Pracrit* of the poets.

2. The *Hindi* was the dialect of the *Cányacubyas*, whose capital was the ancient city *Canóij* or *Canouge*. This language is the ground-work of the modern *Hindostani*, which is intermixed with *Persic* and *Arabic*. Nine-tenths of the *Hindi* may be traced back to pure *Sanscrit*; it has been said that the remainder is wholly distinct from it, and of separate origin, but this assertion, as *Mr. Colebrooke* observes, requires further proof.

3. The *Gaura* or *Bengáli* contains few words which are not evidently of *Sanscrit* origin.

4. *Mai’híla* or *Tirhutíya* spoken in the *sircar* of *Tirhút*, and as far as the *Nepaul Mountains*, has a great affinity with the *Bengáli*.

5. *Utcála* or *Odradésa*, the language of *Orissa*.

These five nations of *Hindoos* are termed the five *Gaurs* or *Northern Nations*; the remaining five are the *Dravirs* or *southern ones*.

6. *Drávíra* is the southern part of the peninsula where the *Támel*, *Tamulian*, or *Malabar* language is spoken. A great number of *Sanscrit* words exist in this idiom, but *Mr. Marsden* considers the basis of it as a distinct language.

7. *Maháráshtra* or *Mahratta*, spoken by the people of that name. This idiom also contains many words derived from an unknown source.

8. *Kárnáta* or the language of the *Kárnátaca*. This is commonly called the *Canarese*. It bears the same affinity to the *Sanscrit* as the other dialects of the *Deccan*.

9. *Tailanga*, or *Telinga*, the language spoken in *Telingana*, an ancient kingdom on the eastern coast of the peninsula. It is said to have borrowed more largely from the *Sanscrit* than the other dialects of the *Deccan*.

10. *Gúrjára*, the dialect of *Guzerat*.

All these dialects, like other modern idioms, are much less abundant in inflections than the parent *Sanscrit*. *Auxiliary verbs* and *particles* supply the place of variations in the radical words.

The *Magad’hi*, or third class of languages, includes the *bhashas*, or vulgar dialects of *India*. Among them is the idiom prevalent in *Multan*, concerning which *Adelung* has announced a very curious fact. The wandering people who are dispersed over a great part of *Europe*, and are known by the names of *Gipseys*, *Bohemians*, and *Zigeuners*, were perceived by *Grellmann* to be of *Hindoo* descent; but that author erred in confounding the *Sudras*, a class of respectable character, with the *outcast Pariars*; and he was mistaken in deriving the *Gipseys* from the former. These vagrants call themselves ‘*Roma*,’ hence *Whiter*, the author of the *Etymologicum Magnum*, ‘imputes to them the building of *Rome*!’ *Pallas* first perceived that the dialect of *Multan* bears a strong analogy with the *Gipseys* language; and *Adelung* has proved, by an extensive comparison of their idioms, that this people certainly originated from some low caste in that part of *India*.

We may now advert to the affinity between the *Sanscrit* and the languages of the *West*, to which we have said that it is related. If this affinity were confined to a resemblance in any given number of roots, it might be attributed to the effects of accidental intercourse. It is only an essential affinity in the structure and genius of languages that demonstrates a common origin. This sort of relationship exists in the *Sanscrit*, the ancient *Zend* as well as the modern *Persic*, the *Greek*, the *Latin*, the *German* dialects; and is found, though not to the same extent, in the *Celtic* and *Sclavonic*. In the *Hebrew* and its cognate idioms, as well as in the *Coptic*, there are many *Sanscrit* roots, bearing little or no resemblance to the structure of that language. A striking example of affinity between these dialects occurs in the numerals, which we subjoin:—

Sanscrit.	Persic.	Greek.	Latin.	Russian.	German.	English.	Welsh.	Gaelic.
Eka,	ek,	εἷς, ἓν.	unus,	odin,	eins, ein,	one,	un,	aon.
Dwau,	du,	δύω,	duo,	dwa,	zwey,	two,	dau, dwy,	da.
Traya,	se,	τρεις,	tres,	tri,	drey,	three,	tri,	tri.
Chatur,	chehar, chatuwar, (Zend),	τέτταρες,	quatuor,	chetare,	vier,	four,	pedwar, pettor (Oscan)	ceithir.
Pancha,	pansh,	πεντε, πεντε,	quinque,	pyat,	fuinf,	five,	pump,	coig.
Shash,	shesh,	ἕξ,	sex,	shest,	sechs,	six,	chewe.	sia.
Sapta,	heft, hapte (Zend),	ἑπτα,	septem,	sedm, sem,	sieben,	seven,	saith,	seachd.
Ashta,	hesht,	ὀκτώ,	octo,	osm,	acht,	eight,	wyth,	ochd.
Nova,	nu,	ἐννεα,	novem,	desyat,	neun,	nine,	naw,	noi.
Dasa,	zeh, dese (Zend),	δέκα,	decem,	desyat,	zehn,	ten,	dèg,	deach.
Ekadas,	yazdeh,	ἑνδεκα,	undecim,		eif,	eleven,	un ar ddèg,	aon deng.
Dwadasi,	duazdeh,	δωδεκα,	duodecim,		zwoelf,	twelve,	deuddèg,	dadhug.
Vinsati,	bist,	ἑκοσι,	viginti,		zwanzig,	twenty,	ugain,	fichid.
Trinsati,	si,	τριακοῦτα,	triginta,		dreyssig,	thirty,	dèg ar hu- gain,	deich tha- fichid.
Sat,	sad,	ἑκατον,	centum,		hundert,	hundred,	caut,	ciad.

The ordinals coincide remarkably in Greek, Latin, and Sanscrit, as *prathama* or *protoma*, *πρωτα*, prima; *dwitya*, *δευτερα*; *tritya*, *τρια*, *tertia*; *chetoorta*, *τεταρα*, *quarta*; *penchema*, *πεμπα*, *quinta*; *sheshita*, *εκτα*, *sexta*; *septima*, *επτα*, *septima*; *ashtima*, *ογδοα*, *octava*; *novuma*, *nona* (regularly deduced from the cardinal it would be *novima*); *decima*, *δεκατα*, *decima*, &c.

Here, as in most instances, we may observe that the Latin agrees with the Sanscrit much more nearly than the Greek.

The following are a few examples of roots which ramify through all these languages: the list might be extended to an almost indefinite number.

Pita, *pitara*, Sanscr.; *peder*, Pers.; *πατηρ*, Gr.; *pater*, Lat. (whence *Ju-piter*, *Dies-piter*); *vater*, Germ.; *father*.

Tada, S.; *tád*, Welsh; *ta'air*, Irish; *otshe*, Russ.; *tatta*, vulgar German; we may add, *taat*, Finnish, and *aita*, Basque; *daddy*, vulgar English; *father*.

Mata, *matarā*, S., *mother*; *mader*, P.; *μητηρ*, Gr.; *mater*, L.; *mutter*, Germ.; *mater*, Slav.

Bhrata, *bhratarā*, S., *brother*; *bradar*, P.; *φρατηρ* (of the same tribe), Gr.; *frater*, L.; *bruder*, Germ.; *brawd*, *brodyr*, W.

Swasara, S., *sister*; *kuaher*, P.; *soror*, L.; *schwester*, Germ.; *chwaer*, W.

Padsja, S., *boy*; *a-pos* (privative), Pers.; *παις*, Gr.; *απαυς* (privative); *bachgen*, W.

Duhita, *duhitara*, S., *daughter*; *dochter*, P.; *θυγατηρ*, Gr.; *tochter*, Germ.

Agni, S., *fire*; *ignis*, L.; *ogon*, Russ.; *πυρ*, Gr.; *feuer*, Germ.; *fyre*, English.

Apa, S., *water*; *ap*, P.; *aqua*, L.

Uda, S., *the sea*; *υδωρ*, Gr.; *udus*, L.; *Udakam*, S., *water*; *wasser*, Germ.; *y dwr*, W.; *water*, English.

Dhara, S., *earth*; *terra*, L.; *ερα*, Gr.; *erde*, Germ.; *daiair*, *tir*, W.; *γη*, Gr.; *ke*, *ge*, Gaëlic.

Bhumi, S.; *bum*, P.; *humus*, Lat.; *Jiami*, S.; *zumin*, P.; *zemlija*, Russ. *Naba* (the air), S.; *νεβηλη*, Gr.; *nubes*, *nebu-Nibu* (cloud), S.; *la*, L.; *nebel*, G.; *név*, W.; *nebesi*, Russ.

Himmala (heaven), *himmel*, Germ. *Nisa*, S., *night*; *νυξ*, Gr.; *nox*, L.; *notch*, Russ.; *nicht*, Germ.: *nös*, W.

Divos, S.; *dies*, L.; *dáy*, Eug.; *dydd*, W.; *tag*, Germ.

Jajanmi S. (beget); *γεννω*, *γεννωω*, *γενος*, Gr.; *gigno*, L.; *gánu*, W.; *kind*, Germ.

Genita, S. (begotten); *genitus*, L.

Janata, S. (nations); *gentes*, *gens*, *genus*, L.

Mrityu, S.; *mors*, L.; *mreté*, *Zend*; *mertovii*, Russ.; *mord*, *morsch*, Germ.; *marw*, W.

Yuvan, S.; *young*; *Iuwan*, P.; *juvenis*, *ju-Yún*, S.; *nior*, *juvencus*, L.

Ieuangc, W.; and *yeong*, Anglo-Saxon; *jo-vank*, *Armoric*.

Yauvaua, S. *youth*; *iau*, W. *Ioban*, *Hindi*.

Jugend, Germ.; *juventus*, L.

St'ha, S. (stand); *Istadan*, P. (to stand).

St'han (station); *Estam*, P.; *sto*, L.; *ιστημι*, Gr.; *I stand*.

Estat, P.; *stat*, L.; *ιστησι*, Gr.; *he stands*.

Stehu, stand, Germ.; *st'hira*, S.

στερεος, Gr. } *firm*.
stier, Germ. }

From each of the above roots is derived a large catalogue of words in all the languages mentioned. In grammatical structure the Sanscrit scarcely differs more from the Greek and Latin than they differ from each other.

The conjunctions of the verbs afford the strongest example of coincidence. The following is the present tense of the verb substantive:—

Sanscrit	. asmi	. asi	. asti	— smah	. st'ha	. santi.
Greek	. εσμι	. εσαι	. εστι	— εσμεν	. εστε	. ειδι or εντι.
Russian	. esm	. esi	. est	— esmvi	. esti	. sut.
Latin	. sum	. es	. est	— sumus	. estis	. sunt.
Persian	. am	. ai	. ast	— aïm	. aïd'	. and.
Welsh	. wyv	. wyt	. oes	— ym	. ych	. ynt.
English	. am	. art	. is	— are	. are	. are.

This verb is defective in many languages. In Latin and in Welsh several tenses are formed from an old verb which only survives in the Sanscrit in a tolerably perfect form. This is *bhavimi*, *bhavasi*, *bhavati*, &c., answering to the German *ich bin*, *du bist*, &c. The preter tense of this verb in Latin, *fui*, *fuiſti*, *fuiſti*, coincides with the Welsh *bûm*, *buost*, *bû*; and the Latin

fuiſsem, *fuiſſes*, *fuiſſet*, &c., with the Welsh *buaswn*, *buasit*, *buasai*, *buasem*, *buasech*, *buasent*. The future in the Russian agrees with the Welsh, as *budu*, *budesh*, *budet*—*budem*, &c., which, in Welsh, is *byddav* (pronounced *budhav*), *byddi*, *bydd*—*byddwm*, *byddwch*, *byddant*.

The verb to eat coincides almost as closely

Sanscrit	. admi	. atsi	. atti	— admas	. att'ha	. adanti.
Latin	. edo	. edis	. edit	— edimus	. editis	. edunt.
		. es	. est		. estis	
Greek	. εδω	. εδεις	. εδει	— εδομεν	. εδετε	. ιδοντι (Æol).
Russian	. iem	. iesh	. iest	— iedim	. iedite	. iedyat.
German	. esse	. isseſt	. isst	— essen	. esseſt	. essen.

Some Sanscrit verbs coincide most with the Greek, others the Latin, as *Jivâmi* *jivâsi* *jivâti*—*jivamâh* *jivathâh* *jivânti*, with *Vivo* *vivis* *vivit*—*vivimus* *vivitis* *vivunt*. *Dadâmi*, *dadâsi*, *dadâte*, with *διδωμι*, *διδως*, *διδωσι*, &c.

The following are some miscellaneous examples:—

Russian	. verebu	. vertish	. vertit	— vertim	. vertite	. vertyat
Latin	. verto	. vertis	. vertit	— vertimus	. vertitis	. vertunt.

Agam,

Welsh . . . Elwn . . . elit . . . elai — elym . . . elych . . . ; elynt.
 Greek . . . ἔλθωμι . . . ἔλθεις . . . ἔλθοι— ἔλθοιμεν ἔλθοιτε . . . ἔλθοιεν.

In all the above instances the German is more remote from the Sanscrit than the other languages; in the following it coincides remarkably with the common prototype. Varttita, er werde (he shall be), vetsti, vetti—du weisst, er weiss (thou shalt know, he will know); schriytati, er schreitet (in Latin, scribit) (writes); shlissiyati, er um-schliesset (he encloses); vindati, er findet (he finds); mishrati, er mischt (miscit) (he mixes).

The nearest relatives of the Sanscrit are two languages which, like it, have been for many ages confined to the use of sacerdotal orders. From eighteen to twenty centuries have elapsed since the Zend and the Bali were living dialects: both of them coincide very nearly with the Sanscrit in their vocables, and are formed from the roots of that language according to the regular laws of elision and contraction. This fact was pointed out by Sir W. Jones, and has been confirmed by Dr. Leyden, to whom we must refer the reader for details.

The modern Persic, as is universally known, is a mixture of the Parsee with Arabic.

The next offspring of the Indian family has held a still more conspicuous place in the history of literature and human society than the preceding; this is the *Pelasgian* stem, from which are descended the Greeks and Romans, and the modern nations in the south of Europe, who speak dialects of the Latin. Our author has given good reasons for including the Thracians in the same stock, as well as the numerous population of Asia Minor, and all the European tribes who appear to have been allied on the one hand to the Getæ and on the other to the Pelasgi. The Lydians, Lycians, Phrygians, &c., are connected by many historical facts with the lineage of the Greeks and Thracians. The authority of Strabo is a far better reason for classing the Cimmerii with the Thracians and Getæ, than the mere resemblance of a name can afford for identifying this nation with the Cimbrî in Denmark, or the Cambro-Britons in Wales. Yet many modern writers, among whom is even Mr. Townsend, talk of the Cimmerii in Britain, as if the name were synonymous with Welsh. The Tauri, whose celebrated rites in honor of Diana, or of some unknown goddess to whom the Greeks gave that name, form the foundation of the romantic drama of Iphigenia, were probably a remnant of the Cimmerian stock. We learn from Herodotus that they were a distinct nation from the Scythians, remaining within the old Cimmerian confines.

With respect to the Getæ, and their relation to the Goths, our author adopts the opinion of M. d'Anville. All the ancients supposed the barbarians who invaded the Roman empire in the reign of Decius, and who afterwards conquered it, to have been the same people over whom the legions of Trajan had triumphed, and who had been known from early antiquity under the name of Getæ. We are certain, however, that the Getæ were Thracians. On the other hand, we know that the language of the Goths was a German dialect. This appears from the trans-

lation of the Bible into the Mæso-Gothic by the bishop Ulphilas. The manners also of the Getæ distinguish them from the Germans: they lived in waggons, and roamed about like their neighbours the Scythians. From these facts the learned Cluverius thought himself authorised to depart from the unanimous opinion of antiquity, and to announce the Goths as a new people. He supposes that they descended from the shores of the Baltic, and, entering the empire through the Getic country, were mistaken by the Romans for their ancient enemies. D'Anville and Grotius followed Cluverius, and Mr. Adeling joins himself to their party. We have no room to enter into the discussion of this question; but shall merely observe that the German dialects, and particularly the Mæso-Gothic, are found to bear a strong affinity to the Pelasgian, as Dr. Jamieson, in his *Hermes Scythicus*, and Mr. Townsend have sufficiently proved. This fact, of which Mr. Adeling was aware, puts the question with respect to the Getæ in a very different light from that in which it appeared to the excellent geographer who first started it. Adeling derives the Illyrians, the supposed ancestors of the Albanians, from the Thracio-Pelasgians, and refers to a work of Thunmann, entitled *Geschichte der östlichen Europäischen völker*. As far as we know, this work has never been imported into England; but we are at a loss to conjecture what proofs can be found to identify the modern Albanians with the Grecian race. Our author is aware of this difficulty, and conjectures that these barbarians are not the Aborigines of Illyrium, but the remnant of some of the hordes, who made their way into Europe during the declining ages of the Byzantine empire. The Alani, a nation of Caucasus, who were perhaps the Albanians of the Caspian shores, may possibly have left relics of their once formidable name in the coasts of the Adriatic. At the era of the Turkish conquest many of the Albanians emigrated, and still preserve their language in their hamlets in Calabria and Sicily.

The origin of the Pelasgi, and their relation to the Hellenes or Greeks properly so called, has been a fertile subject of conjecture and dispute. Fourmont deduced the Pelasgi from Peleg, and identified them with the Philistines. D'Anville insisted on deriving them from the Titans. Larcher, who should have been better informed, makes them Phœnicians, and Pellouter forces them into the ranks of his favorite Celts. Our author adopts the only opinion which carries with it a shadow of probability: he considers the Pelasgi and Hellenes as one race. The passages from which this inference must be drawn occur so frequently in the writings of the Greek historians, that it is surprising they have been so often overlooked. We are told repeatedly by the Greeks, that the first inhabitants of the Peloponnesus were Pelasgi; and that, when the Dorians introduced the Hellenic name into that country, the Arcadians, who defended themselves in their mountainous territory, and continued to boast that they were older than the moon, were

still called Pelasgi. Yet we know that the Arcadian language was Greek; though a rude and unpolished dialect; and nobody will pretend that the Spartans and Argives, who fought under the Atridæ, were not Greeks, though it is certain that they were Pelasgians. The name of Hellenes belonged at first, as Thucydides informs us, to a kind of feudal association among the Thessalian princes, under Hellen son of Deucalion, and was extended over the Peloponnesus by the conquest of the Dorians. At what period the Athenians entered the confederacy we know not; but, whenever it was, we may be sure that they did not, as Herodotus conjectures, abandon on that occasion their old Pelasgian speech, and learn universally a new language. Possibly the story of the death of Codrus, which savors strongly of Grecian fiction, was invented in order to conceal the submission of Athens to the Hellenic league.

The population of Italy is a very curious subject, and we regret that Adelung, who was so competent to such researches, has done little more than copy the speculations of Frèret on this topic.

The chief information we possess at present concerning the Etruscan language is contained in a work of Lanzi, entitled *Saggio di Lingua Etrusca*. It appears that Mr. Adelung intended to insert some extracts from this work in the volume before us. These the editor has suppressed, under the singular pretext that they contradict several of the author's conclusions. He deferred these extracts in order to insert them in an Appendix at the end of the work. No such Appendix, however, has made its appearance.

The most interesting part of Mr. Adelung's work is the historical account he has given of the Latin tongue from its rude beginning to its period of classical refinement, and to its subsequent degeneracy into the Romance of the middle ages, and the modern dialects of the south of Europe. The oldest specimen we have of the Latin language appears to be a hymn of the *Fratres Arvales*, a well known order of priests. It is referred to the age of Romulus.

Enos Lases juvate
Nos Lares juvate
Neve luene Marmar Sins incurrere
Neve luem Mamers Sines incurrere
in Pleores satur fufere Mars lumen sali
in flores ador fieri Mars $\lambda\mu\mu\pi$ maris
sta Berber, Semunes Alternei advocapit
Siste Semones alterni advocate
conctos.
omnes.

Such was an inscription discovered at the repairing of St. Peter's Church in 1777. The laws of Numa, of which some fragments are preserved by Festus, must be nearly as ancient as the foregoing. The following is a specimen of them:—*Sei hemonem fulmin Jobis ocisit nei supera genua tolitod; hemo sei fulmined ocisus escit oloe iousta nuli fieri oportetod. Se cuips hemonem loebesom dolo sciens mortei duit, pariceidad estod, &c.*

As late as 261 years before the Christian era the old Celtic terminations in *od* and *ai*, were retained in the Latin language. The words

puccandod and *prædad* occur in the inscription in memory of the victory of Duilius. From this rude state it is surprising how soon the language became refined by a succession of great orators and poets, who had the example of the Greeks before them, and made the dialect of Rome approach continually towards the elegant structure of the Attic idiom. Fabius Pictor, Porcius Cato, Ennius, Plautus, Terence, and Cicero, form the series of illustrious men who brought the language from rude simplicity to its utmost refinement.

This rapid improvement accounts, as our author judiciously observes, for the confinement of pure Latinity to so small a number of the people: the lower orders were not able to keep up with the change. 'Cicero knew only five or six Roman ladies in his time who spoke their language with purity and correctness; when he heard his mother-in-law Lælia speak, he fancied, he was listening to Plautus. Even the comic poets sinned every moment on the theatre against the purity of the language. Hence we may judge what was the state of the vulgar tongue. Quintilian complains that the populace could not utter an exclamation of joy without a barbarism. Already Plautus had divided the Latin tongue, as it was spoken at Rome, into Noble and Plebeian. Afterwards, when the difference became yet more remarkable, the former was named classic, because it was only to be found among citizens of the first classes, and *lingua Urbana*, and *Urbanitas*; the latter was termed *Vulgaris*, and *Rustica*, because it was the most corrupt in the country. It was more difficult to acquire the classical Latin, even when flourishing in its highest perfection, than to learn the language of any foreign nation. Quintilian complains that it was a very hard matter for his scholars to learn Latin in the midst of Rome; and we are told by Cicero, 'that he sometimes employed several days in studying the purity of a single expression.'

It is not difficult to understand the causes of the decline of Latinity after the establishment of the monarchy. When oratory was no longer cultivated, the great incentive to improvement was lost. The distinguishing majesty of the Roman language ceased to exist when the dignity of republican manners had given way to the frivolous refinements of a court. A false taste immediately displayed itself. The higher class of citizens to whom the purity of speech had been confined were exterminated by the tyrants of Rome, and, amidst the turbulent horrors of a despotic government, people of the lowest order frequently rose to the highest rank. Even barbarians found their way to the senate house, and, before the reign of the second Claudius, an Arabian and a Goth had seated themselves on the throne of the Cæsars. The language of Cicero was now extinct, and nothing remained but the *lingua rustica*, which gradually prepared itself for its transition into the modern dialects.

But it was not till the irruption of the northern nations that the important change took place which destroyed the structure of the Latin language. The dialect was vulgar and debased before, but still it was Latin. It retained its

inflections; the nouns were declined in cases, and the verbs in conjugations. But the learning of these required greater attention than the barbarians could bestow, and, in the dialects which were formed after the mixture of the conquerors with the old population, the use of particles and auxiliary verbs supplied the place of the old inflections.

We now pass to our author's account of the *Celtic* languages, and here we find nothing but inaccuracy and confusion. It is remarkable that foreign writers who touch upon this subject continually involve themselves in perplexity and error. Perloutier and Mallet, though learned authors, particularly the latter, are full of mistakes with respect to the Celtic people and their languages. They ludicrously pronounce the high Dutch to be the most perfect specimen extant of this ancient idiom. Adelung, who has been deceived by Macpherson and other Scottish writers, represents the Gaëlic people as the only genuine offspring of the *Celtæ*. He imagines the Welsh to be the descendants of the Belgæ, who had possessed themselves of the south coast of Britain, before the arrival of the Romans, and avers that they had no claim to the title of ancient Britons, but are comparatively new comers; that their language is a jargon compounded of various shreds from other tongues, and that nearly one-half of it is of German origin. He chooses to give it the name of *Cimbriæ*. We cannot quietly see our countrymen of the principality so unfairly stripped of the honor on which they have so long plumed themselves, without offering a few words in their behalf. We have sought for a motive for Mr. Adelung's unprovoked aggression, and have found it in the old name of *Cymru* (pronounced *Cumri*), which the Welsh give themselves to this day, and which he is determined to identify with *Cimbri*; in short, he is resolved to make our countrymen pass for a branch of that nation of savage monsters who laid waste the north of Italy and were defeated so shamefully by *Caius Marius*. But he is well aware that the dialect of the *Cimbri* was nearly allied to his own language. The names of the leaders of this people are evidently German, and we are informed by several Italian writers that a remnant of them still preserve their northern speech in some hilly cantons in the *Vicentine* and *Veronese*, where they were visited by a Danish prince who found them able to understand the language of his people.

Their intimate connexion with the *Teutones* is a strong symptom of Germanism, and their fierce blue eyes, which are mentioned by *Plutarch*, bear the same testimony. Moreover we are expressly told by *Cæsar*, *Tacitus*, *Strabo*, and *Pliny*, that they were a native German race. This being settled, the only way of finding any affinity in their pedigree with that of the *Welsh* is to represent the latter as a branch of the *Belgic Gauls*, who, according to *Cæsar*, were in great part of German, or possibly of *Cimbriæ* origin.

An appeal to the *Welsh* language completely refutes this unfounded conjecture. The dialect of the *Welsh*, as found in the *Triads* and in the writings of the old bards, is a far more genuine

Celtic than that of the *Gaëls*. And, if either people have ever been so far intermixed with foreigners as to destroy the integrity of its language, it was certainly the latter. One argument will serve amply to demonstrate the truth of this position. We have frequently had occasion to observe that the oldest dialects are more copiously inflected than modern ones. The *Sanscrit* has in this respect the advantage of the *Greek* (if it be an advantage), and of the popular dialects of *India*; and the *Greek* of the *Romæic*, or modern *Greek*. But the greatest disintegration in the structure of a language takes place when a nation becomes so mingled with foreigners as to constitute a new people. In all these instances the idioms are found to have lost a great part of their inflections. Whenever indeed we find two dialects of one language, one of which has an inflected, and the other a simple structure, we may conclude the former to have undergone fewer alterations by foreign intermixture than the latter. Such is the difference that subsists between the *Welsh* and *Gaëlic*. The *Welsh* abounds with inflections of a particular kind, consisting of regular permutations of the initial consonants of words, which seem to have originated on a similar principle with the euphonical orthography of the *Sanscrit*. Most words are capable of four such modifications. Thus: *ty*, a house, becomes in different positions *dy*, *nhy*, and *thy*; *pen*, a head, becomes *ben*, *mhen* or *phen*; *cu*, a dog, *gu*, *nghu*, or *chu*, &c. Besides this example, the *Welsh* has a great variety of terminations in the plurals of nouns; it has four degrees of comparison in adjectives, and a copiously inflected verb. The *Gaëlic* has only one permutation of the initial consonants, and is deficient in all the other particulars above-mentioned. From these circumstances we may fairly infer that the *Welsh* is a more perfect or less corrupted dialect of the *Celtic*. Its vocabulary indeed contains very few foreign words, with the exception of those which have plainly been introduced from the *Latin* and modern *English*.

All the historical facts of which we are in possession favor this conclusion. *Cæsar* mentions the *Belgic* invaders as possessing merely the sea-coast of Britain. He says, '*Interior pars ab iis incolitur quos natos in insula ipsa memoria proditum dicunt; maritima pars ab iis quos prædæ aut belli inferendi causa ex Belgis transierant.*' Now the *Welsh* at the departure of the *Romans*, and consequently at their arrival, possessed so great a portion of the island, that they cannot be the people here described as carrying on piracy on the coasts. We know that they had extended their possessions into *Scotland*. *Dumbarton* was a fortress belonging to the *Strathclwyd Britons*; and *Mr. Chalmers* has proved indisputably that the names of places throughout the *Lowlands* of *Scotland*, as that of *Aberdeen* for example, are derived from the *Welsh*, whence we must conclude either that the *Caledonians* were of the *Cambro-Briton* race, or that the *Welsh* possessed the northern part of the island before the arrival of that people. These facts prove that the *Welsh* are the descendants of a nation who at one period had possession of the whole of this island, and who

retained by far the greater part of it until the Saxon conquest; they are not, therefore, of the Belgian race. The names of places in Gallia Celtica also afford proof that the language of the genuine Celtæ was Welsh, and not Irish. Those particularly which are still preserved in Helvetia are all Welsh.

It is remarkable that, notwithstanding the attention which has been directed to this subject, there is scarcely any point of importance relating to Celtic history which is not still involved in obscurity. The little progress that has been made can only be attributed to the manner in which enquiries have been conducted, and to the love of conjecture, by which our antiquarians have been bewildered. Mr. Adelung has certainly not contributed to dispel this darkness.

His disquisition on the *German* language contains a very elaborate and learned survey of the whole compass of Teutonic literature. He divides the dialects of this great nation into three principal branches, viz. the German, Scandinavian, and English. The German is again subdivided into South German or Gothic, Middle German, and Low German or Low Dutch. The South German dialects are all distinguished by their harsh and guttural pronunciation. This branch of the nation includes the Goths and Vandals, the Heruli, Quadi, Marcomanni, Burgundians, and Lombards. The South German is spoken in all the countries peopled by these nations and the Alemanni. The Bavarians, Austrians, Swiss, Suabians, and the people of Alsace and the Upper and Middle Rhine belong to this class. The Middle Dutch includes the vulgar dialects of Thuringia, Franconia, &c. The Low Dutch is spoken by the people of Lower Saxony, Friesland, Holland, and Belgium.

High Dutch is considered by Adelung, not as popular language of any particular province, but as a refined idiom formed by and adapted for polite conversation and literature. The dialect of Upper Saxony, as spoken by the better orders, served as a basis for it, and it was chiefly diffused and rendered a general language by means of the Reformation and the writings of Luther.

Adelung's account of the *Scandinavian* and *English* contains nothing remarkable, except that he denominates the oldest specimens of our language Danish-Saxon, which, as he contends, succeeded the extinct Anglo-Saxon. In the distribution of the *Slavonian* nations he follows Dobrowsky, who, it seems, has adopted the old division of Procopius and Jornandes. The Antes, or Eastern branch, includes the Russians and Slavonians of Illyrium. Under the Slavini, or Western, are enumerated the Polet, Bohemians, Servians, and Northern Wends, who spoke the Slavonian language in Pomerania as lately as 1404, when it became extinct. Under the Slavonian family might be arranged, as a subdivision, the Littish or Lithuanian idioms, which are a mixture of Slavonian and German. A dialect of this language was formerly spoken in old Prussia.

We have now followed our author in his review of this great family of nations, who have spread the remains of one ancient idiom over so great a portion of the globe. A connected

chain of languages, which every where claim a common origin, and differ only in dialect, extending from Cape Comorin to Iceland and Scandinavia, is a striking phenomenon, and one which excites doubt when first announced; it is found, however, to rest on sufficient proof to satisfy the utmost scepticism. That all these nations were colonies from India, or from some eastern country not far distant from it, is a conclusion which follows inevitably; but the period of their emigration, and the circumstances that attended it, will probably remain for ever involved in impenetrable darkness.

The West of Europe, in the time of Herodotus, was inhabited by the Celtæ and Cynetæ. We know who the former were; the latter remain to be the subject of conjecture. It has been supposed that the old Iberians are designated by this name: however this may be, they were certainly a very ancient people, and probably were seated in the west of Europe before the arrival of the Celts. Their language is yet preserved in the mountains of Biscay; and, though it presents the most remote and most curious relic of European antiquity, has received as yet very little attention from the learned. Some Spanish writers have declared it to be the antediluvian tongue; and we have perused a large octavo volume, by a Castilian author, in the hope of gaining some new light on its structure and origin; but have only learnt that the Cantabrian was the idiom in which the angol spoke to Abraham in the land of Charran. The elder baron Von Humboldt has long ago promised to give a perspicuous and detailed account of the Biscayan people and their antiquities. In the mean time we must make the best use we can of the information contained in the several works of Larramendi, of which we possess a very good abstract in the collection of M. Adelung.

The old Cantabrian or Iberian race possessed all Spain, as appears by the names of places throughout the peninsula, which are derived from their language. But they were not confined to Spain: we learn from Diodorus and Seneca, that the Sicani, who were driven by the Ligurians into Sicily, and the people of Corsica were of this race, and spoke the Iberian language. The Aquitani are associated with them by Cæsar and Strabo. The Ibero-Ligyes of Scylax belonged to the same family, as well as the Ligurians of Italy, whom we find mentioned by Æschylus in a fragment of the lost tragedy of Prometheus Delivered. They are represented as guarding the confines of the country, and intercepting the journey of Hercules from Caucasus to Hesperia.

Ἡξεῖς δὲ Λιγύων εἰς ἀτάρβητον στρατὸν
ἐνθ' οὐ μαχίῃ σάφ' οἶδα καὶ θούρος περ ὧν
μέμψει.

A number of German words are contained in the Basque, probably derived from intercourse with the Visigoths of Spain. Such are baldra, belt; cilhar, silver; dorrea, door; dantza, dance, &c. A much greater number are of Latin origin; as abitua, habit; abitoa, fir-tree; amatu, to love, &c. Some vocables are Celtic; but, after abstracting all these additions, there remains so much which is peculiar, that the Basque must

be considered as an original language, distinct from all other idioms with which we are acquainted. 'The slightest comparison,' says Mr. Adelung, 'suffices to distinguish it from the Celtic, with which many authors have connected it. The difference prevails as well in particular words, as in the whole of the grammatical structure.' He has added a vocabulary in proof of the former point; the latter is exceedingly evident. The Basque abounds in multifarious inflections; but they are not founded on the principle which modifies the Indian dialects: they are formed by a variety of particles, suffixed to or inserted in the middle of the radical words. By means of these are produced six cases in the nouns, with a double declension to each, and eleven moods of the verbs, viz. an indicative, consuetudinary, potential, voluntary, obligatory, necessary, imperative, subjunctive, optative, penitentiary, and infinitive. The following is a specimen:—*il-dau*, he is dead; *il-ete-dau*, he must be dead; *il-edo-dau*, it is probable that he is dead.

From the Biscayan, in the west of Europe, we proceed to the Finnish, and Lapponic, in the north, another wholly unconnected family of languages. To the nations of this stock, collectively, Adelung gives the name of Tchudes; and he establishes, on a firm basis, the old opinion of Leem and Gunnerus of Drontheim, which has been called in question by misinformed writers, that the Finns, Laplanders, and Esthonians are tribes of one kindred; and that the Hungarians or Madjars, as they call themselves, are a remote branch of the same stock, the language of the latter being much intermixed with that of the Petchenegars, and other Tartar tribes, with whom they have been associated and mingled. A Laplander and a Finn cannot understand each other: the language of the former is split into a number of dialects, each wandering alone, having one peculiar to itself; so that one family, as often happens among savages, is scarcely intelligible to another. In many particulars the Lapponic coincides more nearly with the Hungarian than the Finnic; yet with the latter it is manifestly allied, as our author proves by a careful analysis of the grammatical structure of both. In the work of Leem, which contains a very excellent and interesting account of the Norwegian Laplanders, we find that their language has some traits which remind us of the Celtic, and we should not be surprised if a careful comparison should point out more. It is, indeed, highly probable, that when the Asiatic colonies arrived with their druidical hierarchy in the north of Europe, they found that country already occupied by tribes of Tchudic race, and that some intermixture followed. A permutation of consonants prevails in the Lapponic, not unlike that of the Celtic dialects. The nouns have from ten to fifteen cases; these, however, are not real inflections, but formed by prepositions, or rather suffixes added to the terminations of the nouns. Other inflections are very abundant, but mostly on the same principle. The present tense of the verb substantive is as follows:—

Lapponic.—Sing. 1. *Leh*. 2 *lep*. 3 *le*.—Dual.

1. *Len*. 2 *lepen*. 3 *lepe*.—Plural. 1. *Lepe*. 2 *lepet*. 3. *lan*.

Finn.—Sing. 1. *Olen*. 2 *olet*. 3 *on*.—Plural. 1. *Olemme*. 2 *olette*. 3 *owat*.

The numerals are nearly the same in the two languages up to ten, the term for which is totally different. The number nine was probably the last term of their arithmetic, when the tribes of the Tchudic stock first separated. They give themselves the same national denomination. In short, it is evident that they were formerly one people.

The origin of this nation is a curious question; and here the Hungarians come to our aid. This tribe, the Ongres, Ugurs, or Madjars, of different writers, are deduced by Abulgasi from the Huns. His opinion is supported only by the resemblance of the names; and this circumstance does more to invalidate it than the difference of bodily characters between the present Hungarians and the ancient Huns, which, though very considerable, may be accounted for by the agency of physical causes. The Ongres come first to our view in the fourth century, when they inhabited Bashkiria, between the Tobol, the Volga, and the Jaik. In the seventh century we find them in alliance with the Chazares, living on plunder and the chase, in the department of Catharinoslav. Towards the end of the ninth century seven tribes, of which the most considerable was called Madjars, were driven out of their territory by the Petchenegers, and passed the Carpathian mountains into Pannonia, where they settled, and gave a new name to that country. The tribes of Ongres, who remained in Asia, were seen by Rubruquis in 1251. As it is proved incontestably that the Finnish language is allied to the Hungarian, these nations must be held to be of one race, and to have emigrated originally from the same quarter.

The old writers are exceedingly anxious, as usual, to force a comparison between the Lapponic and the Hebrew. Olave Rudbeck, a Swede, had the boldness to assert, that out of 2000 or 3000 words, there are only 200 or 300 which are not from Hebrew or Syriac. We only notice this absurd declaration to express our astonishment that Mr. Townsend has been so far deceived by it as to pronounce peremptorily that the Lapponic is more 'pure,' by which he means nearer to the Hebrew than the modern dialects of Arabia. Thus we find in the extremities of Europe, towards the north and west, the remains of nations, who from their situation must be supposed to have occupied this portion of the earth before the arrival of the Indian colonies. The languages of the Cantabrians and Tchudes are totally distinct from each other, and from those of the Indian stock. Even the numerals, which coincide so extensively in languages otherwise unconnected, have here no resemblance. The Tchudes probably possessed all the southern shores of the Baltic, from which they were expelled by the Germans, and driven into Scandinavia.

The north of Asia, from the country occupied by the Finns to the sea, which separates this continent from America, is peopled by tribes of various origin, which are arranged by Mr. Adelung in three departments. The first contains seven

nations of mixed race, who are more or less connected with the Tchudes; the second consists of the people called Samoiedes, and various scattered tribes, who claim a common origin with them; in the third are placed several nations, whose history has not been investigated, and who speak languages quite unconnected. As these nations are very little known, we shall extract some of the most interesting of our author's observations concerning them.

1. The seven nations called Permians, Vogules, Ostiaks of the Oby, Tcheremisses, Votiaks, Mordouines and Teptjerai, have been represented by Pallas, Gmelin, and others, as so many tribes of Finns, and their languages are generally said to be Tchudic dialects. Adelung shows that this affinity has been very much exaggerated. Of 200 Permian vocables, which Müller the Russian historian has collected, seventeen are of Finnish origin: he found only eight in the same number of Vogulian words, sixteen in the Tcheremissic, and twenty-two in the Votiak vocabularies. In several of these there is a considerable mixture of Tartar words, which may well be accounted for from the long dominion of that people. The great mass of vocables in their language is apparently distinct, and of separate origin in each.

The Permians now inhabit the governments of Archangel and Kasan. In the middle ages they seem to have possessed all the country between the White Sea and the Ural Mountains. Onther, the celebrated voyager and friend of Alfred, represents the Biarmahs as a very populous nation, and says they spoke the same language as the Finns. The Icelandic traditions tell us, that this region was formerly enriched by the commerce of Persia and the Indies. It is difficult to imagine what was the foundation of this rumor.

2. The Samoiedes are the most destitute wretches of the whole human race. They procure a miserable subsistence by fishing along the shores of the Icy Sea, and extend from the neighbourhood of Archangel to the Lena. They probably inhabited formerly a more hospitable climate, and were driven to the northern coasts by the Tartars and Mongoles; some tribes of the same kindred are dispersed around the shores of lake Baikal and the borders of Mongolia. The tribes who wander through these wide regions have such a diversity of dialect, that it is difficult to recognise their mutual resemblance; yet a careful examination discovers enough to identify the race. Perhaps in a few ages these traces will be lost.

3. Between the Lena and Béhring's Straits are found several hunting or fishing tribes, who are for the most part addic'd to the Shaman paganism. The Jeniscan Ostiaks, the Tchuktschi, and the Kamtschadales, are those whose names are best known in Europe. As far as we can judge, by the vocabularies which have been collected of their languages, no affinity can be discovered between them, or any resemblance with the idioms of nations better known, with one remarkable exception, which we shall hereafter notice. Such is the result of Mr. Adelung's observations on these remote tribes, and their languages. We may remark, however, that in his anxiety to avoid

the common error of philologists, he approaches the opposite extreme, and scarcely allows their due weight to real coincidences. A few vocables common to two distant nations do not, indeed, authorise our classing their languages together; but, if such a coincidence cannot be referred to accident, it proves a connexion more or less remote between the nations in whose dialects it occurs. Traces are to be met with in the idioms of many remote nations in northern Asia, which point out this sort of affinity between them and the southern races.

The Caucasian nations are distributed into five principal branches, distinguished from each other in languages and in origin. 1. The Abassians inhabit the north-western tract: they are probably the nation who, in the time of Strabo, practised piracy on the shores of the Euxine: they are now wild mountaineers, and as much distinguished from their neighbours by their features as by their languages, which have no affinity with any other. 2. The Circassians, or more properly Kasaeks, possess the northern declivities of Caucasus and the neighbouring plains. A tribe of this race, intermixed with Russians, gave origin to the Cossacs of the Don. The Circassian bards retain among them the tradition of the Amazons, a nation of women, who, as they say, settled in the territory of the Nogay Tartars, and intermarried with that people. This is exactly the story of Herodotus: he says the Amazons came into the country of the Scythians, who appear, from a variety of circumstances, to have been the ancestors of the proper Tartars. 3. The Ossetes, on the high mountains above the Circassians, are, according to Klapwroth, of Medo-Sarmatian race. He gives some reasons for believing them to be the remains of the celebrated Alani. 4. The Ingushi are a wild people, dwelling near the sources of the Terek. 5. The Lesgi are divided into many tribes, or rather the name includes various hordes, who have little or no affinity. The languages of all these nations are said to be essentially distinct.

The more fertile and level countries, which border on the Caucasus to the southward, are called by Europeans Georgia, but more properly Gurgistan, from the river Kur, the Cyrus of the Greeks. This country is the seat of a nation well known to antiquity, under the names of Iberians and Colchians, who carried on commerce on the Caspian and Euxine Seas. According to Klapwroth they have ancient writings in a peculiar character which record the invasion of Asia by the Cimmerii of Herodotus. It is agreed by all writers that their language has no affinity with any other known idiom.

The Armenians are a remarkable nation of western Asia, whose language has been preserved from the beginning of the fifth century by the use of letters. The idiom of that time differed however widely from the modern dialect, as we learn from a translation of the Bible executed by Miesrob, whose pupil was the historian Moses of Chorene. The Armenian language differs widely from all others, even in those vocables which are necessary to the rudest nations: yet its grammatical structure, which has an affinity with that of the Greek and Sanscrit induces a

suspicion that this diversity has been the effect of a gradual fluctuation.

The high mountainous ridge of Asia, which rises from the north of the Caspian, and stretches across to the Eastern Ocean, has been, from the remotest periods of history, the abode of several barbarous nations, who have poured themselves down from time to time on the more polished nations of the south, and have every where rendered their name terrible to future ages. The nomadic hordes of this elevated plain belong to three great races, equally illustrious in deeds of blood.

1. The native region of the Turks or Tartars is the western declivity of this steppe towards the Caspian Sea, and the banks of the Volga. This immense nation is divided into a number of departments, whose names and affiliations our limits will not permit us to pursue. There is sufficient evidence of their belonging to one stock, though their languages are infinitely diversified. The Scythians of the Greeks, in the definite sense of that name, were this same nation, and it is remarkable that the Nogay Tartars, as Klaproth informs us, from local observations, have still that distemper prevalent among them, to which Herodotus ascribes so curious an origin. The language of the Ottomans is better known than the dialects of other Tartar hordes. The modern Turkish is mixed with Arabic and Persic, but its Tartarian basis is easily distinguishable from these additions, and contains such a number of German vocables, as prove a remote connexion between the Tartar and German races. We may observe that the Saubomate, who spoke the Scythian language in the time of Herodotus, are certainly connected with the Slavonian family. The features of the Tartar nations are European.

2. The mountains of Altai are the cradle of the Mongolian race, whose features distinguish them as widely as those of the negro from the rest of mankind. Three great nations belong to this stock: the Kalmucks, the Burettes, and the proper Mongoles. These people are probably the Argippæi of Herodotus, and the Seres of the later Greeks: they are doubtless the Hiong-nu of the Chinese historians, and the Hunns who laid waste Europe. Their language, which is better known than many others, is polysyllabic, but formed in the structure of the monosyllabic dialects; yet it is not without some traces of resemblance to the European languages. A number of words contained in the vocabulary given by Strahlenburg exist, as Vallancey has remarked, in the modern Irish; Mr. Townsend has copied them in his remarks on the Gaëlic language.

3. The eastern region of the Asiatic steppe is the seat of the Mantshurian, or Mant-shoo race, the conquerors of China. The Tungusians, divided into the Rein-deer, Horse, and Dog-Tungusians, and the Fishing Tungusians, who wander from the river Ienisy to the limits of Daouria, are a branch of this family. They have a distinct language of peculiar structure. Yet, divided as they are from all connexion with European history, they have a number of words which are found in several of our dialects. Mr. Adelung has given a list of them, a part of

which we extract:—‘Ura, Gr. *ουρα*; kalpin, Gr. *καλπος*; chop, Germ. Schopf, Eng. top; non, Germ. nonne (girl); heren, Germ. heer; Eng. array; kison (word) kisureme (to talk), Germ. kosen, Fr. causer; hife, Germ. hafe, avena, Lat. (pipe); fahala (black), Germ. fahl; farshe, pars, part; morin, Eng. mare; singui, sanguis; furu, furor, fury; mala, malleus, hammer; ania, annus, year, &c.’

Beyond Mantchuria, to the eastward, the peninsula of Corea contains a number of states, formerly independent, but now united under one sovereign, who is tributary to China. The Chinese pretend that this subjection took place 2188 years before Christ. The Jesuits who went from Peking to Corea found that the nations neither understood the Chinese nor the Mantchurian language. Their dialect seems to be of the monosyllabic class. In the island of Sagalien, the longest in the world, the inhabitants change their name and language in every village.

The people of the Kuriles, who are said to be covered with hair on their backs, speak a peculiar language. The Japanese suppose themselves to be descended from the Chinese. Their language, however, gives no support to this opinion. It is polysyllabic, and totally different from the Chinese, and, as far as we know, from all other languages. The same remark may be made of the idiom of Formosa.

The extensive traces of one language scattered over the islands of the Indian Seas and Pacific Ocean are a very curious phenomenon. Adelung is very imperfectly informed concerning the history of these islanders, which has been solely investigated by our countrymen, particularly by Leyden, Marsden, and the companions of Cook. An opinion long prevailed that all these tribes were colonies from Malacca, although many striking facts opposed themselves to such a conclusion. Marsden however has shown that the Malays themselves are a colony from the islands, which settled at some remote period on the main land. The inhabitants of all this region, which has been termed Polynesia, may be distributed into three classes, according to the different states of society in which they are found.

1. The negro races, who are every where savages, inhabit the larger islands, and the interior of some others, of which they appear to be the oldest inhabitants. Their languages are very various, and often radically different in adjoining islands; the dialects however of some of their tribes resemble those of the second class. 2dly. The tattooed tribes, to whom belong the Battas of Sumatra, the Pintados of the Philippines, and the natives of the remote isles in the Pacific. Their languages resemble the Otahitean. 3dly. The Menangkabow race is settled in many of the Indian islands, and on the Malayan coast.

We regret that the great length to which these observations have already extended forbids us from following Mr. Adelung and his successor, professor Vater, through their history of the dialects of the African and American savages. Their remarks on the latter particularly, which are comprised in the last part of the Mithridates, and appeared at a later period than the rest of the

work; are very interesting. The most striking fact which presents itself is the endless diversity of the idioms which prevail among these wild nations. Their languages are so numerous that Mr. Jefferson, from this circumstance, fancied that the population of America must be more ancient than that of the eastern continent.

SEC. III.—OF THE DIFFERENCE BETWEEN TRANSPOSITIVE AND ANALOGOUS LANGUAGES.

Such is a survey, which the labors of Adelung have enabled us to make rather extensive, of the history of all the greater dialects of human speech. We feel disposed, before closing this article, so far to enter into the genius or idiom of particular languages as to enquire into the relative advantages of the transpositive and analogous ones.

The learned reader knows that the several changes which take place in the arrangement of the words, in every *transpositive* language, could not be admitted without occasioning great confusion unless certain classes of words were endowed with particular variations, by means of which they are made to refer to the other words with which they ought naturally to be connected. From this cause proceeds the necessity of several variations of verbs, nouns, and adjectives; which are not in the least essential or necessary in the *analogous* languages.

It is generally supposed that every language, whose verbs admit of inflection, is on that account much more perfect than one where they are varied by auxiliaries: we shall now examine this with some degree of attention; and, that what is said on this head may be the more intelligible, we shall give examples from the Latin and English languages. We make choice of these languages because the Latin is more purely transpositive than the Greek, and the English admits of less inflection than any other language with which we are acquainted.

If any preference be due to a language, from the one or the other method of conjugating verbs, it must in a great measure be owing to one or more of these three causes: either it must admit of a greater variety of sounds, and consequently more room for harmonious diversity of tones in the language,—or allow a greater freedom of expression in uttering any simple idea, by the one admitting of a greater variety in the arrangement of the words which are necessary to express that idea than the other,—or, lastly, a greater precision and accuracy, in fixing the meaning of the speaker, arise from the use of one of these forms than from that of the other; for as every other circumstance which may serve to give a diversity to language, such as the general and most prevalent sounds, the frequent repetition of any one particular letter, and a variety of other circumstances of that nature, which may serve to debase a particular language, are not influenced in the least by the different methods of varying the verbs, they cannot be here considered. We shall therefore compare the advantages and disadvantages which may accrue to a language, by inflecting its verbs, with regard to each of these particulars.—variety of sound, variety of arrangement, and accuracy of meaning.

The first particular that we have to examine is, whether the one method of expressing the variations of a verb admits of a greater variety of sounds? In this respect the Latin seems, at first view, to have a great advantage over the English: for the words *amo, amabam, amaveram, amavero, amem, &c.*, seem to be more different from one another than the English translations of them, *I love, I did love, I had loved, I shall have loved, I may love, &c.*; for although the syllable *am* is repeated in every one of the first, yet, as the last syllable usually strikes the ear with greater force, and leaves a greater impression than the first, it is very probable that many will think the frequent repetition of the word *love*, in the latter instance, more striking to the ear than the repetition of *am* in the former. We will therefore allow this its full weight, and grant that there is as great, or even a greater, difference between the sounds of the different tenses of a Latin verb, than between the words that are equivalent to them in English. But, as we here consider the variety of sounds of the language in general, before any just conclusion can be drawn we must not only compare the different parts of the same verb, but also compare the different verbs with one another in each of these languages. And here, at first view, we perceive a most striking distinction in favor of the analogous language over the inflected; for, as it would be impossible to form a particular set of inflections, different from one another, for each particular verb, all those languages which have adopted this method have been obliged to reduce their verbs into a small number of classes; all the words of each of which classes, called conjugations, have the several variations of the moods, tenses, and persons, expressed exactly in the same manner, which must of necessity introduce a similarity of sounds into the language in general, much greater than where every particular verb always retains its own distinguishing sound. To be convinced of this we need only repeat any number of verbs in Latin and English, and observe on which side the preference with respect to variety of sounds must fall.

Pono,	<i>I put.</i>	Bibo,	<i>I drink.</i>
Dono,	<i>I give.</i>	Scribo,	<i>I write.</i>
Cano,	<i>I sing.</i>	Moveo,	<i>I move.</i>
Sono,	<i>I sound.</i>	Doleo,	<i>I ail.</i>
Orno,	<i>I adorn.</i>	Obeo,	<i>I die.</i>
Pugno,	<i>I fight.</i>	Gaudeo,	<i>I rejoice.</i>

The similarity of sounds is here so obvious in the Latin as to be perceived at the first glance; nor can we be surprised to find it so, when we consider that all their regular verbs, amounting to 4000 or upwards, must be reduced to four conjugations; and even these differing but little from one another, which must of necessity produce the sameness of sounds which we here perceive; whereas every language that follows the natural order, like the English, instead of this small number of uniform terminations, have almost as many distinct sounds as original verbs in their language.

But if, instead of the present of the indicative mood, we take almost any other tense of the Latin verb, the similarity of sounds will be still

more perceptible, as many of these tenses have the same termination in all the four conjugations, particularly in the imperfect of the indicative: as,

Pone-bam;	<i>I did put,</i>	<i>I put.</i>
Dona-bam;	<i>I did give,</i>	<i>I gave.</i>
Cane-bam;	<i>I did sing,</i>	<i>I sung.</i>
Sona-bam;	<i>I did sound,</i>	<i>I sounded.</i>
Orna-bam;	<i>I did adorn,</i>	<i>I adorned.</i>
Pugna-bam;	<i>I did fight,</i>	<i>I fought.</i>
Bibe-bam;	<i>I did drink,</i>	<i>I drank.</i>
Scribe-bam;	<i>I did write,</i>	<i>I wrote.</i>
Move-bam;	<i>I did move,</i>	<i>I moved.</i>
Dole-bam;	<i>I did ail,</i>	<i>I ailed.</i>
Mori-bam;	<i>I did die,</i>	<i>I died.</i>
Gande-bam;	<i>I did rejoice,</i>	<i>I rejoiced.</i>

It is unnecessary to make any remarks on the Latin words in this example: but in the English translation we have marked in the first column the words without any inflection; and in the second have put down the same meaning by an inflection of our verb; which we have been enabled to do, from a peculiar excellency in our language unknown to any other either ancient or modern. The numerous tenses ending in *am*, *bam*, and *ram*, sound peculiarly barbarous when conjoined in the same sentence with other words ending also in *am*: thus what can be more uncouth than this?—*Causam quam nesciebam diligentissime investigabam*;—or even than Cicero's famous poetical line, though none of these verbs occur in it, *O fortunatam natam, ne consule Romam?* Were it necessary to pursue this subject farther, we might observe that the perfect tense in all the conjugations ends universally in *i*, the pluperfect in *eram*, and the future in *am* or *bo*; in the subjunctive mood, the imperfect universally in *em*, the perfect in *erem*, the pluperfect in *issem*, and the future in *ero*: and as a still greater sameness is observable in the different variations for the persons in these tenses, seeing the first person plural in all tenses ends in *mus*, and the second person in *tis*, with little variation in the other persons, it is evident that, in respect of diversity of sounds, this method of conjugating verbs by inflection is greatly inferior to the more natural method of expressing the various connexions and relations of the verbal attributive by different words, usually called auxiliaries.

The second particular, by which the different methods of marking the relation of the verbal attributive can affect language, arises from the variety of expressions which either of these may admit of in uttering the same sentiment. In this respect, likewise, the method of conjugating by inflexion seems to be deficient. Thus the present of the indicative mood in Latin can at most be expressed only in two ways, viz. *scribo*, and *ego scribo*; which ought perhaps in strictness to be admitted as only one; whereas, in English, we can vary it in four different ways, viz. 1. *I write*; 2. *I do write*; 3. *write I do*; 4. *write do I*. Though this last variation cannot, in serious composition, be considered as good language, yet examples might be given from some of our best authors. But in works of humor, such as Butler's *Hudibras*, and some of Shakspeare's plays,

it produces a fine effect, by giving a burlesque air to the language. And if we consider the further variation which these receive in power as well as in sound, by having the emphasis placed on the different words, instead of four we shall find eleven different variations: thus, 1. *I write*, with the emphasis upon the *I*;—2. *I write*, with the emphasis upon the word *write*. Let any one pronounce these with the different emphasis necessary, and he will be immediately satisfied that they are not only distinct from each other with respect to meaning, but also with regard to sound; and the same must be understood of all the other parts of this example: thus,

- | | |
|-----------------------|------------------------|
| 3. <i>I do write,</i> | 8. <i>Write I do,</i> |
| 4. <i>I do write,</i> | 9. <i>Write do I,</i> |
| 5. <i>I do write,</i> | 10. <i>Write do I,</i> |
| 6. <i>Write I do,</i> | 11. <i>Write do I.</i> |
| 7. <i>Write I do,</i> | |

None of the Latin tenses admit of more variations than the two above mentioned: nor do almost any of the English admit of fewer than in the above example; and several of these phrases, which must be considered as exact translations of some of the tenses of the Latin verb, admit of many more. Thus the imperfect of the subjunctive mood, which in Latin admits of the above two variations, admits in English of the following:—

1. *I might have written.*
2. *Written I might have.*
3. *Have written I might,*
4. *Written might have I.*
5. *I written might have.*
6. *Have written might I.*

And, if we likewise consider the variations which may be produced by a variation of the emphasis they will amount to no less than twenty-four, instead of two. If we likewise consider, that the Latins were obliged to employ the same word, not only to express '*I might have written*,' but also, '*I could, I would, or I should have written*;' each of which would admit of the same variations as the word *might*; we have in all ninety-six different expressions in English for the same phrase which in Latin admits only of two, unless they have recourse to other forced turns of expression, which the defects of their verbs in this particular have compelled them to invent. We may therefore safely conclude, that the mode of varying verbs by inflection affords less variety in the arrangement of the words of the particular phrases, than the method of varying them by the help of auxiliaries.

But if there should still remain any doubt whether the method of varying the verbs by inflection is inferior to that by auxiliaries, with regard to diversity of sounds, or variety of expression; there cannot be the least doubt, but that with respect to precision, distinctness, and accuracy, in expressing any idea, the latter enjoys a superiority beyond all comparison.—Thus the Latin verb *amo* may be Englished either by the words, *I love, or I do love*, and the emphasis placed upon any of the words that the circumstances may require: by means of which the meaning is pointed out with a force and energy which it is altogether impossible to produce by the use of

any single word. The following line from Shakspeare's Othello may serve as an example:—

—————Excellent wretch!
Perdition catch my soul, but I DO love thee:

In which the strong emphasis upon the word DO, gives it a force and energy which conveys, in an irresistible manner, a most perfect knowledge of the situation of the mind of the speaker at the time.—That the whole energy of the expression depends upon this seemingly insignificant word, we may be satisfied, by keeping it away, thus:

—————Excellent wretch!
Perdition catch my soul, but I love thee.

How poor—how tame—how insignificant is this, when compared with the other! Here nothing remains but a tame assertion, ushered in with a pompous exclamation, which could not here be introduced with any degree of propriety. Whereas, in the way that Shakspeare has left it to us, it has an energy which nothing can surpass; for, overpowered with the irresistible force of Desdemona's charms, this strong exclamation is extorted from the soul of Othello in spite of himself. Surprised at this tender emotion, which brings to his mind all those amiable qualities for which he had so much esteemed her, and at the same time fully impressed with the firm persuasion of her guilt, he bursts out into that seemingly inconsistent exclamation, *Excellent wretch!* and then he adds in the warmth of his surprise,—thinking it a thing most astonishing, that any warmth of affection should still remain in his breast, he even confirms it with an oath,—*Perdition catch my soul, but I do love thee*—In spite of all the falsehoods with which I know thou hast deceived me—in spite of all the crimes of which I know thee guilty—in spite of all those reasons for which I ought to hate thee—in spite of myself,—still I find that I love,—yes, I do love thee.' We look upon it as a thing altogether impossible to transfuse the energy of this expression into any language whose verbs are regularly inflected.

We might thus go through all the other tenses, and show that the same superiority is to be found in each.—Thus, in the perfect tense of the Latins, instead of the simple *amavi*, we say *I have loved*; and, by the liberty we have of putting the emphasis upon any of the words which compose this phrase, we can, in the most accurate manner, fix the precise idea which we mean to excite; for if we say *I have loved*, with the emphasis upon the word *I*, it at once points out the person as the principal object in that phrase, and makes us naturally look for a contrast in some person, and the other parts of the phrase become subordinate to it:—*HE has loved* thee much, but *I have loved* thee infinitely more.' The Latins too, as they were not prohibited from joining the pronoun with their verb, were also acquainted with this excellence, which Virgil has beautifully used in this verse:

—————*Nos patriam fugimus;*
Tu, Tityre, lentus in umbra, &c.

But we are not only enabled thus to distinguish the person in as powerful a manner as the Latins, but can also with the same facility point out any

of the other circumstances as principals; for if we say, with the emphasis upon the word *have*, '*I HAVE loved*;' it as naturally points out the time as the principal object, and makes us look for a contrast in that peculiarity, *I HAVE*; '*I have loved* indeed:—my imagination *has* been led astray—my reason *has* been perverted:—but, *now* that time has opened my eyes, I can smile at those imaginary distresses which once perplexed me.'—In the same manner we can put the emphasis upon the other word of the phrase, *loved*,—'*I have LOVED*.'—Here the passion is exhibited as the principal circumstance; and, as this can never be excited without some object, we naturally wish to know the object of that passion—'*Whom? what have you loved?*' are the natural questions we should put in this case. '*I have LOVED—Eliza*.'—In this manner we are, on all occasions, enabled to express, with the utmost precision, that particular idea which we would wish to excite, so as to give an energy and perspicuity to the language, which can never be attained by those languages whose verbs are conjugated by inflection; and if to this we add the inconvenience which all inflected languages are subject to, by having too small a number of tenses, so as to be compelled to make one word on many occasions supply the place of two, three or even four, the balance is turned still more in our favor.—Thus, in Latin, the same word *AMABO* stands for *shall* or *will* love, so that the reader is left to guess from the context which of the two meanings it was most likely the writer had in view.—In the same manner, *may* or *can* love are expressed by the same word *AMEM*; as are also *might*, *could*, *would*, or *should* love, by the single word *AMAREM*; so that the reader is left to guess which of these four meanings the writer intended to express: which occasions a perplexity very different from that clear precision] of which our language allows, by not only pointing out the different words, but also by allowing us to put the emphasis upon any one of them we please, which superadds energy and force to the precision it would have had without that assistance.

On the whole, therefore, we must conclude, that the method of conjugating verbs by inflection is inferior to that which is performed by the help of auxiliaries;—because it does not afford such a diversity of sounds,—nor allow such variety in the arrangement of expression for the same thought,—nor give so great distinction and precision in the meaning.—It is, however, attended with one considerable advantage above the other method: for, as the words of which it is formed are necessarily of greater length, and more sonorous, than in the analogous languages, it admits of more flowing harmony of expression; for the number of monosyllables in this last greatly checks that pompous dignity which naturally results from longer words. Whether this single advantage is sufficient to counterbalance all the other defects with which it is attended, is left to the reader to determine:—but we may remark, that even this excellence is attended with some peculiar inconveniences, which shall be more particularly pointed out in the sequel.

Perhaps it may still be objected, that although the comparison we have made above may be fair, and the conclusion just, with regard to the Latin and English languages; yet it does not appear clear, that on that account the method of conjugating verbs by inflection is inferior to that by auxiliaries; for, although it be allowed that the Latin language is defective in point of tenses, yet if a language were formed which had a sufficient number of inflected tenses to answer every purpose; if it had, for instance, a word properly formed for every variation of each tense; one for *I love*, another for *I do love*; one for *I shall love*, another for *I will love*; one for *I might*, another for *I could*, and *would*, and *should love*; and so on; that this language would not be liable to the objections brought against the inflection of verbs: and that of course these objections are only valid against those languages which have followed that mode, and executed it imperfectly.—We answer that, although this would in some measure remedy the evil, yet it would not remove it entirely. For, in the first place, unless every verb, or every small number of verbs, were conjugated in one way, having the sound of the words in each tense, and division of tenses, different from all the other conjugations,—it would always occasion a sameness of sound, which would in some measure prevent that variety of sounds so proper for a language. And, even if this could be effected, it would not give such a latitude to the expression as auxiliaries allow; for although there should be two words, one for *I might*, and another for *I could love*; yet as these are single words, they cannot be varied; whereas, by auxiliaries, either of these can be varied twenty-four different ways. In the last place, no single word can ever express all that variety of meaning which we can do by the help of our auxiliaries and the emphasis. *I have loved*, if expressed by any one word, could only denote at all times one distinct meaning; so that, to give it the power of ours, three distinct words at least would be necessary.—However, if all this were done; that is, if there were a distinct conjugation formed for every forty or fifty verbs;—if each of the tenses were properly formed, and all of them different from every other tense as well as every other verb; and these all carried through each of the different persons, so as to be all different from one another;—and if likewise there were a distinct word to mark each of the separate meanings which the same tense could be made to assume by means of the emphasis; and if all this infinite variety of words could be formed in a distinct manner, different from each other, and harmonious; this language would have powers greater than any that could be formed by auxiliaries, if it were possible for the human powers to acquire such a degree of knowledge as to employ it with facility. But how could this be attained, since upwards of 10,000 words would be necessary to form the variation of any one verb, and 100 times that number would not include the knowledge of the verbs alone of such a language. This assertion may perhaps appear very much exaggerated; but let any one mark all the variations of tense, mood, person, and number, which an English verb can be made to as-

sume, varying each of these in every way that they will admit, both as to the diversity of expression and the emphasis; he will soon be convinced that we have here said nothing more than enough. How much, therefore, ought we to admire the simple perspicuity of our language, which enables us, by the proper application of ten or twelve seemingly trifling words, the meaning and use of which can be attained with the utmost ease, to express all that could be expressed by this unwieldy apparatus? What can equal the simplicity or the power of the one method, but the well known powers of the twenty-four letters, the knowledge of which can be obtained with the utmost ease—and their powers know no limits?—or what can be compared to the fancied perfection of the other, but the 33,000 hieroglyphical characters, in which the Chinese write their unintelligible language, and which require half the life of a man to learn to read?

After the verbs, the next most considerable difference we find between the analogous and transpositive language is in the nouns; the latter varying the different cases of these by inflection; whereas the former express all the different variations of them by the help of other words, prefixed, called prepositions. Now, if we consider the advantages and disadvantages of either of these methods, we shall find that with regard to the first particular, viz. variety of sounds, almost the same remarks may be made as upon the verbs; for, if we compare any particular noun by itself, the variety of sound appears much greater between the different cases in the transpositive, than between the translations of these in the analogous language. Thus, *rex, regis, regem, regem, &c.*, are more distant from one another in point of sound, than the translations of these, *a king, of a king, to a king, a king, &c.* But if we proceed one step further, and consider the variety which is produced in the language in general, by the one or the other of these methods, the case is entirely reversed. For as it would have been impossible to form distinct variations, different from one another, for each case of every noun, they have been obliged to reduce all their nouns into a few general classes, called declensions, and to give to all those included under each class the same termination in every case; which produces a like similarity of sound with what we observed was occasioned to the verbs from the same cause; whereas in the analogous languages, as there is no necessity for any constraint, there is almost as great a variety of sounds as there are of nouns. The Latins have only five different declensions; so that all the great number of words of this general order must be reduced to the very small diversity of sounds of which these few classes admit; and even the sounds of these few classes are not so much diversified as they might have been, as many of the different cases in the different declensions have exactly the same sounds. We might here produce examples to show the great similarity of sounds between different nouns in the Latin language, and variety in the English, as we did of the verbs: but, as every reader in the least acquainted with these two languages must be satisfied of this, we think it unnecessary to enlarge.

But if the inflection of nouns is a disadvantage to a language in point of diversity of sounds, it is very much the reverse with regard to the variety it allows in the arranging the words of the phrase. Here, indeed, the transpositive language shines forth in all its glory, and the analogous must yield the palm without dispute. For as the nominative case (or that noun which is the cause of the energy expressed by the verb) is different from the accusative (or that noun upon which the energy expressed by the verb is exerted), these may be placed in any situation that the writer shall think proper, without occasioning the smallest confusion: whereas in the analogous languages, as these two different states of the noun are expressed by the same word, they cannot be distinguished but by their position alone; so that the noun which is the efficient cause must always precede the verb, and that which is the passive subject must follow; which greatly cramps the harmonious flow of composition. Thus the Latins, without the smallest perplexity in the meaning, could say either *Brutum amat Cassius*, or *Cassius amavit Brutum*, or *Brutum Cassius amavit*, or *Cassius Brutum amavit*. As the termination of the word *Cassius* always points out that it is in the nominative case, and therefore that he is the person from whom the energy proceeds; and, in the same manner, as the termination of *Brutum* points out that it is in the accusative case, and consequently that he is the object upon whom the energy is exerted; the meaning continues still distinct and clear, notwithstanding all these several variations: whereas, in the English language, we could only say, *Cassius loved Brutus*, or, by a more forced phraseology, *Cassius Brutus loved*: Were we to reverse the case, as in the Latin, the meaning also would be reversed; for if we say *Brutus loved Cassius*, it is evident, that, instead of being the person beloved, as before, *Brutus* now becomes the person from whom the energy proceeds, and *Cassius* becomes the object beloved. In this respect, therefore, the analogous languages are greatly inferior to the transpositive; and indeed it is from this single circumstance alone, that they derive their chief excellence.

But although it thus appears evident, that any language, which has a particular variation of its nouns to distinguish the accusative from the nominative case, has an advantage over those languages which have none: yet it does not appear that any other of their cases adds to the variety, but rather the reverse: for, in Latin, we can only say *amor Dei*: in English the same phrase may be rendered, either,—*the love of God*—or *God the love*,—or, by a more forced arrangement, *God, the love of*, or, by a very common abbreviation, *God's love*. And as these oblique cases, as the Latins called them, except the accusative, are clearly distinguished from one another, and from the nominative, by the preposition which accompanies them, we are not confined to any particular arrangement with regard to these as with the accusative, but may place them in what order we please, as in Milton's elegant invocation at the beginning of *Paradise Lost*—

Of man's first disobedience, and the fruit
Of that forbidden tree, whose mortal taste
Brought death into the world, and all our wo,
With loss of Eden, till one greater man
Restore us, and regain the blissful seat,
Sing, heavenly Muse.

In this sentence the transposition is almost as great as the Latin language would admit of, and the meaning as distinct as if Milton had begun with the plain language of prose, thus,—'Heavenly Muse, sing of man's first disobedience, &c.

The little attention which seems to have been paid to this peculiar advantage, from the use of an accusative case different from the nominative is indeed surprising. The Latins, who had more occasion to attend to this than any other nation, and even the Greeks themselves, have in many cases overlooked it. For all nouns of the neuter gender, both in Greek and Latin, have in every declension their nominative and accusative singular alike: nor in the plural of such nouns is there any distinction between these two cases; and in Latin all nouns whatever, of the third, fourth, and fifth declensions, have their nominative and accusative plural alike. So that their language reaps no advantage in this respect from almost one-half of their nouns. Nor have any of the modern languages in Europe attempted to copy from them in this particular; from which perhaps more advantage would have been gained, than from copying all the other supposed excellences of their language.

Let us now consider whether the inflection of nouns gives any advantage over the method of defining them by prepositions, in point of distinctness and precision of meaning. In this respect too the analogous languages have the superiority. Indeed this is the particular in which their greatest excellence consists, nor is it disputed, but that, in point of accuracy and precision, this method must excel all others, however, defective it may be in other respects. We observed, when speaking of verbs, that it might perhaps be possible to form a language by inflection which should be capable of as great accuracy as in the more simple order by auxiliaries: but this would have been such an infinite labor, that no human powers would have been able to accomplish it. More easy would it have been, to have formed the several inflections of the nouns so different from one another, as to have rendered it impossible ever to mistake the meaning. Yet even this has not been attempted. And, as we find that those languages which have adopted the method of inflecting their verbs are more imperfect in point of precision than the other, so the same may be said of inflecting the nouns: for, not to mention the energy which the analogous languages acquire by putting the accent upon the noun, or its preposition (when in an oblique case), according as the subject may require, to express which variation of meaning no particular variety of words has been invented in any inflected language, they are not even complete in other respects. The Latin, in particular, is in many cases defective, the same termination being employed in many instances for different cases of the same

noun. Thus the genitive and dative singular and nominative and vocative plural, of the first declension, are all exactly alike, and can only be distinguished from one another by the formation of the sentences;—as are also the nominative, vocative, and ablative singular, and the dative and ablative plural. In the second the genitive singular, and nominative and vocative plural, are the same; as are also the dative and ablative singular, and dative and ablative plural; except nouns in *um*, whose nominative, accusative, and vocative singular, and nominative, accusative, and vocative plural are alike. The other three declensions agree in as many of their cases as these do; which evidently tends to perplex the meaning, unless the hearer is particularly attentive to, and well acquainted with, the particular construction of the other parts of the sentence; all of which is totally removed, and the clearest certainty exhibited at once, by the help of prepositions in the analogous languages.

It is not necessary to enter into such a minute examination of the advantages or disadvantages attending the variation of adjectives; as it will appear evident, from what has been already said, that the endowing them with terminations similar to, and corresponding with, substantives, must tend still more to increase the similarity of sounds, than any of those particulars we have already taken notice of; and were it not for the liberty which they have, in transpositive languages, of separating the adjective from the substantive, this must have occasioned such a jingle of similar sounds as could not fail to have been most disgusting to the ear: but as it would have been impossible in many cases, in those languages where the verbs and nouns are inflected, to have pronounced the words which ought to have followed each other, unless their adjectives could have been separated from the substantives; therefore, to remedy this inconvenience, they were forced to devise this unnatural method of inflecting them also; by which means it is easy to recognise to what substantive any adjective has a reference, in whatever part of the sentence it may be placed. In these languages, therefore, this inflection, both as to gender, number, and case, becomes absolutely necessary; and by the diversity which it admitted in the arranging the words of the several phrases might counterbalance the jingle of similar sounds which it introduced into the language.

Having thus examined the most striking particulars in which the transpositive and analogous languages differ, and endeavoured to show the general tendency of every one of the particulars separately, it would be improper to dismiss the subject without considering each of these as a whole, and pointing out their general tendency in that light: for it often happens in human inventions, that every part which composes a whole, taken separately, may appear extremely fine; and yet, when all these parts are put together, they may not agree, but produce a jarring and confusion very different from what was expected.

Though all languages agree in this respect, that they are the means of conveying the ideas of one man to another, yet as there is an infinite

variety of ways in which we might wish to convey these ideas, sometimes by the easy and familiar mode of conversation, and at other times by more solemn addresses to the understanding, by pompous declamation, &c., the genius of one language may be more properly adapted to the one of these than the other, while another language may excel in the opposite particular. This is exactly the case in the two general idioms of which we now treat. Every particular in a transpositive language is peculiarly calculated for that solemn dignity which is necessary for pompous orations. Long sounding words, formed by the inflection of the different parts of speech, flowing periods, in which the attention is kept awake by the harmony of the sounds, and in expectation of that word which is to unravel the whole,—if composed by a skilful artist, are admirably suited to that solemn dignity and awful grace which constitute the essence of a public harangue. On the contrary, in private conversation, where the mind wishes to unbend itself with ease, these become so many clogs which encumber and perplex. At these moments we wish to transfuse our thoughts with ease and facility—we are tired with every unnecessary syllable—and wish to be freed from the trouble of attention as much as may be. Like state robes, we would wish to lay aside our pompous language, and enjoy ourselves at home with freedom and ease. Here the solemnity and windings of the transpositive language are burdensome; while the facility with which a sentiment can be expressed in the analogous language is what we wish to acquire. Accordingly, in Terence and Plautus, where the beauties of dialogue are most charmingly displayed, transposition is sparingly used. In this humble, though engaging sphere, the analogous language moves unrivalled;—in this it wishes to indulge, and never tires. But it in vain attempts to rival the transpositive in dignity and pomp: the number of monosyllables interrupt the flow of harmony; and, although they may give a greater variety of sounds, yet they do not naturally possess that dignified gravity which suits the other language. This, then must be considered as the striking particular in the genius of these two different idioms, which marks their characters. If we consider the effects which these two different characters of language must naturally produce upon the people who employ them, we shall perceive that the genius of the analogous language is much more favorable for the most engaging purposes of life, the civilising the human mind by mutual intercourse of thought, than the transpositive. For as it is chiefly by speech that man is raised above the brutes; as by this he improves every faculty of his mind, and, to the observations which he may himself have made, has the additional advantage of the experience of those with whom he converses, as well as the knowledge which the human race have acquired by the accumulated experience of all preceding ages;—as it is by the enlivening glow of conversation that kindred souls catch fire from one another, that thought produces thought, and each improves upon the other, till they soar beyond the bounds which human reason, if left alone,

could ever have aspired to;—we must surely consider that language as the most beneficial to society which most effectually removes these bars that obstruct its progress. Now, the genius of the analogous language is so easy, so simple and plain, as to be within the reach of every one who is born in the kingdom where it is used, to speak it with facility: even the rudest among the vulgar can hardly fall into any considerable grammatical errors: whereas, in the transpositive languages, so many rules are necessary to be attended to, and so much variation is produced in the meaning by the slightest variations in the sound, that it requires a study far above the reach of the illiterate ever to attain. So that, how perfect soever the language may be when spoken with purity, the bulk of the nation must ever labor under the inconvenience of rudeness and inaccuracy of speech, and all the evils which this naturally produces. Accordingly, we find, that in Rome, a man, even in the highest rank, received as much honor, and was as much dis-

tinguished among his equals, for being able to converse with ease, as a modern author would be for writing in an easy and elegant style; and Cæsar, among his contemporaries, was as much esteemed for his superiority in speaking the language in ordinary conversation with ease and elegance, as for his powers of oratory, his skill in arms, or his excellence in literary composition. It is needless to point out the many inconveniences which this must unavoidably produce in a state. It naturally tends to introduce a vast distinction between the different orders of men; to set an impenetrable barrier between those born in a high and those born in a low station; to keep the latter in ignorance and barbarity, while it elevates the former to such a height as must subject the other to be easily led by every popular demagogue. The history of the nations who have followed this idiom of language confirms this observation. See GRAMMAR and PHILOLOGY.

LANGUEDOC, a province of the south of France, now divided into the departments of the Tarn, the Higher Garonne, the Hérault, the Aude, the Garde, the Ardeche, the Higher Loire, and the Lozere. See FRANCE. It has the Rhone on its eastern, and the Garonne on its western side: being of an oblique form, about 170 miles from east to west, and ninety from north to south. The Upper or Western Languedoc formerly had Toulouse for its capital; and the Lower or Eastern, Montpellier. It has a population of full 2,000,000, and an area of 16,000 square miles. Its rivers are, the Rhone, Garonne, Aude, Tarn, Allier, and Gordan. In its soil Languedoc is highly favored, and it exports large quantities of wine and brandy. Corn cultivated by frequent irrigation, vines, olives, and mulberries variegates the interior, and fisheries and salt works occupy the inhabitants of its coasts.

In the north-east, or mountainous portion of the province, the climate is cold and the cultivation but very partial. Here, however, it is rich in mines of iron and copper, and in particular spots are found quarries of alabaster. On these mountains are fed vast flocks of sheep, the wool of which, mixed with that imported from Spain, affords materials for the manufactories at Lodeve, Carcassonne, and other towns of this province. Near Cette commences the celebrated canal of Languedoc, begun in the reign of Louis XIV. and which extends from east to west nearly 140 miles, until it reaches the Garonne near Toulouse; effecting a communication by water from the Atlantic to the Mediterranean. The bridges over it are seventy-one in number; the aqueducts which carry it over streams and rivers are fifty-eight, and the sluices 103. A remarkable tunnel in its course is at the hill of Malpas, and is 500 feet in length, and twenty in breadth.

Languedoc was known to the Romans as the *Provincia Narbonensis Prima*: it afterwards fell under the government of the count of Toulouse, until in the thirteenth century, partly by marriage and partly by conquest, it was united to the French crown.

LANGUET (Hubert), a native of Viteaux in Burgundy, born in 1518. He gained great reputation by his learning and virtue. Having read one of Melancthon's works at Bologna, he went to Wittenberg in 1549, where he contracted a strict friendship with him, and embraced the Protestant religion. In 1565 he was one of the first counsellors of Augustus elector of Saxony, who employed him in several important affairs and negotiations. He was afterwards admitted to the confidence of William prince of Orange; and died at Antwerp, on the 30th of September 1581. Many of his letters in Latin to Sir P. Sidney, and Augustus elector of Saxony, have been repeatedly printed in three volumes. A famous treatise, entitled *Vindiciæ contra Tyrannos*, and other works, are also ascribed to him. His life is written by Philibert de la Mare.

LANGUET (John Baptist Joseph), the celebrated vicar of St. Sulpice at Paris, and a doctor of the Sorbonne, was born at Dijon in 1675. He was received into the Sorbonne in 1698; and attached himself to the community of St. Sulpice, where he continued nearly ten years; and in 1714 succeeded to the vicarage. The regent, duke of Orleans, granted him a lottery, and laid the first stone of a new church for him in 1718; and M. Languet spared neither labor nor expense to render it one of the finest in the world. He was also the founder of the *Maison de l'enfant Jesus*; an establishment for the support of about thirty-five poor ladies of good families, and of above 400 poor women and children of town and country. The order and economy of this house gave cardinal Fleury so high an opinion of Languet, that he offered to make him superintendent-general of all the hospitals in the kingdom, which, however, he declined. No man ever took more pains to procure charitable donations and legacies. He is said, from good authority, to have disbursed nearly 1,000,000 of livres annually to the poor. When there was a general dearth, in 1725, in order to relieve the poor, he sold his household goods, pictures, and furniture, and, when the plague raged at Mar-

seilles, he sent large sums into Provence for the relief of the distressed. M. Languet refused several bishoprics, and even resigned his vicarage in 1748; but continued to preach every Sunday at his own parish church, and to support the Maison de l' enfant Jesus, till his death, which happened in 1750.

LAN'GUID, *adj.*
 LAN'GUIDLY, *adv.*
 LAN'GUIDNESS, *n. s.*
 LAN'GUSH, *v. n. & n. s.*
 LAN'GUSHINGLY, *adv.*
 LAN'GUSHMENT, *n. s.*
 LAN'GUOR,
 LAN'GUOROUS, *adj.*

Lat. *languidus* and *languo*; Fr. and Span. *languir*; Ital. *languire*. Lan- guid is feeble; faint; weak: senses which the adverb and noun follow:

to languish, to grow or become feeble; to pine away; sink; exhibit decline, softness, or tenderness: languor and languishment mean faintness; feebleness; listlessness; laxity; state of decline; dulness: languorous (obsolete), faint; melancholy.

If any man techith othirwise and accordith not to the hoolsum wordis of our lord Iesus Crist, and to that techyng that is bi pitee, he is proud and can nothing, but *languischith* aboute questionous and struyng of wordis. *Wicliffe, 1 Tym. 6.*

The land shall mourn, and every one that dwel- eth therein *languish*. *Hosea iv. 3.*

We and our fathers do *languish* of such diseases. *2 Esdras.*

By that count which lovers books invent,
 The sphere of Cupid forty years contains;
 Which I have wasted in long *languishment*,
 That seemed the longer for my greater pains. *Spenser.*

Well hoped I, and fair beginnings had,
 That he my captive *languor* should redeem. *Id.*
 Dear lady, how shall I declare thy case,
 Whom late I left in *languorous* constraint? *Id.*

Let her *languish*
 A drop of blood a-day; and, being aged,
 Die of this folly. *Shakespeare's Cymbeline.*

What man you knows
 What woman is, yea, what she cannot chuse
 But must be, will his free hours *languish* out
 For assured bondage? *Id.*

For these, these tribunes, in the dust I write
 My heart's deep *languor*, and my soul's sad tears. *Shakespeare.*

What can we expect, but that her *languishings*
 should end in death? *Decay of Piety.*

Alas! my Dorus, thou seest how long and *lan- guishingly* the weeks have past over since our last talking. *Sidney.*

The menstruum worked as *languidly* upon the coral as it did before. *Boyle.*

His sorrows bore him off; and softly laid
 His *languished* limbs upon his homely bed. *Dryden.*

What poems think you soft, and to be read,
 With *languishing* regards, and bending head. *Id.*
 Humility it expresses, by the stooping or bending of the head; *languishment*, when we hang it on one side. *Id.*

I'll hasten to my troops,
 And fire their *languid* souls with Cato's virtue. *Addison.*

Let Leonora consider, that, at the very time in which she *languishes* for the loss of her deceased lover, there are persons just perishing in a ship- wreck. *Id. Spectator.*

Languor and lassitude signifies a faintness, which may arise from want or decay of spirits, through in-

digestion, or too much exercise; or from an additional weight of fluids, from a diminution of secretion by the common discharges. *Quincy.*

Whatever renders the motion of the blood *languid*, disposeth to an acid acrimony; what accelerates the motion of the blood, disposeth to an alkaline acrimony. *Arbuthnot.*

No space can be assigned so vast, but still a larger may be imagined; no motion so swift or *languid*, but a greater velocity or slowness may still be conceived. *Bentley.*

And the blue *languish* of soft Allia's eye. *Pope.*
 Leave such to tune their own dull rhimes, and know

What's roundly smooth, or *languishingly* slow. *Id.*
 To isles of fragrance, lilly-silvered vales,
 Difusing *languor* in the panting gales. *Dunciad.*
 Academical disputation gives vigour and briskness to the mind thus exercised, and relieves the *languor* of private study and meditation.

Watts's Improvement of the Mind.
 Then forth he walks,

Beneath the trembling *languish* of her beam,
 With softened soul. *Thomson's Spring.*

A *languid*, leaden iteration reigns,
 And ever must, o'er those whose joys are joys
 Of sight, smell, taste. *Young.*

When by the bed of *languishment* we sit
 (The seat of wisdom! if our choice, not fate),
 Or o'er our dying friends in anguish hang,
 Wipe the cold dew, or stay the sinking head,
 Number their moments, and in every clock
 Start at the voice of an eternity. *Id.*

They become, by degrees, fastidious in their choice of pleasure, *languid* in the enjoyment yet miserable under the want of it. *Paley.*

All love, half *languor*, and half fire,
 Like saints that at the stake expire,
 And lift their raptured looks on high,
 As though it were a joy to die. *Byron.*

LANJANG, or LANTCHANG, the capital city of Laos, situated on the river Mecon. See LAOS. It is said to be a magnificent place; the palace of the sovereign itself resembling a city, while those of the grandees are proportionably large. The ordinary dwellings, however, are mere huts. Long. 101° 38' E., lat. 18° 30' N.

LANIARD. See LANYARD.

LAN'IFICE, *n. s.* } Lat. *lanificium* and
 LAN'IGEROUS, *adj.* } *laniger*. Woollen article: bearing wool.

The moth breedeth upon cloth and other *lanifices*, especially if they be laid up dankish and wet. *Bacon.*

LANISTA, in antiquity, is sometimes used to signify an executioner; but more frequently for a master gladiator, who taught the use of arms, and educated slaves, or children that had been exposed in that art. See GLADIATOR.

LANIUS, the shrike, or butcher-bird, in ornithology, a genus belonging to the order of accipitres, the characters of which are:—the beak is somewhat straight, with a tooth on each side towards the apex, and naked at the base; and the tongue is lacerated. There are above fifty species, besides many varieties.

L. albus, the white panyan shrike, is about double the size of a lark. Its bill is black: the head, neck, back, belly, and shoulders, are white: the rest of the wings and tail black; and across the greater quills there is a white

band; the legs are black. It inhabits the isle of Panay.

L. Antiquanus, the Antiquan shrike, or pie-griesche d' Antigue of Sonnerat, is about the size of a lark. Its bill is large and black; the upper mandible very long, and the curvature so excessive, that one would rather take it for a monstrosity than a characteristic of a species; the irides are dusky; the head is black; the back of a yellowish rufous color: the throat and breast are white; the quills, and bastard wing-coverts, black; and the wings reach only to the beginning of the tail, which is very long and wedge-shaped; the two middle feathers are wholly black; the legs are dusky black. It inhabits Panay, one of the Philippines, but principally about Antigua.

L. cœnilescens, the fork-tailed Indian butcher-bird of Edwards, is about seven inches and a half long; the bill is blackish-brown, and bent; the upper mandible beset with black hairs turning forwards: the plumage on the upper parts of the body is a fine black, with a gloss of blue, and in some lights green; the under parts are white: the greater quills and tail are of a ferruginous black; the tail is pretty much forked, and the outer feather spotted with dirty white. It inhabits Bengal, where it is called fingham. It is called also by the Indians the king of the crows, from its pursuing these birds from place to place with a great noise, and pecking them on the back till they escape.

L. collaris, the less butcher-bird, is seven inches and a half long. The irides are hazel; the bill resembles that of the excubitor; the head and lower part of the back are of a fine light gray; across the eyes from the bill runs a broad black stroke; the upper part of the back, and coverts of the wings, are of a bright ferruginous color; the breast, belly, and sides, an elegant blossom-color: the two middle feathers of the tail are longest, and entirely black; the lower part of the other white, and the exterior webs of the outmost feather on each side wholly so. In the female, the stroke across the eyes is of a reddish brown; the head of a dull rust color mixed with gray; the breast, belly, and sides, are of a dirty white, marked with semicircular dusky lines; the tail is of a deep brown; the outward feather on each side excepted, whose exterior webs are white. It is rather larger than the male. This species is pretty common. Latham suspects it to be a bird of passage, having never seen it in winter. It lays six white eggs marked with a rufous brown circle towards the large end. The nest is generally in a hedge or low bush; near which, it is said, no small bird chooses to build: for it not only feeds on insects, but also on the young of other birds in the nest, taking hold of them by the neck, and strangling them, beginning to eat them first at the brain and eyes. It is called in the German language great head, or bull head, from the size of that part. It will feed on sheep's kidneys, if in a cage, eating a whole one every day. When sitting on the nest, the female is soon discovered; for on the approach of any one, she sets up a horrible outcry.

L. Dominicanus, the Dominican shrike, or

pie-griesche Dominiquaine of Sonnerat, is bigger than a sparrow, and rather longer. The bill is grayish, conical, and strong; the base beset with bristles, pointing forwards; the head, neck, breast, back, wings, and tail, are black; the belly and rump white; the wings reach nearly an inch beyond the middle of the tail; the thighs are black. It inhabits the Philippines, and is a bold courageous bird; it flies very quick, and with great rapidity, frequently hovering in the air like a swallow. It is a great enemy to the raven.

L. excubitor, the great cinereous shrike, or greater butcher-bird, is ten inches long. The plumage on the upper parts is of a pale ash color; the under, white: through the eyes there is a black stripe: the scapulars are white: the base of the greater quills white, the rest black: the tail is somewhat cuneiform; the two middle feathers are black; the outermost on each side white; those between are black, with the ends more or less white: the legs are black. Its bill is black, one inch long, and hooked at the end; the upper mandible furnished with a sharp process; the nostrils are oval, covered with black bristles pointing downwards: the muscles that move the bill are very thick and strong; which makes the head very large. Its method of killing its prey and devouring it is extraordinary; small birds it seizes by the throat, and strangles; which is the reason why the Germans call it the wurchangel, or the suffocating angel. It feeds on small birds, young nestlings, beetles, and caterpillars. When it has killed the prey, it fixes them on some thorn, and when thus spitted pulls them to pieces with its bill: on this account the Germans call it thorntraer and thornfreker. When confined in a cage, it often treats its food in the same manner, sticking it against the wires before devouring it. This species inhabits many parts of Europe and North America. The female makes its nest with heath and moss, lining it with wool and gossamer; and lays six eggs, about as big as those of a thrush, of a dull olive-green, spotted at the thickest end with black. In spring and summer it imitates the voices of other birds, to decoy them within reach, that it may destroy them; but, excepting this, the natural note is the same in all seasons. If a trap-fall be baited with a small living bird, it may be taken in winter. It is mute when kept in a cage, though seemingly content. In countries where they are numerous, the husbandmen value them, on account of their destroying rats, mice, and other vermin. They live five or six years, and are often trained up for catching small birds in Russia. In Carolina they are migratory, coming in May, and departing in September, as the few which are met with in England also do.

L. faustus, the white-wreathed shrike, is about the size of a thrush. Its bill is pale: the upper parts of the body are gray: the under ferruginous: from the eyes to the hind there passes a whitish line, composed of numerous white feathers, rendering it truly characteristic: the wings are rounded; the quills brownish, with gray edges, which are crossed with numerous slender brown lines: the tail is rounded, brown, and crossed with numerous bars of darker brown: the

legs are pale. This elegant species inhabits China, where it is known by the name of whomaj. It is often represented on Chinese paper hangings, where the white line encompasses the back of the head like a wreath.

L. infaustus, the rock-shrike, is seven inches and three-quarters long. The bill is about an inch long, and blackish: the head and neck are of a dark ash-color, marked with small rufous spots: the upper part of the back is a dark brown: the lower much paler, inclining to ash, especially towards the tail: the quills and wing-coverts are dusky, with pale margins: the breast and under parts of the body are orange, marked with small spots, some white and others brown: the tail is three inches long: the wings and tail are even. The male differs from the female only in being of a brighter color. This species is met with in many parts of Europe, from Italy to Russia, and is found in Germany, the Alps, the mountains of Tyrol, &c. Buffon says that it perches on a high stone, and, as soon as a marksman appears with his gun, removes to a greater distance, doing the same as often as he approaches; which renders it difficult to be come at. But Brunnich and Linnæus say, that it is a bold bird, attending the traveller while at his meal, on purpose to feed on his scraps. It has an agreeable note, approaching to that of the hedge-sparrow, and will imitate that of other birds. It makes its nest among the holes of the rocks, &c., hiding it with great art; and lays three or four eggs, feeding its young with worms and insects. If taken young it may be brought up as the nightingale.

L. jocosus, the jocose shrike, is seven inches and a half long. The bill is blackish, rather straighter than in most of the genus, and furnished only with a very fine notch near the tip: the crown of the head is black, except some long brown feathers, which form a kind of crest; the sides of the head, throat, and forepart of the neck are white: from each corner of the mouth there is a black line, continued backwards: and under each eye is a small spot of lively red: the upper parts of the body are brown: the under parts dirty white: the vent rose-color: on the lower part of the neck and breast there is a kind of brown band: the quills are brown: the tail is greatly wedge-shaped, and brown, except the four outer feathers on each side, which have white tips: the legs and claws are black. It is a bird of China, and called there kowkai-kon. It feeds upon rice and insects, particularly cockroaches.

L. nengeta, the guiraron of Buffon, is nine or ten inches long. Its bill is dusky, and beset with bristles at the base: the irides are sapphire-colored; and from the angles of the mouth, through the eyes, there runs a black streak: the upper parts of the body are of a dark brownish ash-color: the under parts cinereous white: in the middle of the wing are a few white feathers: the quills and tail are nearly black; and all the feathers of the last, except the two middle ones, are obliquely tipped with white: the legs are of a dark ash-color: the claws black. These birds are found at Surinam and Brasil. They are common likewise at Guiana, where they frequent

watery places, and are found in great numbers together. They are observed, at frequent intervals, to set up a great cry all together; which affords a certain presage to the thirsty traveller, in the immense forests of Guiana, of water being at hand.

L. tyrannus, the tyrant shrike, is about the size of a thrush. Its bill is a blackish-brown, beset with bristles at the base: the irides are brown: the upper parts of the plumage gray-brown: the under white: the breast inclines to ash-color: the head is blackish on the upper part: the base of the feathers on that part in the male is orange, but seldom visible, unless it erects the feathers, when there appears a streak of orange down the middle of the crown: the tail is brown, margined with rufous: the legs and claws are black-brown. The female scarcely differs, except in the head; the base of the crown feathers being yellow instead of orange; the colors are not quite so deep, and it is less in size. It inhabits Virginia. A variety inhabits St. Domingo and Jamaica, called titri, pipiri, or quiquiri, from their cry, which resembles these words. The first is called the black-headed, or great-billed pipiri; the second the yellow-headed pipiri, or pipiri of passage. The first, though numerous are seldom seen but in pairs; the second in great troops, about August, when they are very fat, and killed in great numbers for the table, as their flesh is accounted good eating. All authors agree that these birds are ferocious to a great degree while the hen is sitting, when no bird whatever dare approach their nest: they will attack the most ravenous without reserve, and usually come off conquerors; whence by some they are called king birds. Another variety, the Carolina tyrant of Catesby, is little, if at all, different from the preceding, in regard to specific character. But, he says, it makes its nest rather exposed, on trees and bushes, frequently on the sassafras; whereas the pipiri makes use of the hole of a tree, for the sake of concealing it. In Carolina it is a bird of passage, coming in spring, and making one nest annually in June; and, after bringing up its young, retiring in autumn. These birds frequent also the red cedars; are seldom found in woods, and often found in hedge-rows and fences of fields, and for the most part within 200 yards of each other. They do not molest their own species; but the moment a crow, or even an eagle, appears, all within reach join forces, and attack him in all parts of his body at once, never desisting till they have driven him off.

LANK, *adj.* } Sax. blanc, læniȝ; Belg.

LANK'NESS, *n. s.* } *lenk* and *lenche*, of Lat. *longus*. Thin; slender; languid; hence not plump; not filled out; flaccid.

The commons hast thou racked; the clergy's bags
Are lank and lean with thy extortions. *Shakspeare*.

Name not Winterface, whose skin's slack,

Lank, as an unthrif's purse. *Denne*.

He, piteous of her woes, reared her lank head,
And gave her to his daughters to imbath
In nectared labors strewed with asphodil. *Milton*.

We let down into a receiver a great bladder well
tied at the neck, but very lank, as not containing
above a pint of air, but capable of containing ten
times as much. *Boyle*.

Moist earth produces corn and grass, but both
Too rank and too luxuriant in their growth,
Let not my land so large a promise boast,
Lest the *lank* ears in length of stem be lost.

Dryden.

Now, now my bearded harvest gilds the plain,
Thus dreams the wretch, and vainly thus dreams on,
Till his *lank* purse declares his money gone. *Id.*

Meagre and *lank* with fasting grown,
And nothing left but skin and bone;
hey just kept life and soul together. *Swift.*

Upon

Her right hand—her *lank*, bird-like right-hand—
stood

A goblet, bubbling o'er with blood; and on
Her left, another, filled with—what I saw not,
But turned from it and her. *Byron.*

LANNES (John), marshal, duke of Montebello, grand cordon of the legion of honor, &c., was born in 1769 at Lectoure, in the department of Gers. He studied at the college there, but his father's misfortunes interrupted his education, and he was apprenticed to a dyer. He entered the army in 1792, and his zeal and intelligence gained him rapid promotion: in 1795 he had obtained the rank of chief of brigade. Displaced on the charge of incapacity, by the agent of the convention, Aubry, Lannes became a volunteer in the army of Italy; and for his conduct at the battle of Millesimo, in April 1796, was made colonel of the twenty-fifth regiment. At the passage of the Po, the bridge of Lodi, and especially at the battle of Bassano, he was distinguished; and, after the assault of Pavia, was promoted to be a general of brigade. Lannes was shortly after sent to Rome to arrange the conditions of peace with the pope. He returned to Paris in October 1797, and accompanied Buonaparte to Egypt, with whom also he returned, and was rewarded by him with a sabre of honor at the battle of Marengo. In 1801 he went as plenipotentiary to Lisbon. In May 1804 he was made a marshal and subsequently duke of Montebello. In 1805 he contributed to the victory of Austerlitz, on which occasion he commanded the right wing of the French, and in the Prussian campaign in 1807, signalised himself at Jena, Eylau, and Friedland. He then served in Spain, at the battle of Tudela; and, the siege of Saragossa. At length he lost his life by a wound which he received at the battle of Essling, in March 1809, and died nine days after that engagement.

LANSDOWN, an extensive plain of England, in the county of Somerset. A battle was fought on this plain between the royal army of Charles I. under the marquis of Hertford, and the parliamentary army under Sir William Waller, in the year 1643. The former kept the field of battle, but their loss, especially in officers, was very considerable. A monument was erected on the spot, by lord Lansdown, grandson of Sir Bevil Grandville, who fell on that occasion. The plain, which is four miles north of Bath, is now enclosed.

LANSINBURGH, a town of New York, capital of Rensselaer county, seated on the east side of the Hudson, opposite the south branch of the Mohawk; 175 miles north of New York,

and 270 N. N. E. of Philadelphia. Long. 73° 34' W., lat. 42° 46' N.

LANSQUENET, or LANSQUINET, the name of a game at cards of French origin. It may be played at by any number of people, though a single pack of cards is used during the deal. The dealer, who possesses an advantage, shuffles the cards, and, after they have been cut by another of the party, deals out two cards on his left hand, turning them up, then one for himself, and a fourth that he places on the table for the company, who is called the *rejouissance*. On this card any, or all of the company, the dealer excepted, may put their money, which the dealer is compelled to answer. The dealer continues turning the cards upwards, one by one, till two of a sort come up, that is to say, two aces, two deuces, &c., which, to prevent mistakes, or their being considered as single cards, he places on each side of his own card; and as often as two, three, or the fourth sort of a card come up, he invariably places, as before mentioned, on each side of his own card. The company has a right to take and put money upon any single card, unless the dealer's card should happen to be double, which is often the case, by his card being the same as one of the two hand-cards, which he first dealt out on his left hand: thus he continues dealing till he brings either their cards or his own. Whilst the dealer's own card remains undrawn, he wins: and whichever card is turned up first, loses. If he deals out the two cards on his left hand, which are styled the hand cards, before his own, he is entitled to deal again. This advantage amounts to no more than his being exempted from losing, when he turns up a similar card to his own, immediately after he has turned up one for himself. Lansquenet is often played without the *rejouissance*, the dealer giving every one of the party a card to put their money upon. It is also often played by dealing only two cards, one for the company and the other for the dealer. A limitation is generally fixed for the sum to be placed upon any card or number of cards, either in gold or silver, beyond which the dealer is not obliged to answer.

LANTANA, or Indian sage, in botany, a genus of the angiosperma order, and didynamia class of plants; natural order fortieth, personatæ: CAL. indistinctly quadridentated; the stigma as it were broken and turned back like a hoof; the fruit is a plum with a bilocular kernel. There are fifteen species, consisting of shrubby exotics from Africa and America for the greenhouse or stove; growing to the height of a yard or two, and adorned with oblong, oval, and roundish simple leaves, with monopetalous, tubular, quadripartite flowers of different colors. They may be propagated either by seeds or cuttings.

1. *L. camara*, or wild sage, is remarkable for the beauty of its flowers; which are yellow, tinged with red. It grows wild among bushes.

2. *L. involucrata*, or sea-side sage, has small ash-colored leaves and a most agreeable smell. It grows near the sea. Both these species are natives of the West Indies. Their leaves, particularly those of the sea-side sage, are used by the blacks in tea for colds, rheums, and weakness of the stomach.

LAN'TERN, *n. s.* } Fr. *lanterne*; Ital. *lanterna*;
 LAN'TERN-JAW, } Span. and Port. *lanterna*;
 LAN'TERN-MAKER. } Lat. *laterna* (*à lateo*, be-
 cause the light lies hid within it); written, corruptly, lantern and lenthorn. A case for exhibiting or concealing a light: lantern-jaws, such as if a candle were burning in the mouth might transmit the light; or as would serve for a lantern.

No man lightnith a *lanterne*: hilih it with a vessel or putteth it under a bed, but on a candlestick that men that entren seen light.

Wicliffe, Luk 8.

God shall be my hope,

My stay, my guide, my *lanthorn* to my feet.

Shakespeare.

Thou art our admiral; thou bearest the *lanthorn* in the poop, but 'tis in the nose of thee; thou art the knight of the burning lamp. *Id. Henry IV.*

A candle lasteth longer in a *lanthorn* than at large.

Bacon.

Amongst the excellent acts of that king, one hath the pre-eminence, the erection and institution of a society, which we call Solomon's house; the noblest foundation that ever was, and the *lanthorn* of this kingdom. *Bacon's Atlantis.*

O thievish night,

Why should'st thou, but for some felonious end,

In thy dark *lanthorn* thus close up the stars

That nature hung in heaven, and filled their lamps

With everlasting oil? *Milton.*

Judge what a ridiculous thing it were, that the continued shadow of the earth should be broken by sudden miraculous eruptions of light, to prevent the art of the *lantern-maker*. *More's Div. Dial.*

Our ideas succeed one another in our minds, not much unlike the images in the inside of a *lanthorn*, turned round by the heat of a candle. *Locke.*

Caprea, where the *lanthorn* fixed on high
 Shines like a moon through the benighted sky,
 While by its beams the wary sailor steers. *Addison.*

Being very lucky in a pair of long *lanthorn-jaws*, he wrung his face into a hideous grimace.

Id. Spectator.

Vice is like a dark *lanthorn*, which turns its bright side only to him that bears it, but looks black and dismal in another's hand. *Government of the Tongue.*

Some men's wit is like a dark *lantern*, which serves their own turn, and guides them their own way. *Pope.*

The ignis fatuus or Jack a *lantern*, so frequently alluded to by poets, is supposed to originate from the inflammable air, or hydrogene, given up from morasses. *Darwin.*

A LANTERN, or LANTHORN, is usually made of white iron, with sashes of glass or horn, to transmit the light.

LANTERN, on ship-board, a well known machine, of which there are many in a ship, to direct the course of other ships in a fleet or convoy; such are the poop and top lanterns. A patent was granted to Mr. Brine, of Portsea, for the invention of a lantern, intended as a signal lantern and for top-lights; which is shaped like the middle frustum of two cones, abutting upon one common base, and conveys its light from six equidistant magnifying points as represented at *aaa*, in the diagram. Its properties are as follow:

No weather will affect its light; no attendance is necessary after it is once lighted; it will burn twelve successive hours; is not liable to entangle in the rigging; and its light always preserves its central position, let the lantern be in any direction whatever. It is not likely to want repair; the expense of burning is very trivial; and it is fully adequate to all the purposes of night signal. Several of our ships of war are furnished with these lanterns.

LANTERN, in architecture, is a little dome raised over the roof of a building to give light, and serve as a crowning to the fabric.

LANTERN, DARK, has only one opening which may be closed up when the light is to be entirely hid, or opened when there is occasion for the light to discover some object.

LANTERN FLY, in zoology. See ENTOMOLOGY.

LANTERN, MAGIC. See DIOPTRICS.

LANTERNS, FEAST OF, in China, is a celebrated festival held from the 13th to the 16th day of the first month; so called from the immense number of lanterns hung out of the houses and streets. On this day are exposed lanterns of all prices, whereof some are said to cost 2000 crowns. They are adorned with gilding, sculpture, painting, japanning, &c., and their size is extravagant; some being from twenty-five to thirty feet diameter, representing halls and chambers. Two or three such machines together would make handsome houses; so that in China they are able to eat, lodge, receive visits, hold balls, and act plays in a lantern. To illuminate them, they light up in them an incredible number of torches or lamps, which at a distance have a beautiful effect. In these they exhibit various kinds of shows, to divert the people. Besides these enormous lanterns, there are multitudes of smaller ones, each about four feet high, and one and a half broad. See CHINA.

LANTURELAS. In 1771 the marquis de Croismare, a man of wit and a friend of madame de la Ferté Imbault, founded a burlesque order of this name, of which he appointed that lady the grand mistress, he himself being the grand master. This institution gave rise to a great many lively productions, and attracted so much attention, that Catharine II. was accustomed to advise all the Russian nobles who visited Paris to become Lanturelas, an honor which was also sought by sovereign princes.

LANYARDS, in nautical affairs, a short piece of cord or line fastened to several machines in a ship, and serving to secure them in a particular place, or to manage them more conveniently. Such are the lanyards of the gun-ports, the lanyard of the buoy, the lanyard of the cat-hook, &c. The principal lanyards used in a ship, however, are those employed to extend the shrouds and stays of the masts by their communication with the dead eyes, so as to form a sort of mechanical power resembling that of a tackle. These lanyards are fixed in the dead-eyes, as follows: one end of the lanyard is thrust through one of the holes of the upper dead-eye, and then knotted, to prevent it from drawing out: the other is then passed through one of the hoies in the lower dead-eye, whence, returning upwards

it is inserted through the second hole in the upper dead-eye, and next through the second in the lower dead eye, and finally through the third holes, in both dead-eyes. The end of the lanyard, being then directed upwards from the lowest dead-eye, is stretched as stiff as possible by the application of tackles; and, that the several parts of it may slide with more facility through the holes in the dead-eyes, it is well smeared with hog's lard or tallow, so that the strain is immediately communicated to all the turns at once.

LAOCOON, in fabulous history, a son of Priam and Hecuba, or, according to others, of Antenor or Capys. Being priest of Apollo and Neptune, he was commissioned by the Trojans to offer a bullock to Neptune to render him propitious. During the sacrifice two enormous serpents issued from the sea, and attacked Laocoon's two sons, who stood next to the altar. The father immediately attempted to defend his sons; but the serpents falling upon him enfolded him in their complicated wreaths, and he died in the greatest agonies. This punishment was said to have been inflicted upon him for dissuading the Trojans from bringing into the city the fatal wooden horse which the Greeks had consecrated to Minerva; as also for his impiety in hurling a javelin against the sides of the horse as it entered within the walls. But, according to Hyginus, he was thus punished for his marriage against the consent of Apollo, or, according to others, for polluting the temple, by his commerce with his wife Antiope, before the statue of the god.

LAOCOON, in the history of the arts, is a celebrated monument of Greek sculpture, executed in marble by Polydorus, Athenodorus, and Agesander, the three famous artists of Rhodes. This relic of antiquity was found in Rome in the ruins of the palace of Titus, in the beginning of the sixteenth century, under the pontificate of Julius II., and was afterwards deposited in the Farnese palace. Laocoon is represented with his two sons, with two hideous serpents clinging round his body, gnawing it, and injecting their poison. Virgil has given us the following beautiful description of the fact:—

Ille agmine certo
 Laocoonta petunt, et primum parva duorum
 Corpora natorum serpens amplexus uterque
 Implicat, et miseris morsu depascitur artus.
 Post, ipsum auxilio subeuntem ac tela ferentem
 Corripuit, spirisque ligant ingentibus: et jam
 Bis medium amplexi, bis collo squamea circum
 Terga dati, superant capite et cervicibus altis.
 Ille simul manibus tendit divellere nodos,
 Perfusus sanie vittas atroque veneno:
 Clamores simul horrendos ad sidera tollit.

Æneid, lib. ii. ver. 212, &c.

This statue exhibits the most astonishing dignity and tranquillity of mind in the midst of the most excruciating torments. Pliny says of it, that it is 'opus omnibus, pictureæ et statuariæ artis, præferendum.' 'Laocoon,' Dr. Gillies observes, 'may be regarded as the triumph of Grecian sculpture; since bodily pain, the grossest and most ungovernable of all our passions, and that pain united with anguish and torture of mind,

are yet expressed with such propriety and dignity, as afford lessons of fortitude superior to any taught in the schools of philosophy. The intolerable agony of suffering nature is represented in the lower part, and particularly in the extremities of the body; but the manly breast struggles against calamity. The contention is still more plainly perceived in his furrowed forehead; and his languishing paternal eye demands assistance, less for himself than for his miserable children, who look up to him for help.'

LAODAMIA, in fabulous history, a daughter of Acastus and Astydamia, who married Protesilaus, the son of Iphiclus, king of a part of Thessaly. The departure of her husband for the Trojan war, and his death from the hand of Hector, was the source of great grief to her. To keep alive the memory of her husband, she ordered a wooden statue to be made, and regularly placed in her bed. This was seen by one of her servants, who informed Iphiclus that his daughter's bed was daily defiled by an unknown stranger. Iphiclus watched his daughter, and, when he found that the intelligence was false, he ordered the wooden image to be burned, in hopes of dissipating his daughter's grief. He did not succeed. Laodamia threw herself into the flames with the image, and perished. This circumstance has given occasion to the fabulous tradition that Protesilaus was restored to life, and to Laodamia for three hours, and that, when he was obliged to return to the infernal regions, he persuaded his wife to accompany him.

LAODICÆA, or **LAODICEA**, in ancient geography, a town of Phrygia, on the Lycus, first called Diospolis, then Rhoas. It was built by Antiochus Theos, and named, after his consort, Laodice. It increased in importance towards the time of Augustus, after having suffered in a siege from Mithridates. Hiero, who adorned it with many offerings, left the people more than 2000 talents. After that benefactor followed Zeno, the rhetorician; and his son Polemo, the renowned sophist, who flourished at Smyrna; but was buried here by the Syrian gate, near which were the sepulchres or coffins of his ancestors. This city was often damaged by earthquakes, and restored by its own opulence or by the munificence of the Roman emperors. About 1097 it was possessed by the Turks, and submitted to Ducas, general of the emperor Alexius. In 1120 the Turks sacked some of the cities of Phrygia by the Mæander, but were defeated by the emperor John Comnenus, who took Laodiceæ, and repaired the walls. About 1161 it was again fortified. Many of the inhabitants were then killed, with their bishop, or carried into captivity by the Turks. In 1190 the German emperor Frederic Barbarossa, going by Laodicea with his army toward Syria on a crusade, was received so kindly that he prayed on his knees for the prosperity of the people. About 1196 this region, with Caria, was dreadfully ravaged by the Turks. The sultan, on the invasion of the Tartars, in 1255, gave Laodicea to the Romans; but they were unable to defend it, and it soon returned to the Turks. It is now totally ruined and deserted. Several remains of its an-

cient grandeur are, however, still to be seen; particularly the ruins of two theatres and an amphitheatre. The memory of this place is consecrated in Scripture, being one of the seven churches to which St. John in the Apocalypse addresses himself.

LAODICEA, or **LAODICEÆ**, in ancient geography, a town of Syria, on the sea-coast. According to Strabo, it was a town of Seleucus, extremely well built, with a commodious harbour. The country about it yielded great quantities of wine. The city was named from Laodice, mother of Seleucus, the founder of it. It is now called Ladikieh.

LAODICE, in fabulous history, a daughter of Priam and Hecuba, who became enamoured of Acamas, son of Theseus, when he came with Diomedes from the Greeks to Troy, with an embassy to demand the restoration of Helen. She had a son by Acamas, whom she called Munitus. She afterwards married Helicaon, son of Antenor, and Telephus, king of Mysia. Some call her Astyoche. When Troy was sacked by the Greeks, Laodice threw herself down from the top of a tower, and was killed.—Homer. Also the name of the mother of Seleucus. Nine months before she brought forth, she dreamt that Apollo had introduced himself into her bed, and had presented her with a precious stone, on which was engraved the figure of an anchor, commanding her to deliver it to her son as soon as born. This dream appeared the more wonderful, when in the morning she discovered in her bed a ring answering the same description. Not only the son that she brought forth called Seleucus, but also all his successors of the house of the Seleuidæ, had the mark of an anchor upon their thigh.—*Justin*.

LAO-KIUN, or **LAO-TSE**, a Chinese philosopher, who founded the sect of Tao-sse. He was born A. A. C. 603, and died in an advanced age, leaving to his disciples a book called Tao-te, being a collection of 5000 sentences. His morality resembles that of Epicurus. See **CHINESE**.

LAOMEDON, in fabulous history, king of Troy, was son of Ilius, and married Strymo, called by some Placia, or Leucippe, by whom he had Podarces, better known by the name of Priam and Hesione. He built the walls of Troy, and was assisted by Apollo and Neptune, whom Jupiter had banished from heaven, and condemned to be subservient to the will of Laomedon for one year. When the walls were finished, Laomedon refused to reward the gods for their labors: and soon after his territories were laid waste by Neptune, and his subjects were visited by a pestilence from Apollo. Sacrifices were offered to the offended divinities; but the calamities of the Trojans increased, and nothing could appease the gods, according to the words of the oracle, but annually to expose to a sea-monster a Trojan virgin. Whenever the monster appeared, the marriageable maidens were assembled, and the lot decided which of them was doomed to death for the good of her country. When this calamity had continued for five or six years, the lot fell upon Hesione, Laomedon's daughter. The king was unwilling to part with a daughter whom he loved with uncommon tenderness, but his refusal would irritate more

strongly the wrath of the gods. In the midst of his fear and hesitation, Hercules came and offered to deliver the Trojans from this public calamity, if Laomedon would promise to reward him with a number of fine horses. The king consented; but, when the monster was destroyed, he refused to fulfil his engagements, and therefore Hercules besieged Troy and took it. Laomedon was put to death after a reign of nineteen years; his daughter Hesione was given in marriage to Telamon, one of Hercules's attendants; and Priam was ransomed by the Trojans, and placed upon his father's throne. According to Hyginus, the wrath of Neptune and Apollo was kindled against Laomedon, because he refused to offer on their altars, as a sacrifice, all the first-born of his cattle, according to a vow he had made.

LAON, a decayed town of France, on the Ardou, the capital of the department of the Aisne. The cathedral, built in 1115, is a fine building, with five lofty turrets: there are also a number of other churches and chapels; two hospitals, and a theatre. Its chief trade is in the wine of the vicinity, but there are some small manufactures of linen, stockings, hats, and nails. There was a sharp action here between the Prussians and the French in March, 1814. It is twenty miles north-east of Soissons, and seventy-seven north-east of Paris.

LAOS, a central kingdom of India, beyond the Ganges, extending from about 12° to 18° N. lat. To the north it is said to be bounded by Lactho and Tunquin; to the south by Cambodia; to the east by Tunquin and Cochin China; and to the west by Siam. The exact limits of this province, however, have never been ascertained, and little is known respecting it except through the report of the earlier Portuguese and Dutch writers, or from the accounts of Tunquinese and Chinese merchants, communicated to the missionaries. According to these, the province is thinly inhabited, and poorly cultivated, the largest collected population being at the village of Hanniah, and amounting only to about 4000 or 5000 persons, many of them strangers, settled there for the purposes of traffic. The inhabitants speak a dialect of the Siamese called the Laos language, and are said to have many books among them, especially translations from the Bali: the Siamese denominate the two principal tribes Chong-mai and Lanchang. According to Mr. Hamilton, some of the most celebrated founders of the Budhoo religion have left remarkable vestiges of themselves here, and devotees pretend to trace the sacred steps of Pra-ku-kuson, Pra-kon-na-kon, Pra-putha-wat-sop, and Pra-sa-mutta-ko-dum. The people are warlike: great believers in magic; and under but a nominal subjection to Cochin China. Elephants, superior gum lac, rubies, topazes, pearls, and fancy gold articles; ivory, musk, bamboos, wax, and cotton, are the exports of this region; the imports fire-arms and gunpowder, silk stuffs, oil, salt, and salt fish.

LAP, <i>n. s.</i> , <i>v. a.</i> & <i>v. n.</i>	} Sax. læppe; Goth. Teut. Belg. and Dan. <i>lap</i> ; Swed. <i>lapp</i> (any thing broad and loose). See FLAP. The loose part of a garment; or
LAP'DOG,	
LAP'FUL,	
LAP'PET,	
LAP'WING,	
LAP'WORK.	

that which may be folded up at pleasure; the clothes spread over the knees, more generally applied to this part of female dress: to lap is to wrap or twist round, or to involve; also to be spread or turned over any thing: a lapdog is a dog nursed in the lap: lappet, a loose part of the head-dress: lapwing, a bird remarkable for its long wings: lapwork is work the parts of which are wrapped interchangeably over each other.

One found a wild vine, and gathered thereof wild gourds his *lapful*, and shred them into the pot of pottage. 2 Kings.

And had this sergeant that he prively
Shulde this childe ful softe wind and wrappe,
With alle circumstances tendrely,
And carry it in a cofre or in a *lappe*. Chaucer.

It feeds each living plant with liquid sap,
And fills with flowers fair Flora's painted *lap*.
Spenser.

Upon a day, as love lay sweetly slumbering
All in his mother's *lap*,
A gentle bee, with his loud trumpet murmuring,
About him flew by *lap*. Id.

As through the flowering forest rash she fled,
In her rude hairs sweet flowers themselves did *lap*,
And flourishing fresh leaves and blossoms did en-
wrap. Id.

I'll make my haven in a lady's *lap*. Shakspeare.
Our stirring

Can from the *lap* of Egypt's widow pluck
The ne'er-lust-wearied Antony. Id.

The Thane of Cawder 'gan a dismal conflict,
Till that Bellona's bridegroom, *lapt* in proof,
Confronted him. Id. Macbeth.

When we both lay in the field,
Frozen almost to death, how he did *lap* me,
Even in his garments, and did give himself,
All thin and naked, to the numb cold night.
Shakspeare.

Ah! but I think him better than I say,
And yet, would herein others' eyes were worse:
Far from her nest the *lapwing* cries away;
My heart brays for him, though my tongue do curse.
Id.

Heaven's almighty sire
Melts on the bosom of his love, and pours
Himself into her *lap* in fruitful showers.
Crashaw.

Ever against eating cares,
Lap me in soft Lydian airs. Milton.

Men expect that religion should cost them no
pains, and that happiness should drop into their
laps. Tillotson.

He struggles into breath, and cries for aid;
Then, helpless, in his mother's *lap* is laid.
He creeps, he walks, and issuing into man,
Grudges their life from whence his own began:
Retchless of laws, affects to rule alone,
Anxious to reign, and restless on the throne.
Dryden.

Indulgent fortune does her care employ,
And, smiling, broods upon the naked boy;
Her garments spreads, and *laps* him in the folds,
And covers with her wings from nightly colds. Id.

These, if the laws did that exchange afford,
Would save their *lap-dog* sooner than their lord.
Id.

And how in fields the *lapwing* Tereus reigns,
The warbling nightingale in woods complains.
Id.

Will four per cent. increase the number of lenders?
if it will not, then all the plenty of money these
conjurers bestow upon us, is but like the gold and

silver which old women believe other conjurers
bestow by whole *lapfuls* on poor credulous girls.

Locke.

He hath a long tail, which, as he descends from a
tree, he *laps* round about the boughs, to keep himself
from falling.

Grew's Museum.

A basket made of porcupine quills: the ground is
a pack-thread caul woven, into which, by the Indian
women, are wrought, by a kind of *lap-work*, the quills
of porcupines, not split, but of the young ones intire;
mixed with white and black in even and indented
waves. Id.

The upper wings are opacous; at their hinder ends,
where they *lap* over, transparent, like the wing of a
fly. Grew.

One of them made his court to the *lap-dog*, to im-
prove his interest with the lady. Collier.

About the paper whose two halves were painted
with red and blue, and which was stiff like thin
pasteboard, I *lapped* several times a slender thread of
very black silk. Newton.

Lap-dogs give themselves the rousing shake;

And sleepless lovers just at twelve awake. Pope.

If a joint of meat falls on the ground, take it up
gently, wipe it with the *lap* of your coat, and then
put it into the dish.

Swift's Directions to a Footman.

Here was the repository of all the wise contentions
for power between the nobles and commons, *lapt*
up safely in the bosom of a Nero and a Caligula.

Swift.

They may be *lappers* of linen, and bailiffs of the
manor. Id.

How naturally do you apply your hands to each
other's *lappets*, and ruffles, and mantuas! Id.

Get thee to Lamia's *lap*! Byron.

LAP, *v. n.* & *v. a.* Sax. *lappian*; Belg. *lappen*;
Dan. *labe*; Fr. *lamper*, *luper*; Arm. *lapu*; Lat.
lambo (to lick). To feed by licking or lapping
up; to lick up.

For all the rest

They'll take suggestion, as a cat *laps* milk.

Shakspeare.

Upon a bull

Two horrid lions ramp, and seized, and tugged off,
bellowing still,

Both men and dogs came; yet they tore the hide,
and *lapt* their fill. Chapman's Iliad.

The dogs by the river Nilus' side being thirsty,
lap hastily as they run along the shore. Digby.

They had soups served up in broad dishes, and so
the fox fell to *lapping* himself, and bade his guest
heartily welcome. L'Estrange.

The tongue serves not only for tasting, but for
mastication and deglutition, in man, by licking; in
the dog and cat kind by *lapping*. Ray on Creation.

LAPATHUS, LAPETHUS, or LEPITUS, in
ancient geography, a town on the north side of
Cyprus, with a port or station for ships, and a
cognominal river. It was built by a colony of
Phœnicians, according to Scylax; by Belus,
king of Tyre, according to Alexander Ephesius.
According to Strabo, it was built by a colony of
Spartans; and one of the nine kings resided
here, the last of whom was Pisistratus, who
commanded the fleet of Alexander the Great. It
had a temple dedicated to Venus. It is now
called Lapitha.

LAPHYSTIUM, a mountain of Bœotia, where
Jupiter had a temple, and where Ahamas was
about to sacrifice Phryxus and Helle, when Ju-
piter saved them by sending a ram with a golden
fleece.

LAPICIDE, *n. s.*LAPIDARY, *n. s. & adj.*LAPIDATE, *v. a.*LAPIDATION, *n. s.*LAPIDEUS, *adj.*LAPIDESCENCE, *n. s.*LAPIDESCENT, *adj.*LAPIDIFIC, *adj.*LAPIDIFICATION, *n. s.*LAPIDIST, *n. s.*

a concretion of the nature of stone: lapidescent, turning or growing to stone: lapidific, forming stones.

Induration or *lapidification* of substances more soft is another degree of condensation. *Bacon.*

Of lapis ceratites, or cornu fossile, in subterraneous cavities, there are many to be found in Germany, which are but the *lapidescencies*, and petrefactive mutations, of hard bodies. *Broune.*

As a cock was turning up a dunghill, he espied a diamond: Well, says he, this sparkling foolery now to a *lapidary* would have been the making of him; but, as to any use of mine, a barley-corn had been worth forty on't. *L'Estrange.*

There might fall down into the *lapideous* matter, before it was concreted into a stone, some small toad, which might remain there imprisoned, till the matter about it were condensed. *Ray.*

Hardness, wherein some stones exceed all other bodies, being exalted to that degree, that art in vain endeavours to counterfeit it, the factitious stones of chymists in imitation being easily detected by an ordinary *lapidist*. *Id.*

The atoms of the *lapidific*, as well as saline principle, being regular, do concur in producing regular stones. *Grew.*

Of all the many sorts of the gem kind reckoned up by the *lapidaries*, there are not above three or four that are original. *Woodward's Natural History.*

Blank verse makes some approach to that which is called the *lapidary* style; has neither the easiness of prose, nor the melody of numbers, and therefore tires by long continuance. *Johnson.*

The *lapidaries* employ a considerable quantity of diamond in powder, which they use with steel instruments to divide pebbles and precious stones. *Parke's Chemical Catechism.*

LAPIDARY is chiefly used for an artificer, who cuts precious stones. Dealers in precious stones are rather styled jewellers. The art of cutting these is of great antiquity. Various machines are employed in cutting precious stones, according to their quality. The diamond, which is extremely hard, is cut on a wheel of soft steel, turned by a mill, with diamond-dust, tempered with olive oil, which also serves to polish it. The oriental ruby, sapphire, and topaz, are cut on a copper wheel, with diamond-dust tempered with olive oil, and are polished on another copper wheel with tripoli and water. Hyacinths, emeralds, amethysts, garnets, agates, and other stones, not of inferior hardness, are cut on a leaden wheel with smalt and water, and polished on a tin wheel with tripoli. The turquois, girasol, and opal, are cut and polished on a wooden wheel with tripoli. Lapidary is also used for a virtuoso skilled in the nature, kinds, &c., of precious stones.

LAPIDARY STYLE denotes the style proper for monumental or other inscriptions. This is a

Lat. *lapicida, lapido*, from *lapis*, a stone. A stone-cutter: lapidary, and lapidist, a dealer in stones. For lapidary, as an adjective, see below. Lapidate, to stone, and to kill by stoning: lapideous, stony: lapidescent,

kind of medium between prose and verse; the jejune and the brilliant are here equally to be avoided. Cicero has prescribed the rules of it: *Accedat oportet oratio varia, vehemens, plena spiritus. Omnium sententiarum gravitate, omnium verborum ponderibus, est utendum.*

LAPIS, in Roman antiquity, a geographical measure denoting a mile; because miles were distinguished by erecting a stone at the end of each; from the number marked on which the length of way from Rome might be known. The device is by Plutarch ascribed to Caius Gracchus. This was more accurately executed by Augustus, who erected a gilt pillar in the forum, at which all the public ways of Italy, distinguished by stones, were terminated. The same thing was done in the Roman provinces. Hence the phrases *tertius lapis, centesimus lapis, &c.*, for three, 100, &c., miles; and sometimes the ordinal number without lapis, as *ad duodecimum, &c.*, at the twelfth mile distant.

LAPIS AQUILÆ. See ÆTITES.

LAPIS ASSIUS, in the natural history of the ancients, the name of a stone, called also sarcophagus, from its power of consuming flesh. See SARCOFAGUS.

LAPIS LAZULI. The lapis lazuli, or azure stone, is a copper ore, very compact and hard, so as to take a high polish, and is worked into a great variety of toys. It is found in detached lumps, of an elegant blue color, variegated with clouds of white, and veins of a shining gold color: to it the painters are indebted for their beautiful ultra-marine color, which is only a calcination of lapis lazuli. It is a combination of 46 silica, 28 lime, 14.5 alumina, 3 oxide of iron, 6.5 sulphate of lime, and 2 water, according to Klaproth. This blue does not suffer any alteration by the contact of air. The finest specimens come from China, Persia, and Great Bucharria. It was formerly exhibited as a purgative and vomit, and given in epilepsy.

LAPIS MUTABILIS, the changeable stone; called also hydrophanes, from Gr. *υδωρ*, water, and *φανω*, to shine, on account of its transparency in water. There are three of these stones in the British Museum, the largest of them about the size of a cherry-stone, but of an oval form. It is opaque and colored like a common yellow pea; it may be scratched, though not without difficulty, by a common knife, notwithstanding which it seems to leave a mark upon glass. It does not ferment with nitrous acid. When it has lain some hours in water, it becomes transparent, and of a yellow amber color. The change begins soon after the immersion, and at one end in form of a little spot; but in a small one of the same kind the transparency begins round the edges. By degrees the spot increases, until the whole stone becomes uniformly clear throughout: when out of the water it loses its transparency, first at one end, and then gradually over the remainder, until the whole has become opaque; which change happens in less time than it takes to become transparent. This change is not entirely peculiar to the hydrophanes. Bergman informs us, that some steatites produce the same effect; and M. Magellan, that the crust of chalcedonies

and agates frequently produce the same appearance. Messrs. Bruckman and Veltheim were the first who particularly enquired into the nature of this stone, and investigated its properties. Their account is as follows:—As soon as the stone is put into water, it exhales a musty smell, several air bubbles arise, and it becomes gradually transparent. Some of the stones become colorless as soon as they are thoroughly transparent; others have a more or less deep yellow color; some acquire a beautiful ruby color; and others again a fine color of mother-of-pearl, or of a bluish opal. Whatever be the color of the liquor in which the hydrophanes is immersed, it gains only its usual degree of transparency with the color peculiar to it. When we look at it in its moist state, we perceive a luminous point varying its situation as the position of the eye is altered. This luminous point is not, according to Mr. Bruckman, the immediate image of the sun, but a reflection of that image refracted in the substance of the stone itself, a phenomenon which probably gave rise to its name of *oculus mundi*. Bruckman left a piece of this stone, weighing thirty-five grains, seven hours in water, the space requisite to make it perfectly transparent; and in that time he found that it had gained three grains in weight. The hydrophanes becomes much sooner transparent when put into hot water; and the same happens if it be dipped in a very dilute acid, or rather a very dilute solution of alkali. When dipped in oil of vitriol, it becomes very quickly transparent, and will continue so on account of the strong attraction of that acid for moisture, which takes as much from the atmosphere as is necessary to keep the stone transparent; but its opacity will return if it be dipped in an alkaline liquor and afterwards dried.

LAPIS NEPHRITICUS, or *jaspachates*, the jade stone, a genus of siliceous earths. It gives fire with steel, and is semitransparent like flint. It does not harden in the fire, but melts in the focus of a burning glass into a transparent green glass with some bubbles. A species brought from the river of the Amazons in America, called *circumcision stone*, melts easier in the focus into a brown opaque glass far less hard than the stone itself. The jade-stone is unctuous to the touch; whence Kirwan thinks that it contains a portion of argillaceous earth, or rather magnesia. The specific gravity is from 2.970 to 3.389; the texture granular, with a greasy look, but exceedingly hard, being superior in this respect even to quartz. It is infusible in the fire, nor can it be dissolved in acids without a particular management; though M. Saussure extracted iron from it. Sometimes it is met with of a whitish milky color from China; but mostly of a deep or pale green from America. The common *lapis nephriticus* is of a gray, yellowish, or olive color. It is so named from its supposed quality of giving ease in nephritic pains, when applied externally to the loins. It may be distinguished from all other stones by its hardness, *sempellucidity*, and specific gravity.

LAPIS THYTES, in the ancient *materia medica*, a. indurated clay approaching to the nature of a stone. It was found in Egypt, and used in

diseases of the eyes. Chambers reckons it a species of *morocolithus*; and says it is found at Gosselar, in Saxony. It is of a smooth and regular texture; very heavy; the surface shining; and the color a pale green.

LAPITHA, a village of Cyprus: according to the *abbe Mariti*, the longest and most extensive in the island. It was anciently called *Lapithus*. Besides the advantage of a fine situation, it furnishes the best productions in the country; and, though Cyprus is in general not very abundant in fruits, *Lapitha* seems a favored spot in this respect, and may be called the garden of the island.

LAPITHUS, in fabulous history, a son of Apollo, by *Stilbe*, and brother to *Centaurus*.

LAPLACE (*Pierre Simon, marquis de*), a celebrated mathematician and astronomer, born 1749, was the son of a farmer in Normandy; went to Paris, where he soon distinguished himself by his knowledge of analysis and the highest branches of geometry. Laplace was chosen a member of the academy of sciences, one of the forty of the French academy, and member of the *bureau des longitudes*. In 1796 appeared his famous work, *Exposition du Système du Monde*. Laplace did not remain a stranger to politics, and, after the 18th of Brumaire, was made minister of the interior by the first consul. In a report to the senate in 1805, Laplace proved the necessity of restoring the Gregorian calendar, and abolishing that of the republic. His principal works are his *Traité de Mécanique céleste*; his *Théorie du Mouvement des Planètes*; *Essai sur les Probabilités*; and *Théorie analytique des Probabilités*. In 1814, Laplace voted for the abdication of Napoleon, and the king created him a peer, with the title of marquis. During the hundred days, he did not appear at the Tuileries. He died March 5, 1827. His *Mécanique céleste* has been translated, with a Commentary by doctor Bowditch, of Boston.

LAPLAND, a northern region of Europe, now possessed by Sweden and Russia, is bounded on the north by the Arctic Ocean, on the east by the White Sea, on the south by Sweden, and on the west by Norway and the Atlantic. Taking 64° of N. lat. for its southern limit, its breadth from north to south will be 500 miles, and its length, from Cape Orlov, on the White Sea, to the entrance of *Saltersfiord* on the Atlantic, about 700 miles. The superficial extent is computed at 150,000 square miles, of which the total population is supposed not to exceed 60,000.

Lapland was divided formerly into three parts, Russian, Swedish, and Danish or Norwegian Lapland; the first, the most dreary division of the whole, consisted of three districts, *Bellamoreskoi*, *Maremanskoi*, and *Terskoi*; but these are now all included in the general appellation of the circle of Kola, which includes also *Kemilapmark* (or the tract to the east of the river *Torneo*), which was ceded by Sweden in 1809. Swedish Lapland, sometimes called *Lapland Proper*, is subdivided into the six provinces of *Torneo-Lapmark*, *Lulea-Lapmark*, *Pitheal-Lapmark*, *Umea-Lapmark*, *Jamtland-Lapmark*, and

Asele-Lapmark; belonging at the present time to the lehn or government of Umea. Norwegian Lapland, or Finmark, now also belongs to Sweden. It is the most northerly of all.

Lapland is a huge congeries of stupendous rocks and mountains, interspersed with many pleasant valleys, watered by a vast number of rivulets that run into the rivers and lakes, which discharge their waters into the gulf of Bothnia. The natives consider it a terrestrial paradise; and indeed nothing could be more enchanting than its vast prospects of mountains, hills, forests, lakes, rivers, &c., if the climate were but moderate; though even here in summer, roses are seen blowing wild on the banks of the lakes and rivers. All the intervals between the mountains are not, however, thus engrossed; great part of the country being covered with brown dusky forests of fir and pine trees; often skirted by wide extended morasses, the stagnating waters of which in summer produce myriads of mischievous insects. The country, however, abounds with excellent springs, and is remarkable for some surprising cataracts, in which the water tumbles over frightful precipices, and dashes among the rocks with amazing impetuosity.

The mountains between the latitude of 67° and 69° rise to an elevation of upwards of 6000 feet: 2700 being the general line of perpetual congelation. The Torneo, Kemi, Lulea, and Pitea are its principal rivers. We may add the Yana and Altan to the north-east. Some of these rivers traverse considerable lakes; but all are in winter comparatively small streams. The principal lakes are the Great Uma, the Great Windel, the Oreavan, the Stor-avan, the Great Lula; the lakes of Kartom, Kali, Torneo, and Enara. Some of these extend forty or fifty leagues in length, and contain a great number of islands: Stor-avan is said to contain upwards of 300; and Enara, in latitude 69°, still more. The maritime districts are of uniform and rather mild temperature; the winters are not severe for the latitude, but the summers are raw and foggy: in the interior the winter is intensely cold, and the heat of summer in the valleys very acceptable and important for a few months. At North Cape, lat. 71° 11' 30", the mean annual temperature is 6° higher than at Enontekis in the interior, lat. 68° 30'. Yet, at the latter, the thermometer rises in July to 64°, while at the Cape it seldom reaches 50°. The summer may be said to begin in both regions in May, and end in September. Secondary rock formations are unknown here in the north; and the primitive (gneiss) is much more common than the transition. The quantity of iron ore in some places is immense. It generally lies in large strata, one of which, at Junossuvando, in lat. 67° 30', is from fifteen to twenty feet thick in one mine, and from forty-two to forty-five in another. Another at Lussavara is 170 feet, and one at Suappavara, in lat. 67° 38', 190 feet in thickness; while at Kirunavara, lat. 67° 58', about ten miles from Juckasjaerfoi, the bed has been actually dug to a depth of 800 feet. The ore, almost always magnetic, is sent to the smelting forge of Torne-ofors, a distance of forty or fifty miles, on small sledges drawn by rein-deer.

at an expense for which the produce scarcely pays. The iron has the defect also, it is said, of being brittle when cold, and of requiring a mixture with more tenacious metal. Copper mines are also found in Lapland; and lead, zinc, and arsenic are not uncommon. At Suappavara gold has been found. None of these mineral stores are, however, profitably managed: fuel being greatly wanted, particularly in the neighbourhood of the iron mines. In some districts the Swedes have tilled and manured pieces of ground that bear plentiful crops of wheat, barley, and rye. There is also great plenty of berries; such as black currants, the Norwegian mulberry, growing upon a creeping plant, and much esteemed as an antiscorbutic; rasp-berries, cran-berries, juniper-berries, and bilberries. The tops of the mountains are so much exposed to intense cold, and tempests of snow and hail, that no tree will grow near the summit; but, in parts more sheltered, fine woods of birch, pine and fir, grow naturally as if they had been planted by art in rows at regular distances, and without any undergrowth. Some parts of Lapland produce the service tree, the willow, the poplar, the elder, and the cornel. The angelica is greatly esteemed by the natives who use it in their food. The acetosa, or sorrel, also grows in great plenty, besides various kinds of grass, heath, fern, and moss, enumerated by Linnæus in his *Flora Lapponica*. But the vegetable which is the most abundant, and of most extensive use, is the lichen *rangiferus*. The Laplanders boil it in broth as a cordial and restorative. They likewise use one species of it as a soft and wholesome bed for their new-born children. See LICHEN. The quantity of any grain raised here is insignificant: the most remarkable agriculturalists are the Finnish colonists, who have raised corn at Alten, in 70° lat., considered the farthest limit of its growth.

Lapland, as well as Norway, is infested with a great number of grey wolves and bears, with whom the inhabitants wage perpetual war. The most honorable exploit among the Laplanders is to kill a bear; and the heroes adorn their caps with a small plate of lead or pewter for every bear they have slain. The country abounds also with elks, beavers, and otters, which live here unmolested, and find plenty of fish for their subsistence. The forests furnish haunts to a great number of beautiful martens and squirrels; as well as to the zibeling or sable, whose skin is extremely valuable; together with ermines, weasels, hares, &c. Large black cats often attend the Laplanders in hunting, and curs are also trained to the game. But the most remarkable animal of Lapland is the rein-deer. See CERVUS. These animals, so useful in various respects to the natives, are kept at no expense. In summer they feed upon grasses and alpine plants; in winter upon the lichen *rangiferus*, or rein-deer lichen, and its varieties, which are so abundant as in many parts almost totally to cover the ground for several miles. This animal is in fact the chief wealth of the natives. The poorer classes have from fifty to 200 of them; the middle classes from 300 to 700; and the affluent often above 1000 head. The females are driven

home morning and evening to be milked; and the herds, when numerous, are unremittingly attended both by men and dogs day and night. Men and boys, wives and daughters, according to Dr. Clarke, take the post of watching by turns, twice or thrice a-day; and each goes out with several dogs, which belong in property to that individual whose commands alone they will obey. The former guards in the mean while return with their hungry dogs. Hence, it not infrequently happens that eight or twelve dogs march over the heads of the persons sleeping in the gamme in quest of comfortable spots for themselves to rest in; and, when the Laplander returns wearied to his gamme, he always willingly shares his reindeer flesh and his soup with his dog, which he would hardly do with either father or mother.

Here are found small breeds of oxen, cows, dogs, sheep, and goats: the last two uncommonly prolific. Birds are also numerous, and Lapland contains many peculiar to itself. The most remarkable is the bird of 'a hundred tongues,' or Swedish mocking bird, extolled for the beauty of its plumage and variety of its tones. The seas abound in fish, and the rivers and lakes in excellent salmon, pike, perch, trout, eels, and char. Against the insects, which in summer prove a great annoyance, the inhabitants defend themselves by keeping their tents and huts as full of smoke as possible. The Laplanders are low in stature, ill shaped; have remarkably large heads, and harsh features. They are, however, strong, hardy, and robust; can bear incredible fatigue; and the stoutest Norwegian, it is said, is not able to bend the bow of a Laplander. The women have a delicate and florid complexion. Both sexes are simple, honest, hospitable, and timorous; but their timidity, respects war alone; for to many other species of dangers they expose themselves with surprising intrepidity, whether in ascending and descending mountains and precipices with their snow shoes and in sledges, or in venturing amidst whirlpools and cataracts in slender boats made of thin fir boards, fastened together with thongs of leather, sinews of wild beasts, or tough and flexible twigs. These boats are of different sizes, from two to six yards in length, managed with oars, and caulked with moss so tight as to keep out the water.

The Laplanders are partly settled, and partly roving: the latter live in tents made with coarse cloth: the former are fixed in small villages near the lakes, and chiefly follow fishing. They build their cottages in the shape of a cone, by placing a circle of large trees or poles aslant in the earth, and close to each other, so that their tops meet, and form a small vent for the issue of the smoke: the ground within they cover with branches of trees. Their domestic utensils are nothing but a few boxes, baskets, some bowls of birch wood, with pots and kettles made of brass or copper, more frequently of stone, and spoons made of the horn of the reindeer. The beds, or more properly the sleeping places, are on logs laid on each side of the fire-place. In spring their food consists principally of the eggs of water fowls, which are extremely plentiful; in summer and autumn, of the birds themselves; and in winter, of the milk and flesh of the reindeer and dried

fish. Not long since they had no bread, but used the inner rind of the pine-tree dried and ground, and dried fish reduced to powder. They make confections and decoctions of berries, angelica, and sorrel, which they use as preservatives against the scurvy.

The Laplander enjoys almost uninterrupted health by temperance and exercise; but is very subject to sore eyes, and even to blindness, from the smoke of his hut, and the fires to which they are almost continually exposed. Some waste away in consumptions; others are afflicted with rheumatic pains and the scurvy; and a few are subject to vertigo and apoplexy. For the cure of all their internal disorders, they use the decoction of a certain species of moss; and, when this cannot be procured, they boil the stalks of angelica in the milk of the reindeer. To their wounds they apply the turpentine that drops from the fir-tree. When frost-bitten (though this seldom happens), they thrust a hot iron into a cheese made of reindeer's milk, and, with the fat that drops from it, anoint the frozen member, which generally recovers. But they often live to the age of 100 without feeling any disease; and it is not uncommon to see a Laplander in old age hunting, fowling, skating, and performing, with agility, the severest exercises of his youth.

The summer garb of the men consists of a long coat of coarse cloth, reaching down to the middle of the leg, and girded round the waist by a belt or girdle; from which hang a Norway knife, and a pouch containing flints, matches, tobacco, and other necessaries; the girdle itself being decorated with brass rings and chains. Their caps are made of the skin of the northern diver, with the feathers on; and their shoes of the reindeer skin, with the hair outwards. They wear no linen; but the garments of the superior ranks are of a finer cloth; and they delight in various colors, of which red is the most agreeable. In winter they are totally cased up in coats, caps, boots, and gloves, made of reindeer skins. The women's apparel differs very little from that of the men; only their girdles are more ornamented with rings, chains, needle-cases, and toys, that sometimes weigh 20 lbs. In winter, both men and women lie in their furs; in summer they cover themselves entirely with coarse blankets, to defend themselves from the gnats.

The Laplanders make surprising excursions upon the snow in their hunting expeditions. They provide themselves with a pair of skates, or snow shoes, which are fir boards covered with the rough skin of the reindeer, turned in such a manner that the hair rises against the snow. One of these shoes is usually as long as the person who wears it; the other is about a foot shorter. The feet stand in the middle, and to them the shoes are fastened by thongs or withes. The Laplander, thus equipped, wields a long pole in his hand, near the end of which there is a round ball of wood, to prevent its piercing too deep in the snow; and with this he stops himself occasionally. By means of these accoutrements he will travel at the rate of sixty miles a-day, without being fatigued; ascending steep mountains, and sliding down

again with amazing swiftness. The Laplander is also provided with a carriage drawn by the rein-deer, in which he journeys with still greater rapidity. The sledge, called pulka, is made in the form of a small boat, with a convex bottom, that it may slide the more easily over the snow: the prow is sharp and pointed; but the sledge is flat behind. The traveller is swathed in this carriage like an infant in a cradle, with a stick in his hand to steer the vessel, and disengage it from pieces of rock or stumps of trees that may chance to encounter it in the route. He must also balance the sledge with his body, otherwise he will be in danger of being overturned. The traces, by which this carriage is fastened to rein-deer, are fixed to a collar about the animal's neck, and run down over the breast between the fore and hind legs, to be connected with the prow of the sledge: the reins, managed by the traveller, are tied to the horns; and the trappings are furnished with little bells, the sound of which is agreeable to the animal. With this draught at his tail, the rein-deer, if pressed, will travel ten or twelve Swedish miles (seventy or eighty-four English miles) in a day; but by such hard driving he is generally destroyed. It, however, frequently happens, that he will persevere in his journey without intermission, and without refreshment, except occasionally moistening his mouth with the snow. Before he sets out, the Laplander whispers in his ear the way he is to go, and the place at which he is to halt, firmly persuaded that the beast understands his meaning. In the beginning of winter, the Laplanders mark the most frequented roads, by strewing them with fir boughs; which being frequently covered with new snow, and alternately beaten by the carriage, consolidates them into a kind of causeway; which is the harder if the surface has felt a partial thaw, and been crusted by a subsequent frost. It requires great caution to follow these tracts; for, if the carriage deviates to the right or left, the traveller is plunged into an abyss of snow. In less frequented parts, where there is no such beaten road, the Laplander directs his course by certain marks made on the trees. Hunting being the chief occupation of the Laplanders, they pursue it in winter by the tracks of the bear and other beasts upon the snow, and often run down their prey. They catch ermines in traps, and sometimes with dogs. Squirrels, martens, and sables, they kill with blunt darts, to avoid wounding the skin. Foxes and beavers are slain with sharp-pointed darts and arrows; in shooting which, they are accounted some of the best marksmen in the world. The larger beasts, such as bears, wolves, elks, and wild rein-deer, they either kill with fire-arms purchased in Sweden or Norway, or take in snares and pits. Their game laws are observed with great punctuality. The beast becomes the property of the man in whose snare or pit he is caught; and he who discovers a bear's den has the exclusive privilege of hunting him to death.

'The Lapps marry very early,' says Dr. Clarke, 'the men seldom later than the age of eighteen, or the women later than fifteen: but the Finns and the Swedes are prohibited from such

early marriages. Very little previous ceremony is used upon these occasions; an interchange of presents, and copious libations of brandy, are all that take place before the solemnisation and consummation. The gifts consist of rings, spoons, cups of silver, or silver gilt, and rix-dollars in specie, according to the wealth of the parties. The richest make also other gifts; such as silver girdles, and silk or cotton handkerchiefs for the neck. When banns have been published in the church, which is very commonly the case, the marriage immediately succeeds their publication; and the nuptials are consummated in one of the log-houses near the church, in which the Lapps deposit their stores for the annual fair. Upon these occasions, the bridegroom treats his friends with brandy, dried rein-deer flesh cooked with broth, rein-deer cheese, and bread and butter. If he be of a wealthy family, beer is also brewed: or, wanting this, plenty of pima and curds and whey are provided. The luxury of smoking tobacco, so general among the Lapps, is of course largely indulged upon these occasions, and even takes place during the repast. Dancing, being unknown among them, forms no part of the merry-making. After the marriage-feast, a general collection is made in money for the married couple, when the distribution of brandy is renewed, and continued for two or three hours, according as the gifts are more or less liberal. Upon this occasion, gifts of rein-deer are promised to the bridegroom, which he is afterwards to go and demand; but, if he make the visit without carrying brandy to the owner of the rein-deer, the promise is never kept. The dowry of wealthy parents, among the Laplanders, to their children when they marry, consists of from thirty to fifty, and even eighty rein-deer, besides vessels of silver and other utensils.'

This intelligent traveller contends, that the Laplander is clearly of Asiatic origin. 'His features mark him at once as belonging to a distinct and peculiar race of men;—eyes half closed; mouth pinched close, but wide; ears full and large, projecting far from the head; complexion tawny and copper colored; hair dark, straight, and lank, none growing near the nape of the neck: add to this a small and stunted stature, with singular flexibility of limbs, easily falling into any posture, like the Oriental nations; looks regarding objects askance; hands constantly occupied in the beginning of conversation with filling a short tobacco-pipe; the head being turned over one shoulder to the person addressing, instead of fronting the speaker;—such is the characteristic portrait of one and every Laplander. The moment we saw any of them, we could immediately recognise those traits by which the whole tribe are distinguished from the other inhabitants of Europe, and in which they differ from the other natives of the land in which they live. Even the Finlander, who is supposed to be a sort of cousin-german, differs, in many respects, from the Laplander. The hair of the Finlander is of a fair color; either pale yellow, flaxen, or almost white: and the honest Swede, of nobler race than either, is a giant, in whose person and manner there is nothing of the cat-like flexibility of the Asiatic, nor any resem-

blance to that orient complexion, and form of the countenance which assimilates the Laplander to the natives of Japan.

LAPLANDERS, the natives of Lapland. See **LAPLAND**. They call themselves Salme-Same, and Samen-Almatjeh. Their country they denominate Same Landa, or Same-aednam; the Swedes style it Lapland or Lappmarken, and the inhabitants Lappar. The natives of those districts under the dominion of Sweden are Lutherans; while many of those who are subject to Russia are still Pagans. The Laplanders, before their conversion to Christianity, which was not till lately introduced amongst them, possessed no books or MSS., though they knew many traditional histories and songs of ancient heroes and princes who once reigned over them; but involved in great uncertainty, and mixed with the most fabulous accounts. They have now a translation of the New Testament in their language; and many of the natives are able to read and write.

LAPLYSIA, the sea-hare, a genus of marine insects belonging to the order of vermes mollusca. The body is covered with membranes reflected. It has a shield-like membrane on the back, a lateral pore on the right side, the anus on the extremity of the back, with four feelers resembling ears. It grows to two inches and a half long, and to more than an inch in diameter; its body approaches to an oval figure, and is soft, punctuated, of a kind of gelatinous substance, and of a pale lead color; from the larger extremity there arise four oblong and thick protuberances; these are the tentacula; two of them stand nearly erect, two are thrown backward. It is common about our shores, especially off Anglesea. It causes, by its poisonous juice, the hair to fall off the hands of those that touch it; and is so extremely fetid as to occasion sickness.

LAPSANA, nipplewort, a genus of the polygama æqualis order, and syngenesia class of plants: natural order forty-ninth, compositæ: receptacle naked: cal. calyculated, with all the inferior scales canaliculated, or finely channelled. There are species, which grow commonly by the sides of ditches. The young leaves of the common kind, called dock-cresses, have the taste of radishes, and are eaten raw at Constantinople as a salad. In some parts of England the people boil them as greens, but they have a bitter and disagreeable taste.

LAPSE, *n. s. & v. n.* Fr. *laps*; Ital. *lapso*; Lat. *lapsus*. A fall; slip; flow; smooth course: metaphorically, apostasy; error; venial fault; mistake: transfer of legal right, by the party who possessed it having failed to exercise it in due time: to lapse is, to slip; fall; fail; glide away; lose the proper time or opportunity; fall legally from a negligent party to another; fall from truth or moral purity.

I have ever verified my friends,
Of whom he's chief, with all the size that verity
Would without lapsing suffer. *Shakspeare.*

To lapse in fulness,
Is sorer than to lie for need; and falsehood
Is worse in kings than beggars. *Id. Cymbeline.*

Myself stood out:

For which if I be lapsed in this place,
I shall pay dear. *Id. Twelfth Night.*
A sprout of that fig-tree which was to hide the
nakedness of lapsed Adam. *Decay of Piety.*
All public forms suppose it the most principal,
universal, and daily requisite to the lapsing state of
human corruption. *Id.*

Round I saw
Hill, dale, and shady woods, and sunny plains,
And liquid lapse of murmuring streams. *Milton.*
Once more I will renew
His lapsed powers, though forfeit, and intralld
By sin to foul exorbitant desires. *Id.*
Notions of the mind are preserved in the memory,
notwithstanding lapse of time. *Hale.*

As God did by the incomprehensible perfection of
his nature from thence foresee our lapse and misery,
so he did as soon determine our remedy and means
of salvation. *Barrow.*

The weakness of human understanding all will
confess; yet the confidence of most practically dis-
owns it; and it is easier to persuade them of it from
other lapses than their own. *Glanville.*

These are petty errors and minor lapses, not con-
siderably injurious unto truth.

Browne's Vulgar Errors.
These were looked on as lapsed persons, and great
severities of penance were prescribed them, as ap-
pears by the canons of Ancyra. *Stillingfleet.*

Homer, in his characters of Vulcan and Thersites,
has lapsed into the burlesque character, and departed
from that serious air essential to an epick poem.

Addison.
In a presentation to a vacant church, a layman
ought to present within four months, and a clergy-
man within six, otherwise a devolution, or lapse of
right, happens. *Aytiffe.*

As an appeal may be deserted by the appellant's
lapsing the term of law, so it may also be deserted by
a lapse of the term of a judge. *Id.*

If the archbishop shall not fill it up within six
months ensuing, it lapses to the king. *Id.*

This scripture may be usefully applied as a caution
to guard against those lapses and failings to which
our infirmities daily expose us. *Rogers.*

It hath been my constant business to examine
whether I could find the smallest lapse in stile or
propriety through my whole collection, that I might
send it abroad as the most finished piece. *Swift.*

This disposition to shorten our words, by retrench-
ing the vowels, is nothing else but a tendency to
lapse into the barbarity of those northern nations
from whom we are descended, and whose languages
labour all under the same defect. *Id.*

Let there be no wilful perversion of another's
meaning; no sudden seizure of a lapsed syllable to
play upon it. *Watts.*

Wrapt in the thought of immortality,
Wrapt in the single, the triumphant thought,
Long life might lapse, age unperceived come on,
And find the soul unsated with her theme. *Young.*

Those faults which we cannot conceal from our
own notice, are considered, however frequent, not
as habitual corruptions or settled practices, but as
casual failures, and single lapses. *Johnson.*

Concerning lapsed Christians, Saint Paul gave in-
struction, that, 'if any man be overtaken in a fault,
ye which are spiritual restore such a man in the
spirit of meekness, considering lest ye also be
tempted.' *Paley.*

LAPSE, in ecclesiastical law, an omission of a
patron to present a clerk to a benefice within six

months of its being void; in which case the benefice is said to be in lapse, or lapsed, and the right of presentation devolved to the ordinary. If the ordinary neglect to present, during the same time, the right of presentation accrues to the metropolitan, and to the king by neglect of the metropolitan. This right of lapse was first established in the reign of Henry II., when the bishops first began to exercise universally the right of institution to churches: and therefore, when there is no right of institution, there is no right of lapse; so that no donative can lapse to the ordinary, unless it has been augmented by the king's bounty; but no right of lapse can accrue, when the original presentation is in the crown. In case the benefice becomes void by death or cession, through plurality of benefices, the patron is bound to take notice of the vacancy at his own peril: but in case of a vacancy by resignation or canonical deprivation, or if a clerk presented be refused for insufficiency, these being matters of which the bishop alone is presumed to be cognizant, here the law requires him to give notice thereof to the patron, otherwise he can take no advantage by way of lapse; neither shall any lapse accrue thereby to the metropolitan or the king. If the bishop refuse or neglect to examine and admit the patron's clerk without good reason assigned, or notice given, he shall have no title to present by lapse: and if the right of presentation be litigious or contested, and an action be brought against the bishop to try the title, no lapse shall occur till the question of right be decided. If the bishop be both patron and ordinary, he shall not have double time allowed him to collate in: and if the bishop doth not collate his own clerk immediately to the living, and the patron presents, though after the six months are lapsed, yet the presentation is good, and the bishop is bound to institute the patron's clerk. If the bishop suffer the presentation to lapse to the metropolitan, the patron also has the same advantage if he present before the archbishop has filled up the benefice: yet the ordinary cannot, after lapse to the metropolitan, collate his own clerk to the prejudice of the archbishop. But if the presentation lapses to the king, the patron shall never recover his right, till the king has satisfied his turn by presentation; for nullum tempus occurrit regi.

LAPWING, in ornithology. See TRINGA.

LAQUEARIUS, a kind of athleta among the ancients, who in one hand held a laqueus, i. e. a sort of snare, wherewith to embarrass and entangle his antagonist, and in the other a poniard to stab him.

LAQUEUS, in surgery, a ligature so contrived, that, when stretched by any weight, it draws up close. Its use is to extend broken or disjointed bones, to keep them in their places while they are set, and to bind the parts closely together.

LAR, the capital of Laristan, a province of Persia, once a most magnificent city, but now in ruins, stands in an extensive plain of palm-trees. There are still found some fine public buildings, however, and the houses are said to be commodious and well furnished: the bazaar is the noblest structure of the kind in Persia. The khau resides in a mansion in the middle of the

city, surrounded with a strong wall, and flanked with towers. The castle is a ruin situated on the summit of a hill behind the town. It is celebrated for its manufacture of fire-arms and cotton cloth. Population 12,000. Long. 42° 30' E., lat. 27° 30' N.

LARA, or LARANDA, in fabulous history, one of the Naiades, daughter of the river Almon in Latium, famed for her beauty and loquacity. She revealed to Juno the amours of Jupiter with Juturna, for which he cut out her tongue, and ordered Mercury to conduct her to Tartarus. But Mercury falling in love with her by the way, she became the mother of twins, who were afterwards worshipped by the Romans, under the name of Lares. *Ovid. Fast.*

LARARIUM was a chapel which the Romans frequently had in their houses for the household gods, called lares. Spartian says, that Alexander the son of Mammea kept in his lararium the figure of our Saviour, together with his other idols.

LARBOARD, Fr. *babord*; in all the Goth. dialects *bak board*. A name given by seamen to the left side of a ship, when looking forward from the stern, wherein the right and left are apparently determined by the analogy of a ship's position, on the water, to that of a fish.—Falconer. Opposed to the starboard.

Or when Ulysses on the *larboard* shunned Charybdis, and by the other whirlpool steered.

Milton.

Tack to the *larboard*, and stand off to sea, Veer starboard sea and land.

Dryden.

Suppose the ships were in the order of sailing with the wind on their *larboard* side, then the starboard or lee line of the order is to have to.

Falconer.

LARCENY, *n. s.* Fr. *larcin*; Lat. *latrocinium*. Theft. See below.

Those laws would be very unjust, that should chastise murder and petty *larceny* with the same punishment.

Spectator.

LARCENY, or SIMPLE LARCENY, when it is the stealing of goods above the value of 1s. is called grand larceny; when of goods to that value, or under, is petit larceny: offences which are considerably distinguished in their punishment, but not otherwise. See THEFT.

LARCENY, MIXED, or COMPOUND LARCENY, is such as has all the properties of the former (see THEFT); but is accompanied with either one or both of the aggravations of taking from one's house or person. See LAW.

LARCH, *n. s.* Lat. *larix*. A tree.

Some botanical critics tell us, the poets have not rightly followed the traditions of antiquity, in metamorphosing the sisters of Phaeton into poplars, who ought to have been turned into *larch* trees; for that it is this kind of tree which sheds a gum, and is commonly found on the banks of the Po.

Addison on Italy.

LARCHER (Peter Henry), a modern French classical scholar, was born at Dijon, October 12th 1726. Related to Bossuet, it was the intention of his father to bring him up to the magistracy. But he was attached too ardently to the belles lettres, and became an intense student of Greek. He gave the public as his first translation the *Electra* of Euripides; then from the English Martinus Scriblerus, and Sir John

Pringle's Observations on the Diseases of the Army. This was followed by a translation of the Greek romance of Chereas and Callirhoe. In 1767 he published remarks, under the title of a Supplement, on Voltaire's Philosophy of History; to which the latter replied in his *Defense de mon Oncle*. Larcher rejoined in a *Reponse à la Defense de mon Oncle*. He now undertook his celebrated translation of Herodotus; and in 1774 published a *Memoire sur Venus*, to which the Academy of Inscriptions awarded their prize. He followed with a translation of Xenophon, which led to his being elected into the academy. During the revolution he lived very privately, and was subsequently decreed a sum of 3000 livres, and received into the Institute. He was also appointed professor of Greek in the Imperial university, but was too aged for service. Larcher died December 22d, 1812, universally regretted and esteemed. In 1814 his library was sold by auction.

LARD, *n. s. & v. a.* } French, *lard, larder* ;
 LAR'DER, *n. s.* } Span. and Ital. *lardo* ;
 Lat. *lardum*, 'vel *laridum* ; qu. *largè aridum* ?—
 Ainsworth. Bacon; the fat of bacon; grease, or fat generally: to lard is to fatten; make like bacon; hence, metaphorically, to flatter; bedaub with praise; mix with something else by way of real or pretended improvement. A larder is an apartment where bacon or other meat is cured or salted; hence, where meat or victuals are kept.

This similitude is not borrowed of the *larder* house, but out of the school house. *Ascham.*

Now Falstaff sweats to death,
 And *lards* the lean earth as he walks along. *Shakspeare.*

Brave soldier, doth he lie
Larding the plain? *Id. Henry V.*

An exact command,
Larded with many several sorts of reasons. *Shakspeare.*

Flesh is ill kept in a room that is not cool; whereas in a cool and wet *larder* it will keep longer. *Bacon.*
 So may thy pastures with their flowery feasts,
 As suddenly as *lard*, fat thy lean beasts. *Donne.*

A certain monk saw some souls roasted upon spits like pigs, and some devils basting them with scalding *lard*: but a while after they were carried to a cool place, and so proved purgatory. *Bp. Taylor.*

Who, forsooth, is the brave spark, the complete gentleman, the man of conversation and address, but he that hath the skill and confidence to *lard* every sentence with an oath or a curse? *Barrow.*

The sacrifice they sped;
 Chopped off their nervous thighs, and next prepared
 To 'involve the lean in cauls, and mend with *lard*. *Dryden.*

The *larded* thighs on loaded altars laid, *Id.*

He *lards* with flourishes his long harangue,
 'Tis fine, sayest thou. *Id.*

So have I seen in *larder* dark,
 Of veal a lucid loin. *Dorset.*

No man *lards* salt *pork* with orange peel,
 Or garnishes his lamb with spitch-cock eel. *King.*

Old age,
 Morose, perverse in humour, diffident
 The more he still abounds, the less content:
 His *larder* and his kitchen too observes,
 And now, lest he should want hereafter, starves. *Id.*

Swearing by heaven; the poets think this nothing, their plays are so much *larded* with it.

Collier's View of the Stage.

LARDNER (Nathaniel), an eminent English dissenting divine, born at Hawkhurst in Kent, June 6th 1684. After a grammatical education, he was sent first to a dissenting academy in London, under the care of the Rev. Dr. Joshua Oldfield; and thence, in his sixteenth year, to prosecute his studies at Utrecht, under the celebrated professors D'Uries, Gravius, and Burman. Here he remained above three years, and then removed for a short space to Leyden. In 1703 he returned to England, continuing at his father's house to prepare himself by close and diligent study for the sacred profession which he had in view. In 1709 he first entered the pulpit, and a few years after was received into lady Treby's family, as domestic chaplain and tutor to her son. He continued in this situation till her ladyship's death in 1721. This event threw him into circumstances of some perplexity, having preached to several congregations during his residence with lady Treby, without the approbation or choice of any one congregation; a circumstance which Dr. Kippis considers reproachful to the Dissenters. Mr. Lardner, it seems, was very deficient in elocution and delivery. He was engaged, however, with some of his dissenting brethren in preaching a Tuesday evening lecture at the Old Jewry. In February 1727 he published, in two volumes 8vo., the first part of *The Credibility of the Gospel History*, or the Facts occasionally mentioned in the New Testament confirmed by passages of ancient authors, who were contemporary with our Saviour or his apostles, or lived near their time. An appendix was subjoined, relating to the time of Herod's death. 'It is scarcely necessary to say,' observes Dr. Kippis, 'how well his work was received by the learned world. Not only was it highly approved by the Protestant Dissenters, with whom the author was more immediately connected, but by the clergy in general of the established church; and its reputation gradually extended into foreign countries. These two, with the subsequent fifteen, volumes octavo, and the four thin quartos, entitled *Jewish and Heathen Testimonies*, occupied him, with the interruption arising from some smaller productions, during the space of forty-three years. The Supplement to the *Credibility* was published separately, under the title of the *History of the Gospels and Epistles*. But applauded as Dr. Lardner's works were, he received little recompense for them. Some of the latter volumes of the *Credibility* were published at a loss; and at last he sold the copyright and all the remaining copies to the booksellers, for the trifling sum of £150. He just lived to see the last volume, the fourth of the *Testimonies*, published. This was in 1767. He was seized with a decline in the summer following; and was carried off in a few days at Hawkhurst, the place of his nativity, where he had a small paternal estate, in the eighty-fifth year of his age.

LARENTINALIA, in antiquity, a feast held among the Romans on the 23rd day of December, but ordered by Augustus to be observed twice

a year; by some supposed to have been in honor of the Lares, but by others, with more probability, in honor of Acca Laurentia; and to have been the same with the Laentalia.

LARES, among the ancients, derived by Apuleius, in his tract *De Deo Socratis*, from *lar*, *familiaris*; a kind of domestic genii, or divinities, worshipped in houses, and esteemed the guardians and protectors of families. The Lares were distinguished from the Penates; as the former were supposed to preside over house-keeping, the servants in families, and domestic affairs; and the latter were the protectors of the masters of families, their wives and children. Accordingly the Lares were dressed in short succinct habits, to show their readiness to serve; and they held a sort of cornucopia in their hands, as a signal of hospitality. According to Ovid, there were generally two of them, who were sometimes represented with a dog at their feet. Plutarch distinguishes good and evil Lares, as he had before done good and evil Genii. There were also some public, and some private Lares. Apuleius tells us the domestic Lares were no more than the souls of departed persons, who had lived well, and discharged the duties of their station; whereas, those who had done otherwise were vagabonds, wandering about, called Larvæ and Lemures. The Lares were also called Penates, and were worshipped under the figures of little marmosets, or images of wax, silver, or earthen ware. The public Lares were also called Compitales, from *compitum*, a cross way; and Viales, from *via*, a way or public road; as being placed at the meeting of roads and in the high ways, and esteemed the patrons and protectors of travellers. The private Lares took care of particular houses and families: these they also called Præstutes, from *præsto*:

Quod præstant oculis omnia tuta suis. *Ovid. Fast.*

They gave the name Urbani, i. e. Lares of Cities, to those who had cities under their care; and Hostilii to those who were to keep their enemies off. There were also Lares of the country, called Rurales, as appears by several antique inscriptions. The Lares were also 'genial gods, supposed to take care of children from their birth. The ancients differ extremely about the origin of the Lares. Varro and Macrobius say that they were the children of Mania; Ovid makes them the issue of Mercury and the Naiad Lara or Laranda: Apuleius assures us they were the posterity of the Lemures; Nigidius, according to Arnobius, made them sometimes the guardians and protectors of houses, and sometimes the same with the Curetes of Samothracia, whom the Greeks called *Idæi dactyli*. Nor was Varro more consistent in his opinion of these gods: sometimes making them the manes of heroes, and sometimes gods of the air. Titus Tatius, king of the Sabines, was the first who built a temple to the Lares. The chimney and fire-place in the house were particularly consecrated to them. Tertullian tells us the custom of worshipping the Lares arose from this, that they anciently interred their dead in their houses; whence the credulous imagined their souls con-

tinued there also, and proceeded to pay them divine honors. To this it may be added, that the custom being afterwards introduced of burying in the highways, they might hence take occasion to regard them as gods of the highways. The victim offered to the Lares in the public sacrifices was a hog; in private, they offered them swine, incense, a crown of wool, and a little of what was left at the table. They also crowned them with flowers, particularly the violet, myrtle, and rosemary. Their symbol was a dog, which was usually represented by their side, on account of its fidelity and the service it does to man in watching his house. They were sometimes also represented as clothed in a dog's skin. The term Lares, according to Bryant, was formed from *laren*, an ancient word by which the ark was represented: and he supposes that the Lares and Manes were the same domestic deities under different names; and that by these terms the Hetrurians and Latins denoted the *dii arkitæ*, who were no other than their arkite ancestors, or the persons preserved in the *laren* or ark; the genius of which was Isis, the reputed parent of the world. He observes farther, that they are described as dæmons and genii, who once lived on earth, and were gifted with immortality. Arnobius styles them *Lares quosdam genios et functorum animas*; and he says, that, according to Varro, they were the children of Mania. Huetius adds, that Mania had also the name of Laranda; and she is styled the mother of the dæmons. By some she is called Lara, and was supposed to preside over families; and children were offered at her altar in order to procure her favor. In lieu of these they in after times offered the heads of poppies and pods of garlic.

LARGE, *adj. & adv.* } Fr. *large*; Lat. *lar-*
LARGE'LY, *adv.* } *gus*. Wide, or broad;
LARGE'NESS, *n. s.* } big; bulky; exten-
sive; copious; abundant: hence liberal; diffu-
sive; comprehensive: at large, free, or without
restraint; also diffusely, to the full extent.

Let them dwell in the land, and trade therein; for it is large enough for them. *Gen. xxxiv. 21.*

Thou shalt drink of thy sister's cup dead and large. *Ezekiel.*

They which would file away most from the largeness of that offer, do in most sparing terms acknowledge little less. *Hooker.*

Discover more at large what cause that was, For I am ignorant, and cannot guess. *Shakspeare.*

The ample proposition that hope makes,

In all designs begun on earth below,

Falls in the promised largeness. *Id.*

Plant fruit trees in large borders, and set therein fine flowers, but thin and sparingly, lest they deceive the trees. *Bacon.*

If you divide a cane into two, and one speak at the one end, and you lay your ear at the other, it will carry the voice further than in the air at large. *Id.*

Their former large peopling was an effect of the countries impoverishing. *Carew's Survey.*

There he conquered a thousand miles wide and large. *Abbot's Description of the World.*

Knowing best the largeness of my own heart toward my people's good and just contentment.

King Charles.

Skippon gave a large testimony under his hand, that they had carried themselves with great civility.

Clarendon.

They their fill of love, and love's disport,
Took *largely*; of their mutual guilt the seal.

Milton.

Thus incorporeal spirits to smallest forms
Reduced their shapes immense; and were at *large*,
Though without number still.

Milton.

Man as far transcends the beasts in *largeness* of
desire as dignity of nature and employment.

Glanville's Apology.

Shall grief contract the *largeness* of that heart,
In which nor fear nor anger has a part?

Waller.

Charles II. asked me, What could be the reason,
that in mountainous countries the men were com-
monly *larger*, and yet the cattle of all sorts smaller?

Temple.

How he lives and eats:

How *largely* gives; how splendidly he treats.

Dryden.

Nor must Bumastus his old honours lose,
In length and *largeness* like the dugs of cows.

Id.

Great Theron, *large* in limbs, of giant height. *Id.*
If the *largeness* of a man's heart carry him beyond
prudence, we may reckon it illustrious weakness.

L'Estrange.

Warwick, Leicester, and Buckingham, bear a
large-boned sheep of the best shape and deepest staple.

Mortimer.

The children are bred up in their father's way; or
so plentifully provided for, that they are left at *large*.

Sprat.

Your zeal becomes importunate;

I've hitherto permitted it to rave

And talk at *large*; but learn to keep it in,

Lest it should take more freedom than I'll give it.

Addison.

There will be occasion for *largeness* of mind and
agreeableness of temper.

Collier on Friendship.

I might be very *large* upon the importance and advantages
of education, and say a great many things
which have been said before.

Felton on the Classics.

Supposing that the multitude and *largeness* of rivers
ought to continue as great as now; we can easily
prove, that the extent of the ocean could be no less.

Bentley.

The second natural division of power is of such
men who have acquired *large* possessions, and conse-
quently dependencies; or descend from ancestors
who have left them great inheritances.

Swift.

Those, who in warmer climes complain

From Phœbus' rays they suffer pain,

Must own, that pain is *largely* paid

By generous wines beneath the shade.

Id.

It does not belong to this place to have that point
debated at *large*.

Watts.

Vernal suns and showers

Diffuse their warmest, *largest* influence.

Thomson.

If you listen to the complaints of a forsaken lover,
you observe that he insists *largely* on the pleasures
which he enjoyed or hoped to enjoy.

Burke on the Sublime.

That *large* black prophet eye seemed to dilate

And follow far the disappearing sun.

As if their last day of a happy date

With his broad, bright, and dropping orb were
gone.

Byron.

LARGE is also a sea term applied to the wind,
when it crosses the line of a ship's course in a
favorable direction, particularly on the beam or
quarter. Thus, if a ship steer west, then the
wind in any point of the compass to the east-
ward of the south or north may be called *large*,
unless when it is directly east, and then it is
said to be right aft. Sailing *large* is, therefore,

advancing with a large wind, so as that the
sheets are slackened and flowing, and the bow-
lines entirely disused. This phrase is generally
opposed to sailing close-hauled.

LARGESS, *n. s.* } Fr. *largesse*; Lat. *largi-*
LARGIT'ION, *n. s.* } *tas*, 'à largiendo, giving
liberally.'—Minsheu. A gift or present. Still re-
tained as a call or cry for bounty by heralds and
harvest-men: largition is the act of giving; but
we find no example of its use.

Our coffers with too great a court,

And liberal *largess*, are grown somewhat light.

Shakspeare.

He assigned two thousand ducats, for a bounty to
me and my fellows: for they give great *largesses*
where they come.

Bacon's New Atlantis.

A pardon to the captain, and a *largess*

Among the soldiers had appeased their fury.

Denham.

Irus's condition will not admit of *largesses*.

Addison.

When the Portuguese suffered under the retreat
of the French, every arm was stretched out, every
hand was opened,—from the rich man's *largess* to the
widow's mite, all was bestowed to enable them to re-
build their villages and replenish their granaries.

Byron.

LARGILLIERE (Nicholas de), a French
painter, born at Paris, in 1656. He lived for
some years in England, and was employed by
Charles II. Louis XIV. also patronised him,
and he became director of the French academy.
His best work is a picture of the crucifixion. He
also painted portraits admirably. He died in
1746, aged ninety.

LARGITIO, in Roman antiquity, was a dis-
tribution of corn, provisions, clothes, money, &c.,
to the people. Gracchus, when tribune, to make
himself popular, passed a law for supplying the
Roman citizens with corn at a very low rate, out
of the public granaries. Claudius, another tri-
bune, with the same view to popular applause,
procured it to be distributed gratis. Cato, to
win the common people from Cæsar, persuaded
the senate to do the same, and 300,000 citizens
shared in the distribution. Cæsar, after his tri-
umph, extended his bounty to 150,000, giving
them each a mina. The Roman emperors en-
larged still further the list of those who were to
partake of their distributions. Largitio is fre-
quently taken to signify a masked bribery;
whereby candidates purchased votes, when they
stood for places of honor or trust in the state.
The distribution of money was called congri-
arium, and the distributors divisoires and se-
questres.

LARGS, a village on the west coast of Scot-
land, opposite the island of Bute; rendered me-
morable by the defeat of the Norwegians in their
last invasion of that country. This invasion was
made in the year 1263, with a fleet of 160 sail, and
an army of 20,000 men, commanded by Haquin
king of Norway, whose ravages on the coast of
Ayr, Bute, and Arran, reaching the Scottish
court, an army was immediately assembled by
Alexander III., and a bloody engagement ensued
at this village, when 16,000 of the invaders were
slain in the battle and flight, with 5000 Scots.
Haquin escaped to the Orkneys, where he soon
after died of grief. The entrenchments of the

Norwegian camp may still be traced along the coast of this place. The Scottist commanders who fell in battle were buried in a rising field near the village; three or four persons were interred in one grave, on each side of which was a large stone; a third was placed across the grave, supported at the extremities by the side stones, and in this rude manner the warriors lay entombed.

LARICAJA, a province of Peru, north of La Paz, celebrated for its gold mines of which few are worked. It is 240 miles from east to west, and seventy-five from north to south; very mountainous, but of temperate climate and capable of great improvement.

LARISSA, an ancient, rich, and celebrated town of Greece, in which there was a famous temple of Jupiter. Adjoining to it was a plain of very great fertility, called by Horace (Carm. lib. 1, Od. vii. 11.) Larissæ campus opimæ, and by Strabo, Campus Pelasgiotis, from the Pelasgi who inhabited it. This town continues to be called by the same name. It is a mean ill-built place, inhabited by a mixed race of Greeks, Turks, and Jews, to the amount of 20,000. It contains, however, several handsome mosques, and is the residence of a pacha, and of an archbishop of the Greek church. It stands on the Peneus, now called the Salembria, over which there is a bridge that connects the suburb with the town. The situation is pleasant, but unhealthy, owing to the neighbouring marshes. It is the capital of Thessaly. Seventy-five miles south by west of Salonica.

LARISSAN, one of the poorest and least productive provinces of Persia, is only rendered habitable by the periodical rains. The inhabitants cultivate a quantity of dates, wheat, and barley. The coast is in the possession of Arab pirates who live under their own sheiks, and reside in small towns defended by mud forts. Lar is the capital.

LARISSÆUS, a surname of Achilles, from his birth-place, Larissa; as well as of Jupiter, from his temple there.

LARISSUS, a river of the Peloponnesus, running between Elis and Achaia.

LARIUS, in ancient geography, an extensive lake of Gallia Cisalpina, through which the Addua (now the Adda) runs, in its way to the Po, above Cremona. It is by some reckoned eighty-eight miles, by others 100 in circumference. Oppenheim states its length to be thirty-six Italian miles, from north to south. It is now called Como (see Como), and is included in the department of the Lario, which is named from it.

LARIX, the larch tree. See PINUS.

LARK, *n. s.* } Sax. *laperce*, ænpack, an
LARKER, } early riser; Belg. *leuwerk*,
LARKLIKE, *adj.* } *larc*; Teut. *lerch*; Dan.
lerke. Minshew gives us an amusing specimen of etymology under this word: 'which,' he says, 'after Geropius, is derived in the Belg. *leuwerk*, from *leaf-work*, i. e. our lives' work, because this bird flies seven sundry times every day very high, and so sings hymns and songs to his Creator, in which consists our lives' work.' A species of ALAUDA, which see. A larker is an old name for a catcher of larks.

It was the *lark* the herald of the morn.

Shakspear.

Look up a height, the shrill-gorged *lark* so far
Cannot be seen or heard: *Id. King Lear.*

The' example of the heavenly *lark*,
Thy fellow-poet, Cowley, mark. *Cowley*

Mark how the *lark* and linnet sing;
With rival notes

They strain their warbling throats,
To welcome in the spring. *Dryden.*

The sprightly *lark's* shrill matin wakes the morn.
Young.

Pride, like an eagle, builds among the stars;
But pleasure, *lark-like* nests upon the ground. *Id.*
The cheerful man hears the *lark* in the morning;
The pensive man hears the nightingale in the evening.
Johnson.

He who sits from day to day

Where the prisoned *lark* is hung,
Heedless of his loudest lay,

Hardly knows that he has sung. *Cowper.*

Rise, sons of harmony, and hail the morn,
While warbling *larks* on russet pinions float,
Or seek at noon the woodland scene remote,
Where the grey linnets carol from the hill. *Beattie.*
'Tis the morn, but dim and dark.

Whither flies the silent *lark*? *Byron.*

LARK, in ornithology. See ALAUDA. The lark is not only a very agreeable bird for the cage, but will live upon almost any food, if it have once a week a fresh tuft of three-leaved grass. The proper method of keeping them in health is this: there must be two pans of food, the one containing meat, the other oatmeal and hempseed. A very good food is the following: boil an egg very hard, to which add the crumb of a halfpenny loaf, and as much hempseed; let the egg be chopped very small, and the hempseed bruised in a mortar; when these are mixed, the bread is to be crumbled in among the rest, and the whole to be rolled together with a common rolling-pin, and kept for use. There must be some fine small gravel strewn at the bottom of the cage, and renewed at farthest once in a week. This will prevent the bird's feet from getting hurt by being clogged with the dung; and his basking in this will keep him also from growing lousy. There must be a perch in the cage, and it must either be lined with green baize, or made of fine matting, which the lark is very fond of. When the bird is first taken, some food must be strewn upon the sand in the bottom of the cage; for it will be sometimes almost famished before it finds the meat in the pan. The cock bird is known from the hen by the loudness and length of his call, by his tallness as he walks about the cage, and by his doubling his notes in the evening, as if he was going with his mate to roost. Both the cock and hen of this kind are subject to many disorders; the principal of these are cramp, giddiness of the head, and breeding lice. Cleanliness is the best cure for the first and the last of these complaints; but we know of no cure for the other. A good strong bird, however, will often last very well five or six years, and improve all the time.

LARKS, DARING, OR DORING, a method of taking larks, by means of a clap-net and a looking glass. For this there must be provided four sticks very straight and light, about the bigness of

a pike; two of these are to be four feet nine inches long, and all notched at the edges or the ends. At one end of these sticks there is to be fastened another of about a foot long on one side; and on the other side a small wooden peg about three inches long. Then four or more sticks are to be prepared, each one foot long; and each of these must have a cord of nine feet long fastened to it at the end. Every one should have a buckle for the commodious fastening on the respective sticks when the net is to be spread. A cord must also be provided, which must have two branches. The one must have nine feet and a half, and the other ten feet long, with a buckle at the end of each; the rest, or body of the cord, must be twenty-four yards long. All these cords, as well the long ones as those about the sticks, must be well twisted, and of the bigness of one's little finger. The next thing is a staff of four feet long, pointed at one end, and with a ball of wood at the other, for the carrying these conveniences in a sack or wallet. There should also be carried a spade to level the ground where there may be any little irregularities; and two small rods, each eighteen inches long, having a small rod fixed with a pack-thread at the larger end of the other. To these are to be tied some pack-thread loops, which are to fasten in the legs of some larks; and there are to be reels to these, that the birds may fly a little way up and down. The looking-glass is to be prepared in the following manner: Take a piece of wood about an inch and a half thick, and cut it in form of a bow, so that there may be about nine inches space between the two ends; and let it have its full thickness at the bottom, that it may receive into it a false piece; in the five corners of which there are to be set in five pieces of looking-glass. These are so fixed, that they may dart their light upwards; and the whole machine is to be supported on a moveable pin with the end of a long line fixed to it; so that, the other end of the cord being carried through a hedge, the pulling it may set the whole machine of the glasses a turning. This and the other contrivances are to be placed in the middle between the two nets. The larks fixed to the place, termed calls, and the glittering of the looking-glasses as they whirl round in the sun, invite the other larks down; and the cord that communicates with the nets, and goes through the hedge, gives the person behind an opportunity of pulling up the nets, so as to meet over the whole, and take every bird that is between them. The places where this sort of sporting succeeds best are open fields, remote from any trees and hedges except one by way of shelter for the sportsman: and the wind should always be either in the front or back; for if it blows sideways, it prevents the playing of the net. See BIRD-CATCHING.

LARMIER (from *larme*, French, a tear), in architecture, a flat square member of the cornice, below the cymasium, and jetting out farthest; so called from its use, which is to disperse the water, and cause it to fall at a distance from the wall, drop by drop, as it were by tears.

LARNICA, a considerable town of Cyprus, consisting of an Upper and Lower town of mean houses, but having a fine harbour, the em-

porium of the commerce of the island. The water is supplied by an aqueduct erected by the Turks. Its exports are corn, wine, silk, and drugs; the imports cloth, hardware, and colonial produce; and rue from Egypt. The ruins of the ancient Citium are near, and frequently yield medals and other relics of the former prosperity of the island. Population 5000.

LARREY (Isaac de), a French protestant historian, who fled from France on the revocation of the edict of Nantes, and took refuge in Holland, where he was made historiographer to the United Provinces. He wrote 1. The History of England; 4 vols. folio; 2. The History of Louis XIV., 3 vols. 4to.; 3. The History of Augustus 8vo.; 4. The History of the Seven Wise Men, 2 vols. 8vo. He died in 1719.

LARROGUE (Daniel de), was born at Vitre. He wrote a satire on Louis XIV., for which he suffered five years' imprisonment. He translated Prideaux's Life of Mahomet, and Echarde's Roman history, into French. He died in 1731.

LARTIUS FLORUS (Titus), a Roman citizen and consul, who appeared a seditious of the people, and was the first dictator ever elected at Rome. He was appointed to this high office, endowed with the most absolute power, and invested with every ensign of royalty except the name of king, A. U. C. 255, within ten years only after the abolition of the monarchy, the expulsion of the kings, and the erection of the republic. So rapidly did even the Roman democracy itself revert to a monarchy. But it was only temporary: Lartius, after defeating the enemies of his country, laid down his unlimited power within six months, and returned to the rank of a private citizen, with the glorious reputation of having exercised his power with blameless lenity. Had he attempted, like the first consul of a neighbouring republic, to prolong his dictatorship to ten or twenty years, the jealousy of the Roman citizens would have been justly alarmed.

LARVÆ, in antiquity, derived from the Etruscan word *lar* or *lars*, signifying prince or lord, denoted the ghosts of the deceased, considered as wicked and mischievous. Hence is formed the term *larvatus*, i. e. *larva indutus* or demoniac. The ingenious Mr. Farmer urges the etymology and use of this term to prove, that the heathen demons were human ghosts. The *larvæ* were also called *lemures*.

LARVÆ, in entomology, a name given by Linnaeus to insects in that state, called by other writers *eruca* or caterpillar. See ENTOMOLOGY.

LARUM, *n. s.* Johnson says from 'alarum or alarm.' But this word is just as probably the origin of that, as in the Goth. and Teut. dialects we have *lur* and *luidr*; Swed. *lur*, a trumpet, or a loud sound; Dan. and Swed. *larm*, a night-clock. Alarm; note or instrument announcing danger; a piece of clock-work to rouse a sleeper at a certain hour.

His *larum* bell might loud and wide be heard,
When cause required, but never out of time.

Spenser.

The peaking cornute, her husband, dwelling in a continual *larum* of jealousy, comes to me in the instant of our encounter.
Shakspeare.

How far off lie these armies ?

—Within a mile and half.

—Then shall we hear their *larum*, and they ours.

Id.

She is become formidable to all her neighbours, as she puts every one to stand upon his guard, and have a continual *larum* bell in his ears. *Howel.*

Of this nature was that *larum*, which, though it were but three inches big, yet would both wake a man, and of itself light a candle for him at any set hour.

Wilkins.

I see men as lusty and strong that eat but two meals a day, as others, that have set their stomachs, like *larums*, to call on them for four or five. *Locke.*

The young *Aeneas*, all at once let down,
Stunned with his giddy *larum* half the town.

Dunciad.

Nor far beneath her in renown is she
Who, through good breeding, is ill company ;
Whose manners will not let her *larum* cease,
Who thinks you are unhappy when at peace.

Young.

LARUS, the gull, in ornithology, a genus belonging to the order of *anser*, the characters of which are, the bill is straight, cultrated, a little crooked at the point, and without teeth; the inferior mandible is gibbous below the apex; the nostrils are linear, a little broader before, and situated in the middle of the beak. There are several different species, principally distinguished by their colors.

1. *L. artica*, the laughing gull, is in length eighteen inches, breadth three feet. It resembles the pewit in every thing but in the legs, which are black instead of red. It is found in Russia, on the river Don, particularly about Tschercask. The note resembles a coarse laugh, whence the name. It is met with also in different parts of the continent of America; and is very numerous in the Bahama Islands.

2. *L. canus*, the common gull, is in length sixteen or seventeen inches; in breadth thirty-six; weight one pound. The bill is yellow: the irides are hazel, and the eye-lids brown: the head, neck, under parts of the body, and tail, are white; the back and wings pale gray: the outer edge of the first four quills, and tips of the first five, are black; but the fourth and fifth have a white spot at the tips; the rest, except the three nearest the body, have the ends white: the legs are of a dull greenish white. This seems to be the most common of all the gulls, being found in vast numbers on our shores and rivers contiguous to the sea. It is seen also very far north, as far as Iceland and the Russian lakes: it is met with in the neighbourhood of the Caspian Sea, in various shores of the Mediterranean, and as far south as Greece: and it is found also in America, on the coast of Newfoundland. It breeds on the rocks and cliffs, like others of the genus; and the eggs are two inches and a half in length, of a deep olive-brown, marked with irregular deep-reddish blotches. It is a tame species, and may be seen by hundreds on the shores of the Thames and other rivers, in the winter and spring, at low tides, picking up the various worms and small fish left by the tides; and will often follow the plough in the fields, for the sake of worms and insects which are turned up, particularly the cockchafer in its larva

state, which it joins with the rooks in devouring most greedily.

3. *L. cataractes*, the skua gull, is in length two feet; the extent four feet and a half; the weight three pounds: the bill is two inches one-fourth long, very much hooked at the end, and very sharp; the upper mandible covered more than half-way with a black sere or skin, as in the hawk kind; the nostrils are placed near the bend, and are pervious. The feathers on the head, neck, back, scapulars, and coverts of the wings, are of a deep brown, marked with rusty color; brightest in the male. The breast, belly, and vent are ferruginous, tinged with ash color. The tail when spread is circular, of a deep brown, white at the root, and with shafts of the same color. The legs are covered with great black scalons: the talons, black, strong and crooked: the interior remarkably so. This species inhabits Norway, the Ferroe Isles, Shetland, and the noted rock Foula a little west of them. It is also a native of the South Sea. It is the most formidable of the gulls; its prey being not only fish, but all the smaller sorts of water-fowl, such as teal, &c. Mr. Schroter, a surgeon in the Ferroe Isles, relates that it likewise preys on ducks and poultry. It has all the fierceness of the eagle in defending its young; when the inhabitants of those islands visit the nest, they defend themselves from its attack by holding a knife erect over their heads, on which the skua will transfix itself when darting on the invaders. The natives are often very roughly treated by them while they are attending their sheep on the hills; and are obliged to guard their heads by holding up their sticks. In Foula it is a privileged bird, because it defends the flocks from the eagle, which it beats and pursues with great fury; so that even that rapacious bird seldom ventures near its quarters. The natives of Foula on this account lay a fine on any person who destroys one: they deny that it ever injures their flocks or poultry; but imagine it preys on the dung of the arctic and other larger gulls, which it persecutes till they moot for fear. These birds are also frequent in many high latitudes of the southern hemisphere; particularly about Port Egmont, whence they have been called Port Egmont hens. In this place, and at Terra del Fuego, they were observed to make their nests among the dry grass. After breeding-time they disperse over the ocean, and for the most part are seen in pairs. They are met with in Kerguelen's Land, and off the Cape of Good Hope, and other parts. In all places the habits of this species are the same with respect to ferocity; it is frequently seen to attack the largest albatross, beating it with great violence so long as it remains on the wing; and this cowardly giant finds no other resource than to settle on the water; upon which the skua flies away.

4. *L. fuscus*, the herring gull, weighs upwards of thirty ounces; the length twenty-three inches, its breadth fifty-two: the bill is yellow, and the lower mandible marked with an orange-colored spot; the back and coverts of the wings are ash-colored; the upper part of the first five quill feathers are black, marked with a white spot near their end; the legs of a pale flesh color. These

birds breed on the ledges of rocks that hang over the sea: they make a large nest of dead grass; and lay three eggs of a dirty white, spotted with black. The young are ash-colored, spotted with brown. This species is a great devourer of fish, especially of herrings; it is a constant attendant on the nets, and so bold as to seize its prey in presence of the fishermen. It is common in this kingdom, and frequents the same places as the black-backed gull. It is also found in most of the northern parts of Europe, as well as about the Caspian and Black Seas; the rivers which fall into them, and the great lakes of Siberia. It is seen also in Iceland, Greenland, and Hudson's Bay. In winter it migrates south, being found in Jamaica; and is said to breed on some of the islands on the coast of South Carolina.

5. *L. hybernus*, the winter gull, winter mew, or cuddy moddy, weighs from fourteen to seventeen ounces; the length eighteen inches, the breadth three feet nine. The irides are hazel; the bill is two inches long, but the slenderest of any gull: black at the tip, and whitish towards the base. The crown of the head, and hindpart and sides of the neck, are white, marked with oblong dusky spots; the forehead, throat, middle of the breast, belly, and rump, white; the back and scapulars of a pale gray, the last spotted with brown: the coverts of the wings are of a pale brown, edged with white; the first quill-feather is black, the succeeding ones are tipped with white; the tail is white, crossed near the end with a black bar; the legs are of a dirty bluish-white. This kind frequents, during winter, the moist meadows in the inland parts of England, remote from the sea.

6. *L. marinus*, the black backed gull, is in length twenty-nine inches; in breadth five feet nine. The bill is very strong and thick, and almost four inches long; the color a pale yellow; but the lower mandible is marked with a red spot, with a black one in the middle. The head, neck, whole under side, tail, and lower part of the back, are white: the upper part of the back and wings are black; the quill-feathers tipped with white, the legs of a pale flesh-color. It inhabits several parts of England, and breeds on the highest cliffs. The egg is blunt at each end; of a dusky olive color; quite black at the greater end, and the rest of it thinly marked with dusky spots. It is also common on most of the northern coasts of Europe. It frequents Greenland; but chiefly inhabits the distant rocks. It lays three eggs in May, placing them on the heaps of dung which the birds leave there from time to time. It is said to attack other birds, and to be particularly an enemy to the eider duck. It very greedily devours carrion, though the most general food is fish. It is common also in America as low as South Carolina, where it is called the old wife.

7. *L. navius*, the wagel, is a large species, being nearly two feet in length, and in breadth about five; weighs nearly three pounds. The bill is black; two inches and a half long: the irides are dusky: the whole plumage is composed of mixed brown, ash-color, and white; the middle of each feather brown: the under parts of the body are the same, but paler: the quills are black: the lower part of the tail is mottled black

and white; near the end is a bar of black, and beyond this the end is white: the legs are of a dirty flesh-color, in some white. This species frequents the sea-coasts of many parts of England, though not in considerable numbers. At times it is seen on the banks of the Thames along with other gulls; and is there supposed to be the female of the black-backed.

8. *L. ridibundus*, the pewit, or black-headed gull, is in length fifteen inches, breadth three feet, and weight ten ounces. The bill is rather slender, and of a blood-red: the eye-lids are red and the irides hazel: the head and throat are dusky brown, in old birds black; and on each eye-lid is a small white spot; the back and wings are of an ash-color; the neck, all the under parts, and tail, are white: the first ten quills are white, margined, and more or less tipped with black; the others of an ash-color, with white ends: the legs are of the color of the bill, the claws black. This species breeds on the shores of some of our rivers; but full as often in the inland fens of Lincolnshire, Cambridgeshire, and other parts of England. They make their nest on the ground, with rushes, dead grass, &c., and lay three eggs of a greenish brown, marked with red-brown blotches. After the breeding season, they again disperse to the sea-coasts. They breed also in Northumberland, and are found throughout Russia and Siberia, as far as Kamtschatka, but no farther to the north. They are seen throughout the winter at Aleppo, in great numbers; and so tame, that the women are said to call them from the terraces of their houses, throwing up pieces of bread, which these birds catch in the air. They inhabit North America, coming into New England in May, and departing in August. The young birds in the neighbourhood of the Thames are thought good eating, and are called red legs. They were formerly more esteemed, and numbers were annually taken and fattened for the table.

9. *L. tridactylus*, the tarrock, is in length fourteen inches, breadth thirty-six; weight seven ounces. The bill is short, thick, and black: the head, neck, and under parts, are white: near each ear, and under the throat, there is a black spot; and at the hind part of the neck a crescent of black: the back and scapulars are bluish-gray; the wing-coverts dusky, edged with gray, some of the larger wholly gray; the exterior sides and ends of the first four quills are black, tips of the two next black, all the rest white: the ten middle feathers of the tail are white tipped with black, the two outermost wholly white: the legs are of a dusky ash-color; in lieu of the back toe, it has only a protuberance. This species breeds in Scotland with the kittiwake; and inhabits other parts of northern Europe; as Iceland and Spitzbergen, the Baltic, and White Seas, and Kamtschatka. It is common in Greenland in summer. It comes in spring, and frequents the sea-coasts; builds in the rocky crags of the bays; in June lays two eggs of a greenish-ash color spotted with brown; and retires from the shores in autumn. It is observed frequently to attend the whales and seals, for the sake of the fish which the last drive before them into the shallows, when these birds dart into the water

suddenly, and make them their prey. They are very noisy, especially during the time of incubation. They both swim and fly well, and for a long time together: they are often observed on portions of ice swimming in the sea. Both the flesh and eggs are esteemed by the Greenlanders, and the skins used as garments.

LARYBUNDER, a port of the province of Sinde, Hindostan, about twenty miles up the Pitty River. Owing to the mud-banks of the river, and the dangers of its navigation, the town of late years has much declined. In 1793 in the agreement between Nadir Shah and the emperor Mohammed it was stipulated that Larybunder should be the west boundary of Hindostan. Long. 57° 25' E., lat. 24° 40' N.

LARYNGOTOMY, *n. s.* } Fr. *laryngoto-*
LARYNX. } *mie.* of Gr. *λαρυγξ*,
the throat; and *τεμνω*, to cut. Laryngotomy, says Quincy, is an operation where the fore-part of the larynx is divided to assist respiration, during large tumors upon the upper parts; as in a quinsy. See **BRONCHOTOMY**. The larynx is the upper part of the trachea. See **ANATOMY**.

There are thirteen muscles for the motion of the five cartilages of the *larynx*. *Derham.*

Human voice is air sent through the lungs, and so agitated or modified in its passage through the windpipe and *larynx* as to become distinctly audible. *Murray.*

LARYNX. See **ANATOMY**.

LASCARIS (Andrew John), surnamed Ryn-dacenus, a learned writer of an ancient Greek family, which emigrated into Italy, after the taking of Constantinople by the Turks in 1453. He was well received by Laurence de Medicis; and was twice sent to Constantinople to collect the best Greek MSS., by which means numberless scarce and valuable treasures of literature were carried into Italy. On his return Louis XII., king of France, prevailed on him to settle in the university of Paris, and sent him twice ambassador to Venice. Ten years after cardinal John de Medicis being elected pope, under the name of Leo X., Lascaris, his old friend, went to Rome, and had the direction of a Greek college. He died in Rome in 1535, at about the ninetieth year of his age. He brought into the west most of the fine Greek MSS. that are now extant, and composed some epigrams in Greek and Latin.

LASCARIS (Constantine), one of the Greeks principally concerned in the revival of learning in the west. He retired into Italy in 1454, and taught polite literature at Milan, whither he was called by Francis Sforza; he afterwards went to Rome, where he was well received by cardinal Bessarion. He afterwards taught rhetoric and the Greek tongue at Naples; and ended his days at Messina, leaving the senate of that city many excellent MSS. which he had brought from Constantinople. He was interred at the public expense, and the senate of Messina erected a marble tomb to his memory. He wrote some grammatical works.

LASCARS, Indian seamen.

LASCENA (Peter), a learned Neapolitan, born 25th of September, 1590. His merits procured him the patronage of cardinal Barberini,

with whom he resided at Rome, and to whom he dedicated his Latin discourses *De Lingua Hellenistica*. Intense study, and too great abstinence, (for he took but one meal in twenty-four hours,) threw him into a fever, of which he died, 30th of September, 1636.

LASCIV'IENT, *adj.* } Fr. *lasciv*; Ital.
LASCIV'IOUS, } *lascivoo*; Lat. *lascivus*.
LASCIV'IOUSNESS, *n. s.* } Lewd; unchaste;
LASCIV'IOUSLY, *adv.* } wanton; soft.

In what habit will you go along?

—Not like a woman: for I would prevent
The loose encounters of *lascivious* men.

Shakspeare.

Grin visaged war hath smoothed his wrinkled front;

And now, instead of mounting barbed steeds

To fright the souls of fearful adversaries,

He capers nimbly in a lady's chamber,

To the *lascivious* pleasing of a lute. *Id.*

He on Eve

Began to cast *lascivious* eyes; she him

As wantonly repaid; in lust they burn.

Milton.

The reason pretended by Augustus was the *lasciviousness* of his Elegies, and his art of Love.

Dryden's Preface to Ovid.

Notwithstanding all their talk of reason and philosophy, and those unanswerable difficulties which, over their cups, they pretend to have against Christianity; persuade but the covetous man not to deify his money, the *lascivious* man to throw off his lewd amours, and all their giant-like objections against Christianity shall presently vanish. *South.*

Repel all impure and *lascivious* thoughts, which taint and pollute the mind; and, though hid from men, are known to God, in whose eye they are abominable. *Mason.*

LASERPTIUM, lazar-wort, a genus of the digynia order, and pentandria class of plants; natural order forty-fifth, umbellatæ. The fruit is oblong, with eight membranaceous angles; the petals inflexed, emarginated, and patent. There are several species, none of which are at all remarkable for their beauty, but are only preserved in botanic gardens for the sake of variety. They are natives of Germany, Italy, and the south of France. All of them abound with an acrid juice, which turns to an excessively acrimonious resin. This was used by the ancients to take away black and blue spots that came by bruises or blows; also to take away excrescences. It was likewise by some of the ancients used internally; but produced such violent effects, that the more prudent refrained from the use of it. It is generally supposed that the silphium of the ancients was procured from one of the species of this genus; but of this we are uncertain.

LASH, *n. s.*, *v. a.* & *v. n.* } Fr. *lags*; Ital.

LASH ER, *n. s.* } *lacio*; Lat. *la-*

queus, a net or cord. The thong of a whip; a cord or string of any kind: hence the stroke given with a whip or cord; any stroke; and, metaphorically, a satirical or sarcastic one: to lash follows these significations, and also means to tie or confine by a cord or rope. The eyelash is the line of hair that laces or borders the eye-lid. See **LACE** and **EYE**.

The farmer they leave in the *lash*,

With losses on every side.

Tusser's Husband y.

Her whip of cricket's bone, her *lash* of film,
Her waggoner a small grey-coated gnat.

Let's whip these stragglers o'er the seas again,
Lash hence these over-weening rags of France.

In 1330 there was a sect of whippers in Germany,
that, to the astonishment of the beholders, *lashed*,
and cruelly tortured themselves.

He that can bear a friendly touch, will not endure
to be *lashed* with angry and reproachful words.

From hence are heard the groans of ghosts, the
pains
Of sounding *lashes*, and of dragging chains.

Roused by the *lash* of his own stubborn tail,
Our lion now will foreign foes assail.

And limping death, *lashed* on by fate,
Comes up to shorten half our date.

The club hung round his ears, and battered
brows;
He falls; and, *lashing* up his heels, his rider throws.

Gentle or sharp, according to their choice,
To laugh at follies, or to *lash* at vice.

Let men out of their way *lash* on ever so fast,
they are not at all the nearer their journey's end.

Leaning on his lance, he mounts his car,
His fiery coursers *lashing* through the air.

The winds grow high,
Impending tempests charge the sky;
The lightning flies, the thunder roars,
And big waves *lash* the frightened shores.

Wheels clash with wheels, and bar the narrow
street;

The *lashing* whip resounds.

Could pensioned Boileau *lash* in honest strain,
Flatt'ners and bigots even in Louis' reign.

Fame and honour were purchased at a better
pennyworth by satire, rather than by any other produc-
tions of the brain; the world being soonest pro-
voked to praise by *lashes*, as men are to love.

They bound me on, that menial throng,
Upon his back with many a thong;
Then loosed him with a sudden *lash*—
Away!—away!—and on we dash!—
Torrents less rapid and less rash.

The tender blue of that large loving eye
Grew frozen with its gaze on vacancy,
Till—Oh how far! it caught a glimpse of him,
And then it flowed—and phrensied seemed to swim
Through those long, dark, and glistening *lashes*
dewed

With drops of sadness oft to be renewed.

LASKO, LASCO, or LASKI (John de), a native
of Poland, descended from a family of distinction.
He travelled into Switzerland, where he
became acquainted with Zuinglius, who made
him a convert to the doctrines of the Reforma-
tion. Upon his return he was made provost of
Gnesna, and bishop of Vesprim in Hungary, but
these dignities did not prevent him from openly
avowing his principles; upon which he was
condemned for heresy, and obliged to fly to
Emdden, in East Friesland, where he became
minister in 1542, and wherein he resided ten
years. Being invited to England by archbishop

Cramer, he lived unmolested till the death of
Edward VI.; but on the accession of Mary I.,
in 1553, he returned to Emdden in 1554, where
he and his companions in persecution were
kindly treated. After an absence of twenty years
he returned to Poland, where he was well re-
ceived by king Sigismund, who employed him
in some important affairs. He wrote several
tracts; particularly De Cœnâ Domini: Epistola
Continens Summum Controversiæ, &c. He died
January 13th, 1560.

LASS, *n. s.* } Sax. leap, loose, i. e. free
LASS'LORN, *adj.* } or single; Swed. *laska*; Goth.
lathka; Teut. *lassen* is to loose. See LAD. A
girl; a young unmarried woman: lasslorn is
forsaken of a lass or mistress.

Whose shadow the dismissed bachelor loves,
Being *lasslorn*.

Now was the time for vig'rous lads to show
What love or honour could invite them to;
A goodly theatre, where rocks are round
With reverend age, and lovely *lasses* crown'd.

A girl was worth forty of our widows; and an
honest, downright, plain dealing *lass* it was.

They sometimes an hasty kiss
Steal from unwary *lasses*; they with scorn
And neck reclined, resent.

Her 'prentice han,' she tried on man,
An' then she made the *lasses* O.

LASSA, a city of Asia, the capital of Great
Thibet, subject to the Chinese. It has only
been visited by Romish missionaries, who have
given very inaccurate accounts of it; but it ap-
pears not to be very extensive, and to be rather
a great temple than a city. It is the residence
of the Dalai Lama, or great head of the Shan-
man religion, who resides in a palace on the east
of the city called Patala, or the Holy Mountain.

LAS'SITUDE. Fr. *lassitude*; Lat. *lassitudo*.
Weariness; fatigue; laxity. See the citation
from Quincy.

Lassitude is remedied by bathing, or anointing
with oil and warm water; for all *lassitude* is a kind
of contusion and compression of the parts; and
bathing and anointing give a relaxation or emolli-
tion.

Assiduity in cogitation is more than our embodied
souls can bear without *lassitude* or distemper.

She lives and breeds in air; the largeness and
lightness of her wings and tail sustain her without
lassitude.

Lassitude generally expresses that weariness which
proceeds from a distempered state, and not from ex-
ercise, which wants no remedy but rest: it proceeds
from an increase of bulk, from a diminution of pro-
per evacuation, or from too great a consumption of
the fluid necessary to maintain the spring of the
solids, as in fevers; or from a vitiated secretion of
that juice, whereby the fibres are not supplied.

Do not over-fatigue the spirits, lest the mind be
seized with a *lassitude*, and thereby be tempted to
nauseate, and grow tired.

From mouth and nose the briny torrent ran,
And lost in *lassitude* lay all the man.

From mouth and nose the briny torrent ran,
And lost in *lassitude* lay all the man.

From mouth and nose the briny torrent ran,
And lost in *lassitude* lay all the man.

From mouth and nose the briny torrent ran,
And lost in *lassitude* lay all the man.

From mouth and nose the briny torrent ran,
And lost in *lassitude* lay all the man.

From mouth and nose the briny torrent ran,
And lost in *lassitude* lay all the man.

From mouth and nose the briny torrent ran,
And lost in *lassitude* lay all the man.

From mouth and nose the briny torrent ran,
And lost in *lassitude* lay all the man.

LASSUS, or LASUS, a dithyrambic poet, born at Hermione in Peloponnesus, about A. A. C. 500. He is reckoned by some among the wise men of Greece. He is particularly known by the answer he gave to a man who asked him what could best render life pleasant? Experience, said Lassus. He was acquainted with music. Some fragments of his poetry are to be found in Athenæus. He wrote an ode upon the Centaurs, and a hymn to Ceres, avoiding the letter S in the composition.

LASSUS (Peter), professor of pathology at the school of medicine and surgery at Paris, and member of the French Institute, was born at Paris in 1741, and studied under his father; admitted a master of surgery in 1765. He obtained in 1771 the office of surgeon in ordinary to the daughters of Louis XV. He retired into Italy with those princesses at the Revolution, but returned to Paris on the re-organisation of the academical institutions, and became successively professor of the history of medicine and of pathology, which offices he held till his death in 1807. His professional works are valuable, and contain *Essai ou Discours Historique et Critique sur les Découvertes faites en Anatomie par les Anciens et les Modernes*, Paris, 1783, 8vo. *Traité Elementaire de Medicine Operatoire*, 1795, 8vo; *Pathologie Chirurgicale*, 1805, 1806, 2 vols. 8vo.

LAST, <i>n. s., adv., v. n.</i>	}	Sax. læst, lææst; Belg. <i>laetste</i> ; Teut. <i>letzt</i> . Latest; hindmost; that which follows all the rest of a number; hence,
LASTAGE, <i>n. s.</i>		
LASTING, <i>part. adj.</i>		
LASTINGLY, <i>adv.</i>		
LASTINGNESS, <i>n. s.</i>		

LAST'LY, *adv.* utmost; lowest; meanest; at last is at the end or conclusion of a series: as an adverb of time, last signifies at the time next before the present, or at the conclusion of all the series of its divisions; in conclusion: to last is to endure; continue; persevere (i. e. to a supposed end). The last of shoe-makers (also known to our Anglo-Saxon ancestors by this name) is derived, perhaps, from its being the enduring or preserved mould on which shoes are constantly formed: but there is a Goth. læst, the foot. Last, a measure of weight or capacity, is also an old word in the language (probably from the læst of a tale): last-age is a custom or duty paid on freights; also ballast.

Gad, a troop shall overcome him; but he shall overcome at the last. *Gen. xlix. 19.*

Why are ye the last to bring the king back?

Samuel.

I will slay the last of them with the sword. *Amos.*

How long is't now since last yourself and I

Were in a mask? *Shakspeare.*

I thought it agreeable to my affection to your grace, to prefix your name before the essays: for the Latin volume of them, being in the universal language, may last as long as books last. *Bacon.*

I will justify the quarrel; secondly, balance the forces; and, lastly, propound variety of designs for choice, but not advise the choice. *Id.*

When last I died, and, dear! I die

As often as from thee I go,

I can remember yet that I

Something did say, and something did bestow. *Donne.*

Unhappy slave, and pupil to a bell,
Unhappy to the last the kind releasing knell.

Cowley.

Nothing so inflameth the wrath of men, so provoketh their enmity, so breedeth their lasting hatred and spite, as do contumelious words. *Barrow.*

All the endeavours Achilles used to meet with Hector, and be the death of him, is the intrigue which comprehends the battle of the last day.

Browne's View of Epic Poetry.

All more lasting than beautiful. *Sidney.*

All more lasting than beautiful, but that the consideration of the exceeding lastingness made the eye believe it was exceeding beautiful. *Id.*

White parents may have black children, as negroes sometimes have lasting white ones. *Boyle on Colors.*

In extremes, bold councils are the best;
Like empirick remedies, they last are tried,
And by the event condemned or justified. *Dryden.*

Fools ambitiously contend

For wit and power; their last endeavours bend
To' outshine each other. *Id. Lucretius.*

Pleased with his idol, he commends, admires,
Adores; and last, the thing adored desires. *Dryden.*

The grateful work is done,

The seeds of discord sowed, the war begun:

Frauds, fears, and fury, have possessed the state,
And fixed the causes of a lasting hate. *Id.*

The several degrees of lasting ideas are imprinted on the memory. *Locke.*

Where there is something both lasting and scarce, and so valuable to be hoarded up, there men will not be apt to enlarge their possessions of land. *Id.*

To bodily punishment we are not to have recourse till all other means of reformation have been attempted in vain; and let this last remedy be applied, if at all applied, with temper and solemnity, that the child may see we are driven to it against our will, from a regard to our duty and his good. *Id.*

A sinew cracked seldom recovers its former strength, and the memory of it leaves a lasting caution in the man, not to put the part quickly again to any robust employment. *Id.*

Every violence offered weakens and impairs, and renders the body less durable and lasting. *Ray.*

The greatest schemes that human wit can forge,
Or bold ambition dares to put in practice,
Depend upon our husbanding a moment,
And the light lasting of a woman's will. *Rowe.*

The swans, that on Cayster often tryed
Their tuneful songs, now sung their last, and died. *Addison.*

O! may famed Brunswick be the last,

The last, the happiest British king,
Whom thou shalt paint or I shall sing. *Id.*

These are standing marks of facts delivered by those who were eye-witnesses to them, and which were contrived with great wisdom to last till time should be no more. *Id.*

Consider the lastingness of the motions excited in the bottom of the eye by light. *Newton's Opticks.*

Thus weather-cocks, that for a while

Have turned about with every blast,

Grown old, and destitute of oil,

Rust to a point, and fix at last. *Friend.*

O, may some spark of your celestial fire,
The last, the meanest, of your sons inspire! *Pope.*

Merion pursued at greater distance still,
I last came Admetus, thy unhappy son. *Id.*

Here, last of Britons, let your names be read. *Id.*

Wit not alone has shone on ages past,
But lights the present, and shall warm the *last*.
Id.

Antilochus

Takes the *last* prize, and takes it with a jest. *Id.*

All politicians chew on wisdom past,

And blunder on in business to the *last*. *Id.*

But, while I take my *last* adieu,

Heave thou no sigh, nor shed a tear. *Prior.*

O ye blest scenes of permanent delight!

Full above measure! *lasting* beyond bound!

A perpetuity of bliss is bliss. *Young.*

None sends his arrow to the mark in view,

Whose hand is feeble or his aim untrue,

For though, ere yet the shaft is on the wing,

Or when it first forsakes the' elastic string,

It err but little from the' intended line,

It falls at *last* far wide of his design. *Cowper.*

A *last* is twelve sacks or 4368 lbs.

Walkingham's Arithmetic.

Nothing is more common than for those who expressed the greatest signs of a *lasting* repentance upon a sick bed, to forget all their vows and promises of amendment as soon as God had removed the judgment and restored them to their former health.

Paley.

LASTERY, *n. s.* Goth. *litcer*; Swed. *lit*, a tinge. A red color.

The bashful blood her snowy cheeks did spread,

That her became as polished ivory,

Which cunning craftsman's hand hath overlaid,

With fair vermilion, or pure *lastery*. *Spenser.*

LASWAREE, a town of Hindostan, in Delhi, where, 1st November 1803, the celebrated battle was fought between lord Lake and the Mahrattas under Dowlut Row Sindiah, in which the power of the latter was wholly broken.

LATAKIA, a sea-port of the pachalic of Tripoli, Syria, the ancient Laodicea. It contains not above 5000 inhabitants, but has supplanted Scanderon as the port of Aleppo. Ten years ago, however, it is said to have been far more flourishing. Its commerce consists in sugar, salt, and rice from Egypt, wine from Cyprus, oranges from Tripoli, and woollen cloth from Smyrna. Here is a Roman triumphal arch, between thirty and forty feet high, enriched with a handsome entablature: it is supposed to have been erected in honor of Cæsar.

LATCH, *n. s.* & *v. a.* } Belgic, *letse*, *litze*;

LATCH'ES, } Ital. *laccio*, à Sax.

LATCH'ET. } *lettan*, to hinder.

See **LET**. Minsheu says, ingeniously enough, from Belg. *let*, *lid*, between the knots. A catch or fastening of a door, often moved by a string: latches, nautically, are defined by Harris in the extract: latchet of a shoe is the tie or fastening: to latch, to fasten with a latch or tie.

There cometh one mightier than I, the *latchet* of whose shoes I am not worthy to unloose.

Mark i. 7.

But hast thou yet *latched* the Athenian's eyes

With the love juice, as I did bid thee do?

Shakspeare.

He had strength to reach his father's house; the door was only *latched*; and, when he had the *latch* in his hand, he turned about his head to see his pursuer.

Locke.

Latches or laskets, in a ship, are small lines like loops, fastened by sewing into the bonnets and drablers of a ship, in order to lace the bonnets to the courses, or the drablers to the bonnets. *Harris.*

The *latch* moved up.

Gay's Pastorals.

Then comes rosy health from her cottage of thatch,

Where never physician had lifted the *latch*. *Smart.*

LATE, *adj.* & *adv.*

LA'TED, *adj.*

LATE'LY, *adv.*

LATE'NESS, *n. s.*

LAT'TER, *adj.*

LAT'TERLY, *adv.*

Sax. *lat*, *læt*; Goth.

lat; Belg. *laet*. The op-

posite of soon and early.

We seem to have no ex-

act synonyme of this

word. Slow; tardy; de-

layed; deceased: as an adverb, after long delay;

soon in the day or night; not long since: of

late seems synonymous with lately: *lately* is

made late; overtaken by night: *latter* is the

comparative of late, though written with *tt*, con-

trary to analogy in the superlative *latest*. 'When

the thing of which the comparison is made is

mentioned we use *later*; as, this fruit is *later*

than the rest; but *latter* when no comparison is

expressed, and the reference is merely to time.'

And he found a man a iew aquyla bi nãme of

poute bi ÿnde, that *late* cam fro italie.

Wiclif. Dedis. 18.

Paul found a certain Jew named Aquila, *lately*

come from Italy. *Acts*. xviii. 1.

But for to tellin you of his array,

His hors wer good, but he was nothing gay;

Of fustian he werid a gipon,

Alle besmottrid with his haburgeon,

For he was *late* ycome from his viaje,

And wente for to do his pilgrimage. *Chaucer.*

That shortly from the shape of womanhed,

Such as she was when Pallas she attempted,

She grew to hideous shape of drearhead,

Pined with grief of folly *late* repented. *Spenser.*

They arrived in that pleasant isle,

Where sleeping *late* she left her other knight. *Id.*

Were it consonant unto reason to divorce these

two sentences, the former of which doth show how

the *latter* is restrained, and, not marking the former,

to conclude by the *latter* of them? *Hooker.*

O boy! thy father gave thee life too soon,

And hath bereft thee of thy life *too late*.

Shakspeare.

Was it so *late*, friend, ere you went to bed,

That you do lie so *late*?

—Sir, we were carousing till the second cock.

Id.

The west glimmers with some streaks of day:

Now spurs the *luted* traveller apace

To gain the timely inn. *Id. Macbeth.*

To make roses, or other flowers, come *late*, is an

experiment of pleasure; for the ancients esteemed

much of the *rosa sera*. *Bacon's Natural History.*

My hasting days fly on with full career,

But my *late* spring no bud nor blossom sheweth.

Milton.

In reason's absence fancy wakes,

Ill-matching words and deeds long past or *late*.

Id.

Who but felt of *late*?

I doubt there's deep resentment in his mind,

For the *late* slight his honour suffered there.

Otway.

Through all the air his sounding strings dilate

Sorrow, *like* that which touched our hearts of *late*.

Waller.

He laughs at all the giddy turns of state,

When mortals search too soon, and fear *too late*.

Dryden.

Late the nocturnal sacrifice begun,

Nor ended till the next returning sun. *Id.*

A second *Silvius* after these appears,

Silvius Æneas, for thy name he bears ;
For arms and justice equally renowned,

Who *later* restored in *Alba* shall be crowned. *Id.*

The *later* it is before any one comes to have these ideas, the *later* also will it be before he comes to those maxims. *Locke.*

Men have of *late* made use of a pendulum, as a more steady regulator. *Id.*

Hath not navigation discovered, in these *latter* ages, whole nations at the bay of *Soldania*? *Id.*

I might have spared his life,
But now it is too *late*.

Phillips's Distressed Mother.

All the difference between the *late* servants and those who staid in the family, was, that those *latter* were finer gentlemen. *Addison's Spectator.*

Just was the vengeance; and to *latest* days
Shall long posterity resound thy praise.

Pope's Odyssey.

The goddess with indulgent cares,
And social joys, the *late* transformed repairs.

Pope.

Lateness in life might be improper to begin the world with. *Swift to Gay.*

The difference between reason and revelation, and in what sense the *latter* is superior. *Watts.*

Latterly Milton was short and thick. *Richards.*

This pray I, *Jove*, and wyth this *latter* breath,
Vengeance I aske upon my cruell death. *Sackville.*

He turned not—spoke not—sunk not—fixed his look,

And set the anxious frame that *lately* shook :

He gazed—how long we gaze despite of pain,

And know, but dare not own, we gaze in vain!

Byron.

LATE WAKE, a ceremony used at funerals in some parts of the Highlands of Scotland. The evening after the death of any person the relations and friends of the deceased meet at the house, attended by a bagpipe or fiddle; the nearest of kin, be it wife, son, or daughter, opens a melancholy ball, dancing, and greeting (i. e. crying violently) at the same time, and this continues till daylight; but with gambols and frolics among the younger part of the company. If the corpse remains unburied for two nights, the same rites are renewed.

LATENT, *adj.* Lat. *latens*. Hidden; secret; reserved; concealed.

Who drinks, alas! but to forget; nor sees

That melancholy sloth, severe disease,

Memory confused, and interrupted thought,

Death's harbingers, lie *latent* in the draught.

Prior.

If we look into its retired movements, and more secret *latent* springs, we may there trace out a steady hand producing good out of evil. *Woodward.*

What were Wood's visible costs I know not, and what were his *latent* is variously conjectured. *Swift.*

Latent caloric is that portion of the matter of heat which makes no sensible addition to the temperature of the bodies in which it exists.—Caloric in a *latent* state exists in all substances that we are acquainted with. *Parke's Chemical Catechism.*

LATERAL, *adj.* } Fr. *lateral*; Lat. *lateralis*—
LATERALITY, } *us.* Growing out of, or
LATERALLY, } belonging to the side: acting sideways.

Forth rush the Levant, and the ponent winds

Eurus and Zephyr, with their *lateral* noise,

Sirocco and Libeccio.

Milton.

We may reasonably conclude a right and left *laterality* in the ark, or naval edifice of Noah. *Brown.*

The days are set *laterity* against the columns of the golden number. *Holder on Time.*

Why may they not spread their *lateral* branches till their distance from the centre of gravity depress them? *Huy.*

The smallest vessels, which carry the blood by *lateral* branches, separate the next thinner fluid or serum, the diameters of which *lateral* branches are less than the diameters of the blood-vessels.

Arbuthnot on Aliments.

LATERAN was originally the proper name of a man; whence it descended to an ancient palace in Rome, and to the buildings since erected in its place; particularly a church called St. John of Lateran, which is the principal see of the popedom.

The canons regular of the congregation of the *lateran* is a congregation of regular canons, of which that church is the principal place or seat. It is asserted there has been an uninterrupted succession of clerks, living in community, from the time of the apostles; and that a number of these were established in the Lateran in the time of Constantine.

LATERAN, COUNCILS OF THE, are those held in the basilica of the Lateran: of these there have been five, held in 1123, 1139, 1179, 1215, and 1513.

A **LATERE**, a term used to denote the qualifications of the cardinals whom the pope sends as legates into foreign countries. They are called legates à *latere*, as being his holiness's assistants and counsellors in ordinary. These are the most considerable of the three kinds of legates, being such as the pope commissions to take his place in councils; and so called in regard that he never gives this office to any but his favorites and confidants, who are always à *latere*, at his side. A legate à *latere* has the power of conferring benefices without a mandate, of legitimating bastards to hold offices, and has a cross carried before him as the ensign of his authority.

De LATERE, legates who are not cardinals, but yet are entrusted with an apostolical legation. See **LEGATE**.

LATH, *n. s.* Saxon læð. Part of a county (obsolete). Mr. Thomson says from Saxon *leth*, contracted from Goth. *lagthing*, or *lathing*, a judicial convocation. See **LATHREVE**.

If all that *tything* failed, then all that *lath* failed, then all that hundred was demanded for them: and if the hundred, then the shire, who would not rest till they had found that undutiful fellow, which was not amenable to law. *Spenser's Ireland.*

The fee-farms reserved upon charters granted to cities and towns corporate, and the blanch rents and *lath* silver answered by the sheriffs. *Bacon.*

LATH, *n. s. & v. a.* } Sax. *latre*; Fr. *latte*,
LATHIE. } *late*; Teut. *latte*; Belg.

lat; Welch, *lath*. A long thin piece of wood: *lathe* is a turning machine, formerly set in motion by a string and *lath*. To *lath* is to fit up or cover with *lath*.

With dagger of *lath*.

Shakspeare.

Penny-royal and orpin they use in the country to trim their houses; binding it with a *lath* or stick, and setting it against a wall.

Bacon's Natural History.

The god who frights away,
With his *lath* sword, the thieves and birds of prey.

Dryden.

Those black circular lines we see on turned vessels of wood, are the effects of ignition, caused by the pressure of an edged stick upon the vessel turned nimbly in the *lathe*.

Ray.

A small kiln consists of an oaken frame, *lathed* on every side.

Mortimer's Husbandry.

The plasterer's work is commonly done by the yard square for *lathing*.

Id.

Laths are made of heart of oak, for outside work, as tiling and plastering; and of fir for inside plastering, and pantile *lathing*.

Moxon.

For wheresoe'er the shrieking victim bath

Poured forth his blood beneath the assassin's knife,

Some hand erects a cross of mouldering *lath*;

And grove and glen with thousand such are rife
Throughout this purple land, where law secures
not life.

Byron.

The *LATHE* is a very useful engine for turning wood, ivory, metals, and other materials. See *TURNING*. The invention of it is very ancient: Diodorus Siculus says, the first who used it was a grandson of Dædalus, named Talus. Pliny ascribes it to Theodore of Samos; and mentions one Thericles who rendered himself very famous by his dexterity in managing the lathe. With this instrument the ancients turned all kinds of vases, many of which they enriched with figures and ornaments in basso relievo. Thus Virgil:—

Lenta quibus torno facili superaddita vitis.

The Greek and Latin authors make frequent mention of the lathe; and Cicero calls the workmen who used it *vascularii*. It was a proverb among the ancients to say a thing was formed in the lathe to express its delicacy and justness. As it is the use and application of this instrument that makes the greatest part of the art of turning, we refer the particular description of it, as well as the manner of applying it in various works, to that head. See *TURNING*.

To *LATHER*, *v. n. v. a. & n. s.* Sax. *leðpan*. To form or cover with a foam: a foam made with soap and water.

Chuse water pure,

Such as will *lather* cold with soap. *Baynard.*

LATHRÆ, in botany, a genus of the angiospermia order, and didynamia class of plants; natural order fortieth, personatæ: *CAL.* quadrifid; there is a depressed glandule at the base of the suture of the germen: *CAPS.* unilocular. Species three, natives of the south of Europe.

LATHREVE, *LEIDGREVE*, or *TRITHENGREVE*, was an officer under the Saxon government, who had authority over a third part of the county; and whose territory was therefore called *trithing*, otherwise a *leid lath* or *leithin*; in which manner the county of Kent is still divided; and the rapes in Sussex seem to answer to the same. As to the jurisdiction of this officer, those matters that could not be determined by the hundred court were thence brought to the *trithing*; where all the principal men of the three or more hundreds being assembled by the *lathreve*, or *trithingreve*, did debate and decide it; or, if they could not, then the *lathreve* sent it up to the county court, to be there finally determined.

LATHYRUS, in botany, chickling, a genus of the decandria order, and diadelphia class of plants; natural order thirty-second, papilionaceæ. Stylus plain, villous above, towards the end broader: *CAL.* upper two segments shorter than the rest.

1. *L. latifolius*, the everlasting pea, has thick, fibrous perennial roots; climbing, thick, branching annual stalks, having membranaceous wings between the joints, rising upon support by their cirri six or eight feet high; diphyllous leaves, of two spear-shaped lobes, terminated by claspers; and numerous large red or purple flowers on long foot-stalks, appearing plentifully from June till October, succeeded by abundance of seed.

2. *L. odoratus*, the sweet-scented pea, has a fibrous annual root; a climbing stalk, rising upon support by its claspers three or four feet high; diphyllous leaves of two oval lobes, terminated by climbing tendrils; and flowers by two's on long flower stalks, of different colors in the varieties.

3. *L. Tangitanus*, the Tangier pea, has a fibrous annual root, a climbing stalk rising upon support for four or five feet high; diphyllous leaves, of two spear-shaped alternate lobes, terminated by tendrils; and from the joints of the stalks large reddish flowers by two's on long foot-stalks. All the species are of hardy growth, and may be propagated by seed in the common ground, in patches where it is designed the plants should flower, for they do not succeed so well by transplantation. They may be sowed in spring; though, if sowed in autumn, the plants will flower earlier the following year.

LATIAR, in Roman antiquity, a feast or ceremony instituted by Tarquinius Superbus, in honor of Jupiter Latiaris, or Latialis. Tarquin, having made a treaty of alliance with the Latins, proposed, in order to perpetuate it, to erect a common temple, where all the allies, the Romans, Latins, Hernici, Volsci, &c., should assemble themselves every year, hold a kind of fair, exchange merchandises, feast, and sacrifice. Such was the instituting of the Latiar. The founder only appointed one day for this feast; the first consul added another to it, upon concluding the peace with the Latins; a third was added, after the people, who had retired to Mons Sacer, were returned to Rome; and a fourth, after appeasing the sedition raised on occasion of the plebeians aspiring to the consulate. These four days were called *Feræ Latinæ*; and all things done during the course of the *feræ*, as feasts, sacrifices, offerings, &c., were called *Latiare*.

LATICLAVE, *LATICLAVIUM*, in Roman antiquity, was an honorable distinction, peculiar in the times of the republic to the senators; but whether it was a particular kind of garment, or only an ornament upon it, the critics are not agreed. The most general opinion is, that it was a broad stripe of purple sewed upon the fore part of their tunic, and round the middle of the breast. There were buttons set on the *latus clavus*, or *laticlave*, which appeared like the heads of large nails, whence some think it derived its name. The senators, prators, and chief magis-

trates of colonies and municipal cities, had a right to wear it. The prætexta was always worn over it; but, when the prætor pronounced sentence of death, the prætexta was then put off, and the laticlave retained. The laticlavium differed from the angusticlavium, but authors do not agree in what this difference consisted; the most general opinion seems to be, that the slips or stripes of purple were narrower in the angusticlave.

LATIMER (Hugh), bishop of Worcester, an illustrious protestant martyr, born about the year 1480, at Thurcaston in Leicestershire, and the only son of a yeoman of that village. At the age of fourteen he was sent to Christ's College, Cambridge, where he applied himself to the study of divinity, and took the degree of B. D. At this time he was a zealous papist, and was honored with the office of keeper of the cross to the university: but when he was about thirty years of age he became a convert to the Protestant religion; and, being now one of the twelve licensed preachers from Cambridge, he promulgated his opinions with great freedom. It was not long before he was accused of heresy; and, being summoned before cardinal Wolsey, was obliged to subscribe certain articles of faith, which he certainly did not believe. About the year 1529 he was presented by Henry VIII. to the rectory of Westkinton in Wiltshire; to which place, after residing some time at court with his friend and patron Dr. Butts, he retired; but, resuming his former invectives against the popish doctrines, he was again summoned to answer certain interrogatories, and once more obliged to subscribe. In 1535 he was promoted to the bishopric of Worcester; in the possession of which dignity he continued till the year 1539, when, rather than assent to the act of the six articles, he resigned his mitre, and retired into the country; but was in a short time accused of speaking against the six articles, and committed to the tower, where he continued prisoner till the death of Henry VIII. in January 1547. On the accession of Edward VI. Latimer was released, but not restored to his bishopric, though he preached several times before the king, and continued to exercise his ministerial function with unremitting zeal and resolution. Young Edward, alas! finished his short reign in 1553; and Mary I., of bloody memory, ascending the throne, Latimer was immediately doomed to destruction, and, together with Cranmer and Ridley, confined in the tower. In April 1554 they were removed to Oxford, that they might dispute with the doctors of both universities. Latimer, declining the disputation on account of his great age and infirmities, delivered his opinion in writing; and, refusing to subscribe the popish creed, was condemned for heresy; and, in October following, was, together with bishop Ridley, burnt alive. He behaved with uncommon fortitude on the occasion, and died a real martyr to the Reformation. Of his plain dealing, even with crowned heads, the following circumstance is a celebrated proof:—It was the custom for bishops to make presents to the king on new-year's-day, and, among the rest, Latimer waited on Henry VIII. with his gift, which, in-

stead of a purse of gold, was a New Testament, having the leaf turned down to this passage: 'Whoremongers and adulterers God will judge.' When Mary ascended the throne, and he was cited to appear before the council, an opportunity, it is said, was afforded him to quit the kingdom. But, with a just anticipation of the consequences, he prepared himself to obey with alacrity the citation, and, as he passed Smithfield, exclaimed, 'This place has long groaned for me.' On reaching the place of execution at Oxford, and a faggot, ready kindled, being placed at Ridley's feet, Latimer exclaimed, 'Be of good comfort, master Ridley, and play the man; we shall this day light such a candle by God's grace in England, as I trust shall never be put out.' His works are, 1. Sermons, 1635, folio. 2. Letters, in Fox's Acts and Monum. vol. ii. folio, 1580. 3. An Injunction to the prior and Convent of St. Mary's in Worcestershire.

LATIN, *n. s. & adj.*

LATINISM, *n. s.*

LATINIST,

LATINITY,

LATINIZE, *v. a. & v. n.*

Latinus. The language of ancient Rome. It is most surprising that Dr. Johnson, though he frequently used this word in this sense in his Dictionary, has not defined it in this sense. He says only of the *n. s.* 'an exercise practised by school-boys, who turn English into Latin.' Written or spoken in the Latin language: Latinism is a Latin idiom or mode of speech or writing; Latinist, a person learned in Latin; Latinity, the purity of Latin phraseology or style: to Latinize, to use Latin words or phrases; to give Latin terminations; or to make Latin.

In learning farther his syntaxis, he shall not use the common order in schools for making of *Latinis*.

Ascham.

The Greek church did always dissent from the *Latinis* in this particular, since they had forged this new doctrine in the laboratories of Rome.

Bishop Taylor.

I am liable to be charged that I *Latinize* too much.

Dryden.

Augustus himself could not make a new *Latin* word.

Locke.

Milton has made use of frequent transpositions, *Latinisms*, antiquated words and phrases, that he might the better deviate from vulgar and ordinary expressions.

Addison.

If Shakspeare was able to read Plautus with ease, nothing in *Latinity* could be hard to him.

Dennis.

He uses coarse and vulgar words, or terms and phrases that are *Latinized*, scholastick, and hard to be understood.

Watts.

Oldham was considered as a good *Latinist*.

Oldham's Life.

In the beginning, being probably most in pain for his *Latinity*, he endeavours to defend the use of the word persona.

Johnson.

LATIN LANGUAGE. See LANGUAGE.

LATINUS I., king of the Latins in Italy, was the son of Faunus and Marica; and, it is said, began to reign about A. A. C. 1216. Lavinia, his only daughter, married Æneas, after that Trojan prince had killed Turnus king of the Rutuli. See **ROME**.

LATIROSTROUS, *adj.* Lat. *latus* and *rostrum*. Broad-beaked.

In quadrupeds, in regard of the figure of the heads, the eyes are placed at some distance; in *atirostrou*, and flat-billed birds, they are more laterally seated. *Browne*.

LATITANCY, *n. s.* } Lat. *latitans*. See
LAT'ITANT, *adj.* }
LATITATION, *n. s.* } **LATENT**. The state of
 lying hid.

In vipers she has abridged their malignity by their secession or *latitancy*. *Browne's Vulgar Errours*.

Snakes and lizards, *latitant* many months in the year, containing a weak heat in a copious humidity, do long subsist without nutrition. *Browne*.

It must be some other substance *latitant* in the fluid matter, and really distinguishable from it. *More*.

Force the small *latitant* bubbles of air to disclose themselves and break. *Boyle*.

LATITUDE, *n. s.* } Fr. *latitude* ;

LATITUDINARIAN, *adj. & n. s.* } Lat. *latitudo*.
 Width; breadth; extent; freedom; in bodies of unequal dimensions the shorter axis; in equal bodies the line drawn from right to left; the space in the earth or heavens from the equator in either of the poles: a *latitudinarian* is a person unrestrained in his habits or opinions.

Whether the exact quadrat, or the long square be the better, I find not well determined; though I must prefer the latter, provided the length do not exceed the *latitude* above one third part. *Wotton*.

In such *latitudes* of sense, many that love me and the church well, may have taken the covenant. *King Charles*.

In human actions there are no degrees, and precise natural limits described, but a *latitude* is indulged. *Taylor*.

Among the southern constellations, two there are who bear the name of the dog; the one in sixteen degrees *latitude*, containing on the left thigh a star of the first magnitude, usually called *Procyon*, or *Anticanus*. *Browne's Vulgar Errours*.

Albertus, bishop of Ratisbon, for his great learning, and *latitude* of knowledge, surnamed *Magnus*; besides divinity, hath written many tracts on philosophy. *Browne*.

I took this kind of verse, which allows more *latitude* than any other. *Dryden*.

There is a difference of degrees in men's understandings, to so great a *latitude*, that one may affirm, that there is a greater difference between some men and others, than between some men and beasts. *Locke*.

We found ourselves in the *latitude* of thirty degrees two minutes south. *South*.

Then, in comes the benign *latitude* of the doctrine of good-will, and cuts asunder all those hard pinching cords. *Id.*

Another effect the Alps have on Geneva is, that the sun here rises later and sets sooner than it does to other places of the same *latitude*. *Addison*.

Latitudinarian love will be expensive, and therefore I would be informed what is to be gotten by it. *Collier on Kindness*.

Those places which lie on the equator have no *latitude*. *Guthrie*.

LATITUDE, in geography, is the distance of any place from the equator reckoned on a meridian, or great circle of the globe passing through the poles. The most simple method of finding the *latitude* of a place is by the meridian altitude of the sun, which may be obtained by direct observation, at the moment it passes

the meridian of the place; or it may be found from several altitudes taken near the meridian, compared with the time. At the terrestrial equator, where the *latitude* is nothing, the celestial equator passes through the zenith; the poles of the world are consequently in the horizon: but, if we suppose ourselves advancing along any meridian into either hemisphere, the pole of that hemisphere appears to ascend above the horizon, and describe an arc of a vertical circle, equal to the arc of the meridian passed over. Hence, as the arc of the meridian measures the *latitude* of the place arrived at, it follows that this is always equal to the elevation of the pole at that place, and that the inclination of the celestial equator to the horizon is equal to the complement of the *latitude*. To ascertain the meridional altitude of the sun is, therefore, to ascertain this inclination; and, consequently, the *latitude*.

We copy from Mr. Miers the following problems in illustration of this method. Let PEP, fig. 1, be a terrestrial meridian, and EQ the

equator. When the observer is at E, the plane of the equator, supposed to be produced to the heavens, will pass through the zenith Z, and the poles will evidently be situated in the horizon H H'. But, on proceeding from E to O, the horizon gradually recedes from H H' to H' H', and the pole P appears to ascend through an equal arc, but in a contrary direction. Hence, as the sum of the two angles E C O and O C P is equal to a right angle, and the sum of the two O C P and P C H' also equal to a right angle, if the common angle O C P be taken from each of these sums, there will remain the angle E C O equal to the angle P C H'; that is, the altitude of the pole equal to the *latitude* of the place of observation. Again, the angle E C H', which is the complement of E C O, is evidently the inclination of the equator to the horizon of the observer at O; and consequently the altitude of the equator at any place is equal to the complement of the *latitude* of that place. All that is necessary, therefore, to find the *latitude*, is, to ascertain the height of the equator, and subtract it from 90°. The easiest method of accomplishing this is to observe the meridian altitude of a heavenly body, and reduce it to the true altitude by the corrections already explained; and then either by adding the declination to this altitude, or by subtracting it from it, as circumstances require, the height of the equator will be ob-

tained. That is, if the sun pass the meridian south of the observer's zenith, add the declination when it is south, and subtract it when north; but if he pass the meridian on the north of that zenith, subtract his declination when south, and add it when north.

The following example will show the application of these precepts.—Suppose the altitude of the sun's lower limb, when he passed the meridian south of the observer, on the 9th of May 1818, was found to be $46^{\circ} 32'$; what was the latitude of the place?

Observed altitude of Sun's lower limb	46	32	0
Sun's semidiameter, 9th May, add	0	15	51
<hr/>			
Observed altitude of Sun's centre	46	47	51
Refraction, to be subtracted	0	0	54
<hr/>			
	46	46	57
Parallax corresponding to this altitude, add	0	0	6
<hr/>			
True altitude of the sun's centre	46	47	3
Declination north, 9th May, subtract	17	16	18
<hr/>			
Height of equator	29	30	45
<hr/>			
Complement. LATITUDE NORTH	60	29	15

The latitude may also be found, as this writer observes, from the observed altitude of a star, the declination of which is known, as the corrections for semidiameter and parallax are then unnecessary. The meridional altitude of the moon will also afford the same result; but in this case the corrections are more tedious, and, from the irregularity in her motion, much greater attention is requisite to insure equal accuracy.

Another easy method of obtaining the latitude of a place is by observing the greatest and least altitudes of a circumpolar star; half the sum of which is the height of the pole, or, as shown above, the latitude of the place. Let P, P, fig. 2, be the axis of the earth, H H the horizon, a and b the greatest and least heights of a circumpolar star; then, as this star describes a circle about P as a centre, the arcs Pa and Pb are equal to each other; Ha and Hb are its two altitudes in these positions: hence $HP = \frac{1}{2}(Ha + Hb)$. Now, when Ha and Hb are found by observation, the heights of the pole HP, and consequently the latitude of the place, is known. If half the difference of the two altitudes be

added to the less, or subtracted from the greater altitude, the result will also be the same; for

Fig. 2.

$Hb + bP$ or $Ha - aP$ is evidently equal to HP. Example.—Suppose the greatest altitude of a circumpolar star was observed to be $66^{\circ} 48' 40''$, and its least $36^{\circ} 18' 20''$; required the latitude of the place of observation.

Greatest observed altitude	66	48	40	
Refraction to be subtracted	0	0	24	
<hr/>				
True altitude of the star	66	48	16	
Least observed altitude	36	18	20	
Refraction answering to this altitude	0	1	18	
<hr/>				
True altitude of the star	36	17	2	
Greatest altitude of the same star	66	48	16	
<hr/>				
Sum of their altitudes	103	5	18	
<hr/>				
LATITUDE of the place	half sum	51	32	39

It is also evident that if half the difference of the two altitudes, which is $15^{\circ} 13' 37''$, be added to the less altitude $36^{\circ} 17' 2''$, or subtracted from the greater, $66^{\circ} 48' 16''$, their sum or difference will be $51^{\circ} 32' 39''$, which is the same as before.—Myers's Geography. Introduction.

LATITUDES, INCREASING, is a name for the enlarged parts of the meridian in the construction of Mercator's Chart; and these are also frequently styled meridional parts. Tables of them are accurately calculated, and are of great utility in the construction and use of these maps. The following table shows the lengths which ought to be given to the degrees of latitude, in charts of this kind, answering to the corresponding increase in the longitude. It will be sufficient for

LATITUDES, INCREASING, is a name for the enlarged parts of the meridian in the construction

common purposes; but, when the length is required for every minute of the quadrant, Robertson's Navigation, or any of the published tables, may be consulted.

LATIUM, in ancient geography, the country of the Latins, at first contained within very narrow bounds, but afterwards increased by the accession of various people. The appellation, according to Virgil, is derived from *latendo*, concealing, from Saturn's lying hid there from the hostile pursuits of his son Jupiter; and from Latium comes the name Latini, the people; though Dionysius Halicarnassæus derives it from king Latinus, who reigned about the time of the Trojan war. But, whatever be in this, it is certain that Latium, when under Æneas and his descendants, or the Alban kings, contained only the Latins, exclusive of the Æqui, Volsci, and Hernici; only that Æneas reckoned the Rutuli, after their conquest, among the Latins. And this constituted the ancient Latium confined to the Latins: but afterwards, under the kings, and after their time, it reached from the Tiber to Circeii. Under the consuls the country of the Æqui, Volsci, Hernici, &c., after long and bloody wars, was added to Latium, under the appellation adjectitious or superadded Latium, as far as the river Liris, the eastern boundary, and to the north as far as the Marsi and Sabines. The various people, which in succession occupied Latium, were the Aborigines, the Pelasgi, the Arcades, the Siculi, the Arunci, the Rutuli; and, beyond Circeii, the Volsci, the Osci, the Ausones: but the time and order in which they occupied the country are difficult to determine.

LATMUS, in ancient geography, a mountain of Ionia, or on the confines of Caria, famous for the fable of Endymion, of whom Diana was said to be enamoured: hence called Latmius Heros, and Latmius Venator. In the mountain was a cave in which Endymion dwelt. (Scholiast on Apollonius Rhodius). It is supposed by Hecætaus to be the Phtheiron Mons of Homer; but by Strabo to be Graius Mons.

LATOMIA properly signifies a stone quarry: but the places whence stones had been dug having been made use of sometimes for dungeons, jails, or places for criminals, it is often applied as a name for a prison. There was a place of confinement of this sort at Rome, near the Tullianum; another at Syracuse, in which, according to Cicero, Verres shut up Roman citizens.

LATONA, in mythology, a pagan goddess, whose history is very obscure. Hesiod makes her the daughter of the Titan Coëus, and Phœbe his sister. She was admired for her beauty, and beloved by Jupiter. Juno, always jealous of her husband's amours, made Latona the object of her vengeance, and sent the serpent Python to persecute her. Latona wandered from place to place in the time of her pregnancy, continually alarmed for fear of Python. She was driven from heaven; and Terra, influenced by Juno, refused to give her a place where she might rest and bring forth. Neptune, moved with compassion, struck with his trident, and made immoveable the island of Delos, which before wandered in the Ægean Sea, appearing sometimes above and sometimes below the surface. Latona, changed into a quail by Jupiter, came to Delos; where she resumed her original shape, and gave birth to Apollo and Diana, leaning against a palm tree or an olive. Her repose was of short duration; Juno discovered her retreat, and obliged her to fly from Delos. She wandered over the greatest part of the world; and in Caria, where her fatigue compelled her to stop, she was insulted and ridiculed by the peasants, of whom she asked for water while they were weeding a marsh. Their refusal and insolence provoked her, and she intreated Jupiter to punish their barbarity, who changed them all into frogs. She was also insulted by Niobe, who boasted herself greater than the mother of Apollo and Diana, and ridiculed the presents which the piety of her neighbours had offered to Latona. See NIÖBE. At last Latona, though persecuted by Juno, became a powerful deity, and saw her children receive divine honors. Her worship was generally established where her children received adoration; particularly at Argos, Delos, &c., where she had temples. She had an oracle in Egypt, celebrated for the true and decisive answers which it gave. Latona, Venus, and Diana, were the three goddesses most in veneration among the Roman women.

LATOPOLIS, an ancient town of Egypt, so called from the fish Latus, which Strabo tells us the inhabitants worshipped as well as Minerva.

LATRANT, *adj.* *Lat. latrans.* Barking.

They care be first the various gifts to trace,
The minds and genius of the *latrant* race.

Tickell.

LATRIA. Fr. *latría*; Gr. *λατρεία*; Lat. *latría*. The highest kind of worship; distinguished by the papists from *dulia*, or inferior worship.

The image of the cross they worship with divine honour.—For in the very pontifical, published by the authority of pope Clement VIII., these words are found, The legat's cross must be on the right hand, because *latría* or divine honour is due to it.

Bishop Taylor.

LATRIA, in theology, is that religious worship due only to God. The Romanists say, 'They honor God with the worship of *latría*, and the saints with the worship of *dulia*: but the terms, however distinct, are usually confounded. See however, on this point, the foregoing extract from Bishop Taylor. Mr. Daille seems to own that some of the fathers of the fourth century allowed the distinction between *latría* and *dulia*. See ADORATION.

LATRUNCULI, a game amongst the Romans, of much the same nature with our chess. The *latrunculi* were properly the chess-men, called also *latrones* and *calculi*. They were made of glass, and distinguished by black and white colors. Sometimes they were made of wax or other convenient substances. Some give the invention of this game to Palamædes when at the siege of Troy; Seneca attributes it to Chilon, one of the seven Grecian sages; others honor Pyrrhus with the invention; and others again contend that it is of Persian origin. Frequent allusions to this game are met with in the Roman classics, and a little poem was written upon it, addressed to Piso, which some say was the work of Ovid, others of Lucan, in the end of some editions of whose works it is to be found, and to which we refer for a fuller account of the game. This game expresses so well the chance and order of war, that it is, with great appearance of probability, attributed to some military officer as the inventor. One Cæus Julius was so exceedingly fond of chess, that after he was sentenced to death by Caligula, he was found playing, and, on being interrupted in his game by a call to execution, he obeyed the summons, but first desired the centurion who brought the fatal order, to bear witness that he had one man upon the board more than his antagonist, that he might not falsely brag of victory when he should be no more!

LATTALATTA, an island adjacent to Gilolo, in the Eastern seas, about twenty-five miles in circumference. It is divided from that of Tappa by a strait only about a mile and a half in length, and in some places not above forty yards broad. Between Lattalatta and Mandioly the strait is about eight miles across. Long. 126° 50' E., lat. 0° 20' S.

LATTEN, *n. s.* Fr. *leton*; Belg. *latoen*; Ital. *lattone*; Welsh, *lattwn*. Brass; a mixture of copper and calaminaris stone.

And hise feet lyk to *latoun* as in a brenynge chymney. *Wicliffe. Apoc. 1.*

To make lamp-black, take a torch or link, and hold it under the bottom of a *latten* bason, and, as it groweth black within, strike it with a feather into some shell. *Peacham.*

LATTEN, in the manufactures, is a term used

for iron plates tinned over, of which cannisters, &c., are made. Plates of iron being prepared of a proper thinness are smoothed by rusting them in an acid, with which they fill certain troughs, and then put in the plates, which they turn once or twice a-day, that they may be equally rusted over. After this they are taken out, and well scoured with sand; and, to prevent their rusting again, are immediately plunged into pure water, in which they are to be left till the instant they are to be tinned or blanchd; the manner of doing which is this: they flux the tin in a large iron crucible, which has the figure of an oblong pyramid with four faces. The crucible is heated only from below, its upper part being luted with the furnace all round. It is always deeper than the plates which are to be tinned are long; they plunge them in, and the tin ought to swim over them; for this purpose artificers of different trades prepare plates of different shapes, though M. Reaumur thinks them all excusable. But the Germans use no sort of preparation of the iron to make it receive the tin, more than the keeping it always steeped in water till the time; only, when the tin is melted in the crucible, they cover it with a layer of a sort of fried suet, which is usually two inches thick, and the plate must pass through this before it can come to the melted tin. The first use of this covering is to keep the tin from burning; for, if any part should take fire, the suet would soon moisten it, and reduce it to its primitive state again. The blanchers say, this suet is a compounded matter. The melted tin must also have a certain degree of heat: for, if it is not hot enough, it will not stick to the iron; and, if it is too hot, it will cover it with too thin a coat, and the plates will have several colors, as red, blue, and purple, and upon the whole will have a cast of yellow. To prevent this, by knowing when the fire has a proper degree of heat, they might try with small pieces of iron; but, in general, habit teaches them to know the degree, and they put in the iron when the tin is at a different standard of heat, according as they would give it a thicker or thinner coat. Sometimes also they give the plates a double layer, as they would have them very thickly covered. This they do by dipping them into the tin when very hot the first time, and when less hot the second. The tin which is to give the second coat must be fresh covered with suet; and that with the common suet; not the prepared.

LATTICE, *n. s.* Fr. *lattis*; written by Junius *lettice*, and derived from *λεττερον*, a hindring iron, or iron stop; but by Skinner more probably imagined to be derived from *lath*.

The mother of Sisera looked out at a window, and cried through the *lattice*. *Judges v. 28.*

My good window of *lattice*, fare thee well; thy casement I need not open, I look through thee. *Shakspeare.*

Up into the watch-tower get,
And see all things despoil'd of fallacies:
Thou shalt not peep through *lattices* of eyes,
Nor hear through labyrinths of ears, nor learn
By circuit or collections to discern. *Donne.*

The trembling leaves through which he played,
Dappling the walk with light and shade,

Like lattice windows, give the spy
 Room but to peep with half an eye. *Cleveland.*
 No bliss has life to boast, till death can give
 Far greater. Life's a debtor to the grave;
 Dark lattice! letting in eternal day. *Young.*
 While her young hand,
 Fair as the moonlight of which it seems part,
 So delicately white, it trembles in
 The act of opening the forbidden lattice,
 To let in love through music, makes his heart
 Thrill like his lyre-strings at the sight. *Byron.*

LATTIMO, in the glass trade, a name for a fine milk-white glass. There are several ways of making it, but the best of all is this: take 4 cwt. of crystal frit, and 60 lbs. of calcined tin, and 2½ lbs. of prepared manganese: mix these well with the frit, and set them in a pot in a furnace to melt and refine. At the end of eighteen hours this will be purified; then cast it into water, purify it again afterwards in the furnace, and make a proof of it. If it be too clear, add 15 lbs. more of calcined tin; mix it well with the metal, and let it stand one day to purify; it will then be of a whiteness surpassing even that of snow, and fit to work into vessels.

LATUS, in ichthyology, a fish of the coracinus or umbra kind, caught in the Nile, the Adriatic, and the Mediterranean. It resembles the coracinus, but is larger, wants the beard, and its body is rounder. It is esteemed very delicate.

LAVA. Lat. *lavo*. See **LAVE**. The fused substance that flows from volcanoes.

Nymphs! your fine forms with steps impassive
 mock
 Earth's vaulted roofs of adamantine rock;
 Round her still centre tread the burning soil,
 And watch the billowy lavas, as they boil. *Darwin.*

LAVA. See **VOLCANO**.

LAVAL, a considerable walled town in the north of France, the capital of the department of the Mayenne. It is situated on the river of that name. It has two castles, five churches, and three hospitals, with a modern monastery of the order of La Trappe. The linen manufacture is carried on to great extent; and that of serge, flannel, and cotton. Population 15,200. Fifteen miles south of Mayenne, and forty west of Le Mans.

LAVANDULA, lavender: a genus of the angiospermia order, and didynamia class of plants: natural order forty-second, verticillatæ: CAL. ovate, and a little dentated, supported by a bracten or floral leaf: cor. is resupinated; the stamina within the tube.

1. *L. dentata*, the dentate-leaved stæchas, hath a woody stalk, branching on every side three or four feet high; leaves deeply indented in a pinnated manner; and the branches terminated by scaly four-cornered spikes of flowers, appearing most part of summer.

2. *L. spica*, the lavender spike, hath a short shrubby stalk, rising two or three feet high; small spear-shaped entire leaves; and from the ends of the branches, numerous, long, erect, naked spikes of small ringent flowers, of different colors in the varieties. The varieties of this are common narrow-leaved lavender, with blue flowers, and with white flowers; broad-leaved lavender; dwarf lavender: all of them flowering

in July. This species is the common lavender; but the narrow-leaved variety, with blue flowers, is the sort usually cultivated for its flowers, for medicine, &c.

3. *L. stoechas*, or French lavender, hath a shrubby very branchy stalk, rising two or three feet high; very narrow, spear-shaped, pointed, hoary leaves, opposite; and all the branches terminated by short bushy spikes of purple flowers in June and July; succeeded by seeds in August. There is a variety with white flowers. All the sorts are propagated plentifully by slips or cuttings of their young shoots in spring. In March or April take off a quantity of slips or cuttings, from three or four to six inches long; strip off the under leaves; then plant them in a shady border, four inches asunder; give a good watering, repeat it occasionally in dry weather, and the plants will be well rooted in summer, and each become a good plant, fit to be transplanted into any place early in autumn, that is, September or October; removing them, if possible, with balls of earth; and, if intended to plant them for use, set them in rows two or three feet asunder, and two feet distance in each row: if any are designed for the shrubbery they should be stationed singly at good distances near the front. The dentata species, being tender, should be potted to move to shelter in winter. The *lavandula stoechas* is also often raised from seed, sown in March or April, in a bed of light earth. The last two species are proper both for the kitchen-garden, for medicinal and other family uses, and to plant in the pleasure ground to adorn the front of small shrubbery compartments, where they will increase the variety very agreeably; and are finely scented aromatics, both when growing, and their flowers when gathered. The flowers of this species are gathered for use in July, which being the time of their perfection, cut off the spikes close in a dry day, and tie them in small bunches for use. These and the summits are in a very eminent degree cephalic and nervine. They are given in palsies, vertigos, lethargies, tremors, and suppression of the menstrual evacuation. The compound spirit distilled from them is famous in these and many similar cases. The distilled oil is particularly celebrated for destroying the pediculi inguinales, and other cutaneous insects.

LAVATER (John Caspar), the celebrated physiognomist, was born at Zurich, in 1740. He studied theology, but without making himself master of the learned languages, which he often afterwards regretted. He was first appointed preacher to the Orphan House, and afterwards, in 1778, deacon and pastor of the principal church of St. Peter at Zurich, in which office he continued till his death. His peculiar religious tenets are to be found in his various works: particularly in his *View of Immortality*; his *Pocket Bible*; his *Messiah*; his *Pontius Pilate*; his *Treatise on Miracles*; his *Sermons on the Existence of the Devil*; his *Visions*; and his *Observations on important Passages in the Evangelists*. For a long time he kept a journal, of which above fifty copies were made out, and sent to his principal partisans abroad, who dispersed copies of them among their friends. The

evangelical doctrine and duty of brotherly love were always the chief subjects of these apostolical epistles. In the midst of these various labors, he found time to compose his Treatise on Physiognomy, a work which has rendered his name universally known throughout Europe and America. The opinions and theory which he published were a medley of judicious observations, ingenious conjectures, and fanciful reveries. The novelty as well as mystery of the subject greatly attracted at first the public attention, and every person was eager to read his neighbour's heart in his face. In Switzerland, Germany, France, Britain, and North America, vast numbers became passionate admirers of his theory. His books were multiplied in many editions, and repeated translations: and the mania is to this day far from being extinct. While the Helvetians were trembling under the oppressions of the French pro-consuls, Rapinat, Schaumburg, and their associates, who tyrannised over the brave Swiss, Lavater wrote his celebrated Appeal to the French Government, and preached the rights of his countrymen, even while the sword of vengeance was hanging over him: nor did he desist, till he was torn from his congregation, as a preacher of sedition and anarchy. He was first sent to Schaffhausen as a hostage, but returned soon after, without any interruption, through the French army. His death happened in consequence of some wounds which he received from a Swiss soldier, when Zurich was taken from the Austrians and Russians, by general Massena, in autumn 1799.

LAVATERA, in botany, a genus of the polyandria order, and polydelphia class of plants: natural order thirty-seventh, columnifera: external CAL. double and trifid; the arilli or seed-coats are very many and monospermous. There are several species, most of them herbaceous flowery annuals, or shrubby perennials, growing erect from two or three, to eight or ten feet high, garnished with large roundish, heart-shaped, and angular leaves, and quinquepetalous flowers of the mallow kind. They are easily propagated by seed in the open ground in the spring; and thrive best when they are sown where they are designed to remain. The lavatera tribe affect a warm sandy situation and soil, in which they will sometimes continue to exhibit their beauties for many years; but in general they are short-lived, continuing only two or three years; this renders them peculiarly eligible to be scattered plentifully in a newly made shrubbery; they will add warmth to young plants, and will die away themselves before the spaces they occupy will be required by the surrounding shrubs.

LAVATORY, or **LAVADERO**, a name given to certain places in Chili and Peru, where gold is obtained from the earth by washing.

LAUBAN, or **LUBAN**, a manufacturing town of Prussia, in Upper Lusatia, on the Queis. Of late its woollen manufactures are declined, and those of cotton and linen have the chief attention. Here is a central school, a house of correction, a foundling-hospital, and a convent. Across the river are dye-works and bleachfields. Inhabitants 5000. Sixty-two miles north of Dresden, and seventy-two N. N. E. of Prague.

LAUD, *n. s. & v. a.*

LAUD'ABLE, *adj.*

LAUD'ABLENESS, *n. s.*

LAUD'ABLY, *adv.*

orate.

Lat. laus, laudo, laudabilis. Praise to God or man: to laud is to praise or celebrate.

And the honour they did to the laurir
Is for by it they have ther *laud* wholly,
Ther triumph eke and martial glory,
Which unto them is more perfitte richesse,
Than any wight man can or gesse. *Chaucer.*
I'm in this earthly world, where to do harm
Is often *laudable*; but to do good, sometime
Accounted dangerous folly. *Shakspeare. Macbeth.*
We have certain hymns and services, which we
say daily of *laud* and thanks to God for his marvellous works. *Bacon.*

In the book of Psalms, the *lauds* make up a very great part of it. *Government of the Tongue.*

The holy Apostle doth recommend to us;—carefully to perform things good and *laudable*, eschewing whatever is bad or culpable. *Barrow.*

Obsolete words may be *laudably* revived when either they are sounding or significant. *Dryden.*

Affectation endeavours to correct natural defects, and has always the *laudable* aim of pleasing, though it always misses it. *Locke*

Good blood, and a due projectile motion or circulation, are necessary to convert the aliment into *laudable* animal juices. *Arbuthnot.*

O thou almighty and eternal Creator, having considered the heavens the work of thy fingers, the moon and the stars which thou hast ordained, with all the company of heaven, we *laud* and magnify thy glorious name. *Bentley.*

Doubtless, O guest, great *laud* and praise were mine,

Replied the swain, for spotless faith divine:

If, after social rites, and gifts bestowed,
I stained my hospitable hearth with blood. *Pope.*

Their example will not only be your motive to *laudable* pursuits, but a mirror to your mind.

Mason.

LAUD (William), archbishop of Canterbury, in the seventeenth century, was born at Reading in 1573, and educated at St. John's College, Oxford, of which he was afterwards a fellow. In 1610 he entered into orders. In 1611 he was elected president of St. John's College; and, his election being disputed, king James confirmed it. The same year he was sworn the king's chaplain. In 1621 he was nominated bishop of St. David's; and in 1628 bishop of London. In 1630 he was elected chancellor of the University of Oxford. In 1633 he attended the king into Scotland, and was sworn a privy councillor of that kingdom. In the same year he succeeded archbishop Abbot in the see of Canterbury; and soon after came out the king's declaration concerning lawful sports on Sundays, which the archbishop was charged with having revived and enlarged, and also with the vexatious prosecutions of such clergymen as refused to read it in their churches. In 1634-5 he was in the committee of Trade and the King's Revenue; on the 4th of March following he was appointed one of the Commissioners of Treasury; and on the 6th of March, 1635-6, he received the staff of lord High Treasurer. To prevent the printing and publishing of what he thought improper books, he procured a decree to be passed in the star-chamber, on the 11th

of July, 1637, whereby it was enjoined that the master-printers should be reduced to a certain number, and that none of them should print any books till they were licensed, either by the archbishop, or the bishop of London, or some of their chaplains, or by the chancellors or vice-chancellors of the universities. A new parliament being summoned met on the 13th April, 1640; and the convocation on the day following; but the commons launching out into complaints against the archbishop, and insisting upon a redress of grievances before they granted any supply, the parliament was dissolved on the 7th of May. The convocation, however, continued sitting; and made seventeen cantons, which were supposed to be formed under the immediate direction of the archbishop. In the beginning of the long parliament he was attacked on account of those canons; and they being condemned by the house of commons on the 16th of December, 1640, 'as containing many things contrary to the king's prerogative, to the fundamental laws and statutes of this realm; to the rights of parliament, to the property and liberty of the subject, and tending to sedition, and of dangerous consequence;' he was, on the 18th of December, accused by the commons of high treason, and sent to the Tower. Being tried before the house of lords, for endeavouring to subvert the laws, and to overthrow the Protestant religion, he was found guilty, and beheaded on Tower Hill on January 10th following, in the seventy-second year of his age. This learned prelate, notwithstanding his being charged with a design to bring in popery, wrote an answer to Dr. Fisher, which is esteemed one of the best pieces that has been printed against that religion. When he was privately offered a cardinal's hat by the pope, he refused it, saying, that 'something dwelt within him which would not suffer his compliance, till Rome was other than it is.' He was temperate in his diet, and regular in his private life; but his fondness for introducing new ceremonies, in which he showed an indiscreet zeal, his encouraging various sports on Sundays, his illegal and cruel severity in the star-chamber and high commission courts, and the fury with which he persecuted the dissenters, and all who presumed to contradict his sentiments, exposed him to deserved popular hatred. Besides his Answer to Fisher, he published several Sermons, and other works.

LAUDANUM. See OPIUM.

LAUDATIO, in a legal sense, was anciently the testimony delivered in court of the accused person's good behaviour and integrity of life. It resembled the custom which prevails in our trials, of calling persons to speak to the character of the prisoner. The least number of the laudatores amongst the Romans was ten.

LAUDER, an ancient royal borough in a parish of the same name, lately much improved. In the reign of king James III. the nobility, whom he had summoned to meet him in this town, on public business, seized his favorite minister, Sir Robert Cochran, whom he had raised from the rank of a common mason to be earl of Mar, and hung him, with his associates, over Lauder Bridge, in sight of the king and his army. Lau-

der has five fairs, and joins with Jedburgh, Haddington, Dunbar, and North Berwick, in electing a representative in the imperial parliament. It is twenty-five miles south of Edinburgh, and twenty-four west of Berwick.

LAUDER (William), a native of Scotland, educated at the university of Edinburgh, where he finished his studies with great reputation. In 1739 he published, at Edinburgh, an edition of Johnston's Psalms. In 1742 he was recommended by Messrs. Cuming and Maclaurin, professors of ecclesiastical history and mathematics, to the mastership of the grammar school at Dundee, then vacant. Whether he succeeded in the application or not is uncertain; but a few years afterwards he figured in London, where he endeavoured to ruin the reputation of Milton; an attempt which ended in the destruction of his own. His reasons for the attack probably sprung from the virulence of a violent party spirit, which triumphed over every principle of honor and honesty. He commenced his nefarious operations in *The Gentleman's Magazine*, 1747; and, finding that his forgeries were not detected, was encouraged in 1751 to collect them, with additions, into a volume, entitled, *An Essay on Milton's Use and Imitation of the Moderns in his Paradise Lost*, 8vo.; the object of which was to prove that our great bard had pirated in that work the thoughts and expressions of certain modern Latin poets. The fidelity of his quotations had been doubted by several people; and the falsehood of them was soon after exhibited by Dr. Douglas, bishop of Salisbury, in a pamphlet entitled *Milton vindicated from the Charge of Plagiarism* brought against him by Lauder, and Lauder himself convicted of several Forgeries and gross Impositions on the Public: In a Letter humbly addressed to the Right Honorable the Earl of Bath, 1751, 8vo. The appearance of this detection overwhelmed Lauder with confusion. It was demonstrated that this adventurer had thrust into his pretended extracts, from the works of Massenius, Taubmannus, &c., whole lines of a bad Latin translation of Milton's work; and then quoted them against the poet. He subscribed a confession, dictated by a learned friend, wherein he ingenuously acknowledged his offence. He afterwards imputed his conduct to various motives; abused the few friends who continued to countenance him; and, finding that his character was not to be retrieved, quitted the kingdom, and went to Barbadoes, where he some time kept a school. His behaviour there was mean and despicable; and he passed the remainder of his life in universal contempt. He died about the year 1771.

LAUDICENI, amongst the Romans, applauders who for reward entered the rehearsal rooms, attended the repetition of plays, and were in waiting when orations were pronounced, in order to raise or increase the acclamation and applause.

LAUDOHN (Gideon), baron de, a celebrated general in the imperial service, born in 1716, was a native of Livonia. He made his first campaigns under marshal Munich, in the war of 1738, between the Russians and Turks; and was at the taking of Oczakow, Choczim, and

Stawutzchane, where the Turks were entirely defeated. Frederick the Great refused, in 1741, to take young Laudohn into his service, saying he did not like his countenance: he afterwards was compelled to acknowledge that, though he often admired the position of other generals, he had ever dreaded the battles of Laudohn. In 1756 he entered into the service of the house of Austria, with the rank of lieutenant-colonel, and made such a rapid progress, that within less than a year he was a general of artillery, and, within three years, commander in chief of the whole army. He rescued Olmutz, when besieged by the Prussians; beat the king himself at Frankfort on the Oder; at Zorndorf, took general Fouquet prisoner; carried Glatz and Schweidnitz by assault, and stopped the progress of Frederick in a war which might otherwise have proved fatal to the house of Austria. In 1778, when elevated to the rank of marshal, at the head of 60,000 men he prevented Henry, brother to the king of Prussia, from joining his army to that of the king. At Dubicza, Novi, Gradisca, and Belgrade, in the war between the emperor and the Turks, he had but to present himself before the place, and say with Cæsar, *Veni, vidi, vici*. But at his head-quarters in Moravia he was seized with a fever, in consequence of an operation he underwent for an obstruction in the urethra. His impatience under the medical applications, the impetuous ardor of his character, and the knowledge, above all, of his importance in the war, contributed to irritate his mind, and promote the violence of the fever. He resisted the application of cataplasms, before and after the incisions were made, with a fatal obstinacy, which raised the inflammation to such a height, that he expired under the accession of the fever on the 14th of July, 1790, in the seventy-fourth year of his age.

LAVE, *v. a. & v. n.* } Fr. *laver* and *lavo*ir;
LAVA'TION, *n. s.* } Lat. *lavo*. To wash;
LAVA'TORY, *n. s.* } bathe; lade or throw
LAV'ER. } up water: a lavation is
the act of washing: lavatory, a wash or a washing vessel: and laver is used wholly in the latter sense.

Unsafe, that we must *lave* our honours
In these so flatt'ring streams. *Shakspeare.*

Though hills were set on hills,
And seas met seas to guard thee, I would through:
I'd plough up rocks, steep as the Alps in dust,
And *lave* the Tyrrhene waters into clouds,
But I would reach thy head. *Ben Jonson.*

Such filthy stuff was by loose lewd varlets sung
before the chariot on the solemn day of her *lavation*.
Hakewill.

Lavatories, to wash the temples, hands, wrists, and jugulars, do potently profligate, and keep off the venom. *Harvey.*

But as I rose out of the *laving* stream,
Heaven opened her eternal doors, from whence
The spirit descended on me like a dove. *Milton.*

Let us go find the body where it lies
Soaked in his enemies' blood, and from the stream
With *lavers* pure, and cleansing herbs, wash off
The clodded gore. *Id. Agonistes.*

With roomy decks, her guns of mighty strength,
Whose low-laid mouths each mounting billow *laves*.

Deep in her draught, and warlike in her length,
She seems a sea-wasp flying on the waves.

Dryden.
Some stow their oars, or stop the leaky sides,
Another bolder yet the yard bestrides,
And folds the sails; a fourth with labour *laves*
The intruding seas, and waves ejects on waves.

Id.
In her chaste current oft the goddess *laves*,
And with celestial tears augments the waves.

Pope.
Young Aretus from forth his bridal bower
Brought the full *laver* o'er his hands to pour.

Id. Odyssey.
Fill high the bowl with Samian wine,
Our virgins dance beneath the shade—
I see their glorious black eyes shine;
But, gazing on each glowing maid,
My own the burning tear-drop *laves*,
To think such breasts must suckle slaves.

Byron.
'LAVEER', *v. n.* From VEER, which see.
To change the direction often in a course.

How easy 'tis, when destiny proves kind,
With full-spread sails to run before the wind:
But those that 'gainst stiff gales *laveering* go,
Must be at once resolved, and skilful too.

Dryden.
LAUENBURG, a duchy of north Germany, on the right bank of the Elbe; and, since 1815, belonging to Denmark. It has 425 square miles of undulating plain, and a soil, on the whole, well cultivated. It is watered by the Elbe, Steckenitz, and Trave; and has the two lakes of Schall and Ratzeburg, and the extensive forest of Sachsenwald. The inhabitants, who are in number 35,000, have a carrying trade in timber between the Elbe and the Baltic. This duchy was formerly independent; but on the extinction of the ducal family, in 1689, its possessions lapsed to the house of Hanover, and consisted, at that period, of the province just described, and a territory on the left bank of the Elbe. The latter, in 1815, was united with Luneburg; and the rest of the duchy ceded to Prussia, who soon after transferred it to Denmark. The inhabitants are Lutherans.

Lauenburg, the capital, stands on a rising ground, between the Elbe and the Steckenitz. Here is a toll on the Elbe, which produces an annual revenue of between £7000 and £8000; and the trade of the town is respectable. Population 2200. Thirty-five miles E. S. E. of Ham-burg.

LAV'ENDER, *n. s.* Lat. *lavandula*. A plant.

And then again he turneth to his play,
To spoil the pleasures of that paradise;
The wholesome sage, and *lavender* still grey,
Rank smelling rue, and cummin good for eyes.

Spenser.
The whole *lavender* plant has a highly aromati-
ck smell and taste, and is famous as a cephalick,
nervous, and uterine medicine. *Hill.*

LAVENDER. See LAVANDULA.

LAVENDER COTTON. See SANTOLINA.

LAVENDER, SEA. See STATICE.

LAVERNA, in antiquity, the goddess of thieves and cheats among the Romans, who honored her with public worship, because she was supposed to favor those who wished that

their designs might not be discovered. Varro says that she had an altar near one of the gates of Rome; hence called *porta lavernalis*.

LAUGH, *v. n., v. a. & n. s.* } Sax. *hlapan*;
LAUGH'ABLE, *adj.* } Goth. *hlaju*;
LAUGH'ER, *n. s.* } *hlæa* to rejoice;
LAUGH'INGLY, *adv.* } Teut. and Belg.
LAUGH'INGSTOCK, } *lachan*. Min-
LAUGH'TER. } sheu says with

some probability from Heb. *לעל*. To make the noise of sudden merriment, or that sudden mirth excites; to appear gay: to laugh at is to treat as only fit for laughter, or contemptuously; as an active verb, to deride; scorn: laugh, as a noun, is the convulsion caused by mirth: laughable, causing or fit to excite laughter: laughing-stock, a butt for ridicule: laughter, convulsion or noisy mirth.

Woo to you that now *leyghen* for ye schulen
mourne and wepe. *Wiclif. Luk 6.*

A wicked soul shall make him to be *laughed* to
scorn of his enemies. *Ecclus. vi. 4.*

The forlorn maiden, whom your eyes have seen
The *laughing-stock* of fortune's mockerie. *Spenser.*

You saw my master wink and *laugh* upon you.
Shakspeare.

There's one did *laugh* in's sleep, and one cried,
Murder!

They waked each other. *Id.*

'Twere better for you, if 'twere not known in
council; you'll be *laughed* at. *Shakspeare.*

Be bloody, bold, and resolute: *laugh* to scorn
The power of man. *Id. Macbeth.*

Nature hath framed strange fellows in her time:
Some that will ever more peep through their eye,
And *laugh* like parrots at a bagpiper;
And others of such vinegar aspect,
That they'll not show their teeth in way of smile,
Though Nestor swear the jest be *laughable*.
Shakspeare.

I am a common *laugher*. *Id.*

Pray you, let us not be *laughing-stocks* to other
men's humours. *Id.*

Laughing causeth a continued expulsion of the
breath with the loud noise, which maketh the inter-
jection of *laughing*, shaking of the breast and sides,
running of the eyes with water, if it be violent.

Bacon's Natural History.

Some say that *laughter* here
Keeps residence, but *laughter* fits not there,
Where darkness ever dwells, and melancholy fear.
Fletcher's Purple Island.

Abraham heard this news from the angel, and
laughed; Sarah heard it and *laughed*; Abraham
laughed for joy; Sarah for distrust. *Bp. Hull.*

The act of *laughter*, which is a sweet contraction
of the muscles of the face, and a pleasant agitation
of the vocal organs, is not merely voluntary, or
totally within the jurisdiction of ourselves.

Browne.

We find not that the *laughter-loving* dame
Mournd for Anchises. *Waller.*

Then *laughs* the childish year with flowrets crowned.
Dryden.

Casaubon confesses Persius was not good at turn-
ing things into a pleasant ridicule; or, in other
words, that he was not a *laughable* writer. *Id.*

Supine credulous frailty exposes a man to be both
a prey and *laughing-stock* at once. *L'Strange.*

The dissolute and abandoned, before they are
aware of it, are betrayed to *laugh* at themselves, and
upon reflection find that they are merry at their own
expence. *Addison.*

In order to look into any person's temper, I generally make my first observations upon his *laugh*, whether he is easily moved, and what are the passages which throw him into that agreeable kind of convulsion. *Steels.*

Pain or pleasure, grief or *laughter*. *Prior.*
That mind is dissolute and ungoverned, which must be hurried out of itself by loud *laughter* or sensual pleasure, or else be wholly inactive. *Steels.*
The plenteous board, high-heaped with cates di-
vine,

And o'er the foaming oowl the *laughing* wine. *Pope.*

No wit to flatter left of all his store;
No fool to *laugh* at, which he valued more. *Id.*

Me gentle Delia beckons from the plain,
Then hid in shades, eludes her eager swain;
But feigns a *laugh*, to see me search around. *Id.*
Some sober men cannot be of the general opinion,
but the *laughers* are much the majority. *Id.*

A reserved man is in a continual conflict with the
social part of his nature, and even grudges himself
the *laugh* into which he is sometimes betrayed.

Shenstone.

Democritus, who was always *laughing*, lived one
hundred and nine years; Heraclitus, who never ceased
crying, only sixty. *Laughing* then is best; and to
laugh at one another is perfectly justifiable, since we
are told that the gods themselves, though they made
us as they pleased, cannot help *laughing* at us.

Steevens.

Each dimpling cheek with warmer blushes dyes,
Laughs on the lips, and lightens in the eyes.

Darwin.

Dainties he heeded not, nor gaude, nor toy
Save one short pipe of rudest minstrelsy:
Silent when glad; affectionate, though shy;
And now his look was most demurely sad;
And now he *laughed* aloud, yet none knew why.

Beattie.

The last of human sounds which rose,
As I was darted from my foes,
Was the wild shout of savage *laughter*,
Which on the wind came roaring after.

Byron.

LAUGHTER is an affection peculiar to mankind.
In laughter the eye-brows are raised about the
middle, and drawn down next the nose; the
eyes are almost shut; the mouth opens and shows
the teeth, the corners of the mouth being drawn
back and raised up; the cheeks seem puffed
up, and almost hide the eyes; the face is usually
red; the nostrils are open; and the eyes wet.

Authors attribute laughter to the fifth pair of
nerves, which sending branches to the eye, ear,
lips, tongue, palate, and muscles of the cheek,
parts of the mouth, præcordia, &c., there hence
arises a sympathy, or consent, between all these
parts; so that when one of them is acted upon
the others are proportionally affected. Hence a
thing seen or smelt affects the glands, and parts
of the mouth; a thing seen or heard, that is
shameful, affects the cheeks with blushes: on
the contrary, if it please and tickle the fancy, it
affects the præcordia, and muscles of the mouth
and face with laughter; if it cause sadness and
melancholy, it likewise affects the præcordia,
and demonstrates itself by causing the glands of
the eyes to emit tears. The affection of the
mind by which laughter is produced is seem-
ingly so very different from the other passions
with which we are endowed, that it has engaged

the attention of very eminent persons. 1. Aristotle, in the fifth chapter of his *Poetics*, observes of comedy, that 'it imitates those voices or meanesses only which partake of the ridiculous:—now the ridiculous', adds he, 'consists of some fault or turpitude not attended with great pain, and not destructive.' 2. 'The passion of laughter,' says Hobbes, 'is nothing else but sudden glory arising from some conception of some eminency in ourselves, by comparison with the infirmity of others, or with our own formerly. For men,' continues he, 'laugh at the follies of themselves past, when they come suddenly to remembrance, except when they bring with them any sudden dishonor.' 3. Akenside, in the third book of his excellent poem, treats of ridicule at considerable length. He gives a detail of ridiculous characters; ignorant pretenders to learning, boastful soldiers, and lying travellers, hypocritical churchmen, concealed politicians, &c. Having finished the detail of characters, he makes some general remarks on the cause of ridicule; and explains himself more fully in a prose definition, illustrated by examples, in these words: 'That which makes objects ridiculous is some ground of admiration or esteem connected with other more general circumstances comparatively worthless or deformed: or it is some circumstance of turpitude or deformity connected with what is in general excellent or beautiful; the inconsistent properties existing either in the objects themselves, or in the apprehension of the person to whom they relate; belonging always to the same order or class of beings; implying sentiment and design, and exciting no acute or vehement commotion of the heart.' 4. Hutcheson has given another account of this ludicrous quality, and seems to think that it is the contrast or opposition of dignity and meanness which occasions laughter.

LAUGIER (Mark Antony), an ingenious French author of the eighteenth century. He wrote, 1. An Essay on Architecture; 2. A History of Venice; 3. A History of the Peace of Belgrade. He died in 1769.

LAUGIERIA, in botany, a genus of the monogynia order, and pentandria class of plants: cor. is quinquefid; FRUIT, a plum, with a quinquelocular kernel, Species five, all natives of the south of Europe.

LAVINIUM, or **LAVINUM**, in ancient geography, a town of Latium, six miles east of Laurentum, so named from Lavinia, and built by the Trojans: the first town of Roman original in Latium, and the seat of the Dii Penates (Livy), situated near the river Numicus, between which and the Tiber Æneas landed, according to Virgil. Holstenius supposes the town to have stood on an eminence, now called Mount Levano.

LAVISH, *adj.* & *v. a.* } Old Fr. *laver*, to
LAV'ISHER, *n. s.* } dabble, throw about:
LAV'ISHLY, *adv.* } or from lave as Dr.
LAV'ISHMENT, *n. s.* } Johnson suggests.
LAV'ISHNESS. } Wasteful; profligate;
 profuse, liberal to excess; unrestrained: to lavish is to scatter with profusion, squander.

First got with guile, and then preserved with dread,
 And after spent with pride and *lavishness*.

Færicæ Queene.

Bellona's bridegroom, lapt in proof,
 Confronted him, curbing his *lavish* spirit.

Shakspeare.

My father's purposes have been mistook;
 And some about him have too *lavishly*
 Wrested his meaning and authority. *Id.*

His jolly brother, opposite in sense,
 Laughs at his thrift; and, *lavish* of expence,
 Quaffs, crams, and guttles, in his own defence.

Dryden.

Then laughs the childish year with flowrets
 crowned,
 And *lavishly* perfumes the fields around. *Id.*

If we consider *lavish* men carefully, we shall find it always proceeds from a certain incapacity of possessing themselves, and finding enjoyment in their own minds. *Spectator.*

Should we thus lead them to a field of slaughter,
 Might not the impartial world with reason say,
 We *lavished* at our deaths the blood of thousands?

Addison.

The dame has been too *lavish* of her feast,
 And fed him till he loaths. *Roue's Jane Shore.*

Praise to a wit is like rain to a tender flower; if it be moderately bestowed, it cheers and revives; but, if too *lavishly*, overcharges and depresses him.

Pope.

But has the cause been truly stated? Have not lamentation and wonder been *lavished* on an evil that was never felt. *Johnson.*

Let us not then be so *lavish*, so unjust, as not to pay this debt; by spending some part, at least, if we cannot all or most, of our time and care upon that which has not the most indefeasible claim to it.

Mason.

Yes—from afar a landscape seems to rise,
 Deckt gorgeous by the *lavish* hand of Spring:
 Thin gilded clouds float light along the skies,
 And laughing loves disport on fluttering wing.

Beattie.

There youth, which needed not, nor thought of such
 Vain adjuncts, *lavished* its true bloom, and health,
 And bridal beauty, in the unwholesome dress
 Of flushed and crowded wassailers, and wasted
 Its hours of rest in dreaming this was pleasure.

Byron.

LAUNCESTON, the capital of Cornwall, called also Dunhivid, from its situation on a down. King Henry III. made it a free borough. It was formerly composed of two other boroughs, viz. Dunhivid and Newport. It was incorporated by queen Mary I. in 1555. It is governed by a mayor, recorder, and eight aldermen; has a free-school, founded by queen Elizabeth, and now returns one member. Its markets are on Thursday and Saturday, and it has four fairs. The chapel, which was enlarged in the reign of Henry VI., and converted into a parish church, was rebuilt in the time of Henry VIII. It is a handsome Gothic building, with a lofty tower, and stands near the centre of the town. On the side of one of the walls is a fine figure of St. Mary Magdalen, in a recumbent position. Here is a handsome meeting-house of the Methodists. It had a monastery and a noble castle, which, because of its strength, was called Castle Terrible, and was given by king Richard I. to his brother, afterwards king John. The lower part of its ancient castle is used for the gaol. It is seated on the Tamar, twenty-eight miles north of Plymouth, and 214 west by south of London.

LAUNCH, *v. n.* & *v. a.* Skinner says from *ance*, because a ship is pushed into water with great force. To cast a ship into water; to push to sea: hence to expatiate; rove; cast from the hand.

Launch out into the deep, and let down your nets for a draught. Luke v. 4.

From hence that general care and study springs, That *launching* and progression of the mind.

Davideis.

All art is used to sink episcopacy, and *launch* presbytery in England.

King Charles.

So short a stay prevails;

He soon equips the ship, supplies the sails, And gives the word to *launch.* Dryden.

The King of Heaven, obscure on high, Bared his red arm, and *launching* from the sky His written bolt, not shaking empty smoke, Down to the deep abyss the flaming fellow strook.

Id.

For general history, Raleigh and Howel are to be had. He who would *launch* further into the ocean, may consult Whear.

Locke.

Spenser has not contented himself with submissive imitation: he *launches* out into very flowery paths, which still conduct him into one great road.

Prior.

I have *launched* out of my subject on this article.

Arbutnot.

With stays and cordage last he rigged the ship, And rolled on leavers, *launched* her in the deep.

Pope.

He had not acted in the character of a suppliant, if he had *launched* out into a long oration.

Broome.

They little thought, that day of pain, When *launched*, as on the lightning's flash,

They bade me to destruction dash,

That one day I should come again,

With twice five thousand horse, to thank

The count for his uncourtous ride.

Byron.

LAUND, *n. s.* Fr. *lande*; Welsh *lawn*. Lawn; a plain extended between woods.

Under this thick-grown brake we'll shroud ourselves,

For through this *laund* anon the deer will come.

Shakspeare.

LAUNDER, in mineralogy, a name given in Devonshire, and other places, to a long and shallow trough, which receives the powdered ore after it comes out of the box or coffer, which is a sort of mortar, in which it is powdered with iron pestles. The powdered ore, which is washed into the launder by the water from the coffer, is always finest nearest the grate, and coarser all the way down.

LAUNDRESS, *n. s.* Fr. *lavandiere*; Ital.

LAUNDRY. } *lavandera*. Skinner thinks that *lavandresse* may have been the old word. A woman whose employment is to wash clothes: laundry, a room for washing clothes.

Take up these clothes here quickly; carry them to the *laundress* in Datchet Mead.

Shakspeare.

The countess of Richmond would often say, On condition the princes of Christendom would march against the Turks, she would willingly attend them, and be their *laundress*.

Camden.

Chalky water is too fretting, as appeareth in *laundry* of cloaths, which wear out apace.

Bacon.

The *laundress* must be sure to tear her smocks in the washing, and yet wash them but half.

Swift.

The affairs of the family ought to be consulted, whether they concern the stable, dairy, the pantry, or *laundry*.

Id.

LAUNOI, DE, or LAVOUIRUS (John), D. D., a learned French divine, born in 1691. Instead of seeking ecclesiastical preferment, he refused several good benefices, and devoted his time chiefly to church history. In pursuit of this study he visited Rome, where he acquired the esteem and friendship of Leo Allatus and Holstenius. He was a zealous defender of the liberties of the Gallican church; and wrote against legends and canonisations. His works make several large folio volumes. He lived in primitive simplicity, and died in 1678.

LAVOISIER (Anthony Laurence), the celebrated chemist, and one of the most eminent men of the eighteenth century, was born at Paris August 16th, 1743. Being of a noble family, he received a very liberal education, which he improved by the most unremitting industry. In his twenty-third year, on the 9th of April, 1766, the Academy of Sciences presented him with a gold medal, for his Dissertation on the best mode of enlightening the streets of a great city during the night. In 1768 he was admitted a member of that learned society, to whose service he chiefly devoted his scientific labors, and became one of its most active and useful associates. In these exertions his attention was successfully occupied with every branch of physical and mathematical science. The analysis of gypsum, the crystallisation of salts, the supposed conversion of water into earth, the effects produced by the grande deloupe of the garden of the infantia, the congelation of water, the project of bringing water from the Yvette to Paris, the phenomena of thunder and lightning, of the aurora borealis, of electricity, mineralogy, and various other important objects of experimental science, gave constant employment to the genius and talents of this great chemist. Journeys, in concert with M. Guettard, through every province of France, enabled him to procure numerous materials for a proper description and arrangement of the various genera and species in the mineral kingdom. These he arranged into a kind of chart, which served as a ground-work for a more laborious work on the Revolutions of the Globe, and the formation of Couches de la Terre; a work of which two beautiful sketches are to be seen in the Memoirs of the French Academy for 1772 and 1787. All his time and fortune were devoted to the culture of the sciences in general, nor did he seem to have an attachment to one science more than to another, till the investigations of Black, Priestley, and Cavendish, into the nature and properties of the gases, opened a new sphere for the exertions of genius; and, when Mr. Cavendish arrived in France, Lavoisier repeated and varied their experiments in every possible manner. In the end of 1735 he presented to the Academy his first chemical work, entitled New Experiments relative to the Existence of a fixed elastic fluid in certain substances, and to the phenomena which result from its fixation or disengagement. This came out in Paris just about the same time that Dr. Priestley's treatise on the different species of air appeared at London; and, though it may be considered rather as a syllabus or outline than a complete treatise, yet it was executed with so much perspicuity, and

his processes were described in it with so much exactness and accuracy, that it surpassed every former publication of the kind. Lavoisier now began to hold in his house philosophical assemblies, to which he invited every literary character celebrated in geometrical, chemical, or physical investigations. In these instructive conversations, discussions were regularly held, similar to those that preceded the first establishment of academies; the opinions of the most eminent literati in Europe were canvassed, the most new and striking passages in the works of foreign authors were quoted and discussed, and modern theories were investigated and tried by the touchstone of experiment. To these assemblies the literati of all nations found a ready admission; and Priestley, Watt, Bolton, Blagden, Fontana, Jacquin, Ingenhousz, Landriani, and other illustrious physiologists of Great Britain, Germany, and Italy, mingled in company with Berthollet, Monge, Borda, Cousin, Laplace, Lagrange, Guyton, Meunier, and Vandermonde. Thus Lavoisier became the founder of the French chemical school. This school, in which every individual was both tutor and pupil, lasted from 1776 to 1792; but the period when it flourished in its greatest vigor was between 1780 and 1788. Ancient and baseless theories were exploded, and the ideal doctrine of phlogiston vanished before the decisive proofs of experiment. In the twenty volumes published by the Academy of Sciences, between 1773 and 1793, there are forty memoirs by Lavoisier, replete with all the most important phenomena of the science. At last, in 1789, he published his Elements of Chemistry, which presented the science in a form entirely new, and completely distinguished the discoveries and improvements of Lavoisier from those of Dr. Priestley, and former chemists. This virtuous and truly great man could not, however, escape the bloody fangs of revolutionary violence. After having been repeatedly elected by his fellow-citizens a member of the national Assembly and National Convention, and a commissioner of the National Treasury, &c., he was falsely accused of being an accomplice in a plot to favor the success of the enemies of the republic; and, being brought before the revolutionary tribunal, was condemned to be guillotined. The bloody sentence was executed on the 9th of May 1794, to the regret of every friend to virtue, science, and humanity: his prosecutors, with barbarity worse than Gothic, refusing to allow him the respite of fourteen days to finish some important experiments in chemistry. See CHEMISTRY.

LAVOLTA. Fr. *lavolt*. An old dance.

I cannot sing,

Nor heel the high *lavolt*; nor sweeten talk;

Nor play at subtle games. *Shakspeare.*

LAVORO, TERRA DI, a considerable province of the north-west part of Naples, bordered by the Tuscan Sea on the south-west, the Campagna di Roma on the north-west, and on the east and south by other provinces of the Neapolitan territory; about 1720 square miles in superficial extent. It has a rich soil; towards the coast the country is level; but in the interior it is penetrated by various branches of the Apennines. Its rivers are the Gangliano, the Volturno, and the

Clanio. It contains also the lakes Fondi, Argano, Lucrino, Fusano, and Licalo. Here is made the famous lachrymæ Christi wine.

LAURA, in church history, a collection of small cells at some distance from each other, in which the hermits in ancient times lived together in a wilderness. These hermits did not live in community, but each monk provided for himself in his distinct cell. The most celebrated lauras mentioned in ecclesiastical history were in Palestine: as the laura of St. Euthymus; at four or five leagues distance from Jerusalem; the laura of St. Saba, near the brook Cedron; the laura of the Towers, near the river Jordan, &c.

LAURA, the celebrated mistress of Petrarch was born in 1310, at Avignon, and married to Hugh de Sades. See **PETRARCH**. She died of the plague in 1348, aged thirty-eight.

LAUREATE, or POET LAUREATE, an officer of the household of the kings of Britain.—Of the first institution of poets laureate, Wharton in his History of English Poetry has given the following account: ‘Great confusion has entered into this subject, on account of the degrees in grammar, which included rhetoric and versification, anciently taken in our universities, particularly at Oxford: on which occasion, a wreath of laurel was presented to the new graduate, who was afterwards usually styled Poeta laureatus. These scholastic laureations, however, seem to have given rise to the appellation in question. I will give some instances at Oxford, which at the same time will explain the nature of the studies for which our academical philologists received their rewards. About the year 1470 one John Watson, a student in grammar, obtained a concession to be graduated and laureated in that science; on condition that he composed 100 Latin verses in praise of the university, and a Latin comedy. Another grammarian was distinguished with the same badge, after having stipulated, that, at the next public act, he would affix the same number of hexameters on the great gates of St. Mary’s church, that they might be seen by the whole university. This was at that period the most convenient mode of publication. About the same time one Maurice Burchensaw, a scholar in rhetoric, supplicated to be admitted to read lectures, that is, to take a degree in that faculty; and his petition was granted, with a provision, that he should write 100 verses on the glory of the university, and not suffer Ovid’s Art of Love, and the Elegies of Pamphilus, to be studied in auditory. Not long afterwards, one John Balman, another rhetorician, having complied with the terms imposed, of explaining the first book of Tully’s Offices, and likewise the first of his Epistles, without any pecuniary emolument, was graduated in rhetoric; and a crown of laurel was publicly placed on his head by the chancellor of the university. About the year 1489, Skelton was laureated at Oxford, and in the year 1493 was permitted to wear his laurel at Cambridge. Robert Whittington affords the last instance of a rhetorical degree at Oxford. He was a secular priest, and eminent for his various treatises in grammar, and for his facility in Latin poetry; having exercised his art many years, and submitting to the customary demand

of 100 verses, he was honored with the laurel in the year 1512. With regard to the poet laureate of the kings of England, he is undoubtedly the same that is styled the king's versifier, and to whom 100 shillings were paid as his annual stipend in the year 1251. But when or how that title commenced, and whether this officer was ever solemnly crowned with laurel at his first investiture, I will not pretend to determine, after the researches of the learned Selden on this question have proved unsuccessful. It seems most probable, that the barbarous and inglorious name of versifier gradually gave way to an appellation of more elegance and dignity: or rather, that at length those only were in general invited to this appointment who had received academical sanction, and had merited a crown of laurel in the universities for their abilities in Latin composition, particularly Latin versification. Thus the king's laureate was nothing more than 'a graduated rhetorician employed in the service of the king.' That he originally wrote in Latin, appears from the ancient title versificator: and may be moreover collected from the two Latin poems, which Baston and Gulielmus, who appear to have respectively acted in the capacity of royal poets to Richard I. and Edward II., officially composed on Richard's crusade, and Edward's siege of Striveling Castle. And Bernard, successively poet-laureate of Henry VII. and VIII. affords a still stronger proof that this officer was a Latin scholar. Bernard was a native of Thoulouse and an Augustine monk. He was not only the king's poet laureate, as is supposed, but his historiographer, and preceptor in grammar to prince Arthur. He obtained many ecclesiastical preferments in England. All the pieces now to be found in character of poet laureate are in Latin. These are, An Address to Henry VIII., for the most auspicious beginning of the tenth year of his reign, with an Epithalamium on the marriage of Francis the dauphin of France with the king's daughter; A New Year's Gift for the year 1515; and, Verses wishing prosperity to his majesty's thirteenth year. He has left some Latin hymns; and many of his prose pieces, which he wrote in the quality of historiographer to both monarchs, are remaining. I am of opinion that it was not customary for the royal laureate to write in English till the reformation of religion had begun to diminish the veneration for the Latin language; or, rather, till the love of novelty, and a better sense of things, had banished the narrow pedantries of monastic erudition, and taught us to cultivate our native language.

LAUREL, *n. s.* } Fr. *laurier*; Ital. *lauro*;
 LAUREATE, *adj.* } Span. *lauriero*; Port. *lau-*
 LAUREATION, *n. s.* } *vero*, a tree. See LAURUS.
 LAUREATED, *adj.* } Laureate is decked with laurel, or pertaining to the poet so decked, or styled poet laureate: laureation, the act or state of taking degrees in a Scottish university: laurelled, crowned with laurels.

And whanne this worthy duc had thus ydon,
 He toke his host, and home he rit anon,
 With *laurer* crowned as a conquerour,
 And ther he liveth in joye and in honour
 Terme of his lif. *Chaucer. Cant. Tales.*

The laurel, weed of mighty conquerors,
 And poets sage. *Færie Queen.*

Hearst thou the news? my friend! the express is
 come
 With laurelled letters from the camp to Rome.

Dryden.

Bid Amaranthus all his beauty shed,
 And daffodillies fill their caps with tears,
 To strew the laureate hearse where Lycid lies.

Milton.

The laurel or cherry-bay, by cutting away the side
 branches, will rise to a large tree. *Mortimer.*

The laurels or laurel of the ancients is affirmed
 by naturalists to be what we call the bay tree.

Ainsworth.

Then future ages with delight shall see—
 How Plato's, Bacon's, Newton's, looks agree;
 Or in fair series laurelled bards be shown,
 A Virgil there, and here an Addison. *Pope.*
 Soft on her lap her laureate son reclines. *Id.*

If endless ages can outweigh an hour,
 Let not the laurel, but the palm inspire.

Young.

The beacons of surrounding foes—
 A king must lay his limbs at length,
 Are these the laurels and repose,
 For which the nations strain their strength?

Byron.

And being fluent—save indeed when fed ill—
 He lied with such a fervour of invention—
 There was no doubt he earned his laureat pension. *Id.*

LAUREL, See LAURUS, and PRUNUS.

LAUREL, ALEXANDRIAN. See RUSCUS.

LAUREL, SEA SIDE. See PHYLLANTHUS.

LAUREL MOUNTAINS, a ridge of mountains in the United States, extending from North Carolina to Pennsylvania, and forming part of the great range called the Alleghany Mountains. They lie west of the Alleghany ridge, and several head-waters of the Ohio rise among them. In one of them, about lat. 36°, there is a spring of water remarkably cold, and as blue as indigo. The Great Kanaway breaks through them in its way to the Ohio, in long. 81° 19' W., lat. 38° 30' N.

LAURELS, pieces of gold coined in the year 1619, with the king's head laureated, which gave them the name of laurels; the 20s. pieces whereof were marked with XX., the 10s. X: and 5s. pieces with V.

LAURENCE (St.), a river of North America. See LAWRENCE (St.).

LAURENS CASTRA. See LAURENTUM.

LAURENT, or St. LAURENT, an island of South America, near the coast of Peru, at the entrance of the harbour of Callao.

LAURENTALES, LAURENTALIA, or LAURENTALIA, called also Larentinalia, and Larentales, feasts celebrated among the Romans on the tenth of the kalends of January or 23d of December, in memory of Acca Laurentia, wife of the shepherd Faustulus, and nurse of Romulus and Remus. Acca Laurentia, from whom the solemnity took its name, is represented as no less remarkable for the beauty of her person, than her lasciviousness; on account of which she was nicknamed by her neighbours lupa, the she wolf; which has given rise to the tradition of Romulus and Remus being suckled by a wolf. She afterwards married a very rich man, who brought her great wealth, which, at her death, she left to the Roman people; in consideration whereof

they performed these honors to her memory, though others represent the feast as held in honor of Jupiter Latiaris. See **LARENTINALIA** and **LARES**.

LAURENTIUS, (Koster), one of the first printers, and, according to some, the inventor of the art, was born at Haerlem about 1370, and held several offices in the magistracy of that city. His first work was an *Horarium* containing the letters of the alphabet, the Lord's prayer, the apostles' creed, and two or three short prayers; the next was the *Speculum salutis*, in which he introduced pictures on wooden blocks; then *Donatus*, the larger size; and afterwards the same work in a less size. All these were printed on separate moveable wooden types fastened together by threads. It has been very erroneously supposed, that he quitted the profession, and died broken-hearted; but it is certain that he did not live to see the art brought to perfection. He died in 1440, aged seventy. His grandsons took his business and printed new editions of *Donatus* and the *speculum*. They afterwards reprinted the latter, with a Latin translation, in which they used their grandfather's wooden pictures; and printed the book partly on wooden blocks, partly on wooden separate types, according to Mr. Meerman, who has given an exact engraving of each kind, taken from different parts of the same book, which was published between the years 1442 and 1450. Nor did they stop here: they continued to print several editions of the *Speculum*, both in Latin and in Dutch; and many other works, particularly *Historia Alexandri Magni: Flavii Vedatii* (for *Vegetii*) *Renati Epitome de Re Militari*; and *Opera varia à Thomas à Kempis*. Of each of them Meerman has given an engraved specimen. They were all printed with separate wooden types; and, by their great neatness, are a proof that the descendants of Laurentius were industrious in improving his invention. *Kempis* was printed at Haerlem in 1472, and was the last known work of Laurentius's descendants, who soon after disposed of all their materials, and probably quitted their employment; as the use of fusile types was about that time universally diffused through Holland, by the settling of *Martens* at Alost, where he pursued the art with reputation for upwards of sixty years. See **PRINTING**.

LAURENTUM, or **LAURENS CASTRA**, in ancient geography, a town of Latium, supposed to be the royal residence of those most ancient kings, *Latinus*, *Picus*, and *Faunus*. (*Virgil*.) Hither the emperor *Commodus* retired during a pestilence. Its name was from an adjoining grove of bay trees, midway between *Ostia* and *Antium*.

LAURICOCHA, *Laururagua*, or *False Maranon*, a river of South America, which has its rise in a lake of the same name near *Guanuco*, in 11° S. lat. It sweeps with a circular course towards *Xauxa*; when, rising over the east side of the *Andes*, it flows northwards through *Chapoyas*, to *Jean de Braconeros*, and the *Ucayale* or *Amazons*, into which it falls, in lat. 4° 55' S. Its course is about 1000 miles.

LAURO (*Philip*), a celebrated painter, born

in Rome in 1623. He learned the first rudiments of the art from his father, *Balthasar*, who was himself a good painter. He afterwards studied under *Angelo Carosello*, his brother-in-law; and proved so great a proficient, that in a short time he far surpassed his tutor in design, coloring, and elegance of taste. He applied himself to painting historical subjects in a small size, enriching the back grounds with lively landscapes; but though his small paintings are most esteemed he finished several grand compositions for altarpieces. He died in 1694; and his works are eagerly purchased at high prices all over Europe.

LAURO, or **LAURON**, in ancient geography, a town of *Hispania Citra*, where *Cneius Pompeius*, son of *Pompey the Great*, was defeated and slain. It is now called *Lorigne*, and lies fifteen miles north of *Lliria* in *Valencia*.

LAURUS, the bay tree, a genus of the monogynia order, and emneandria class of plants; natural order twelfth, holoraceæ: CAL. none: COR. calycine, or serving in place of the calyx, and separtite; the nectarium with three glandules, each terminated by two bristles surrounding the germen. The interior filaments furnished with glandules at the base: the fruit a monospermous plum. There are several species; the following are the most remarkable:—

1. *L. æstivalis*, the deciduous bay, growing naturally in North America. It rises with an upright stem, covered with a purplish bark; having oblong, oval, acuminate, veined, deciduous leaves, two or three inches long, and half as broad, growing opposite; with small white flowers succeeded by red berries. The deciduous bay, in a moist rich soil, in which it principally delights, will grow to be about sixteen feet high; but in some soils, that are possessed of the opposite qualities, it will hardly arrive at half that height. The flowers are succeeded in May by large red berries, which never ripen in England: so that, notwithstanding the leaves in summer are very handsome, and the color of the bark makes a variety in winter, it is principally the scarcity of this plant which makes it valuable.

2. *L. benzoina*, the benzoin, or Benjamin tree, is also a native of North America; grows fifteen or twenty feet high, divided into a very branchy head; with oval, acute, deciduous leaves, three or four inches long, and half as broad; and small yellowish flowers, not succeeded by berries in this country. This tree will grow to a much larger size than the preceding, and its branches are more numerous. The leaves on their upper surface are venose, and of a whitish cast. When bruised, they emit a fine fragrant smell. This tree was formerly mistaken for that which produces the drug called benzoin; which is now known to be obtained from a species of *styrax*.

3. *L. camphora*, the camphor tree, grows naturally in the woods of the western parts of Japan, and in the adjacent islands. The root smells stronger of camphor than any of the other parts, and yields it in greater plenty. The bark of the stalk is outwardly somewhat rough; but in the inner surface smooth and mucous, and therefore easily separated from the wood, which is dry and of a white color. The leaves

stand upon slender foot-stalks, have an entire undulated margin, running out into a point; have the upper surface of a lively and shining green, the lower herbaceous and silky; and are furnished with a few lateral nerves, which stretch archwise to the circumference, and frequently terminate in small warts; a circumstance peculiar to this species of *laurus*. The flowers are produced on the tops of foot-stalks, which proceed from the arm-pits of the leaves; but not till the tree has attained considerable age and size. The flower-stalks are slender, branched at the top, and divided into very short pedicles, each supporting a single flower. These flowers are white, and consist of six petals, which are succeeded by a purple and shining berry of the size of a pea, and in figure somewhat top-shaped. It is composed of a soft pulpy substance that is purple, and has the taste of cloves and camphor; and of a nucleus or kernel of the size of a pepper, that is covered with a black, shining, oily corticle, of an insipid taste. The medicine called camphor, though solid, is the essential oil of the *laurus camphora*; and is obtained from it by distillation in the East Indies. The abbé Grosier informs us, that in China some of these trees are above 100 cubits in height, and so thick that twenty persons cannot enclose them. Common camphor costs only a penny the ounce at Peking; but it is inferior to that of Borneo, in the judgment even of the Chinese. The manner in which some authors have spoken of camphor, the abbé observes, gives us reason to conclude, that they have been entirely ignorant of the process employed to obtain this salutary gum. The camphor does not drop to the earth like the gums of certain resinous trees, which are preserved by discharging that part of their substance which is too oily; neither does it distil from the bottom to the top of the tree through an incision made in it. The Chinese would practise this method could it be employed with success; for it is very common in China to make such kind of incisions in resinous trees; but the camphor is obtained by boiling the branches of the tree, and then purifying the juice so extracted. See CHEMISTRY and PHARMACY.

4. *L. cassia*, the base cinnamon, has lanceolated leaves, triple nerved. The bark of this species is known in the shops by the name of *cassia lignea*. This bark, which is imported from China and different parts of the East Indies, has a very near resemblance to the cinnamon; though distinguishable from it by being of a thicker and coarser appearance, and by its breaking short and smooth, while the cinnamon breaks fibrous and shivery. It resembles cinnamon still more exactly in its aromatic flavor, than in its external appearance: and seems only to differ from it in being somewhat weaker, in abounding more with a viscous mucilaginous matter, and in being less astringent. Accordingly, it has not only a place in the Edinburgh pharmacopœia, but is also the basis of a distilled water.

5. *L. cinnamomum*, the cinnamon tree, is a native of Ceylon. It has a large root, and divides into several branches, covered with a

bark, which on the outer side is of a grayish-brown, and on the inside has a reddish cast. The wood of the root is hard, white, and has no smell. The body of the tree, which grows to the height of twenty or thirty feet, is covered, as well as its numerous branches, with a bark which at first is green, and afterwards red. The leaf is longer and narrower than the common bay tree: and it is three-nerved, the nerves vanishing towards the top. The flowers are small and white, and grow in large bunches at the extremity of the branches; they have an agreeable smell, something like that of the lily of the valley. The fruit is shaped like an acorn, but is not so large. This species may be treated like the green-house plants, but it is rather a stove plant in this country. As the tree puts out numerous side branches, with a dense foliage, from the very bottom of the trunk; this furnishes an opportunity of obtaining plenty of layers, and facilitates the propagation of the tree, as it does not perfect its seeds in any quantity under six or seven years; when it becomes so plentifully loaded, that a single tree is sufficient almost for a colony. It seems to delight in a loose moist soil, and to require a southern aspect; the trees, thus planted, flourishing better than others growing in loam, and not so well exposed to the sun. When healthy, it is (from layers) of a pretty quick growth, reaching in eight years, the height of fifteen or twenty feet, is very spreading, and furnished with numerous branches, of a size fit for decortication. The seeds, however, are a long time in coming up, and the plants make small progress for the first year or two. 'The birds appear to be very fond of the berries, and will probably propagate this tree in the same way they do many others every where over the island; so that in a short time it will grow spontaneously, or without cultivation.' Cinnamon is the under bark of the *cinnamomum*. The best season for separating it from the outer bark, which is gray and rugged, is the spring, when the sap flows in the greatest abundance. It is cut into thin slices, and exposed to the sun, and curls up in drying. The old trees produce a coarse kind of cinnamon; the spice is in perfection in the island of Ceylon, when the trees are not older than three or four years. When the trunk has been stripped of its bark, it receives no further nourishment; but the root is still alive, and continues to throw out fresh shoots. The fruit of the tree is shaped like an acorn, but is not so large. Its seed, when boiled in water, yields an oil which swims at top, and takes fire. If left to cool, it hardens into a white substance, of which candles are made, which have an agreeable smell. The cinnamon is not reckoned excellent, unless it be fine, smooth, brittle, thin, and of a yellow color inclining to red; fragrant, aromatic, and of a poignant, yet agreeable taste. The connoisseurs give the preference to that of which the pieces are long, but slender. That which comes to us is generally mixed with the cassia bark; but this last is easily distinguished. Cinnamon splinters in breaking, and has a roughness with its aromatic flavor; while the cassia breaks smooth, and has a mucilaginous taste. Cinna-

mon is a very elegant and useful aromatic, more grateful both to the palate and stomach than most other substances of this class. By its astringent quality it likewise corroborates the viscera, and proves of great service in several kinds of alvine fluxes, and immoderate discharges from the uterus. 'The best cinnamon bark is taken from the small branches, of about an inch diameter, the larger limbs not being so easily decorticated, and not yielding so good or so strong a cinnamon. The smaller twigs, or those that have not acquired a cineritious bark, are too full of sap and mucilage, and have little aroma. It is the liber, or inner bark, that constitutes the cinnamon; from which the two external-barks must be carefully and entirely separated, or they vitiate the flavor of the cinnamon; to do which with dexterity, and to raise the bark from the wood, requires some practice. The bark being separated, the smaller pieces are to be placed within the larger; which, by exposure to the sun or the air, presently coil up, and require no further preparation. A dry season is the proper one for taking the bark; as it is found to be weakened after long or heavy rains. Cinnamon, though more retentive of its virtues than any of the other spices, yet requires to be protected, when taken, from the air and moisture, by close packing in cedar chests. The leaves of this tree, whether recent or dried, are so strongly impregnated with an aroma, as to afford a good succedaneum for the bark, both in cookery and medicine. Distilled, they give an excellent simple and spirituous water, and an essential oil. Powdered, they are a good aromatic spice, or mareschal perfume.'

L. nobilis, the evergreen bay tree, is a native of Italy, and has an upright trunk, branching on every side from the bottom upward; with spear-shaped, nervous, stiff, evergreen leaves, three inches long, and two broad; and small, yellowish, quadrifid, diœious flowers, succeeded by red berries in autumn and winter. Of this species there are varieties, with broad, narrow, striped, or waved leaves. They are propagated by layers, or by the berries. Evelyn says, he has seen bay trees nearly thirty feet high, and almost two feet in diameter; and enumerates the bay amongst useful trees. Hanbury tells us, that 'it will grow to thirty feet in height, with a trunk of two feet in diameter;' and accordingly he arranges it amongst his forest trees: he acknowledges, however, at the same time, that the wood is of little value. The bay is nevertheless a fine aromatic, and a beautiful evergreen. It is said to be the true *laurus* of the ancients, with which they adorned the brows of their successful generals. Like the holly, box, and laurel, the bay will bear the shade and drip of taller trees; and it is upon the whole a very desirable evergreen, being extremely ornamental. The leaves and berries have a moderately strong aromatic smell, and a warm, bitterish, pungent taste; the berries are stronger in both respects than the leaves, and afford in distillation a larger quantity of essential aromatic oil; they yield also an almost insipid oil to the press, in consequence of which they prove unctuous in the mouth. They are warm carminatives, and some-

times prescribed with this intention against flatulent cholics, and in hysterical disorders. Their principal use in the present practice is in glysters, and some external applications.

L. perseæ, the avocado pear tree, or alligator pear, rises to a considerable height, with a straight trunk, of which the bark and wood are of a grayish color. The leaves are long, oval, pointed, of a substance like leather, and of a beautiful green color. The flowers are produced in large knots or clusters at the extremities of the branches, and consist each of six petals disposed in the form of a star, and of a dirty white or yellow color, with an agreeable odor, which diffuses itself to a considerable distance. It is a native of the West Indies. It begins to bear two years and a half, or at most three years, after being planted; and, like most of the trees in warm climates, bears twice a year. This species, with the camphor and cinnamon require the treatment common to greenhouse plants. The *perseæ* is cultivated universally in the West Indies by all ranks of people. The fruit is pear-shaped, and from one to two pounds in weight. On removing a green skin or covering, a yellow butyraceous substance appears; and in the heart a large round seed or stone, which is unequal in the surface, and exceedingly hard and woody. This fruit is ripe in August and September, and constitutes one of the most agreeable articles of diet for six or eight weeks to the negroes. These pears, with a little salt and a plantain or two, afford a hearty meal. They are also served up at the tables of the planters as choice fruit. When the pear is ripe, the yellow or eatable substance is firmer than butter, and tastes somewhat like butter or marrow: hence it is called by some the vegetable marrow. But, however excellent this fruit is when ripe, it is very dangerous when pulled and eaten before maturity. The leaves of this tree and those of the bead vine or wild liquorice are made into pectoral decoctions by the common people. The large stone is used for marking linen. The cloth is tied or held over the stone, and the letters are pricked out by a needle through the cloth and into the seed. The stain is a reddish brown, which never washes out.

L. sassafras, is a native of North America. It has a shrub-like straight stem, garnished with both oval and three-lobed, shining, deciduous leaves, of different sizes, from three to six inches long, and nearly as broad, with small yellowish flowers, succeeded by blackish berries; but not in this country. This species, as well as the *æstivalis* and *benzoin*, may be propagated—1. By the seeds; 2. By layers; but by this method they will be two, three, or even four years, before they have struck out good roots; though the Benjamin tree is propagated fastest by this method; 3. By suckers, which they will at all times throw out, and which may be often taken off with pretty good roots; 4. Cuttings, when planted in a good bark bed, and duly watered, will also often grow. When this method is practised, and plants obtained, they must be inured by degrees to the open air, till they are hardy enough to be finally planted out. The *sassafras* will grow to nearly the height of the

deciduous bay and benzoin, though the branches are not so numerous. Its bark is smooth, and of a red color, which beautifully distinguishes it in winter: whilst the fine shining green of its leaves constitutes its greatest beauty in summer. In these, indeed, there is a variety, and a very extraordinary one. Some are large, and of an oval figure; others are smaller, and of the same shape; whilst others again are so divided into three lobes as to resemble the leaves of some sorts of the fig-tree. In America, the sassafras generally stands single in the woods, and along the fences round the fields. It flowers in May before the leaves come out; and, being entirely covered with them, it is distinguished at a great distance by their beautiful yellow color. The root has a fragrant smell, and a sweetish, aromatic, subacid taste; the bark tastes much stronger than any other part, and the small twigs stronger than the large pieces. It is a warm aperient and corroborant, and frequently employed with success for purifying and sweetening the blood and juices. Sassafras yields in distillation an extremely fragrant oil of a penetrating pungent taste, so ponderous notwithstanding the lightness of the drug itself as to sink in water. Rectified spirit extracts the whole taste and smell of sassafras, and elevates nothing in evaporation: hence the spirituous extract proves the most elegant and efficacious preparation, as containing the virtue of the root entire. The bark is used in Pennsylvania and other parts of North America for dyeing worsted a fine lasting orange color, which does not fade in the sun. They use urine instead of alum in dyeing; and boil the dye in a brass boiler, because in an iron vessel it does not yield so fine a color. The wood is made use of for posts belonging to enclosures, for it is said to last a long time in the ground: but it is likewise said, that there is hardly any kind of wood which is more attacked by worms than this, when it is exposed to the air without cover; and that in a short time it is quite worm-eaten through and through. On cutting some part of the sassafras tree, or its shoots, and holding it to the nose, it has a strong but pleasant smell. Some people peel the root, and boil the peel with their beer while brewing. Others put the peel into brandy, either whilst it is distilling or after it is made.

LAUS, or LAOS, in ancient geography, a river of Italy, separating Lucania from the Bruttii, and running from east to west into the Tuscan Sea; with a cognominal bay, and a town, the last of Lucania, a little above the sea; a colony from Sybaris, according to Strabo, Pliny, and Stephanus. Both town and river are now called Laino, in Calabria Citra; and the bay, Golfo della Scalea.

LAUS POMPEIA, in ancient geography, a town of Insubria, situated to the east of Milan, between the rivers Addua and Lamber. It was built by the Boii after they passed the Alps: its ancient Gallic name is unknown. Strabo Pompeius, father of Pompey, leading thither a colony, gave it a new name, and conferred the Jus Latii on the ancient inhabitants who remained there. The modern Lodi is built from its ruins, at some distance.

LAUSANNE, a beautiful town of Switzerland,

the capital of the canton of the Pays de Vaud, is situated on three eminences, about a mile north of the lake of Geneva. The streets of course are steep and irregular; but the Gothic cathedral crowning one of the eminences has been much admired. Little trade is carried on, and the only manufactures are jewellery and silversmiths' work. Other objects deserving attention are the chateau, an old edifice, the arsenal, the town house, the hospital, the charity school, and the riding and drawing schools. Here are also some good libraries and cabinets. Lausanne has long had claims to literary distinction. Since 1536 its academy has boasted various distinguished scholars, as Beza and Barheyrac. Classics and divinity are the chief objects of study: there is also a professorship of law, and of natural and moral philosophy. In 1808 an improved form was given to this institution. Exclusive of the academy there also existed at Lausanne, after the revocation of the edict of Nantes, a seminary for the education of the French Protestant clergy, but since 1809 this has been discontinued. The French language is very well spoken here. Haller and Voltaire passed some years at Lausanne; and Gibbon, from 1783 to 1793, composed the chief part of his history here. Since 1814 it has been much visited by our countrymen. Strangers are still generally accommodated at pensions or boarding houses, in the manner described by Gibbon. The climate, though cold in winter, is thought healthy; and nothing can exceed in richness the prospect from the high tower of the cathedral. About a mile to the westward of Lausanne was a Roman station, Lausonum, of which fragments of buildings, bricks, coins, &c., have been at different times discovered. There are also the remains of a Roman road to the east, in the Chemin d'Estras, Via strata. Lausanne was long an appendage to the canton of Bern, but always had a separate constitution: the French in 1798 first incorporated it with the new canton of Vaud. It is forty-one miles south-west of Bern.

LAW (Edmund), D. D., bishop of Carlisle, was born in the parish of Cartmel in Lancashire A. D. 1703. His father, who was a clergyman, held a chapel in Cartmel. He was educated first at Cartmel, afterwards at Kendal, and completed his studies at St. John's College, Cambridge. Soon after taking his first degree he was elected fellow of Christ's College. During his residence there he published a translation of archbishop King's Essay upon the Origin of Evil, with copious notes; in which many metaphysical subjects are treated with great ingenuity and learning. To this work was prefixed, as a preliminary dissertation, a valuable piece, by the Rev. Mr. Gay of Sidney College, of whom Dr. Law had a high opinion. At this time he also prepared for the press an edition of Stephens's Thesaurus. In the year 1737 he was presented to the rectory of Graystock in Cumberland, worth £300 a-year. Soon after this he married Mary the daughter of John Christian, Esq. of Unerigg in Cumberland; and was promoted by the bishop of Carlisle to the archdeaconry of that diocese: in 1746 he went to reside at Sal-

keld, on the Eden, where he published *Considerations on the Theory of Religion*, to which were subjoined *Reflections on the Life and Character of Christ*; and an appendix concerning the use of the words *Soul and Spirit in Holy Scripture*, and the state of the dead there described. In 1754 he took his degree of D. D., and in his thesis defended the doctrine of the natural mortality of the soul. In 1756 he succeeded Dr. Keene, bishop of Chester, as master of Peterhouse in Cambridge. About 1760 he was appointed head librarian of the university; a situation peculiarly suited to his taste. Some time after this he was also appointed casuistical professor. In 1762 he suffered an irreparable affliction by the death of his lady, who left him eleven children, many of them very young. Some years afterwards, he received several other preferments. In 1768 the duke of Grafton recommended him to his majesty for the bishopric of Carlisle, not only without solicitation, but without his knowledge. About 1777 our bishop gave to the public a handsome edition, in 3 vols. 4to., of Mr. Locke's *Works*, with the author's life, and a preface. About this time too he published *Considerations on the Propriety of Requiring Subscriptions to Articles of Faith*, and new editions of his two principal works, considerably enlarged. He held the see of Carlisle nearly nineteen years, generally spending the summer in his diocese at Rose Castle, where he died August 14th, 1787, aged eighty-four. His life was almost entirely devoted to metaphysical and religious enquiries. Beside the above works, he published in 1734 or 1735 a very ingenious *Enquiry into the Ideas of Space, Time, &c.*, in which he combats the opinions of Dr. Clarke and his adherents. He was interred in his cathedral church, in which a handsome monument is erected to his memory, with a suitable inscription.

Law (Edward), lord Ellenborough, fourth son of Dr. Law, bishop of Carlisle, was born at Great Salkeld in Cumberland, in 1749, and educated at Cambridge. There he obtained a prize medal, given by the chancellor in 1771; and, after taking his first degree, became a student at Lincoln's Inn. Having been called to the bar, he established his reputation as leading counsel for Mr. Hastings. He was made attorney-general in 1801; and the following year he succeeded to the station of chief-justice, on which he was also made a baron. In 1806 he was a member of the whig cabinet, and held his post of chief-justice till 1818, when he resigned, and died December 13th of that year. Lord Ellenborough was an able judge, but of an ardent temperament, and well inclined to support all the measures of ministers.

Law (John), the celebrated projector, was the eldest son of a goldsmith in Edinburgh, and was born about 1681. He was educated for business; but possessed great abilities, and a very fertile invention. He had the address, when but a very young man, to recommend himself to the king's ministers in Scotland to arrange the revenue accounts, which were in great disorder at the time of the union. He also laid a proposal before the Scottish parliament, for supplying the kingdom with money, by establishing a bank,

which should issue paper to the value of the whole landed property in the kingdom; but his plan, being thought wild, was rejected. His father dying, about 1704, Law succeeded to the small estate of Laurieston; and became a gamester and a man of fashion. He was tall and graceful in his person, and commonly went by the name of Beau Law. He was forced to fly his country, however, in the midst of his career, in consequence of having fought a duel and killed his antagonist. He escaped to Holland; thence proceeded to Venice, and wandered over Italy, studying the nature of banks, and making himself an adept in the mysteries of exchanges and re-exchanges. At the close of the reign of Louis XIV., when the French finances were in great disorder, Law having obtained an audience, the bankrupt king was delighted by his projects; but the minister Desmarest, menacing him with the Bastille, obliged him to fly from Paris. He next applied to Victor Amadeus, duke of Savoy, who informed him he was not rich enough to ruin himself. At the death of Louis XIV. the regent duke of Orleans, in despair, called in our numerical quack. By an arret of the 2d March, 1716, a bank was established by authority, in favor of Law and his associates; 200,000 shares were instituted, of 1000 livres each; and Law deposited in it to the value of 2000 or 3000 crowns, which he had accumulated in Italy by gaming. Many people had at first little confidence in this bank; but, when it was found that the payments were made with quickness and punctuality, they began to prefer its notes to ready money; in consequence of which, shares rose to more than twenty times their original value; and in 1719 their nominal value was more than eighty times the amount of all the current specie of France. Law was now created count Tankerville, Europe rang with his praise, even his calculating countrymen were beguiled into admiration of him, and his native city, humbly presenting him with her freedom, used these remarkable expressions: 'The city of Edinburgh presents its freedom to John Law, count of Tankerville, &c., &c., a most accomplished gentleman, the first of all bankers in Europe, the fortunate inventor of sources of commerce, in all parts of the remote world, and who has so well deserved of his nation.' Law was in fact adored; the proudest courtiers were reptiles before this mighty man, and dukes and duchesses patiently waited in his antichamber. But in 1720 this commercial bubble burst, and in its explosion almost overthrew the French government: it is remarkable that the same desperate game was played by the South Sea directors in England, in the same fatal year, 1720. Law being exiled as soon as the credit of his projects began to fail, retired to Venice, where he died in 1729. Montesquieu who saw him there, says, 'He is still the same man; his mind ever busied in financial schemes; his head is full of figures, of agios, and of banks. Of all his more than princely revenues, he has only saved a large white diamond, which, when he has no money, he pawns.' The principles upon which Law's original scheme was founded, are explained by himself in a *Discourse concerning Money and Trade*, which he published in Scotland.

Not *lawyers* at the bar play more with sense,

When brought to their last trope of eloquence,

Than they on every subject, great or small,

At clubs or councils, at a church or ball;

Then cry we rob them of their tribute due:

Alas! how can we laugh and pity too?

Stillingfleet's Essay on Conversation.

Unhappy man! to break the pious *laws*

Of nature, pleading in his children's cause.

Dryden.

I may be allowed to tell your lordship, the king of
 poets, what an extent of power you have, and how
lawfully you may exercise it. *Id.*

Not the gods, nor angry Jove, will bear

Thy *lawless* wandering walks in open air. *Id.*

This is an inconvenience, I confess, that attends
 all governments whatsoever, when the governors
 have brought it to this pass, to be generally suspected
 of their people; the most dangerous state which they
 can possibly put themselves in; wherein they are the
 less to be pitied, because it is so easy to be avoided;
 it being as impossible for a governor, if he really
 means the good of his people, and the preservation
 of them, and their *laws* together, not to make them
 see and feel it, as it is for the father of a family not
 to let his children see he loves, and takes care of
 them. *Locke.*

Though it be not against strict justice for a man
 to do those things which he might otherwise *lawfully*
 do, albeit his neighbour doth take occasion from
 thence to conceive in his mind a false belief, yet
 Christian charity will, in many cases, restrain a man.

South.

Tom Touchy is a fellow famous for taking the *law*
 of every body; there is not one in the town where he
 lives that he has not sued at a quarter-sessions.

Addison's Spectator.

He, meteor-like, flames *lawless* through the void,
 Destroying others, by himself destroyed. *Pope.*

A *law* may be very reasonable in itself, although
 one does not know the reason of the *lawgivers*.

Swift.

Thy nymphs with scorn beheld their foes,

When the defendant's council rose;

And, what no *lawyer* ever lacked,

With impudence owned all the fact. *Id.*

The giving the priest a right to the tithe would
 produce *lawsuits* and wrangles; his attendance on
 the courts of justice would leave his people without a
 spiritual guide. *Id.*

Laws are like cobwebs, which may catch small
 flies, but let wasps and hornets break through. *Id.*

What is a *law*, if those who make it

Become the forwardest to break it? *Beattie.*

Children ought, as far as it is necessary and they are able, to support their parents, and to bear with their infirmities, do every thing in their power to make their lives comfortable, receive their advice with respectful attention, and obey all their *lawful* commands. *Beattie.*

The language of the Christian *lawgiver* is different. The world is not worthy of the ambition of an immortal being. Its honours and pleasures have a tendency to debase the mind, and disqualify it for future happiness. *Id.*

And here it must be remembered, that he distribute every thing according to the exact rules of justice, and with such a due care as to prevent all *lawsuits* and contentions for the future. *Paley.*

The framers of such a bill must be content to inherit the honours of that Athenian *lawgiver*, whose edicts were said to be written not in ink but in blood. *Byron.*

I am not speaking here of the reviled and discredited statute *law* only, but of that venerable common *law* to which our reformers are so fond of appealing on all occasions, as well as of the statute *law* by which it is modified, explained, or enforced. *Canning.*

LAW. Upon a subject of this magnitude and importance, our first duty, perhaps, is the lucid arrangement of what we have to offer the reader. He will find, therefore, the following treatise divided into four principal parts:—I. Of the Nature of Laws in general. II. Of the Laws of the United Kingdom, England. III. Of the Laws of Scotland. IV. Of the Laws of Ireland.

PART I.

OF THE NATURE OF LAWS IN GENERAL.

SECT. I.—DEFINITIONS OF LAW.

Law, in its most general signification, is the rule or principle by which all things are regulated according to their nature and constitution. In this sense, all substances and beings have their laws. *The material world* has its laws; as the laws of motion and gravitation: thus, in bodies moved, the motion is received, increased, diminished, lost, according to the relations of the quantity of matter and velocity. The world itself, subsisting through so long a succession of ages, is directed by invariable laws, and without their constant operation it would inevitably perish. *The brute creation* has its laws: by which the individual is preserved, and the species continued. But, although brutes have their natural laws, they do not invariably conform to them. In this respect the *vegetable world* acts in stricter adherence to its innate principles; and indeed the whole intelligent world is far from being so well governed by its laws as the physical; for, though the laws of the former are equally invariable, it does not in the same degree obey them. This is because, on the one hand, man, though an intelligent being, is of a finite nature, and liable to error; and, on the other, his nature requires him to be a free agent. As a physical being he is, like all other bodies, governed by invariable laws; but as an intelligent being he frequently transgresses the primitive laws established by the Author of his nature, and even those of his own instituting he frequently alters and infringes

Law, in its more confined sense, and in which it is our present business to consider it, denotes the rules, not of action in general, but of human action or conduct; that is, the precepts by which man is commanded to regulate his behaviour. In this sense 'Law' is synonymous with one of the significations of right; for the law is that which is right, as that is right which is the law. Thus, according to Grotius, right signifies nothing more than what is just, and that more in a negative than a positive sense; so that right is that which is not unjust. For instance, to deprive another of what belongs to him, merely for one's own advantage, is repugnant to the law of nature, as Cicero observes in his third book of Offices; and, by way of proof, says, that, if the practice were general, all society and intercourse among men must be overturned. Florentinus, the lawyer, maintains that it is impious for one man to form designs against another, as nature has established a degree of kindness amongst us. Seneca remarks that, as all the members of the human body agree among themselves, because the preservation of each conduces to the welfare of the whole, so men should forbear from mutual injuries, as they were born for society, which cannot subsist unless all the parts of it are defended by mutual forbearance and good will.

Following the etymology of the term, as defined by Horne Tooke, right is that which is ordered, as wrong is that which is wrested from the right or ordered course. The next step in the definition is to determine by whom it has been ordered, so as to ascertain the sufficiency of the authority, and then to learn how the rule on any particular occasion is to be applied. The answer is, that the Author of nature has made the law, and reason must judge of its application, by comparing its consistency with other rules of the moral system, and observing its adaptation to the end designed, namely, the general happiness of the human race.

SECT. II.—OF THE ORIGIN OF PROPERTY AND CIVIL GOVERNMENT.

According to divine revelation, God gave to mankind in general dominion over the earth and all its creatures, from the first creation of the world. Even those who dispute this original title to property, must acknowledge the fact, that such dominion has actually existed from the earliest periods of society. All things, as Justin says, formed a common stock for all mankind, as the inheritors of one great patrimony. That is to say, the existing race were entitled to the earth, in the same manner that the immediate heir of an entailed estate is entitled to all its productions during the period of his natural life. In a rude state of society it naturally happened that every man seized to his own use or consumption whatever he met with; a general exercise of right which supplied the place of private property. So that to deprive any one of what he had thus seized, became an act of injustice. Yet this natural right of appropriation must be exercised under the restraint imposed by the law of benevolence, which is as innate a principle as the feeling of self-love, and the conse-

quent law of self-preservation. Though we are entitled to benefit ourselves as much as possible, we are not at liberty to injure others; still less to injure them needlessly. And it follows that no one could be entitled to take possession of a larger portion of unoccupied land than he really needed, or to retain so much of it as would deprive other human beings of a reasonable share in the common patrimony of mankind. If, indeed, that which was unoccupied were no more than sufficient for the use of a single family, but which could not be the case in the commencement of society, those who first took possession would have an absolute right to retain it, to the entire exclusion of all others. But if the unoccupied territory were of ample extent, and the first settlers or colonists were succeeded by others, who, driven by necessity, sought the means of subsistence, the latter would have a natural and moral right to a partition of so much of the soil as would be necessary for their wants, as the younger children of the same parent are entitled according to the natural law to a participation in the inheritance which would have descended entire, had the eldest remained the only child; and to withhold an equitable distribution, thus founded in nature and reason, would be atrociously unjust.

Cicero aptly compares the world to a theatre, in which the seats are common property, yet every spectator claims that which he occupies, for the time being, as his own. But it is clear that the spectator is entitled to one seat only, and has no right, because he first arrived, to take possession of more than one.

This view of the subject is further confirmed by the actual events which have occurred in the acquisition of property of different kinds. Thus it appears that a community of lands for pasture prevailed among men long after a community in animals, or flocks, had ceased. For the great extent of land was sufficient for the use of all occupants, as yet but few in number, without their incommoding each other. In the words of Virgil, it was declared unlawful to fix a landmark on the plain, or to apportion it out in stated limits. But as men increased in numbers, and their flocks in the same proportion, they could no longer with convenience enjoy the use of lands in common, and it became necessary to divide them into allotments for each family. It is evident here that the circumstance of first occupancy is not the only one by which mankind have been guided. We perceive that their convenience is assigned as the reason for the division of lands, and no one can doubt that it is more 'convenient' for individuals in general, as well as more just, that the division should be as nearly as possible proportioned to the wants and interests of society at large. In the hot countries of the east, wells would naturally be objects of great importance, for the refreshment of their herds and flocks; so that, in order to avoid strife and inconvenience, all would be anxious to have them as possessions of their own, and these would therefore constitute the first objects of contract or agreement. Strictly speaking, according to the moral law, it would be unjust in any individual to appropriate exclusively so essential an object as a well of water, which obviously is

a common gift, and which no one could entirely require. The circumstance of first occupation could only confer the right of being first supplied, after which every one else would have an equal right. The accounts of the commencement of many of these important rights we derive from Sacred History, and they are found to agree with the opinions maintained upon this subject by philosophers and poets, who have described the community of goods that prevailed in the early state of the world, and the distribution of property which afterwards took place. Hence a notion may be formed of the reason why men departed from their primeval state of holding all things in common, attaching the ideas of property, first to moveable, and next to immoveable things.

In considering how things passed from being held in common to a state of property, it is obvious, says Grotius, that it was not by the act of the mind alone that this change took place. For men in that case could never know what others intended to appropriate to their own use, so as to exclude the claim of every other pretender to the same; and many too might desire to possess the same thing. Property therefore must have been established either by express agreement, as by division; or by tacit consent, as by occupancy. For as soon as it was found inconvenient to hold things in common, before any division of lands had been established, it is natural says Grotius, that it must have been generally agreed that whatever any one had occupied should be accounted his own. Cicero, he says, considered it admitted as a universal maxim that every one should rather wish himself to enjoy the necessaries of life, than leave them for the acquisition of another. This is an opinion very consonant with the character of the Roman orator, who was much addicted to the vice of avarice. Quintilian observes, if such be the condition of life, that whatever has fallen to the private use of any individual, becomes the property of such holder, it is evidently unjust to take away any thing which is possessed by such a right, an opinion which evidently rests upon the assumption of the very thing in dispute, that whatever has 'fallen' to private use, becomes the absolute property of the holder. Besides, if ever such an agreement took place as that which Grotius assumes, with respect to the division of lands either expressly or tacitly, the natural feeling of mankind in general must necessarily have been, that the land retained by each on account of previous occupancy should be of reasonable extent only, and proportioned to the wants of the rest of the community. Indeed the division of lands among the Hebrew and other early nations, however barbarous the state of society might be in which it took place, is a proof of the existence of that natural feeling amongst mankind relating to the claims of each individual to an equal or fair participation in the common property of the earth, notwithstanding accidental circumstances may have invested some of them with a previous occupation. The contrary theory supposes that the natural right does not depend upon moral considerations, but on the mere accident of first possession or seizure, which is equally absurd and unjust.

Among the means of acquiring property, Paulus, the lawyer, reckons one, which seems most natural; and that is, if by the ingenuity of art, or the exertions of labor, we have given to any production its existence amongst the works of man. Grotius contends, however, that as nothing can naturally be produced, except from some materials before in existence, it follows that, if those materials were our own, the possession of them under any new shape or commodity, is only a continuation of our former property. If they belonged to no one, our possession comes under the class of title by occupancy: but, if they were another's, no improvement of ours can by the law of nature give us a right of property therein. Now occupancy is, undoubtedly, according to the origin of society, the primary means of title; but it is obvious that the produce of labor stands equally high in natural right, although second to it in the order of existence. Thus the ancients, in styling Ceres a law-giver, meant to signify that the division of lands had given birth to a new kind of right; namely, the fruits of the earth. There is, indeed, an evident distinction between the right to the fruits of the earth and the right to the land itself. The former is generally the produce of some degree of skill, labor, care and attention, which, in natural justice, confers a claim beyond the mere act of possession. The latter is fortuitous, may be unattended by merit, and requires the sanction of time and the proof of general convenience fully to establish it; but no one can hesitate to concede to industry its reward, or can doubt that, whilst man is doomed to labor, he is entitled to its fruits.

The acquisition of property, or the establishment of the rights of individuals to its separate and exclusive enjoyment, and the formation of government, are necessarily coeval. It would have been in vain that a few scattered individuals or families should have agreed to respect each other's possessions, until society had been so far matured, that such agreements could be enforced amongst the parties making them, and their violation punished. When society is once formed, government, as observed by Blackstone, results of course, as necessary to preserve and to keep that society in order. Unless some superior be constituted, whose commands and decisions all the members are bound to obey, they would still remain as in a state of nature, without any judge upon earth to define their several rights, and redress their several wrongs. But as all the members of society are naturally equal, in whose hands are the reins of government to be entrusted? To this the general answer is easy; but the application of it to particular cases has occasioned one-half of those mischiefs which are apt to proceed from misguided political zeal. In general, all mankind will agree, that government should be reposed in such persons, in whom those qualities are most likely to be found, the perfection of which is among the attributes of him who is emphatically styled the Supreme Being; the three grand requisites, namely, of wisdom, of goodness, and of power: wisdom, to discern the real interest of the community; goodness, to endeavour always to pursue that interest; and power to carry this knowledge and intention into effect.

These are the natural foundations of sovereignty, and these requisites ought to be found in every well constituted government.

How the several forms of government we now see in the world at first actually began is matter of great uncertainty. However they began, or by what right soever they subsist, there is and must be in all of them a supreme, irresistible, absolute, uncontrolled authority, in which the *jura summi imperii*, or the rights of sovereignty, reside. And this authority is placed in those hands wherein (according to the opinion of the founders of such respective states, either expressly given or collected from their tacit approbation) the qualities requisite for supremacy, wisdom, goodness and power, are the most likely to be found.

The political writers of antiquity do not allow more than three regular forms of government: the first when the sovereign power is lodged in an aggregate assembly, consisting of all the members of a community, which is called a *democracy*; the second when it is lodged in a council composed of select members, and then it is styled an *aristocracy*; the last when it is entrusted in the hands of a single person, and then it takes the name of a *monarchy*. All other species of government, they say, are either corruptions of, or reducible to, these three.

By the sovereign power is meant the making of laws; for, wherever that power resides, all others must conform to and be directed by it, whatever appearance the outward form and administration of the government may put on. For it is at any time in the option of the legislature to alter that form and administration by a new edict or rule, and to put the execution of the laws into whatever hands it pleases: and all the other powers of the state must obey the legislative power in the execution of their several functions, or else the constitution is at an end.

In a democracy, where the right of making law resides in the people at large, public virtue, or goodness of intention, is more likely to be found than either of the other qualities of government. Popular assemblies are frequently foolish in their contrivance, and weak in their execution; but generally mean to do the thing that is right and just, and have always a degree of patriotism or public spirit.

In aristocracies there is more wisdom to be found than in the other forms of government; being composed, or intended to be composed, of the most experienced citizens; but there is less honesty than in a republic, and less strength than in a monarchy.

A monarchy is indeed the most powerful of any, all the sinews of government being knit and united together in the hand of the prince; but then there is imminent danger of his employing that strength to improvident or oppressive purposes.

Thus these three species of government have all of them their several perfections and imperfections. Democracies are usually the best calculated to direct the end of a law; aristocracies to invent the means by which that end shall be obtained; and monarchies to carry those means into execution. And the ancients had in general

no idea of any other permanent form of government but these three, and Tacitus treats the notion of a mixed government, formed out of them all, and partaking of the advantages of each, as a visionary whim, and one that, if effected, could never be lasting or secure.

But, happily for the people of this island, the British Constitution has long remained a standing exception to the truth of this observation. For, as with us the executive power of the law is lodged in a single person, they have all the advantages of strength and despatch that are to be found in the most absolute monarchy: and, as the legislative power of the kingdom is entrusted to three distinct estates, entirely independent of each other; 1. the king; 2. the lords, spiritual and temporal, which is an aristocratical assembly of persons selected for their piety, birth, wisdom, valor, or property; and, 3. the house of commons, freely chosen by the people from among themselves, which makes it a kind of democracy; as this aggregate body, actuated by different springs, and attentive to different interests, composes the British parliament, and has the supreme disposal of every thing, there can no inconvenience be attempted by either of the three branches which will not be withstood by one of the other two, each branch being armed with a negative power sufficient to repel any innovation which it shall think inexpedient or dangerous.

Here, then, is lodged the sovereignty of the British constitution; and lodged as beneficially as is possible for society. For in no other shape could we be so certain of finding the three great qualities of government so happily united. If the supreme power were lodged in any one of the three branches separately, we must be exposed to the inconveniences of either absolute monarchy, aristocracy, or democracy: and so want two of the principal ingredients of good polity; either virtue, wisdom, or power. If it were lodged in any two of the branches, for instance in the king and house of lords, our laws might be providently made and well executed, but they might not always have the good of the people in view. If lodged in the king and commons, we should want that circumspection and mediatory caution which the wisdom of the peers is to afford. If the supreme rights of legislature were lodged in the two houses only, and the king had no negative upon their proceedings, they might be tempted to encroach upon the royal prerogative, or perhaps to abolish the kingly office, and thereby weaken, if not totally destroy, the strength of the executive power.

But the constitutional government of this island is so admirably tempered and compounded that nothing can endanger or hurt it, but destroying the equilibrium of power between one branch of the legislature and the rest. For if ever it should happen that the independence of any one of the three should be lost, or that it should become subservient to the views of either of the other two, there would soon be an end of our constitution. The legislature would be changed from that which was originally set up by the general consent and fundamental act of the society: and such a change, however effected, is according to Mr. Locke at once an entire dis-

solution of the bands of government; and the people are thereby reduced to a state of anarchy, with liberty to constitute to themselves a new legislative power.

SECT. III.—OF THE NATURAL OR MORAL LAW.

We have in the previous section anticipated some of the grounds upon which the law of nature depends, and have illustrated some of its applications.

Grotius observes that natural right is the dictate of right reason, showing the moral turpitude, or moral fitness, of any act, from its agreement or disagreement with a rational nature, and consequently that such an act is either forbidden or commanded by God, the Author of nature. The actions upon which such a dictate is given are either binding or unlawful in themselves, and therefore necessarily understood to be commanded or forbidden by God. This characteristic distinguishes natural right, not only from human law, but from the law which God himself has been pleased to reveal.

There are some things, however, allowed by the law of nature, not absolutely, but according to a certain state of affairs. Thus, by the law of nature, before property was introduced, every one had a right to the use of whatever he found unoccupied; and, before laws were enacted, to avenge his personal injuries by force. Thus Polybius, relating the manner in which men first entered into society, concludes, that the injuries done to parents or benefactors inevitably provoked the indignation of mankind, giving an additional reason, that, as understanding and reflection form the great difference between men and other animals, it is evident they could not transgress the bounds of that difference, like other animals, without exciting universal abhorrence of their conduct. When this sense of justice is attributed to brutes, it is done improperly, from some shadow and trace of reason they may possess. But it is not material to the nature of right, whether the actions appointed by the law of nature, such as the care of our offspring, are common to us with other animals or not, or like the worship of God, are peculiar to man. We have two criteria for determining the conformity of actions with the moral law:—the one is the general tendency of the action to a beneficial result, and the other is the common or moral sense, and uniform feeling of mankind at large.

It appears that Blackstone rests the determination of the moral law upon the first criterion which we have stated: as does Dr. Paley. But we think the latter is an equally valid and satisfactory test. The nature of the former, however, Blackstone well explains; and the other we shall illustrate from the pages of Grotius. If, says he, the discovery of the first principles of the law of nature depended only upon the due exertion of right reason, and could not otherwise be obtained, than by a chain of metaphysical disquisitions, mankind would have wanted some inducement to have quickened their enquiries, and the greater part of the world would have rested content in mental indolence, and ignorance its inseparable companion. As therefore the Creator is a being, not only of infinite power and wisdom, but also

of infinite goodness, he has been pleased so to contrive the constitution of human nature, that we should want no other prompter to enquire after and pursue the rule of right, but only our own self-love, that universal principle of action. For he has so intimately connected the laws of eternal justice with the happiness of each individual, that the latter cannot be attained but by observing the former; and, if the former be punctually obeyed, it cannot but induce the latter. In consequence of which mutual connexion of justice and human felicity, he has not perplexed the law of nature with a multitude of abstract rules and precepts, referring merely to the fitness or unfitness of things, as some have surmised; but has graciously reduced the rule of obedience to this one paternal precept, 'that man should pursue his own happiness.' This is the foundation of what is called ethics, or natural law. For the several articles into which it is branched, in our systems, amount to no more than demonstrating, that this or that action tends to man's real happiness; that is, his happiness estimated with reference to its substantial and enduring influence upon the whole aggregate of life. And therefore very justly concluding, that the performance of it is a part of the law of nature; or, on the other hand, that this or that action is destructive of man's real happiness, and therefore that the law of nature forbids it.

This law of nature, being coeval with mankind, and dictated by God himself, is of course superior in obligation to any other. It is binding over all the globe, in all countries, and at all times; no human laws are of any validity, if contrary to this; and such of them as are valid derive all their force, and all their authority, mediately or immediately, from this original.

But to apply this to the particular exigencies of each individual, we must still have recourse to reason, to discern what the law of nature directs in every circumstance of life; by considering what method will tend the most effectually to our own substantial happiness.

The existence of the law of nature is proved, 1st, by its agreement with a reasonable and social nature: 2nd, by its being received as such among all, or at least the more civilised, nations. For a general effect can only arise from a general cause. Now scarcely any other cause can be assigned for so general an opinion but the common sense, as it is called, or moral sense, of mankind.

In support of this doctrine Grotius has quoted various authorities. There is a sentence of Hesiod, he says, that has been much praised, that opinions which have prevailed amongst many nations, must have some foundation: and Heraclitus establishing common reason as the best criterion of truth, says, those things are certain which generally appear so. Among other authorities may be quoted Aristotle, who says it is a strong proof in our favor, when all appear to agree with what we say; and Cicero maintains, that the consent of all nations, in any case, is to be admitted for the law of nature. Seneca is of the same opinion: any thing, says he, appearing the same to all men, is a proof of its truth.

Quintilian says, we hold those things to be true in which all men agree.

We have called them 'the more civilised nations;' for, as Porphyry observes, some nations are so strange that no fair judgment of human nature can be formed from them. Chrysostom cautions us not to form our judgments of things from such as have corrupt minds. Andronicus, the Rhodian, says that, with men of a right and sound understanding, natural justice is unchangeable. Nor does it alter the case, though men of disordered and perverted minds think otherwise, like him who should deny honey to be sweet. Plutarch too agrees entirely with what has been said, as appears from a passage in his life of Pompey, affirming that man neither was nor is by nature a wild unsociable animal, but it is the corruption of his nature which makes him so; yet by acquiring new habits, by changing his place and way of living, he may be reclaimed to his original gentleness. Aristotle, taking a description of man from his peculiar qualities, makes him an animal of a gentle nature; and in another part of his works he observes, that, in considering the nature of man, we are to take our likeness from nature in its pure, and not in its corrupt state.

Natural right, as Grotius observes, relates not only to those things that exist independently of the human will, but to many things which necessarily follow the exercise of that will. Thus property, as now in use, was at first a creature of the human will. But, after it was established, one man was prohibited by the law of nature from seizing the property of another against his will. Wherefore Paulus said that theft is expressly forbidden by the law of nature. Ulpian condemns it as infamous in its own nature; and Euripides, in the verses of Helena:—"The air is common to men, the earth also, where every man, in the ample enjoyment of his possession, must refrain from doing violence or injury to that of another."

The practice of Grotius, which we have followed, in citing the opinions of poets, orators, and historians, in support of his argument, has been most satisfactorily vindicated by Sir James Mackintosh, in his admirable discourse on the Law of Nations. He says, 'he quotes them as witnesses, whose conspiring testimony, mightily strengthened and confirmed by their discordance on almost every other subject, is a conclusive proof of the unanimity of the whole human race on the great rules of duty, and the fundamental principles of morals. On such matters, poets and orators are the most unexceptionable of all witnesses; for they address themselves to the general feelings and sympathies of mankind; they are neither warped by system nor perverted by sophistry; they can attain none of their objects; they can neither please nor persuade; if they dwell on moral sentiments not in union with those of their readers. No system of moral philosophy can surely disregard the general feelings of human nature, and the according judgment of all ages and nations.'

To this may be added, that not only are poets, orators, and historians, naturally the most competent of all to give evidence upon the nature of

our moral feelings, from their own full possession of the best sympathies of human nature, and to establish the general fact by their own innate consciousness; but the appeal to these authorities has a due and beneficial effect upon those who do not possess this moral faculty in the same degree; yet who are influenced by the reverence they feel for distinguished authority, and who yield a salutary obedience to the principle, though they may not fully appreciate its nature, or comprehend its consequences.

SECT. IV.—OF THE REVEALED LAW.

If the moral sense of mankind could always be relied upon; if the benevolent feelings of men were always in operation—their sense of justice unswayed by selfishness—and their reason and understanding always unclouded, each would be ‘a law unto himself,’ and need no other guide than his own impressions and convictions. But this every one personally knows is not the case; and it is too true, that even those who possess the most intelligence, the highest human virtue, and the longest experience, are still prone to error alike in their moral and intellectual perceptions. To them ‘the ways of Heaven are dark and intricate,’ and ‘their understanding traces them in vain.’

It has pleased, therefore, Divine Providence, to enlighten this natural darkness of the human mind by several express revelations, which are to be found in the Holy Scriptures. Writers upon this subject hold that the revealed law, emanating from the will of the Creator, does not command or forbid things in themselves either binding or unlawful, but makes them unlawful by its prohibition, and binding by its command. ‘Undoubtedly,’ says a commentator on Grotius, ‘actions are made unlawful by the law of God declaring them to be such;’ as St. Paul says, ‘but for the law, I should not have known sin:’ that is, ‘I should not have known its evil and its enormity, but from finding it so expressly prohibited.’ Yet still, as God is the moral Governor of the world, though his prohibitions alone render any acts unlawful, such acts, even though prohibited, would be found, upon trial, to be at variance with the nature, and consequently detrimental to the happiness of men. Therefore, the Divine prohibitions, when examined, will be found conformable to the laws of nature. Thus the conspiring evidence of nature and revelation will show that God is the author of both.

The revealed law is termed by some the voluntary divine right. The very meaning of these words shows, that it springs from the divine will, by which it is distinguished from natural law. This law admits of what Anaxarchus said, that God does not will a thing because it is just, but that it is just or binding because God wills it. Now this law was given either to mankind in general or to one particular people. We find three periods at which it was given by God to the human race: the first of which was immediately after the creation of man; the second at the period of the flood, and the third by that glorious dispensation through Jesus Christ. These three laws undoubtedly bind all men, as

soon as they come to a sufficient knowledge of them.

Of all nations there is but one to which God particularly vouchsafed to give laws, and that was the people of Israel. Hence we may infer that we are bound by no part of the Levitical law, strictly and properly so called; because any obligation, beyond that arising from the law of nature, must proceed from the express will of the law-giver. Now it cannot be discovered by any proof, that God intended any other people than the Israelites to be bound by that law. Therefore, with respect to ourselves, we have no occasion to prove an abrogation of that law, for it could never be abrogated with respect to those whom it never bound. But the Israelites were released from the ceremonial part as soon as the law of the gospel was proclaimed.

The chief doctrines of the revealed law, so far as they relate to the morals of society, independently of religious considerations (which will be treated in another part of the work), are the following:—That we should do unto others as we would they should do unto us. That we should love our neighbour as ourselves: and in the interpretation of the rule we are to consider every human being as our neighbour. That we should render good for evil. In other words, that we should not only love our neighbours but our enemies. Philosophically speaking, it is substituting the law of universal philanthropy in the place of individual rights and interests.

These are precepts which manifestly inculcate a higher and purer morality than the selfishness of human beings, and their natural short-sightedness would have been willing to adopt even had they been able to discover them.

SECT. V.—OF INTERNATIONAL LAW.

It is evidently impossible for the whole race of mankind to be united in one great community in which the same laws should prevail, and in which the same supreme power could enforce their execution. They must therefore necessarily be divided into many different states, suited to the natural variety of their inclinations and capacities. But, though entirely independent of each other, yet they are capable of, and benefited by mutual intercourse. Hence arises another kind of law to regulate this inter-communication; namely, *The law of nations*; which, as none of these states will acknowledge a superiority, must depend entirely upon the rules of natural law, or upon mutual compacts; treaties, or leagues, between the several communities.

Yet, frequently, in one part of the world that is held for the law of nations which is not so in another. Now this law of nations can only be proved in the same manner as the unwritten civil law, and that is by the continual experience and testimony of the sages of the law. For this law, as Dio Chrysostom well observes, consists of the discoveries made by experience and time, that is of the universal expediency of the general principles of justice; and in this we derive great advantage from the writings of eminent historians.

The following are some of the general rules of the law of nations:—

1. That there should be a right of free passage through countries, across rivers, and over any part of the sea, which belong to a particular people, upon necessary occasions: as in quest of settlements, to trade with other nations, or recover lost possessions.

2. In the prosecution of a just war any power has a right to take possession of a neutral soil, if there be real grounds for supposing the enemy intends to make himself master of the same; especially if the enemy's occupying it would be attended with irreparable mischief. But this rule, or rather exception, arising from necessity, must be followed by ample restitution when the necessity has ceased.

3. The privileges or rights granted to the people of one country, should be granted to those of all other countries; yet it is said a monopoly may be lawfully allowed to one particular state. Both these dicta, however, cannot be correct, and, to reconcile them, we must suppose that monopolies are generally unlawful, but that there may be some exceptions to the rule, arising from peculiar circumstances.

4. The natives of one country have a right to reside in another for the recovery of health or other just cause.

SECT. VI.—OF CONVENTIONAL OR MUNICIPAL LAW.

Although some part of the laws by which the intercourse of nations is regulated has its origin in compact, and depends upon the mere will of the contracting parties, yet the much larger and most important part of it depends on the law of nature. The reverse of this is the case with municipal laws, by which the citizens or subjects of particular communities are regulated. These are chiefly conventional, adopted by common consent, and binding only by the law of nature on the principle of obedience to the civil power. It is true the municipal law generally, though not invariably, enforces the natural law; but the larger portion of its code applies to actions which in a state of nature would be indifferent, and in the neglect or performance of which there might be neither blame nor merit.

This corresponds with what Grotius terms 'voluntary right,' deriving its origin from the will; and, according to his authority, that which is of human origin is either a civil right, or a right more or less extensive than the civil right, and which is derived from the civil power. The less extensive right, and not derived from the civil power although subject to it, is various; comprehending the authority of parents over children, masters over servants, and the like. For as there were parents and children, masters and servants, before there were princes and subjects, the rights arising out of these primitive relations exist independently of the conventional law.

In one signification of the word 'right,' Grotius considers it a moral quality annexed to the person, justly entitling him to possess some particular privilege, or to perform some particular act. This moral quality, as he terms it, when perfect, is called a faculty; when imperfect, an aptitude. Some of the instances adduced in sup-

port of this position, however, rather show a natural than a moral quality, and others a conventional one. Of the former is the power of a father over his child, and the right of a husband over his wife. Of the latter is the right to services in respect of land, the right of passage to a house, and the right of demanding the fulfilment of a promise.

Civilians call a 'faculty' that right which every man has to his own; but Grotius, taking it in its strict and proper sense, as applicable to a state of society, terms it a right, comprehending the power that we have over ourselves, which is called liberty, and the power that we have over others, as that of a master over his slaves. It likewise comprehends property, the use and possession, and the power of alienating and pledging it. It implies also the power of demanding what is due, to which the obligation of the party indebted corresponds.

In this conventional view of the subject, 'right' is two-fold, the one private, established for the advantage of each individual; the other superior, or public, involving the claims which the state has upon individuals and their property for the public good. Thus the regal authority is above that of a father and a master, and the sovereign has a greater right over the property of his subjects, where the public good is concerned, than the owners themselves; and, when the exigencies of the state require a supply, every man is more obliged to contribute towards it, than to satisfy his creditors.

According to the signification of the word right, now under review, it has the same meaning as law, taken in its most extensive sense, to denote a rule of action obliging us to do what is proper. We say, 'obliging' us, for the best counsels or precepts, if they lay us under no obligation to obey them, cannot come under the denomination of law or right. Permission is no act of the law, but only the silence of the law; yet the law prohibits any one from impeding another in doing what the law permits.

The law obliges us to do what is proper, no simply what is just. Yet from giving the name of a right to that which is proper, a more general acceptance of the word justice has been derived. Aristotle, defining one kind of right to be natural, and the other voluntary, adopts the term *lawful right* in the strictest sense of the word, law; and sometimes an instituted right. The Hebrews distinguished natural rights as precepts, and voluntary rights as statutes.

A positive, legal permission, is either full, granting us power to do some particular act without the least restriction, or less than full, only allowing men impunity for certain actions, and a right to do them without molestation from others. From the permission of the former kind, no less than from a positive precept, it follows that what the law allows is not contrary to the law of nature. Thus, the law of nature, authorising self-defence in its fullest extent, the law of nations, which authorises war for the same purpose, cannot be repugnant to it. But with regard to the latter kind of permission, allowing impunity for certain acts, but not expressly authorising them, we cannot so readily conclude those acts

to be conformable to the law of nature; because, where the words of permission are ambiguous in their meaning, it is better for us to interpret, according to the established law of nature, what kind of permission it is, than from our conception of its expediency to conclude it conformable to the law of nature. The law of England on homicide, as excusable in self-defence, will illustrate this position.

The rights which God has established called natural rights, because every man has naturally a right to them, such as life and liberty, need not the aid of human laws to be more effectually invested in every man than they are; neither do they receive any additional strength, when declared by the municipal laws to be inviolable. On the contrary, no human legislature has power to abridge or destroy them, unless the owner shall himself commit some act that amounts to a forfeiture.

Neither do divine or natural duties, such as, for instance, the worship of God, the maintenance of children, and the like, receive any stronger sanction from being also declared to be duties by the law of the land. The case is the same as to crimes, and misdemeanors, that are forbidden by the laws, and therefore styled mala in se, such as murder, theft, and perjury; which contract no additional turpitude from being declared unlawful by the legislature.

From these general considerations we proceed to the more minute definition of municipal law, which, according to Blackstone, is 'a rule of civil conduct prescribed by the supreme power in a state, commanding what is right, and prohibiting what is wrong.'

It is a rule; not a transient sudden order concerning a particular person, but something permanent, uniform, and universal. It is also distinguished from advice or counsel, which we are at liberty to follow or not as we see proper, and to judge of the reasonableness or unreasonableness of the thing advised; for our obedience to the law depends not upon our approbation, but upon the maker's will. Counsel is only matter of persuasion, law is matter of injunction—counsel acts only upon the willing, law on the unwilling also.

It is also distinguished from a compact or agreement; for a compact is a promise proceeding from us—law is a command directed to us. It is true there is an obligation, which a compact carries with it, equal in point of conscience to that of a law; but then the origin of the obligation is different. In compacts, we ourselves determine and promise what shall be done, before we are obliged to do it: in laws, we are obliged to act without ourselves determining or promising any thing at all; yet it may be observed that, although we do not personally consent, we are presumed to do so by our representatives in the legislature.

It is also a rule of civil conduct. This distinguishes it from the natural and revealed law: the former of which is the rule of moral conduct, and the latter not only the rule of moral conduct but of faith. Municipal law regards man only as a citizen, and as bound to contribute his part to the subsistence and peace of society.

It is likewise a rule prescribed. It is requisite that the rule be notified to the people who are to obey it. The manner in which the notification is to be made very greatly varies. It may be notified by universal tradition and long practice; or *viva voce* by officers appointed for that purpose; or by writing or printing. Yet, whatever way is made use of, it is incumbent on the promulgators to do it in the most public and perspicuous manner. All laws should be made to commence in futuro, and be notified before their commencement, which is implied in the term 'prescribed.'

It is also a rule made by the supreme power in the state, for legislation is the greatest act of superiority that can be exercised by one being over another. Wherefore it is requisite to the very essence of a law, that it be made by the supreme power, the nature of which has been already shown.

Having thus defined the general nature of municipal laws, we now proceed to consider their several parts and objects.

Every law, as further defined by Blackstone, may be said to consist of several parts: one declaratory; whereby the rights to be observed, and the wrongs to be eschewed, are clearly defined and laid down—another, directory, whereby the subject is instructed and enjoined to observe those rights, and to abstain from the commission of those wrongs—a third, remedial, whereby a method is pointed out to recover a man's private rights, or redress his private wrongs—to which may be added a fourth, usually termed the sanction, or vindicatory branch of the law, whereby is signified what evil or penalty shall be incurred by such as commit any public wrongs, or transgress or neglect their duty.

With regard to the first of these, the *declaratory* part of the municipal law, this depends not so much upon the law of revelation or of nature, as upon the wisdom and will of the legislator. In all those cases which are determined by the former, the legislator acts only in subordination to the great Law-giver, transcribing and publishing his precepts. So that the declaratory part of the municipal law has no force with regard to actions that are naturally and intrinsically right or wrong.

But, with regard to things in themselves indifferent, the case is entirely different. These become either right or wrong, just or unjust, duties or misdemeanors, according as the municipal legislator sees proper for promoting the welfare of the society, and more effectually carrying on the purposes of civil life. Thus the common law has declared, that the goods of the wife do instantly upon marriage become the property and right of the husband; and the statute law has declared all monopolies a public offence; yet *that* right, and *this* offence, have no foundation in nature; but are merely created by the law for the purposes of civil society.

And sometimes, where the thing itself has its rise from the law of nature, the particular circumstances and mode of doing it become right or wrong, as the laws of the land shall direct. Thus, for instance, in civil duties, obedience to superiors is the doctrine of revealed as well as

natural religion: but who those superiors shall be, and in what circumstances, or to what degrees they shall be obeyed, it is the province of human laws to determine. And so, as to injuries or crimes, it must be left to our own legislature to decide, in what cases the seizing another's cattle shall amount to the crime of robbery, and where it shall be a justifiable action, as when a landlord takes them by way of distress for rent.

So much for the declaratory part of the municipal law: and the *directory* stands much upon the same footing; for this virtually includes the former, the delation being usually collected from the direction. The law that says, 'thou shalt not steal,' implies a declaration that stealing is a crime. And we have seen, that, in things naturally indifferent, the very essence of right and wrong depends upon the direction of the laws to do or to omit them.

The *remedial* part of a law is so necessary a consequence of the former two, that laws must be very vague and imperfect without it. For in vain would rights be declared, in vain directed to be observed, if there were no method of recovering and asserting those rights, when wrongfully withheld or invaded. This is what we mean when we speak of the protection of the law. When, for instance, the declaratory part of the law has said, 'that the field or inheritance which belonged to Titius's father is vested by his death in Titius,' and the *directory* part has 'forbidden any one to enter on another's property without the leave of the owner;' if Gaius after this will presume to take possession of the land, the remedial part of the law will then interpose its office; will make Gaius restore the possession to Titius, and also pay him damages for the invasion.

With regard to the *sanction* of laws, or the evil that may attend the breach of public duties; human legislators have for the most part chosen to make the sanction of their laws rather vindicatory than remuneratory, or to consist rather in punishments than in actual particular rewards. Because in the first place the quiet enjoyment and protection of all our civil rights and liberties, which are the sure and general consequence of obedience to the municipal law, are in themselves the best and most valuable of all rewards: because, also, were the exercise of every virtue to be enforced by the proposal of particular rewards, it were impossible for any state to furnish stock enough for so profuse a bounty: and farther, because the dread of evil is a much more forcible principle of human actions than the prospect of good. The truth is, also, it may be observed, that providence, in its bounty, has not only connected our actual prosperity with every kind of good conduct, but has rendered the performance of duty in itself an agreeable and pleasurable act, and the source of enduring satisfaction afterwards in the contemplation of the result. It is manifest, also, that the good which already predominates in the lot of the meritorious, must present a contrast to the evil of punishment amply sufficient to constitute the most efficient motive.

For which reasons, though a prudent bestow-

ing of rewards is sometimes of exquisite use, yet those civil laws which enforce and enjoin our duty, seldom, if ever, propose any privilege of gift to such as obey the law; but constantly come armed with a penalty denounced against transgressors, either expressly defining the nature and quantity of the punishment, or else leaving it to the discretion of the judges, and those who are entrusted with the care of putting the laws in execution.

Of all the parts of a law, the most effectual is the *vindicatory*. For it is but lost labor to say, Do this, or avoid that, unless we also declare, this shall be the consequence of your non-compliance. The main strength of a law, therefore, consists in the penalty annexed to it. In this lies the principal obligation of human laws.

Legislators and their laws are said to *compel* and *oblige*; because, by declaring a penalty against offenders, they bring it to pass that no man can easily choose to transgress the law; since, by reason of the impending correction, compliance is in a high degree preferable to disobedience.

It has been justly held by ethical writers, that human laws are binding upon men's consciences. But, if that were the only or most forcible obligation, the good only would regard the laws, and the bad would set them at defiance. And, true as this principle is, it must still be understood with much restriction. It holds, we apprehend, as to rights; and that when the law has determined the field to belong to Titius, it is matter of conscience no longer to withhold or invade it.

So also in regard to actual duties, and such offences as are mala in se: here we are bound in conscience, because we are bound by superior laws, before those human laws were in being, to perform the one and abstain from the other.

But in relation to those laws which enjoin only positive duties, and forbid only such things as are not mala in se, but mala prohibita merely, without any intermixture of moral guilt, annexing a penalty to non-compliance; here, in the opinion of Blackstone (but in which we cannot agree): Conscience seems to be no farther concerned, than by directing a submission to the penalty, in case of our breach of those laws: for otherwise, he says, the multitude of penal laws in a state would not only be looked upon as an impolitic, but would also be a very wicked thing, if every such law were a snare for the conscience of the subject. But in these cases the alternative is offered to every man; either abstain from this, or submit to such penalty: and his conscience will be clear, whichever side of the alternative he thinks proper to embrace. Thus, by the statutes for preserving the game, a penalty is denounced against every unqualified person that kills a hare, and against every person who possesses a partridge in August. And so too, by other statutes, pecuniary penalties are inflicted for exercising trades without serving an apprenticeship thereto, for erecting cottages without annexing four acres of land to each, for not burying the dead in woollen, for not performing statute work on the public roads, and for innumerable other positive misdemeanors. Now these prohibitory laws do not make the transgression a moral offence, or

sin: the only obligation in conscience is to submit to the penalty, if levied. It must, however, be observed, he continues, that we are here speaking of laws that are simply and purely penal, where the thing forbidden or enjoined is wholly a matter of indifference, and where the penalty inflicted is an adequate compensation for the civil inconvenience supposed to arise from the offence. But, where disobedience to the law involves in it also any degree of public or private injury, there it falls within our former distinction, and is also an offence against conscience.

We cannot subscribe to the soundness of this distinction between the duty of obedience to those laws which relate to things termed intrinsically bad and those which are merely prohibited. Undoubtedly there are different degrees of offence, and the conscience is infinitely more outraged by the destruction of human life than by that of an animal protected only by the game laws; but the principle is the same in kind though different in degree. The duty of obedience is violated in the one case as it is in the other, although the importance of the consequences are widely different in amount.

The duty of obedience to the divine law, whether revealed or natural, stands first in order, but next to that must be placed obedience to the laws of our country, which, although less perfectly constructed than the other, are, at least, designed for the general benefit. The learned judge himself observes, that obedience to superiors is the doctrine of revealed as well as of natural religion, and who those superiors shall be, and in what circumstances or what degrees they shall be obeyed, it is the province of human laws to determine.

In reference to the divine law, it may be observed, that obedience is the test of the performance of the highest duty. The very first offence was an act of disobedience. Now, it cannot be objected that the command related to that which was in itself indifferent, for the divine will of the Creator is absolute. Nor can it be urged that the propriety or reasonableness of the injunction was not intelligible to the creature. Neither can it be said that the doom which followed the transgression would have been more consistent with justice, had the commission of murder, or some other offence which we are accustomed to deem atrocious, been the appointed criterion of obedience rather than the eating of the prohibited fruit.

If the doctrine, that the payment of the penalty is a full compensation for offence, be valid, then it would follow that the sufferings which succeeded the fall of man expiated his offence, and no other atonement could be necessary; an inference we presume from which the orthodox judge would have recoiled with abhorrence.

The doctrine is also equally at variance with the duties which arise out of the natural relations of life. The child is not excused for an act of express disobedience by the reproof or punishment which the parent inflicts. Repeated acts of disobedience, though followed each by chastisement, still leave a stain upon the moral character. The child remains incorrigibly disobedient. Is it enough to say that it has always

undergone such punishment as the parent thought proper to apportion? No: the outrages against the moral law cannot be balanced by 'corporeal sufferance,' any more than a felony can be compounded by the restoration of the stolen property, or the payment of its price.

But the absurdity of this may be shown still more. Though, according to the barbarous rules of the *lex talionis*, an eye may be demanded for an eye, and a tooth for a tooth, justice cannot acquit the offender from blame by his submitting to the mutilation. Punishment is the consequence of the offence, and he who suffers it cannot complain of its infliction, for he is forewarned that it must ensue. But is the injured party, he who has been deprived of sight, is he satisfied by knowing that his enemy has been reduced to equal blindness? Has the injury he has sustained been removed by it? Did he submit to the wrong upon the tacit understanding that a similar fate awaited his assailant? He entered into no such contract, he is not benefited by it, and cannot be satisfied with its fulfilment; and, monstrous as such an hypothesis is, it is the only one that can support the position that justice is satisfied by inflicting the penalty. This wild sort of retribution is illustrated by a tale ascribed to the author of *Waverley*, and selected from a work now said to be in the press. A Highland drover, after a dispute with his fellow traveller, an Englishman, who triumphs over him in a boxing-match, quits the scene of his deadly mortification, and obtains a weapon which he had confided to a friend, with which he returns after the lapse of some hours, and stabs his antagonist to the heart. He then surrenders himself to the law. What his conscience is supposed to tell him we are not informed, but his language is quite accordant with the doctrine under review: he holds himself justified: 'I give,' says he, 'life for life; what can I do more?' The sophism is manifest; though he could not do more, he could have done less; he could have permitted his fellow-being to live; his own recklessness of life restored not animation to the dead, nor diminished the mortal pang which followed his murderous blow, or the agony inflicted upon the kindred of his victim.

Tried by the general principles of legislation it is a doctrine the most absurd imaginable. The legislator frames a law, declaring a certain act unlawful, and prohibiting its performance. The case supposes that the interest of society is concerned in making the regulation, and a conscientious man, a good subject, he who feels a regard for the interests of his country, would concur in the law, and require no other sanction. Although he might not perceive the reason of the enactment, he would not think himself justified in setting up his private judgment against the whole legislative body of the state; or, if he were conscientiously satisfied of the injustice or impolicy of the measure, he would seek in a lawful way to obtain an alteration, and in the mean time submit to it. But, as we have seen, it is necessary to enforce obedience upon the unwilling by affixing adequate penalties for transgression. Yet it can never be supposed that the legislator intends to open an account current

with the disobedient, and accept so much money for so many acts of transgression. The object of the legislator is to prevent the infraction altogether. The penalty is imposed for that purpose; and, according to every correct principle, the penalty should be of an amount calculated to effect its object.

According to this rule, if it happened that the penalty at first imposed did not prevent the offence, it would be strictly justifiable, and indeed the duty of the legislature, to increase the amount until the object of prevention were accomplished. Now another question arises out of this race between the legislator and the culprit,—has the latter a moral right, as regards the duty he owes to himself, to throw away his substance, to consume his property, in paying the forfeitures consequent upon his infractions of the law? We think this cannot be maintained.

The principle may be illustrated by applying it to the private transactions of individuals. It must be allowed that it is immoral to withhold the payment of a debt, or the performance of a contract, which we know to be just, and which we are able to discharge. And it cannot be maintained that this breach of the moral law is healed by the payment of the expense to which the creditor may be put. We can never know the precise consequences of our misconduct, and certainly do not repair it by the mere satisfaction which the law has awarded, since the evil may be, and generally is, much greater than the law can ascertain, or than can be on all occasions made the subject of legal proof and adjudication.

Nay it is singularly enough in another place admitted by the learned judge, that human laws are binding upon men's consciences, so far as respects the rights of property, and that, 'when the law has determined the field to belong to Titius, it is matter of conscience no longer to withhold or invade it.' Yet in a state of nature the field could not belong to Titius. It was perfectly indifferent who first obtained a right by occupancy, and that occupancy could not naturally enable him to invest it in some other person after his death, to the entire exclusion, not only of mankind in general, but even of his own children; yet such are the rights of property according to the conventional law.

When we examine indeed the instances, which are adduced to support the doctrine, its dangerous tendency becomes still more obvious. In all these instances the evil is, that each individual is allowed to judge, in his own case, whether the action prohibited be malum in se or not, and it is unnecessary to say that the interests of society must suffer, when every one is thus allowed to consult his own personal interest and convenience; and to enter into a sort of bargain with justice, that he shall be at liberty to violate its rules at a certain price. Take the instances adduced by Blackstone. First, of the penalties inflicted by the game laws. Now, although these laws are liable to many serious objections, and it is desirable to alter them, yet in several respects they are founded on principles clearly important and beneficial to society. It is not right that one man should trespass on

another's land to kill even what are termed 'wild animals,' but which have been reared at considerable expense. Nor is it right that the poor should quit their useful and honest callings to prowl after these wild animals; a practice which, if it were general, would reduce civilised society to barbarism, and carry us back to the precarious life of the hunter. Against, therefore, the killing of game, except on a man's own land, and against the seizure of it by those who have contributed nothing to rear it, we conceive the laws may justly provide by adequate penalties.

Then it is said that exercising certain trades without having served an apprenticeship is also an 'indifferent thing,' and the payment of the penalty all that the moral law requires. To us it appears, however, that there is both mischief to the public and injury to individuals by a transgression of this prohibition. With respect to several trades the law may be unnecessary, since the public can provide against the evil by employing those only who are skilful; yet, even here, it is a small part of the public only that is competent to form a correct judgment and to elude imposition. The injury in such cases is limited to those, who, conforming to the law are put to expense or inconvenience in the course of their apprenticeship from which those who set the law at defiance are exempted. But take the instance of an apothecary: is it not contrary to good conscience that he should, in breach of a wholesome provision, venture to exercise his important profession to the imminent danger of human life without adequate skill and knowledge, which he can scarcely acquire in less than seven years?

The other instances of burying in woollen, working on the public roads, &c., may also be shown to have the public good in view and the neglect or violation of them as tending to its injury: and, therefore, that it is not an 'indifferent thing' to violate such laws, nor the infraction morally satisfied by the discharge of the penalty.

It may be said, however, that this mode of stating the instances adduced, brings them within the rule of mala in se. If that be so, we ought to have been furnished with those cases which are not capable of such an explanation. The illustrations are at variance with the doctrine. Yet we may presume that the well-known learning and ingenuity of the distinguished commentator have selected the best that could be found; and in truth, if there were any instance in which it is really a matter of perfect indifference whether the law were obeyed or not, except as to the payment of the price set upon the infringement, such a law ought not to exist. There ought to be no enactments which do not tend, on the one hand, to benefit society; or, on the other, to prevent the injuries which may assail it. All other laws are necessarily in violation of the infeasible rights of individual liberty. And it will be recollected that the important question before us does not in the least depend upon the natural injustice of any law, but that it simply is—Whether the infringement of a law, relating to things in a state of nature indifferent, but which in a state of society the legislator has a

right to make, can be violated, with moral impunity, upon satisfaction of the penalty affixed?

There is also this evil consequent upon allowing individuals to compound for their disobedience, that it lessens the respect we should feel for the laws in general, and consequently those maxims of jurisprudence, which in every view of moral obligation we are bound to obey, would possess proportionally a less degree of influence. Indeed, the bulk of mankind are unable to make those distinctions, which in some cases are so exceedingly nice, that even the learned themselves differ about them, and they will be apt to confound such distinctions, and interpret them in their own favor, rather than the contrary. And we conceive there is this important consideration lost sight of, in pursuing these subtleties, that the moral disgrace attendant upon a trial and conviction for offending against any legal enactment, tends more to secure obedience to the laws in general, than those penalties which it is supposed altogether settle the account, as if it were a mere matter of arithmetic.

In short, we deny altogether the correctness of the premises from which the doctrine in question has been drawn. There are no actions which can be considered strictly 'indifferent,' after the law of the land has pronounced them otherwise. What might have been the case in an imaginary state, prior to the institution of civilised life, it is now needless to discuss. It is clearly important to connect the sanction of moral obligation with the enactments of the legislature, and thus to ensure as far as possible that obedience upon which the well-being of society depends.

Such being the general nature and several constituent parts of the municipal law, we have next to consider the rules by which they are interpreted and the general principles of equity.

The fairest and most rational method to interpret the will of the legislature is by exploring its intentions at the time when the law was made. To consult the legislative body upon the meaning of its laws, in relation to particular cases, is objectionable at all periods; but especially so at any considerable distance of time from their enactment, for the individual members are frequently changed, and it would rarely, if ever, occur that the same persons, the exact majority of whom passed the law, could be assembled to expound its intention. Besides, as Blackstone observes, such a practice would not only be endless but afford great room for partiality and oppression.

The most natural and probable means of determining questionable laws are by the examination of the words, the context, the subject matter, the effects and consequence, and the spirit and reason of the law.

1. *Words* are generally to be understood in their usual and most known signification, according to their general and popular use. Thus the law mentioned by Puffendorf, which forbade a layman to lay hands on a priest, was adjudged to extend to him who had hurt a priest with a weapon. Again, terms of art, or technical terms, must be taken according to the acceptance of the

learned in each art trade and science. So in the act of settlement, where the crown of England is limited 'to the princess Sophia, and the heirs of her body, being protestants,' it becomes necessary to call in the assistance of lawyers to ascertain the precise idea of the words 'heirs of her body;' which in a legal sense comprise only certain lineal descendants. Lastly, where words are clearly repugnant in two laws, the latter law takes place of the elder.

2. If words happen to be still dubious we may establish their meaning from the *context*; with which it may be of singular use to compare a word or sentence, whenever it is ambiguous, equivocal, or intricate. Thus the preamble is often called in to help the construction of an act of parliament. Of the same nature is the comparison of a law with other laws made by the same legislature that have some affinity with the subject, or that expressly relate to the same point.

3. As to the *subject matter*, words are always understood as having a regard thereto; for that is always supposed to be in the eye of the legislator, and all his expressions directed to that end. Thus, when a law of Edward III. forbids all ecclesiastical persons to purchase provisions at Rome, it might seem to prohibit the buying of grain and other victual; but when we consider that the statute was made to repress the usurpations of the papal see, and that the nominations to benefices by the pope were called *provisions*, we see that the restraint is intended to be laid upon such provisions only.

4. As to the *effects and consequences*, the rule is that where words bear either none, or a very absurd signification, if literally understood, we must deviate from the received sense of them. Therefore the Bolognian law, mentioned by Puffendorf, which enacted, 'that whoever drew blood in the streets should be punished with the utmost severity,' was held not to extend to the surgeon who opened the vein of a person who fell down in the street in a fit.

5. But, lastly, the most universal and effectual way of discovering the true meaning of a law, when the words are dubious, is by considering the *reason* and *spirit* of it, or the cause which moved the legislator to enact it. For, when the reason ceases, the law itself ought likewise to cease with it. An instance of this is given in a case put by Cicero, or whoever else was the author of the treatise inscribed to Herennius. There was a law, that those who in a storm forsook the ship should forfeit all property therein, and the ship and lading should belong entirely to those who staid in it. In a dangerous tempest all the mariners forsook the ship, except only one sick passenger, who was unable to get out and escape. By chance the ship came safely to port. The sick man kept possession, and claimed the benefit of the law. Now here all the learned agree that the sick man was not within the reason of the law; for the reason of making it was, to give encouragement to such as should venture their lives to save the vessel: but this is a merit to which he could never pretend, who neither staid in the ship upon that account, nor contributed any thing to its preservation.

From this method of interpreting laws by the reason of them, arises what we call equity: which is thus defined by Grotius, 'the correction of that wherein the law (by reason of its universality) is deficient.' For since in laws all cases cannot be foreseen or expressed, it is necessary, that, when the general decrees of the law come to be applied to particular cases, there should be somewhere a power vested of defining those circumstances, which (had they been foreseen) the legislator himself would have expressed. And these are the cases which, according to Grotius, 'lex non exactè definit, sed arbitrio boni viri permittit.'

Equity thus depending essentially upon the particular circumstances of each individual case, there can be no established rules and fixed precepts of equity laid down, without destroying its very essence, and reducing it to a positive law. And, on the other hand, the liberty of considering all cases in an equitable light must not be indulged too far, lest thereby we destroy all law, and leave the decision of every question in the breast of the judge. And law, without equity, though hard and disagreeable, is much more desirable for the public good than equity without law; which would make every judge a legislator and introduce infinite confusion: as there would then be almost as many different rules of action laid down in our courts, as there are differences of capacity and sentiments in the human mind.

PART II.

OF THE LAWS OF ENGLAND.

The LAWS OF ENGLAND seem sufficiently important to require a separate introduction on the subject of their origin and foundations; the civil must, then, necessarily be divided from the criminal code; and each of these heads will be subdivided into chapters, preserving all the greater distinctions of rights and injuries, crimes and punishments, &c.

INTRODUCTION.

Origin, foundation, and maxims of the law.—The law of England may be divided into the *lex non scripta*, the unwritten or common law; and the *lex scripta*, the written or statute law.

OF THE COMMON LAW.—The *lex non scripta*, or unwritten law, includes not only general customs, or the common law properly so called, but also the particular customs of certain parts of the kingdom, and likewise those particular laws that are by custom observed only in certain courts and jurisdictions. In the profound ignorance of letters which formerly overspread the whole western world, all laws were entirely traditional; the nations among which they prevailed having little or no idea of writing. Thus the British as well as the Gallic druids committed all their laws and learning to memory; and it is said of the primitive Saxons here, as well as their brethren on the continent, that *leges solâ memoriâ et usu retinebant*. But at present the monuments and evidences of our legal customs are contained in the records of the several courts of justice, in books of reports and judicial decisions, and in the treatises of learned sages of

the profession, preserved and handed down from the times of highest antiquity. These parts of the English law, however, are styled *leges non scriptæ*, because their original institution and authority are not set down in writing as acts of parliament are, but receive their binding power, and the force of laws, by long and immemorial usage, and by their universal reception throughout the kingdom: in like manner as Aulus Gellius defines the *jus non scriptum* to be that which is *tacito et illiterato hominum consensu et moribus expressum*.

The ancient English, particularly Fortescue, insist that these customs are as old as the primitive Britons, and continued down through the several mutations of government and inhabitants to the present time, unchanged and unadulterated. But the truth is, that there never was any formal exchange of one system of laws for another, though doubtless, by the intermixture of nations, the Romans, the Picts, the Saxons, the Danes, and the Normans, they must have insensibly introduced and incorporated many of their own customs with those that were before established. 'Our laws,' says lord Bacon, 'are mixed as our language;' and, indeed, antiquarians and historians assure us that our body of law is of this compound nature. For they tell us, that in the time of Alfred the local customs of the several provinces of the kingdom were grown so various that he found it expedient to compile his dome-book, or *liber judicialis*, for the general use of the whole kingdom. This book is said to have been extant so late as the reign of Edward IV., but is now unfortunately lost.

But the irruption and establishment of the Danes in England, which followed soon after, introduced new customs, and caused this code of Alfred in many provinces to fall into disuse, or at least to be mixed and debased with other laws. So that about the beginning of the eleventh century there were three principal systems of laws prevailing in different districts. 1. The *Mercen lage*, or Mercian laws, and those bordering on Wales. 2. The *West Saxon lage*, or laws of the West Saxons, prevailed in the counties south and west of the island, from Kent to Devonshire. These were probably much the same with the laws of Alfred, Berkshire being the seat of his peculiar residence. 3. The *Dane lage*, or Danish law, was principally maintained in the rest of the midland counties and on the east coast, the part most exposed to their inroads. The northern provinces were then under a distinct government.

Out of these three laws, Roger Hoveden and Ranulphus Cestrensis inform us, king Edward the Confessor extracted one uniform digest of laws to be observed throughout the whole kingdom; though Hoveden and the author of an old MS. chronicle assure us, likewise, that this work was projected and begun by his grandfather king Edgar. General digests of the same kind were formed in the thirteenth and fifteenth centuries in Sweden, Spain, and Portugal. That of Sweden was styled the *Land's Lagh*.

But these compilations of Edgar, and Edward the Confessor seem to have been only a new

edition of Alfred's dome-book, with additions. For Alfred is generally styled *legum Anglicanarum conditor*, as Edward is the restitutor. These, however, are the laws so often styled in history the laws of Edward the Confessor; which our ancestors struggled so hard to maintain, under the first princes of the Norman line; and which subsequent princes so frequently promised to keep and to restore, as the most popular act they could do when pressed by foreign emergencies, or domestic discontents. These are the laws that so vigorously withstood the repeated attacks of the civil law; which established in the twelfth century a new Roman empire over most states on the continent; states that have lost by these means their political liberties, while the free constitution of England, by the struggle to retain them, has been rather improved than debased. These, in short, are the laws which gave rise to that collection of maxims and customs now known by the name of the common law, a name either given to it, in contradistinction to other laws, as the statute law, the civil law, the law merchant, and the like; or, more probably, as a law common to all the realm, the *jus commune*, or *folcright*, mentioned by king Edward the Elder, after the abolition of the several provincial customs and particular laws above-mentioned. But the antiquity of this law is much higher than tradition or history can reach: hence, in this law, the goodness of a custom depends upon its having been used time out of mind.

This unwritten or common law is properly distinguishable into three kinds: I. General customs, which are the universal rule of the kingdom, and form the common law in its stricter and more usual signification. II. Particular customs; which for the most part affect only the inhabitants of particular districts. III. Certain particular laws; which by custom are adopted and used by some particular courts of pretty general and extensive jurisdiction.

SECT. I.—GENERAL CUSTOMS.

The common law, properly so called, is that by which proceedings and determinations in the king's ordinary courts of justice are guided and directed. This, for the most part, settles the course in which lands descend by inheritance; the manner and form of acquiring and transferring property; the solemnities and obligation of contracts; the rules of expounding wills, deeds, and acts of parliament; the respective remedies of civil injuries; the several species of temporary offences, with the manner and degree of punishment; and an infinite number of minuter particulars, which diffuse themselves as extensively as the ordinary distribution of common justice requires.

Some have divided the common law into two principal grounds or foundations: 1. Established customs; such as that, where there are three brothers, the eldest brother shall be the heir to the second in exclusion of the youngest: and, 2. Established rules and maxims; as, 'that the king can do no wrong,' that no man shall 'be bound to accuse himself,' and the like. But these seem to be one and the same thing. For

the authority of these maxims rests entirely upon general reception and usage; and the only method of proving that this or that maxim is a rule of the common law is, by showing that it has been always the custom to observe it.

But here a very material question arises, How are these customs or maxims to be known, and by whom is their validity to be determined? The answer is, by the judges in the several courts of justice. They are the depository of the laws; the living oracles who must decide in all cases of doubt, and who are bound by an oath to decide according to the law of the land. Their knowledge of that law is derived from experience and study; from the *viginti annorum lucubrations* which Fortescue mentions; and from being long personally 'accustomed to the judicial decisions of their predecessors.

The doctrine of the law then is briefly this, that precedents and rules must be followed, unless flatly absurd or unjust; for though their reason be not obvious, at first view, yet we owe such a deference to former times as not to suppose they acted wholly without consideration. We may indeed take it as a general rule, that the decisions of courts of justice are the evidence of common law.

The decisions, therefore, of courts are held in the highest regard, and are not only preserved as authentic records in the treasures of the several courts, but are handed out to public view in the numerous volumes of reports which furnish the lawyer's library. The reports are extant in a regular series from the reign of king Edward II. inclusive; and from his time to that of Henry VIII. were taken by the prothonotaries, or chief scribes of the court, at the expense of the crown, and published annually, whence they are known under the denomination of the year-books. But though king James I., by advice of lord Bacon, appointed two reporters, 'with a handsome stipend for this purpose; yet that wise institution was soon neglected, and, from the reign of Henry VIII. to the present time, this task has been executed by many private and contemporary hands, who, sometimes through haste, sometimes through mistake, have published very crude and imperfect accounts. Some of the most valuable of the ancient reports are those published by lord chief justice Coke, a man of great learning in his profession, whose four volumes of *Institutes* are of great authority in the courts of justice. The works of Glanvil, Bracton, Britton, Fleta, Littleton, and Fitzherbert, with some others of ancient date, are also often cited as authorities. Thus the first ground and chief corner stone of the laws of England is generally immemorial custom, or common law, from time to time declared in the decisions of the courts of justice, which decisions are preserved among the public records, explained in the reports, and digested for general use in the authoritative writings of the venerable sages of the law. And it is esteemed one of the characteristic marks of British liberty, that the common law depends upon custom; which carries this mark of freedom along with it, that it seems to have been introduced by the voluntary consent of the people.

SECT. II.—PARTICULAR CUSTOMS.

The second branch of the unwritten laws of England are particular customs, or laws which affect only the inhabitants of particular districts.

Such is the custom of gavel-kind in Kent, and some other parts of the kingdom (though perhaps it was general till the Norman Conquest); which ordains, among other things, that not the eldest son only of the father shall succeed to his inheritance, but all the sons alike; and that though the ancestor be attainted and charged, yet the heir shall succeed to his estate, without any escheat to the lord. Such is the custom that prevails in divers ancient boroughs, and therefore called borough English, that the youngest son shall inherit the estate in preference to all his elder brothers. Such also are the special and particular customs of manors, of which every one has more or fewer, and which bind all the copyhold tenants that hold of such manors. Such, lastly, are many customs in London, with regard to trade, apprentices, widows, orphans, and a variety of other matters. All these are contrary to the general law of the land, and are good only by special usage; though the customs of London are also confirmed by act of parliament.

To this head may, most properly, be referred a particular system of customs used only among one set of the king's subjects, called the custom of merchants, or *lex mercatoria*; which, however different from the general rules of the common law, is yet ingrafted into it, and made a part of it; being allowed, for the benefit of trade, to be of the utmost validity in all commercial transactions; for it is a maxim of law that *cuiuslibet in sua arte credendum est*.

The rules relating to particular customs regard either the proof of their existence; their legality when proved; or their usual method of allowance. And, first, we will consider the rules of proof.

As to gavelkind, and borough English, the law takes particular notice of them; and there is no occasion to prove that such customs actually exist, but only that the lands in question are subject thereto. All other private customs must be particularly pleaded; and as well the existence of such customs must be shown, as that the thing in dispute is within the custom alleged. The trial, in both cases, is by a jury of twelve men, and not by the judges; except the same particular custom has been before tried, determined, and recorded, in the same court.

When a custom is actually proved to exist, the next enquiry is into the legality of it; for, if it is not a good custom, it ought to be no longer used. *Malus usus abolendus est*, is an established maxim of the law. To make a particular custom good, the following are necessary requisites:—

1. That it has been *used so long*, that the memory of man runneth not to the contrary.

2. It must have been *continued*, without interruption of the right: an interruption of the possession only for ten or twenty years, will not destroy the custom; but, if the right be discontinued, even for a day, the custom is quite at an end.

3. It must have been *peaceable*, and acquiesced in; not subject to contention and dispute.

4. Customs must be *reasonable*: or rather they must not be unreasonable.

5. Customs ought to be *certain*. A custom that lands shall descend to the most worthy of the owner's blood is void; for how shall this superior worth be determined? but a custom to descend to the next male of the blood, exclusive of females, is certain, and therefore good.

6. Customs, though established by consent, must (when established) be *compulsory*; and not left to the option of every man, whether he will use them or not.

7. Lastly, customs must be *consistent* with each other. One custom cannot be set up in opposition to another. For, if both are really customs, then both are of equal antiquity, and both established by mutual consent: which, to say of contradictory customs, is absurd.

Next, as to the *allowance* of special customs. Customs, in derogation of the common law, must be construed strictly: and all special customs must submit to the king's prerogative.

SECT. III.—PECULIAR CUSTOMARY LAWS.

The third branch of the *leges non scriptæ*, or customary laws, are those peculiar laws which by custom are adopted and used only in certain peculiar courts and jurisdictions. And by these are understood the civil and canon laws.

It may seem improper, at first view, to rank these laws under the head of unwritten laws, seeing they are set forth in pandects, codes, and institutions, &c., and enforced by an immense number of expositions, decisions, and treatises of the learned in both branches of the law. But it is plain, that it is not on account of their being written laws, that either the canon law, or the civil law, has any obligation within this kingdom. They bind not the subjects of England, because their materials were collected from popes or emperors; digested by Justinian, or declared authentic by Gregory; for the legislature of England does not, nor ever did, recognise any foreign power, as superior or equal to it in this kingdom; or as having the right to give law to any, the meanest of its subjects. But all the strength that either the papal or imperial laws have obtained in this realm is because they have been admitted and received by immemorial usage and custom in some particular cases and courts; or because they are in some other cases introduced by consent of parliament. This is expressly declared in statute 25 Henry VIII. cap. 21.

By the *CIVIL* law, absolutely taken, is generally understood the civil or municipal law of the Roman empire, as comprised in the institutes, the code, and the digest of the emperor Justinian, and the novel constitutions of himself and some of his successors. It consists of 1st. The Institutes, which contain the elements or first principles of the Roman law, in four books. 2d. The digests or pandects in fifty books; containing the opinions and writings of eminent lawyers, digested in a systematical method. 3rd. A new code or collection of imperial constitutions; the lapse of a whole century having rendered the former code of Theodosius imperfect. 4th. The novels or new constitutions posterior

in time to the other books, and amounting to a supplement to the code, containing new decrees of successive emperors as new questions happened to arise.

The **CANON** law is a body of Roman ecclesiastical law relative to such matters as that church either has, or pretends to have, the proper jurisdiction over. This is compiled from the opinions of the ancient Latin fathers, the decrees of general councils, and the decretal epistles and bulls of the holy see; and contains also the Decretum Gratiani compiled by one Gratian, an Italian monk, and entitled by him Concordia Discordantium Canonum; the Decretalia of Gregory IX., the Sextus Decretalium of Boniface VIII., the Constitutions of Clement V., and the Extravagantes of John XXII., and his successors.

Besides these collections, which during the times of popery were received as authentic in this island, as well as in other parts of Christendom, there is also a kind of national canon law composed of legatine and provincial constitutions, and adapted only to the exigencies of this church and kingdom. At the dawn of the reformation under Henry VIII. it was enacted in parliament that a review should be had of the canon law, and, till such review should be made, all canons, constitutions, ordinances, and synodals provincial, being then already made and not repugnant to the law of the land or the king's prerogative, should still be used and executed. And, as no such review has yet been perfected, upon his statute now depends the authority of the canon law in England. For, though canons were enacted by the clergy under James I. in 1603, yet as they were never confirmed in parliament, it has been solemnly adjudged that where they are introductory of new regulations they do not bind the laity, whatever regard the clergy may think proper to pay them.

There are four species of courts in which the civil and canon laws are permitted, under different restrictions to be used. 1. The courts of the archbishops and bishops and their derivative officers, usually called courts Christian (*curiæ Christianitatis*) or the ecclesiastical courts. 2. The military courts. 3. The courts of admiralty. 4. The courts of the two universities. In all, their reception in general and the different degrees of that reception are grounded entirely upon custom; corroborated in the latter instance by act of parliament, ratifying those charters which confirm the customary law of the universities.

1. The courts of common law have the superintendency over these courts; to keep them within their jurisdictions; to determine wherein they exceed them; and to punish the officer who executes, and in some cases the judge who enforces the sentence so declared to be illegal.

2. The common law has reserved to itself the exposition of all such acts of parliament as concern either the extent of these courts, or the matters depending before them.

3. An appeal lies from all these courts to the king, in the last resort.

SECT. IV.—OF THE STATUTE LAW.

We next proceed to the *leges scriptæ*, the written laws of the kingdom, which are statutes,

acts, or edicts, made by the king's majesty by and with the advice of the lords spiritual and temporal and commons in parliament assembled. The oldest of these now extant, and printed in our statute-books, is the famous Magna Charta, as confirmed in parliament by 9 Hen. III.

As to their several kinds, statutes are either *general* or *special*, public or private.

1. A *general* or *public* act is a universal rule that regards the whole community: and of this the courts of law are bound to take notice judicially, and *ex officio*, without the statute being particularly pleaded, or formally set forth by the party who claims an advantage under it.

2. *Special* or *private* acts are rather exceptions than rules, being those which only operate upon particular persons and private concerns; such as the Romans entitled *senatûs decreta* in contradistinction to the *senatûs consulta*, which regarded the whole community; and of these the judges are not bound to take notice, unless they be formally shown and pleaded.

Statutes also are either *declaratory* of the common law, or *remedial* of some defects therein.

1. *Declaratory*, where the old custom of the kingdom is almost fallen into disuse or become disputable; in which case the parliament has thought proper in *perpetuum rei testimonium* and for avoiding all doubts and difficulties, to declare what the common law is and ever has been.

2. *Remedial* statutes are those made to supply such defects, and abridge such superfluities, in the common law, as arise either from the general imperfection of all human laws, from change of time and circumstances, from the mistakes and unadvised determinations of unlearned judges, or from any other cause whatsoever. And the doing of this, either by enlarging the common law where it was too circumscribed, or by restraining it where it was too lax, has occasioned another subordinate division of remedial acts of parliament into enlarging and restraining statutes.

The rules to be observed with regard to the construction of statutes are principally the following:—

1. There are three points to be considered in the construction of all remedial statutes; the old law, the mischief, and the remedy; that is, how the common law stood at the making of the act, what the mischief was for which the common law did not provide, and what remedy the parliament has provided to cure the mischief.

2. A statute which treats of things or persons of an inferior rank cannot, by any general words, be extended to those of a superior.

3. Penal statutes must be construed strictly.

4. Statutes against frauds are to be liberally and beneficially expounded. This may seem a contradiction to the last rule, most statutes against frauds being in their consequences penal. But this difference is here to be taken: where the statute acts upon the offender, and inflicts a penalty, as the pillory or a fine, it is then to be taken strictly; but when the statute acts upon the offence, by setting aside the fraudulent transaction, here it is to be construed liberally.

5. One part of a statute must be so construed by another that the whole may, if possible, stand: *et res magis valeat quam pereat*.

6. A saving totally repugnant to the body of the act is void.

7. Where the common law and a statute differ, the common law gives place to the statute; and an old statute gives place to a new one upon the general principle that *leges posteriores contrarias abrogant*. But this is to be understood only when the latter statute is couched in negative terms, or by its matter necessarily implies a negative.

8. If a statute, that repeals another, is itself repealed afterwards, the first statute is hereby revived without any formal words for that purpose.

9. Acts of parliament derogatory from the power of subsequent parliaments bind not.

10. Lastly, acts of parliament that are impossible to be performed are of no validity: and if there arise out of them collaterally any absurd consequences, manifestly contradictory to common reason, they are, with regard to those consequences, void.

Such is the general nature of the laws of England, over and above which, *equity* is also frequently called in to assist, to moderate, and to explain them. There are courts of equity established for the benefit of the subject to detect latent frauds and concealments, which the process of the courts of law is not adapted to reach—to enforce the execution of such matters of trust and confidence as are binding in conscience, though not cognizable in a court of law; to deliver from such dangers as are owing to misfortune or oversight; and to give a more specific relief, and more adapted to the circumstances of the case, than can always be had by most of the rules of the positive or common law. This is the business of the courts of equity, which, however, are only conversant in matters of property. For the freedom of our constitution will not permit, that in criminal cases a power should be lodged in any judge to construe the law otherwise than according to the letter. This caution, while it admirably protects the public liberty, can never bear hard upon individuals. A man cannot suffer more punishment than the law assigns, but he may suffer less. The laws cannot be strained by partiality to inflict a penalty beyond what the letter will warrant, but, in cases where the letter induces any apparent hardship, the crown has the power to pardon.

GENERAL MAXIMS OF THE ENGLISH LAW.

Although it has not been usual in works of this kind, we conceive it will be useful to state the leading maxims of the English law, and especially those which from their nature are calculated to be of extensive application. This is the more necessary on account of the brevity with which the *details* of the law must necessarily be set forth. We shall arrange these principles in the order of their nature and importance.

1. *Maxims relating to public offences.*

No man ought to accuse himself unless it be before God.

In criminal cases the proof ought to be as clear as day-light.

Intent without act is not punishable.

Malice is held equivalent to age.

A madman is punished by his madness: he cannot be further punished by the law.

He confesses his guilt who flies from judgment.

Offences the most difficult to guard against ought to be the most severely punished.

The health and welfare of the people is the highest law.

2. *Maxims of justice in general.*

The public good is to be preferred before private interest.

It is for public good that there should be an end to litigation.

Ignorance of the law doth not excuse.

Ignorance of the fact excuseth.

We ought not to go from the words of the law.

The disposition of the law is of greater force than the disposition of man.

Delays are odious in the law.

No injury is to be presumed.

The law excuseth impotency, or natural inability: as idiots, prisoners, &c.

In cases in general, there is favor shown to persons within age.

The law compelleth no man to impossibilities.

The construction of law shall wrong no person.

Necessity gives a privilege denied by law.

That which in the beginning is vicious cannot by length of time be made good.

Whatever is inconvenient and contrary to reason is not permitted in the law.

What otherwise is good and just, if it be acquired by force, or fraud, it is evil and unjust.

Things done between strangers ought not to injure those not parties: they may benefit them.

The laws help those that are watchful, and not those that are sleepy and negligent.

Every thing should be dissolved by the same means whereby it was first constituted.

3. *Maxims of equity.*

In all things, but especially in the law, there is equity.

He that will have equity done, must do equity.

Equity suffers not a wrong to be without remedy.

Equity suffers not advantages to be taken of a penalty or forfeiture, where compensation can be made.

Where equity is equal, the law must prevail.

A verdict at law is a bar to equity.

A contract founded in evil, or against morality, is void.

Conditions against law are void.

Deceit is not purged by circuitry.

4. *Maxims affecting individuals.*

A personal action dies with the person, as in cases of trespass, and battery.

Injuries to the body cannot be remitted or forgiven.

What one does by another, he does by himself.

He who cannot pay in purse, must pay in person.

The title to an Englishman's liberties is older than the oldest title to any estate.

No one can be a witness in his own cause.

No one ought to be a judge in his own cause.

No one shall take advantage of his own wrong.

Let the actor take care what he does : as an acquittance for the last rent presumes the arrears discharged.

Every act is to be judged from the intention of the agent.

5. *Maxims affecting property.*

The act of God does injury to no man, as, if a house is blown down by tempest, the tenant is excused in waste, unless he expressly covenants to repair.

The act of law does injury to no one. Thus, if land out of which a rent charge is granted be recovered by elder title, the grantee shall have a writ of annuity.

An ambiguous deed or contract is to be explained against the seller or granter.

Bad grammar does not vitiate a deed.

The right to land is of an infinite extent upwards as well as downwards.

To whomsoever any one shall grant any thing, he grants that without which it cannot be.

That is certain which can be reduced to certainty.

To whom it is lawful to do the greater, to him it is not unlawful to do the smaller thing.

A right sometimes sleeps, but never dies.

It is forbidden that any one should do that with his own, which may injure another ; and so use your own that you do not hurt others.

Every man's grant shall be taken most strongly against himself.

He who bears the burden ought also to receive the profit.

He that reaps the profit ought to bear the burden.

Clandestine gifts are suspicious.

No action lies on a naked contract ; that is, without consideration.

Long possession is the law of peace.

The naming of one thing is the exclusion of another.

Every thing may be annulled by the same means that made it.

The English law has been frequently censured for its voluminousness and complexity, by those who have not understood its nature, or the various circumstances out of which it arose. Sir Walter Scott, in his comparison of the Code Napoleon with the English system of jurisprudence, has admirably investigated the grounds of the public prejudice.

'It is the common and vulgar idea,' he says, 'that the system of legislation may be reduced and simplified into a few general maxims of equity, sufficient to lead any judge of understanding and integrity to a just decision of all questions which can possibly occur between man and man. It follows, as a corollary to this proposition, that the various multiplications of authorities, exceptions, particular cases, and especial provisions, which have been introduced among civilised nations, by the address of those of the legal profession, are just so many expedients

to embarrass the simple course of justice with arbitrary modifications and refinements, in order to procure wealth and consequence to those educated to the law, whose assistance must be used as its interpreters, and who become rich by serving litigants as guides through the labyrinth of obscurity which had been raised by themselves and their predecessors.

'Such were the ideas of law and its professors, which occurred to the parliament of Praise-God Barebones, when they proposed to Cromwell to abrogate the whole common law of England, and dismiss the lawyers, as drones who did but encumber the national hive. Such was also the opinion of many of the French statesmen, who, as rash in judging of jurisprudence as in politics, imagined that a system of maxims, modified on the plan of the twelve tables of the ancient Romans, might serve all the purposes of a civil code in modern France. They who thought in this manner had entirely forgotten how soon the laws of these twelve tables became totally insufficient for Rome herself—how, in the gradual change of manners, some laws became obsolete, some inapplicable,—how it became necessary to provide for emerging cases, successively by the decrees of the senate, the ordinances of the people, the edicts of the consuls, the regulations of the prætors, the answers or opinions of learned jurisconsults, and finally by the rescripts, edicts, and novels of the emperors, until such a mass of legislative matter was assembled as scarcely the efforts of Theodosius or Justinian were adequate to bring into order, or reduce to principle.

But this, it may be said, was the very subject complained of. The simplicity of the old laws, it may be urged, was corrupted, and hence by the efforts of interested men, not by the natural progress of society, arose the complicated system which is the object of such general complaint.

'The answer to this is obvious. So long as society remains in a simple state, men have occasion for few and simple laws. But when society begins to be subdivided into ranks, when duties are incurred, and obligations contracted, of a kind unknown in a ruder or earlier period, these new conditions, new duties, and new obligations, must be regulated by new rules and ordinances, which accordingly are introduced as fast as they are wanted, either by the course of long custom, or by precise legislative enactment. There is no doubt one species of society in which legislation may be much simplified ; and that is, where the whole law of the country, with the power of enforcing it, is allowed to reside in the bosom of the king, or of the judge who is to administer justice. Such is the system of Turkey, where the *cadi* is bound by no laws nor former precedents, save what his conscience may discover from perusing the *koran*. But so apt are mankind to abuse unlimited power, and indeed so utterly unfit is human nature to possess it, that, in all countries where the judge is possessed of such arbitrary jurisdiction, he is found accessible to bribes, or liable to be moved by threats. He has no distinct course prescribed, no beacon on which to direct his vessel, and

trims therefore his sails to the pursuit of his own profit.'

Before presenting an outline of the law of England, it may not be immaterial further to observe, that there are various modes in which its several departments may be treated and arranged. It may be viewed historically, and its progress delineated from rudeness to refinement;—philosophically, in relation to the principles of universal law; or artificially and technically, as regards the peculiar character and circumstances of the country to which its provisions apply. We shall endeavour to combine, as far as practicable, the two latter methods; the first would lead us beyond our limits, and be inconsistent with our plan.

The celebrated Commentaries of Sir William Blackstone have so fully taken possession of the minds of all legal enquirers, that, even were the work less excellent than it is, it would still be expedient, in some degree, to adopt the general plan of that distinguished composition. It has become a sort of text book, and has established so firm a hold in the recollection, that an entire deviation from its plan would appear like affectation rather than improvement. There are, however, some respects in which we think an alteration may be judiciously made, and in which the natural and philosophic arrangements may be preferred to the artificial and the technical.

In one respect Blackstone seems to have followed the classification of Grotius, who treats of the general rights of things, (On War and Peace, book II., chap. 2.) But this distinction, which might have some reason in its favor in a general work upon the law of nature and nations, can scarcely be maintained in reference to a code of municipal laws long established. In the former case it relates to the origin of property, and to the consideration that some things are impossible to be made the subject of property, as the sea in its full extent, &c. Now the laws of England, in relation to property, can apply only to those 'things' which are recognised as property, or over which the subjects or inhabitants of the realm are entitled to exercise dominion.

It may be questioned, also, whether the distinction which has been attempted to be made between public and private wrongs is well founded, or recognised as a principle in jurisprudence. Violations of the public law, whether civil or criminal, are public wrongs, although a single individual only may be the sufferer, and whether the injury be inflicted on person or property. The distinction, indeed, is not kept up consistently even in the Commentaries themselves, for the third volume is entitled *Private Wrongs*, and the fourth *Public Wrongs*; yet the latter includes offences against individuals, their persons, habitations, and property.

Adopting, therefore, a more popular arrangement and phraseology, our classification of the *CIVIL* code will consist in its principal divisions of rights and injuries, relating to person and property; and of redress, and the mode of obtaining it. The *CRIMINAL* code will be divided into different classes of crimes, their prevention, and appropriate punishment.

CIVIL CODE.

CHAP. I.—OF RIGHTS RELATING TO PERSONS.

Of persons in public authority.

1. *Of the king, his title, duties, prerogatives, his royal family, councils, and revenue.*—The superior executive power of this kingdom is lodged in a single person, the king or queen. This royal person may be considered with regard to 1. His title; 2. His duties; 3. His prerogative; 4. His royal family; 5. His councils; 6. His revenue, ordinary and extraordinary:

The king's title. The crown of England by the positive constitution of the kingdom has ever been descendible, and so continues. The crown is descendible in a course peculiar to itself. This course of descent is subject to limitation by parliament. Notwithstanding such limitations the crown retains its descendible quality, and becomes hereditary in the prince to whom it is limited. King Egbert, king Canute, and king William I., have been successively constituted the common stocks, or ancestors, of this descent. At the revolution, the convention of estates, or representative body of the nation, declared that the misconduct of king James II. amounted to an abdication of the government, and that the throne was thereby vacant. In consequence of this vacancy, and from a regard to the ancient line, the convention appointed the next protestant heirs of the blood royal of king Charles I. to fill the vacant throne, in the old order of succession, with a temporary exception or preference to the person of king William III. On the impending failure of the Protestant line of king Charles I., whereby the throne might again have become vacant, the king and parliament extended the settlement of the crown to the protestant line of king James I. viz. to the princess Sophia of Hanover, and the heirs of her body, being protestants, and she is now the common stock from whom the heirs of the crown must descend.

The king's duties, are to govern his people according to law, to execute judgment in mercy, and to maintain the established religion. These are his part of the original contract between himself and the people, founded in the nature of society, and expressed in his oath at the coronation.

The king's prerogative is that special power, and pre-eminence, which the king has above other persons, and out of the ordinary course of law, in right of his regal dignity. Such prerogatives are either direct or incidental. The incidental, arising out of other matters, are considered as they arise: we now treat only of the direct.

In the king's authority, or legal power, consists the executive part of government. In foreign concerns, the king, as the representative of the nation, has the right or prerogative, 1. Of sending or receiving ambassadors; 2. Of making treaties; 3. Of proclaiming war or peace; 4. Of issuing reprisals; 5. Of granting safe conducts. In domestic affairs the king is considered a constituent part of the supreme legislative power, and has a negative upon all new laws. He is not bound by statute unless specially named.

As the general of the kingdom, he may raise fleets and armies, build forts, appoint havens,

erect beacons, prohibit the exportation of arms and ammunition, and confine his subjects within the realm, or recall them from foreign parts.

The king is also the fountain of justice, and conservator of the peace; and therefore may erect courts, prosecute offenders, pardon crimes, and issue proclamations. He is likewise the fountain of honor, of office, and of privilege. He is also the arbiter of domestic commerce (not of foreign which is regulated by the law of merchants); and is therefore entitled to the erection of public marts, the regulation of weights and measures, and the coinage or legitimation of money.

The king is, lastly, the supreme head of the church; and, as such, convenes, regulates, and dissolves synods, nominates bishops, and receives appeals in all ecclesiastical causes.

The king's royal family are, 1. The queen, either regnant, consort, or dowager. 2. The prince and princess of Wales, and the princess royal. 3. The king's other descendants.

The king's councils are, 1. The parliament. 2. The peers. 3. The judges. 4. The privy council.

The king's revenue is either ordinary or extraordinary; and the ordinary is, 1. Ecclesiastical, 2. Temporal.

The ecclesiastical revenue consists: 1. In the custody of the temporalities of vacant bishoprics; 2. In corrodies and pensions; 3. In extra parochial tithes; 4. In the first fruits and tenths of benefices.

The king's ordinary temporal revenue consists, 1. In the demesne lands of the crown; 2. In the hereditary excise, being part of the consideration for the purchase of his feudal profits, and the prerogatives of purveyance and pre-emption; 3. In wine licenses, being the residue of the same consideration; 4. In his forests; 5. His courts of justice; 6. Royal fish; 7. Wrecks, and things jetsam, flotsam, and ligan; 8. Royal mines; 9. Treasure trove; 10. Waifs; 11. Estrays; 12. Forfeitures for offences, and deadlands; 13. Escheats of lands; 14. Custody of idiots and lunatics.

What is usually termed the hereditary revenue of the crown, namely, the profits of the crown lands, the hereditary excise, the duty on wine licenses, and the profits arising from courts of justice, has been relinquished by his present majesty, and now forms part of the consolidated fund; instead of which parliament have granted to his majesty, during his life, for the maintenance of his civil list, £850,000 in England, and £207,000 in Ireland, chargeable upon the consolidated fund of the United Kingdom. Stat. 1 Geo. IV., c. 1.

The king's extraordinary revenue consists in aids, subsidies, and supplies, granted him by the commons in parliament. Heretofore, these were usually raised by grants of the nominal tenth or fifteenth of the moveables in every township; or by subsidies assessed upon individuals, with respect to their land and goods.

A new system of taxation took place soon after the revolution; our modern taxes are therefore, 1. Annual; 2. Perpetual.

The annual taxes are, 1. The land-tax, or the ancient subsidy raised upon a new assess-

ment; 2. The malt-tax, being an annual excise on malt, mum, cider, and perry.

The perpetual taxes, are, 1. The customs or tonnage and poundage of all merchandise, exported and imported; 2. The excise duty, or inland imposition, on a great variety of commodities; 3. The salt duty, or excise on salt; 4. The post-office, or duty for the carriage of letters; 5. The stamp-duty on paper, parchment, &c.; 6. The duty on houses and windows; 7. The duty on licenses for hackney-coaches and chairs.

Part of this revenue is applied to pay the interest of the national debt, till the principal is discharged by parliament.

The produce of these several taxes went originally to separate and specific funds, to answer specific loans upon their respective credits; but these are now consolidated by parliament into three several funds, the aggregate, general, and south-sea funds, to answer all the debts of the nation; the public faith being also superadded, to supply deficiencies and strengthen the security of the whole.

The surpluses of these funds, after paying the interest of the national debt, are carried together and denominated the sinking fund; which, unless otherwise appropriated by parliament, is annually applied to pay off some part of the principal. But previous to this the aggregate fund is charged with an annual sum for the civil list which is the immediate proper revenue of the crown, settled by parliament on the king at his accession, for defraying the charges of civil government.

2. *Of the parliament.*—Parliaments, in some shape, are of as high antiquity as the Saxon government, and have subsisted in their present form upwards of 500 years. The parliament is assembled by the king's writs, and its sitting must not be intermitted above three years.

Its constituent parts are the king's majesty, the lords spiritual and temporal, and the commons represented by their members, each of which parts has a negative or necessary voice in making laws.

With regard to the general law of parliament, its power is absolute: each house is the judge of its own privileges, and all the members of either house were formerly entitled to the privilege of speech, of person, of their domestics, and of their lands and goods.

But the privileges as to their servants and property, together with all other privileges which derogated from the common law in matters of civil right, save only as to freedom of person in the members themselves, have since been relinquished by parliament, by stat. 10 Geo. III. c. 50.

The peculiar privileges of the lords, besides their judicial powers, are to hunt in the king's forests, to be attended by the sages of the law, to make proxies, to enter protests, and to regulate the election of the sixteen peers of North Britain, and of the twenty-eight peers of Ireland.

The peculiar privileges of the commons are, to raise taxes on the subject, and to determine the merits of their own elections, with regard to the qualifications of the electors and elected, and the proceedings at elections themselves.

Bills are usually read twice in each house, committed, engrossed, and then read a third

time; and when they have obtained the concurrence of both houses, and received the royal assent, they become acts of parliament.

The houses may adjourn their meetings, but the king only can prorogue the parliament.

Parliaments are dissolved, 1. At the king's will; 2. By the demise of the crown, or rather within six months after the demise; 3. By length of time, or having sat for the space of seven years.

3. *Of subordinate magistrates.*—Subordinate magistrates of the most general use and authority are, 1. Sheriffs; 2. Coroners; 3. Justices of the peace; 4. Constables; 5. Surveyors of the highways; 6. Overseers of the poor.

The sheriff is the keeper of each county, annually nominated in due form by the king; and is (within his county) a judge, a conservator of the peace, a ministerial officer, and the king's bailiff.

Coroners are permanent officers of the crown in each county, elected by the freeholders, whose office it is to make enquiry concerning the death of the king's subjects, and certain revenues of the crown, and also in particular cases to fill the office of the sheriff.

Justices of the peace are magistrates in each county statutorily qualified and commissioned by the king's majesty; with authority to conserve the peace, to hear and determine felonies, and other misdemeanors, and to do many other acts committed to their charge by particular statutes.

Constables are officers of hundreds and townships, appointed at the leet, and empowered to preserve the peace, to keep watch and ward, and to apprehend offenders.

Surveyors of the highways are officers appointed annually in every parish, to remove annoyances in, and to direct the reparation of, the public roads.

Overseers of the poor are officers appointed annually, in every parish, to relieve such impotent, and employ such sturdy poor, as are settled in each parish, by birth, by parentage, by marriage, or by forty days' residence; accompanied with 1. Notice to an overseer; 2. Renting a tenement of ten pounds annual value; 3. Paying their assessed taxations; 4. Hiring and service for a year; 5. Apprenticeship for seven years; 6. Having a sufficient estate in the parish.

2. *Of the people generally, and their allegiance.*

The people are either aliens, that is, born out of the dominions or allegiance of the crown of Great Britain, or natives, that is, born within it. Allegiance is the duty of all subjects; being the reciprocal tie of the people to the prince, in return for the protection he affords them: and in natives this duty of allegiance is natural and perpetual; in aliens it is local and temporary only.

The rights of natives are also natural and perpetual; those of aliens local and temporary only, unless they be made denizens by the king or naturalised by parliament.

3. *Of the clergy and laity; the army and navy.* Natives are also either clergy, that is, all persons in holy orders or in ecclesiastical offices: or laity, which comprehends the rest of the nation.

The clergy are, 1. Archbishops and bishops;

2. Deans and chapters; 3. Archdeacons; 4. Rural deans; 5. Parsons (under which are included appropriators) and vicars, to whom there are generally requisite holy orders, presentation, institution, and induction; 6. Curates; to which may be added, 7. Churchwardens; 8. Parish clerks and sextons.

The laity are divisible into three states: civil, military, and maritime.

The civil state (which includes all the natives except the clergy, the army, the navy, and many individuals among them also) may be divided into the nobility and commonalty.

The nobility are dukes, marquises, earls, viscounts, and barons: these had anciently duties annexed to their respective honors. They are created either by writ, that is by summons to parliament; or by the king's letters patent, that is, by royal grant; and they enjoy many privileges, exclusive of their senatorial capacity.

The commonalty consists of knights of the garter, knights bannerets, baronets, knights of the bath, knights bachelors, esquires, gentlemen, yeomen, tradesmen, artificers, and laborers.

The military state, by the standing constitutional law, consists of the militia of each county, raised from among the people by lot, officered by the principal land-holders, and commanded by the lord-lieutenant.

The more disciplined occasional troops of the kingdom are kept on foot only from year to year, by parliament; and, during that period, are governed by martial law, or arbitrary articles of war, formed at the pleasure of the crown.

The maritime state consists of the officers and mariners of the British navy; who are governed by express and permanent laws, or the articles of the navy, established by act of parliament.

4. *Of corporations.*—Bodies politic, or corporations, which are artificial persons, are established for preserving in perpetual succession certain rights, which being conferred on natural persons only would fail in process of time. Corporations are, 1. Aggregate, consisting of many members; 2. Sole, consisting of one person only.

Corporations are also either spiritual, erected to perpetuate the rights of the church; or lay: and the lay are 1. Civil, erected for many temporal purposes; 2. Eleemosynary, erected to perpetuate the charity of the founder.

Corporations are usually erected and named by virtue of the king's royal charter, but may be created by act of parliament. The powers incident to all corporations are, 1. To maintain perpetual succession; 2. To act in their corporate capacity like an individual; 3. To hold lands subject to the statutes of mortmain; 4. To have a common seal; 5. To make bye-laws; which last power, in spiritual or eleemosynary corporations, may be executed by the king or the founder.

The duty of corporations is to answer the ends of their institution. To enforce this duty, all corporations may be visited; spiritual corporations by the ordinary; lay corporations by the founder, or his representative, viz. the civil or the king (who is the fundator incipiens of all),

represented in his court of king's bench; the eleemosynary by the endower (who is the fundator perficiens of such), or by his heirs or assigns. Corporations may be dissolved, 1. By act of parliament; 2. By the natural death of all their members; 3. By surrender of their franchises; 4. By forfeiture of their charter.

5. *Of the absolute rights of individuals.*—The absolute rights of individuals compose what is called civil liberty.

Civil liberty is the natural liberty of mankind so far restrained by human laws as is necessary for the good of society.

The absolute rights or civil liberties of Englishmen, as frequently declared in parliament, are principally three:—The right of personal security, of personal liberty, and of private property.

The right of personal security consists in the legal enjoyment of life, limb, body, health, and reputation.

The right of personal liberty consists in the free power of locomotion, without illegal restraint or banishment.

The right of private property consists in every man's free use and disposal of his own lawful acquisitions, without injury or illegal diminution.

Besides these three primary rights, there are others which are designed to preserve the former from unlawful attacks: 1. The constitution and power of parliaments; 2. The limitation of the king's prerogative; and others to vindicate them, when actually violated; namely, 3. The regular administration of public justice; 4. The right of petitioning for redress of grievances; 5. The having and using of arms for self-defence.

6. *Of persons in their private relations.*—The private relations of persons are four:—1. Husband and wife; 2. Parent and child; 3. Guardian and ward; 4. Master and servant.

(1.) *Husband and wife.*—The relation of marriage includes the reciprocal rights and duties of husband and wife.

Marriage is duly contracted between persons, 1. Consenting; 2. Free from canonical impediments, which make it voidable; 3. Free also from the civil impediments—of prior marriage—of want of age—of non-consent of parents, &c., where requisite—of want of reason; any of which make it totally void; and it must be celebrated by a clergyman in due form and place.

Marriage is dissolved, 1. By death; 2. By divorce in the spiritual court; not à mensâ et thoro only, but à vinculo matrimonii, for a canonical cause existing previous to the contract; 3. By act of parliament; as for adultery.

By marriage the husband and wife become one person in law; which unity is the principal foundation of their respective rights, duties, and disabilities.

(2.) *Of parent and child.*—The next and most universal private relation, is that of parent and child. Children are, 1. Legitimate, or those who are born in lawful wedlock, or within a competent time after; 2. Bastards, being those who are not so born.

The duties of parents to legitimate children are, 1. Maintenance; 2. Protection; 3. Education.

The power of parents consists principally in correction, and consent to marriage: both may,

after death, be delegated by will to a guardian; and the former also, at any time, to a tutor or master.

The duties of legitimate children to parents are obedience, protection, and maintenance. The duty of parents to bastards is only that of maintenance. The rights of a bastard are such only as he can acquire; for he is incapable of inheriting any thing.

(3.) *Guardian and Ward.*—We come next to the relation of guardian and ward, which is plainly derived from the last; these being, during the continuance of their relation, reciprocally subject to the same rights and duties.

Guardians are of divers sorts: 1. Guardians by nature, or the parents; 2. Guardians for nurture, assigned by the ecclesiastical courts; 3. Guardians in socage, assigned by the common law; 4. Guardians by statute, assigned by the father's will. All subject to the superintendance of the court of chancery.

Full age in male or female, for all purposes, is the age of twenty-one years (different ages being allowed for different purposes); till which age the person is an infant. An infant, in respect of his tender years, has various privileges, and various disabilities in law; chiefly with regard to suits, crimes, estates, and contracts.

(4.) *Of Master and Servant.*—There are four species of servants (for slavery is unknown to our laws), viz. 1. Menial servants, who are hired; 2. Apprentices, who are bound by indentures; 3. Laborers, who are casually employed; 4. Stewards, bailiffs, and factors, who are rather in a ministerial state.

From this relation result divers powers to the master, and emoluments to the servant. The master has a property in the service of a servant, and must be answerable for such acts as the servant does by his express or implied command.

CHAP. II.—OF RIGHTS RELATING TO PROPERTY.

1. *Of Property in general.*—All dominion over external objects has its original from the gifts of the Creator to man in general. The substance of things was, at first, common to all mankind; yet a temporary property, in the use of them, might even then be acquired, and continued, by occupancy. In process of time a permanent property was established in the substance, as well as in the use, of things; which was also originally acquired by occupancy only.

Let this property should determine by the owners' dereliction, or death, whereby the thing would again become common, societies have established conveyances, wills, and heirships, in order to continue the property of the first occupant; and, where, by accident, such property becomes discontinued and unknown, the thing usually results to the sovereign of the state, by virtue of the municipal law.

But of some things, which are incapable of permanent substantial dominion, there still subsists only the same transient usufructuary property which originally subsisted in all things.

This property, or exclusive dominion, may be divided into, 1. Things real; 2. Things personal.

2. *Of real Property.*—In things real may be considered, 1. Their several kinds; 2. The te-

ures by which they may be holden; 3. The estates which may be acquired therein; 4. Their title, or the means of acquiring and losing them.

All the several kinds of things real are reducible to one of these three, viz. lands, tenements, or hereditaments; whereof the second includes the first, and the third includes the first and second.

Hereditaments, therefore, or whatever may come to be inherited (being the most comprehensive denomination of things real) are either corporeal, or incorporeal.

Corporeal hereditaments consist wholly of lands in their largest legal sense; wherein they include not only the face of the earth, but every other object of sense adjoining thereto, and subsisting either above or beneath it.

Incorporeal hereditaments are rights issuing out of things corporeal, or concerning, or annexed to, or exercisable within, the same.

Incorporeal hereditaments are, 1. Advowsons; 2. Tithes; 3. Commons; 4. Ways; 5. Offices; 6. Dignities; 7. Franchises; 8. Corrodies, or pensions; 9. Annuities; 10. Rents.

An advowson is a right of presentation to an ecclesiastical benefice, either appendant or in gross. This may be, 1. Presentative; 2. Collative; 3. Donative.

Tithes are the tenth part of the increase yearly arising from the profits and stock of lands, and the personal industry of mankind. These, by the ancient and positive law of the land, are due of common right to the parson or (by endowment) vicar, unless especially discharged, 1. By real composition; 2. By prescription, either *de modo decimandi*, or *de non decimando*.

Common is a profit which a man has in the lands of another; 1. Common of pasture; which is either appendant, appurtenant, because of vicinage, or in gross; 2. Common of piscary; 3. Common of turbary; 4. Common of estover or botes.

Ways are a right of passing over another man's ground.

Offices are the right to exercise a public or private employment.

For dignities, which are titles of honor, see chap. I.

Franchises are a royal privilege, or branch of the king's prerogative, subsisting in the hands of a subject.

Corrodies, which may be converted into pensions, are ecclesiastical annuities.

An annuity is a yearly sum of money, charged upon the person, and not upon the lauds of the grantor.

Rents are a certain profit issuing yearly out of lands and tenements; and are reducible to, 1. Rent-service; 2. Rent-charge; 3. Formerly rent-*seek*, where the party entitled to it had no power to distrain for it, but the remedy by distress is now given in all cases of distress.

3. *Of the feudal system and ancient tenures.*—The doctrine of tenure is derived from the feudal law, which was planted in Europe by its northern conquerors at the dissolution of the Roman empire.

Pure and proper feuds were parcels of land allotted by a chief to his followers; to be held

on the condition of personally rendering due military service to their lord.

These were granted by investiture; were held under the bond of fealty; were inheritable only by descendants; and could not be transferred without the mutual consent of the lord and vassal.

Improper feuds were derived from the other, but differed from them in their original, their services and renders, their descent and other circumstances.

The lands of England were converted into feuds of the improper kind soon after the Norman conquest; which gave rise to the grand maxim of tenure, viz. that all lands in the kingdom are holden mediately or immediately of the king.

The distinction of tenures consisted in the nature of their services; as 1. Chivalry, or knight service; where the service was free, but uncertain; 2. Free soccage, where the service was free and certain; 3. Pure villenage, where the service was base and uncertain; 4. Privileged villenage, or villein soccage, where the service was base, but certain.

The most universal ancient tenure was that by chivalry, or knight service; in which the tenant of every knight's fee was bound, if called on, to attend his lord to the wars. This was granted by livery, and perfected by homage and fealty, which usually drew after them suit of court.

The fruits and consequences of the tenure by knight service were, 1. Aid; 2. Relief; 3. Primerseisin; 4. Wardship; 5. Marriage; 6. Fines upon alienation; 7. Escheat.

Grand serjeantry differed from chivalry principally in its render, or service; and not in its fruits and consequences.

The personal service in chivalry was at length gradually changed into pecuniary assessments, which were called scutage or escuage.

These military tenures (except the services of grand serjeantry) were, at the restoration of king Charles, totally abolished, and reduced to free soccage by act of parliament.

Free soccage is a tenure by any free, certain, and determinate service. This tenure, the relic of Saxon liberty, includes petit serjeantry, tenure in burgage, and gavelkind.

Free soccage lands partake strongly of the feudal nature, as well as those in chivalry; being holden subject to some service;—at the least to fealty and suit of court; subject to relief, to wardship, and to escheat, but not to marriage; subject also formerly to aids, primer seisin, and fines for alienation.

Pure villenage was a precarious and slavish tenure; at the absolute will of the lord upon uncertain services of the basest nature. Hence, by tacit consent or encroachment, have arisen the modern copyholds, or tenure by copy of court roll; in which lands may be still held at the (nominal) will of the lord (but regulated) according to the custom of the manor. These are subject, like soccage lands, to service, relief, and escheat; and also to heriots, wardships, and fines upon descent and alienation.

Privileged villenage, or villein soccage, is an exalted species of copyhold tenure, upon base but certain services; subsisting only in the

ancient demesnes of the crown, whence the tenure is denominated the tenure in ancient demesne.

Copyholds of ancient demesne have divers immunities annexed to their tenure; but are still held by copy of court roll, according to the custom of the manor, though not at the will of the lord.

Frankmoign is a tenure by spiritual services at large, whereby many ecclesiastical and eleemosynary corporations now hold their lands and tenements; being of a nature distinct from tenure by divine service in certain.

4. *Of freehold estates.*—Estates in lands, tenements, and hereditaments, are such interest as the tenant has therein; to ascertain which, may be considered, 1. The quantity of interest; 2. The time of enjoyment; 3. The number and connexion of the tenants.

(1.) *Quantity of interest.*—Estates with respect to their quantity of interest or duration, are either freehold, or less than freehold. A freehold estate, in lands, is such as is created by livery of seisin at common law; or in tenements of an incorporeal nature, by what is equivalent thereto. Freehold estates are either estates of inheritance, or for life only; and inheritances are, 1. Absolute, or fee simple; 2. Limited fees. Tenant in fee simple is he that has lands, tenements, or hereditaments, to hold to him and his heirs for ever.

Limited fees are, 1. Qualified, or base fees; 2. Fees conditional at the common law. Qualified, or base fees, are those which, having a qualification subjoined thereto, are liable to be defeated when that qualification is at an end.

Conditional fees, at the common law, were such as were granted to the donee, and the heirs of his body, in exclusion of collateral heirs. These were held to be fees granted on condition that the donee had issue of his body; which condition being once performed by the birth of issue, the donee might immediately alien the land; but the statute de Douis, being made to prevent such alteration thereupon, from the division of the fee (by construction of this statute), into a particular estate, and a reversion, the conditional fees began to be called fees-tail.

Entails, curtesy, and dower.—All tenements, real, or savouring of the reality, are subject to entails. Estates tail may be 1. General, or special; 2. Male or female; 3. Given in frank marriage. Incident to estates tail are 1. Waste; 2. Dower; 3. Curtesy; 4. Bar; by fine, recovery, or lineal warranty with assets. Estates tail are now, by many statutes and resolutions, almost brought back to the state of conditional fees at the common law.

Freeholds, not of inheritance, or for life only, are, 1. Conventional, or created by act of the parties; 2. Legal, or created by operation of law. Conventional estates for life are created by an express grant for term of one's own life, or per autre vie; or by a general grant, without expressing any term at all. Incident to this and all other estates for life, are estovers and emblements: and to estates per autre vie general occupancy was also incident, as special occupancy still is, if *cestuy que vie* survives the tenant.

Legal estates for life are, 1. Tenancy in tail after possibility of issue extinct; 2. Tenancy by the curtesy of England; 3. Tenancy in dower.

Tenancy in tail, after possibility of issue extinct, is where one is tenant in special tail and a person from whose body the issue was to spring, dies without issue, or having left issue, that issue becomes extinct: whereupon the surviving tenant becomes tenant in tail after possibility of issue extinct. This estate partakes both of the incidents to an estate tail, and of those to an estate for life.

Tenancy by the curtesy of England is where a man marries a woman seised of an estate of inheritance, and he by her has issue, born alive, which was capable of inheriting her estate; in which case he shall, upon her death, hold the tenements for his own life, as tenant by the curtesy.

Tenancy in dower is where a woman marries a man seised of an estate of inheritance, of which her issue might by any possibility have been heir and the husband dies; the woman is hereupon entitled to dower, or one-third part of the lands to hold for her natural life. Dower is either by the common law; by special custom; *ad ostium ecclesiæ*; or *ex assensu patris*. Dower may be forfeited or barred; particularly by an estate in jointure.

Estates for a limited term, conditional, reversionary, &c.—Estates less than freehold are, 1. Estates for years; 2. Estates at will; 3. Estates at sufferance; 4. Estates on condition.

An estate for years is where a man, seised of lands and tenements, letteth them to another for a certain period of time, which transfers the interest of the term; and the lessee enters thereon, which gives him possession thereof, but not legal seising of the land. Incident to this estate are estovers; and also emblements, if it determine before the full end of the term.

An estate at will is where lands are let by one man to another, to hold at the will of both parties, and the lessee enters thereon.

Copyholds are estates held at the will of the lord, regulated according to the custom of the manor.

An estate at sufferance is where one comes into possession of land by lawful title, but keeps it afterwards without any title at all.

Estates on condition, whether freehold or otherwise, are, 1. On condition implied; 2. On condition expressed; 3. Estates in gage; 4. Estates by statute merchant, or staple; 5. Estates by elegit.

Estates on condition implied are where a grant of an estate has, from its essence and constitution, a condition inseparably annexed to it; though none be expressed in words. Estates on condition expressed are where an express qualification or provision is annexed to the grant of an estate; on the performance of which, either expressed or implied (if precedent), the estate may be vested or enlarged, or on the breach of them (if subsequent) an estate already vested may be defeated.

Estates in gage, in vadio, or in pledge, are estates granted as a security for money lent: being 1. *In vivo vadio*, or living gage, where the profits of land are granted till a debt be paid; upon which payment the grantor's estate

will revive: 2. In mortuo vadio, in dead, or mortgage, where an estate is granted on condition to be void at a day certain, if the grantor then repays the money borrowed; on failure of which, the estate becomes absolutely dead to the grantor.

Estates by statute merchant, or statute staple, are also estates conveyed to creditors in pursuance of certain statutes, till their profits have discharged the debt.

Estates by elegit are, where, in consequence of a judicial writ so called, lands are delivered by the sheriff to a plaintiff, till their profits shall satisfy a debt adjudged to be due by law.

(2.) *Estates, with respect to their time of enjoyment*, are either in immediate possession, or in expectancy; which estates in expectancy are created at the same time, and are parcel of the same estates, as those upon which they are expectant: these are, 1. Remainders; 2. Reversions.

A remainder is an estate limited to take effect, and be enjoyed, after another particular estate in possession is determined. Therefore, 1. There must be a precedent particular estate in order to support a remainder; 2. The remainder must pass out of the grantor, at the creation of the particular estate; 3. The remainder must vest in the grantee, during the continuance, or at the determination, of the particular estate.

Remainders are, 1. Vested—where the estate is fixed to remain to a certain person, after the particular estate is spent; 2. Contingent—where the estate is limited to take effect, either to an uncertain person, or upon an uncertain event.

An executory devise is such a disposition of lands, by will, that no estate shall vest thereby at the death of the deviser, but only upon some future contingency, without any precedent particular estate to support it.

A reversion is the residue of an estate left in the grantor, to commence in possession after the determination of some particular estate granted; to which are incident, fealty and rent.

Where two estates, the one less, the other greater, the one in possession, the other in expectancy, meet together in one and the same person, and in one and the same right, the less is merged in the greater.

(3.) *Of Tenancy in severalty, joint, common, &c.*—Estates, with respect to the number and connexion of their tenants, may be held, 1. In severalty; 2. In joint-tenancy; 3. In coparcenary; 4. In common.

An estate in severalty is where one tenant holds in his own sole right, without any other person being joined with him.

An estate in joint-tenancy is where an estate is granted to two or more persons; in which case the law construes them to be joint-tenants, unless the words of the grant expressly exclude such construction.

Joint-tenants have a unity of interest, of title, of time, and of possession; they are seised per my et per tout; and, therefore, upon the decease of one joint-tenant, the whole interest remains to the survivor.

Joint-tenancy may be dissolved, by destroying one of its four constituent unities.

An estate in coparcenary is where an estate of inheritance descends from the ancestor to two or more persons, who are called parceners, and all together make but one heir.

Parceners have a unity of interest, title, and possession—but are only seized per my, and not per tout; wherefore there is no survivorship among parceners.

Incident to this estate is the law of hotchpot.

Coparcenary may also be dissolved, by destroying any of its three constituent unities.

An estate in common is where two or more persons hold lands by distinct titles, and for distinct interests, but by unity of possession, because none knoweth his own severalty.

Tenants in common have therefore a unity of possession (without survivorship—being seised per my, and not per tout), but no unity of title, time, or interest.

This estate may be created, 1. By dissolving the constituent unities of the two former; 2. By express limitation in a grant: and may be destroyed, 1st, by uniting the several titles in one tenant; 2dly, by partition of the land.

5. *Of the title to real property.*—A title to, or right to possess, things real, may be reciprocally acquired or lost, 1. By descent; 2. By purchase.

(1.) *By descent.*—Descent is the means whereby a man, on the death of his ancestor, acquires a title to his estate, in right of representation, as his heir at law. To understand the doctrines of descent, we must form a clear notion of consanguinity, which is the connexion or relation of persons descended from the same stock or common ancestor; and it is, first, lineal, where one of the kinsmen is lineally descended, not one from the other; secondly, collateral, where they are lineally descended not one from the other, but both from the same common ancestor.

The rules of descent or canons of inheritance observed by the laws of England are these: 1. Inheritances shall lineally descend to the issue of the person last actually seised, in infinitum, but shall never lineally ascend. 2. The male issue shall be admitted before the female. 3. When there are two or more males in equal degree, the eldest only shall inherit; but the females all together. 4. The lineal descendants, in infinitum, of any person deceased, shall represent their ancestor, or stand in the same place as the person himself would have done, had he been living. 5. On failure of lineal descendants, or issue of the person last seised, the inheritance shall descend to the blood of the first purchaser, subject to the last three rules. To evidence which blood, the two following rules are established. 6. The collateral heir of the person last seised must be his next collateral kinsman of the whole blood. 7. In collateral inheritances, the male stocks shall be preferred to the female; that is, kindred derived from the blood of the male ancestors shall be admitted before those from the blood of the female, unless, where the lands have, in fact, descended from the female.

(2.) *By purchase.*—Purchase, perquisitio, is the possession of an estate, which a man hath by his own act or agreement, and not by the mere act of law, or descent from any of his ancestors:

this includes, 1. Escheat; 2. Occupancy; 3. Prescription; 4. Forfeiture; 5. Alienation.

Escheat is where, upon deficiency of the tenant's inheritable blood, the estate falls to the lord of the fee.

Inheritable blood is wanting to 1, such as are not related to the person last seised; 2, the maternal relations in paternal inheritances, and vice versa; 3, kindred of the half blood; 4, monsters; 5, bastards; 6, aliens and their issue; 7, persons attainted of treason or felony.

Occupancy is taking possession of those things which before had no owner. Thus at the common law where tenant per auter vie died during the life of cestuy que vie, he who could first enter might lawfully retain the possession, unless by the original grant the heir was made a special occupant. But the law of derelictions and alluvions has narrowed the title by occupancy.

Prescription, as distinguished from custom, is a personal immemorial usage of enjoying a right in some incorporeal hereditament, by a man, and either his ancestors or those whose estate of inheritance he has; of which the first is called prescribing to his ancestors, the latter in a *que* estate.

Forfeiture is a punishment annexed by law to some illegal act, or negligence, of the owner of things real; whereby the estate is transferred to another, who is usually the party injured. Forfeitures for crimes, or misdemeanors, are for 1. Treason; 2. Felony; 3. Misprision of treason; 4. Premunire; 5. Assaults on a Judge, and batteries, sitting the courts.

Alienations or conveyances which induce a forfeiture are, 1. Those in mortmain, made to corporations contrary to the statute law; 2. Those made to aliens; 3. Those made by particular tenants, when larger than their estates will warrant.

Lapse is a forfeiture of the right of presentation to a vacant church by neglect of the patron to present within six calendar months.

Simony is the corrupt presentation of any one to an ecclesiastical benefice, whereby that turn becomes forfeited to the crown.

Waste is a spoil, or destruction, in any corporeal hereditaments, to the prejudice of him that has the inheritance. Copyhold estates may have also other causes of forfeiture, according to the custom of the manor.

Bankruptcy is the act of becoming a bankrupt; that is, a trader who secretes himself, or does certain other acts, tending to defraud his creditors; by bankruptcy all the estates of the bankrupt are transferred to the assignees of his commissioners, to be sold for the benefit of his creditors.

6. *Of alienating or transferring real property.*—Alienation, conveyance, or purchase, in its more limited sense, is a means of transferring real estates wherein they are voluntarily resigned by one man, and accepted by another. This formerly could not be done by a tenant, without license from his lord; nor by a lord without attornment of his tenant.

All persons are capable of purchasing; and all that are in possession of any estates are capable of conveying them, unless under peculiar disabilities by law; as being attainted, non compos, infants under duress, feme covert or

aliens. Alienations are made by common assurances which are, 1. By deed, or matter in pais; 2. By matter of record; 3. By special custom; 4. By devise.

In assurances by deeds may be considered. 1. The general nature of a deed. 2. Its several species. A deed, in general, is a writing sealed and delivered by the parties; and may be, 1. A deed indented, or indenture. 2. A deed poll.

The requisites of a deed are, 1. Sufficient parties, and proper subject matter; 2. Good and sufficient consideration; 3. Writing on paper, or parchment, duly stamped; 4. Legal and orderly parts: namely, 1st, the premises; 2dly, the habendum; 3dly, the tenendum; 4thly, the reddendum; 5thly, the conditions; 6thly, the warranty which is either lineal or collateral; 7thly, the covenants; 8thly, the conclusion, which includes the date. 5. Reading it, if desired; 6. Sealing, and, in many cases, signing it also; 7. Delivery; 8. Attestation.

A deed may be avoided, 1. By the want of any of the requisites before-mentioned; 2. By subsequent matter; 1st, rasure or alteration; 2dly, defacing its seal; 3dly, cancelling; 4thly, disagreement of those whose consent is necessary; 5thly, judgment of a court of justice.

Deeds which serve to convey real property, or conveyances, are either by common law or by statute; and, of conveyances by common law, some are original or primary, others derivative or secondary.

Original conveyances, are, 1. Feoffments; 2. Gifts; 3. Grants; 4. Leases; 5. Exchanges; 6. Partitions. Derivative are, 7. Releases; 8. Confirmations; 9. Surrenders; 10. Assignments; 11. Defeasances.

A feoffment is the transfer of any corporeal hereditament to another, perfected by livery of seisin, or delivery of bodily possession from the feoffer to the feoffee; without which no freehold estate therein can be created at common law. A gift is properly the conveyance of lands in tail. A grant is the regular method, by common law, of conveying incorporeal hereditaments. A lease is the demise, granting, or letting to farm of any tenement, usually for a less term than the lessor has therein, yet sometimes possibly for a greater; according to the regulations of the restraining and enabling statutes. An exchange is the mutual conveyance of equal interests, the one in consideration of the other. A partition is the division of an estate held in joint-tenancy, in coparcenary, or in common, between the respective tenants; so that each may hold his distinct part in severalty. A release is the discharge or conveyance of a man's right, in lands and tenements, to another that has some former estate in possession therein. A confirmation is the conveyance of an estate or right in esse, whereby a voidable estate is made sure, or a particular estate is increased. A surrender is the yielding up of an estate for life, or years, to him that has the immediate remainder or reversion; wherein the particular estate may emerge.

An assignment is the transfer, or making over to another, of the whole right one has in any estate; but usually in a lease for life or years. A defeasance is a collateral deed made at the same

time with the original conveyance, containing some condition upon which the estate may be defeated.

Conveyances by statute depend much on the doctrine of uses and trusts; which are a confidence reposed in the terre-tenant, or tenant of the land, that he shall permit the profits to be enjoyed, according to the directions of cestuy que use, or cestuy que trust. The statute of uses, having transferred all uses into actual possession (or, rather, having drawn the possession to the use) has given birth to three other species of conveyance: 1. A covenant to stand seised to uses; 2. A bargain and sale, enrolled; 3. A lease and release; 4. A deed to lead or declare the use of other more direct conveyances. 5. A revocation of uses; being the execution of a power, reserved at the creation of the use, of recalling at a future time the use or estate so created. All which owe their present operation principally to the statute of uses.

Deeds which do not convey, but only charge real property, and discharge it, are, 1. Obligations. 2. Recognizances. 3. Defeasances upon both.

By matter of record.—Assurances by matter of record are where the sanction of some court of record is called in, to substantiate and witness the transfer of real property: these are, 1. Private acts of parliament; 2. The king's grants; 3. Fines; 4. Common recoveries.

Private acts of parliament are a species of assurances calculated to give (by the transcendent authority of parliament) such reasonable powers or relief as are beyond the reach of the ordinary course of law. The king's grants, contained in charters or letters patent, are all entered on record for the dignity of the royal person, and security of the royal revenue. A fine (sometimes said to be a feoffment of record) is an amicable composition and agreement of an actual, or fictitious suit; whereby the estate in question is acknowledged to be the right of one of the parties. The parts of a fine are, 1. The writ of covenant; 2. The license to agree; 3. The concord; 4. The note; 5. The foot; to which the statute hath added, 6. Proclamations.

Fines are of four kinds, 1. Sur cognizance de droit come ceo que il ad de son done; 2. Sur cognizance de droit tantum; 3. Sur concessit, sur done, grant, et render; which is a double fine. The force and effect of fines (when levied by such as have themselves any interest in the estate) are to assure the lands in question to the cognizee, by barring the respective rights of parties, privies, and strangers. A common recovery is by an actual, or fictitious, suit or action for land, brought against the tenant of the freehold, who thereupon vouches another, who undertakes to warrant the tenant's title; but, upon such vouchee's making default, the land is recovered by judgment at law, against the tenant; who in return obtains judgment against the vouchee to recover lands of equal value in recompense. The force and effect of a recovery are to assure lands to the recoverer, by barring estates tail, and all remainders and reversions expectant thereon, provided the tenant in tail either suffers or is vouched in such recovery.

The uses of a fine or recovery may be directed by, 1. Deeds to lead such uses, which are made previous to the levying or suffering them; 2. Deeds to declare the uses, which are made subsequent.

By special custom.—Assurances by special custom are confined to the transfer of copy-hold estates.

This is effected by, 1. Surrender by the tenant into the hands of the lord to the use of another, according to the custom of the manor; 2. Presentment, by the tenants or homage, of such surrender; 3. Admittance of the surrender, by the lord, according to the uses expressed in such surrender. Admittance may also be had upon original grants to the tenant from the lord, and upon descents to the heir from the ancestor.

By devise.—Devise is a disposition of lands and tenements contained in the last will and testament of the owner. This was not permitted by the common law, as it stood since the conquest, but was introduced by the statute law, under Henry VIII., since made more universal by the statute of tenures under Charles II., with the introduction of additional solemnities by the statute of frauds and perjuries in the same reign.

The construction of all common assurances should be, 1. Agreeable to the intention; 2. To the words of the parties; 3. Made upon the entire deed; 4. Bearing strongest against the contractor; 5. Conformable to law; 6. Rejecting the latter of two repugnant clauses in a deed, and the former in a will; 7. Most favorable in case of a devise.

Of the nature of and property in things personal.—Things personal are comprehended under the general name of chattels, which include whatever wants either the duration or the immobility attending things real. In these are to be considered, 1. Their distribution; 2. The property of them; 3. The title to that property.

As to the distribution of chattels, they are, 1. Chattels real; 2. Chattels personal. *Chattels real* are such quantities of interest in things immoveable, or lands and tenements, as are short of the duration of freeholds, being limited to a time certain, beyond which they cannot subsist. *Chattels personal* are things moveable, which may be transferred from place to place, with the person of the owner.

Property in chattels personal is either in possession or in action. Property in possession, where a man has the actual enjoyment of the thing, is, 1. Absolute; 2. Qualified. Absolute property is where a man has such an exclusive right in the thing, that it cannot cease to be his without his own act or default. Qualified property is such as is not in its nature permanent; but may sometimes subsist, and at other times not subsist. This may arise, 1. Where the subject is incapable of absolute ownership; 2. From the peculiar circumstances of the owners.

Property in action is where a man has not the actual occupation of the thing, but only a right to it, arising upon some contract, and recoverable by an action at law. The property of chattels personal is liable to remainders expectant on estates for life to joint-tenancy, and to tenancy in common.

Of the title to personal property.—The title to things personal may be acquired or lost by, 1. Occupancy; 2. Prerogative; 3. Custom; 4. Succession; 5. Marriage; 6. Forfeiture; 7. Judgment; 8. Gift or grant; 9. Contract; 10. Bankruptcy; 11. Testament; 12. Administration.

By occupancy. Occupancy still gives the first occupant a right to those few things which have no legal owner, or which are incapable of permanent ownership. Such as, 1. Goods of alien enemies; 2. Things found; 3. The benefit of the elements; 4. Animals, *feræ naturæ*; 5. Emblements; 6. Things gained by accession; 7. By confusion; 8. Literary property.

By prerogative is vested in the crown, or its grantees, the property of the royal revenue; and also the property of all game in the kingdom, with the right of pursuing and taking it.

By custom, obtaining in particular places, a right may be acquired in chattels; the most usual of which customs are those relating to, 1. Heriots; 2. Mortuaries; 3. Heirlooms. Heriots are either heriot-service, which differs little from a rent; or heriot-custom, which is a customary tribute of goods and chattels, payable to the lords of the fee, on the decease of the owner of lands. Mortuaries are a customary gift, due to the minister, in many parishes, on the death of his parishioners. Heirlooms are such personal chattels as descend by special custom to the heir, along with the inheritance of his ancestor.

By succession, the right of chattels is also vested in corporations aggregate, and likewise in such corporations sole as are the heads and representatives of bodies aggregate.

By marriage the chattels of the wife are vested in the husband, in the same degree of property, and with the same powers, as the wife, when sole, had over them, provided he reduces them to possession. The wife also acquires by marriage, a property in her paraphernalia.

By forfeiture for crimes and misdemeanors the right of goods and chattels may be transferred from one man to another, either in part or totally. Total forfeitures of goods arise from conviction of, 1. Treason, and misprision thereof; 2. Felony; 3. Excusable homicide; 4. Outlawry for treason or felony; 5. Flight; 6. Standing mute; 7. Atrocious contempts, as assaults on a judge and batteries, sitting the courts; 8. *Præmanire*; 9. Pretended prophecies; 10. Owling; 11. Residing abroad of artificers; 12. Challenges to fight for debts at play.

By judgment consequent on a suit at law a man may, in some cases, not only recover, but originally acquire a right to personal property. As, 1. To penalties, recoverable by action popular; 2. Damages; 3. To costs of suit.

By gifts, grants, and contracts. A grant or gift is a voluntary conveyance of a chattel, personal in possession, without any consideration or equivalent. A contract is an agreement, upon sufficient consideration, to do or not to do a particular thing; and, by such contract, any personal property, either in possession or in action, may be transferred. Contracts may be either express or implied, either executed or executory.

The consideration of contracts is, 1. A good consideration; 2. A valuable consideration; which is, 1. *Do, ut des*; 2. *Facio, ut facias*; 3. *Facio, ut des*; 4. *Do, ut facias*.

The most usual species of personal contracts are, 1. Sale or exchange; 2. Bailment; 3. Hiring or borrowing; 4. Debt. Sale or exchange is a transmutation of property from one man to another, in consideration of some recompense in value. Bailment is the delivery of goods in trust, upon a contract, express or implied, that the trust shall be faithfully performed by the bailee. Hiring or borrowing is a contract, whereby the possession of chattels is transferred for a particular time, on condition that the identical goods (or sometimes their value) be restored at the time appointed, together with (in case of hiring) a stipend or price for the use. This price being calculated to answer the hazard, as well as the inconvenience of lending, gives birth to the doctrine of interest or usury upon loans; and consequently to the doctrine of bottomry or respondentia and insurance. Debt is any contract whereby money becomes due to the creditor: this is, 1. A debt of record; 2. A debt upon special contract; 3. A debt upon simple contract; which last includes paper credit, or bills of exchange, and promissory notes.

By bankruptcy. Herein may be considered, 1. Who may become a bankrupt; 2. The acts whereby he may become a bankrupt; 3. The proceedings on a commission of bankrupt; 4. How his property is transferred thereby. Persons of full age, using the trade of merchandise, by buying and selling, and seeking their livelihood thereby, are liable to become bankrupts for debts of a sufficient amount.

A trader who endeavours to avoid his creditors, or evade their just demands, by any of the acts specified in the several acts of bankruptcy, doth thereby commit *an act of bankruptcy*. The proceedings on a commission of bankrupt, so far as they affect the bankrupt himself, are principally by 1. Petition; 2. Commission; 3. Declaration; 4. Choice of assignees; 5. The bankrupt's surrender; 6. His examination; 7. His discovery; 8. His certificate; 9. His allowance. The property of a bankrupt's personal estate is, immediately upon the act of bankruptcy, vested by construction of law in the assignees, and they, when they have collected sufficient for the purpose, distribute it by equal dividends among all the creditors. See **BANKRUPT**.

By Testament and Administration.—Concerning testaments and administrations, considered jointly, are to be observed 1. Their original, and antiquity; 2. Who may make a testament; 3. Its nature and incidents; 4. What are executors and administrators; 5. Their office and duty.

Testaments have subsisted in England immemorially; whereby the deceased was at liberty to dispose of his personal estate, reserving anciently to his wife and children their reasonable part of his effects. The goods of intestates belonged anciently to the king, who granted them to the prelates to be disposed of in pious uses; but, on their abuse of this trust in the times of popery, the legislature compelled them to dele-

gate their power to *administrators* expressly provided by law.

All persons may make a testament, unless disabled by, 1. Want of discretion; 2. Want of free-will; 3. Criminal conduct.

Testaments are the legal declarations of a man's intentions, which he wills to be performed after his death: These are, 1. Written; 2. Nuncupative.

An *executor* is he to whom a man by his will commits the execution thereof.

Administrators are, 1. *Durante minore ætate* of an infant executor or administrator; 2. *Cum testamento annexo*, when no executor is named, or the executor refuses to act; 3. General administrators, in pursuance of the statutes of Edward III. and Henry VIII.; 4. Administrators *de bonis non*; when a former executor or administrator dies without completing his trust.

The office and duty of executors, and, in many points, of administrators also, are, 1. To bury the deceased; 2. To prove the will, or take administration; 3. To make an inventory; 4. To collect the goods and chattels; 5. To pay debts, observing the rules of priority; 6. To pay legacies, either general or specific if they be vested and not lapsed; 7. To distribute the undivided surplus, according to the statute of distributions.

CHAP. III.—OF INJURIES RELATING TO PERSONS.

1. *Of injuries proceeding from, or affecting the crown.*—Injuries to which the crown is a party are, 1. Where the crown is the aggressor; 2. Where the crown is the sufferer. Some of these relate to injuries of property as well as personal rights; but it will be convenient to class them all under the present head.

The crown is the aggressor, whenever it is in possession of any property to which the subject has a right. This is remedied, 1. By petition of right; where the right is grounded on facts disclosed in the petition itself; 2. By *monstrans de droit*; where the claim is grounded on facts, already appearing on record. The effect of both which is to remove the hands or possession of the king.

Where the crown is the sufferer, the king's remedies are, 1. By such common law actions as are consistent with the royal dignity; 2. By inquest of office, to recover possession: which, when found, gives the king his right by solemn matter of record; but may afterwards be traversed by the subject; 3. By writ of *scire facias*, to repeal the king's patent or grant; 4. By information of intrusion, to give damages for any trespass on the lands of the crown; or of debt, to recover monies due upon contract, or forfeited by the breach of any penal statute; or sometimes in the latter cases by information in rem: all of which informations are filed in the exchequer, *ex officio*, by the king's attorney-general; 5. By writ of *quo warranto*, or information in the nature of such writ; to seize into the king's hands any franchise usurped by the subject, or to oust a usurper from any public office; 6. By writ of *mandamus*, unless cause be shown, to admit or restore any person entitled to a fran-

chise or office: to which, if a false cause be returned, the remedy is by traverse, or by action on the case for damages; and in consequence a peremptory *mandamus* or writ of restitution.

2. *Of injuries to the absolute rights of persons.*—Injuries to the rights of persons are, 1. Injuries to the absolute; 2. Injuries to the relative, rights of persons.

The absolute rights of individuals are, 1. Personal security; 2. Personal liberty; 3. Private property. To which the injuries must be correspondent.

(1.) *Personal security.*—Injuries to personal security are, 1. Against a man's life; 2. Against his limbs; 3. Against his body; 4. Against his health; 5. Against his reputation. The first must be referred to a subsequent chapter.

Injuries to the limbs and body are, 1. Threats; 2. Assault; 3. Battery; 4. Wounding; 5. Mayhem.

The remedy for these injuries is by action of trespass, *vi et armis*; for damages. The mode of procedure, before the several courts in which redress may be obtained, will be stated in a subsequent chapter; but it will be found convenient to point out the general nature of each remedy in connexion with the injury to which it applies.

Injuries to health, by any unwholesome practices, are remedied by a special action of trespass, on the case, for damages.

Injuries to reputation are, 1. Slanderous and malicious words. The remedy is by action on the case, for damages; 2. Libels; for which a similar remedy is provided; 3. For malicious prosecutions. The remedy is by action of conspiracy, or on the case, for damages.

(2.) *Personal liberty.*—The injury to personal liberty is false imprisonment. The remedies are, 1. By writ of, 1st, *Mainprize*; 2ndly, *Odio et atia*; 3dly, *Homine replegiando*; 4thly, *Habeas corpus*; to remove the wrong; 2. By action of trespass; to recover damages.

(3.) *Injuries to private property.* See the next chapter.

3. *Of the injuries to the relative rights of persons.*—Injuries to relative rights affect, 1. Husbands; 2. Parents; 3. Guardians; 4. Masters.

(1.) *Husbands.*—Injuries to a husband are, 1. Abduction, or taking away his wife. The remedy provided by the law is by action of trespass, *de uxore raptâ et abductâ*; to recover possession of his wife, and damages; 2. Criminal conversation with her. The remedy for which is by action on the case, for damages; 3. Beating her. For which a remedy is provided by action on the case, or in trespass, *per quod consortium amisit*; for damages at the suit of the husband, or a joint action of trespass by the husband and wife.

(2.) *Parents and guardians.*—The injury to a parent or guardian is the abduction of their children or wards. The remedy for which is by an action of trespass, *de filiis vel custodiis raptis vel abductis*, to recover possession of them, and damages.

(3.) *Masters.*—Injuries to a master are, 1. Keeping his servants. For which the law has provided a remedy by action on the case for

damages; 2. Beating them; the remedy in which case is by action on the case or in trespass, per quod servitium amisit, for damages.

CHAP. IV.—INJURIES RELATING TO PROPERTY.

1. *Of injuries to personal property.*—Personal property is either in possession or in action. Injuries to personal property in possession are, 1. By dispossession; 2. By damage, while the owner remains in possession.

(1.) *Dispossession.*—Dispossession may be effected, 1. By an unlawful taking; 2. By an unlawful detaining.

In this place, as in the chapter respecting personal injuries, we refer to a subsequent part of the treatise for an account of the mode of redress, and the courts in which it is to be sought; but we shall find it convenient briefly to notice, along with each species of injury, the general kind of remedy which the law affords; reserving the details of procedure for the fifth chapter.

For the unlawful taking of goods and chattels personal, the remedy is, 1. Actual restitution, which in case of a wrongful distress is obtained by action of replevin; 2. Satisfaction in damages: 1st, in the case of rescous, by action of rescous, pound breach, or on the case: 2dly, in case of other unlawful takings, by action of trespass or trover.

For the unlawful detaining of goods lawfully taken, the remedy is also, 1. Actual restitution; by action of replevin or detainue. 2. Satisfaction in damages: by action on the case, for trover and conversion.

(2.) *Damage.*—For damage to personal property while in the owner's possession, the remedy is in damages; by action of trespass vi et armis, in case the act be immediately injurious; or by action of trespass on the case to redress consequential damage.

Injuries to personal property, in action, arise by breach of contracts, 1. Express; 2. Implied.

Breaches of express contracts are, 1. By non-payment of debts; the remedies for which are, 1st, Specific payment; recoverable by action of debt; 2dly, damages for non-payment; recoverable by action on the case. 2. By non-performance of covenants. In which case remedy is by action of covenant, 1st, to recover damages, in covenants personal; 2dly, to compel performance, in covenants real. 3. By non-performance of promises, or assumpsits. And here the remedy is by action on the case, for damages.

Implied contracts are such as arise, 1. From the nature and constitution of government; 2. From reason and the construction of law.

Breaches of contracts, implied in the nature of government, are by the non-payment of money which the laws have directed to be paid. In these cases the remedy is by action of debt (which in such cases is frequently a popular, frequently a qui tam, action), to compel the specific payment; or, sometimes, by action on the case, for damages.

Breaches of contracts implied in reason, and construction of law, are by the non-performance of legal presumptive assumpsits: for which the

remedy is in damages; by an action on the case on the implied assumpsits, 1. Of a quantum meruit; 2. Of a quantum valebat; 3. Of money expended for another; 4. Of receiving money to another's use; 5. Of an insimul computassent, on an account stated (the remedy on account unstated being by action of account); 6. Of performing one's duty, in any employment, with integrity, diligence, and skill. In some of which cases an action of deceit (or on the case in nature of deceit) will lie.

2. *Of injuries to real property.*—Injuries affecting real property are, 1. Ouster; 2. Trespass; 3. Nuisance; 4. Waste; 5. Subtraction; 6. Disturbance.

(1.) *Dispossession of freehold.*—Ouster is the amotion of possession; and is, 1. From freeholds; 2. From chattels real.

Ouster from freeholds is effected by, 1. Abatement; 2. Intrusion; 3. Disseisin; 4. Discontinuance; 5. Deforcement.

Abatement is the entry of a stranger, after the death of the ancestor, before the heir.

Intrusion is the entry of a stranger, after a particular estate of freehold is determined, before him in remainder or in reversion.

Disseisin is a wrongful putting out of him that is seized of the freehold.

Discontinuance is where the tenant in tail, or the husband of a tenant in fee, makes a larger estate of the land than the law allows.

Deforcement is any other detainer of the freehold from him who has the property, but who never had the possession.

The universal remedy for all these injuries is restitution or delivery of possession; and sometimes damages for the detention. This is effected, 1. By mere entry; 2. By action possessory; 3. By writ of right.

Mere entry on lands, by him who has the apparent right of possession, will (if peaceable) divest the mere possession of a wrong doer. But forcible entries are remedied by immediate restitution, to be given by a justice of the peace. Where the wrong doer has not only mere possession, but also an apparent right of possession, this may be divested by him who has the actual right of possession by means of the possessory actions of writ of entry or assise.

A writ of entry is a real action, which disproves the title of the tenant, by showing the unlawful means under which he gained or continues possession. And it may be brought either against the wrong doer himself, or in the degrees called the per, the per and cui, and the post. These writs of entry, however, are not now in use.

An assise is a real action, which proves the title of the demandant by showing his own or his ancestor's possession; and it may be brought either to remedy abatements, viz. the assise of mort d'ancestor, &c.; or to remedy recent disseisins, viz. the assise of novel disseisin. But these writs have also fallen into disuse. Where the wrong doer has gained the actual right of possession, he who has the right of property can only be remedied by a writ of right, or some writ of a similar nature. As, 1. Where such right of possession is gained by the discontinuance of tenant in tail. The remedy for the right

of property is by writ of *formedon*. 2. Where gained by recovery in a possessory action, had against tenants of particular estates by their own default. The remedy is by writ of *quod ei de forceat*. 3. Where gained by recovery in a possessory action had upon the merits. 4. Where gained by the statute of limitations. The remedy, in both cases, is by a mere writ of right, the highest writ in the law, which is now the general mode of proceeding in a real action and of which there have been several recent instances.

Dispossession of chattels real.—Ouster from chattels real is, 1. From estates by statute and *elegit*; 2. From an estate for years.

Ouster from estates by statute, or *elegit*, is effected by a kind of *disseisin*. The remedy for which is restitution and damages; by assise of novel *disseisin*, or usually by *scire facias* and *re-entent*.

Ouster from an estate for years, is effected by a like *disseisin* or *ejectment*, and the remedy is also by restitution and damages; 1. By writ of *ejectione firmæ*; 2. By writ of *quare ejecit infra terminum*.

A writ of *ejectione firmæ*, or action of trespass in *ejectment*, lieth where lands, &c., are let for a term of years, and the lessee is ousted or ejected from his term; in which case he shall recover possession of his term and damages.

This is now the usual method of trying titles to land, instead of an action real: viz. By 1. The claimant's making an actual or supposed lease upon the land to the plaintiff; 2. The plaintiff's actual or supposed entry thereupon; 3. His actual or supposed ouster and *ejectment* by the defendant. For which injury this action is brought either against the tenant, or (more usually) against some casual or fictitious ejector; in whose stead the tenant may be admitted defendant, on condition that the lease, entry, and ouster, be confessed, and that nothing else be disputed but the merits of the title claimed by the lessor of the plaintiff.

A writ of *quare ejecit infra terminum* is an action of a similar nature; only not brought against the wrong doer or ejector himself, but such as are in possession under his title. But this writ has now become wholly obsolete.

(2.) *Of trespass*.—Trespass is an entry upon, and damage done to another's lands, by one's self, or one's cattle; without any lawful authority, or cause of justification: which is called a breach of his close. The remedy for which is in damages; by an action of trespass, *quare clausum fregit*: besides that of distress, damage feasant. But unless the title to the land came chiefly in question, or the trespass was wilful or malicious, the plaintiff (if the damages be under 40s.) shall recover no more costs than damages.

(3.) *Of nuisance*.—Nuisance, or annoyance, is any thing that worketh damage or inconvenience; and it is either a public and common nuisance, or a private nuisance; which is any thing done to the hurt or annoyance of 1. The corporeal; 2. The incorporeal, hereditaments of another.

The remedies for a private nuisance, besides that of abatement, are 1. Damages, by action on the case; which also lies for special prejudice by a public nuisance; 2. Removal thereof, and

damages, by assise of nuisance; 3. Like removal and damages, by writ of *quod permittat prosternere*. The remedy usually adopted is by action on the case, the others have fallen into disuse.

(4.) *Of waste*.—Waste is a spoil and destruction in lands and tenements, to the injury of him who hath, 1. An immediate interest, as by right of common in the lands; 2. The remainder or reversion of the inheritance.

The remedies for a commoner are restitution and damages, by assise of common: or damages only, by action on the case; the former of which remedies has become obsolete. The remedy for him in remainder or reversion is, 1. Preventive, by writ of *estrepement at law*, or injunction out of chancery, to stay waste; 2. Corrective, by action of waste, to recover the place wasted and damages; or by action on the case for damages only. The writ of *estrepement* is now disused.

(5.) *Of subtraction*.—Subtraction is when one who owes services to another, withdraws or neglects to perform them. This may be, 1. Of rents and other services, due by tenure; 2. Of those due by custom.

For subtraction of rents and services due by tenure, the remedy is, 1. By distress, to compel the payment or performance; 2. By action of debt; 3. By assise; 4. By writ de *consuetudinibus et servitiis*, to compel the payment; 5. By writ of *cessavit*; and, 6. By writ of right sur disclaimer; to recover the land itself. The *distrain* and action are the usual remedies.

To remedy the oppression of the lord, the law has also given, 1. The writ of *ne injustè vexes*; 2. The writ of *mesne*.

For subtraction of services due by custom, the remedy is, 1. By writ of *secta ad molendinum, furnum torrale, &c.*, to compel the performance and recover damages; 2. By action on the case; for damages only. The latter is the ordinary remedy in use.

(6.) *Of disturbance*.—Disturbance is the hindering or disquieting the owners of an incorporeal hereditament, in the regular and lawful enjoyment of it. Disturbances are, 1. Of franchises; 2. Of commons; 3. Of ways; 4. Of tenure; 5. Of patronage.

Disturbance of franchises is remedied by a special action on the case; for damages.

Disturbance of common is, (1.) *Intercommoning without right*. The remedy given for which is in damages; by an action on the case, or of trespass: besides distress, damage feasant: to compel satisfaction.

(2.) *Surcharging the common*. The remedies for which are distress, damage feasant; to compel satisfaction; action on the case, for damages; or, writ of *admeasurement of pasture*; to apportion the common, and writ de *secundâ superoneratione*; for the supernumerary cattle, and damages. In these cases, also, the common remedy is by *distrain* or action; the others having become obsolete.

(3.) *Inclosure or obstruction*. The remedies for which are by restitution of the common, and damages; by assise of a novel *disseisin*, and by writ of *quod permittat*: or damages only; by action on the case. The latter is the only remedy now in use.

Disturbance of ways is the obstruction, 1. Of a way in gross, by the owner of the land; 2. Of a way appendant, by a stranger. And the remedy for both is by damages, obtained in an action in the case.

Disturbance of tenure, by driving away tenants, is remedied by a special action on the case, for damages.

Disturbance of patronage is the hindrance of a patron to present his clerk to a benefice, whereof usurpation within six months is now become a species.

Disturbers may be, 1. The pseudo-patron, by his wrongful presentation; 2. His clerk, by demanding institution; 3. The ordinary, by refusing the clerk of the true patron.

The remedies are, 1. By assise of darrein presentment; 2. By writ of quare impedit; to compel institution and recover damages, consequent to which are the writs of quare incumbravit, and quare non admisit, for subsequent damages; 3. By writ of right of advowson; to compel institution, or establish the permanent right. The writ of quare impedit is now, however, the only remedy in use.

CHAP. V.—OF REMEDIES FOR INJURIES, AND MODE OF PROCEDURE.

The redress of civil injuries is one principal object of the laws of England. This redress is effected, 1. By the mere act of the parties; 2. By the mere operation of law; 3. By both together, or suit in courts.

1. *Of redress by the mere act of the parties.*—Redress, by the mere act of the parties, is that which arises, 1. From the sole act of the party injured; 2. From the joint act of all the parties.

Of the first sort are, 1. Defence of one's self or relations; 2. Recaption of goods; 3. Entry on lands and tenements; 4. Abatement of nuisances; 5. Distress for rent, for suit or service, for amercements, for damage, or for divers statutable penalties, made of such things only as are legally distrainable; and taken and disposed of according to the due course of law; 6. Seising of heriots, &c.

Of the second sort are, 1. Accord; 2. Arbitration.

2. *Of redress by the mere operation of law.*—Redress, effected by the mere operation of law, is, 1. In the case of retainer, where a creditor is executor or administrator, and is thereupon allowed to retain his own debt; 2. In the case of remitter, where one who has had a good title to lands, &c., comes into possession by a bad one, and is thereupon remitted to his ancient good title, which protects his ill-acquired possession.

3. *Of redress in courts of justice.*—Injuries between subject and subject, cognisable by the courts of common law, are in general remedied by putting the party injured into possession of that right whereof he is unjustly deprived.

This is effected, 1. By delivery of the thing detained to the rightful owner; 2. Where that remedy is either impossible or inadequate, by giving the party injured a satisfaction in damages.

The instruments by which these remedies may be obtained are suits or actions: which are defined to be legal demands of one's right.

Redress, that is effected by the act both of the law and of the parties, is by suit or action in the courts of justice.

Herein may be considered, 1. The courts themselves; 2. The cognisance of wrongs or injuries therein. And, of courts, 1. Their nature and incidents; 2. Their several species.

A court is a place wherein justice is judicially administered by officers delegated by the crown; being a court either of record or not of record.

Incident to all courts are a plaintiff, defendant, and judge: and there are also usually attorneys; and advocates or counsel, viz. either barristers or sergeants at law.

(1.) *Of courts in general.*—Courts of justice, with regard to their several species, are, 1. Of a public, or general jurisdiction throughout the realm; 2. Of a private, or special jurisdiction.

Public courts of justice are, 1. The courts of common law and equity; 2. The ecclesiastical courts; 3. The military courts; 4. The maritime courts.

The general and public courts of common law and equity are, 1. The court of piepoudre; 2. The court baron; 3. The hundred court; 4. The county court; 5. The court of common pleas; 6. The court of king's bench; 7. The court of exchequer; 8. The court of chancery (which two last are courts of equity as well as law); 9. The court of exchequer chamber; 10. The house of peers, to which may be added as auxiliaries, 11. The courts of assize and nisi prius.

(2.) *Of courts ecclesiastical.*—Ecclesiastical courts which were separated from the temporal by William the Conqueror, or courts Christian, are, 1. The court of the archdeacon. 2. The court of the bishop's consistory. 3. The court of arches. 4. The court of peculiars. 5. The prerogative. 6. The court of delegates. 7. The court of review.

Remedies in the ecclesiastical courts.—Injuries cognizable in the ecclesiastical courts are, 1. Pecuniary. 2. Matrimonial. 3. Testamentary.

Pecuniary injuries, here cognizable, are, 1. Subtraction of tithes; for which the remedy is by suit to compel their payment, or an equivalent; and also their double value. 2. Non-payment of ecclesiastical dues, the remedy for which is by suit for payment. 3. Spoliation, for which the remedy is by suit for restitution. 4. Dilapidations, the remedy for which is by suit for damages. 5. Non-repair of the church, &c., and non-payment of church-rates, for which the remedy is by suit to compel them.

Matrimonial injuries, are, 1. Jactitation of marriage, in which the remedy is by suit for perpetual silence. 2. Subtraction of conjugal rites, for which the remedy provided is by suit for restitution. 3. Inability for the marriage state. The remedy for which is by suit for divorce. 4. Refusal of decent maintenance to the wife, for which there is a remedy by suit for alimony.

Testamentary injuries, are, 1. Disputing the validity of wills, the remedy provided for which

is by suit to establish them. 2. Obstructing of administrations, and the remedy is by suit for the granting them. 3. Subtraction of legacies, for which the remedy is by suit for the payment.

The course of proceedings in these courts is much conformed to the civil and canon law; but their only compulsive process is that of excommunication; which is enforced by the temporal writ of *significavit*, or *de excommunicato capiendo*.

(3.) *Of courts military and maritime.*—Of courts military: the only permanent military court was that of chivalry, but which is now entirely out of use. The courts martial are temporary, and are annually established by act of parliament.

Civil injuries cognizable in the court military, or court of chivalry, are, 1. Injuries in point of honor, for which there was formerly a remedy by suit for honorable amends, but which is now entirely obsolete. 2. Encroachments in coat-armour, &c., the remedy for which is by suit to remove them, and the proceedings are of a summary nature.

Of Courts Maritime.—Maritime courts are, 1. The court of admiralty, and vice-admiralty. 2. The court of delegates. 3. The lords of the privy council, and others, authorised by the king's commission for appeals in prize causes.

Civil injuries cognizable in the courts maritime are injuries in their nature of common law cognizance, but arising wholly upon the sea, and not within the precincts of any county. The proceedings herein are also much conformed to the civil law.

(4.) *Of courts of a special or limited jurisdiction.*

Courts of a special and private jurisdiction, are, 1. The forest courts; including the courts of attachments, regard, *swienmote*, and justice seat. 2. The court of commissioners of sewers. 3. The court of policies of assurance. 4. The court of the marshalsea, and the palace court. 5. The courts of the principality of Wales. 6. The court of the duchy chamber of Lancaster. 7. The courts of the counties palatine, and other royal franchises. 8. The stannary courts. 9. The courts of London, and other corporations; to which may be referred the courts of requests, or courts of conscience; and the modern regulations of certain courts baron and county courts. 10. The courts of the two universities.

(5.) *Mode of procedure in the common law courts.*—1. Of proceedings before trial. The pursuit of the several remedies furnished by the laws of England is, 1. By action in the courts of common law; 2. By the proceedings in the courts of equity.

Of an action in the court of common pleas (originally the proper court for prosecuting suits) the orderly parts are, 1. The original writ; 2. The process; 3. The pleadings; 4. The issue, or demurrer; 5. The trial; 6. The judgment; 7. The proceedings in nature of appeal; 8. The execution.

Original writ.—The original writ is the beginning or foundation of a suit, and is either optional, called a *precipe*, commanding the defendant to do something in certain, or otherwise show cause to the contrary; or *preemptory*, called a *si fecerit*

rit te securum, commanding, upon security being given by the plaintiff, the defendant to appear in court, to show wherefore he has injured the plaintiff: both issuing out of chancery under the king's great seal, and returnable in bank during term time.

Process.—Process is the means of compelling the defendant to appear in court. This includes, 1. Summons; 2. The writ of attachment, or *pone*; which is sometimes the first or original process; 3. The writ of *distringas*, or *distress infinite*; 4. The writs of *capias ad respondendum*, and *testatum capias*; or, instead of these, in the king's bench, the bill of Middlesex, and writ of *Latitat*; and, in the Exchequer, the writ of *quo minus*. 5. The *alias* and *pluries* writs; 6. The *exigent*, or writ of *exigi facias*, proclamations, and outlawry; 7. Appearance and common bail; 8. The arrest; 9. Special bail, first to the sheriff, and then to the action.

Pleadings.—Pleadings are the mutual altercations of the plaintiff and defendant in writing: under which are comprised, 1. The declaration or count; wherein, incidentally, of the *visne*, *nonsuit*, *retraxit*, and *discontinuance*; 2. The defence, claim of cognizance, *imparlance*, *view*, *oyer*, *aid*, *prayer*, *voucher*, or *age*. 3. The plea; which is either a dilatory plea, (1st, to the jurisdiction; 2dly, in disability of the plaintiff; 3dly, in abatement;) or it is a plea to the action; sometimes confessing the action either in whole or in part, (wherein of a tender, paying money into court and set off,) but usually denying the complaint, by pleading either, 1st, the general issue; or, 2dly, a special bar, (wherein of justifications, the statutes of limitations, &c.) 4. Replication, rejoinder, surrejoinder, rebutter, surrebutter, &c. Therein of *estoppels*, *color*, *duplicity*, *departure*, *new assignment*, *protestation*, *avertment*, and other incidents of pleading.

Issue and demurrer.—Issue is where the parties, in a course of pleading, come to a point affirmed on one side and denied on the other; which, if it be a matter of law, is called a demurrer; if it be a matter of fact, it still retains the name of an issue of fact.

Continuance is the detaining of the parties in court from time to time, by giving them a day certain to appear upon. And, if any new matter arises since the last continuance or adjournment, the defendant may take advantage of it, even after demurrer or issue, by alleging it as a *plea puis darrein continuance*.

The determination of an issue in law, or demurrer, is by the opinion of the judges of the court, which is afterwards entered on record.

2. *Of Trials.*—Trial is the examination of the matter of fact put in issue.

The species of trial are, 1. By the record. 2. By inspection. 3. By certificate. 4. By witnesses. 5. By wager of *batel*. 6. By wager of law. 7. By jury.

Trial by the record is had when the existence of such record is the point in issue.

Trial by inspection, or examination, is had by the court, principally when the matter in issue is the evident object of the senses.

Trial by certificate is had in those cases, where such certificate must have been conclusive to a jury.

Trial by witnesses (the regular method in the civil law) is only used in writ of dower, when the death of the husband is in issue.

Trial by wager of battel, in civil cases, was only had on writ of right; but, in lieu thereof, the tenant might have, at his option, the trial by the grand assise: but this mode of trial is now abolished by act of parliament.

Trial by wager of law is only had where the matter in issue may be supposed to have been privily transacted between the parties themselves, without the intervention of other witnesses.

Trial by jury. Trial by Jury is, 1. Extraordinary; as by the grand assise, in writs of right; and by the grand jury, in writs of attain. 2. Ordinary.

The method and process of the ordinary trial by jury is, 1. The writ of venire facias to the sheriffs, coroners, or elisors: with the subsequent compulsive process of habeas corpora, or distringas. 2. The carrying down of the record to the court of nisi prius. 3. The sheriff's return; or pannel of, 1st, special, 2dly, common jurors. 4. The challenges; 1st, to the array; 2dly, to the polls of the jurors; either, propter honoris respectum, propter defectum, propter affectum (which is sometimes a principal challenge, sometimes to the favor), or propter delictum. 5. The tales de circumstantibus. 6. The oath of the jury. 7. The evidence; which is either by proofs, 1st, written; 2dly, parole:—or by the private knowledge of the jurors. 8. The verdict, which may be, 1st, privy; 2dly, public; 3dly, special.

3. *Of Judgment and its incidents.*—Whatever is transacted at the trial, in the court of nisi prius, is added to the record under the name of a postea: consequent upon which is the judgment.

Judgment may be arrested or stayed for causes, 1. Extrinsic, or dehors the record; as in the case of new trials. 2. Intrinsic, or within it; as where the declaration varies from the writ, or the verdict from the pleadings and issue; or where the case, laid in the declaration, is not sufficient to support the action in point of law.

Where the issue is immaterial, or insufficient, the court may award a repleader.

Judgment is the sentence of the law, pronounced by the court, upon the matter contained in the record.

Judgments are, 1. Interlocutory; which are incomplete till perfected by a writ of enquiry. 2. Final.

Costs are expenses of suit, and are now the necessary consequences of obtaining judgment.

Appeals.—Proceedings, in the nature of appeals from judgment, are, 1. A writ of attain, to impeach the verdict of a jury; which of late has been superseded by new trials. 2. A writ of audita querela; to discharge a judgment by matter that has since happened. 3. A writ of error from one court of record to another; to correct judgments, erroneous in point of law, and not helped by the statutes of amendment and jeofails.

Writs of error lie, 1. To the court of king's bench, from all inferior courts of record; from the court of common pleas at Westminster; and from the court of king's bench in Ireland. 2.

To the courts of exchequer chamber, from the law side of the court of exchequer; and from proceedings in the court of king's bench by bill. 3. To the house of peers, from proceedings in the court of king's bench by original and on writs of error; and from the several courts of exchequer chamber.

Execution.—Execution is the putting in force of the sentence or judgment of the law. Which is effected, 1. Where possession of any hereditament is recovered; by writ of habere facias seisinam, possessionem, &c. 2. Where any thing is awarded to be done or rendered by especial writ for that purpose: as by a writ of abatement, in case of nuisance; retorna habendo, and capias in withernam, in replevin; distringas, and scire facias, in detinue. 3. Where money only is recovered; by writ of, 1st, Capias ad satisfaciendum, against the body of the defendant; or, in default thereof, scire facias against his bail. 2dly, Fieri facias, against his goods and chattels. 3dly, Levari facias, against his goods and the profits of his lands. 4thly, Elegit against his goods, and the possession of his lands. 5thly, Extendi facias and other process, on statutes, recognizances, &c., against his body, lands, and goods.

(6.) *Of Proceedings in the Courts of Equity*—Matters of equity which belong to the peculiar jurisdiction of the court of chancery, are, 1. The guardianship of infants. 2. The custody of idiots and lunatics. 3. The superintendance of charities. 4. Commissions of bankrupt.

The court of exchequer, and the duchy-court of Lancaster, have also some peculiar causes, in which the interest of the king is more immediately concerned.

Equity is the true sense and sound interpretation of the rules of law; and, as such, is equally attended to by the judges of the courts both of common law and equity.

The essential differences, whereby the English courts of equity, are distinguished from the courts of law, are, 1. The mode of proof, by a discovery on the oath of the party; which gives a jurisdiction in matters of account and fraud. 2. The mode of trial, by depositions taken in any part of the world. 3. The mode of relief, by giving a more specific and extensive remedy than can be had in the courts of law; as, by carrying agreements into execution, staying waste or other injuries by injunction, directing the sale of incumbered lands, &c. 4. The true construction of securities for money, by considering them merely as a pledge. 5. The execution of trusts, or second uses, in a matter analogous to the law of legal estates.

The proceedings in the court of chancery (to which those in the exchequer very nearly conform) are, 1. Bill. 2. Writ of subpœna, and perhaps injunction. 3. Process of contempt, viz. (ordinarily) attachment, attachment with proclamations, commissions of rebellion, sergeant at arms, and sequestrations. 4. Appearance. 5. Demurrer. 6. Plea. 7. Answer. 8. Exceptions, amendments, cross or supplemental bills, bills of revivor, interpleader, &c. 9. Replication. 10. Issue. 11. Depositions taken upon interrogatories, and subsequent publication thereof. 12. Hearing. 13. Interlocutory decree, feigned issue,

and trial, reference to the master and report, &c. 14. Final decree. 15. Re-hearing, or bill of review. 16. Appeal to parliament.

CRIMINAL CODE.

CHAP. I.—OF CRIMES AGAINST THE PUBLIC.

1. *Of the nature of crimes.*—A crime or misdemeanor is an act committed, or omitted, in violation of a public law, either forbidding or commanding it. Crimes are distinguished from civil injuries, as they are a breach and violation of the public rights, due to the whole community, considered as a community.

2. *Of persons responsible for crimes.*—All persons are capable of committing crimes, unless there be in them a defect of will: for, to constitute a legal crime, there must be both a vicious will, and a vicious act. The will does not concur with the act, 1. Where there is a defect of understanding. 2. Where no will is exerted. 3. Where the act is constrained by force and violence.

A vicious will may therefore be wanting in the cases of, 1. Infancy. 2. Idiocy, or lunacy. 3. Drunkenness; which does not however, excuse. 4. Misfortune or chance-medley. 5. Ignorance, or mistake of fact. 6. Compulsion, or necessity; which is 1st, that of civil subjection; 2dly, that of duress per minas; 3dly, that of choosing the least pernicious of two evils, where one is unavoidable; 4thly, that of want, or hunger; which is no legitimate excuse. The king, from his excellence and dignity, is also incapable of doing wrong.

3. *Of the different degrees of guilt in criminals, which are,* 1. As principals. 2. As accessories. A principal in a crime is, 1. He who commits the fact. 2. He who is present at, aiding and abetting, the commission. An accessory is he who does not commit the fact, nor is present at the commission: but is in some sort concerned therein, either before or after. Accessories can only be in petit treason, and felony; in high treason and in simple larceny, and other crimes under the degree of felony, all are principals.

An accessory, before the fact, is one who, being absent when the crime is committed, has procured, counselled, or commanded, another to commit it.

An accessory after the fact is, where a person, knowing a felony to have been committed, receives, relieves, comforts, or assists, the felon. Such accessory is usually entitled to the benefit of clergy; where the principal, and accessory before the fact, are excluded from it.

Every accessory before the fact is made punishable by the late statute in the same manner as the principal; and an accessory after the fact (except a receiver of stolen property) is liable to be imprisoned not exceeding two years.

4. *Of offences against religion and the law of nations.*—Crimes and misdemeanors cognizable by the laws of England are such as more immediately offend, 1. God and his holy religion. 2. The law of nations, 3. The king and his government. 4. The public, or commonwealth. 5. Individuals.

Crimes more immediately offending God and religion are, 1. Apostasy. For which the penalty is incapacity, and imprisonment. 2. Heresy, and the penalty for one species thereof is the same as in the previous instance. 3. Offences against the established church, either by reviling its ordinances; for which the penalties are fine, deprivation, imprisonment, forfeiture; or by nonconformity to its worship: 1st, Through total irreligion, where the penalty is fine. 2dly, Through protestant dissenting; the penalty for which was abolished by the toleration act. 3rdly, Through popery, either in professors of the popish religion, popish recusants convict, or popish priests. The penalties were, incapacity, double taxes, imprisonment, fines, forfeitures, abjuration of the realm, judgment of felony without clergy, and judgment of high treason. But the greater part of these barbarous and intolerant statutes were repealed in 1779, by the famous *popish bill*. 4. Blasphemy; for which the penalty is fine, imprisonment, and corporal punishment. 5. Profane swearing and cursing; the penalty for which is fine, or imprisonment in the house of correction. 6. Witchcraft, or at least the pretence thereto; the penalty inflicted is imprisonment, and pillory. 7. Religious imposture; the penalty for which is fine, imprisonment, and corporal punishment. 8. Simony; which is punished by forfeiture of double value; and incapacity. 9. Sabbath-breaking, which may be fined. 10. Drunkenness, the penalty for which is fine, or stocks. 11. For lewdness, the penalties are fine, imprisonment, house of correction.

The law of nations is adopted in England in its full extent, as part of the law of the land. Offences against this law are principally incident to whole states or nations; but, when committed by private subjects, are then the objects of the municipal law.

Crimes against the law of nations, animadverted on by the laws of England, are, 1. Violation of safe conducts. 2. Infringement of the rights of ambassadors: the penalty in both cases is arbitrary. 3. Piracy, for which the penalty is judgment of felony, without benefit of clergy.

5. *Of offences against the state and government.*—Crimes and misdemeanors more peculiarly offending the king and his government are, 1. High treason. 2. Felonies injurious to the prerogative. 3. Præmunire. 4. Other misprisions and contempts.

High treason may, according to the statute of Edward III., be committed, 1. By compassing or imagining the death of the king, or queen consort, or their eldest son and heir; demonstrated by some overt act. 2. By violating the king's companion, his eldest daughter, or the wife of his eldest son. 3. By some overt act of levying war against the king in his realm. 4. By adherence to the king's enemies. 5. Counterfeiting the king's great or privy seal. 6. By counterfeiting the king's money, or importing counterfeit money. 7. By killing the chancellor, treasurer, or kings justices, in the execution of their offices.

High treasons, created by subsequent statutes, are such as relate, 1. To papists: as the repeated defence of the pope's jurisdiction; the coming from beyond sea of a natural born popish priest

the renouncing of allegiance, and reconciliation to the pope, or other foreign power. 2. To the coinage, or other signatures of the king: as counterfeiting, or importing and uttering counterfeit foreign coin, here current; forging the sign manual, privy signet, or privy seal; falsifying, &c., the current coin. 3. To the Protestant succession: as corresponding with, or remitting to, the late pretender's sons; endeavouring to impede the succession; writing or printing in defence of any pretender's title, or derogation of the act of settlement, or of the power of parliament to limit the descent of the crown.

The punishment of high treason in males is, generally, to be, 1. Drawn; 2. Hanged; 3. Embowelled alive; 4. Beheaded; 5. Quartered; 6. The head and quarters to be at the king's disposal. But, in treasons relating to the coin, only to be drawn and hanged till dead. Females, in both cases, were formerly drawn and burnt alive; but this last barbarous punishment was abolished by act of parliament about 1790.

Against the king's prerogative.—Felony is that offence which occasions the total forfeiture of lands or goods at common law; now usually also punishable with death by hanging; unless through the benefit of clergy.

Felonies injurious to the king's prerogative, of which some are within, others without clergy, are, 1. Such as relate to the coin: as the wilful uttering of counterfeit money, &c., to which head some inferior misdemeanors affecting the coinage may be also referred. 2. Conspiring or attempting to kill a privy counsellor; 3. Serving foreign states, or enlisting soldiers for foreign service; 4. Embezzling the king's armour or stores; 5. Desertion from the king's armies, by land or sea.

Præmunire, in its original sense, is the offence of adhering to the temporal power of the pope, in derogation of the regal authority. The penalties for which are, outlawry, forfeiture, and imprisonment: which have since been extended to some offences of a different nature.

Among these are, 1. Importing popish trinkets; 2. Contributing to the maintenance of popish seminaries abroad, or popish priests in England; 3. Molesting the professors of abbeylands; 4. Acting as broker in an usurious contract, for more than ten per cent; 5. Obtaining any stay of proceedings in suits for monopolies; 6. Obtaining an exclusive patent for gunpowder or arms; 7. Exertion of purveyance or preemption; 8. Asserting a legislative authority in both or either house of parliament; 9. Sending any subject a prisoner beyond sea; 10. Refusing the oaths of allegiance and supremacy; 11. Preaching, teaching, or advised speaking, in defence of the right of any pretender to the crown, or in derogation of the power of parliament to limit the succession; 12. Treating of other matters by the assembly of Scotland, convened for electing their representatives in parliament; 13. Unwarrantable undertakings by unlawful subscriptions to public funds.

Misprisions and contempts are all such high offences as are under the degree of capital. These are, 1. Negative, in concealing what ought to be

revealed; 2. Positive, in committing what ought not to be done.

Negative misprisions are, 1. Misprision of treason; for which the penalty is forfeiture and imprisonment. 2. Misprision of felony; the punishment for which is fine and imprisonment. 3. Concealment of treasure-trove; in which also the punishment is fine and imprisonment.

Positive misprisions, or high misdemeanors and contempts, are, 1. Mal-administration of public trusts, which includes the crime of peculation; the usual penalties for which are banishment, fines, imprisonment, disability. 2. Contempts against the king's prerogative; which are punished by fine and imprisonment. 3. Contempts against his person and government; the penalties inflicted for which are fine, imprisonment, and infamous corporal punishment. 4. Contempts against his title; the penalties are fine and imprisonment; or fine and disability. 5. Contempts against his palaces, or courts of justice; which are punished by fine, imprisonment, corporal punishment, forfeiture, and formerly the loss of right hand.

6. *Offences against the community.*

Crimes especially affecting the commonwealth are offences, 1. Against the public justice; 2. Against the public peace; 3. Against the public trade; 4. Against the public health; 5. Against the public police or economy.

(1.) Offences against public justice are, 1. Embezzling or vacating records, and personating others in the courts of justice; the penalty for which is judgment of felony, without benefit of clergy. 2. Compelling prisoners to become approvers; the punishment is judgment of felony. 3. Obstructing the execution of process. 4. Escapes; 5. Breach of prison; 6. Rescue; which four may, according to the circumstances, be either felonies or misdemeanors, punishable by fine and imprisonment. 7. Returning from transportation; this is felony, without benefit of clergy. 8. Taking rewards to help one to his stolen goods; the penalty is the same as for the theft. 9. Receiving stolen goods; the penalties are transportation, fine, and imprisonment. 10. Theftbote; 11. Common bawdry and suing in a feigned name; 12. Maintenance; 13. Champerty: in these four the penalties are fine and imprisonment. 14. Compounding prosecutions on penal statutes; penalty, fine, imprisonment, and disability. 15. Conspiracy, and threats of accusation in order to extort money, &c.; for which the penalties to be inflicted are the villainous judgment, fine, imprisonment, pillory, whipping, transportation. 16. For perjury and subornation thereof; the penalties are infamy, imprisonment, fine, or pillory; and sometimes transportation, or house of correction. 17. For bribery, the penalties are fine, and imprisonment. 18. Embracery (an attempt to overawe a jury); which is punished by infamy, fine, and imprisonment. 19. For false verdict; the penalty is the judgment in attain. 20. Negligence of public officers, &c., is punished by fine, and forfeiture of the office; 21. Oppression by magistrates; 22. Extortion of officers: the penalty in both instances is imprisonment, fine and sometimes forfeiture of the office.

(2.) *Against public peace.*—Offences against the public peace are, 1. Riotous assemblies to the number of twelve; 2. Appearing armed or hunting in disguise; 3. Threatening or demanding any valuable thing by letter. All these are felonies without benefit of clergy. 4. Destroying of turnpikes, &c.; the penalties are, whipping, imprisonment, judgment of felony, with and without clergy. 5. Affrays; 6. Riots, routs, and unlawful assemblies; 7. Tumultuous petitioning; 8. Forceful entry and detainer. The penalties in the last four are fine and imprisonment. 9. For going unusually armed the penalty is forfeiture of arms and imprisonment; 10. Spreading false news; which is punished by fine and imprisonment; 11. For pretended prophecies the penalties are fine, imprisonment, and forfeiture; 12. Challenges to fight; the penalties are fine, imprisonment, and sometimes forfeiture; 13. For libels the penalties are fine, imprisonment, and corporal punishment.

(3.) *Against public trade.*—Offences against the public trade, are, 1. Owling, and the penalties are fines, forfeiture, imprisonment, transportation, judgment of felony; 2. Smuggling, for which the penalties are fines, loss of goods, judgment of felony; 3. Fraudulent bankruptcy; the penalty for which is judgment of felony; 4. Usury, which is punished by fine and imprisonment; 5. For cheating, the penalties are fine, imprisonment, pillory, tumbrel, whipping, or other corporal punishment; 6. Forestalling; 7. Regrating; 8. Engrossing: the penalties for all three are loss of goods, fine, imprisonment; 9. Monopolies, and combinations to raise the price of commodities, the penalties for these are fines, imprisonment, loss of goods, infamy, and sometimes the pains of *præmunire*; 10. For exercising a trade, not having served as an apprentice, the penalty is fine; 11. Transporting or residing abroad of artificers; for which the penalties are fine, imprisonment, forfeiture, incapacity, becoming aliens.

(4.) *Against public health and police.*—Offences against the public health are, 1. Irregularity in the time of the plague, or of quarantine; and the penalties are whipping, judgment of felony, with and without clergy; 2. Selling unwholesome provisions, for which the penalties are amercement, fine, imprisonment, abjuration of the town.

Offences against the public police and economy, or domestic order of the kingdom, are 1. Those relating to clandestine and irregular marriages; the penalties are judgment of felony, with and without clergy; 2. Bigamy, or (more properly) polygamy, the penalty for which is judgment of felony; 3. Idleness, vagrancy, and incorrigible roguery, the penalties for which are imprisonment, whipping, judgment of felony; 4. Common nuisances; 1st, By annoyances or purprestures in highways, bridges, and rivers; 2dly, By offensive trades and manufactures; 3dly, By disorderly houses; 4thly, By lotteries; 5thly, By cottages; 6thly, By fireworks; 7thly, By eavesdropping: the penalty in all of which is by fine; 8thly, By common scolding; penalty the cucking stool: 5. Luxury in diet; penalty discretionary; 6. Gaming; the penalties inflicted on gentlemen

are fines, on others fine and imprisonment, on cheating gamesters, fine, infamy, and the corporal pains of perjury; 7. For destroying game the penalties are fines and corporal punishment.

CHAP. II.—OF OFFENCES AGAINST INDIVIDUALS.

1. *Of offences against life.*—Crimes especially affecting individuals are, 1. Against their persons; 2. Against their habitations; 3. Against their property:

Crimes against individuals are, 1. By homicide, or destroying life; 2. By other corporal injuries.

Homicide is, 1. Justifiable; 2. Excusable; 3. Felonious.

Homicide is justifiable, 1. By necessity and command of law; 2. By permission of law; 1st, for the furtherance of public justice; 2dly, for prevention of some forcible felony.

Homicide is excusable, 1. Per infortunium, or misadventure; 2. *Se defendendo*, or in self-defence, by chance-medley. The penalty in both cases is forfeiture of goods; which, however, is pardoned of course.

Felonious homicide is the killing of a human creature without justification or excuse. This is, 1. Killing one's self; 2. Killing another.

Killing one's self, or self murder, is where one deliberately, or by any unlawful malicious act, puts an end to his own life. This is felony; punished by forfeiture of goods and chattels.

Killing another is, 1. Manslaughter; 2. Murder.

Manslaughter is the unlawfully killing of another without malice, express or implied. This is either, 1. Voluntary, upon a sudden heat; 2. Involuntary, in the commission of some unlawful act. Both are felony, but within clergy, except in the case of stabbing.

Murder is when a person, of sound memory and discretion, unlawfully killeth any reasonable creature in being, and under the king's peace; with malice aforethought, either express or implied. This is felony without clergy; punished with speedy death, and hanging in chains, or dissection.

Petit treason (being an aggravated degree of murder) is where the servant kills his master, the wife her husband, or the ecclesiastic his superior. The punishment for which is to be drawn and hanged.

2. *Of offences against the person.*—Crimes affecting the persons of individuals not amounting to homicide are, 1. Mayhem, and also shooting at another. The penalties for which are fine, imprisonment, judgment of felony, without benefit of clergy. According to a recent act of parliament, shooting, stabbing, or cutting, with intent to murder, rob, maim, or disfigure, is deemed felony, without benefit of clergy, if the crime would have been murder had death ensued. 2. Forceful abduction and marriage or defilement of an heiress, which is felony; also stealing and deflowering or marrying any woman child under the age of sixteen years; for which the penalty is imprisonment, fine, and temporary forfeiture of her lands. 3. Rape, and

also carnal knowledge of a woman child under the age of ten years. 4. Buggery with man or beast. Both these are felonies, without benefit of clergy. 5. Assault; 6. Battery, especially of clergymen; 7. Wounding. The penalties in all three are fine, imprisonment, and other corporal punishment. 8. False imprisonment; for which the penalties are fine, imprisonment, and (in some atrocious cases) the pains of *præmunire* and incapacity of office or pardon. 9. For kidnapping, or forcibly stealing away the king's subjects, the penalty is fine and imprisonment. 10. Administering medicine to procure abortion is in some cases a capital felony, in others punishable by imprisonment or transportation.

3. *Of offences against habitations.*—Crimes affecting the habitations of individuals are, 1. Arson; 2. Burglary.

Arson is the malicious and wilful burning of the house, or out-house, of another man. This is felony; in some cases within, in others without clergy.

Setting fire to a man's own house, out-house, &c., with intent to injure another, is now also made felony, without benefit of clergy.

Burglary is the breaking and entering by night into a mansion house, with intent to commit a felony. This is felony without clergy.

4. *Of offences against property.*—Crimes affecting the private property of individuals are, 1. Larceny; 2. Malicious mischief; 3. Forgery.

Larceny is, 1. Simple; 2. Mixed or compound. Simple larceny is the felonious taking, and carrying away, of the personal goods of another. And it formerly was, 1. Grand larceny, being above the value of 12*d*.; 2. Petit larceny, to the value of 12*d*. or under. This distinction is now abolished as to the value of the property, and the punishment for simple larceny is whipping, imprisonment, hard labor, or transportation.

Mixed or compound larceny is that wherein the taking is accompanied with the aggravation of being, 1. From the house; 2. From the person.

Larcinies from the house are punished with death for *breaking and entering* a dwelling house and stealing property to any value.

Or stealing in any value in any dwelling house, *my person therein being put in fear*.

Or stealing in any dwelling house to the value of 15 or more.

No building is deemed part of the dwelling house unless there be a communication *immediate* or by a *covered and enclosed* passage leading from the one to the other.

Stealing from a church or chapel is also a capital felony.

Robbery from buildings not within this description is punished with transportation or imprisonment. And so for robberies in shops and counting-houses.

Lodgers robbing a house or apartment are liable to transportation, imprisonment, or whipping.

Larceny from the *person* is, 1. By privately stealing from the person of another, above the value of 12*d*.; 2. By robbery, or the felonious and forcible taking from the person of another, in or near the highway, goods or money of any value by putting him in fear. These are both

felonies without clergy. An attempt to rob is also felony.

Malicious injury to property by destroying ships, machinery, and manufactures, fish-ponds, sea, river, and canal banks, bridges, churches, chapels, meeting-houses, houses, out-houses, trees, shrubs, corn, hay, straw, hop-binds, cattle, coal-mines (or engines thereunto belonging), flood-gates, fences for enclosures by act of parliament, walls, &c., are punished by forfeitures, imprisonment, hard labor, and in some cases by transportation.

Forgery is the fraudulent making or alteration of a writing in prejudice of another's right: the penalties for which are fine, imprisonment, pillory, forfeiture, judgment of felony without clergy.

CHAP. III.—OF THE PREVENTION OF CRIMES.

It is an honor, and almost a singular one, to our English laws, that they furnish a title of this sort; since *preventive* justice is upon every principle of reason, of humanity, and of sound policy, preferable in all respects to *punishing* justice; the execution of which, though necessary, and its consequence a species of mercy to the commonwealth, is always attended with many harsh and disagreeable circumstances.

This preventive justice consists in obliging those persons, whom there is a probable ground to suspect of future misbehaviour, to stipulate with, and to give full assurance to the public, that such offence as is apprehended shall not happen; by finding pledges or securities for keeping the peace, or for their good behaviour. This requisition of sureties forms part of the penalty inflicted upon such as have been guilty of certain gross misdemeanors: but there it must be understood rather as a caution against the repetition of the offence, than any immediate pain or punishment. And, indeed, if we consider all human punishments in a large and extended view, we shall find them all rather calculated to prevent future crimes, than to expiate the past: since all punishments inflicted by temporal laws may be classed under three heads; such as tend to the amendment of the offender himself, or to deprive him of any power to do future mischief, or to deter others by his example: all of which conduce to one and the same end, of preventing future crimes, whether that be effected by amendment, disability, or example. But the caution of which we speak at present is such as is intended merely for prevention, without any crime actually committed by the party, but arising only from a probable suspicion that some crime is intended, or likely to happen; and consequently it is not meant in any degree of punishment, unless perhaps for a man's imprudence in giving just ground of apprehension.

By the Saxon constitution these sureties were always at hand, by means of king Alfred's wise constitution of decenaries or frankpledges; where in the whole neighbourhood or tithing of freemen were mutually pledges for each other's good behaviour. But, this great and general security being now fallen into disuse and neglected, there has succeeded to it the method of making

suspected persons find particular and special securities for their future conduct: of which we find mention in the laws of king Edward the Confessor; 'tradat fidejussores de pace et legalitate tuendâ.' Let us therefore consider, first, what this security is; next, who may take or demand it; and, lastly, how it may be discharged.

1. *Security to keep the peace and be of good behaviour.*—This security consists in being bound, with one or more sureties, in a recognizance or obligation to the king, entered on record, and taken in some court or by some judicial officer; whereby the parties acknowledge themselves to be indebted to the crown in the sum required (for instance £100), with condition to be void and of none effect, if the party shall appear in court on such a day, and in the mean time shall keep the peace; either generally, towards the king, and all his liege people; or particularly, also, with regard to the person who craves the security. Or, if it be for the good behaviour, then on condition that he shall demean and behave himself well, or be of good behaviour, either generally or specially, for the time therein limited, as for one or more years, or for life. This recognizance, if taken by a justice of the peace, must be certified to the next sessions, in pursuance of the statute 3 Hen. VII., c. 1; and if the condition of such recognizance be broken, by any breach of the peace in the one case, or any misbehaviour in the other, the recognizance becomes forfeited or absolute; and, being extracted or extracted (taken out from among the other records), and sent up to the exchequer, the party and his sureties, having now become the king's absolute debtors, are sued for the several sums in which they are respectively bound.

2. *By whom and how it may be obtained.*—Any justices of the peace, by virtue of their commission, or those who are ex officio conservators of the peace, may demand such security according to their own discretion; or it may be granted at the request of any subject, upon due cause shown, provided such demandant be under the king's protection; for which reason it has been formerly doubted whether Jews, Pagans, or persons convicted of a præmunire, were entitled thereto. Or, if the justice is averse to act, it may be granted by a mandatory writ, called a supplicavit, issuing out of the king's bench or chancery; which will compel the justice to act, as a ministerial and not as a judicial officer: and he must make a return to such writ, specifying his compliance, under his hand and seal. But this writ is seldom used; for, when application is made to the superior courts, they usually take the recognizances there, under the directions of the statute 21 Jac. I. c. 8. And indeed a peer or peeress cannot be bound over in any other place than the courts of king's bench or chancery: though a justice of the peace has a power to require sureties of any other person, being compos mentis, and under the degree of nobility, whether he be a fellow-justice or other magistrate, or whether he be merely a private man. Wives may demand it against their husbands; or husbands, if necessary, against their wives. But feme-coverts, and infants under age, ought to

find security by their friends only, and not to be bound themselves: for they are incapable of engaging themselves to answer any debt; which, as we observed, is the nature of these recognizances or acknowledgments.

3. *How the responsibility may be discharged.*—A recognizance may be discharged either by the demise of the king, to whom the recognizance is made; or by the death of the principal party bound thereby, if not before forfeited; or by order of the court to which such recognizance is certified by the justices (as the quarter sessions, assizes, or king's bench), if they see sufficient cause: or in case he at whose request it was granted, if granted upon a private account, will release it, or does not make his appearance to pray that it may be continued.

Thus far what has been said is applicable to both species of recognizances, for the peace, and for the good behaviour; de pace, et legalitate, tuendâ, as expressed in the laws of king Edward. But as these two species of securities are in some respects different, especially as to the cause of granting, or the means of forfeiting them, we shall now consider them separately: and, first, shall show for what cause such a recognizance, with sureties for the peace, is grantable; and, then, how it may be forfeited.

4. *For what causes the security is grantable.*—Any justice of the peace may, ex officio, bind all those to keep the peace who in his presence make any affray; or threaten to kill or beat another; or contend together with hot and angry words; or go about with unusual weapons or attendance, to the terror of the people; and all such as he knows to be common barrators; and such as are brought before him by the constable for a breach of the peace in his presence; and all such persons as, having been before bound to the peace, have broken it and forfeited their recognizances. Also, whenever any private man has just cause to fear that another will burn his house, or do him a corporal injury, by killing, imprisoning, or beating him; or that he will procure others so to do; he may demand surety for the peace against such person: and every justice of the peace is bound to grant it, if he who demands it will make oath that he is actually under fear of death or bodily harm, and will show that he has just cause to be so, by reason of the other's menaces, attempts, or having lain in wait for him; and will also farther swear, that he does not require such surety out of malice or for mere vexation. This is called swearing the peace against another: and, if the party does not find such sureties as the justice in his discretion shall require, he may be immediately committed till he does.

5. *Of the forfeiture of recognizances for keeping the peace.*—Such recognizances for keeping the peace, when given, may be forfeited by any actual violence, or even an assault, or menace, to the person of him who demanded it, if it be a special recognizance: or, if the recognizance be general, by any unlawful action whatsoever, that either is or tends to a breach of the peace; or, more particularly, by any one of the many species of offences which are mentioned as crimes in the two preceding chapters; or by any private

violence committed against any of his majesty's subjects. But a bare trespass upon the lands or goods of another, which is a ground for a civil action, unless accompanied with a wilful breach of the peace, is no forfeiture of the recognizance. Neither are mere reproachful words, as calling a man knave or liar, any breach of the peace so as to forfeit one's recognizance (being looked upon to be merely the effect of unmeaning heat and passion), unless they amount to a challenge to fight.

The other species of recognizance, with sureties, is for the good abearance or good behaviour. This includes security for the peace, and somewhat more: we will therefore examine it in the same manner as the other.

6. *Of compelling security for good behaviour.*—First, then, the justices are empowered, by the statute 34 Edw. III. c. 1, to bind over to the good behaviour towards the king and his people, all them that be not of good fame, wherever they be found; to the intent that the people be not troubled nor endangered, nor the peace diminished, nor merchants and others, passing by the highways of the realm, be disturbed nor put in the peril which may happen by such offenders. Under the general words of this expression, 'that be not of good fame,' it is holden that a man may be bound to his good behaviour for causes of scandal, contra bonos mores, as well as contra pacem; as, for haunting bawdy-houses with women of bad fame, or for keeping such women in his own house, or for words tending to scandalise the government, or in abuse of the officers of justice, especially in the execution of their office. Thus also a justice may bind over all night-walkers; eaves-droppers; such as keep suspicious company, or are reported to be pilferers or robbers; such as sleep in the day and wake in the night; common drunkards; whoremasters; the putative fathers of bastards; cheats, idle vagabonds, and other persons, whose misbehaviour may reasonably bring them within the general words of the statute, as persons not of good fame: an expression, it must be owned of so great a latitude as leaves much to be determined by the discretion of the magistrate himself. But, if he commit a man for want of sureties, he must express the cause thereof with convenient certainty: and take care that such cause be a good one.

7. *Forfeiture of recognizances for good behaviour.*—A recognizance for the good behaviour may be forfeited by all the same means as one for the security of the peace may be: and also by some others. As, by going armed with unusual attendance, to the terror of the people; by speaking words tending to sedition; or by committing any of those acts of misbehaviour which the recognizance was intended to prevent. But not by giving barely fresh cause of suspicion of that which perhaps may never actually happen; for though it is just to compel suspected persons to give security to the public against misbehaviour that is apprehended, yet it would be hard, upon such suspicion, without the proof of any actual crime, to punish them by a forfeiture of their recognizance.

CHAP. IV.—OF THE PUNISHMENT OF CRIMES, AND THE MODE OF PROCEDURE.

1. *Of the nature and object of punishment.*—Punishments may be considered with regard to 1. The power; 2. The end; 3. The measure of their infliction.

The power, or right, of inflicting human punishments for natural crimes, or such as are mala in se, was by the law of nature vested in every individual; but, by the fundamental contract of society, is now transferred to the sovereign power; in which also is vested, by the same contract, the right of punishing positive offences, or such as are mala prohibita.

The end of human punishments is to prevent future offences; 1. By amending the offender himself; 2. By deterring others through his example; 3. By depriving him of the power to do future mischief.

The measure of human punishments must be determined by the wisdom of the sovereign power, and not by any uniform universal rule: though that wisdom may be regulated, and assisted, by certain general, equitable, principles.

2. *Of courts of criminal jurisdiction.*—In the method of punishment may be considered, 1. The several courts of criminal jurisdiction; 2. The several proceedings therein.

The criminal courts are, 1. Those of a public and general jurisdiction throughout the realm; 2. Those of a private and special jurisdiction.

Public criminal courts are, 1. The high court of parliament; which proceeds by impeachment; 2. The court of the lord high steward; and the court of the king in full parliament for the trial of capitally indicted peers; 3. The court of king's bench; 4. The court of chivalry, now disused; 5. The court of admiralty under the king's commission; 6. The courts of oyer and terminer, and general gaol delivery; 7. The court of quarter-sessions of the peace; 8. The sheriff's tourn; 9. The court-leet; 10. The court of the coroner; 11. The court of the clerk of the market.

Private criminal courts are, 1. The court of the lord steward, &c., by statute of Henry VII.; 2. The court of the lord steward, &c., by statute of Henry VIII.; 3. The university courts.

3. *Of summary convictions.*—Proceedings in criminal courts are, 1. Summary. 2. Regular.

Summary proceedings are such whereby a man may be convicted of divers offences, without any formal process or jury, at the discretion of the judge, or judges, appointed by act of parliament or common law.

Such are, 1. The trials of offences and frauds against the laws of excise, and other branches of the king's revenue. 2. Convictions before justices of the peace upon a variety of minute offences, chiefly against the public police. 3. Attachments for contempts of superior courts of justice.

4. *Of proceedings before trial.*—Regular proceedings in the courts of common law, are, 1. Arrest. 2. Commitment and bail. 3. Prosecution. 4. Process. 5. Arraignment, and its incidents. 6. Plea and issue. 7. Trial and conviction. 8. Formerly benefit of clergy. 9. Judgment and its consequence. 10. Reversal of judgment. 11. Reprieve or pardon. 12. Execution.

(1.) *Arrest*.—An arrest is the apprehending or restraining of one's person; in order to be forthcoming to answer a crime whereof one is accused or suspected.

This may be done, 1. By warrant. 2. By an officer, without warrant. 3. By a private person, without warrant. 4. By hue and cry.

(2.) *Commitment and bail*.—Commitment is the confinement of one's person in prison for safe custody, by warrant from proper authority; unless in bailable offences he puts in a sufficient bail or security for his future appearance.

The magistrate is bound to take reasonable bail, if offered, unless the offender be not bailable.

Such are, 1. Persons accused of treason; or, 2. Of murder; or, 3. Of manslaughter, by indictment; or if the prisoner was clearly the slayer. 4. Prison-breakers, when committed for felony. 5. Outlaws. 6. Those who have abjured the realm. 7. Approvers and appellees. 8. Persons taken with the mainour. 9. Persons accused of arson. 10. Excommunicated persons.

The magistrate may, at his discretion, admit to bail or otherwise, persons not of good fame, charged with other felonies, whether as principals or as accessories. If they be of good fame, he is bound to admit them to bail. The court of king's bench, or its judges, in time of vacation, may bail in any case whatsoever.

(3.) *Prosecutions*.—Prosecution, or the manner of accusing offenders, is either by a previous finding of a grand jury; as, 1. By presentment. 2. By indictment: or without such findings. 3. By information. 4. By appeal.

A presentment is the notice taken by a grand jury of any offence, from their own knowledge or observation.

An indictment is a written accusation of one or more persons of a crime or misdemeanor, preferred to, and presented on oath by, a grand jury; expressing with sufficient certainty, the person, time, place, and offence.

An information is, 1. At the suit of the king and a subject, upon penal statutes. 2. At the suit of the king only. Either 1. Filed by the attorney general *ex officio*, for such misdemeanors as affect the king's person or government; or, 2. Filed by the master of the crown office, with leave of the court of king's bench, at the relation of some private subject, for other gross and notorious misdemeanors, all differing from indictments in this, that they are exhibited by the informer, or the king's officer, and not on the oath of a grand jury.

An appeal was an accusation or suit, brought by one private subject against another, for larceny, rape, mayhem, arson, or homicide; which the king could not discharge or pardon, but the party alone could release: but which proceeding is now abolished.

(4.) *Process on an indictment*.—Process to bring in an offender, when indicted in his absence, is, in misdemeanors, by *venire facias*, distress infinite, and *capias*; in capital crimes, by *capias* only; and in both, by *outlawry*.

During this stage of proceedings, the indictment may be removed into the court of king's bench from any inferior jurisdiction, by writ of

certiorari facias; and cognizance must be claimed in place of exclusive jurisdiction.

(5.) *Arraignment*.—Arraignment is the calling of the prisoner to the bar of the court, to answer the matter of the indictment.

Incident hereunto are, 1. The standing mute of the prisoner; for which, in petit treason, and felonies of death, he shall undergo the *peine forte et dure*. 2. His confession, which is either simple, or by way of approvement.

In treason, petit larceny, and misdemeanors, standing mute has always been holden as a confession, and equivalent to a conviction; and now the law extends it to felony and piracy.

(6.) *Plea and issue*.—The plea, or defence, alleged by the prisoner, may be, 1. A plea to the jurisdiction. 2. A demurrer in point of law. 3. A plea in abatement. 4. A special plea in bar; which is, 1st, *autrefois acquit*; 2dly, *autrefois convict*; 3dly, *autrefois attain*; 4thly, a pardon. 5. The general issue, not guilty.

Hereupon issue is joined by the clerk of the arraigns, on behalf of the king.

5. *Of the trial, conviction, and its consequences*.—(1.) *Trials* of offences, by the laws of England, were and are, 1. By ordeal, of either fire or water. 2. By the corsned. Both these have been long abolished. 3. By *battel*, in appeals and approvements, which are also now abolished. 4. By the peers of Great Britain. 5. By jury.

The method and process of trial by jury are, 1. The *impannelling* of the jury. 2. Challenges; 1st, for cause; 2dly, *peremptory*. 3. *Tales de circumstantibus*. 4. The oath of the jury. 5. The evidence. 6. The verdict, either general or special.

(2.) *Conviction* is when the prisoner pleads, or is found guilty; whereupon, in felonies, the prosecutor is entitled to, 1. His expenses. 2. Restitution of his goods.

(3.) *Benefit of clergy*.—Clergy, or the benefit thereof, was originally derived from the usurped jurisdiction, of the popish ecclesiastics; but was new-modelled by several statutes. It was an exemption of the clergy from any other secular punishment, for felony, than imprisonment for a year, at the court's discretion: and it was extended likewise, absolutely, to lay peers, for the first offence. All felonies were entitled to the benefit of clergy, except such as were ousted by particular statutes. Felons, on receiving the benefit of clergy, though they forfeited their goods to the crown, were discharged of all clergyable felonies before committed, and restored in all capacities and credits. But now every one guilty of felony, whether peer or commoner, clergy or layman, is alike amenable. The term benefit of clergy, however, still discriminates a certain class of offences, to which a specific punishment is attached.

(4.) *Judgment*.—Judgment, unless any matter be offered in arrest thereof, follows upon conviction; being the pronouncing of that punishment which is expressly ordained by law.

Attainder of a criminal is the immediate consequence, 1. Of having judgment of death pronounced upon him; 2. Of *outlawry* for a capital offence.

The consequences of attainder are, 1. Forfeiture to the king. 2. Corruption of blood.

Forfeiture to the king is, 1. Of real estates, upon attainder:—in high treason absolutely, till the death of the late pretender's sons; in felonies, for the king's year, day, and waste; in misprision of treason, assaults on a judge, or battery sitting the courts, during the life of the offender. 2. Of personal estates upon conviction; in all treason, misprision of treason, felony, excusable homicide, petty larceny, standing mute upon arraignment, the above named contempts of the king's courts, and flight.

Corruption of blood is an utter extinction of all inheritable quality therein: so that, after the king's forfeiture is first satisfied, the criminal's lands escheat to the lord of the fee; and he can never afterwards inherit, be inherited, or have any inheritance derived through him. But this corruption of blood is now limited to high treason, petit treason, and murder.

(5.) *Reversal of judgment.*—Judgments, and their consequences, may be avoided, 1. By falsifying, or reversing, the attainder. 2. By reprieve, or pardon.

Attainders may be falsified, or reversed, 1. Without a writ of error; for matters de hors the record. 2. By writ of error; for mistakes in the judgment, or record. 3. By act of parliament; for favor.

When an outlawry is reversed, the party is restored to the same plight as if he appeared upon the *capias*. When a judgment, on conviction, is reversed, the party stands as if never accused.

(6.) *Reprieve and pardon.*—A reprieve is a temporary suspension of the judgment, 1. *Ex arbitrio judicis*. 2. *Ex necessitate legis*; for pregnancy, insanity, or the trial of identity of person, which must always be tried instanter.

A pardon is a permanent avoider of the judgment by the king's majesty, in offences against his crown and dignity; drawn in due form of law, allowed in open court, and thereby making the offender a new man.

The king cannot pardon, 1. Imprisonment of the subject beyond the seas. 2. Offences prosecuted by appeal. 3. Common nuisances. 4. Of offences against popular or penal statutes, after information brought by a subject. Nor is his pardon pleadable to an impeachment by the commons in parliament.

(7.) *Execution.*—Execution is the completion of human punishment, and must be strictly performed in the manner which the law directs.

The warrant for execution is sometimes under the hand and seal of the judge; sometimes by writ from the king; sometimes by rule of court; but commonly by the judge's signing the calendar of prisoners, with their separate judgments in the margin.

PART III.

OF THE LAWS OF SCOTLAND.

INTRODUCTION.

The municipal law of Scotland, as of most other countries, consists partly of statutable or written law, which has the express authority of the legislative power; partly of customary or

unwritten law, which derives force from presumed or tacit consent.

Under the statutable or written law are comprehended, 1. Acts of parliament; not only those which were made down to the union with England, but such of the British statutes enacted since the union as concern this part of the United Kingdom.

A collection of law books under the title of *Regiam Majestatem* was published by Sir John Skene, at the commencement of the sixteenth century. It consists of the *Regiam Majestatem*, now generally deemed to be a mere transcript from a work of Glanville, an English lawyer, called *Regiam Potestatem*, interlarded with a few of the laws and particular customs of this country, the borough laws, the laws of R. Malcolm, &c.

The written law of Scotland also comprehends the acts of sederunt, which are ordinances for regulating the forms of proceeding before the court of session. The Roman law continues to have great authority in all cases where it is not derogated from by any statute or custom.

Unwritten or customary law, is that which, without being expressly enacted by statute, derives its force from the tacit consent of king and people: custom, as it is equally founded in the will of the lawgiver with written law, has therefore the same effects: hence, as one statute may be explained or repealed by another, so a statute may be explained by the uniform practice of the community, and even go into disuse by a posterior contrary custom.

A uniform train of the judgments or decisions of the court of session is commonly considered as part of the customary law.

The Scottish acts of parliament were proclaimed in all the different shires, boroughs, and baron-courts. But after statutes came to be printed that custom was gradually neglected; and at last the publication of laws at the market cross of Edinburgh was declared sufficient; and they became obligatory forty days thereafter. British statutes are deemed sufficiently notified without formal promulgation; though, for the information of the lieges in general, copies of every public statute are now forwarded to each district of every county throughout the kingdom at the public expense. After a law is published, no pretence of ignorance can exouse the breach of it.

By the rules of interpreting statute law received in Scotland, an argument may be used from the title to the act itself; a rubro ad nigrum; or at least where the rubric has been either originally framed, or afterwards adopted, by the legislature.

By the rules for the interpretation of laws in Scotland being, in general, nearly the same with those observed for the interpretation and construction of the statute laws in England, it is unnecessary to repeat them here.

The objects of the laws of Scotland, according to Mr. Erskine in his *Institute*, are persons, things, and actions.

CHAP. I.—OF PERSONS IN THEIR PUBLIC RELATION.

1. *Of the authority of courts in general.*—Jurisdiction is a power conferred upon a judge

or magistrate, to take cognizance of, and decide causes according to law, and to carry his sentences into execution. The district, within which a judge has the right of jurisdiction, is called his territory: and every act of jurisdiction exercised by a judge without his territory is null.

Jurisdiction is either supreme, inferior, or mixed. That jurisdiction is supreme from which there lies no appeal to a higher court. Inferior courts are those whose sentences are subject to the review of the supreme courts, and whose jurisdiction is confined to a particular territory. Mixed jurisdiction participates of the nature both of the supreme and inferior.

Jurisdiction is either civil or criminal. By the first, questions of private right are decided; by the second, crimes are punished.

Jurisdiction is either privative or cumulative. Private jurisdiction is that which belongs only to one court, to the exclusion of all others. Cumulative, otherwise called concurrent, is that which may be exercised by any one or two or more courts in the same cause.

Jurisdiction is either proper or delegated. Proper jurisdiction is that which belongs to a judge or magistrate himself, in virtue of his office. Delegated is that which is communicated by the judge to another, called a deputy or substitute.

Civil jurisdiction is founded, 1. *Ratione domicilii*, if the defender has his domicile within the judge's territory.

A domicile is the dwelling place where a person lives with an intention to remain; and custom has fixed it as a rule, that residence for forty days founds jurisdiction. If one has no fixed dwelling-place, e. g. a soldier, or a travelling merchant, a personal citation against him within the territory is sufficient to found the judge's jurisdiction over him, even in civil questions. As the defender is not obliged to appear before a court to which he is not subject, the pursuer must follow the defender's domicile.

It is founded, 2. *Ratione rei sitæ*, if the subject in question be within the territory. If that subject be immovable, the judge, whose jurisdiction is founded in this way, is the sole judge competent, excluding the judge of the domicile.

Where one who has not his domicile within the territory is to be sued before an inferior court, *ratione rei sitæ*, the court of session must be applied to, whose jurisdiction is universal, and, who, of course, grants letters of supplement to cite the defender to appear before the inferior judge. Where the party to be sued resides in another kingdom, and has an estate in this, the court of session is the only proper court, as the commune forum to all persons residing abroad; and the defender, if his estate be heritable, is considered as lawfully summoned to the court by a citation at the market-cross of Edinburgh, and pier and shore of Leith: but where a stranger, not a native of Scotland, has only a moveable estate in this kingdom, he is deemed to be so little subject to the jurisdiction of its courts, that action cannot be brought against him till his effects be first attached by an arrestment *jurisdictionis fundandæ causâ*.

A judge may in special causes arrest or secure the persons of such as have neither domicile nor estate within his territory, even for civil debts. Thus, on the border between Scotland and England, warrants are granted of course by the judge ordinary of either side, against those who have their domicile upon the opposite side; and security is also required where natives are suspected of withdrawing.

A judge may be declined, i. e. his jurisdiction disowned judicially, 1. *Ratione causæ*, from his incompetency to the special cause brought before him. 2. *Ratione suspecti judicis*; where either the judge himself, or his near kinsman, has an interest in the suit. No judge can vote in the cause of his father, brother, or son, either by consanguinity or affinity; nor in the cause of his uncle or nephew by consanguinity. 3. *Ratione privilegii*; where the party is by privilege exempted from their jurisdiction.

Prorogated jurisdiction, *jurisdictio in consentiente*, is that which is, by the consent of parties, conferred upon a judge, who without such consent would be incompetent.

A party who has either properly declined the jurisdiction of the judge before whom he had been cited, or who thinks himself aggrieved by any proceedings in the cause, may before decree apply to the court of session to issue letters of advocacy for calling the action from before the inferior court to themselves.

2. *Of the supreme judges and courts.*—The British house of peers is the court of last resort, to which appeals lie from all the supreme courts of Scotland; but that court has no original jurisdiction in civil matters, in which they judge only upon appeal.

A court was erected in 1425, consisting of certain persons to be named by the king, out of the three estates of parliament, which was vested with the jurisdiction formerly lodged in the council, and obtained the name of the session, because it was ordained to hold annually a certain number of sessions at the places to be especially appointed by the king.

The judges who were vested with a universal civil jurisdiction, consisted originally of seven churchmen, seven laymen, and a president, who was required to be a prelate; but spiritual judges were in 1584 partly, and in 1640 totally, prohibited. At the commencement of the winter session, 1808, the fifteen ordinary judges were separated into two divisions, the one consisting of eight, and the other of seven members. Each division possesses the same powers, and carries on actions under the same forms, as the whole did formerly, with some improvements, by which the business of the nation is greatly facilitated.

The appellation of the *college of justices* is not confined to the judges who are distinguished by the name of senators; but comprehends advocates, clerks of session, writers to the signet, and others.

Though the jurisdiction of the session is properly limited to civil causes, the judges have always sustained themselves as competent to the crime of falsehood. Where the falsehood deserves death or demerement, they, after finding the crime proved, remit the criminal to the court

of justiciary. Special statute has given to the court of session jurisdiction in contraventions of law burrows, deforcements, and breach of arrestment; and they have been in use to judge in battery pendente lite, and in usury. In certain civil causes, the jurisdiction of the session is exclusive of all inferior jurisdictions, as in declarations of property, and other competitions of heritable rights, provings of the tenor, cessiones bonorum, restitution of minors, reductions of decrees or of writings, sales of the estates of minors or bankrupts, &c.: in a second class of causes, their jurisdiction can be exercised only in the way of review, after the cause is brought from the inferior court; as in maritime and consistorial causes, which must be pursued in the first instance before the admiral or commissary; and in actions below £25 sterling, which must be commenced before the judge ordinary. The session may proceed as a court of equity by the rules of conscience, in abating the rigor of law, and giving aid in proper cases to such as in a court of law can have no remedy.

In 1672 five lords of session were added as commissioners of justiciary, to the justice general and justice-clerk. The justice general, if present, is constant president of the court, and in his absence the justice-clerk. The kingdom is divided into three districts, and two of the judges are appointed to hold circuits in certain boroughs of each district twice in the year; one judge may proceed to the business in the absence of his colleague. In trials before this court the evidence was always taken down in writing till the act 23 Geo. III. was passed, by which the judges may try and determine all causes by the verdict of an assise, upon examining the witnesses *vivâ voce*, without reducing the testimony into writing, unless it shall appear more expedient to proceed in the former way, which they have it in their power to do. This act was at first temporary, but is now made perpetual by 27, Geo. III. c. 18.

By an old statute, the crimes of robbery, rape, murder, and wilful fire-raising (the four pleas of the crown), are said to be reserved to the king's court of justiciary; but the only crime in which, in practice, the jurisdiction of justiciary became at last exclusive of all inferior criminal jurisdiction, was that of high treason. The court of justiciary, when sitting at Edinburgh, has a power of advocating causes from all inferior criminal judges, and of suspending their sentences.

The *circuit court* can also judge in all criminal cases which do not infer death or demembration, upon appeal from any inferior court within their district; and has a supreme civil jurisdiction, by way of appeal, in all causes not exceeding £12 sterling, in which their decrees are subject to review; but no appeal is to lie to the circuit, till the cause be finally determined in the inferior court.

The court of *exchequer* consists of the lord treasurer of Great Britain, and a chief baron, with four other barons of exchequer; which barons are to be made of sergeants at law, English barristers, or Scottish advocates of five years standing. This court has a private jurisdiction conferred upon it, as to the duties of cus-

oms, excise, or other revenues appertaining to the king or prince of Scotland, and as to all honors and estates that may accrue to the crown; in which matters they are to judge by the forms of proceeding used in the English court of exchequer, under the following limitations: that no debt due to the crown shall affect the debtor's real estate in any other manner than such estate may be affected by the laws of Scotland, and that the validity of the crown's title to any honors or lands shall continue to be tried by the court of session. The barons have the powers of the Scots court transferred to them, of passing the accounts of sheriffs or other officers who have the execution of writs issuing from, or returnable to, the court of exchequer, and of receiving resignations, and passing signatures of charters, gifts of casualties, &c. But, though all these must pass in exchequer, it is the court of session only that can judge of their preference after they are completed.

The *high admiral* is declared the king's justice-general upon the seas, on fresh water within flood mark, and below the first bridge, and in all harbours and creeks. His civil jurisdiction extends to all maritime causes, and so comprehends questions of charter-parties, freights, salvages, bottomries, &c. He exercises this supreme jurisdiction by a delegate, the judge of the high court of admiralty; and he may also name inferior deputies, whose jurisdiction is limited to particular districts, and whose sentences are subject to the review of the high court. In causes which are declared to fall under the admiral's cognizance his jurisdiction is sole; insomuch that the session itself, though it may review his decrees by suspension or reduction, cannot carry a maritime question from him by advocacy. The admiral has acquired, by usage, a jurisdiction in mercantile causes, even where they are not strictly maritime, cumulative with the judge of the ordinary. All our supreme courts have seals or signets proper to their several jurisdictions.

3. *Of the inferior judges and courts.*—*Sheriff* is the judge ordinary constituted by the crown over a particular division or county. His civil jurisdiction extends to all actions upon contracts, or other personal obligations, forthcomings, poundings of the ground, mails, and duties; and to all possessory actions, as removings, ejections, spuilzies, &c.; to all brieves issuing from the chancery, as of inquest, terce, division, tutory, &c.; and even to adjudications of land estates, when proceeding on the renunciation of the apparent heir. His present criminal jurisdiction extends to certain capital crimes, as theft, and even murder, though it be one of the pleas of the crown, and he is competent to most questions of public police, and has a cumulative jurisdiction with justices of the peace in all riots and breaches of the peace. Sheriffs have a ministerial power, in virtue of which they return juries for trial of causes that require them. The writs for electing members of parliament have been, since the union, directed to the sheriffs, who, after they are executed, return them to the crown office whence they issued. They also execute writs issuing from the court of exchequer; and, in

general, take care of all estates, duties, or casualties, that fall to the crown within their territory, for which they must account to the exchequer. No high sheriff or steward can judge personally in any cause. One sheriff or steward-depute is to be appointed by the king in every shire, who must be an advocate of three years standing; and whose office as sheriff or steward-depute is now, by 28 Geo. III., held ad vitam aut culpam.

The appanage or patrimony of the *prince of Scotland*, has been long erected into a regality jurisdiction called the principality. It is personal to the king's eldest son, upon whose death or succession it returns to the crown. The prince has, or may have, his own chancery, from which his writs issue, and may name his own chamberlain and other officers, for receiving and managing his revenue. The vassals of the prince are entitled to elect, or to be elected, members of parliament for counties, equally with those who hold of the crown.

Justices of the peace are magistrates named by the sovereign over the several counties of the kingdom, for the special purpose of preserving the public peace. They may compel workmen or laborers to serve for a reasonable fee, and they can condemn masters in the wages due to their servants. They have power to judge in questions of highways, and to call out the tenants with their cottars (cottagers) and servants to perform six days' work yearly for upholding them; but have no jurisdiction in common actions for debts, except where they are declared competent by special statute.

Since the union, over and above the powers committed to them by the laws of Scotland, they are authorised to exercise whatever belonged to the office of an English justice in relation to the public peace. Two justices can constitute a court. Special statute has given the cognizance of several matters of excise to the justices in which their sentences are final.

A *borough* is a body corporate, made up of the inhabitants of a certain tract of ground erected by the sovereign with jurisdiction annexed to it. Boroughs are erected either to be holden of the sovereign himself, which is the case of royal boroughs; or of the superior of the lands erected, as boroughs of regality and barony. Boroughs royal have power, by their charters, to choose annually certain office-bearers or magistrates, and, in boroughs of regality and barony, the nomination of magistrates is, by their charter, lodged sometimes in the inhabitants, sometimes in the superior. Bailies of boroughs have jurisdiction in matters of debt, services, and questions of possession betwixt the inhabitants. Their criminal jurisdiction extends to petty riots, and reckless fire-raising. The dean of guild is that magistrate of a royal borough who is head of the Merchant Company. He has the cognizance of mercantile causes within the borough; and the inspection of buildings that they encroach neither on private property, nor on the public streets; and he may direct insufficient houses to be pulled down. His jurisdiction has no dependence on the court of the borough, or baillie-court.

A *baron*, in the extensive sense of that word,

is one who holds his lands immediately of the crown.

By the jurisdiction act, the civil jurisdiction of a baron is reduced to the power of recovering from his vassals and tenants the rents of lands, and of assessing them in mill-services; and of judging in causes where the debt and damages do not exceed 40s. sterling. His criminal jurisdiction is, by the same statute, limited to assaults, batteries, and other similar offences, which may be punished by a fine not exceeding 20s. sterling, or by setting the offender in the stocks in the day time not above three hours; the fine to be levied by pointing, or one month's imprisonment.

The *high constable* of Scotland had no fixed territorial jurisdiction, but followed the court; and had, jointly with the marischal the cognizance of all crimes committed within two leagues of it. By the jurisdiction act, all jurisdictions constabulary are dissolved, except that of high constable.

The office of the *Lyon king of arms* was chiefly ministerial, to denounce war, proclaim peace, carry public messages, &c. But he has also a right of jurisdiction whereby he can punish all who usurp arms contrary to the law of arms, and deprive or suspend messengers, heralds, or pursuivants (who are officers named by himself); but he has no cognizance of the damage arising to the private party through the messenger's fault.

4. *Of ecclesiastical persons.*—Upon abolishing the pope's authority, the regular clergy were totally suppressed; and in place of all the different degrees which distinguished the secular clergy, we had at first only parochial presbyters or ministers, and superintendants, who had the oversight of the church within a certain district: soon afterwards the church government became episcopal, by archbishops, bishops, &c.; and after some intermediate turns, is now presbyterian, by kirk-sessions, presbyteries, synods, and general assemblies.

The term *prelate*, in the statutes, signifies a bishop, abbot, or other dignified clergyman. Since the reformation, the crown, as coming in place of the pope, is considered as universal patron, where no right of patronage appears in a subject. Where two churches are united, which had different patrons, each patron presents by turns. Where a fund is gifted for the establishment of a second minister, in a parish where the cure is thought too heavy for one, the patronage of such benefice does not belong to the donor, but to him who was patron of the church, unless either where the donor has reserved to himself the right of patronage in the donation, or where he and his successors have been in the constant use of presenting the second minister, without challenge from the patron.

The right of presenting incumbents was, by act 1650, c. 23, taken from patrons, and vested in the heritors and elders of the parish, upon payment to be made by the heritors to the patron of 600 merks; but it was again restored to patrons, 10 Ann. c. 12, with the exception of the presentations sold in pursuance of the former act. Patrons were not simply administrators of the church; for they held the fruits of the vacant benefice as their own, for some time after the re-

formation. But that right is now no more than a trust in the patron who must apply them to pious uses within the parish, at the sight of the heritors, yearly as they fall due. If he fail, he loses his right of administering the vacant stipend for that and the next vacancy. The king, who is exempted from this rule, may apply the vacant stipend of his churches to any pious use, though not within the parish. If one should be ordained to a church, in opposition to the presentee, the patron, whose civil right cannot be affected by any sentence of a church court, may retain the stipend as vacant. Patrons are to this day entitled to a seat and burial place in the churches of which they are patrons, and to the right of all the teinds (i. e. tithes) of the parish not heritably disposed.

That kirks may not continue too long vacant, the patrons must present to the presbytery a fit person for supplying the cure, within six months from his knowledge of the vacancy, otherwise the right of presentation accrues to the presbytery *jure devoluto*. Since the revolution a judicial act of admission by the presbytery, proceeding either upon a presentation, or upon a call from the heritors and elders, or upon their own *jus devolutum*, completes the minister's right to the benefice.

The expedients for the maintenance of the clergy having proved ineffectual, a commission of parliament was appointed, in the reign of James VI., for planting kirks and modifying stipends to ministers out of the teinds; and afterwards several other commissions were appointed with the more ample powers of dividing large parishes, erecting new ones, &c., all of which were, in 1707, transferred to the court of session, with this limitation, that no parish should be disjoined, nor new church erected, nor old one removed to a new place, without the consent of three-fourths of the heritors, computing the votes, not by their own numbers, but by the valuation of their rents within the parish. The judges of session, when sitting in that court, are considered as a commission of parliament, and have their proper clerks, macers, and other officers of court, as such.

By a subsequent law, a fund has been set apart for raising all the stipends in Scotland below £150 to at least that sum.

Where a certain quantity of stipend is modified to a minister out of the teinds of a parish, without proportioning that stipend among the several heritors, the decree is called a decree of modification; but where the commissioners also fix the particular proportions payable by each heritor it is a decree of modification and locality. Where a stipend is only modified it is secured on the whole teinds of the parish, so that the minister can insist against any one heritor to the full extent of his teinds; such heritor being always entitled to relief against the rest for what he shall have paid above his just share; but, where the stipend is also localised, each inheritor is liable in no more than his own proportion.

Few of the reformed ministers were, at first, provided with dwelling-houses; most of the popish clergy having, upon the first appearance of the reformation, let their manses in feu, or in

long tacks. Ministers therefore got a right, in 1563, to as much of these manses as would serve them, notwithstanding such feus or tacks. Where there was no parson's nor vicar's manse, one was to be built by the heritors, at the sight of the bishop (now the presbytery); the charges not exceeding £1000 Scots, nor below 500 merks. Under a manse are comprehended stable, barn, and byre (cow-house), with a garden: for all which it is usual to allow half an acre of ground.

Every incumbent is entitled at his entry to have his manse put in good condition; for which purpose the presbytery may appoint a visitation by tradesmen, and order estimates to be laid before them of the sums necessary for the repairing, which they may proportion among the heritors according to their valuations. The presbytery, after the manse is made sufficient, ought, upon application of the heritors, to declare it a free manse; which lays the incumbent under an obligation to uphold it in good condition during his incumbency, otherwise he or his executors shall be liable in damages; but they are not bound to make up the loss arising from the necessary decay of the building by the waste of time.

All ministers, where there is any landward or country parish, are, over and above their stipend, entitled to a glebe, which comprehends four acres of arable land, or sixteen sowms of pasture ground, where there is no arable land (a sowm is what will graze ten sheep, or one cow); and it is to be designed or marked by the bishop or presbytery out of such kirk lands within the parish as lie nearest to the kirk, and in default of kirk lands, out of temporal lands.

A right of relief is competent to the heritors, whose lands are set off for the manse or glebe, against the other heritors of the parish. Manses and glebes, being once regularly designed, cannot be feued or sold by the incumbent in prejudice of his successors, which is in practice extended even to the case where such alienation evidently appears profitable to the benefice.

Ministers, besides their glebe, are entitled to grass for a horse and two cows. And if the lands, out of which the grass may be designed, either lie at a distance, or are not fit for pasture, the heritors are to pay to the minister £20 Scots yearly an equivalent. Ministers have also freedom of foggage, pasturage, fuel, feal, divot, loaning, and free fish and entry, according to use and wont; but what these privileges are, must be determined by the local customs of the several parishes.

The legal terms at which stipends become due to ministers are Whitsunday, and Michaelmas. If the incumbent be admitted to his church before Whitsunday (till which term the corns are not presumed to be fully sown), he has right to that whole year's stipend; and if he is received after Whitsunday, and before Michaelmas, he is entitled to the half of that year; because, though the corns were sown before his entry, he was admitted before the terms at which they are presumed to be reaped. If he dies, or is translated to another benefice before Whitsunday, he has right to no part of that year; if before Michaelmas, to the half; and, if not till after Michaelmas, to the whole.

After the minister's death, his executors have right to the annat; which, in the sense of the canon law, was the right reserved to the pope of the first year's fruits of every benefice. Upon a threatened invasion from England, 1547, the annat was given, by our parliament, to the executors of such churchmen as should fall in battle in defence of their country; but the word annat or ann, as it is now understood, is the right which law gives to the executors of ministers, of half a year's benefice over and above what was due to the minister himself for his incumbency.

The executors of a minister need make up no title to the ann by confirmation: neither is the right assignable by the minister, or affectable with his debts; for it never belonged to him, but is a mere gratuity given by law to those for whom it is presumed the deceased could not sufficiently provide; and law has given it expressly to executors; and, if it were to be governed by the rules of succession in executory, the widow, in case of no children, would get one-half, the other would go to the next of kin; and, where there are children, she would be entitled to a third, and the other two-thirds would fall equally among the children. But the court of session have in this last case divided the ann into two equal parts, of which one goes to the widow, and the other among the children in capita.

At the Reformation all episcopal jurisdiction, exercised under the authority of the pope, was abolished. As the course of justice in consistorial causes was thereby stopped, queen Mary, besides naming a commissary for every diocese, did, by a special grant, establish a new commissary court at Edinburgh, consisting of four judges or commissaries. This court is vested with a double jurisdiction; one diocesan, which is exercised in the special territory, contained in the grant, viz. the counties of Edinburgh, Haddington, Linlithgow, Peebles, and a great part of Stirlingshire; and another universal, by which the judges confirm the testaments of all who die in foreign parts, and may reduce the decrees of all inferior commissaries, provided the reduction be pursued within a year after the decree.

The commissaries retain to this day an exclusive power in judging of declarators of marriage, and of the nullity of marriage; in actions of divorce and of non-adherence; of adultery, bastardy, and confirmation of testaments; because all these matters are still considered to be properly consistorial. Inferior commissaries are not competent to questions of bastardy and adherence, when they have a connexion with the lawfulness of marriage, or with adultery.

Commissaries have now no power to pronounce decrees in absence for any sum above £40 Scots, except in causes properly consistorial; but they may authenticate tutorial and curatorial inventories, and all bonds, contracts, &c., which contain a clause for registration in the books of any judge competent; and protests on bills may be registered in their books.

CHAP. II.—OF PERSONS IN THEIR PRIVATE RELATION.

1. *Of Marriage.*—Marriage is a contract, and requires the consent of parties. Idiots

therefore, and furious persons, cannot marry. As no person is presumed capable of consent within the years of pupillarity, which, by our law, lasts till the age of fourteen years in males, and twelve in females, marriage cannot be contracted by pupils; but, if the marriage pair shall cohabit after puberty, such acquiescence gives force to the marriage. Marriage is fully perfected by consent, which founds all the conjugal rights and duties. The consent requisite to marriage must be de presentia.

It is not necessary that marriage should be celebrated by a clergyman. The consent of parties may be declared before any magistrate, or simply before witnesses, which, if copula follows, constitutes a marriage; and, though no formal consent should appear, marriage is presumed from the cohabitation, or living together at bed and board, of a man and woman who are generally reputed husband and wife. A man's acknowledgment of his marriage to the midwife whom he called to his wife, and to the minister who baptized his child, was found sufficient presumptive evidence of marriage, without the aid either of cohabitation, or of habit and repute. Children may enter into marriage, not only without the knowledge, but even against the remonstrances, of a father.

Marriage is forbidden within certain degrees of blood. By the laws of Moses (Leviticus xviii.), which, by the act 1567, c. 15, has been adopted by us, cousins german, and all remoter degrees, may lawfully marry. Marriage, in the direct line, is forbidden in infinitum. Marriage also, where either of the parties is naturally unfit for generation, or stands already married to a third person, is ipso jure, null.

To prevent bigamy and incestuous marriages, the church has introduced proclamation of banns, that all persons who know any objection to the marriage may offer it. When the order of the church is observed, the marriage is called regular; when otherwise, clandestine. Marriage is valid when entered into in either of these ways; but, when clandestine, there are certain penalties imposed upon the parties, as well as on the celebrator and witnesses.

Rights by marriage.—It is only moveable subjects, or the fruits produced by heritable subjects during the marriage, that become common to man and wife. The husband, as the head of the wife, has the sole right of managing the goods in communion, which is called *jus mariti*. The husband can sell, or even gift, at his pleasure, the whole goods falling under communion; and his creditors may affect them for the payment of his proper debts. But a stranger may convey an estate to a wife, so as it shall not be subject to the husband's administration; or the husband himself may, in the marriage contract, renounce his *jus mariti* in all or any part of his wife's moveable estate.

From this right are excepted paraphernal goods, which, as the word is understood in our law, comprehends the wife's wearing apparel, and the ornaments to her proper person; as necklaces, ear-rings, breast or arm jewels, buckles, &c. These are neither alienable by the husband, nor affectable by his creditors.

The right of the husband to the wife's moveable estate is burdened with the moveable debts contracted by her before her marriage, though they should far exceed her moveable estate. The husband is only cited as administrator of the society goods. As soon therefore as the marriage is dissolved, and the society goods thereby suffer a division, the husband is no farther concerned in the share belonging to his deceased wife; and consequently is no longer liable to pay her debts, which must be recovered from her representatives, or her separate estate.

This obligation upon the husband is, however, perpetuated against him, 1. Where his proper estate, real or personal, has been affected, during the marriage, by complete legal diligence. 2. The husband continues liable, even after the wife's death, in so far as he is lucratus, or profited by her estate: still however the law does not consider a husband, who has got but a moderate tocher with the wife, as lucratus by the marriage.

Where the wife is debtor in that sort of debt which, if it had been due to her, would have excluded the *jus mariti*, e. g. in bonds bearing interest, which continue heritable as to the rights of husband and wife, the husband is liable only for the by-gone interests, and those that may grow upon the debt during the marriage.

The husband by marriage becomes the perpetual curator of the wife. From this right it arises, 1. That no suit can proceed against the wife till the husband be cited for his interest; 2. All deeds done by a wife without the husband's consent are null; neither can she sue in any action without the husband's concurrence. Yet where the husband refuses, or by reason of forfeiture cannot concur, &c., or where the action is to be brought against the husband himself, for not performing his part of the marriage articles, the judge will authorise her to sue in her own name.

If the husband should either withdraw from his wife, or turn her out of doors, or if, continuing in family with her, he should by severe treatment endanger her life, the commissaries will authorise a separation à mensâ et thoro, and give a separate alimony to the wife, suitable to her husband's estate, from the time of such separation until either a reconciliation or a sentence of divorce.

Certain obligations of the wife are valid, notwithstanding her being *sub curâ mariti*, e. g. obligations arising from deficit; for wives have no privilege to commit crimes. But, if the punishment resolves into pecuniary mulct, the execution of it must, from her incapacity to fulfil, be suspended till the dissolution of the marriage, unless the wife has a separate estate exempted from the *jus mariti*.

Obligations arising from contract affect either the person or the estate. The law has been so careful to protect wives, while *sub curâ mariti*, that all personal obligations granted by a wife, though with the husband's consent, as bonds, bills, &c., are null, with the following exceptions, 1. Where the wife gets a separate peculium, or stock; 2. A wife's personal obligation, granted in the form of a deed, *inter vivos*, is valid, if it is not to take

effect till her death; 3. Where the wife is by the husband, *præposita negotiis*, intrusted with the management of a particular branch of business or of his whole affairs.

A wife, while she remains in family with her husband, is considered as *præposita negotiis domesticis*; and, consequently, may provide things proper for the family, for the price whereof the husband is liable, though they should be misapplied, or though the husband should have given her money to provide them elsewhere. A husband may use the remedy of exhibition against her, by which all persons are interpellated from contracting with her, or giving her credit.

As to rights granted by the wife, affecting her estate, she has no moveable estate, except her paraphernalia, and these she may alienate with consent of the husband. She can, without the husband, bequeath by testament her share of the goods in communion. All donations, whether by the wife to the husband or by the husband to the wife, are recoverable by the donor; but if the donor dies without revocation the right becomes absolute.

When dissolved.—Marriage, by the law of Scotland, cannot be dissolved till death, except by divorce, proceeding either upon account of adultery or of wilful desertion.

Marriage is dissolved by death, either within year and day from its being contracted, or after year and day. If it is dissolved within year and day, all rights in consideration of the marriage, unless guarded against in the contract, become void, and things return to the same condition in which they stood before the marriage, with this restriction, that the husband is considered as a *bonâ fide* possessor, in relation to what he has consumed upon the faith of his right; but he is liable to repay the tocher without any deduction in consideration of his family expense during the marriage. If things cannot be restored on both sides, equity hinders the restoring of one party and not the other. Where a marriage had been dissolved within the year, without a living child, by the death of the husband the widow was entitled to be alimented out of an estate of which he died possessed.

Upon the dissolution of a marriage, after year and day, the surviving husband becomes the irrevocable proprietor to the tocher, and the wife, where she survives, is entitled to her jointure, or to her legal provisions. She has also right to mournings, suitable to the husband's quality, and to alimony from the day of his death till the term at which her life-rent provision, either legal or conventional, commences. If a living child be procreated of the marriage, the marriage has the same effect as if it subsisted beyond the year.

Divorce.—Divorce is such a separation of married persons, during their lives, as looses them from the nuptial tie, and leaves them at freedom to intermarry with others. But neither adultery nor wilful desertion are grounds which must necessarily dissolve marriage; they are only handles which the injured party may take hold of to be free. In the case of divorce upon adultery, marriage is, by a special statute (1600, c. 20), prohibited betwixt the two adulterers.

Where either party has deserted from the other for four years together, that other may sue for adherence. If this has no effect the church is to proceed, first by admonition, then by excommunication; all which previous steps are declared to be a sufficient ground for pursuing a divorce. In practice, however, the commissaries pronounce sentence in the adherence, after one year's desertion, but four years must intervene between the first desertion and the decree of divorce.

The legal effects of divorce on the head of desertion are, that the offending husband shall restore the tocher and forfeit to the wife all her provisions, legal and conventional; and, on the other hand, the offending wife shall forfeit to the husband her tocher and all the rights that would have belonged to her in the case of her survivance. This was also esteemed the rule in divorces upon adultery. But by a decision of the court of session in 1662, founded on a tract of ancient decisions recovered from the records, the offending husband was allowed to retain the tocher!

2. *Of minors and their tutors and curators.*—A child is under pupillarity from the birth to fourteen years of age if a male, and till twelve if a female. Minority begins where pupillarity ends, and continues till majority; which, by the law of Scotland, is the age of twenty-one years complete, both in males and females; but minority, in a large sense, includes all under age, whether pupils or puberes. Because pupils cannot in any degree act for themselves, and minors seldom with discretion: pupils are put by law under the power of tutors, and minors may put themselves under the direction of curators. Tutory is a power and faculty to govern the person, and administer the estate of a pupil. Tutors are either nominate, of law, or dative.

A tutor nominate is he who is named by a father, in his testament or other writing, to a lawful child.

If there be no nomination by the father, or if the tutors nominate do not accept, or if the nomination falls by death or otherwise, there is place for a tutor of law. This sort of tutory devolves upon the nearest related by the father, though females intervene.

Where there are two or more equally near to the pupil, he who is entitled to the pupil's legal succession is preferred to the others. But, as the law suspects that he may not be over careful to preserve a life estate which stands in the way of his own interest, this sort of tutor is excluded from the custody of the pupil's person, which is commonly committed to the mother, while a widow, until the pupil be seven years old; and in default of the mother, to the highest relation by the mother. The tutor of law must be at least twenty-five years of age. He is served or declared by a jury of sworn men, who are called upon a brief issuing from the chancery, which is directed to any judge having jurisdiction. He must give security before he enters upon the management.

If no tutor of law demands the office, any person, even a stranger, may apply for a tutory dative. If a pupil be without tutors of any kind, the court of session will, at the suit of any

kinsman, name a factor (steward) for the management of the pupil's estate.

After the years of pupillarity are over, the minor is considered as capable of acting by himself, if he has confidence enough of his own capacity and prudence. The only two cases in which curators are imposed upon minors are, 1. Where they are named by the father, in a state of health; 2. Where the father is himself alive. If the minor chooses to be under the direction of curators, he may fix on any he pleases.

These curators are styled *ad negotia*, to distinguish them from another sort, called curators *ad lites*, who are authorised by the judge to concur with a pupil or minor in actions of law, either where he is without tutors and curators, or where his tutors and curators are parties to the suit. Women are capable of being tutors and curators under certain restrictions.

In this, tutory differs from curatory, that, as pupils are incapable of consent, they have no person capable of acting; which defect the tutor supplies. Hence, the tutor subscribes alone all deeds of administration; but in curatory it is the minor who subscribes as the proper party; the curator does no more than consent. Hence, also, the persons of pupils are under the power either of their tutors, or of their nearest cognates; but the minor, after pupillarity, has the disposal of his own person and may reside where he pleases.

Both tutors and curators must, previous to their administration, make a judicial inventory, subscribed by them and the next of kin, before the minor's judge ordinary, of his whole estate personal and real.

Tutors and curators cannot grant leases of the minor's lands, to endure longer than their own office; nor under the former rental, without either a warrant from the court of session, or some apparent necessity.

They have power to sell the minor's moveables; but cannot sell their pupil's land estate, without the authority of a judge; yet this restraint reaches not to such alienations as the pupil could by law be compelled to grant.

Tutors and curators cannot, contrary to the nature of their trust, authorise the minor to do any deed for their own benefit; nor can they acquire any debt affecting the minor's estate. It seems, however, that such purchase would be considered as valid, provided it were *bonâ fide* acquired at a public sale.

Persons named to the offices of tutory or curatory, may either accept or decline; and where a father, in liege poustie (when in a state of health), names certain persons both as tutors and curators to his children, though they have acted as tutors, they may decline the office of curatory. Tutors and curators, having once accepted, are liable in diligence, that is, are accountable for the consequences of their neglect in any part of their duty from the time of their acceptance. They are accountable *singuli in solidum*, i. e. every one of them is answerable, not only for his own diligence, but for that of his co-tutors; and any one may be sued without citing the rest; but he who is condemned in the whole has action of relief against his co-tutors.

From this obligation to diligence are excepted, 1. Fathers or administrators in law, who, from the presumption that they act to the best of their power for their children, are liable only for actual intrusions. 2. Tutors and curators named by the father in consequence of the act 1696, with the special provisos, that they shall be liable barely for intrusions, not for omissions; and that each of them shall be liable only for himself, and not in solidum for the co-tutors; but this power of exemption from diligence is limited to the estate descending from the father himself. Tutors or curators are not entitled to any salary or allowance for pains, unless a salary has been expressly contained in the testator's nomination; for their office is presumed to be gratuitous.

Though no person is obliged to accept the office of tutor or curator, yet having once accepted he cannot throw it up, or renounce it, without sufficient cause; but if he should be guilty of misapplying the minor's money, or fail in any other part of his duty, he may be removed at the suit of the minor's next in kin, or by a co-tutor or co-curator. When the misconduct proceeds merely from indolence or inattention, the court, in place of removing the tutor, either join a curator with him, or, if he be a tutor nominate, they oblige him to give caution (surety) for his past and future management.

The offices of tutory and curatory expire also by the pupil's attaining the age of puberty, or the minor's attaining the age of twenty-one years complete; and by the death either of the minor, or of his tutor and curator. Curatory also expires by the marriage of a female minor, who becomes thereby under the coverture of her own husband.

Deeds either by pupils, or by minors having curators, without their consent, are null; but they oblige the grantors, in as far as relates to sums profitably applied to their use. A minor under curators can indeed make a testament by himself; but, whatever is executed in the form of a deed *inter vivos*, requires the curator's consent. Deeds by a minor, who has no curators, are as effectual as if he had curators and signed them with their consent; he may even alienate his heritage without the interposition of a judge.

Minors may be restored against all deeds granted in their minority that are hurtful to them.

A minor cannot be restored against his own delict or fraud, e. g. 1. If he should induce one to bargain with him by saying he was major. 2. If at any time after majority he has approved of the deed. 3. A minor who has taken himself to business, as a merchant, shopkeeper, &c., cannot be restored against any deed granted by him in the course of that business. 4. A minor cannot be restored in a question against a minor, unless some gross unfairness shall be qualified in the bargain.

Curators are given not only to minors, but in general to every one, who, either through defect of judgment, or unfitness of disposition, is incapable of rightly managing his own affairs. The way of appointing this sort of curators is by a jury summoned from the chancery.

Persons, let them be ever so profuse, or liable

to be imposed upon, if they have the exercise of reason, can effectually oblige themselves till they are fettered by law. This may be done by interdiction, which is a legal restraint laid upon such persons from signing any deed to their own prejudice, without the consent of their curators or interdictors. An interdiction, duly registered, has this effect, that all deeds done thereafter by the person interdicted, without the consent of his interdictors, affecting his heritable estate, are subject to reduction.

Registration in the general register secures all his lands from alienation, wherever they lie; but, where the interdiction is recorded in the register of a particular shire, it covers no lands except those situated in that shire.

3. *Of children.*—Children are either born in wedlock, or out of it. All children born in lawful marriage are presumed to be begotten by the person to whom the mother is married; and consequently to be lawful children. This presumption is so strongly founded, that it cannot be defeated but by direct evidence that the mother's husband could not be the father of the child. A father has the absolute right of disposing of his children's persons, of directing their education, and of moderate chastisement; and even after they become puberes he may compel them to live in family with him, and contribute their labor and industry, while they continue there, towards his service. A child who gets a separate stock from the father for carrying on any trade or employment, even though he should continue in his father's house, may be said to be emancipated or *foris-familiated*, in so far as concerns that stock; for the profits arising from his are his own. *Foris-familiation*, when taken in this sense, is also inferred by the child's marriage, or by his living in a separate house with his father's permission or good will.

Children born out of wedlock are styled natural children or bastards. Bastards may be legitimated or made lawful, 1. By the subsequent intermarriage of the mother of the child with the father; and this legitimation entitles the child to all the rights of lawful children. The subsequent marriage which produces legitimation is considered by the law to have been entered into when the child legitimated was begotten; and hence, if he be a male, he excludes by his right of primogeniture the sons procreated after the marriage from the succession of the father's heritage, though these sons were lawful children from the birth. Hence, also, those children only can be thus legitimated who are begotten of a woman whom the father might at that period have lawfully married. Bastards are legitimated by letters of legitimation from the sovereign.

4. *Of servants.*—As to the power of masters over their servants, all servants now enjoy the same rights and privileges with other subjects, unless in so far as they are tied down by their engagements of service. Servants are either necessary or voluntary. Necessary are those whom law obliges to work without wages. Voluntary servants engage without compulsion, either for mere subsistence, or for wages also. Those who earn their bread in this way, if they

should refuse to engage, may be compelled to it by the justices of the peace, who have power to fix the rate of their wages.

Colliers, coalbearers, salters, and other persons necessary to colliers and salt-works, as they are particularly described by act 1661, were formerly tied down to perpetual service at the works to which they had once entered. Upon a sale of the works, the right of their service was transferred to the new proprietor. All persons were prohibited to receive them into their service without a testimonial from their last master; and if they deserted to another work, and were redemanded within a year thereafter, he who had received them was obliged to return them within twenty-four hours, under a penalty. But though the proprietor should neglect to require the deserter within the year, he did not, by that short prescription, lose his property in him. Colliers, &c., where the colliery to which they were restricted was either given up or not sufficient for their maintenance, might lawfully engage with others; but, if the former work should be again set a-going, the proprietor might reclaim them back to it.

But by 15 Geo. III., c. 28, these restraints, the only remaining vestiges of slavery in the law of Scotland, were abrogated; and, after the 1st of July, 1775, all colliers, coal-bearers, and salters, were declared to be upon the same footing with other servants or laborers. The act subjects those who are bound prior to the 1st of July, 1775, to a certain number of years' service for their freedom, according to the age of the person.

5. *Of the poor.*—Indigent children may be compelled to serve any of the king's subjects without wages, till the age of thirty years. Vagrants and sturdy beggars may be also compelled to serve any manufacturer. And, because few persons are willing to receive them into their service, public work-houses are ordained to be built for setting them to work. The poor who cannot work must be maintained by the parishes in which they were born; and, where the place of their nativity is not known, the burden falls upon the parishes where they have had their most common resort for the three years immediately preceding their being apprehended, or their applying for the public charity. Where the contributions collected at the churches to which they belong are not sufficient for their maintenance, they are to receive badges from the minister and kirk session, in virtue of which they may ask alms at the dwelling-houses of the inhabitants of the parish.

CHAP. III.—OF PROPERTY AND ITS ACQUISITION IN GENERAL.

1. *Of rights relating to property.*—The right of enjoying and disposing of a subject at one's pleasure is called 'property.' Proprietors are restrained by law from using their property to their neighbour's prejudice; and, on this principle, nuisances of every kind are reprobated by law. In particular, such as corrupt the air, render the neighbourhood unwholesome; or in short, to use the words of lord Mansfield, 'render the enjoyment of life and property uncom-

fortable.' Every state or sovereign has a power over private property, called by some lawyers *dominium eminens*, in virtue of which the proprietor may be compelled to sell his property for an adequate price, where an evident utility on the part of the public demands it.

Certain things are by nature incapable of appropriation; as the air, the light, the ocean, &c., none of which can be brought under the power of any one person, though their use be common to all. Others are by law exempted from private commerce, in respect of the uses to which they are destined. Of this last kind are, 1. *Res publicæ*, as navigable rivers, highways, bridges, &c.; the right of which is vested in the king, chiefly for the benefit of his people, whence they are called *regalia*. 2. *Res universitatis*, things which belong in property to a particular corporation or society, and whose use is common to every individual in it; but both property and use are subject to the regulations of the society; as town-houses, corporation-halls, market-places, church-yards, &c. The lands or other revenue belonging to a corporation do not fall under this class, but are *juris privati*, in so far as regards the corporation.

2. *Of the means of acquiring property.*—Property may be acquired either by occupation or accession; and transferred by tradition or prescription; but prescription, being also a way of losing property, will be explained under a separate title. Occupation, or occupancy, is the appropriating of things which have no owner, by apprehending them or seizing their possession. This was the original method of acquiring property; and accorded, under certain restrictions, with the doctrine of the Roman law, *quod nullius est, fit occupantis*: but this doctrine can have no place in the feudal plan, by which the king is looked on as the original proprietor of all the lands within his dominions.

Even in that sort of moveable goods which is presumed to have once had an owner, this rule obtains by the law of Scotland, *quod nullius est, fit domini regis*. Thus the right of treasure hid under ground is not acquired by occupation, but accrues to the king. Thus, also, where one finds strayed cattle or other moveables, which have been lost by the former owner, the finder acquires no right in them, but must give public notice thereof; and if, within a year and a day after such notice, the proprietor does not claim his goods, they fall to the king, sheriff, or other person to whom the king has made a grant of such escheats.

In that sort of moveables which never had an owner, as wild beasts, fowls, fishes, or pearls found on the shore, the original law takes place, that he who first apprehends becomes proprietor; insomuch, that though the right of hunting, fowling, and fishing, are restrained by statute under certain penalties, yet all game, even what is caught in contravention of the law, becomes the property of the catcher (unless where the confiscation thereof is made part of the penalty); the contravener being obnoxious, however, to the penal enactment of the statutes, in consequence of his transgression. It was not for a long time a fixed point, whether a person, though

possessed of the valued rent by law entitling him to kill game, could hunt upon another person's grounds without consent; but it was lately found, by the court of session, and affirmed upon appeal, that he could not; it being repugnant to the idea of property, that any person, however qualified, should have it in his power to traverse and hunt upon another's grounds without consent of the proprietor. Although certain things become the property of the first occupant, yet there are others which fall not under this rule. Thus whales, thrown in, or killed on our coasts, belong neither to those who killed them, nor to the proprietor of the grounds on which they are cast, but to the king, providing they are so large as that they cannot be drawn by a wain with six oxen.

Accession is that way of acquiring property, by which, in two things which have a connexion with, or dependence on one another, the property of the principal thing draws after it the property of its accessory. Thus a house belongs to the owner of the ground on which it stands, though built with materials belonging to, and at the charge of another; trees taking root in our ground though planted by another become ours. Thus also the insensible addition made to one's ground by what a river washes from other grounds (which is called *alluvio*) accrues to the master of the ground which receives the addition. The Romans excepted from this rule the case of paintings drawn on another man's board or canvas, in consideration of the excellency of the art; which exception our practice has, for a like reason, extended to similar cases. Under accession is comprehended specification; by which is meant, a person's making a new species or subject from materials belonging to another.

Though the new species should be produced from the commixtion or confusion of different substances belonging to different proprietors, the same rule holds; but, where the mixture is made by the common consent of the owner, such consent makes the whole a common property, according to the shares that each proprietor had formerly in the several subjects.

Property is carried from one to another by tradition, which is the delivery of possession by the proprietor, with an intention to transfer the property to the receiver. Two things are therefore requisite in order to the transmitting of property in this way, 1. The intention or consent of the former owner to transfer it on some proper title of alienation, as sale, exchange, gift, &c.; 2. The actual delivery in pursuance of that intention.

Tradition is either real, where the *ipsa corpora* of moveables are put into the hands of the receiver; or symbolical, which is used where the thing is incapable of real delivery, or even when actual delivery is only inconvenient.

Possession, which is essential both to the acquisition and enjoyment of property, is defined, the detention of a thing, with a design, or animus, in the detainer, of holding it as his own. It cannot be acquired by the sole act of the mind, without real detention; but, being once acquired, it may be continued *solo animo*. Possession is either natural or civil. Natural possession is when one possesses by himself;

thus, we possess lands by cultivating them and reaping their fruits, houses by inhabiting them, moveables by detaining them in our hands. Civil possession is our holding the thing either by the sole act of the mind, or by the hands of another who holds it in our name.

A *bonâ fide* possessor is he who, though he is not really proprietor of the subject, yet believes himself, on probable grounds, to be proprietor. A *malâ fide* possessor is he who knows, or is presumed to know, that what he possesses is the property of another. By our customs, perception alone, without consumption, secures the possessor. If he has sown the ground, while his *bona fides* continued, he is entitled to reap the crop. But this doctrine does not reach to civil fruits, e. g. the interest of money, which the *bonâ fide* receiver must restore, together with the principal, to the owner.

Bona fides necessarily ceases by the *conscientia rei alienâ* in the possessor, whether such consciousness should proceed from legal interpellation, or private knowledge. *Mala fides* is sometimes induced by the true owner's bringing his action against the possessor, sometimes not till *litiscontestation*, and, in cases uncommonly favorable, not till sentence be pronounced against the possessor.

The property of moveable subjects is presumed by the bare act of possession, until the contrary be proved; but possession of an immoveable subject, though for 100 years together, if there is no seisin, does not create even a presumptive right to it; *nulla sesina, nulla terra*. Such subject is considered as *caduciary*, and so accrues to the sovereign. Where the property of a subject is contested, the lawful possessor is entitled to continue till the point of right be discussed; and, if he has lost it by force or stealth, the judge will, upon summary application, immediately restore it to him.

Where a possessor has several rights in his person affecting the subject possessed, the general rule is, that he may ascribe his possession to which of them he pleases; but one cannot ascribe his possession to a title, other than that on which it commenced, in prejudice to him from whom his title flowed.

3. *Of the general nature of heritable and moveable rights.*—Since the introduction of feus, wherever there are two or more in the same degree of consanguinity to one who dies intestate, and who are not all females, such rights belonging to the deceased as are either properly feudal, or have any resemblance to feudal rights, descend wholly to one of them, who is considered as his proper heir; the others, who have the name of next of kin, or executors, must be contented with that portion of the estate which is of a more perishable nature. Hence has arisen the division of rights to be explained under this title. The subjects descending to the heir are styled heritable; and those that fall to the next of kin moveable.

All rights of, or affecting lands, under which are comprehended houses, mills, fishings, teinds (or tithes), and all rights of subjects that are *fundo annexa*, whether completed by seisin or not, are heritable *ex sua naturâ*. On the other

hand, every thing that moves itself or can be moved, and, in general, whatever is not united to land, is moveable: as household furniture, corn, cattle, cash, arrears of rent* and interest, even though they should be due on a right of annual rent; for, though the arrears last mentioned are secured on land, yet, being presently payable, they are considered as cash.

Debts (*nomina debitorum*) when due by bill, promisory note, or account, are moveable. When constituted by bond, they do not fall under any one head; but are divided into heritable and moveable by the following rules:—all debts constituted by bond, bearing an obligation to infest the creditor in any heritable subject, are heritable. Bonds merely personal are moveable as to succession, but they are heritable with respect to the fisk, and to the rights of husband and wife. Bonds taken payable to heirs and assignees, secluding executors, are heritable in all respects, from the destination of the creditor. But a bond which is made payable to heirs, without mention of executors, descends, not to the proper heir in heritage, though heirs are mentioned in the bond, but to the executor; for the word heir, which is a generic term, points out him who is to succeed by law in the right; and the executor, being the heir in *mobilibus*, is considered as the person to whom such bond is taken payable. But, where a bond is taken to heirs male, or to a series of heirs one after another, such bond is heritable, because its destination necessarily excludes executors.

Subjects originally moveable become heritable, 1. By the proprietor's destination; 2. Moveable rights may become heritable by the supervening of an heritable security.

Heritable rights do not become moveable by accessory moveable securities; the heritable right being in such case the *jus nobilius*, which draws the other after it.

Certain subjects partake in different respects or the nature both of heritable and moveable. Personal bonds are moveable in respect of succession, but heritable as to the fisk and the rights of husband and wife. All bonds, whether merely personal or even heritable, on which no *seisin* has followed, may be affected at the suit of creditors, either by adjudication, which is a diligence proper to heritage, or by arrestment which is peculiar to moveables. Bonds secluding executors, though they descend to the creditor's heir, are payable by the debtor's executors without relief against the heir.

All questions, whether a right be heritable or moveable, must be determined according to the condition of the subject at the time of the ancestor's death. If it was heritable at that period, it must belong to the heir; if moveable it must fall to the executor, without regard to any alterations that may have affected the subject in the intermediate period between the ancestor's death and the competition.

CHAP. IV.—OF HERITABLE PROPERTY.

1. *By charter and seisin.*—Heritable rights are governed by the feudal laws. In feudal questions, therefore, Scotland is governed, in the first place, by its own statutes and customs;

where these fail, regard must be had to the practice of neighbouring countries, if the genius of the law appears to be the same; and, should the question still remain doubtful, we may have recourse to books written concerning feus, as to the original plan on which all feudal systems have proceeded.

This military grant got the name first of *beneficium*, and afterwards of *feudum*; and was defined a gratuitous right to the property of lands, made under the conditions of fealty and military service, to be performed to the grantor by the receiver; the radical right of the lands still remaining in the grantor.

Under lands in this definition are comprehended all rights or subjects so connected with land, that they are deemed a part thereof, as houses, mills, fishings, jurisdictions, patronages, &c. Though feus in their original nature were gratuitous, they soon became the subject of commerce; services of a civil or religious kind were frequently substituted in place of military; and now services of every kind have been entirely dispensed with in certain feudal tenures. He who makes this grant is called superior, and he who receives it the vassal. The subject of the grant is commonly called the feue; though that word is at other times, in our law, used to signify one particular tenure. The interest retained by the superior in the feue is styled *dominium directum*, or the superiority; and the interest acquired by the vassal *dominium utile* or the property. The word feue is promiscuously applied to both.

Allodial goods are opposed to feus; by which are understood goods enjoyed by the owner, independent of a superior. All moveable goods are allodial; lands only are so when they are given without the condition of fealty or homage. By the feudal system, the sovereign, who is the fountain of feudal rights, reserves to himself the superiority of all the lands of which he makes the grant; so that, with us, no lands are allodial, except those of the king's own property, the feudal or allodial lands of Orkney, the superiorities which the king reserves in the property lands of his subjects, and manses and glebes, the right of which is completed by the presbytery's designation without any feudal grant.

Every person who is in the right of an immoveable subject, provided he has the free administration of his estate, and is not debarred by statute or by the nature of his right, may dispose of it to another. Nay a vassal, though he has only the *dominium utile*, can subfeue his property to a subvassal by a subalter right, and thereby raise a new *dominium directum* in himself, subordinate to that which is in his superior, and so on in infinitum. The vassal who thus subfeues is called the subvassal's immediate superior, and the vassal's superior is the subvassal's mediate superior.

All persons who are not disabled by law may acquire and enjoy feudal rights. Papists could not formerly purchase a land estate by any voluntary deed; but now, by 33 Geo. III. c. 44, their situation is assimilated in that respect to that of Roman Catholics in England. Aliens, who owe allegiance to a foreign prince, cannot

hold a feudal right without naturalisation; and therefore, where such privilege was intended to be given to favored nations or persons, statutes of naturalisation were necessary, either general or special; or, at least, letters of naturalisation by the sovereign.

Every heritable subject capable of commerce may be granted in feu. From this general rule are excepted, 1. The annexed property of the crown. 2. Tailzied lands, which are devised under condition that they shall not be aliened. 3. An estate in hereditate jacente cannot be effectually alienated by the heir apparent that is not entered; but such alienation becomes effectual upon his entry, the supervening right accruing in that case to the purchaser; which is a rule applicable to the alienation of all subjects not belonging to the vendor at the time of the sale.

The feudal right, or, as it is called, investiture, is constituted by charter and seisin. By the charter we understand that writing which contains the grant of the feudal subject to the vassal, whether it be executed in the proper form of a charter or of a disposition. Charters by subject superiors are granted either, 1. *A me de superiore meo*, when they are to be holden, not of the grantor himself, but of his superior. This sort is called a public holding, because vassals were in ancient times publicly received in the superior's court before the *pares curiæ* or co-vassals. Or, 2. *De me*, where the lands are to be holden of the grantor. These were called sometimes base rights, from *bas* 'lower'; and sometimes private, because, before the establishment of our records, they were easily concealed from third parties. An original charter is that by which the fee is first granted: a charter by progress is a renewed disposition of that fee to the heir or assignee of the vassal. All doubtful clauses in charters by progress ought to be construed agreeably to the original grant; and all clauses in the original charter are understood to be implied in the charters by progress, if there be no express alteration.

A seisin is the instrument or attestation of a notary, that possession was actually given the superior or his bailie, to the vassal or his attorney; which is considered as so necessary a solemnity, as not to be suppliable, either by a proof of natural possession, or even of the special fact that the vassal was duly entered to the possession by the superior's bailie.

The symbols by which the delivery of possession is expressed are, for lands, earth and stone; for rights of annual rent, payable out of land, it is also earth and stone, with the addition of a penny money; for parsonage teinds, a sheaf of corn; for jurisdiction, the book of the court; for patronages, a psalm book and the keys of the church; for fishings, net and cable; for mills, clap and hopper, &c. The seisin must be taken upon the ground of the lands, except where there is a special dispensation in the charter from the crown.

All seisins must be registered within sixty days after their date, either in the general register of seisins at Edinburgh, or in the register of the particular shire appointed by the act 1617: which it must be observed is not, in every case,

the shire within which the lands lie. Burgage seisins are ordained to be registered in the books of the borough. Unregistered seisins are ineffectual against third parties, but they are valid against the grantors and their heirs. Seisins regularly recorded are preferable, not according to their own dates, but the dates of their registration.

Seisin necessarily supposes a superior by whom it is given. The right therefore, which the sovereign who acknowledges no superior has over the whole lands of Scotland, is constituted *jure coronæ*, without seisin. In several parcels of land that lie contiguous to one another, one seisin serves for all unless the right of the several parcels be either holden of different superiors, or derived from different authors, or enjoyed by different tenures under the same superior. In discontinuous lands, a separate seisin must be taken on every parcel, unless the sovereign has united them into one tenantry by a charter of union; in which case, if there is no special place expressed, a seisin taken on any part of the united lands will serve for the whole, even though they be situated in different shires. The only effect of union is to give the discontinuous land the same quality as if they had been contiguous or naturally united. Union, therefore, does not take off the necessity of separate seisins, in lands holden by different tenures, or the rights of which flow from the different superiors; these being incapable of natural union.

The privilege of barony carries a higher right than union does, and consequently includes union in it as the less degree. The right of barony can neither be given nor transmitted, unless by the crown; but the quality of simple union, being once conferred on lands by the sovereign, may be communicated by the vassal to a sub-vassal. Though part of the lands united or erected into a barony be sold by the vassal to be holden *a me*, the whole union is not thereby dissolved: what remains unsold retains the quality.

A charter not perfected by seisin is a right merely personal, which does not transfer the property, and a seisin of itself bears no real faith without its warrant. It is the charter and seisin joined together that constitutes the feudal right, and secures the receiver against the effect of all posterior seisins, even though the charters on which they proceed should be prior to his.

No quality which is designed as alien, or real burden on a feudal right, can be effectual against singular successors, if it be not inserted in the investiture. If the creditors in the burden are not particularly mentioned, the burden is not real; for no perpetual unknown encumbrance can be created upon lands. Where the right itself is granted with the burden therein mentioned, or where it is declared void if the sum be not paid against a certain day, the burden is real; but, where the receiver is simply obliged by his acceptance to make payment, the clause is effectual only against him and his heirs.

2. *Of the several kinds of holding.*—Feudal subjects are chiefly distinguished by their different manners of holding. *Feu* holding is that whereby the vassal is obliged to pay to the su-

perior a yearly rent in money or grain, and sometimes also in services proper to a farm, as ploughing, reaping, carriages for the superior's use, &c., *nomine feudi firmæ*. This kind of tenure was introduced for the encouragement of agriculture, the improvement of which was considerably obstructed by the vassal's obligation to military service. It appears to have been a tenure known in Scotland as far back as *leges burgorum*.

Blanch holding is that whereby the vassal is to pay the superior an elusory yearly duty, as a penny-money, a rose, a pair of gilt spurs, &c., merely in acknowledgment of the superiority *nomine albæ firmæ*. This duty where it is a thing of yearly growth, if it be not demanded within the year, cannot be exacted thereafter; and, where the words *si petatur tantum* are subjoined to the *reddendo*, they imply a release to the vassal whatever the quality of the duty may be, if it is not asked within the year.

Burgage holding is that by which boroughs royal hold of the sovereign the lands which are contained in the charters of erection. As the royal borough is the king's vassal, all burgage holders hold immediately of the crown. The magistrates, therefore, when they receive the resignations of the particular burgesses and give seisin to them, act, not as superiors, but as the king's bailies especially authorised thereto.

Feudal subjects granted to churches, monasteries, or other societies for religious or charitable uses, are said to be mortified or granted *ad manum mortuum*; either because all casualties must necessarily be lost to the superior, where the vassal is a corporation which never dies; or because the property of these subjects is granted to a dead hand, which cannot transfer it to another. Lands may be mortified to any lawful purpose, either by *blanch* or by *feu* holding. But as the superior must lose all the casualties of superiority in the case of mortifications to churches, universities, &c., therefore lands cannot be mortified without the superior's consent.

3. *Of the casualties due to the superior.*—The right of the superior continues unimpaired, notwithstanding the feudal grant, unless in so far as the dominion utile, or property is conveyed to his vassal. The superiority carries a right to the services and annual duties contained in the *reddendo* of the vassal's charter. The duty payable by the vassal is a *debitum fundi*; i. e. it is recoverable not only by a personal action against himself, but by a real action against the lands.

Besides the constant fixed rights of superiority, there are others, which, because they depend upon uncertain events, are called casualties.

The tenure of the lands holden ward of the crown or prince is turned in *blanch* for payment of one penny Scots yearly, *si petatur tantum*, and the tenure of those holden of subjects into *feu* for payment of such yearly *feu-duty* in money victual or cattle, in place of all services, as should be fixed by the court of session.

The only casualty, or rather forfeiture, is the loss or tinsel of the *feu* right, by the neglect of payment of the *feu* duty for two full years. Yet where there is no conventional irritancy in the *feu* right, the vassal is allowed to purge the legal irritancy, by making payment

before sentence; but where the legal irritancy is fortified by a conventional, he is not allowed to purge, unless where he can give a good reason for the delay of payment.

The casualties common to all holdings are non-entry, relief, liferent, escheat, disclamation, and purpresture.

Non-entry is that casualty which arises to the superior out of the rents of the feudal subject, through the heir's neglecting to renew the investiture after his ancestor's death. The amount is ascertained by the retoured duties, or valued rent, made by the inquest, according to which the public taxes, as well as private dues, are regulated. In *feu*-holdings, the *feu-duty* is returned as the rent, because the *feu-duty* is presumed to be, and truly was at first, the rent. The superior of *teinds* gets the fifth part of the retoured duty as non entry; because the law considers *teinds* to be worth a fifth part of the rent. The heir, after he is cited by the superior in the action of general declarator, is subjected to the full rents till his entry, because his neglect is less excusable after citation. The decree of declarator, proceeding on this action, entitles the superior to the possession, and gives him right to the rents downward from the citation. Non-entry does not obtain in *burgage* holdings, because the incorporation of inhabitants holds the whole incorporated subjects of the king; and there can be no non-entry due in lands granted to communities, because there the vassal never dies. It is also excluded as to a third of the lands by the *terce*, during the widow's life; and as to the whole of them by the *courtesy* during the life of the husband. But it is not excluded by a precept of seisin granted to the heir, till seisin be taken thereupon.

Relief is that casualty which entitles the superior to an acknowledgment or consideration from the heir for receiving him as vassal. It is called relief, because, by the entry of the heir, his fee is relieved out of the hands of the superior. It is not due in *feu*-holdings flowing from subjects, unless where it is expressed in charter by a special clause for doubling the *feu-duty* at the entry of an heir; but in *feu*-rights holden of the crown it is due, though there should be no such clause in the charter. In *blanch* and *feu* holdings, where this casualty is expressly stipulated, a year's *blanch* or *feu* duty is due in name of relief, beside the current year's duty, payable in name of *blanch* or *feu* farm.

Escheat, from *escheoir*, to fall, is that forfeiture which falls through a person's being denounced rebel. It is either single or life rent.

Single *escheat* falls, without denunciation, upon sentence of death pronounced in any criminal trial; and, by special statute, upon one's being convicted of certain crimes, though not capital: as perjury, bigamy, deforcement, breach of arrestment, and usury. All moveables belonging to the rebel at the time of his rebellion, or afterwards acquired by him until relaxation, fall under single *escheat*. Bonds bearing interest, because they continue heritable *quoad fiscum*, fall not under it, nor such fruits of heritable subjects as become due after the term next ensuing

the rebellion, these being reserved for the life-rent escheat. The king never retains the right of escheat to himself, but makes it over to a donatory, whose gift is not perfected till, upon an action of general declarator, it be declared that the rebel's escheat has fallen to the crown by his denunciation, and that the right of it is now transferred to the pursuer by the gift in his favor. Every creditor, therefore, of the rebel, whose debt was contracted before rebellion, and who has used diligence before declarator, is preferable to the donatory. But the escheat cannot be affected by any debt contracted, nor by any voluntary act of the rebel after rebellion. The rebel, if he continues unrelaxed for year and day after rebellion, is construed to be civilly dead; and therefore, where he holds any feudal right, his superiors, as being without a vassal, are entitled each of them to the rents of such of the lands belonging to the rebel as hold of himself, during all the days of the rebel's natural life, by the casualty of life-rent escheat; except where the denunciation proceeds upon treason, or proper rebellion, in which case the life rent falls to the king. It is that estate only, to which the rebel has a proper right of life rent in his own person, that falls under his life-rent escheat.

Though neither the superior nor his donatory can enter into possession in consequence of this casualty, till decree of declarator, yet that decree, being truly declaratory, has a retrospect, and does not so properly confer a new right as declare the right formerly constituted to the superior, by the civil death of his vassal. Hence all charters are heritable bonds, though granted prior to the rebellion, and all adjudications, though led upon debts contracted before that period, are ineffectual against the life escheat, unless seisin be taken thereon within year and day after the grantor's rebellion. Here, as in single escheat, no debt contracted after rebellion can hurt the donatory, nor any voluntary right granted after that period, though in security or satisfaction of prior debts.

Disclamation is that casualty whereby a vassal forfeits his whole feu to his superior, if he disowns or disclaims him, without ground, as to any part of it.

Purpresture draws likewise a forfeiture of the whole feu after it; and is incurred by the vassal's encroaching upon any part of his superior's property, or attempting, by building, enclosing, or otherwise, to make it his own. In both these feudal delinquencies the least color of excuse saves the vassal.

4. *Of rights annexed to the feu.*—Under the dominium utile, which the vassal acquires by the feudal right, is comprehended the property of whatever is considered as part of the lands, whether of houses, woods, enclosures, &c., above ground; or of coal, limestone, minerals, &c., under ground. Mills have, by the generality of our lawyers, been deemed a separate tenement, and so not carried by a charter or disposition, without either a special clause conveying mills, or the erection of the lands into a barony. Yet it is certain that, if a proprietor builds a mill on his own lands, it will be carried by his entail, or by a retour without mentioning it, although the

lands are not erected into a barony. If the lands disposed be astricted or thirled to another mill, the purchaser is not allowed to build a new corn mill on his property, even though he should offer security that it shall not hurt the thirl.

Proprietors are prohibited to hold dove-cotes; unless their yearly rent, lying within two miles thereof, extend to ten chalders of victual. A purchaser of lands with a dove cote is not obliged to pull it down though he should not be qualified to build one; but, if it become ruinous, he cannot rebuild it. The right of brewing, though not expressed in the grant, is implied in the nature of property, as are also the rights of fishing, fowling, and hunting, in so far as they are not restrained by statute. Every proprietor is entitled to a grant of the mines within his own lands with the burden of delivering to the crown a tenth of what shall be brought up.

Salmon fishing is likewise a right understood to be reserved by the crown, if it be not expressly granted; but forty years' possession thereof, where the lands are either erected into a barony, or granted with the general clause of fishings, establishes the full right of the salmon fishing in the vassal. A charter of lands, within which any of the king's forests lie, does not carry the property of such forests to the vassal.

All the subjects which were by the Roman law accounted *respublicæ*, as rivers, highways, ports, &c., are, since the introduction of feus, held to be *inter regalia*, or in *patrimoniâ principis*; and hence encroachment upon a highway is said to infer *purpresture*. No person has the right of a free port without a special grant, which implies a power in the grantee to levy anchorage and shore-dues, and obligation upon him to uphold the port in good condition. In this case of things our forefathers reckoned *fortalices* or small places of strength originally built for the defence of the country, either against foreign invasions or civil commotions; but these now pass with the lands in every charter.

The vassal acquires right by his grant, not only to the lands specially contained in the charter, but to those that have possessed forty years as pertinent thereof. But, 1. If the lands in the grant are marked out by special limits, the vassal is circumscribed by the tenor of his own right, which excludes every subject, without these limits, from being pertinent of the lands. 2. A right, possessed under an express infeftment, is preferable, *ceteris paribus*, to one possessed only as pertinent. 3. Where neither party is infeft per expressum, the mutual promiscuous possession by both, of a subject as pertinent, resolves into a *commonty* of the subject possessed. But if one of the parties has exercised all the acts of property of which the subject was capable, while the possession of the other was confined to pasturage only, or to casting feal and divot, the first is to be deemed sole proprietor, and the other to have merely a right of servitude.

As *barony* is a *nomen universitatis*, and unites the several parties contained in it into one individual right, the general conveyance of a barony carries with it all the different tenements of which it consists, though they should not be

specially enumerated; and this holds, even without erection into barony, in lands that have been united under a special name. Hence likewise the possession by the vassal of the smallest part of the barony lands preserves to him the right of the whole. The vassal is entitled in consequence of his property to levy the rents of his own lands, and to recover them from his tenants by an action for rent before his own court; and from all other possessors and intruders, by an action of mails and duties before the sheriff. He can also remove from his lands tenants who have no leases; and he can grant tacks or leases to others.

A *tack* is a contract of location, whereby the use of lands, or any other immoveable subject, is set to the lessee or tacksman for a certain yearly rent, either in money, the fruits of the ground, or services. It ought to be reduced into writing, as it is a right concerning lands: tacks, therefore, that are given verbally, to endure for a term of years, are good against neither party for more than one year. An obligation to grant a tack is as effectual against the grantor as a formal tack. A life-renter, having a temporary property in the fruits, may grant tacks to endure for the term of his own life rent.

The tacksman's right is limited to the fruits which spring up annually from the subject set, either naturally, or by his own industry; he is not therefore entitled to any of the growing timber above ground, and far less to the minerals, coal, clay, &c., under ground, the use of which consumes the substance. Tacks are, like other contracts, personal rights in their own nature; and consequently ineffectual against singular successors in the lands; but, for the encouragement of agriculture, they were, by act 1449, declared effectual to the tacksman for the full time of their endurance, into whose hands soever the lands might come.

To give a written tack the benefit of this statute, it must mention the special tack-duty payable to the proprietor, which, though small, if it be not elusory, secures the tacksman; and it must be followed by possession, which supplies the want of a seisin. If a tack does not express the term of entry, the entry will commence at the next term after its date, agreeably to the rule *quod purè debetur, præsentì die debetur*. If it does not mention the *ish*, i. e. the term at which it is to determine, it is good for one year only; but, if the intention of parties to continue it for more than one year should appear from any clause in the tack (e. g. if the tacksman should be bound to certain annual prestations), it is sustained for two years as the minimum. Tacks granted to perpetuity, or with an indefinite *ish*, have not the benefit of the statute. Tacks of houses within borough do not fall within this act, it being customary to let these from year to year. The conveyance of a tack which is not granted to assignees is ineffectual without the landlord's consent. A right of tack, though it be heritable, falls under the *jus mariti*. This implied exclusion of assignees, is, however, limited to voluntary, and does not extend to assignments; but a tack expressly excluding assignees cannot be carried even by adjudication. Life-rent tacks may be assigned, unless assignees be

specially excluded. If neither the setter nor tacksman shall properly discover their intention to have the tack dissolved at the term fixed for its expiration, they are presumed to have entered into a new tack upon the same terms with the former, which is called *tacit relocation*, which continues till the landlord warns the tenant to remove, or the tenant renounces his tack to the landlord. This obtains also in the case of moveable tenants, who possess from year to year without written tacks. In judicial tacks, however, by the court of session, *tacit relocation* does not take place.

No relief is afforded in the reduction of rent unless where a total loss arises from the act of God or the king's enemies.

Tacks may be evacuated during their currency, 1. In the same manner as feu rights, by the tacksman running in arrear of his tack duty for two years together. This irritancy may be prevented by the tenant's making payment at the bar before sentence. 2. Where the tenant either runs in arrear of one year's rent, or leaves his farm uncultivated at the usual season; in which case he may be ordained to give security for the arrears, and for the rent of the five following crops, otherwise to remain as if the tack were at an end.

The landlord, when he intends to remove a tenant whose tack is expiring, or who possesses without a tack, must warn the tenant forty days preceding the term, personally or at his dwelling-house. This precept must be also executed on the ground of the lands, and thereafter read in the parish church where the lands lie, and affixed to the door. A landlord's title in a removing cannot be brought under question by a tenant; but, if he is to insist against tenants not his own, his right must be perfected.

The defender in a removing must, before offering any defence which is not instantly verified, give security to pay to the pursuer the violent profits if they should be awarded against him. These are so called because the law considers the tenant's possession after the warning as violent.

The landlord has in security of his tack-duty, over and above the tenant's personal obligation, a *tacit pledge* or *hypothec*, not only on the fruits, but on the cattle pasturing on the ground. The corn and other fruits are hypothecated for the rent of that year whereof they are the crop. The landlord is entitled to a preference over any creditor. This right, however, cannot compete with an extent issued for a debt due to the crown. A superior has also a hypothec for his feu-duty. In tacks of houses, breweries, shops, and other tenements, which have no natural fruits, the furniture, and other goods brought into the subject set, are hypothecated to the landlord for one year's rent. But the tenant may by sale impair this hypothec, as he might that of cattle in rural tenements.

5. *Of the transmission of rights*.—A vassal may transmit his feu either to universal successors, as heirs; or to singular successors, i. e. those who acquire by gift, purchase, &c. This last sort of transmission is either voluntary, by disposition; or necessary, by adjudication.

The superior is entitled, for the entry of singular successors, in all cases where such entries are not taxed, to a year's rent of the subject, deducting the feu-duty, and likewise all annual burdens and repairs. Base-rights, i. e. dispositions to be holden of the disponer, are transmissions only of the property, the superior remaining as formerly.

Public rights, i. e. dispositions to be holden of the grantor's superior, may be perfected either by confirmation or resignation. When the receiver is to complete his right in the first way, he takes seisin upon the precept, but such seisin is ineffectual without the superior's confirmation, for the disponee cannot be deemed a vassal till the superior receive him as such, or confirm the holding. Where two several public rights of the same subject are confirmed by the superior, their preference is governed by the dates of the confirmations, not of the infestments confirmed, because it is the confirmation which completes a public right.

Resignation is that form of law by which the vassal surrenders his feu to his superior. In resignation ad remanentiam, where the feu is resigned that it may remain with the superior, he acquires the property also of the lands resigned.

Resignations in favorem are made, not with an intention that the property resigned should remain with the superior, but that it should be again given by him in favor either of the resignor himself or of a third party. The grantor even of a personal right of lands is not so divested by conveying a right to one person, but that he may effectually make it over afterwards to another; and the preference between the two does not depend on the dates of the dispositions, but on the priority of the seisins following upon them.

6. *Of redeemable rights, and first of wadsets and mortgages.*—A wadset (from wad, a pledge) is a right by which lands, or other heritable subjects, are impignorated by the proprietor to his creditor in security of his debt. The debtor who grants is called the reverser, and the creditor is called the wadsetter.

Rights of reversion are generally esteemed stricti juris; yet they go to heirs unless there be some clause discovering the intention of parties that the reversion should be personal to the reverser himself. Though the right should not express it, redemption will be competent against the heir. Reversions cannot be assigned unless they are taken to assignees, but they may be adjudged.

Reversions commonly leave the reverser at liberty to redeem the lands without restriction in point of time; but sometimes if the debt be not paid against a determinate day, the lands become the irredeemable property of the wadsetter. Where the sum lent falls short of the value of the lands, the right of redemption is continued to the reverser while the irritancy is not declared. This indulgence is limited to forty years. If the reverser would redeem his lands, he must use an order of redemption against the wadsetter. In the voluntary redemption of a right of wadset holden base, a renunciation duly registered re-establishes the

reverser in the full right of the lands. If the wadsetter either does not appear at the time and place appointed, or refuses the redemption money, the reverser must consign it under form of instrument in the hands of the person appointed in the right of reversion, or, if no person be named, in the hands of the clerk of the bills in the court of session, a clerk of the session, or any responsible person.

After decree of declarator is obtained, by which the lands are declared to return to the debtor, the consigned money, which comes in place of the lands, becomes the wadsetter's, who therefore can charge the consignatory upon letters of horning, to deliver it up to him.

A *proper wadset* is that whereby it is agreed that the use of the land shall go for the use of the money; so that the wadsetter takes his hazard of the rents, and enjoys them in satisfaction of his interest.

In an *improper wadset*, the reverser, if the rent should fall short of the interest, is taken bound to make up the deficiency; if it amounts to more, the wadsetter is obliged to impute the excrescence towards extinction of the capital.

If the wadsetter be entitled by his right to enjoy the rents without accounting, and if at the same time the reverser be subjected to the hazard of that deficiency, such contract is declared usurious. Infestments of annual rent are also redeemable rights. A right of annual rent does not carry the property of the lands; but it creates a real burden upon the property for payment of the interest or annual rent contained in the right.

7. *Of servitudes or burdens.*—Servitude is a burden affecting lands, or other heritable subjects, whereby the proprietor is either restrained from the full use of what is his own, or is obliged to suffer another to do something upon it. Legal servitudes are established by statute or custom.

Conventional servitudes are constituted either by grant, where the will of the party burdened is expressed in writing, or by prescription where his consent is presumed from his acquiescence in the burden for forty years. Servitudes constituted by grant are not effectual in a question with the superior of the tenement burdened with the servitude, unless his consent be adhibited. But, where the servitude is acquired by prescription, the consent of the superior, whose right afforded him a good title to interrupt, is implied.

Predial servitudes are burdens imposed upon one tenement in favor of another tenement.

Predial servitudes are divided into rural servitudes, or of lands; and urban servitudes, or of houses. Servitudes may be constituted of a foot-road, horse-road, cart-road, dams and aqueducts, watering of cattle, and pasturage. Common pasturage is sometimes constituted by a general clause of pasturage in a charter or disposition, without mentioning the lands burdened; in which case the right comprehends whatever had been formerly appropriated to the lands disposed out of the grantor's own property, and likewise all pasturage due to them out of other lands. When a right of pasturage is given to

several neighbouring proprietors, on a moor or common belonging to the grantor, indefinite as to the number of cattle to be pastured, the extent of their several rights is to be apportioned according to the number that each of them can fodder in winter upon his own dominant tenement.

The servitudes of houses, where different floors or stories of the same house belong to different persons, the property of the house cannot be said to be entirely divided. The proprietor of the ground floor must uphold it for the support of the upper, and the owner of the highest story must uphold that as a cover to the lower. When the higher floor is divided among the several proprietors, each proprietor is obliged, according to this rule, to uphold that part of the roof which covers his own garret.

No proprietor can build, so as to throw the rain water from his own house, immediately upon his neighbour's ground, without a special servitude, which is called of stillicide; but if it fall within his own property, though at the smallest distance from the march, the owner of the inferior tenement must receive it. The servitudes *altius non tollendi*, et *non officendi luminibus vel prospectui*, restrain proprietors from raising their houses beyond a certain height, or from making any building whatsoever that may hurt the light or prospect of the dominant tenement.

There are two other predial servitudes; that of fuel or feal and divot, and of thirlage. The first is a right by which the owner of the dominant tenement may turn up peats, turfs, feals or divots from the ground of the servient, and carry them off either for fuel or thatch, or the other uses of his own tenement.

Thirlage is that servitude by which lands are astricted or thirled to a particular mill; and the possessors bound to grind their grain there, for payment of certain multure and sequels as the agreed price of grinding.

Multure is the quantity of grain or meal payable to the proprietor of the mill, or to the multuror his tacksman.

The *sequels* are the small quantities given to the servants under the name of knaveship, bannock, and lock or gowpen.

Thirlage is either, 1. Of grindable corns; or, 2. Of all growing corns; or, 3. Of the *invecta et illata*, i. e. of all the grain brought within the thirl, though of another growth. Where the thirlage is of grindable grain, it is restricted to the corns which the tenants have occasion to grind, either for the support of their families, or for other uses; the surplus may be carried out of the thirl unmanufactured, without being liable in multure. Where it is of the *grana crescentia*, the whole grain growing upon the thirl is astricted with the exceptions, 1. Of seed and horse-corn; and 2. Of the farm-duties due to the landlord, if they are delivered in grain not ground. But if the rent be payable in meal, flour, or malt, the grain of which these are made must be manufactured in the dominant mill.

The thirlage of *invecta et illata* is seldom constituted but against the inhabitants of a borough or village, that they shall grind all the unmanu-

factured grain they import thither at the dominant mill.

Thirlage, in the general case, cannot be established by the prescription alone, except 1. Where one pays to a mill a certain sum, or quantity of grain yearly, in the name of multure, whether he grinds at it or not, called dry multure. 2. In mills of the king's property. This is extended to mills belonging to church lands, where thirty years' possession is deemed equivalent to a title in writing.

The possessors of the lands astricted are bound to uphold the mill, repair the dam-dykes and aqueducts, and bring home the mill-stones. The right of thirlage may be commuted into a fixed or annual payment in money, at the instance of the proprietor either of the mills or of the thirled lands.

Servitudes being restraints upon property are *stricti juris*. They are not therefore presumed.

Servitudes are extinguished, 1. Confusion, when the person comes to be proprietor of the dominant and servient tenements; 2. By the perishing either of the dominant or servient tenement; 3. Servitudes are lost by the dominant tenement neglecting to use the right for forty years.

Personal servitudes are those by which the property of a subject is burdened, in favor, not of a tenement, but of a person. The only personal servitude known in our law, is usufruct or life-rent; which is a right to use and enjoy a thing during life, the substance of it being preserved.

A *simple life-rent* is that which is granted by the proprietor in favor of another. And this sort requires seisin in order to affect singular successors.

A *life-rent by reservation* is that which a proprietor reserves to himself in the same writing by which he conveys the fee to another. It requires no seisin.

Life-rents by law are the *terce* and the *courtesy*. The *terce* (*tertia*) is a life-rent competent by law to widows, who have not accepted of special provisions in the third of the heritable subjects in which their husbands died infest, and takes place only where the marriage has subsisted for a year and a day, or where a child has been born alive of it.

The *terce* is not limited to lands, but extends to teinds, and to servitudes and other burdens affecting lands; thus the widow is entitled to a life-rent of the third of the sum secured, either by rights of annual rent, or, by rights in security. In improper wadsets the *terce* is the third of the sum lent. In those that are proper, it is a third of the wadset lands, or in case of redemption, a third of the redemption money. Neither rights of reversion, superiority, nor patronage, fall under the *terce*. Where a *terce* is due out of lands burdened with a prior *terce* still subsisting, the second *tercer* had only right to a third of the two-thirds. But upon the death of the first widow, whereby the lands are disburdened of her *terce*, the smaller *terce* becomes enlarged. A widow who has accepted of a special provision from her husband is excluded from the *terce*, unless such provision shall contain a clause that

she shall have right to both. The widow has no title of possession, and so cannot receive the rents in virtue of her terce, till she be served to it; and, in order to this, she must obtain a brief out of the chancery directed to the sheriff, who calls an inquest to take proof that she was wife to the deceased, and that her husband died infest in the subjects contained in the brief.

Courtesy is a life-rent given by law to the surviving husband of all his wife's heritage in which she died infest, if there was a child of the marriage born alive. The child born of the marriage must be the mother's heir. If she had a child of the former marriage, the husband has no right to the courtesy while such child is alive.

The husband is considered as her temporary representative; and is liable for the burdens chargeable on the subject, and of the current interest of all her debts to the value of the yearly rent he enjoys.

All life-renters must use their right *salvâ rei substantiâ*. Whatever therefore is part of the fee itself, cannot be encroached on by the life-renter, e. g. woods or growing timber, even for the necessary uses of the life-rented tenement. Life-renters are bound to keep the subject life-rented in proper repair. They are also burdened with the alimony of the heir where he has not enough for maintaining himself.

8. *Of teinds or tithes*.—Teinds are that proportion of rents or goods which is due to churchmen for performing divine service, or exercising the other spiritual functions proper to their several offices. The crown, by the final abolition of episcopacy, is now in the right of the teinds and superiorities of bishop's lands.

Ministers or stipendiaries are, in the first place, to be supported from the teinds, which are of four classes, viz. 1. Such as are in the hands of the crown, never disposed or erected. 2. Such as are in the hands of laymen. 3. Such as are in lease from the crown, titulars or patrons. 4. Those heritably disposed by the titulars. The two first are called free teind, and are modified *primo loco* to their real extent or tack-duty paid, and then the surplus teind of the tacksman (after paying the tack-duty which was previously allocated), in consideration of which the commissioners grant him a prorogation. And lastly, the teinds heritably disposed are burdened in proportion with the patron's own lands when all the free and surplus tack-teinds are exhausted. If the titular warranted against future augmentations, he is liable solely. The patron may modify upon any one heir, to the extent of his teinds, until citation in an action of valuation: and the minister may sue any one heir to the like extent upon a modification of stipend. But a locality prevents this.

The commission, with consent of two-thirds of the valuation, may remove or erect churches. Horning is obtained upon decrees of the presbytery for realising the legal provisions of ministers, of manses, glebes, stipends, &c.

9. *Of rights which may be affected at the suit of creditors*.—*Diligences* are forms of law whereby a creditor endeavours to make good his payment, either by affecting the person of his debtor, by securing the subjects belonging to him

from alienation, or by carrying the property of these subjects to himself. Real diligence is that which is proper to heritable or real rights; personal is that by which the person of the debtor may be secured, or his personal estate affected. Of the first sort we have two, viz. inhibition and adjudication.

Inhibition is a personal prohibition against the party inhibited to contract any debt, or do any deed, by which any part of his lands may be aliened or carried off in prejudice of the creditor inhibiting.

Adjudications and judicial sales.—Heritable rights may be carried from the debtor to the creditor, either by the diligence of adjudication, or by a judicial sale carried on before the court of session.

Such part of the debtor's lands is to be adjudged as is equivalent to the principal sum and interest of the debt, with the composition due to the superior, and expenses of infestment; and a fifth part more, in respect the creditor is obliged to take land for his money. The adjudger lies under no obligation to account for the surplus rents. The debtor may redeem in five years; and the creditor attaining possession upon it can use no farther execution against the debtor, unless the lands be evicted from him.

Where the debtor does not produce a sufficient right to the lands, or is not willing to renounce the possession, and ratify the decree, the statute makes it lawful for the creditor to adjudge all right belonging to the debtor in the same manner, and under the same reversion of ten years, as he could by the former laws have apprised it. In this last kind, which is called general adjudication, the creditor must limit his claim to the principal sum, interest, and penalty, without demanding a fifth part more. Abbreviations are ordained to be made of all adjudications, which must be recorded within sixty days after the date of the decree.

Where the debtor's apparent heir formally renounces the succession, the creditor may obtain a decree *cognitionis causâ*; in which, though the heir renouncing is cited for the sake of form, no sentence condemnatory can be pronounced against him in respect of his renunciation; the only effect of it is to subject the *hæreditas jacens* to the creditor's diligence.

Adjudications *contra hæreditatem jacentem* carry not only the lands themselves that belonged to the deceased, but the rents thereof fallen due since his death. This sort of adjudication is declared redeemable within seven years by any coadjudging creditor, either of the deceased debtor, or of the heir renouncing. Adjudications in implement are declared against those who have granted deeds without procuratory of resignation or precept of seisin and refuse to divest themselves.

All adjudications led within year and day of that which has been made first effectual by seisin (where seisin is necessary), or exact diligence for obtaining seisin, are preferable *pari passu*. The year and day runs from the date of the adjudication, and not of the seisin or diligence for obtaining it. After the days of that period they are preferable according to their dates.

All the coadjudgers within the year are preferable *pari passu*, as if one adjudication had been held for all their debts.

Sequestration is a diligence that generally ushers in actions of sale. Sequestration of lands is a judicial act of the court of session, whereby the management of an estate is put into the hands of a factor or steward named by the court, who gives security and is to be accountable for the rents to all having interest. The court of session, who decree the sequestration, have the nomination of the factor, in which they are directed by the recommendation of the creditors.

The court of session, without sequestration, name a factor to preserve the rents from perishing. The estates of those engaged in trade and manufactures may be sequestered at the suit of a creditor to the extent of £100, two creditors to the extent of £150, and three or more to the extent of £200. The bankrupt's funds are placed under the management, first of a factor, then of a trustee, chosen by the creditors.

The word *bankrupt* is sometimes applied to persons whose funds are not sufficient for their debts; and sometimes, not to the debtor, but to his estate. The court of session are empowered, at the suit of any real creditor, to try the value of a bankrupt's estate, and sell it for the payment of his debts. No process of sale at the suit of a creditor, can proceed without a proof of the debtor's bankruptcy, or at least that his lands are so charged with debts that no prudent person will buy from him. The debtor or his apparent heir, and all the real creditors in possession, must be made parties to the suit; but it is sufficient if the other creditors be called by an edictal citation.

As processes of ranking and sale are designed for the common interest of all the creditors, no diligence carried on or completed during their pendency ought to give any preference in the competition.

It is a rule in all real diligences, that where a creditor is preferable on several different subjects, he cannot use his preference arbitrarily, by favoring one creditor more than another: but must allocate his universal debt proportionally against all the subjects or parties whom it affects.

CHAP. V.—OF MOVEABLE PROPERTY.

1. *Of obligations and contracts.*—Obligations are either, 1. Merely *natural*, where one person is bound to another by the law of nature, but cannot be compelled by any civil action to the performance. Or, 2. Merely *civil*, which may be sued upon by an action, but are elided by an exception in equity, as in the case of obligations granted through force or fear, &c. 3. Proper or full obligations are those which are supported both by equity and the civil sanction.

Obligations may be also divided into 1. Pure, to which neither day nor condition is adjoined. These may be exacted immediately. 2. Obligations *ex die*, which have a day adjoined to their performance. 3. Conditional obligations, in which there is no proper debt till the condition be purified, because it is possible the condition may never exist.

Obligations when considered with regard to their cause are sometimes called *obediential*. Such

are the obligation on parents to alimnet or maintain their children. Under parents are comprehended, the mother, grandfather, and grandmother, in their proper order. This obligation on parents extends to the providing of their issue in all the necessaries of life, and giving them suitable education. It ceases when the children can earn a livelihood by their own industry; but the obligation on parents is perpetual. This obligation is on the father's death transferred to the eldest son, the heir of the family. The brothers are only entitled to alimony till the age of twenty-one, after which they are presumed able to do for themselves; but the obligation to maintain the sisters in families of rank continues till their marriage.

A *contract* is the voluntary agreement of two or more persons, whereby something is to be given or performed upon one part, for a valuable consideration, either present or future, on the other part. Consent, which is implied in agreement, is excluded, 1. By error in the essentials of the contract. 2. By such a degree of restraint, upon any of the contracting parties, as extorts the agreement.

Loan or *mutuum* is that contract which obliges a person, who has borrowed any fungible subject from another, to restore to him as much of the same kind, and of equal goodness. Whatever receives its estimation in number, weight, or measure, is a fungible; as corn, wine, current coin, &c.

Commodate is a species of loan, gratuitous on the part of the lender, where the thing lent may be used, without either its perishing or its alienation. Hence, in this sort of loan, the property continues with the lender; the only right the borrower acquires in the subject is its use, after which he must restore the individual thing that he borrowed; consequently if the subject perishes, it perishes to the lender, unless it has perished by the borrower's fault.

Depositio is a bilateral contract by which one who has the custody of a thing committed to him is obliged to restore it to the depositor. If a reward is bargained for by the depositary for his care, it resolves into the contract of location. As this contract is gratuitous, the depositary is only answerable for the consequences of gross neglect; but, after the deposit is redemanded, he is accountable even for casual misfortunes. He is entitled to a full indemnification for the losses he has sustained by the contract, and to the recovery of all sums expended by him on the subject.

An obligation arises without formal paction, barely by a traveller's entering into an inn, ship, or stable, and there depositing his goods, or putting up his horses, whereby the inkeeper, &c., is accountable not only for his own acts and those of his servants, but of the other guests or passengers; and indeed in every case, unless where the goods have been lost by pirates or house-breakers. Carriers fall within the intendment of this law; and practice has extended it to vintners within borough. The extent of the damage sustained by the party may be proved by his oath in litem.

Sequestration, whether voluntarily consented

to by the parties or authorised by the judge, is a kind of deposit. Consignation of money is also a deposit. The risk of the consigned money lies on the consigner, where he ought to have made payment, and not consignation, or has consigned only a part, or has chosen for consignatory a person neither named by the parties nor of good credit.

Pledge is a contract by which a debtor puts into the hands of his creditor a special moveable subject in security of the debt. Tradesmen and ship-carpenters have a hypothec, on the house or ship repaired, for the materials and other charges of reparation, but not for the expense of building a new ship; but no hypothec exists for the expense of repairs done in a home port. Owners of ships have a hypothec on the cargo for the freight, heritors on the fruits of the ground, and landlords on the *invecta et illata* for their rents. Writers also, and agents, have a right of hypothec, or more properly of retention, in their constituents' writings for their claim of pains and disbursements. A creditor cannot, for his own payment, sell the subject impignorated without applying to the judge-ordinary for a warrant to put it up to public sale, and to this application the debtor ought to be made a party.

2. *Obligations by word or writing*.—Agreement implies the intervention of two different parties who come under mutual obligations to one another. Where nothing is to be given or performed but on one part, it is properly called a promise; which, as it is gratuitous, does not require the acceptance of him to whom the promise is made. An offer, which must be distinguished from a promise, implies something to be done by the other party; and, consequently, is not binding on the offerer till it be accepted, with its limitations or conditions, by him to whom the offer is made; after which it becomes a proper agreement.

Writing must necessarily intervene in all obligations and bargains concerning heritable subjects, though they should be only temporary, as tacks, which, when they are verbal, last but for one year. In these no verbal agreement is binding, though it should be referred to the oath of the party. If, upon a verbal bargain of lands, part of the price shall be paid, the payment creates a valid obligation, and gives a beginning to the contract of sale. An agreement, whereby a real right is passed from, or restricted, called *pactum liberatorium*, may be perfected verbally. Writing is also essential to bargains made under condition that they shall be reduced into writing. In the same manner verbal, or nuncupative testaments are rejected; but verbal legacies are sustained where they do not exceed £100 Scots. Anciently, when writing was little used, deeds were executed by the party appending his seal to them in presence of witnesses. The subscription, also, of the grantor was afterwards required; and, if he could not write, that of a notary. In subscription of the parties by initials, proof must be given that the grantor used to subscribe in that way and had subscribed the deed in question.

Writings carrying any heritable right, and other deeds of importance, must be subscribed

by the principal parties, if they can subscribe, otherwise, by two notaries before four witnesses specially designed. The designation of the witnesses is now necessary where the parties themselves subscribe. Sums exceeding £100 Scots are held obligations of importance. In a divisible obligation, e.g. for a sum of money, though exceeding £100, the subscription of one notary is sufficient if the creditor restricts his claim to £100. But in an obligation indivisible, e.g. for the performance of a fact, if it be not subscribed in terms of the statute it is void. When notaries thus attest a deed, the attestation, or docket, must specially express that the grantor gave them a mandate to sign; nor is it sufficient that this be mentioned in the body of the writing.

In every deed the name of him who writes it, with his dwelling-place, or other mark of distinction, must be inserted. The witnesses must both subscribe as witnesses, and their names and designations be inserted in the body of the deed; and all subscribing witnesses must know the grantor, and either see him subscribe or hear him acknowledge his subscription, otherwise they are declared punishable as accessory to forgery.

Instruments of seisin are valid if subscribed by one notary, before a reasonable number of witnesses, which is extended by practice to instruments of resignation. Two witnesses are deemed a reasonable number to every deed that can be executed by one notary. Another requisite is that deeds must be executed on stamped paper or parchment.

Bonds were frequently executed without filling up the creditor's name, and they passed like notes payable to the bearer; but now, all writings taken in blank in the creditor's name are declared null, with the exception of indorsations of bills of exchange.

Certain privileged writings do not require the ordinary solemnities. 1. Holograph deeds (written by the grantor himself) are effectual without witnesses. 2. Testaments, if executed where merit of skill and business cannot be had, are valid, though they should not be quite formal. Clergymen were frequently notaries before the Reformation; and, though they were afterwards prohibited to act as notaries, the case of testaments is excepted; so that these are supported by the attestation of one minister with two witnesses. 3. Discharges to tenants are sustained without witnesses; 4. Missive letters, commissions, and fitted accounts in the course of trade, and bills of exchange, though they are not holograph, are sustained without the ordinary solemnities.

A bill of exchange is an obligation whereby the drawer desires him to whom it is directed to pay a certain sum, at the day and place therein mentioned, to a third party. Bills drawn blank, in the creditor's name, fall under the statutory nullity; for, though indorsations of bills are excepted from it, bills themselves are not. Not only the person drawn upon must sign his acceptance, but the drawer must sign his draught, before any obligation can be formed against the acceptor. Yet it is sufficient that the drawer signs before the bill be produced in judgment, though it should be after the death both of the

creditor and acceptor. A creditor in a bill may transmit it to another by indorsation, though the bill should not bear to his order.

Bills, when drawn payable at any considerable distance of time after date, are denied the privileges of bills; for bills are intended for currency, and not to lie as a security in the creditor's hands. Bills are not valid which appear *ex facie* to be donations.

Promissory notes are placed upon the same footing as bills, and declared to have the same privileges. Both prescribe in six years after the term of payment. Bank notes and post bills are excepted from this prescription; nor does it run during the years of the creditor's minority. Inland bills and promissory notes must be protested within the days of grace to secure recourse; and the dishonor notified within fourteen days after the protest.

3. *Of contracts by consent and of accessory obligations.*—Contracts consensual, i. e. which might be perfected by sole consent, without the intervention either of things or of writing, are, sale, permutation, location, society, and mandate. Where the subject of any of these contracts is heritable, writing is necessary.

Sale is a contract by which one becomes obliged to give something to another in consideration of a certain price in current money to be paid for it. Things consisting merely in hope may be the subject of this contract, as the draught of a net. Commodities, where their importation or use is absolutely prohibited, cannot be the subject of sale; and even in contraband goods, no action lies against the vender for not delivery if the buyer knew the goods were contraband. But where the foreign merchant was not a native of Scotland, no ways amenable to its laws, he has been allowed action for the price of such goods unless it were shown that he had in fact been *particeps criminis* by aiding the smuggling.

Though this contract may be perfected before delivery of the subject, the property remains till then with the vender: yet, till delivery, the hazard of its deterioration falls on the purchaser, because he has all the profits arising from it after the sale. On the other hand the subject itself perishes for the vender, 1. If it should perish through his fault or after his undue delay to deliver it; 2. If a subject is sold as a fungible, and not as an individual, or *corpus*, e. g. a quantity of farm wheat, sold without distinguishing the parcel to be delivered from the rest of the farm; 3. The *periculum* lies on the vender till delivery, if he be obliged by special article in the contract to deliver the subject at a certain place.

Location is that contract where a hire is stipulated for the use of things or for the service of persons. In the location of things the lessor is obliged to deliver the subject fitted for the use it was let for; and the lessee must preserve it carefully, put it to no other use, and, after that is over, restore it. Where a workman, or artificer, lets his labor, and if the work is either not performed according to contract, or if it be insufficient even from mere unskilfulness, he is liable to his employer in damages. A servant hired for a certain term is entitled to his full wages, though

from sickness, or other accident, he should be disabled for a part of his time; but, if he die before the term, his wages are only due for the term he actually served. If a master dies, or without good reason turns off, before the term, a servant who eats in his house, the servant is entitled to his full wages and to his maintenance till that term: and, on the other part, a servant who without grounds deserts his service, forfeits his wages and maintenance, and is liable to his master in damages.

Society or copartnership is a contract whereby the several partners agree concerning the communication of loss and gain arising from the subject of the contract. A copartnership may be so constituted that one of the partners shall be entitled to a certain share of the profits, without being subject to loss. No partner can, without a special power, transfer any part of his share to another. All the partners are bound in *solidum* by the obligation of any one of them, if he subscribe by the firm, or name of the company, unless it be a deed that falls not under the common course of administration. The company effects are the common property of the society, subjected to its debts, so that no partner can claim a division thereof till these are paid, and consequently no creditor of a partner can by diligence carry to himself the property of any part of the common stock in prejudice of a company creditor; but he may, by arrestment, secure his debtor's share in the company's hands, to be made forthcoming to him at the close of the copartnership, in so far as it is not exhausted by the company's debts.

Society is dissolved not only by the renunciation but by the death of any of them if not otherwise covenanted. Not only natural but civil death, e. g. arising from a sentence inflicting capital punishment, makes one incapable to perform the duties of a partner, and consequently dissolves the society. In both cases, of death and renunciation, the remaining partners may continue the copartnership, either expressly, by entering into a new contract, or tacitly, by carrying on their trade as formerly.

A *joint trade* is not a co-partnership, but a momentary contract, where two or more persons agree to contribute a sum to be employed in a particular course of trade, the produce whereof is to be divided among adventurers, according to their several shares, after the voyage is finished. If, in joint trade, that partner who is intrusted with the money for purchasing the goods should, in place of paying them in cash, buy them upon credit, the furnisher, who followed his faith alone in the sale, has no recourse against the other adventurers; he can only recover from them what of the buyer's share is yet in their hands. Where any one of the adventurers in a joint trade becomes bankrupt, the others are preferable to his creditors, upon the common stock, as long as it continues undivided, for their relief of all the engagements entered into by them on account of the adventure.

Mandate is a contract by which one employs another to manage any business for him. It may be constituted tacitly, by one's suffering another to act in a certain branch of his affairs, for a tract of time together, without challenge.

Where no special rules are prescribed, the mandatory, if he acts prudently, is secure, whatever the success may be. Mandates may be general, containing a power of administering the mandant's whole affairs; but no mandate implies a power of disposing gratuitously of the constituent's property, nor even of selling his heritage for an adequate price; but a general mandatory may sell such of the moveables as must otherwise perish. No mandatory can, without special powers, transact doubtful claims belonging to his constituent, or refer them to arbiters.

Mandates expire, 1. By the revocation of the employer, though only tacit; 2. By the renunciation of the mandatory, even after he has executed part of his commission, if his office be gratuitous; 3. By the death either of the mandant or mandatory. But, if the matters are not entire, the mandate continues in force, notwithstanding such revocation, renunciation, or death.

Masters of ships are empowered to contract in name of their executors, or employers, for repairs, ship-provisions, and whatever else may be necessary for the ship or crew. Whoever has the actual charge of the ship is deemed the master. The furnisher or lender must prove that the ship needed repairs, provisions, &c.; but he is under no necessity to prove the application of the money or materials to the ship's use. If there are several exercitors they are liable *singuli in solidum*. In the same manner, the undertaker of any branch of trade, manufacture, or other land negotiation, is bound by the contracts of the institors whom he sets over it, in so far as relates to the subject of the *præpositura*.

Contracts and obligations receive strength by the contractor or his heirs doing any act thereafter which imports an approbation of them. This is called homologation. It cannot be inferred, 1. By the act of a person who was not in the knowledge of the original deed; 2. Where the act or deed, which is pleaded as such, can be ascribed to any other cause.

Quasi contracts are formed without explicit consent by one of the parties doing something which by its nature either obliges him to the other party, or the other party to him.

Indebiti solutio, or the payment to one of what is not due to him, if made through any mistake either of fact or even of law, founds him who made the payment in an action against the receiver for repayment; *condictio indebiti*. This action does not lie, 1. If the sum paid was due *ex æquitate*, or by a natural obligation. 2. If he who made the payment knew that nothing was due.

Where two or more persons become common proprietors of the same subject by legacy, &c., an obligation is thereby created among the proprietors to communicate the profit and loss arising from the subject, while it remains common; and the subject may be divided at the suit of any having interest.

The throwing of goods overboard, for lightening a ship in a storm, creates an obligation whereby the owners of the ship and goods saved are obliged to contribute for the relief of those whose goods are thrown overboard. In this contribution, the ship's provisions suffer no esti-

mation. A master, who cut his mast, or parted with his anchor, to save the ship, is entitled to this relief; but if he has lost them by the storm, the loss falls only on the ship and freight. If the ejection does not save the ship, the goods preserved from shipwreck are not liable in contribution. Ejection may be lawfully made, if the master and a third part of the mariners judge that measure necessary, though the owner of the goods should oppose it; and the goods ejected are to be valued at the price that the goods of the same sort which are saved shall be afterwards sold for.

There are certain obligations which cannot subsist by themselves, but are *accessions* to, or make a part of, other obligations. Of this sort are *fidejussio*, and the obligation to pay interest. Cautionary or *fidejussio* is that obligation by which one becomes engaged as security for another, that he shall either pay a sum or perform a deed.

A right of relief is competent *de jure* to the cautioner who pays against his co-cautioner, unless where the cautioner appears to have renounced it. Cautionary is also judicial, as in a suspension. It is sufficient to loose the cautioner, that, when he became bound, the suspender had good reason to suspend. Obligations for sums of money are frequently accompanied with an obligation for the annual rent or interest thereof.

Interest is the profit due by the debtor of a sum of money due to the creditor, for the use of it, which is fixed at five per cent. Bills of exchange and inland bills, though they should not be protested, carry interest from their date in case of non-acceptance; or from the day of their falling due in case of acceptance and non-payment.

Donation, so long as the subject is not delivered to the donee, may be justly ranked among obligations; and it is that obligation which arises from the mere good will and liberality of the grantor. Donations made in contemplation of death or *mortis causâ*, are of the nature of legacies, and like them revocable; consequently, not being effectual in the grantor's life, they cannot compete with any of his creditors; not even with those whose debts were contracted after the donation. They are understood to be given from a personal regard of the donee, and therefore fall by his predecease. No deed, after delivery, is to be presumed a *donatio mortis causâ*; for revocation is excluded by delivery.

Deeds are not presumed, in *dubio*, to be donations. Hence a deed by a debtor to his creditor, if donation be not expressed, is presumed to be granted in security or satisfaction of the debt; but bonds of provision to children are, from the presumption of paternal affection, construed to be intended as an additional patrimony; yet a tocher given to a daughter in her marriage contract is presumed to be in satisfaction of all former bonds and debts, because the marriage contracts usually contain the whole provisions in favor of the bride.

4. *Of the dissolution of obligations*.—Obligation may be dissolved by performance or implement, consent, compensation, novation, or confusion.

Payment made by the debtor upon a mistake in fact, to one whom he believed, upon probable grounds, to have the right of receiving payment, extinguishes the obligation. But payment made to one, to whom the law denies the power of receiving it, has not this effect.

Obligations are extinguishable by the consent of the creditor, who without full implement, or even any implement, may renounce the right constituted in his own favor.

A *discharge*, though it should be general, of all that the grantor can demand, extends not to debts of an uncommon kind, which are not presumed to have been under the grantor's eye. Where the same person is both creditor and debtor to another, the mutual obligations, if they are for equal sums, are extinguished by compensation; if for unequal, still the less obligation is extinguished, and the greater diminished, as far as the concurrence of debt and credit goes.

The right of *retention*, which bears a near resemblance to compensation, is chiefly competent where the mutual debts, not being liquid, cannot be the ground of compensation; and it is sometimes admitted *ex æquitate*, in liquid debts where the compensation is excluded by statute.

Obligations are dissolved by novation, whereby one obligation is changed into another without changing either the debtor or creditor. The first obligation being thereby extinguished, the cautioners in it are loosed, and all its consequences discharged, so that the debtor remains bound only by the last. Obligations are extinguished confusion, where the debit and credit meet in the same person either by succession or singular title.

5. *Of assignations or assignments.*—Heritable rights, when they are clothed with infestment, are transmitted by disposition, which is a writing containing procuratory of resignation and precept of seisin; but those which either require no seisin, or on which seisin has not actually followed, are transmissible by simple assignation. He who grants the assignation is called the cedent; and he who receives it, the assignee or cessionary. If the assignee conveys his right to a third person, the deed of conveyance is called a translation; and, if he assigns it back to the cedent, a retrocession.

Assignations must not only be delivered to the assignee, but intimated by him to the debtor. Intimations are considered as so necessary for completing the conveyance, that, in a competition between two assignations, the last, if first intimated, is preferred. Though, regularly, intimation to the debtor is made by an instrument taken in the hands of a notary, by the assignee or his procurator, yet the law admits equipollencies where the notice of the assignment given to the debtor is equally strong.

6. *Of arrestments and poidings, or attachment of property.*—The diligences, whereby a creditor may affect his debtor's moveable subjects, are arrestment and poiding. Arrestment is the order of a judge, by which he who is debtor in a moveable obligation to the arrester's debtor, is prohibited to make payment or delivery till the debt to the arrester be paid or secured. The arrester's debtor is usually called the common debtor, because, where there are two or more

competing creditors, he is debtor to all of them. The person in whose hands the diligence is used is styled the arrestee.

Arrestment may be laid on by the authority either of the supreme court, or of an inferior judge.

All debts in which one is personally bound, though they should be heritably secured, are grounds upon which the creditor may arrest the moveable estate belonging to his debtor. Arrestment may proceed on a debt, the term of payment whereof is not yet come, in case the debtor be vergens ad inopiam.

Moveable debts are the proper subject of arrestment; under which are comprehended conditional debts, and even depending claims. Certain moveable debts are not arrestable: 1. Debts due by bill, which pass from hand to hand, as bags of money. 2. Future debts. Claims, depending on the issue of a suit, are not considered as future debts; for the sentence, when pronounced, has a retrospect to the period at which the claim was first founded. The like doctrine holds in conditional debts. 3. Alimentary debts; but the past interest due upon such debts may be arrested by the person who has furnished the alimony. The surplus fee, over and above what is necessary for a servant's personal uses, may be arrested. If the arrestee shall make payment of the sum, or deliver the goods arrested, to the common debtor, he is not only liable criminally for breach of arrestment, but he must pay the debt again to the arrester.

Arrestment is not merely prohibitory, as inhibitions are, but is a step of diligence, which founds the user in a subsequent action, whereby the property of the subject arrested may be adjudged to him.

Where arrestment proceeds on a depending action, it may be loosed by the common debtor's giving security to the arrester for his debt in the event it shall be found due. Arrestment founded on decrees, or on registered obligations, cannot be loosed but upon payment or consignation; except, 1. Where the term of payment of the debt is not yet come, or the condition has not yet existed. 2. Where the arrestment has proceeded on a registered contract, in which the debts or mutual obligations are not liquid. 3. Where the decree is suspended, or turned into a libel.

Arrestment is only an inchoated or begun diligence; to perfect it there must be an action brought by the arrester against the arrestee, to make the debt or subject arrested forthcoming.

In all competitions regard is had to the dates, not of the grounds of debt, but of the diligences proceeding upon them. In the competition of arrestments, the preference is governed by their dates, according to the priority even of hours, where it appears with any certainty which is the first. All arrestments which shall have been used for attaching any effects of a bankrupt, within sixty days prior to the bankruptcy, or within four calendar months thereafter, shall be ranked, *pari passu*, as if they had been of the same date.

Poiding is that diligence affecting moveable subjects, by which their property is carried di-

rectly to the creditor. No pouncing can proceed, till a charge be given to the debtor to pay or perform, and the days thereof be expired, except pouncings against vassals for their feued duties, and pouncings against tenants for rent, proceeding upon the landlord's own decree, in which the ancient custom of pouncing without a previous charge continues. A debtor's goods may be pounced by one creditor, though they have been arrested before by another; for arrestment, being but an imperfect diligence, leaves the right of the subject still in the debtor, and so cannot hinder any creditor from using a perfect diligence, which has the effect of carrying the property directly to himself. No cattle pertaining to the plough, nor instrument of tillage, can be pounced in the time of laboring or tilling the ground, unless where the debtor has no other goods.

Ministers may pounce for their stipends, upon one appraisement, on the ground of the lands; and landlords were always in use to pounce so for their rents.

No pouncing of the moveables belonging to a bankrupt, within forty days from his bankruptcy, or within four calendar months thereafter, shall give a preference to such pouncer; but every other creditor of the bankrupt, having liquidated grounds of debt or decrees for payment, and summoning such pouncer before the four months are elapsed, shall be entitled to a proportional share of the goods so pounced, effecting to his debt.

7. Of title by prescription.—Positive prescription is generally defined, the acquisition of property by the possessor's continuing his possession for the time which law has declared necessary for that purpose: negative is the loss or omission of a right, by neglecting to follow it forth, or use it, during the whole time limited by law.

Whoever shall have possessed his lands, annual rents, or other heritages, peaceably, in virtue of infeftments, for forty years continually after their dates, shall not thereafter be disquieted in his right by any person pretending a better title. Under heritages are comprehended every right that is *fundo annexum*, and capable of continual possession.

8. Of limitation of claims.—Actions of spuilzie, ejection, and others of that nature, must be pursued within three years after the commission of the fact on which the action is founded. Under the general words are comprehended all actions, where the pursuer is admitted to prove his libel by his own oath in litem.

Servants' fees, house rents, men's ordinaries (i. e. money due for board), and merchants' accounts, fall under the triennial prescription. There is also a general clause subjoined to this statute, of other the like debts, which includes alimentary debts, wages due to workmen, and accounts due to writers, agents, or procurators.

In accounts, prescription does not begin till the last article; for a single article cannot be called an account. Actions of removing must also be pursued within three years after the warning. Reductions of erroneous retours prescribe, if not pursued within twenty years.

Ministers' stipends, and multures prescribe in five years after they are due; and arrears of rent five years after the tenants' removing from the lands.

Bargains concerning moveables, or sums of money which are proveable by witnesses, prescribe in five years after the bargain. Under these are included sales, locations, and all other consensual contracts, to the constitution of which writing is not necessary. But all the above-mentioned debts may, after the five years, be proved, either by the oath or the writing of the debtor. A quinquennial prescription is established in arrestments, whether on decrees or depending actions: the first prescribe in five years after using the arrestment, and the last in five years after sentence is pronounced on the depending action.

No person binding for or with another, either as cautioner or co-principal, in a bond or contract for a sum of money, continues bound after seven years from the date of the bond, provided he has either a cause of relief in the bond, or a separate bond of relief, intimated to the creditor, at his receiving the bond. But all diligence used within the seven years against the cautioner shall stand good. The statute excludes all cautionaries for the faithful discharge of offices; these not being obligations in a bond or contract for sums of money: and practice has denied the benefit of it to all judicial cautioners, as cautioners in a suspension. Actions of count and reckoning, competent either to minors against their tutors or curators, or vice versa, prescribe in ten years after the majority or death of the minor.

Holograph bonds, missive letters, and books of accounts, not attested by witnesses, prescribe in twenty years, unless the creditor shall thereafter prove the verity of the subscription by the debtor's oath. The duration of bills is limited to six years.

Prescription does not run *contra non valentem agere*, against one who is barred, by some legal incapacity, from pursuing; for, in such case, neither negligence nor dereliction can be imputed to him. Prescription may be interrupted by any deed, whereby the proprietor or creditor uses his right or ground of debt.

Diligence used upon a debt, against any one of two or more co-obligants, preserves the debt itself, and so interrupts prescription against all of them; except in the special case of cautioners, who are not affected by any diligence used against the principal debtor.

CHAP. VI.—OF THE TITLE TO PROPERTY BY SUCCESSION OR DESCENT.

1. Of succession in heritable rights:—and, first, of heirs general.—Singular successors are those who succeed to a person yet alive, in a special subject by singular titles; but succession, in its proper sense, is a method of transmitting rights from the dead to the living. Heritable rights descend by succession to the heir, properly so called; moveable rights to the executors, who are sometimes said to be heirs in moveables. Succession is either by special destination, which descends to those named by the proprietor him-

self; or legal, which devolves upon the persons whom the law marks out for successors, from a presumption that the proprietor would have named them had he made a destination. The first is in all cases preferred to the other, as presumption must yield to truth.

In the succession of heritage, the heirs at law are otherwise called heirs general, heirs whatsoever, or heirs of line; and they succeed, by the right of blood, in the following order:—First, descendants; among these, sons are preferred to daughters, and the eldest son to all the younger. Where there are daughters only, they succeed equally, and are called heirs proportioners. Failing immediate descendants, grand-children succeed; and, in default of them, great-grand-children, and so on ad infinitum: preferring, as in the former case, males to females, and the eldest male to the younger. Next, after descendants, collaterals succeed; among whom the brothers german of the deceased have the first place. The immediate younger brother of the deceased excludes the rest, according to the rule that heritage descends. If there are no brothers german, the sisters german succeed equally; then brothers consanguinean, in the same order as brothers german; and, failing them, sisters consanguinean equally. Next, the father succeeds. After him, his brothers and sisters; then the grandfather; failing him, his brothers and sisters; and so upwards, as far back as propinquity can be proved. Though children succeed to their mother, a mother cannot to her child; nor is there any succession, through the mother of the deceased.

In heritage there is a right of representation, by which one succeeds, not from any title in himself but in the place, and as representing some of his deceased ascendants. In the succession of heirs portioners, indivisible rights, e. g. titles of dignity, fall to the eldest sister. A single right of superiority goes also to the eldest. The principal seat of the family falls to the eldest with the garden and orchard belonging to it, without recompence to the youngest sisters; but all other houses are divided amongst them, together with the lands on which they are built as parts and pertinents of these lands.

(2.) *Heirs by entail.*—The heir of line is entitled to the succession, not only of subjects properly heritable, but to that sort of moveables called heirship, which is the best of certain kinds. This doctrine has been probably introduced that the heir might not have a house and estate to succeed to, quite dismantled by the executor.

The appellation of *tailzie*, or *entail*, is chiefly used in the case of a land estate, which is settled on a long series of heirs substituted one after another. The person first called in the tailzie is the institute; the rest the heirs tailzie, or substitutes.

Tailzies, when considered in relation to their several degrees of force, are either, 1. Simple destinations; 2. Tailzies with prohibitory clauses; 3. Tailzies with prohibitory, resolutive, and irritant clauses. That is a simple destination where the persons called to the succession are substituted one after another, without any restraint laid on the exercise of their property. The heirs therefore, succeeding to such estate, are absolute

fiars, and consequently may alter the destination at pleasure.

In tailzies with clauses prohibitory, e. g. declaring that it shall not be lawful to the heirs to contract debts or alien the lands in prejudice of the succession, none of the heirs can alien gratuitously. But the members of entail may contract debts which will be effectual to the creditors, or may dispose of the estate for onerous causes. In both these sorts, the maker himself may alter the tailzie, except, 1. Where it has been granted for an onerous cause, as in mutual tailzies; or 2. Where the maker is expressly disabled, as well as the institute or the heirs. Where a tailzie is guarded with irritant and resolutive clauses, the estate entailed cannot be carried off by the debt or deed of any of the heirs succeeding thereto, in prejudice of the substitutes. The entail must be registered in a special register established for that purpose; and the irritant and resolutive clauses must be inserted, not only in the procuratories, precepts, and seisins, by which the tailzies are first constituted, but in all the after conveyances thereof; otherwise they can have no force against singular successors. But a tailzie, even without these requisites, is effectual against the heir of the grantor or against the institute who accepts of it. An heir of entail has full power over the entailed estate, except in so far as he is expressly fettered. Heirs of entail are entitled (notwithstanding any restrictions in the deed of entail) to improve their estates by granting leases, building farm-houses, draining, enclosing, and exchanging, under certain limitations, and to claim repayment of three-fourths of the expense from the next heir of entail. An heir, who counteracts the directors of the tailzie, by alienating any part of the estate, charging it with debt, &c., is said to contravene. It is not the simple contracting of debt that infers contravention; the lands entailed must be actually adjudged upon the debt contracted.

When the heirs of the last person specially called in a tailzie come to succeed, the irritancies have no longer any person in favor of whom they can operate; and consequently the fee, which was before tailzied, becomes simple and unlimited in the person of such heirs. The king may purchase lands within Scotland notwithstanding the strictest entail; and, where the lands are in the hands of minors or fatuous persons, his majesty may purchase them from the curators or guardians. And heirs of entail may sell to their vassals the superiorities belonging to the entailed estate; but, in all these cases, the price is to be settled in the same manner that the lands or superiorities sold were settled before the sale.

Rights, not only of land estates, but of bonds, are sometimes granted to two or more persons in conjunct fee. Where a right is so granted to two strangers, without any special clause adjoined to it, each of them has an equal interest in the fee, and the part of the deceased descends to his own heir. If the right be taken to the two jointly, and the longest liver and their heirs, the several shares of the conjunct fiars are affectable by their creditors during their lives: but, on the death of any of them, the survivor has the fee of the whole in so far as the share of the predeceased remains free after payment of his debts.

Where a right is taken to a husband and wife, in conjunct fee and life-rent, the husband is the only *fiar*; the wife's right resolves into a life rent, unless it be presumable that the fee was intended to be in the wife. Where a right of moveables is taken to husband and wife, the heirs of both succeed equally.

(3.) *Heirs by provision.*—Heirs of provision are those who succeed to any subject, in virtue of a provision in the investiture or other deed of settlement. Though all provisions to children by marriage contract, conceived in the ordinary form, being merely rights of succession, are postponed to every onerous debt of the grantor, even to those contracted posterior to the provisions; yet where a father executes a bond of provision to a child actually existing, whether such child be the heir of a marriage or not, a proper debt is thereby created, which, though it be without doubt gratuitous, is not only effectual against the father himself and his heirs, but is not reducible at the instance even of his prior onerous creditors, if he was solvent at the time of granting it.

In marriage contracts, the conquest, or certain part of it, is often provided to the issue; by which is meant whatever real addition shall be made to the father's estate during the marriage by purchase or donation. Conquest therefore must be free, i. e. what remains after payment of the father's debts. Where heritable rights are provided to the heirs of a marriage, they fall to the eldest son, for he is the heir at law in heritage. Where a sum of money is so provided, the word heir is applied to the subject of the provision, and so marks out the executor, who is the heir in moveables. When an heritable right is provided to the bairns (or issue) of a marriage, it is divided equally among the children, if no division be made by the father; for such destination cuts off the exclusive right to the legal heir. No provision granted to bairns gives a special right of credit to any one child, as long as the father lives: the right is granted *familia*; so that the whole must go to one or other of them: but the father has a power inherent in him to divide it among them, in such proportions as he thinks best, yet so as none of them may be entirely excluded, except in extraordinary cases. A clause of return is that by which a sur in a bond or other right is, in a certain event, limited to return to the grantor himself or his heirs.

(4.) *Rights and liabilities of heirs.*—An heir is, in the judgment of law, *eadem persona cum defuncto*, and so represents the deceased universally, not only in his rights, but in his debts: in the first view he is said to be heir active; in the second passive.

Before an heir can have an active title to his ancestor's rights, he must be entered by service and retour. He who is entitled to enter heir is, before his actual entry, called apparent heir. The bare right of apparency carries certain privileges with it. An apparent heir may defend his ancestor's titles against any third party who brings them under challenge. Tenants may safely pay them their rents; and, after they have once acknowledged by payment, he may compel

them to continue it; and the rents not uplifted by the apparent heir belong to his executors upon his death.

As an heir is by his entry subjected universally to his ancestor's debts, apparent heirs have therefore a year (*annus deliberandi*) allowed to them from the ancestor's decease to deliberate whether they will enter or not; till the expiration of which, though they may be charged by creditors to enter, they cannot be sued in any process founded upon such charge.

The service of heirs is either general or special. A *general* service vests the heir in the right of all heritable subjects, which either do not require seisin, or which have not been perfected by the seisin in the person of the ancestor. A *special* service, followed by seisin, vests the heir in the right of the special subjects in which the ancestor died infest.

If an heir within the *annus deliberandi* exhibit upon oath a full inventory to the clerk of the shire, his subsequent entry will subject him no farther than to the value of such inventory. Creditors are not obliged to acquiesce in the value of the estate given up by the heir; but may bring the estate to a public sale in order to discover its true value.

An heir by immixing with his ancestor's estate without entry, subjects himself to his debts as if he had entered; or incurs a passive title. This passive title is excluded, if the heir's intromission be by order of law; or if it be founded on singular titles, and not as heir to the deceased. But an apparent heir's purchasing any right to his ancestor's estate, otherwise than at public *roup* (auction), or his possessing it in virtue of rights settled in the person of any near relation of the ancestor, to whom he himself may succeed as heir, otherwise than upon purchase by public sale, is deemed behaviour as heir. Behaviour as heir is also excluded where the intromission is small, unless an intention to defraud the ancestor's creditors be presumable from the circumstances attending it.

Another passive title in heritage may be incurred by the apparent heir's accepting a gratuitous right from the ancestor to any part of the estate to which he himself might have succeeded as heir. If the right be onerous there is no passive title; if the consideration paid first does not amount to its full value, the creditors of the deceased may reduce it in so far as it is gratuitous, but still it infers no passive title. The heir incurring this passive title is no farther liable, than if he had, at the time of his acceptance, entered heir to the grantor, and so subjected himself to the debts that were then chargeable against him.

Neither of these passive titles takes place, unless the subject intermeddled with, or disposed, be such as the intromitter or receiver would succeed to as heir. In this also, these two passive titles agree, that the intromission in both must be after the death of the ancestor; for there can be no *termini habilis* of a passive title while the ancestor is alive. An apparent heir, who is cited by the ancestor's creditor in a process for payment, if he offers any peremptory defence against the debt, incurs a passive title. Every

person passing over his immediate ancestor, who had been three years in possession, and serving heir to one more remote, shall be liable for the debts and deeds of the person interjected, to the value of the estate to which he is served.

(5.) *Death-bed deeds.*—Deeds affecting heritage, if they be granted by a person on death-bed (i. e. after contracting that sickness which ends in death), to the danger of the heir, are ineffectual, except where the debts of the grantor have laid him under a necessity to alien his lands.

The allegation of death-bed is also excluded by the grantee having lived sixty days after signing the deed. The legal evidence of convalescence is the grantor's having been after the date of the deed at kirk or market unsupported, when the people are met together for any public meeting civil or ecclesiastical or at the time of public market. Where a deed is consented to or ratified by the immediate heir, it is secured against all challenge, even from the remoter.

In a competition between the creditors of the deceased and of the heir the creditors of the deceased are preferred. But this preference is limited to the case where the creditors of the deceased have used due diligence within three years from his death; and the heir's creditors may, after that period, affect it for their own payment. All dispositions by an heir of the ancestor's estate, within a year after his death, are null, in so far as they are hurtful to the creditors of the ancestor.

2. *Of succession in moveables.*—In the succession of moveable rights, it is a universal rule, that the next in degree to the deceased, or next of kin, succeeds to the whole; and, if there are two or more equally near, all of them succeed by equal parts. Neither does the right of representation obtain in the succession of moveables, except in the single case of competition between the full blood and the half blood. Where the estate of a person deceased consists partly of heritage and partly of moveables, if there are others as near in degree to the deceased as himself, but where the heir, in such case finds it his interest to renounce his exclusive claim to the heritage, and betake himself to his right as one of the next of kin, he may collate or communicate the heritage with the others, who in their turn must collate the moveables with him, so that the whole is thrown into one mass and divided equally among all of them.

One may settle his moveable estate upon whom he pleases, excluding the legal successor by a testament; which is a written declaration of what a person wills to be done with his moveable estate after his death. If the executor nominated be a stranger, he is merely a trustee, accountable to the next of kin; but he may retain a third of the dead's part for his trouble in executing the testament; in payment of which, legacies, if any be left to him, must be imputed. The heir, if he be named executor, has right to the third as a stranger; but if one be named who has an interest in the legal succession, he has no allowance unless such interest be less than a third. Nuncupative or verbal testaments are not by the law of Scotland effectual for supporting the nomination of executor, let the subject of the succession be ever so small: but verbal lega-

cies, not exceeding £100 Scots, are sustained; and, even where they are granted for more, they are ineffectual only as to the excess.

A *legacy* is a donation by the deceased to be paid by the executor to the legatee. It may be granted either in the testament or in a separate writing. Legacies are not due till the grantor's death, and consequently they can transmit no right to the executors of the legatee in the event that the grantor survives him.

Legacies where they are general, i. e. of a certain sum of money indefinitely, give the legatee no right in any one debt or subject; he can only insist in a personal action against the executor for payment out of the testator's effects. A special legacy, i. e. of a particular debt due to the deceased or of a particular subject belonging to him, is of the nature of an assignment, by which the property of the special debt or subject vests, upon the testator's death, in the legatee, who can therefore directly sue the debtor or possessor; yet, as no legacy can be claimed till the debts are paid, the executor must be cited in such process, that it may be known whether there are free effects sufficient for answering the legacy. Where there is not enough for payment of all the legacies each of the general legatees must suffer a proportional abatement; but a special legatee gets his legacy entire, though there should be nothing over for payment of the rest; and, on the contrary, he has no claim if the debt or subject bequeathed should perish, whatever the extent of the free executry may be.

Minors, after puberty, can test without their curators, wives without their husbands, and persons interdicted without their interdictors; but bastards cannot test, except in the cases afterwards set forth.

If a person deceased leaves a widow, but no child, his testament, or, in other words, the goods in communion, divide in two; one half goes to the widow; the other is the dead's part, i. e. the absolute property of the deceased on which he can test, and which falls to his next of kin, if he dies intestate. Where he leaves children, one or more, but no widow, the children get one-half as their legitimate; the other half is the dead's part, which falls also to the children, if the father has not tested upon it. If he leaves both widow and children, the division is tripartite; the wife takes one-third by herself; another falls, as legitimate, to the children equally among them, or even to an only child, though he should succeed to the heritage; the remaining third is the dead's part. Where the wife pre-deceases, without children, one-half is retained by the husband, the other falls to her next of kin. Where she leaves children, two-thirds remain with the surviving father, as if one-third were due to him *proprio nomine*, and another as administrator of the legitimate for his children; the remaining third, being the wife's share, goes to her children.

Before a testament can be divided, the debts owing by the deceased are to be deducted. As the husband has the full power of burdening the goods in communion, his debts affect the whole, and so lessen the legitimate and the share of the relict as well as the dead's part. His funeral charges and the mournings and alimony due to

the widow are considered as his proper debts; but legacies, or other gratuitous rights granted by him on death-bed, affect only the dead's part. Bonds bearing interest, due by the deceased, cannot diminish the relic's share, because such bonds, when due to the deceased, do not increase it. The funeral charges of the wife pre-deceasing, fall wholly on her executors, who have right to her share. Where the deceased leaves no family, neither husband, wife, nor child, the testament suffers no division, but all is the dead's part.

The whole issue of the husband, not only by that marriage which was dissolved by his death, but by any former marriage, has an equal interest in the legitime. But no legitime is due, 1. Upon the death of a mother. 2. Neither is it due to grandchildren, upon the death of a grandfather. Nor, 3. To children who having renounced the legitime are no longer considered as in familia.

As the right of legitime is strongly founded in nature it is not to be inferred by implication. The child who has got a provision from his father is obliged to collate it with others, and impute it towards his own share of the legitime; but, if from the deed of provision, the father shall appear to have intended it as a præcipuum to the child, collation is excluded. A child is not bound to collate an heritable subject provided to him, because the legitime is not impaired by such provision.

An executor is not vested in the right of the moveable estate of the deceased without confirmation.

Confirmation proceeds upon an edict which is affixed on the door of the parish church where the deceased dwelt, and serves to intimate to all concerned the day of confirmation, which must be nine days at least after publishing the edict. In a competition for the office of executor, the commissary prefers, primo loco, the person named to it by the deceased himself, whose nomination he ratifies or confirms, without any previous decerniture: this is called the confirmation of a testament testamentary. In default of an executor named by the deceased, universal disponees are by the present practice preferred; after them the next of kin; then the relic; then creditors; and lastly, special legatees.

A creditor, whose debtor's testament is already confirmed, may sue the executor, who holds the office for all concerned, to make payment of his debt. Where there is no confirmation, he may himself apply for the office, and confirm as executor-creditor.

A creditor, whose debt has not been constituted, or his claim not closed by decree, during the life of his debtor, has no title to demand directly the office of executor qua creditor: but he may charge the next of kin who stands off, to confirm, who must either renounce within twenty days after the charge, or be liable for the debt.

There are certain debts of the deceased, called privileged debts, which were always preferable to every other. Under that name are comprehended medicines furnished to the deceased on death-bed, physicians' fees during that period, funeral

charges, and the rent of his house, and his servants' wages for the year or term current at his death. These the executors are in safety to pay on demand. If no diligence be used within six months, the executor may retain for his own debt. Such creditors of the deceased as have used diligence within a year after their debtor's death are preferable, on the subject of his testament, to the creditors of his next of kin.

The only passive title in moveables is vicious intromission; which may be defined, an unwarrantable intermeddling with the moveable estate of a person deceased, without the order of the law. This is not confined, as the passive titles in heritage are, to the persons interested in the succession, but strikes against all intromitters whatever. Where an executor confirmed intromits with more than he has confirmed, he incurs a passive title; fraud being in the common case presumed from his not giving up an inventory of the full subject intermeddled with. Vicious intromission is also presumed where the depositories of a dying person are not sealed up, as soon as he becomes incapable of sense, by his nearest relations; or, if he dies in a house not his own, they must be sealed up by the master of such house, and the keys delivered to the judge ordinary, to be kept by him, for the benefit of all having interest.

The passive title of vicious intromission does not take place where there is any probable title or circumstance that takes off the presumption of fraud. In consequence of this rule, necessary intromission, or custodia causa, by the wife or children, who only continue the possession of the deceased in order to preserve his goods for the benefit of all concerned, infers no passive title.

The whole of a debtor's estate is subjected to the payment of his debts; and therefore both his heirs and executors are liable for them, in a question with creditors: but, as succession is by law divided into the heritable and the moveable estate, each of these ought, in a question between the several successors, to bear the burdens which naturally affect it. Action of relief is accordingly competent to the heir who has paid a moveable debt, against the executor; and vice versa. This relief is not cut off by the deceased's having disposed either his land estate or his moveables with the burden of his whole debts.

3. *Of last heirs and bastards.*—Where a vassal dies, without having any heir who can prove the remotest propinquity to him, the king succeeds as last heir, both in the heritable and moveable estate of the deceased.

If the lands to which the king succeeds be holden immediately of himself, the property is consolidated with the superiority, as if resignation had been made in the sovereign's hands. If they are holden of a subject, the king, who cannot be vassal to his own subject, names a donatory; who, to complete his title, must obtain a decree of declarator. The whole estate of the deceased is in this case subjected to his debts, and to the widow's legal provisions. Neither the king nor his donatory is liable beyond the value of the succession.

A bastard can have no legal heirs except those of his own body. The king therefore succeeds

to him, failing his lawful issue, as last heir. Though the bastard, as absolute proprietor of his own estate, can dispose of his heritage in liege pousie, and of his moveables by any deed inter vivos; yet he is disabled, ex defectu natalium, from bequeathing by testament without letters of legitimation from the sovereign. If the bastard has lawful children, he may test without such letters, and name tutors and curators to his issue.

The legal rights of succession, being founded in marriage, can be claimed only by those who are born in lawful marriage. A bastard, though he cannot succeed jure sanguinis, may succeed by destination, where he is specially called to the succession by an entail or testament.

Aliens are incapable of succeeding in feudal rights, without naturalisation. Children born in a foreign state, whose fathers were natural born subjects and not attained, are held to be natural born subjects.

CHAP. VII.—OF REMEDIES AND MODE OF PROCEDURE.

1. *Of the nature of actions for enforcing rights.*—Actions are either real or personal. A real action is that which arises from a right in the thing itself; and which therefore may be directed against all possessors of that thing. A personal action is founded only on an obligation undertaken for the performance of some fact, or the delivery of some subject; and therefore can be carried on against no other than the person obliged, or his heirs.

Actions, again, are either ordinary or rescissory. All actions are, in the sense of this division, ordinary, which are not rescissory. Rescissory actions are divided, 1. Into actions of proper improbation. 2. Actions of reduction-improbation. 3. Actions of simple reduction. Reduction-improbation is an action whereby a person, who may be hurt or affected by a writing, insists for producing or exhibiting it in court in order to have it set aside, or its effect ascertained under the certification that the writing if not produced shall be declared false and forged. As the certification in this process draws after it so heavy consequences, two terms are assigned to the defenders for production.

In an action of simple reduction, the certification is only temporary, declaring the writings called for null, until they be produced; so that they recover their full force after production.

The most usual grounds of reduction of writings are, the want of the requisite solemnities; that the grantor was minor, or interdicted, or inhibited; or that he granted it in prejudice of his lawful creditors.

In reductions on the head of force or fear, or fraud and circumvention, the pursuer must libel the particular circumstances from which his allegation is to be proved. Reduction is not competent upon every degree of force or fear; it must be such as would shake a man of constancy and resolution. Neither is it competent on that fear which arises from the just authority of husbands or parents over their wives or children, nor upon the fear arising from the regular execution of lawful diligence by caption, provided the deeds granted under that fear relate to the

ground of debt contained in the diligence; but, if they have no relation to that debt, they are reducible ex metu.

Alienations granted by debtors after contracting lawful debts, in favor of conjunct or confident persons, without just and necessary causes, and without a just price really paid, are null. One is deemed a prior creditor whose ground of debt existed before the right granted by the debtor; though the written voucher of the debt should bear a date posterior to it.

Rights, though gratuitous, are not reducible, if the grantor had at the date thereof a sufficient fund for the payment of his creditors. Provisions to children are, in the judgment of law, gratuitous; so that their effect, in a question with creditors, depends on the solvency of the grantor; but settlements to wives, either in marriage contracts, or even after marriage, are onerous, in so far as they are rational; and consequently are not reducible even though the grantor was insolvent. This rule holds also in rational tochers contracted to husbands: but it must, in all cases, be qualified with this limitation, 'if the insolvency of the grantor was not publicly known;' for, if it was, fraud is presumed in the receiver of the right, by contracting with the bankrupt.

The receiver of the deed, if he be a conjunct or confident person, must instruct or support the onerous cause of his right, not merely by his own oath, but also by some circumstances or adminicles. But, where a right is granted to a stranger, the narrative of it, expressing an onerous cause, is sufficient per se to secure it against reduction. Persons are accounted conjunct whose relation to the grantor is so near as to bar them from judging in his cause. Confident persons are those who appear to be in the grantor's confidence by being employed in his affairs, as a steward or servant.

All voluntary payments or rights made by a bankrupt to one creditor, to disappoint the more timely diligence of another, are reducible at the instance of that creditor who has used the prior diligence. But the creditor who neglects to complete his diligence within a reasonable time is not entitled to reduce any right granted by the debtor, after the time that the diligence is considered as abandoned.

A prohibited alienation, when conveyed by the receiver to another who is not privy to the fraud, subsists in the person of the bonâ fide purchaser. In the case of moveable rights, this nullity is receivable by exception; but it must be declared by reduction where the right is heritable. All alienations by a bankrupt, within sixty days before his bankruptcy, to one creditor in preference to another, are reducible at the instance even of such creditors as had not used the least step of diligence.

Actions are divided into rei persecutoriæ, and pœnales. By the first the pursuer insists barely to recover the subject that is his, or the debt due to him; and this includes the damage sustained. In penal actions, which always arise ex delicto, something is also demanded by way of penalty.

Actions of spuilzie, ejection, and intrusion,

are penal. An action of spuilzie is competent to one dispossessed of a moveable subject violently or without order of law, against the person dispossessing. Ejection and intrusion are, in heritable subjects, what spuilzie is in moveables. The difference between the two first is, that, in ejection, violence is used; whereas the intruder enters into the void possession, without either a title from the proprietor, or the warrant of a judge.

The action of contravention of law-borrows is also penal. It proceeds on letters of law-borrows (from borgh a cautioner) which contain a warrant to charge the party complained upon, that he may give security not to hurt the complainant in his person, family, or estate.

The most marked division of actions is into *petitory*, *possessory*, and *declaratory*.

Petitory actions are those where something is demanded from the defender, in consequence of a right of property or of credit in the pursuer.

Possessory actions are those which are founded either upon possession alone, as spuilzies; or upon possession joined with another title, as removings; and they are competent either for getting into possession, for holding it, or for recovering it.

A *declaratory action* is that in which some right is craved to be declared in favor of the pursuer, but nothing sought to be paid or performed by the defender.

The action of double or multiple-poining may be also reckoned declaratory. It is competent to a debtor who is distressed, or threatened with distress, by two or more persons claiming right to the debt. In these competitions, any of the competitors may bring an action of multiple-poining in the name of the tenants or other debtors, without their consent, or even though they should disclaim the process. By the bankrupt statute it is competent, in the case of a forthcoming or multiple-poining raised on an arrestment used within sixty days prior, or four calendar months subsequent to a bankruptcy, for any other creditor, who has used an arrestment, producing his interest, and making his claim in the process, at any time before the expiration of the four months, to be ranked.

A process of wakening is of the same class. An action is said to sleep when it lies over not insisted on for a year, in which case its effect is suspended; but even then it may at any time within the years of prescription be revived or wakened by a summons.

An action that stands upon any of the inner house rolls cannot sleep; nor an action in which the decree is pronounced, because it has got its full competition.

An action of transumpt falls under the same class. It is competent to those who have a partial interest in writings that are not in their own custody, against the possessors thereof, for exhibiting them, that they may be transumed for their behoof: after which full duplicates are made out, collated, and signed, by one of the clerks of court, which are called transumps, and are as effectual as an extract from the register.

A summons, when applied to actions pursued

before the session, is a writ in the king's name, issuing from his signet upon the pursuer's complaint authorising messengers to cite the defender to appear before the court and make his defences.

The days indulged by law to a defender between his citation and appearance, to prepare for his defence, are called *induciae legales*. If he is within the kingdom, twenty-seven days must be allowed him for that purpose; and, out of it, two diets of sixty and fifteen. Defenders residing in Orkney or Zetland must be cited on forty days. In certain summonses, which are privileged, the *induciae* are shortened. Spuilzies and ejections proceed on fifteen days; wakenings and transferences, being but incidental, on six.

Defences are pleas offered by a defender for eliding an action. They are either dilatory, which do not enter into the cause itself, and so can only procure an absolvitor from the *lis pendens*; or *peremptory*, which entirely cut off the pursuer's right of action.

By *litiscontestatio* a judicial contract is understood to be entered into by the litigants, by which the action is perpetuated against heirs, even when it arises *ex delicto*. *Litiscontestatio* is not formed till an act is extracted admitting the libel or defence to proof.

2. *Of probation or evidence*.—All allegations by parties to a suit must be supported by proper proof. Probation is either by writing, by the party's own oath, or by witnesses. In the case of allegations, which may be proved by either of the three ways, a proof is said to be admitted *prout de jure*, because in such case all the legal methods of probation are competent to the party; if the proof he brings by writing be lame, he may have recourse either to witnesses or to his adversary's oath; but, if he should first take himself to the proof by oath, he cannot thereafter use any other probation. As obligations or deeds signed by the party himself, or his ancestors or authors, must be of all evidence the least liable to exception; therefore every debt or allegation may be proved by proper evidence in writing. Books of account kept by merchants, tradesmen, and other dealers, though not subscribed, are probative against him who keeps them; and, in case of furnishings by a shopkeeper, such books, if they are regularly kept by him, supported by the testimony of a single witness, afford a *semiplena probatio* in his favor, which becomes full evidence by his own oath in supplement. Notarial instruments and executions by messengers bear full evidence that the solemnities therein set forth were used, not to be invalidated otherwise than by a proof of falsehood; but they do not prove any other extrinsic facts therein averred against third parties.

Regularly, no person's right can be proved by his own oath, nor taken away by that of his adversary; because these are the bare averments of parties in their own favor. But, where the matter in issue is referred by one of the parties to the oath of the other, such oath, though made in favor of the deponent himself, is decisive of the point; because the reference is a virtual contract between the litigants, by which they are

understood to put the issue of the causes upon what shall be deposed. A defender, though he cannot be compelled to swear to facts in a libel properly criminal; yet may in trespasses, where the conclusion is limited to a fine or to damages.

Oaths of verity are sometimes referred by the judge to either party, *ex officio*; which, because they are not founded on any implied contract between the litigants, are not finally decisive, but may be traversed on proper evidence afterwards produced. These oaths are commonly put by the judge for supplying a lame or imperfect proof, and are therefore called oaths in supplement.

To prevent groundless allegations, oaths of calumny have been introduced, by which either party may demand his adversary's oath, that he believes the fact contained in his libel or defences to be just and true.

In all oaths, whether of verity or of calumny, the citation carries, or at least implies, a certification, that, if the party does not appear at the day assigned for deposing, he shall be held pro confesso. Though an oath which resolves into a non memini cannot be said to prove any point, yet where one so deposes upon a recent fact, to which he himself was privy, his oath is considered as a dissembling of the truth, and he is held pro confesso, as if he had refused to swear.

An oath in litem is that which the judge refers to a pursuer, for ascertaining either the quantity or the value of goods which have been taken from him by the defender without order of law, or the extent of his damages.

The law of Scotland rejects the testimony of witnesses, 1. In payment of sums above £100 Scots, which must be proved either *scripto vel juramento*; 2. In all gratuitous promises, though for the smallest trifle; 3. In all contracts where writing is either essential to their constitution, or where it is usually adhibited, as in the borrowing of money. On the other part, probation by witnesses is admitted to the extent of £100 Scots, in payments, nuncupative legacies, and verbal agreements, which contain mutual obligations, and it is received in certain cases to the highest extent.

No person, whose near relation to another bars him from being a judge in his cause, can be admitted as a witness for him; but he may against him, except a wife or child, who cannot be compelled to give testimony against the husband or parent. The testimony of persons is rejected who have been guilty of crimes that the law declares to infer infamy.

All witnesses, before they are examined in the cause, are purged of partial counsel; that is, they must declare that they have no interest in the suit, nor have given advice how to conduct it; that they have got neither bribe nor promise, nor have been instructed how to depose; and that they bear no enmity to either of the parties.

Where facts do not admit a direct proof, presumptions are received as evidence, which in many cases make as convincing a proof as the direct. Presumptions are consequences deduced from facts known or proved, which infer the certainty, or at least a strong probability, of another fact to be proved. This kind of probation is

therefore called artificial, because it requires a reasoning to infer the truth of the point in question. Presumptions are either, 1. *Juris et de jure*; 2. *Juris*; or, 3. *Hominis* or *judicis*. The first sort obtains where statute or custom establishes the truth of any point upon a presumption; and it is so strong, that it rejects all proof that may be brought to elide it in special cases.

Presumptions *juris* are those which the law-books or decisions have established. Most of this kind are founded merely on the want of a contrary proof; thus the legal presumptions for freedom, for life, for innocence, &c. are in effect so many negative propositions. All of them may be elided, not only by direct evidence, but by other conjectures affording a stronger degree of probability to the contrary.

A *fictio juris* differs from a presumption: things are presumed which are likely to be true; but a fiction of law assumes for truth what is either certainly false, or at least is as probably false as true.

3. *Of sentences.*—Decrees of the court of session are either in *foro contradictorio*, where both parties have litigated the cause in the absence of the defender. Decrees of the session in *foro* cannot be again brought under the review of the court, either on points which the parties neglected to plead before sentence (which are called competent and omitted), or upon points pleaded and found insufficient (proposed and repelled). But decrees, though in *foro*, are reversible by the court where either they labor under essential nullities, e. g. where they are *ultra petita*, or not conformable to their grounds and warrants, or founded on an error in calculation, &c.; or where the party against whom the decree is obtained has thereafter recovered evidence sufficient to overturn it, of which he knew not before. No appeal is to be received from sentences of the session after five years from extracting the sentence, unless the person entitled to such appeal be minor, clothed with a husband, non compos mentis, imprisoned, or out of the kingdom. Sentences pronounced by the lord ordinary have the same effect, if not reclaimed against, as if they were pronounced in presence; and all petitions against the interlocutor of an ordinary must be preferred within a certain number of days after signing such interlocutor.

Decrees in absence of the defender have not the force of *res judicatæ* as to him. A party therefore may be restored against those upon paying to the other his costs. The sentences of inferior courts may be reviewed by the court of session, before decree by advocacy, and after decree by suspension or reduction.

Reduction is the proper remedy, either where the decree has already received full execution by payment, or where it decrees nothing to be paid or performed, but simply declares a right in favor of the pursuer.

Suspension is that form of law by which the effect of a sentence condemnatory, that has not yet received execution, is stayed or postponed till the cause be again considered. The first step towards suspension is a bill preferred to the lord ordinary on the bills. Suspensions of decrees in *foro* cannot pass, but by the whole lords in

time of session, and by three in vacation time; but other decrees may be suspended by any one of the judges. As suspension has the effect of staying the execution of the creditor's legal diligence, it cannot pass without caution given by the suspender to pay the debt, in the event it shall be found due. Where the suspender cannot, from his low or suspected circumstances, procure unquestionable security, the lords admit juratory caution, i. e. such as the suspender swears is the best he can offer; but the reasons of suspension are, in that case, to be considered with particular accuracy at passing the bill. Decrees in favor of the clergy, of universities, hospitals, or parish schoolmasters, for their stipends, rents, or salaries, cannot be suspended, but upon production of discharges, or on consignment of the sums charged for. Though he, in whose favor the decree suspended is pronounced, be always called the charger, yet a decree may be suspended before a charge be given on it. And suspension is competent even where there is no decree for putting a stop to any illegal act whatsoever. Letters of suspension are considered merely as a prohibitory diligence; so that the suspender, if he would turn provoker, must bring an action of reduction. If, upon discussing the letters of suspension, the reason shall be sustained, a decree is pronounced, suspending the letters of diligence on which the charge was given simpliciter, which is called a decree of suspension, and takes off the effect of the decree suspended. If the reasons of suspension be repelled, the court find the letters of diligence orderly proceeded, i. e. regularly carried on; and they ordain them to be put to farther execution.

4. *Of executions.*—Decrees are carried into execution, by diligence, either against the person, or against the estate of the debtor. The first step of personal execution is by letters of horning, which pass by warrant of the court of session, on the decrees of magistrates of boroughs, sheriffs, admirals, and commissaries. If the debtor does not obey the letters of horning, within the days of the charge, the charger, after denouncing him rebel, and registering the horning, may apply for letters of caption, which contain a command, not only to messengers, but to magistrates, to apprehend and imprison the debtor.

Law secures peers, married women, and pupils, against personal execution by caption upon civil debts. Such commoners also as are elected to serve in parliament are secured against personal execution by the privilege of parliament. No caption can be executed against a debtor within the precincts of the king's palace of Holyrood House; but this privilege of sanctuary affords no security to criminals. Where the personal presence of a debtor under caption is necessary, in any of our supreme courts, the judges are empowered to grant him a protection, for such time as may be sufficient for his coming and going, not exceeding a month. Protection from diligence is also granted by the court of session under the bankrupt statutes, where it is applied for with concurrence of the trustee, or a certain number of the creditors, as the case may require.

After a debtor is imprisoned, he ought not to be indulged the benefit of the air, not even under a guard. Any magistrate or jailer who shall suffer the prisoner to go abroad, without a proper attestation, upon oath, of the dangerous state of his health, is liable subsidiariè for the debt. Magistrates are in like manner liable if they shall suffer a prisoner to escape through the insufficiency of their prison; but if he shall escape under night by the use of instruments, or by open force, or by any other accident which cannot be imputed to the magistrates or jailer, they are not chargeable with the debt; provided they shall have, immediately after his escape, made all possible search for him.

Insolvent debtors may apply for a release from prison upon a *cessio bonorum*, i. e. upon their making over to their creditors all their estate real and personal. This must be insisted for by way of action, to which all the creditors of the prisoner ought to be made parties. The prisoner must in this action, which is cognizable only by the court of session, exhibit a particular inventory of his estate, and make oath that he has no other estate than is therein contained, and that he has made no conveyance of any part of it since his imprisonment, to the hurt of his creditors. He must also make oath whether he has granted any disposition of his effects before his imprisonment, and condescend on the persons to whom, and on the cause of granting it.

A fraudulent bankrupt is not allowed this privilege; nor a criminal, who is liable in any assythment or indemnification to the party injured or his executors, though the crime itself should be extinguished by a pardon. A disposition granted on *cessio bonorum* is merely in farther security to the creditors, not in satisfaction, or in solutum of the debts.

Where a prisoner for debt declares upon oath, before the magistrate of the jurisdiction, that he has not wherewith to maintain himself, the magistrate may set him at liberty, if the creditor does not aliment him within ten days after intimation made for that purpose. But the magistrate may detain him in prison, if the creditor chooses to bear the burden of the aliment. The statute authorising this release, which is usually called the act of grace, is limited to the case of prisoners for civil debts.

Decrees are executed against the moveable estate of the debtor by arrestment or pouncing, and against his heritable estate by inhibition, or adjudication.

5. *Of arbitrations.*—A decree arbitral is a sentence proceeding on a submission to arbiters. A submission is a contract entered into by two or more parties, who have disputable rights or claims, whereby they refer their differences to the final determination of an arbiter or arbiters, and oblige themselves to acquiesce in what shall be decided. Where the day, within which the arbiters are to decide, is left blank in the submission, practice has limited the arbiter's power of deciding to a year. Where a submission is indefinite, like all other contracts, it subsists for forty years. Submissions, like mandates, expire by the death of any of the parties' submitters before sentence. As arbiters are not vested with

jurisdiction, they cannot compel witnesses to make oath before them, or havers of writings to exhibit them; but this defect is supplied by the court of session, who at the suit of the arbiters, or of either of the parties, will grant warrant for citing witnesses, or for the exhibition of writings. For the same reason, the power of arbiters is barely to decide; the execution of the decree belongs to the judge. Where the submitters consent to the registration of the decree arbitral, performance may be enforced by summary diligence.

The power of arbiters is wholly derived from the consent of parties. Hence, where their powers are limited to a certain day, they cannot pronounce sentence after that day; nor can they subject parties to a penalty higher than that which they have agreed to in the submission; and where a submission is limited to special claims, sentence pronounced on subjects not specified in the submission is null. But on the other hand, as submissions are designed for a most favorable purpose, the amicable composing of differences, the powers thereby conferred on arbiters receive an ample interpretation. Decrees arbitral are not reducible upon any ground, except corruption, bribery, or falsehood.

CRIMINAL LAW.

CHAP. I.—OF CRIMES.

1. *Their nature.*—The word crime in its most general sense includes every breach either of the law of God, or of our country; in a more restricted meaning it signifies such transgressions of law as are punishable by courts of justice. By the Scottish law, no private party, except the party injured, or his next of kin, can accuse criminally; but the king's advocate, who in this question represents the community, has a right to prosecute all crimes in *vindictam publicam*, though the party injured should refuse to concur. Smaller offences, as petty riots, injuries, &c., which do not demand the public vengeance, pass generally by the appellation of delicts, and are punished either by fine or imprisonment.

The essence of a crime is, that there be an intention in the actor to commit; for an action in which the will of the agent has no part is not a proper object either of reward or punishment. Simple negligence does not therefore constitute a proper crime. Yet, where it is extremely gross, it may be punished arbitrarily. Far less can we reckon in the number of crimes, those committed by an idiot or furious person; but smaller degrees of fatuity, which only darken reason, will not afford a total defence, though they may save from the *pœna ordinaria*. Actions committed in drunkenness are not to be considered as involuntary, seeing the drunkenness itself, which was the first cause of the action, is both voluntary and criminal.

On the same principle, such as are in a state of infancy, or in the confines of it, are incapable of a criminal action, dole not being incident to that age; but the precise age at which a person becomes capable of dole, being fixed neither by nature nor by statute, is by our practice to be gathered by the judge, as he best can, from the

understanding and manners of the person accused. Where the guilt of a crime arises chiefly from statute, the actor, if he is under puberty, can hardly be found to be guilty; but, where nature itself points out its deformity, he may, if he is *proximus pubertati*, be more easily presumed capable of committing it; yet, even in that case he will not be punished *pœnâ ordinaria*.

One may be guilty of crime, not only by perpetrating it himself, but being accessory to a crime committed by another. A person may be guilty, art and part, either, 1. By giving advice, or counsel to commit the crime: or, 2. By giving warrant or mandate to commit it; or, 3. By actually assisting the criminal in the execution. It is generally agreed by doctors that, in the more atrocious crimes, the adviser is equally punishable with the criminal; and that, in the slighter, the circumstance arising from the adviser's smaller age, the jocular or careless manner of giving advice, &c., may be received as pleas for softening the punishment. One who gives mandate to commit a crime, as he is the first spring of action, seems more guilty than the person employed as the instrument in executing it; yet the actor cannot excuse himself under the pretence of orders which he ought not to have obeyed.

Assistance may be given to the committer of a crime not only in the actual execution but previous to it, by furnishing him, intentionally, with poison, arms, or the other means of perpetrating it. That sort of assistance which is not given till after the criminal act, and which is commonly called abetting, though it be of itself criminal, does not infer art and part of the principal crime; as if one should favor the escape of a criminal knowing him to be such, or conceal him from justice.

Those crimes that are in their consequences most hurtful to society are punished capitally, or by death; others escape with a smaller punishment, sometimes fixed by statute, and sometimes arbitrary, i. e. left to the discretion of the judge, who may exercise his jurisdiction, either by fine, imprisonment, or a corporal punishment. Where the punishment is left by law to the discretion of the judge, he can in no case extend it to death. The single escheat of the criminal falls, on conviction, in all capital trials, though the sentence should not express it.

2. *Of crimes against religion.*—Certain crimes are committed more immediately against God himself; others against the state; and a third kind against particular persons. The chief crime in the first class, cognisable by temporal courts, is blasphemy, under which is included atheism. This crime consists in the denying or vilifying the Deity by speech or writing. All who curse God, or any of the persons of the blessed Trinity, are to suffer death even for a single act; and those who deny him, if they persist in their denial. The denial of a providence, or of the authority of the Holy Scriptures, is punishable capitally for the third offence. No prosecution can now be carried on for witchcraft or conjuration. But all who undertake, from their skill in any occult science, to tell fortunes, or discover stolen goods, are to suffer imprisonment for a

year, stand in the pillory four times in that year, and find surety for their future good behaviour.

3. *Of crimes against the state and government.*—Some crimes against the state are levelled directly against the supreme power, and strike at the constitution itself: others discover such a contempt of law as tends to baffle authority, or slacken the reins of government. *Treason*, crimen majestatis, is that crime which is aimed against the majesty of the state, and can be committed only by those who are subjects of that state either by birth or residence. Soon after the union of the two kingdoms, in 1707, the laws of treason then in force in England were extended to Scotland by 7 Ann. c. 21, both with regard to the facts constituting that crime, to the forms of trial, the corruption of blood, and all the penalties and forfeitures consequent on it.

It is high treason by the law of England to imagine the death of the king, queen consort, or of the heir apparent to the crown; to levy war against the king, or adhere to his enemies; to counterfeit the king's coin, or his great or privy seal; to kill the chancellor, treasurer, or any of the twelve judges of England, while they are doing their offices; which last article is, by the forenamed act 7 Ann., applied to Scotland, in the case of slaying any judge of the session or judiciary sitting in judgment. Those who wash, clip, or lighten the proper money of the realm; who advisedly affirm, by writing or printing, that the pretender has any right to the crown, that the king and parliament cannot limit the succession to it, or who hold correspondence with the pretender, or any person employed by him, are also guilty of treason.

The forms of proceeding in the trial of treason, whether against peers or commoners, are set forth in a small treatise published by order of the house of lords in 1709, subjoined to a collection of statutes concerning treason. By the conviction upon this trial, the whole estate of the traitor becomes forfeited to the crown. His blood is also corrupted, so that, on the death of an ancestor he cannot inherit; and the estate which he cannot take falls to the immediate superior as escheat, ob defectum hæredis without distinguishing whether the lands be held of the crown or of a subject. No attainder for treason shall, after the death of the pretender and all his sons, hurt the right of any person, other than that of the offender during his natural life: the rights of creditors and other third parties, in the case of forfeiture on treason, must be determined by the law of England.

Misprison of treason, from meprendre, is the overlooking or concealing of treason. It is inferred by one's bare knowledge of the crime, and not discovering it to a magistrate or other person entitled by his office to take examinations; though he should not in the least degree assent to it. The act 7 Ann. extends the English law of misprison to Scotland. Its punishment is, by the law of England, perpetual imprisonment, together with the forfeiture of the offender's moveables, and of the profits of his heritable estate during his life; that is, in the style of our law, his simple and life-rent escheat.

The crime of *sedition* consists in the raising

commotions or disturbances in the state. It is either verbal or real. *Verbal* sedition, or leasing-making, is inferred from the uttering of words tending to create discord between the king and his people. It is punished either by imprisonment, fine, or banishment, at the discretion of the judge. *Real* sedition is generally committed by convocating together any considerable number of people, without lawful authority, under the pretence of redressing some public grievance, to the disturbance of the public peace. Those who are convicted of this crime are punished with the confiscation of their goods; and their lives are at the king's will. If any persons, to the number of twelve, shall assemble, and, being required by a magistrate or constable to disperse, shall nevertheless continue together for an hour after such command, the persons disobeying shall suffer death and confiscation of moveables.

4. *Of crimes against public justice and policy.*—Judges who wilfully, or through corruption, use their authority as a cover to injustice or oppression, are punished with the loss of honor, fame, and dignity. Under this head may be classed theftbote (from bote, compensation), which is the taking a consideration in money or goods from a thief to exempt him from punishment, or connive at his escape from justice. A sheriff or other judge, guilty of this crime, forfeits his life and goods. And even a private person who takes theftbote, suffers as the principal thief. The buying of disputed claims concerning which there is a pending process, by any judge or member either of the session or of an inferior court, is punished by the loss of the delinquent's office, and all the privileges thereto belonging.

Deforcement is the opposition given, or resistance made, to messengers or other officers while they are employed in executing the law. The court of session is competent to this crime. It is punishable with the confiscation of moveables, the one half to the king, and the other to the creditor at whose suit the diligence was used. Armed persons, to the number of three or more, assisting in the illegal running, landing, or exporting of prohibited or uncustomed goods, or any one who shall resist, wound, or maim, any officer of the revenue in the execution of his office, are punishable with death and the confiscation of moveables.

Breach of arrestment is a crime of the same nature with deforcement, as it imports a contempt of the law and of the judges. It subjects to an arbitrary corporal punishment, and the escheat of moveables; with a preference to the creditor for his debt, and for such further sum as shall be modified to him by the judge. Under this head, of crimes against good government and police, may be reckoned the forestalling of markets; that is, the buying of goods intended for a public market before they are carried thither; which, for the third criminal act, infers the escheat of moveables, as also slaying salmon in forbidden time, destroying plough-graith in time of tillage, slaying or houghing-horses or cows in time of harvest, and destroying or spoiling growing timber.

5. *Crimes against individuals.* (1.) *Murder.*—Crimes against particular persons may be di

rected either against life, limb, liberty, chastity, goods, or reputation. Murder is the wilful taking away of a person's life without a necessary cause. The law makes no distinction between premeditated and sudden homicide; both are punished capitally. Casual homicide where the actor is in some degree blameable, and homicide in self-defence, where the just bounds of defence have been exceeded, are punished arbitrarily; but the slaughter of night-thieves, house-breakers, assistants in masterful depredations, or rebels denounced for capital crimes may be committed with impunity. The crime of demembration, or the cutting off of a member, is joined with that of murder; but, in practice, its punishment has been restricted to the escheat of moveables, and an assythment or indemnification to the party. Mutilation, or the disabling of a member, is punished at the discretion of a judge.

(2.) *Self-murder*.—Self-murder is as highly criminal as the killing our neighbour; and for this reason the law has, contrary to the rule *crimina morte extinguuntur*, allowed a proof of the crime after the offender's death, that his single escheat might fall to the king or his donatory. To this end an action must be brought, not before the justiciary, but the session, because it is only intended *ad civilem effectum*, for proving and declaring the self-murder; and the next of kin to the deceased must be made a party to it.

(3.) *Parricide*.—The punishment of parricide, or the murder of a parent, is not confined by the Scottish law to the criminal himself. All his posterity in the right line are declared incapable of inheriting, and the succession devolves on the next collateral heir. Even the cursing or beating of a parent infers death, if the person guilty be above sixteen years; and an arbitrary punishment if he be under it. A presumptive or statutory murder is constituted by 1690, c. 21, by which any woman who shall conceal her pregnancy during its whole course, and shall not call for, or make use of, help in the birth, is to be reputed the murderer, if the child be dead or missing. This act was intended to discourage the unnatural practice of women making away with their children begotten in fornication, to avoid church censures. A new statute has been since enacted, with a view to improve the law of the act of 1690.

(4.) *Duelling*.—Duelling is the crime of fighting in single combat on previous challenges given and received. Fighting in a duel, without license from the king, is punishable by death; and whatever person, principal, or second, shall give a challenge to fight a duel, or shall accept a challenge, or otherwise engage therein, is punished by banishment and escheat of moveables, though no actual fighting should ensue.

(5.) *Haimsucken*.—Haimsucken (from haim, 'home' and socken, 'to seek or pursue') is the assaulting or beating of a person in his own house. The punishment of this crime is no where defined, except in the books of the Majesty, which make it the same as that of a rape. It is, therefore, like rape, capital by our practice. The assault must be made in the proper house of the person assaulted, where he lies and rises daily and nightly; so that neither a public

nor even a private house, where one is only transiently, falls within the law. Any party to a law suit, who shall slay, wound, or otherwise invade his adversary, at any period of time between executing the summons and the complete execution of the decree, or shall be accessory to such invasion, shall lose his cause. The sentence pronounced on this trial, against him who has committed the battery, is not subject to reduction, either on the head of minority, or on any other ground whatever; and if the person prosecuted for this crime shall be denounced for not appearing, his life-rent, as well as single escheat, falls upon the denunciation.

(6.) *Wrongous imprisonment*.—The crime of wrongful imprisonment is inferred by granting warrants of commitment in order to trial, proceeding on informations not subscribed, or without expressing the cause of commitment; by receiving or detaining prisoners on such warrants; by refusing to a prisoner a copy of the warrant of commitment; by detaining him in close confinement above eight days after his commitment; by not releasing him on bail, where the crime is bailable; and by transporting persons out of the kingdom, without either their own consent or a lawful sentence. The persons guilty of a wrongful imprisonment are punished by a pecuniary mulct, from £6000 down to £4000 Scots, according to the rank of the person detained; and the judge, or other person guilty, is over and above subjected to pay to the person detained a certain sum per diem, proportioned to his rank, and is declared incapable of public trust. All these penalties may be insisted for by a summary action before the session, and are subject to no modification.

(7.) *Adultery*.—Adultery is the crime by which the marriage-bed is polluted. This crime could neither by the Roman nor Jewish law be committed, but where the guilty woman was the wife of another. By the law of Scotland it is adultery, if either the man or woman be married. The law distinguishes between simple adultery and that which is notorious or manifest. Open and manifest adulterers, who continue incorrigible notwithstanding the censures of the church, are punished capitally. This crime is distinguished by one or other of the following characters; where there is issue procreated between the adulterers, or where they keep bed and company together notoriously, or where they give scandal to the church, and are, upon their obstinately refusing to listen to its admonitions, excommunicated. The punishment of simple adultery, not being defined by statute, is left to the discretion of the judge; but custom has made the falling of the single escheat one of its penalties.

(8.) *Bigamy*.—Bigamy is a person's entering into the engagement of a second marriage, in violation of a former marriage-vow subsisting. Bigamy, on the part of the man, has been tolerated in many states, before the establishment of Christianity, even by the Jews themselves; but it is prohibited by the precepts of the gospel, and it is punished by the Scottish law, whether on the part of the man or of the woman, with the pains of perjury.

(9.) *Incest*.—Incest is committed by persons who stand within the degrees of kindred forbidden in Lev. xviii., and is punished capitally. The same degrees are prohibited in affinity, as in consanguinity, Lev. xviii. 15, et seq. As this crime is repugnant to nature, all children, whether lawful or natural, stand on an equal footing: *civilis ratio civilia jura corrumpere potest, non verò naturalia*. It is difficult indeed to bring a legal proof of a relation merely natural on the side of the father; but the mother may be certainly known without marriage.

(10.) *Rape*.—There is no explicit statute making rape, or the ravishing of women, capital; but it is plainly supposed in act 1612, c. 4, by which the ravisher is exempted from the pains of death, only in the case of the woman's subsequent consent, or her declaration that she went off with him of her own free will; and even then he is to suffer an arbitrary punishment, either by imprisonment, confiscation of goods, or a pecuniary fine.

(11.) *Theft, robbery, and piracy*.—Theft is defined a fraudulent intermeddling with the property of another, with a view of making gain. The old law of Scotland proportioned the punishment of the theft to the value of the goods stolen; heightening it gradually from a slight corporal punishment to a capital, if the value amounted to thirty-two pennies Scots, which in the reign of David I. was the price of two sheep. In several later acts it was taken for granted that this crime is capital. But where the thing stolen is of small value, it is considered, not as theft but as pickery, which is punished either corporally, or by banishment. The breaking of orchards, and the stealing of green wood, is punished by a fine, which rises as the crime is repeated.

Theft may be aggravated into a capital crime, though the value of the thing stolen be trifling; as theft twice repeated, or committed in the night, or by banded men, or of things set apart for sacred uses. The receivers and concealers of stolen goods, knowing them to be such, suffer as thieves. Those who barely harbour the person of the criminal, within forty-eight hours either before or after committing the crime, are punished as partakers of the theft. Such as sell goods belonging to thieves or lawless persons, who dare not themselves come to market, are punished with banishment and the escheat of moveables.

Theft attended with violence is called *robbery*; and in the old statutes rief or stouthrief, under which class may be included sorning, or the taking of meat and drink by force, without paying for it. Stouthrief came at last to be committed so audaciously, by bands of men associated together, that it was thought necessary to vest all our freeholders with a power of holding courts upon sorners and rieviers, and condemning them to death. Nay, all were capitally punished, who to secure their lands from depredation paid to the rieviers a yearly contribution, which got the name of *black mail*. An act also passed, commanding to banishment a band of sorners, supposed to come from Egypt, called gypsies, and adjudging to death all that should be reputed Egyptians, if found thereafter within the king-

dom. Robbery committed on the seas is called *piracy*; and is punished capitally by the high admiral. Several of the facts which constitute this crime are set forth in statute 8. Geo. I. c. 24.

(12.) *Falsehood and forgery*.—Falsehood, in a large sense, is the fraudulent imitation or suppression of truth, to the damage of another. The lives and goods of persons convicted of using false weights or measures were, by our old law, in the king's mercy; and their heirs could not inherit but upon a remission. The latest statute against this crime punishes it by confiscation of moveables. That particular species of falsehood which consists in the falsifying of writings passes by the name of *forgery*. Our practice has now of a long time, agreeably to the Roman law, made this crime capital; unless the forgery be of executions or other writings of smaller moment; in which case it is punished arbitrarily. The writing must not only be fabricated but put to use, or founded on, in order to infer this crime. And, though it be strictly criminal, yet the trial of it is competent to the court of session. Where improbation is moved against a deed by way of exception, the inferior judge, before whom the action lies, may try the question ad civilem effectum. When it is pleaded as an exception, our practice to discourage affected delays obliges the defender, who moves it, to consign £40 Scots; which he forfeits, if his plea shall appear calumnious. Where a person found guilty of forgery by the court of session, is by them remitted to the justiciary, an indictment is there exhibited against him, and a jury sworn, before whom the decree of session is produced, in place of all other evidence of the crime, in respect of which the jury find the pannel guilty; so that decree being pronounced by a competent court, is held as full proof, or, in the style of the bar, as *probatio probata*.

(13.) *Perjury and subornation*.—Perjury, which is the judicial affirmation of a falsehood on oath, really constitutes the *crimen falsi*; for he who is guilty of it does in the most solemn manner substitute falsehood in the place of truth. To constitute this crime, the violation of truth must be deliberately intended by the swearer; and therefore reasonable allowance ought to be given to forgetfulness or misapprehension according to his age, health, and other circumstances. The breach of a promissory oath does not infer this crime; for he who promises on oath may sincerely intend performance when he swears, and so cannot be said to call on God to attest a falsehood. Though an oath, however false, if made upon reference in a civil question, concludes the cause, the person perjured is liable to a criminal trial; for the effect of the reference can go no further than the private right of the parties.

Notwithstanding the mischievous consequences of perjury to society, it is not punished capitally, but by confiscation of moveables, imprisonment for a year, and infamy. The court of session is competent to perjury incidenter, when in any examination upon oath, taken in a cause depending before them, a person appears to have sworn falsely: but in the common case, that trial is proper to the justiciary. Subornation

of perjury consists in tampering with persons who are to swear in judgment, by directing them how they are to depose; and it is punished with the pains of perjury.

(14.) *Stellionate, double conveyances, fraudulent bankruptcy, &c.*—The crime of stellionate, from *stellio*, includes every fraud which is not distinguished by a special name; but is chiefly applied to conveyances of the same right granted by the proprietor to different donees. The punishment of stellionate must necessarily be arbitrary, to adapt it to the various natures and different aggravations of the fraudulent acts. The persons guilty of that kind of it which consists in granting double conveyances, are by our law declared infamous, and their lives and goods at the king's mercy. The cognisance of fraudulent bankruptcy is appropriated to the court of session, who may inflict any punishment on the offender that appears proportioned to his guilt, death excepted.

(15.) *Usury.*—The crime of usury, before the reformation, consisted in the taking of any interest for the use of money; and now in taking a higher rate of interest than is authorised by law. It is divided into *usura manifesta*, or direct; and *velata*, or covered. One may be guilty of the first kind either where he covenants with the debtor for more than the lawful interest on the loan money; or where one receives the interest of a sum before it is due, since thereby he takes a consideration for the use of money before the debtor has really got the use of it. Where a debt is clogged with an uncertain condition, by which the creditor runs the hazard of losing his principal, he may covenant for a higher interest than the legal, without the crime of usury; for there the interest is not given merely in consideration of the use of the money, but of the danger undertaken by the creditor.

Covered usury is that which is committed under the mask, not of a loan, but of some other contract; e. g. a sale or an improper wadset. And, in general, all obligations entered into with an intention of getting more than the legal interest for the use of money, however they may be disguised, are usurious. As a further guard against this crime, the taking more than the legal interest for the forbearance of payment of money, merchandise, or other commodities, by way of loan, exchange, or other contrivance whatever, or the taking a bribe for the loan of money, or for delaying its payment when lent, is declared usury. Where usury is proved, the usurious obligation is not only declared void, but the creditor, if he has received any unlawful profits, forfeits the treble value of the sums or goods lent. Usury, when it is to be pursued criminally, must be tried by the justiciary; but where the libel concludes only for voiding the debt, or restitution, the session is the proper court.

(16.) *Injury to character, slander, &c.*—Injury, in its proper acceptation, is the reproaching or affronting our neighbour. Injuries are either verbal or real. A verbal injury, when directed against a private person, consists in the uttering contumelious words, which tend to expose our neighbour's character by making him little or

ridiculous. It does not seem that the twitting one with natural defects, without any sarcastical reflections, though it be uncharitable, falls under this description, as these imply no real reproach in the just opinion of mankind. Where the injurious expressions have a tendency to blacken one's moral character, or fix some particular guilt, and are deliberately repeated in different companies, or handed about in whispers to confidants, it then grows up to the crime of slander; and, where a person's moral character is thus attacked, the *animus injuriandi* is commonly inferred from the injurious words themselves, unless special circumstances be offered to take off the presumption; e. g. that the words are uttered in judgment in one's own defence, or by way of information to a magistrate and had some foundation in fact. Though the cognisance of slander is proper to the commissaries, who, as the judges Christianitatis, are the only judges of scandal; yet, for some time past, bare verbal injuries have been tried by other criminal judges, and even by the session. It is punished either by a fine proportioned to the condition of the persons injuring and injured, and the circumstances of time and place; or if the injury import scandal, by publicly acknowledging the offence; and frequently the two are conjoined. The calling one a bankrupt is not, in strict speech, a verbal injury, as it does not affect the person's moral character; yet, as it may hurt his credit in the way of business, it finds him in an action of damages, which must be brought before the judge ordinary. A real injury is inflicted by any fact by which a person's honor or dignity is affected; as striking one with a cane, or even aiming a blow without striking; spitting in one's face; assuming a coat of arms, or any other mark of distinction proper to another, &c. The composing and publishing defamatory libels may be reckoned of this kind. Real injuries are tried by the judge ordinary, and punished either by fine or imprisonment, according to the demerit of the offenders.

CHAP. II.—OF PUNISHMENT.

1. *Of criminal jurisdiction.*—Criminal jurisdiction is founded, 1. *Ratione domicilii*, if the defender dwells within the territory of the judge. Vagabonds, who have no certain domicile, may be tried wherever they are apprehended. 2. *Ratione delicti*, if the crime was committed within the territory. By a temporary act now expired, treason, committed in certain Scottish counties, was made triable by the court of justiciary, wherever it should sit.

No criminal trial can proceed, unless the person accused is capable of making his defence. Absents, therefore, cannot be tried; nor fatuous, nor furious persons, durante furore, even for crimes committed while they were in their senses. But our practice considers every person who is capable of dole to be also sufficiently qualified for making his defence in a criminal trial.

No person can be imprisoned in order to stand trial for any crime, without a warrant in writing expressing the cause and proceeding upon a subscribed information, unless in the case of indignities done to judges, riots, and other offences,

specially mentioned in Act 1701, c. 6. Every prisoner committed for trial, if the crime of which he is accused be not capital, is entitled to be released upon bail, the extent of which is to be modified by the judge, not exceeding 12,000 merks, Scots, for a nobleman, 6000 for a landed gentleman, 2000 for every other gentleman or burgess, and 600 for any other inferior person: or, in the option of the judge, £60 sterling. That persons who, either from the nature of the crime with which they are charged, or from their low circumstances, cannot procure bail, may not be for ever in prison untried, it is lawful for every prisoner to apply to the criminal judge, that his trial may be brought on. The judge must, within twenty-four hours after such application, issue letters directed to messengers, for intimating to the prosecutor to fix a diet for the prisoner's trial, within sixty days after the intimation, under the pain of wrongous imprisonment: and, if the prosecutor does not insist within that time, or, if the trial is not finished within forty days more when carried on before the justiciary, or in thirty days when before any other judge, the prisoner is, upon a second application, setting forth that the legal time is elapsed, entitled to his freedom, under the same penalty.

Upon one's committing any of the grosser crimes, it is usual for a justice of the peace, sheriff, or other judge, to take a precognition of the facts, i. e. to examine those who were present at the criminal act, upon the special circumstances attending it, in order to know whether there is ground for a trial, and to serve as a direction to the prosecutor how to set forth the facts in the libel; but the persons examined may insist to have their declarations cancelled before they give testimony at the trial. Justices of the peace, sheriffs, and magistrates of boroughs, are also authorised to receive informations concerning crimes to be tried in the circuit courts; which informations are to be transmitted to the justice clerk forty days before the sitting of the respective courts. To discourage groundless criminal trials, all prosecutors, where the defender was absolved, were condemned by statute in costs as they should be modified by the judge; and, besides, were subjected to a small fine to be divided between the fisc and the defender: and, where the king's advocate was the only pursuer, his informer was made liable. This sufficiently warrants the present practice of condemning vexatious prosecutors in a pecuniary mulct, though far exceeding the statutory sum.

2. *Of prosecutions.*—The forms of trial upon criminal accusations differ much from those observed in civil actions, if we except the case of such crimes as the court of session is competent to, and of less offences tried before inferior courts. The trial of crimes proceeds either upon indictment, which is sometimes used when the person to be tried is in prison, or by criminal letters issuing from the signet of the justiciary. In either case, the defender must be served with a full copy of the indictment or letters, and with a list of the witnesses to be brought against him, and of the persons who are to pass on the inquest; and fifteen free days must intervene be-

tween his being so served and the day of appearance. When the trial proceeds upon criminal letters, the private prosecutor must give security, at raising the letters, that he will report them, duly executed, to the justiciary in the terms of 1535, c. 35; and the defender, if he be not already in prison, is by the letters required to give caution, within a certain number of days after his citation, for his appearance upon the day fixed for his trial; and, if he gives none within the days of the charge, he may be denounced rebel, which infers the forfeiture of his moveables.

Libel.—That part of the indictment, or of the criminal letters, which contains the grounds of the charge against the defender, and the nature or degree of the punishment he ought to suffer, is called the libel. All libels must be special, setting forth the particular facts inferring the guilt, and the particular place where these facts were done. The time of committing the crime may be libelled in more general terms, with an alternative as to the month, or day of the month; but, as it is not practicable in most cases to libel upon the precise circumstances of accession that may appear in proof, libels against accessories are sufficient, if they mention, in general, that the persons prosecuted are guilty art and part.

Letters of exculpation.—The defender of a criminal trial may raise letters of exculpation, for citing witnesses in proof of his defences against the libel, or of his objections against any of the jury or witnesses, which must be executed on the same day of appearance with that of the indictment or criminal letters.

Diets of appearance.—The diets of appearance, in the court of justiciary, are peremptory. The criminal letters must be called on the very day to which the defender is cited; and hence, if no accuser appears, their effect is lost, *instantia perit*, and new letters must be raised. If the libel, or any of the executions, shall to the prosecutor appear informal, or if he be diffident of the proof, from the absconding of a necessary witness, or such like, the court will, upon a motion made by him, desert the diet *pro loco et tempore*; after which new letters become also necessary. A defender who does not appear on the very day to which he is cited is declared fugitive; in consequence of which his single escheat falls. The defender, after his appearance in court, is called the pannel.

The two things to be chiefly regarded in a criminal libel are, 1. The relevancy of the facts, i. e. their sufficiency to infer the conclusion; 2. Their truth. The consideration of the first belongs to the judge of the court; that of the other to the jury of assize. If the facts libelled be found irrelevant, the pannel is dismissed from the bar; if relevant, the court remits the proof thereof to be determined by the jury; which must consist of fifteen men, picked out by the court from a greater number, not exceeding forty-five, who have been all summoned, and given in list to the defender at serving him with a copy of the libel.

Evidence.—Crimes cannot, like debts, be referred to the defender's oath; for no person is compellable to swear against himself where his

life, limb, liberty, or estate, is concerned; nor even in crimes which infer infamy, because one's good name is, in right estimation, as valuable as his life. There is one exception, however, to this rule in trying the crime of usury, which may be proved by the usurer's oath, notwithstanding the rule, *nemo tenetur jurare in suam turpitudinem*. Crimes, therefore, are, in the general case, proveable only by the defender's free confession, or by writing, or by witnesses. No extra-judicial confession, unless it is adhered to by the pannel in judgment, can be admitted as evidence.

All objections relevant against a witness, in civil cases, are also relevant in criminal. No witness is admitted who may gain or lose by the event of the trial. *Socii criminis*, or associates in the same crime, are not admitted against one another, except either in crimes against the state, as treason; in occult crimes, where other witnesses cannot be had, as forgery; or in thefts or depredations committed in the Highlands. The testimony of the private party injured may be received against the pannel, where the king's advocate is the only prosecutor, if, from the nature of the crime, there must needs be a penalty of witnesses, as in rape, robbery, &c.

The jury and their verdict.—After all the witnesses have been examined in court, the jury are shut up in a room by themselves, where they must continue, excluded from all correspondence, till their verdict, or judgment, be subscribed by the foreman, or chancellor, and clerk; and accordingly to this verdict the court pronounce sentence, either absolving or condemning. It is not necessary, by the law of Scotland, that a jury should be unanimous in finding a person guilty; the narrowest majority is as sufficient against the pannel as for him. Juries cannot be punished on account of an erroneous verdict, either for or against the pannel. Though the proper business of a jury be to enquire into the truth of the facts found relevant by the court, for which reason they are sometimes called the inquest, yet, in many cases, they judge, also, in matters of law or relevancy. Thus, though an objection against a witness should be repelled by the court, the jury are under no necessity to give more credit to his testimony than they think just; and, in all trials of art and part, where special facts are not libelled, the jury, if they return a general verdict, are indeed judges, not only of the truth, but of the relevancy of the facts that are sworn to by the witnesses. A general verdict is that which finds, in general terms, that the pannel is guilty, or not guilty, or that the libel or defences are proved or not proved. In a special verdict, the jury finds certain facts proved, the import of which is to be afterwards considered by the court.

Execution.—Criminal judges must now suspend, for some time, the execution of such sentences as affect life or limb, that so condemned criminals, whose cases deserve favor, may have access to apply to the king for mercy. No sentence of any court of judicature south of the river Forth, importing either death or demeritation, can be executed in less than thirty days; and, if north of it, in less than forty days, after the date of the sentence. But corporal punish-

ments, less than death, or dismembering, e. g. whipping, pillory, &c., may be inflicted eight days after sentence beyond it.

Extinction or remission of crimes.—Crimes are extinguished (1.) By the death of the criminal; both because a dead person can make no defence, so that his trial would be truly a judging upon the hearing of one side; and because, though his guilt should be ever so notorious, he is, after death, carried beyond the reach of human penalties. Such trials, therefore, can have no effect, but to punish the innocent heir, contrary to that most equitable rule, *culpa tenet suos auctores*.

(2.) Crimes may be extinguished by a remission from the sovereign. But a remission, though it secures the delinquent from the public resentment, the exercise of which belongs to the crown, cannot cut off the party injured from his claim of damages, over which the crown has no prerogative. Whoever, therefore, founds on a remission, is liable in damages to the private prosecutor, in the same manner as if he had been tried and found guilty. Even general acts of indemnity passed by parliament, though they secure against such penalties as the law inflicts upon the criminal merely *per modum pœnæ*, yet do not against the payment of any pecuniary fine that is given by the statute to the party injured, nor against the demand of any claim competent to him in name of damages.

Less injuries, which cannot be properly said to affect the public peace, may be extinguished, either by the private party's expressly forgiving him, or by his being reconciled to the offender after receiving the injury. Hence arises the rule, *dissimulatione tollitur injuria*. But, where the offence is of a higher nature, the party injured, though he may pass from the prosecution, in so far as his private interest is concerned, cannot preclude the king's advocate, or procurator fiscal, from insisting *ad vindictam publicam*.

Crimes are also extinguished by prescription, which operates by the mere lapse of time, without any act either of the sovereign or of the private sufferer. Crimes prescribe in twenty years; but, in particular crimes, the prescription is limited by statute to a shorter time. No person can be prosecuted, upon the act against wrongous imprisonment, after three years. High treason, committed within his majesty's dominions, suffers likewise a triennial prescription, if indictment be not found against the traitor within that time. All actions, brought upon any penal statute made or to be made, where the penalty is appropriated to the crown, expire in two years after committing the offence; and, where the penalty goes to the crown or other prosecutor, the prosecutor must sue within one year, and the crown within two years after the year ended. Certain crimes are, without the aid of any statute, extinguished, by a shorter prescription than twenty years. By our old law, in the cases of rape, robbery, and hame-sucken, the party injured was not heard after a silence of twenty-four hours; from a presumption that persons could not be so grossly injured without immediately complaining: And it is probable that a prosecution for these crimes, if delayed for any considerable time, would be cas-

even at this day, or at least the punishment restricted. Less injuries suffer also a short prescription; law presuming forgiveness, from the nature of the offence, and the silence of the party. The particular space of time sufficient to establish this presumption, must be determined by the judge, according to circumstances.

PART IV.

THE LAW OF IRELAND.

CHAP. I.—OF THE LAW BEFORE THE UNION.

Ireland, until the last reign, constituted a distinct, though a dependent and subordinate kingdom. It was entitled the dominion, or lordship of Ireland, and the king's style was, 'lord of Ireland,' till the 33d year of Henry VIII. when he assumed the title of king, which is recognised by act of parliament, 35 Henry VIII. c. 3.

Scotland and England, though now one and the same kingdom, yet differ in their municipal laws. But England and Ireland, although so recently distinct kingdoms, yet in general agree in their laws.

On the conquest of Ireland by Henry II. the laws of England were received and sworn to by the Irish nation, assembled at the council of Lismore. At the time of this conquest the Irish were governed by what they called the Brehon law, so styled from the Irish name of judges, who were denominated Brehons. But king John, in the twelfth year of his reign, went into Ireland, and carried over with him many sages of the law, and there, by his letters patent in right of the dominion of conquest, is said to have ordained and established, that Ireland should be governed by the laws of England: which letters patent Sir Edward Coke apprehends to have been there confirmed in parliament. But to this ordinance many of the Irish were averse to conform, and still stuck to their Brehon law: so that both Henry III. and Edward I. were obliged to renew the injunction; and at length, in a parliament holden at Kilkenny, 40 Edw. III., under Lionel, duke of Clarence, the then lieutenant of Ireland, the Brehon law was formally abolished, it being unanimously declared to be indeed no law, but a lewd custom crept in of later times. And yet, even in the reign of queen Elizabeth, the wild natives still kept and preserved their Brehon law; which is described to have been 'a rule of right unwritten, but delivered by tradition from one to another, in which oftentimes there appeared great show of equity in determining the right between party and party, but in many things repugnant quite both to God's law, and man's.' The latter part of this character is alone ascribed to it, by the laws before cited of Edward I. and his grandson. But as Ireland was a distinct dominion, and had parliaments of its own, it is to be observed, that though the immemorial customs, or common law of England, were made the rule of justice in Ireland also, yet no acts of the English parliament, since the 12th of king John, extended into that kingdom; unless they were specially named, or included under general words, such as, 'within any of the king's dominions.' And this is particularly expressed, and the reason

given in the year books: 'a tax granted by the parliament of England shall not bind those of Ireland, because they are not summoned to our parliament;' and again, 'Ireland hath a parliament of its own, and maketh and altereth laws; and our statutes do not bind them, because they do not send knights to our parliament: but their persons are the king's subjects, like as the inhabitants of Calais, Gascoigny, and Guienne, while they continued under the king's subjection.' The general run of laws, enacted by the superior state, are supposed to be calculated for its own internal government, and do not extend to its distant dependent countries; which, bearing no part in the legislature, are not therefore in its ordinary and daily contemplation. But when the sovereign legislative power sees it necessary to extend its care to any of its subordinate dominions, and mentions them expressly by name, or includes them under general words, there can be no doubt but then they are bound by its laws.

The Irish nation, being formerly excluded from the benefit of the English statutes, were deprived of many excellent improvements of the common law: and, the measure of justice in both kingdoms becoming thence no longer uniform, it was enacted, that all acts of parliament, before made in England, should be of force within the realm of Ireland. But, by the same rule that no laws made in England were anciently binding in Ireland, it followed that no acts of the English parliament since the 10 Henry VII. bound the people of Ireland, unless specially named or included under general words. On the other hand, it was equally clear that where Ireland was particularly named, or included under general words, they were bound by such acts of parliament.

By a subsequent statute, 6 Geo. I. c. 5, it is declared, that the kingdom of Ireland ought to be subordinate to, and dependent upon, the imperial crown of Great Britain, as being inseparably united thereto; and that the king's majesty, with the consent of the lords and commons of Great Britain in parliament, assembled, has power to make laws to bind the people of Ireland. Thus we see how extensively the laws of Ireland communicate with those of England; and indeed such communication is highly necessary, as the ultimate resort from the courts of justice in Ireland is, as in Wales, to those in England; a writ of error (in the nature of an appeal) lying from the king's bench in England, as the appeal from the chancery in Ireland lies immediately to the house of lords here; it being expressly declared, by the same statute, 6 Geo. I. c. 5, that the peers of Ireland have no jurisdiction to affirm or reverse any judgments or decrees whatsoever. The propriety, and even necessity, in all inferior dominions, of this constitution, 'that, though justice be in general administered by courts of their own, yet the appeal in the last resort ought to be to the courts of the superior state,' is founded upon these two reasons, 1. Because otherwise the law, appointed or permitted to such inferior dominions, might be insensibly changed within itself without the assent of the superior. 2. Because otherwise judgments might

be given to the disadvantage or diminution of the superiority; or to make the dependence to be only on the person of the king, and not on the crown of England.

But this act of 6 Geo. I. c. 5 was afterwards repealed in the British parliament by the statute 22 Geo. III. c. 53. The former act, however, being considered as merely declaratory of the previous law, the repeal produced no other effect than to make the law somewhat less clear than the declaratory act had made it. Afterwards, by the 23 Geo. III. c. 28, it was declared that the people of Ireland should in all cases whatever be bound only by laws enacted by his majesty and the parliament of that kingdom; and the right claimed by them to have all actions and suits instituted in that kingdom decided in his majesty's courts there finally, and without appeal thence, was established and ascertained, as it was then said, 'for ever.' And it was declared, that such decisions were at no time to be questioned or questionable: and all writs of error and appeals in the English courts were declared to be null and void.

CHAP. II.—OF THE LAW SINCE THE UNION.

1. *Of the state and united parliament.*—By the articles of the union, 39 and 40 Geo. III., it is declared that the kingdoms of Great Britain and Ireland shall on the 1st day of January, 1801, and for ever after, be united into one kingdom, by the name of the United Kingdom of Great Britain and Ireland; and that the royal style and titles of the imperial crown, and the ensigns, armorial flags, and banners, shall be such as should be appointed by his majesty's royal proclamation. That the succession to the imperial crown shall continue settled in the same manner as the succession to the crown of Great Britain and Ireland stood before limited. That there shall be one parliament, styled the parliament of the united kingdom of Great Britain and Ireland. That four lords spiritual of Ireland, by rotation of sessions, namely one of the four archbishops and three of the eighteen bishops, and twenty-eight lords temporal of Ireland, elected for life by the peers of Ireland, shall sit in the house of lords; and 100 commoners, two for each county, two for the city of Dublin, and two for the city of Cork, one for Trinity College, and one for each of the thirty-one most considerable cities, towns, and boroughs, shall be the number to sit in the house of commons on the part of Ireland.

2. *Of peers and commoners.*—*Of peers.*—The act of union also declares, that questions respecting the rotation or election of the spiritual or temporal peers, shall be decided by the house of lords; and in the case of an equality of votes in the election of a temporal peer, the clerk of the parliament shall determine the election by drawing one of the names from a glass. A peer of Ireland, not elected one of the twenty-eight, may sit in the house of commons; but, whilst he continues a member of the house of commons, he shall not be entitled to the privilege of peerage, nor capable of being elected one of the twenty-eight, nor of voting at such election, and

he may be sued and indicted for any offence as a commoner. As often as three of the peerages of Ireland, existing at the time of the union, shall become extinct, the king may create one peer of Ireland; and when the peers of Ireland are reduced to 100 by extinction, or otherwise, exclusive of those who shall hold any peerage of Great Britain subsisting at the time of the union, or created of the united kingdom since the union, the king may then create one peer of Ireland for every peerage that becomes extinct, or as often as any one of them is created a peer of the united kingdom; so that the king may always keep up the number of 100 Irish peers, over and above those who have an hereditary seat in the house of lords.

The lords of parliament on the part of Ireland, spiritual and temporal, sitting in the house of lords, have the same rights and privileges respectively as the peers of Great Britain; and the lords spiritual and temporal of Ireland have rank and precedency next, and immediately after, all the persons holding peerages of the like order and degree in Great Britain, subsisting at the time of the union; and all peerages thereafter created of Ireland, or of the united kingdom, of the same degree, have precedency according to the dates of their creations; and the peers of Ireland, except those who are members of the house of commons, have all the privileges of peers as fully as the peers of Great Britain; the right and privileges of sitting in the house of lords, and upon the trial of peers, only excepted.

An Irish peer is now entitled to every privilege, except that of sitting in the house of lords; unless he chooses to waive it, in order to sit in the house of commons; and, therefore, Irish peers, who are not members of the house of commons, are entitled to the letters missive from the court of chancery, when a bill is filed against them.

Of the commons.—Questions respecting the election of the members of the house of commons returned for Ireland are to be tried in the same manner as questions respecting the elections for places in Great Britain, subject to such particular regulations as the parliament afterwards shall deem expedient. The qualifications by property of the representatives in Ireland are declared the same respectively as those for counties, cities, and boroughs in England, unless some other provision be afterwards made. And it was declared that, until an act should be passed in the parliament of the united kingdom, providing in what cases persons, holding offices and places of profit under the crown of Ireland, should be incapable of sitting in the house of commons, not more than twenty such persons should be capable of sitting; and, if more than twenty such persons should be returned from Ireland, then the seats of those above twenty should be vacated who have last accepted their offices or places.

The following are the cities, towns, and boroughs, which are entitled each to send one representative to sit in the house of commons. These are exclusive of the several counties, as well as of the cities of Dublin and Cork, and of Trinity College:—

- | | |
|-------------------|--------------------|
| 1. Armagh. | 17 Galway. |
| 2. Athlone. | 18. Kilkenny. |
| 3. Bandonbridge. | 19. Kinsale. |
| 4. Belfast. | 20. Limerick |
| 5. Carrickfergus. | 21. Lisburn. |
| 6. Cashel. | 22. Londonderry. |
| 7. Catherlough. | 23. Mallow. |
| 8. Clonmel. | 24. New Ross. |
| 9. Coleraine. | 25. Newry. |
| 10. Downpatrick. | 26. Portarlington. |
| 11. Drogheda. | 27. Sligo. |
| 12. Dundalk. | 28. Tralee. |
| 13. Dungannon. | 29. Waterford. |
| 14. Dungarvon. | 30. Wexford. |
| 15. Ennis. | 31. Youghall. |
| 16. Enniskillen. | |

3. *Of Protestants and Roman Catholics.*—The churches of England and Ireland are declared by the union to be united in one Protestant episcopal church, to be called the united church of England and Ireland, according to the doctrine, worship, discipline, and government of the church of England.

The laws, so far as regard the Protestant church, have been stated in the former parts of this article, and need not here be repeated.

Though the laws relating to Roman Catholics apply to all parts of the united kingdom, yet we deem it appropriate to introduce them in this place, on account of their general relation and great importance to the people of Ireland.

Of the Roman Catholic Clergy, and their church observances.—The Roman Catholic clergy, notwithstanding the removal of many disabilities, are still prohibited from officiating in any place of worship having a steeple and a bell. An exception in this respect, however, has been made in favor of places of worship in Ireland. Neither can they wear the habit of their order, except in places allowed by the statute (43 Geo. III.) or in a private house, where there are not more than five persons, besides the family. A Catholic priest cannot teach in an endowed school, nor can he receive into his school the child of any Protestant parent.

No Roman Catholic can found any religious order or society bound by monastic vows, or any school or college. All uses, trusts, and dispositions of property remain still unlawful.

Formerly the Catholics in Ireland were not allowed to bury their dead in any suppressed monastery or convent, nor to bury in the burial grounds of the established churches, unless the Protestant service was celebrated by a minister of the established church. But these restrictions are now removed (5 Geo. IV. c. 25), and Catholics may be buried in suppressed religious houses, or in Protestant church-yards, according to the Catholic ceremonial.

Catholics, having taken the oaths prescribed by the statutes 31 and 43 Geo. III., are not liable to prosecution for attending or performing mass, or other ceremonies of the church of Rome. But the place must be certified to the sessions, and the minister's name registered. The Catholic clergy are exempted from serving on juries and parochial offices.

Of the Roman Catholic laity.—Roman Ca-

tholics, who are nominated to parochial offices, are may execute them by deputy. They may hold certain offices upon taking the oath, and making the declaration prescribed by the act.

The king may grant them commissions in the army, navy, and marines. They are also eligible, upon taking the oaths of allegiance only, to the offices of commissioners of customs, excise, stamps, taxes, or any other office in the revenue, or under the post-master-general.

But they are, in strictness, disqualified from voting for members of parliament; for the oath of supremacy may be tendered, although such is not the practice, and in Ireland they are considered as eligible to vote. No Catholic, however, can sit in either house of parliament, because the oath of supremacy and declaration against popery, must be made by every member before taking his seat.

4. *Of trade and navigation.*—The subjects of Great Britain and Ireland are declared by the act of union to be equally entitled to the same privileges with regard to trade and navigation, and also in respect of all treaties with foreign powers. It was also enacted, that all prohibitions and bounties upon the exportation of merchandise, the growth, produce, or manufacture, of either country to the other shall cease. But that the importation of certain articles therein enumerated shall be subject to such countervailing duties as are specified in the act.

For twenty years from the union, i. e. until 1st of January, 1821, certain manufactured articles, viz. apparel, cabinet-ware, pottery, sadlery, &c., were subjected to a duty of £10 per cent. Salt, hops, coals, calicoes, and muslins, &c., to certain duties specified. Articles, the growth, produce, or manufacture of either country, subject to internal duty, or to duty on the materials of which they are composed, are made subject, by certain schedules in the acts, to the countervailing duties there specified. And it is provided that all articles subject to such internal duty, shall from time to time be subjected on their importation into each country respectively, from the other, to such duty as shall be sufficient to countervail such internal duty in the country from which they are exported; and that, upon the export of the like articles from one country to the other, a drawback shall be given equal in amount to the countervailing duty payable on such articles, if they had been imported into the country whence they are exported. All articles, the growth, produce, or manufacture of either country, when exported through the other, are made subject to the like charges, as on exportation directly from their own country.

All duty on the import of foreign or colonial articles into either country, shall, on their export to the other, be drawn back; and this is confirmed by 59 Geo. III. c. 52, § 8, and c. 83, § 9.

By statutes 55 Geo. III. c. 83, 59 Geo. III. c. 52, and 83, foreign or colonial goods, imported into Great Britain or Ireland from each other, shall pay such duties as on their first importation, according as they were imported either by British or foreign ships, or directly or not directly from the place of their growth; and for this purpose the clearances on the exportation

of such goods from either country to the other, shall state whether the original importation into the exporting country was a British or foreign vessel, or directly from the place of growth or not; the purpose of these acts is to prevent the evasion of the higher duties payable on the original importation, if made in foreign vessels, &c.

Corn, meal, malt, flour, and biscuit, are exempted from the operation of the union acts, so that all these, except malt, were declared free between Great Britain and Ireland, under 46 Geo. III. c. 97. The intercourse of malt between the two countries is regulated by statute 50 Geo. III. c. 34, 53, and the countervailing duties are ascertained by the several acts imposing the internal duties.

In 1823 several alterations were made under the authority of parliament for facilitating the repeal of the countervailing duties, and placing the commerce between the two countries on the footing of the coasting trade.

5. *Of taxation.*—The sinking funds, and the interest of the national debt of each country, according to the union acts, are to be defrayed by each separately. And, for the space of twenty years after the union, the contribution of Great Britain and Ireland towards the public expenditure in each year was directed to be in the proportion of fifteen to two, subject to future regulations.

Under the 56 Geo. III., c. 98, amended by 57 Geo. III., c. 48, one general consolidated fund of the united kingdom has been established, charged indiscriminately, whether in the exchequer of Great Britain or Ireland, with the whole of the interest and sinking funds of the national debts of Great Britain and Ireland, as one joint consolidated national debt, interest and sinking fund; with all other charges on the former separate consolidated funds; and, subject to such charges, to be indiscriminately applied to the service of the united kingdom.

Regulations are made for the issue of money out of the Irish exchequer, under warrant of the lord-lieutenant of Ireland, and the issues out of the treasury of Great Britain, from the growing produce of the consolidated fund; and the balance of joint contributions between Great Britain and Ireland are declared to be cancelled.

6. *Of the administration of justice.*—By the statute of union it is also enacted that all the laws and courts of each kingdom shall remain the same as they were then established, subject to such alterations by the united parliament as circumstances may require; but that all writs of error and appeals shall be decided by the house of lords of the united kingdom, except appeals from the court of admiralty in Ireland, which shall be decided by a court of delegates appointed by the court of chancery in Ireland.

7. *Apprehension of criminals in one country for offences committed in the other.*—By 44 Geo. III., c. 92, persons against whom warrants have been issued in Ireland, who shall escape to, or be in, England or Scotland, or where persons shall escape from England or Scotland to Ireland, any justice of the peace, of the place where such person shall escape to, shall indorse the warrant,

and the person charged may be apprehended where such warrant is indorsed, and carried into England, Scotland, or Ireland, as the case may require, to be proceeded against according to law.

In offences not bailable, the original warrant shall be indorsed, according to 45 Geo. III. c. 92.

If bailable, the party shall be bailed in the place where he is apprehended, by duplicate bonds, one to be transmitted to the proper officer of the place where the warrant was issued, and the other to the court of exchequer in the country where the party is bailed; and the penalty may be levied in the county where the bond is taken, on certificate of the breach thereof to the exchequer there.

Witnesses may be served in England with subpoenas, to compel appearance in Ireland in criminal prosecutions, and may be served in Ireland to compel appearance in England, 45 Geo. III., c. 92, sect. 3, 4. And by the 54 Geo. III., c. 186, sect. 2, 3, it is provided that warrants signed in England, Scotland, or Ireland, may be indorsed and acted upon in any part of the united kingdom, in the same manner as directed by 13 Geo. III., c. 31, as to warrants in England and Scotland; and judges in Ireland may indorse Scotch letters of second deliverance, for compelling attendance in Scotland of witnesses, in criminal cases, resident in Ireland.

ADDENDA.

OF ISLANDS SUBJECT TO THE LAWS OF THE UNITED KINGDOM.

There are several adjacent islands which are subject to the crown of the united kingdom. Some of them, viz. the Isles of Wight, of Portland, of Thanet, &c., are comprised within some neighbouring county, and are therefore to be looked upon as annexed to the mother Island, and part of the kingdom of England. But there are others which require a more particular consideration.

The Isle of Man is a distinct territory from England, and is not governed by our laws: neither does any act of parliament extend to it, unless it be particularly named therein, and then an act of parliament is binding there. It was formerly subject to the kings of Norway. Afterwards to England, under John and Henry III. Subsequently to Scotland, and again to England. Henry IV., by right of conquest, disposed of it to the earl of Northumberland. Several changes of dominion occurred until the year 1735, when the duke of Athol succeeded to the title, as heir of earl Derby. Though the title of king had been long abolished, the lords of the island had the power of making laws; and no process from England was available, until the year 1765, when the property in the island was purchased by the British government. It retains, however, its peculiar laws, except those of the revenue.

The islands of JERSEY, GUERNSEY, SARR, ALDERNEY, and their appendages, are also governed by their own laws. The king's writ, or process from the courts of Westminster, is there of no force; but his commission is. They are not bound by common acts of our parlia-

ment, unless particularly named. All causes are originally determined by their own officers, the bailiffs and jurats of the islands; but an appeal lies from them to the king in council, in the last resort.

For the law relating to the plantations and colonies in America, and the East and West Indies see PLANTATIONS and WEST INDIES.

LAW LANGUAGE.

All law proceedings in England were formerly written, as indeed all public proceedings were, in Norman or law French, and even the arguments of the counsel and the decisions of the court were in the same barbarous dialect: an evident and shameful badge, it must be owned, of tyranny and foreign servitude; being introduced under the auspices of William the Norman, and his sons; whereby the ironical observation of the Roman satirist came to be literally verified, that *Gallia caudicos docuit facunda Britannos*. This continued till the reign of Edward III.; who, having employed his arms successfully in subduing the crown of France, thought it unbecoming the dignity of the victors to use any longer the language of a vanquished country. By a statute therefore passed in the thirty-sixth year of his reign, it was enacted, that for the future all pleas should be pleaded, shown, defended, answered, debated, and judged in the English tongue; but be entered and enrolled in Latin. In like manner as don Alonso X., king of Castile (the great-grand-father of our Edward III.) obliged his subjects to use the Castilian tongue in all legal proceedings; and as in 1286 the German language was established in the courts of the empire. And perhaps if our legislature had then directed that the writs themselves, which are mandates from the king to his subjects to perform certain acts or to appear at certain places, should have been framed in the English language according to the rule of our ancient law, it had not been very improper. But the record or enrollment of those writs, and the proceedings thereon, which was calculated for the benefit of posterity, was more serviceable (because more durable) in a dead and immutable language than in any flux or living one. The practisers, however, being used to the Norman language, and therefore imagining they could express their thoughts more aptly and more concisely in that than in any other, still continued to take their notes in law French; and of course when these notes came to be published under the denomination of reports, they were printed in that barbarous dialect; which, joined to the additional terrors of a Gothic black letter, has occasioned many a student to throw away his Plowden and Littleton without venturing to attack a page of them. And yet in reality, upon a nearer acquaintance, they would have found nothing very formidable in the language, which differs in its grammar and orthography as much from the modern French, as the diction of Chaucer and Gower does from that of Addison and Pope. Besides, as the English and Norman languages were concurrently used by our ancestors for several centuries together, the two idioms have naturally assimilated, and mutually bor-

rowed from each other; for which reason the grammatical construction of each is so very much the same, that an Englishman (with a weeks' preparation) would understand the laws collected in their grand coutumier as well, if not better, than a Frenchman bred within the walls of Paris.

The Latin which succeeded the French for the entry and enrollment of pleas, and which continued in use for four centuries, answers so nearly to the English (oftentimes word for word) that it is not at all surprising that it should generally be imagined to be totally fabricated at home, with little more art or trouble than by adding Roman terminations to English words. Whereas in reality it is a very universal dialect, spread throughout all Europe at the irruption of the northern nations, and particularly accommodated and moulded to answer all the purposes of the lawyers with a peculiar exactness and precision. This is principally owing to the simplicity, or (if the reader pleases) the poverty and baldness of its texture, calculated to express the ideas of mankind just as they arise in the human mind, without any rhetorical flourishes, or perplexed ornaments of style; for it may be observed, that those laws and ordinances, of public as well as private communities, are generally the most easily understood, where strength and perspicuity, not harmony or elegance of expression, have been principally consulted in compiling them. These northern nations, or rather their legislators, though they resolved to make use of the Latin tongue in promulgating their laws, as being more durable and more generally known to their conquered subjects than their own Teutonic dialects, yet (either through choice or necessity) have frequently intermixed therein some words of a Gothic original; which is more or less the case in every country of Europe, and therefore not to be imputed as any peculiar blemish in our English legal Latinity. The truth is, what is generally denominated law Latin is in reality a mere technical language, calculated for eternal duration, and easy to be comprehended both in present and future times; and on those accounts best suited to preserve those memorials which are intended for perpetual rules of action. The rude pyramids of Egypt have endured from the earliest ages, while the more modern and more elegant structures of Attica, Rome, and Palmyra have sunk beneath the stroke of time.

As to the objection of locking up the law in a strange and unknown tongue, this is of little weight with regard to records, which few have occasion to read, but such as do, or ought to, understand the rudiments of Latin.

It was once observed by the late lord Ellenborough (certainly a very high authority, for he possessed a masculine intellect and great learning) that it was to be lamented, as a consequence of the statute for rendering the proceedings at law into English, that the literature of the inferior part of the profession (by which he meant the attorneys as compared with the barristers) had receded since that time. It is however somewhat questionable whether the knowledge of sufficient Latin to understand the language of

the old law proceedings could be a very decisive test of literature. Especially when it is recollected that the pleadings were formerly transcribed by the officers of the court, and not by the attorney, and in cases which varied from the ordinary routine the forms might be and probably were prepared (as they are now) by sergeants and counsel, or by special pleaders, and therefore but a scanty portion of legal learning would enable an attorney to pass through the customary practice of the profession. Besides, as Blackstone himself says, it may be observed of the law Latin, as the very ingenious Sir John Davis observes of the law French, 'that it is so very easy to be learned, that the meanest wit that ever came to the study of the law doth come to understand it almost perfectly in ten days without a reader.'

It is true indeed that the many terms of art, with which the law abounds, are sufficiently harsh when Latinised (yet not more so than those of the other sciences), and may, as Mr. Selden observes, give offence 'to some grammarians of squeamish stomachs, who would rather choose to live in ignorance of things the most useful and important, than to have their delicate ears wounded by the use of a word, unknown to Cicero, Sallust, or the other writers of the Augustan age.' Yet this is no more than must unavoidably happen when things of modern use, of which the Romans had no idea, and consequently no phrases to express them, come to be delivered in the Latin tongue. It would puzzle the most classical scholar to find an appellation, in his pure Latinity, for a constable, a record, or a deed of feoffment: it is therefore to be imputed as much to necessity, as ignorance, that they were styled in our forensic dialect *constabularius*, *recordum*, and *feoffamentum*. Thus again, another uncouth word of our ancient laws (for it is unnecessary to defend the ridiculous barbarisms sometimes introduced by the ignorance of modern practisers) the substantive *murdrum* or the verb *murdrare*, however harsh and unclassical it may seem, was necessarily framed to express a particular offence; since no other word in being, *occidere*, *interficere*, *necare*, or the like, was sufficient to express the intention of the criminal, or *quo animo* the act was perpetrated; and therefore by no means came up to the notion of murder at present entertained by our law; viz. a killing with malice aforethought.

A similar necessity to this produced a similar effect at Byzantium, when the Roman laws were turned into Greek for the use of the oriental empire. They studied more the exact and precise import of the words, than the neatness and delicacy of their cadence. And it may be suggested that the terms of the law are not more numerous, more uncouth, or more difficult to be explained by a teacher, than those of logic, physics, and the whole circle of Aristotle's philosophy, may even of the politer arts of architecture and its kindred studies, or the science of rhetoric itself. Sir Thomas More's famous legal question contains in it nothing more difficult, than the definition which in his time the philosophers currently gave of their *materia prima*, the ground work of all natural knowledge; that

it is, *neque quid, neque quantum, neque quale, neque aliquid eorum quibus ens determinatur*; or its subsequent explanation by Adrian Heereboord, who assure us that *materia prima non est corpus, neque per formam corporeitatis, neque per simplicem essentiam: est tamen ens, et quidem substantia, licet incompleta; habetque actum ex se entitativum, et simul est potentia subjectiva*. The law therefore, with regard to its technical phrases, stands upon the same footing with other studies, and requests only the same indulgence.

This technical Latin continued in use from the time of its first introduction till the subversion of our ancient constitution under Cromwell; when, among many other innovations in the law, some for the better and some for the worse, the language of our records was altered and turned into English. But, at the Restoration of king Charles, this novelty was no longer countenanced; the practisers finding it very difficult to express themselves so concisely or significantly in any other language as the Latin. And thus it continued without any sensible inconvenience till about the year 1730 when it was again thought proper that the proceedings at law should be done into English, and it was accordingly so ordered by statute 4 Geo. II. c. 26.

This provision was made, according to the preamble of the statute, that the common people might have knowledge and understanding of what was alledged or done for and against them in the process and pleadings, the judgment and entries in a cause. Which purpose Blackstone apprehends has not been answered; being apt, he says, to suspect that the people are now, after so many years experience, altogether as ignorant in matters of law as before. It may be observed, however, that the time at which the commentaries were written was too near the period of the change, fully to appreciate the general advantages which in the process of time might be expected to result from so apparently rational a course as that of using our native language in the forms of administering justice.

We cannot indeed by any means subscribe to the opinion of the learned commentator, that the *inconveniences* which have arisen from conducting the law proceedings in English are of a very formidable nature. 'It may be true,' as he says, 'that many clerks and attorneys are hardly able to read, much less to understand a record even of so modern a date as the reign of George I.' The fact is that scarcely any member of the profession ever has occasion either to read or understand such records, and when we are reminded by Blackstone himself that 'the meanest wit can understand it almost perfectly in ten days,' we need not wonder that the acquisition of it is deferred until it is really wanted, which it is at least a thousand to one will never be the case. No doubt there were inconveniences which followed this change, and which follow almost every one; but which every year diminishes in an increased proportion. It is now very nearly a century since the change took place, and the records of the courts in the reign of George I. are as little required now, as in his day were required those of Charles I.

Another objection of a more serious nature, if it were well founded, is 'that it has much enhanced the expense of legal proceedings: for since the practitioners are confined (for the sake of the stamp duties, which are thereby considerably increased) to write only a stated number of words in a sheet; and as the English language, through the multitude of its particles, is much more verbose than the Latin, it follows that the number of sheets must be very much augmented by the change.' The most considerable part of the expense, on which this objection is founded, is now removed by the repeal of the stamp duties upon law proceedings, which were forty years ago pointed out and reprehended by Mr. Bentham as an unwarrantable tax upon justice. It is true that some part of the difference of expense between writing in English and in Latin still remains, inasmuch as the charges of the practitioner are governed by the extent of the written proceedings at so much per folio of seventy-two words; yet we think no Englishman would ever think of complaining that it cost him something more to have the pleadings, which involved perhaps his highest interests, written in his native tongue, than might have happened had they been expressed in a dead language, which would occupy at least ten days tolerably to learn!

It is true that the translation of technical phrases and the names of writs and other process were found to be so very ridiculous (a writ of *nisi prius*, *quare impedit*, *fieri facias*, *habeas corpus*, and the rest, not being capable, it was thought, of an English dress with any degree of seriousness) that in two years' time a new act was obliged to be made, 6 Geo. II. c. 14, which allows all technical words to continue in the usual language, and has thereby, as Sir W. Blackstone contends, defeated every purpose of the former statute.

The attempt to translate these technical names literally was no doubt absurd, but we cannot admit that the object of the writs enumerated, or any other, could not have been briefly designated in the English language. If, however, it is impossible to do so, it is surely a matter of no great difficulty to learn the signification of the Latin term; and at all events it cannot be truly said that 'every purpose' of the statute has been defeated, when we have the proceedings themselves in English, although the technical name of some of them remains in its ancient state. That the people continue as ignorant of matters of law as before, notwithstanding the alteration, cannot be entirely correct; for they had formerly the two difficulties, of barbarous language and technical phraseology to contend with—they have now only the latter; which it may be expected will at length also yield to the influence of reasonable improvement.

But it is justly observed by Sir W. Blackstone that, although our English Justinian obtained a victory over the French language, in our courts of justice there was one mischief too deeply rooted, and which king Edward came too late to eradicate. Instead of the plain and easy method of determining suits in the county courts, the chicanery and subtleties of Norman jurisprudence had taken possession of the king's courts

to which every cause of consequence was drawn. Indeed that age, and those immediately succeeding it, were the era of refinement and subtlety. There is an active principle in the human soul, that will ever be exerting its faculties to the utmost stretch, in whatever employment, by the accidents of time and place, the general plan of education, or the customs and manners of the age and country, it may happen to find itself engaged. The northern conquerors of Europe were then emerging from the grossest ignorance in point of literature; and those who had leisure to cultivate its progress were such only as were cloistered in monasteries, the rest being all soldiers or peasants. And, unfortunately, the first rudiments of science which they imbibed were those of Aristotle's Philosophy, conveyed through the medium of his Arabian commentators; which were brought from the east by the Saracens into Palestine and Spain, and translated into barbarous Latin. So that, although the materials upon which they were naturally employed, in the infancy of a rising state, were those of the noblest kind; the establishment of religion, and the regulations of civil polity; yet, having only such tools to work with, their execution was trifling and flimsy. Both the divinity and the law of those times were, therefore, frittered into logical distinctions and drawn out in metaphysical subtleties most amazingly artificial; but which serves no other purpose than to show the vast powers of the human intellect, however vainly or preposterously employed. Hence law in particular, which (being intended for universal reception) ought to be a plain rule of action, became a science of the greatest intricacy, especially when blended with the new refinements engrafted upon feudal property: which refinements were from time to time gradually introduced by the Norman practitioners, with a view to supersede (as they did in a great measure) the more homely, but more intelligible, maxims of distributive justice among the Saxons. And, to say the truth, these scholastic reformers have transmitted their dialect and finesse to posterity, so interwoven in the body of our legal polity, that they cannot easily be taken out without injury to the substance. Statute after statute has in later times been made to pare off these troublesome excrescences, and restore the common law to its pristine simplicity and vigor, and the endeavour has greatly succeeded; but still the scars are deep and visible; and the liberality of our modern courts of justice is frequently obliged to have recourse to unaccountable fictions and circuities in order to recover that equitable and substantial justice, which for a long time was totally buried under the narrow rules and fanciful niceties of metaphysical and Norman jurisprudence.

LAWS RESPECTING GAME.

Referring to the article *GAME* for an account of the property in animals included under this denomination, and for the reasons on which the statutes are founded, and their origin in the feudal policy, we may, in the language of Sir William Blackstone, in treating of the alterations in these laws, and mentioning franchises granted of chase and free warran, as well to preserve the breed of

animals, as to indulge the subject, observe, that though the forest laws are now mitigated, and by degrees grown entirely obsolete; yet from this root has sprung a bastard slip, known by the name of the game law, now arrived to and waning in its highest vigor; both founded upon the same unreasonable notion of permanent property in wild creatures; and both productive of the same tyranny to the commons; but with this difference, that whilst the forest laws established one mighty hunter throughout the land—the game laws have raised a little Nimrod in every manor. And in one respect the ancient law was much less unreasonable than the modern; for the king's grantee of a chase or free warren might kill game in every part of his franchise; but now, though a freeholder of less than £100 a year is forbidden to kill a partridge upon his own estate, yet nobody else (not even the lord of the manor, unless he has a grant of free warren) can do it without committing a trespass and subjecting himself to an action.

Under the article *GAME*, already referred to, will be found a statement of the law, upon the old principles of the forest law, as to destroying beasts and fowls ranked under the denomination of game. By that law all persons are alike treated as trespassers and offenders who have not authority from the crown to kill game (which is royal property) by the grant of either a free warren, or who have not at least a manor of their own.

Besides the old remedies against trespassers, the laws called the game laws have also inflicted additional punishments, which are chiefly pecuniary, on persons guilty of this general offence, unless they should be people of such rank or fortune as therein specified.

For unqualified persons transgressing the law by killing game, keeping engines for that purpose, or having game in their custody; or for persons, however qualified, that kill game, or have it in possession at unseasonable times of the year, or unseasonable hours of the day or night, on Sundays or on Christmasdays, or selling or exposing it to sale, there are various penalties assigned, corporal and pecuniary, by different statutes; on any of which, but only on one at a time, the justices may convict, or in most of them prosecutions may be carried on at the assizes. The substance of these statutes will be stated under their appropriate heads.

1. *Of killing deer, hares, and other game.*—It is declared felony by the 7 and 8 Geo. IV. c. 29, to course, hunt, snare, carry away, kill, or wound, or attempt to kill or wound, any deer kept in the enclosed part of any forest, chase, or purlieu, or any enclosed land where deer are usually kept. The offender is liable to transportation for seven years, or imprisonment for two years either with or without whipping. If the offence be committed on the unenclosed part of a forest, chase, or purlieu, a penalty of £50 may be inflicted, and for the second offence the same punishment as above. Setting engines for taking deer, or pulling down any fence or bank enclosing land where deer are kept, renders the offender liable to a penalty not exceeding £20.

According to 11 Heary VII. c. 13, persons

taking pheasants or partridges with engines in another man's ground, without license, are subject to a penalty of £10. Hunting with spaniels, in standing corn, incurs a penalty, by 23 Eliz. c. 10, of 40s. Those who kill any pheasant, partridge, duck, heron, hare, or other game, are liable to a forfeiture of 20s. for every fowl and hare.

2. *Of the several qualifications for killing game.*—It may be in general sufficient to observe that the qualifications for killing game, as they are usually called, but more properly the exemptions from the penalties inflicted by the laws, are,

As to property.—1. The having a freehold or copyhold estate of £100 per annum; there being fifty times the property required to enable a man to kill a partridge, even on his own land, as to vote for a knight of the shire. 2. A leasehold for ninety-nine years or for life of £150 per annum. An ecclesiastical living is within the act. 3. Being the owner or keeper of a forest, park, chase, or warren. 4. The lord of any manor or royalty. 5. The game-keeper of qualified lords of manors, employed solely to kill game for their use.

As to rank.—Being the son and heir apparent of an esquire (a very loose and vague description), or person of superior degree. It is singular that whilst the son of an esquire is qualified on account of his rank, the father is not qualified unless he possess a sufficient amount of property.

Certificates and deputations.—By the 25 Geo. III. c. 50, and 31 Geo. III. c. 21, every person in Great Britain, the royal family excepted, who shall use any dog, gun, net, or other engine, for the taking or destruction of game (not acting as game-keeper), shall deliver in a paper or account in writing, containing his name and place of abode, to the clerk of the peace, or his deputy, and annually take out a certificate thereof; and every such certificate shall be charged with a stamp duty, amounting in the whole to £3 3s. The clerk of the peace is directed by the act annually to deliver to persons requiring the same, duly stamped, a certificate or license according to the form therein mentioned, for which he is entitled to demand 1s. for his trouble, and, on refusal or neglect to deliver the same, he is liable to forfeit £20.—Every certificate is to bear date the day when issued, and to continue in force until the 1st of July following.

Any person that shall use any greyhound, hound, pointer, setting-dog, spaniel, or other dog, or any gun, net, or engine, for taking or killing game, without a certificate, is liable to the penalty of £20. The clerks of the peace are to transmit to the stamp office in London alphabetical lists of the certificates granted every year before the 1st of August, under the penalty of £20. These lists are to be kept in the stamp office in London, and there to be inspected on payment of 1s. And the commissioners of the stamp duties are, once or oftener in every year, as soon as such lists are transmitted to them, to cause the same to be published in the newspapers circulating in each county, or such public paper as they shall think most pro-

per. Any person in pursuit of game who shall refuse to produce his certificate, or to tell his name and place of abode, or shall give any false or fictitious name or place of abode, to any person requiring the same, who shall have obtained a certificate, is liable to a penalty of £50.

Effect of the certificate.—The certificates are not to authorise persons to kill game at any time prohibited by law, nor to give any person any right to kill game, unless such person shall be qualified so to do by the law, but he shall be liable to the same penalties as if the act (relating to certificates) had not passed. So that though by this act, qualified and unqualified persons are equally included, yet having a certificate does not give an unqualified person a right to kill game. The point of right still stands upon the former acts of parliament. And any unqualified person killing game without a certificate is not only liable to the penalty inflicted by this act, but also to all the former penalties relating to the killing of game, &c.

The deputation of a game-keeper must be registered with the clerk of the peace, and such game-keeper must annually take out a certificate thereof, which certificate is charged with stamp duties amounting in the whole to £1 1s.

Game-keepers must also, within the space of twenty days next after their appointment, register their deputations, and take out a certificate thereof, in default of which they are liable, in each instance, to the penalty of £20. If any game-keeper who shall have registered his deputation, and taken out a certificate thereof, shall be changed, and a new game-keeper appointed in his stead, the first certificate is declared null and void, and the person acting under the same, after notice, is liable to the penalty of £20.

Game-keepers have power within the manors for which they are appointed to seize guns, dogs, nets, and engines, kept by unqualified persons to destroy game. But they have no right to use fire arms for the capture of poachers, though they are justified in taking them into custody.

3. *Of selling, purchasing, and possessing game.*—By 1 Jac. I. c. 17, for selling, or buying to sell again, any hare, pheasant, &c., the penalty is 10s. each hare, &c.

By the 9 Ann. c. 25, the penalty is increased to £5 against higglers, chapmen, carriers, innkeepers, victuallers, &c., for selling game, or offering the same to sale: and it is adjudged 'an exposing to sale' when any hare or other game is found in a shop, &c.

The 28 Geo. II., c. 12, enacts that persons selling, or exposing to sale, any game, are liable to the penalties inflicted by 5 Ann. c. 14, on higglers, &c., offering game to sale; and game found in the house or possession of a poulterer, salesman, fishmonger, cook, or pastry-cook, is deemed exposing thereof to sale.

According to the 58 Geo. III., c. 75, any person, whether qualified or not, who buys game, is liable to forfeit £5, and, for the discovery of offenders, the penalty is remitted, and they receive the reward from the other party if they interpose within six months.

Constables, by 7 Jac. I. c. 11, having a justice of peace's warrant, may search for game and nets in the possession of persons not qualified to kill game or keep nets. Suspected persons, without lawful occasion, found in possession of deer, or any part thereof, or of any snare or engine for taking deer, forfeit on conviction £20.

Under 4 & 5 W. & M. c. 23, the houses of suspected persons may be searched by constables, authorised by a justice of the peace, and, in case any game be found, the offender may be apprehended, and if he do not give a good account before a justice of the peace, how he came by the game, or produce the party of whom he bought it, or a creditable person to prove the sale, he shall forfeit for every article of game a sum not less than 5s., nor more than 20s., or be committed to the house of correction, not exceeding a month, nor less than ten days, and there be whipped and kept to hard labor.

Higglers, chapmen, innkeepers, victuallers, &c., having in their custody hare, pheasant, partridge, heath-game, &c., except sent by some person qualified to kill game, shall by 5 Ann. c. 14, forfeit for every hare and fowl £5, to be levied by distress and sale of their goods, being proved by one witness before a justice; and for want of distress shall be committed to the house of correction for three months; one moiety of the forfeiture belongs to the informer, and the other to the poor.

4. *Of offences during the night, &c.*—If any person shall take or kill any pheasants or partridges with any net in the night time, they shall by 23 Eliz., c. 10, forfeit 20s. for every pheasant, and 10s. for every partridge taken. By a subsequent statute the penalty for killing hares during the night is £5, or imprisonment in the house of correction for three months.

By 5 Geo. III., c. 14, persons convicted of entering warrens in the night time, and taking or killing of conies there, or aiding or assisting therein, may be punished by transportation, or by whipping, fine, or imprisonment. Persons convicted on this act are not liable to be convicted under any former act. This act does not extend to the destroying conies in the day-time, on the sea and river banks in the county of Lincoln, &c. No satisfaction is to be made for damages occasioned by entry unless they exceed 1s.

It is further enacted, by 10 Geo. III. c. 19, that if any person kill any hare, &c. between sun-setting and sun-rising, or use any guns, &c. for destroying game, he shall for the first offence be imprisoned for any time not exceeding six nor less than three months. If guilty of a second offence, after conviction of a first, to be imprisoned for any time not exceeding twelve months, nor less than six; and shall also, either for the first or any other offence, be once publicly whipped.

By 13 Geo. III., c. 80, persons destroying game, between seven at night and six in the morning, from the 12th of October to the 12th of February, and between nine at night and four in the morning from the 12th of February to the 12th of October, or in the day-time on Sundays or on Christmas day, are liable to a penalty of £20 for the first offence, £30 for the second, and £50

for the third: the amount of which, however, may be mitigated. In default of payment; imprisonment for six or twelve months may be inflicted, besides whipping.

A subsequent statute, 57 Geo. III. c. 97, inflicts the penalty of transportation for seven years, or fine and imprisonment, on persons found with offensive weapons with intent illegally to destroy game or rabbits. The 3d of Geo. IV., c. 114, adds to this hard labor.

By the statute 7 and 8 Geo. IV., c. 29, persons in the night time killing hares or conies in any warren are guilty of a misdemeanor. The same offence in the day-time, or using snares or engines, subjects the offender to a penalty of £5.

Offences during prohibited seasons of the year.—By 7 Jac. I., c. 11, pheasants or partridges are not to be taken between the 1st of July and the last of August, on pain of imprisonment for a month, or the payment of 20s. for each pheasant, &c., killed. And by the 9th Ann., c. 25, if any persons shall drive wild fowls with nets, between the 1st of July and the 1st of September, they shall forfeit 5s. for every fowl.

The 2d of Geo. III., c. 19, provides against any person taking, killing, buying or selling, or having in his custody any partridge between the 12th of February and the 1st of September, or pheasant between the 1st of February and the 1st of October, or heath-fowl between the 1st of January and the 20th of August, or grouse between the 1st of September and the 25th of July in any year.

Black game, or heath-fowl, is protected under a penalty of £20, from the 10th of December to the 20th of August. Red game, or grouse, has the same protection; and bustards from the 1st of March to the 1st of September. There is an exception by 50 Geo. III., c. 55, as to heath-game in the New Forest, and in Somerset and Devon, which may be taken between the 10th of December and the 1st of September. The eggs

of game are also protected by various penalties.

5. Of legal proceedings and their limitation.—By the 26th of Geo. II., c. 2, all suits and actions brought by virtue of stat. 8 Geo. I., for the recovery of any pecuniary penalty, or sum of money, for offences committed against any law, for the better preservation of the game, shall be brought before the end of the second term after the offence committed.

Evidence, and recovering penalties.—Witnesses refusing to appear on summonses from justices of the peace, or appearing and refusing to give evidence, are liable to forfeit £10. The certificates obtained under deputations are not to be given in evidence for killing of game by a game-keeper out of the manor in respect of which such deputation or appointment was given or made.

Penalties exceeding £20 are to be recovered in any of his majesty's courts of record at Westminster; and penalties not exceeding £20 are recoverable before two justices, and may be levied by distress. The whole of the penalties go to the informer.

6. Of the seizure of guns, dogs, and nets.—If any unqualified person shall keep a gun he shall forfeit £10: and persons being qualified may take guns from those who are not qualified, and break them, 35 Henry VIII. c. 6, and 21 and 22 Car. II. c. 25. One justice of peace, upon examination and proof of the offence, may commit the offender till he has paid the forfeiture of £10. And persons not qualified by law keeping dogs, nets, or other engines to kill game, being convicted thereof before a justice of the peace, shall forfeit £5, or be sent to the house of correction for three months.

If a person hunt upon the ground of another, such other person cannot justify the killing of his dogs, as appears by a case reported in 2 Roll. Abr. 567; but it was otherwise adjudged in Mich. 3 Car. II., in C. B. 2 Cro. 44.

LAWERS, an eminent engraver, who flourished about the middle of the sixteenth century. He was a native of Flanders, and is said to have studied under Paul Pontius, whose style of engraving he often imitated.

LAWLESS COURT, a famous court held annually at Rochford, in Essex, on Wednesday morning after Michaelmas-day. See **ROCHFORD**.

LAWN, *n. s.* Fr. *linon*. Fine linen, used in bishop's sleeves.

Should'st thou bleed,
To stop the wounds my finest lawn I'd tear,
Wash them with tears, and wipe them with my hair.
Prior.

What awe did the slow solemn knell inspire;
The duties by the lawn robed prelate payed,
And the last words, that dust to dust conveyed?
Tickel.

From high life high characters are drawn,
A saint in crape is twice a saint in lawn. *Pope.*

LAWN, *n. s.* Fr. *lande*; Ital. Span. and barb. Lat. *landa*; Teut. Sax. and Belg. *land*. An open, smooth ground: an open space of ground between woods.

Betwixt them lawns, or level downs and flocks
Grazing the tender herb, were interposed. *Milton.*
His mountains were shaded with young trees, that
gradually shot up into groves, woods, and forests,
intermixed with walks, and lawns, and gardens.
Addison.

Interspersed in lawns and opening glades,
Thin trees arise that shun each other's shades.
Pope.

Stern beasts in trains that by his truncheon fell,
Now grisly forms shoot o'er the lawns of hell. *Id.*

A Turkey carpet was his lawn,
Whereon he loved to bound. *Couper.*

A **LAWN** is a spacious plain in a park, or adjoining to a noble seat. The dimensions of a lawn, in a large park, should be as extensive as the ground will permit; and never less than fifty acres; but, in gardens of a moderate extent, a lawn of ten acres is sufficient: and, in those of the largest size, fifteen acres. The best situation for a lawn is in the front of the house: and here, if the house front the east, it will be extremely convenient; but the most desirable aspect for a lawn is that of the south-east. Some recommend an exact square, others an oblong square, some an oval, and others a circular figure. The most proper trees are the elm, oak, chestnut, and beech; and some clumps of ever-greens intermixed will add to the beauty of the whole, especially in winter; the best sorts are lord Weymouth's pine, and the silver and spruce firs.

LAWRENCE (French), LL.D., a learned modern civilian, was born at Bristol, where he

received his early education, and whence he removed to Winchester and to Corpus Christi College, Oxford. In 1781 he graduated M. A., and in 1787 LL.D. In 1797 he was appointed regius professor of civil law at Oxford, and, through the friendship of Mr. Burke and earl Fitzwilliam, became a member of the legislature. He was one of the executors of Mr. Burke, and a joint editor of his works. He contributed to the probationary odes for the laureatship, and wrote Remarks on the Apocalypse. He was also a writer in the Annual Register. A volume of letters between him and Mr. Burke has recently appeared. He died in 1807 of a decline.

LAWRENCE (sir Thomas), a distinguished English portrait painter, was born at Bristol in 1769. His father was an inn-keeper, and the artist very early exhibited proofs of his talent for the art: he is said to have sketched portraits very successfully in his fifth year. At the age of six he was sent to school, where he remained two years; and this, with the exception of a few lessons subsequently in Latin and French, constituted his whole education. His father would not even permit him to be instructed in drawing, declaring that his genius would be cramped by the restraint of rules. Young Lawrence, however, had access to the galleries of some of the neighboring gentry, in which he employed himself in copying historical and other pieces. In 1782, his father removed to Bath, where his son was much employed in taking portraits in crayon; and, having made a copy of the Transfiguration, by Raphael, the Society of Arts bestowed on him their silver palette, in consequence of its merits. During six years, he was the sole support of his father and a large family. In 1787, the family removed to London, and Lawrence was admitted a student at the Royal Academy. His subsequent career was successful and brilliant. He was elected royal associate in 1791, and, on the death of sir J. Reynolds, the next year, was made painter to the king. His reputation grew steadily, and he was soon considered the first portrait painter of the age in England. His scene from the Tempest was a successful attempt at historical painting; but that branch of the art receives too little encouragement in England, in comparison with that of portrait painting, to induce a successful artist in the latter department to cultivate the former. In 1815, he was knighted by the prince regent, who also employed him to take the likenesses of the sovereigns, and the most distinguished persons of their suite. During their visit to England, he finished the portrait of the king of

Prussia, and went to Aix-la-Chapelle, several years afterwards, to paint Alexander; thence he went to Vienna, where he completed the portraits of the emperor, the archdukes, Metternich, &c., and, in Rome, painted Pius VII. and cardinal Gonsalvi. On his return to England, he was elected president of the Royal Academy, as successor to West. This office he held till his death, which occurred suddenly, January 7, 1830. His portraits are striking likenesses, and display a bold and free pencil; but they are, particularly his later ones, chargeable with mannerism, and are not considered to be successful in expressing the nicer shades of character. In his drawing, there is a want of accuracy and finish. His income, for the last twenty years of his life, was from £10,000 to £20,000; but he died poor, owing to his zeal to possess the first-rate productions of his art, which he purchased at any price. The personal appearance of sir Thomas Lawrence was striking and agreeable. His countenance bore a marked resemblance to that of Canning, and he was always pleased when this resemblance was observed. A look of settled melancholy was always upon his features, and there was a restlessness in his manner that bespoke an unquiet spirit.

LAWRENCE, ST., GULF OF, a gulf which receives the waters of the St. Lawrence, formed between the western part of Newfoundland, the eastern shores of Labrador, the eastern extremity of New Brunswick, part of Nova Scotia, and the island of Cape Breton. It communicates with the Atlantic by three passages,—on the north, by the straits of Belleisle, between Labrador and Newfoundland; on the south-east, by the passage between Cape Ray and Newfoundland; and by the gut of Canso, which divides Cape Breton from Nova Scotia. The distance from Cape Rosier to Cape Ray is seventy-nine leagues; from Nova Scotia to Labrador, 106.

LAWSONIA. See ALHEN.

LAX, *adj.* & *n. s.*

LAX'ATIVE, *adj.* & *n. s.*

LAX'ATIVENESS,

LAX'ITY,

LAX'NESS.

not legally or morally rigid: as a substantive diarrhœa; looseness of body: laxative is having the power or tendency to remove that habit; a purgative: laxativeness, power of removing costiveness: laxity and laxness, state of being un-compressed; incoherent; not costive; not precise.

LAXAS, a town of New Granada, South America. It was formerly rich, owing to its mines; but its population is now greatly reduced.

LAY, preterite of *lie*. See LIE.

LAY, *v. a.* & *n. s.* } Sax. *legzan*, *legan*; Teut.

LAYER, *n. s.* }

lega; Dan. *legge*. To place; deposit; apply; put down; prostrate; dispose: hence to quiet; calm; allay (mentally); dispose of; put into any supposed state or condition; to scheme or contrive; charge or allege; impose; enjoin; exhibit. It is combined with a great number of prepositions and adverbs: but some one of the above original senses seems always to be retained: to lay eggs is to deposit them: a lay is synonymous with a layer, row, or stratum: it also signifies a wager.

How shall this bloody deed be answered?

It will be *laid* to us.

Id. *Hamlet.*

For her, my lord,

I dare my life *lay down*, and will do't, Sir.

Shakspeare.

Embalm me,

And *lay me forth*; although unqueened, yet like

A queen, and daughter to a king, inter me. *Id.*

Lay down by those pleasures the fearful and dangerous thunders and lightnings, and then there will be found no comparison.

Raleigh.

Another ill accident is *laying* of corn with great rains in harvest.

Bacon's Natural History.

After the egg *laid*, there is no further growth or nourishment from the female. *Id.*

A viol should have a *lay* of wire-strings below, as close to the belly as the lute, and then the strings of guts mounted upon a bridge as in ordinary viols, that the upper strings stricken might make the lower resound. *Bacon.*

Let the main part of the ground employed to gardens or corn be to a common stock: and *laid* in, and stored up, and then delivered out in proportion. *Id.*

There is a cunning, which we in England call the turning of the cat in the paw; which is, when that which a man says to another, he *lays* it as if another had said it to him. *Id.*

Every breast she did with spirit inflame,
Yet still fresh projects *laid* the grey-eyed dame.

Chapman.

Friends, loud tumults are not *laid*
With half the easiness that they are raised

Ben Jonson.

Till us death *lay*

To ripe and mellow, we are but stubborn clay.

Doane.

I have *laid down*, in some measure, the description of the old known world.

Abbot.

Let no sheep there play,

Nor frisking kids the flowery meadows *lay*.

May.

The only son of God, upon this very hill is *laid* upon the altar of the cross; and so becomes a true sacrifice for the world.

Bp. Hall.

Whilst he this, and that, and each man's blow,

Doth eye, defend, and shift, being *laid* to sore;

Backwards he bears. *Daniel's Civil War.*

He that really *lays* these two things to heart, the extreme necessity that he is in, and the small possibility of help, will never come coldly to a work of that concernment. *Drapp.*

I feared I should have found

A tempest in your soul, and came to *lay* it.

Denham.

Fathers are wont to *lay up* for their sons,

Thou for thy son art bent to *lay out* all. *Milton.*

Soft on the flowery herb I found me *laid*. *Id.*

Thus passed the night so foul, till morning fair

Came forth with pilgrim steps in amice grey,

Who with her radiant finger stilled the roar

Of thunder, chased the clouds, and *laid* the winds.

Id.

A vessel and provisions *laid* in large

For man and beast. *Id.*

Let us be glad of this, and all our fears

Lay on his providence. *Id.* *Paradise Regained.*

It is esteemed an even *lay*, whether any man lives ten years longer: I suppose it is the same, that one of any ten might die within one year.

Graunt.

And *laid about* in fight more busily,

Than the Amazonian dame Penthesile. *Hudibras.*

When we began, in courteous manner, to *lay* his unkindness *unto* him, he, seeing himself confronted

by so many. like a resolute orator, went not to denial, but to justify his cruel falsehood. *Sidney.*

After a tempest, when the winds are laid,
The calm sea wonders at the wrecks it made.

Waller.

Darkness, which fairest nymphs disarms,
Defends us ill from Mira's charms ;

Mira can lay her beauty by,

Take no advantage of the eye,

Quit all that Lely's art can take,

And yet a thousand captives make. *Id.*

Tycho Brahe laid out, besides his time and industry, much greater sums of money on instruments than any man we ever heard of. *Boyle.*

You see what obligation the profession of Christianity lays upon us to holiness of life. *Tillotson.*

Kircher lays it down as a certain principle, that there never was any people so rude, which did not acknowledge and worship one supreme deity.

Stillingfleet.

The writers of those times lay the disgraces and ruins of their country upon the numbers and fierceness of those savage nations that invaded them.

Temple.

The whole was tilled, and the harvest laid up in several granaries. *Id.*

I lay the deep foundations of a wall,

And Enos, named from me, the city call.

Dryden.

At once the wind was laid, the whispering sound Was dumb, a rising earthquake rocked the ground.

Id.

But since you will be mad, and since you may Suspect my courage, if I should not lay ;
The pawn I proffer shall be full as good. *Id.*

While cumbered with my dropping cloaths I lay,
The cruel nation covetous of prey,
Stained with my blood the' un hospitable coast.

Id. Æneid.

They lay want of invention to his charge ; a capital crime. *Id.*

A prince who never disobeyed,

Not when the most severe commands were laid,

Nor want, nor exile with his duty weighed.

Dryden.

He took the quiver and the trusty bow

Achates used to bear ; the leaders first

He laid along, and then the vulgar pierced. *Id.*

Dismiss your rage, and lay your weapons by,
Know I protect them, and they shall not die. *Id.*

Answer, or answer not, 'tis all the same,

He lays me on, and makes me bear the blame.

Id.

I have laid in for these, by rebating the satire, where justice would allow it, from carrying too sharp an edge. *Id.*

The story of the tragedy is purely fiction : for I take it up where the history has laid it down. *Id.*

He laid down his pipe, and cast his net, which brought him a very great draught. *L'Estrange.*

The husband found no charm to lay the devil in a petticoat, but the rattling of a bladder with beads in it. *Id.*

O bird ! the delight of gods and of men ! and so he lays himself forth upon the gracefulness of the raven. *Id.*

A dispute, where every little straw is laid hold on, and every thing that can but be drawn in any way, to give colour to the argument, is advanced with ostentation. *Locke.*

The pictures drawn in our minds are laid in fading colours, and, if not sometimes refreshed, vanish and disappear. *Id.*

If you can get a good tutor, you will never repent the charge ; but will always have the satisfaction to think it the money, of all other, the best laid out. *Id.*

They, who so state a question, do no more but separate and disentangle the parts of it, one from another and lay them, when so disentangled, in their due order. *Id.*

A tax laid upon land seems hard to the landholder, because it is so much money going out of his pocket. *Id.*

They lay the blame on the poor little ones. *Id.*

Retention is the power to revive again in our minds, those ideas which, after imprinting, have disappeared, or have been laid aside out of sight. *Id.*

Favourable seasons of aptitude and inclination, be heedfully laid hold of. *Id.*

We make no excuses for the obstinate : blows are the proper remedies ; but blows laid on in a way different from the ordinary. *Id. on Education.*

It was a sandy soil, and the way had been run of dust ; but an hour or two before a refreshing fragment shower of rain had laid the dust. *Ray.*

The chief time of laying gilliflowers is in July, when the flowers are gone. *Mortimer's Husbandry.*

Hens will greedily eat the herb which will make them lay the better. *Id.*

Upon this they lay a layer of stone, and upon that a lay of wood. *Id.*

A layer of rich mould beneath, and about this natural earth to nourish the fibres. *Evelyn.*

Never more shall my torn mind be healed,

Nor taste the gentle comforts of repose !

A dreadful band of gloomy cares surround me,

And lay strong siege to my distracted soul.

Philips.

If we lay all these things together, and consider the parts, rise, and degrees of his sin, we shall find that it was not for nothing. *South.*

In the late successful rebellion, how studiously did they lay about them, to cast a slur upon the king ! *Id.*

A hen mistakes a piece of chalk for an egg, and sits upon it ; she is insensible of an increase or diminution in the number of those she lays. *Addison.*

A Roman soul is bent on higher views,

To civilize the rude unpolished world,

And lay it under the restraint of laws. *Id.*

Readers, who are in the flower of their youth, should labour at those accomplishments which may set off their persons when the bloom is gone, and to lay in timely provisions for manhood and old age. *Id. Guardian.*

My father never at a time like this
Would lay out his great soul in words, and waste
Such precious moments. *Id. Cato.*

The wars have laid whole countries waste.

Addison.

Their office it is to lay the business of the nation before him. *Id.*

No selfish man will be concerned to lay out himself for the good of his country. *Smalridge.*

I shall lay down some indisputable marks of this vice, that, whenever we see the tokens, we may conclude the plague is in the house :—let us hear your diagnosticks. *Collier on Pride.*

The terrestrial matter is disposed into strata or layers, placed one upon another, in like manner as any earthly sediment, settling down from a flood in great quantity, will naturally be. *Woodward.*

Whilst you lay on your friend the favour, acquit him of the debt. *Wycherley.*

For that look which does your people awe,
When in your throne and robes you give 'em law,
Lay it by here, and give a gentler smile. *Walker.*

Ambitious conquerors, in their mad career,
Checked by thy voice, *lay down* the sword and spear.
Blackmore's Creation.

There was eagerness on both sides; but this is far
from *laying* a blot upon Luther. *Atterbury.*

Till he *lays* his indictment in some certain coun-
try, we do not think ourselves bound to answer. *Id.*

He was dangerous, and takes occasion to *lay out*
bigotry, and false confidence, in all its colours. *Id.*

If the sinus lie distant, *lay* it open first, and cure
that apertion before you divide that in ano. *Wiseman.*

Don Diego and we have *laid* it so, that, before the
rope is well about thy neck, he will break in and cut
thee down. *Arbuthnot.*

Roscommon first, then Mulgrave rose, like light;
The Stagyrite, and Horace, *laid aside*,
Informed by them, we need no foreign guide. *Granville.*

I cannot better satisfy your piety, than by *laying*
before you a prospect of your labours. *Wake.*

I must *lay down* this for your encouragement, that
we are no longer now under the heavy yoke of a per-
fect unsinning obedience. *Id.*

We to thy name our annual rites will pay,
And on thy altars sacrifices *lay*. *Pope's Statius.*

Homer is like his Jupiter, has his terrors, shaking
Olympus; Virgil, like the same power in his bene-
volence, counselling with the gods, *laying* plans for
empires. *Pope.*

Neglect the rules each verbal critick *lays*,
For not to know some trifles is a praise. *Id.*

What right, what true, what fit, we justly call,
Let this be all my care; for this is all;
To *lay* this harvest *up*, and hoard with haste
What every day will want, and most, the last. *Id.*

A scheme which was writ some years since, and
laid by to be ready on a fit occasion. *Swift.*

From the maxims *laid down* many may conclude
that there had been abuses. *Id.*

The colouring upon those maps should be *laid on*
so thin, as not to obscure or conceal any part of the
lines. *Watts.*

Many trees may be propagated by *layers*: this
is to be performed by slitting the branches a little
way, and *laying* them *under* the mould about half
a foot. *Miller.*

No money is better spent than what is *laid out* for
domestic satisfaction. A man is pleased that his
wife is dressed as well as other people, and the wife
is pleased that she is dressed. *Johnson.*

I served out my trade when the gallant game was
played,
And the Moro low was *laid* at the sound of the drum.
Burns.

Do not you think there is a sort of antipathy be-
tween philosophical and poetical genius? I ques-
tion whether any one person was ever eminent for
both. Lucretius *lays aside* the poet when he assumes
the philosopher, and the philosopher when he assumes
the poet. *Beattie.*

How many hours of night or day
In those suspended pangs I *lay*,
I could not tell; I scarcely knew
If this were human breath I drew. *Byron.*

LAY, *n. s.* Sax. ley, leag. See LEA. Pas-
ture land: ground laid down in grass.

A tuft of daisies on a flowery *lay*
They saw. *Dryden's Flower and Leaf.*

The plowing of *layes* is the first plowing up of
grass ground for corn. *Mortimer's Husbandry.*

LAY, *n. s.* Sax. ley, leoð; Ital. lai; Welsh
llais; Goth. *lio*, from *loa*, to sound. A song or
poem.

To the maiden's sounding timbrels sung,
In well attuned notes, a joyous *lay*.
Faerie Queene.

Soon he slumbered, fearing not be harmed,
The whiles with a loud *lay*, she thus him sweetly
charmed. *Id.*

This is a most majestic vision, and
Harmonious charming *lays*. *Shakespeare.*

Nor then the solemn nightingale
Ceased warbling, but all night tuned her soft *lays*.
Milton.

If Jove's will
Have linked that amorous power to thy soft *lay*,
Now timely sing. *Id.*

He reached the nymph with his harmonious *lay*,
Whom all his charms could not incline to stay.
Waller.

On Ceres let him call, and Ceres praise
With uncouth dances, and with country *lays*.
Dryden.

Even gods incline their ravished ears,
And tune their own harmonious spheres
To his immortal *lays*. *Dennis.*

Unhappy Dryden! in all Charles's days,
Roscommon only boasts unspotted *lays*. *Pope.*

I strive, with wakeful melody, to cheer
The sullen gloom, sweet Philomel! like thee,
And call the stars to listen: every star
Is deaf to mine, enamoured of thy *lay*. *Young.*

But hail, ye mighty masters of the *lay*,
Nature's true sons, the friends of man and truth,
Whose song sublimely sweet, serenely gay,
Amused my childhood, and informed my youth.
Beattie.

On thy voiceless shore
The heroic *lay* is tuneless now—
The heroic bosom beats no more!
And must thy lyre, so long divine,
Degenerate into hands like mine? *Byron.*

LAY, *adj.* } Lat. *laicus*; Gr. *laos*, the
LAYMAN, *n. s.* } people. Belonging to the peo-
ple as distinct from the clergy: one of the people;
a painter's image of a man.

The say of the father may no way prejudice the
bishop's authority, but it excludes the assistance of
laymen from their consistories. *Bp. Taylor.*

All this they had by law, and none repined,
The preference was but due to Levi's kind:
But, when some *lay* preferment fell by chance,
The Gourmands made it their inheritance.
Dryden.

Since a trust must be, she thought it best
To put it out of *laymen's* power at least,
And for their solemn vows prepared a priest. *Id.*

You are to have a *layman* almost as big as the life
for every figure in particular, besides the natural
figure before you. *Id. Dufresnoy.*

It might well startle
Our *lay* unlearned faith. *Rowe.*

Lay persons, married or unmarried; being doctors
of the civil law, may be chancellors, officials, &c.
Ayliff's Parergon.

Laymen will neither admonish one another them-
selves, nor suffer ministers to do it.
Government of the Tongue.

Where can be the grievance, that an ecclesiastical
landlord should expect a third part value for his
lands, his title as antient, and as legal, as that of a
layman, who is seldom guilty of giving such bene-
ficial bargains? *Swift.*

LAY BROTHERS, among the Romanists, pious but illiterate persons, who devote themselves in some convent to the service of the religious. They wear a different habit from that of the religious; but never enter into the choir, nor are present at the chapters: nor do they make any other vow except of constancy and obedience. In the nunneries there are also lay sisters.

The institution of lay brothers began in the eleventh century. The persons on whom this title was conferred were such as were too ignorant to become clerks, and who therefore applied themselves wholly to bodily labor.

It seems to have taken its rise from hence, that the laity in those days had not, for the generality, the least tincture of learning; whence also those came to be called clerks, by way of distinction, who had studied a little, and were able to read.

In some orders they are only retained by a civil contract, which, however, binds them for life; in other orders they are to pass through four years of probation, as among the Jacobins; or seven, as among the Feuillants. The Capuchins admit none before nineteen years of age. The Jesuits call them coadjutors.

LAYBACH, GOVERNMENT OF, one of the greatest divisions of Austrian ILLYRIA, which see. It is divided into the circles of Laybach, Neustadtel, Adelsberg, Clagenfurt, and Villah. Population about 640,000.

LAYBACH, one of the circles of the above government, has a territorial extent of 1423 square miles, and a population of 140,000.

LAYBACH, the capital of the division of Austrian Illyria of this name, stands on the river Laybach. It has a cathedral, town-house, ten churches, two hospitals, a central school or university, an observatory, and public library. Also three distinct suburbs, and a castle on an eminence, which is used as a prison. The manufactures of silks and woollens are fallen into decay, but the potteries and tanneries are thriving; and there is a good trade with Italy, Croatia, and the south of Germany. Population 11,000. It is twenty-eight miles north-east of Onesk.

LAYBACH, or **LAUBACH**, a river of Carniola, which rises about a mile west of Upper Laybach, and falls into the Save. It is navigable for boats almost to its head, but forms a marsh in its course.

LAYERS, in gardening, are tender shoots or twigs of trees, laid in the ground, till, having struck root, they are separated from the parent tree, and become distinct plants. The propagating trees by layers is done in the following manner: the branches of the trees are to be slit a little way, and laid under the mould for about half a foot; the ground should be first made very light, and after they are laid they should be gently watered. If they will not remain easily in the position they are put in, they must be pegged down with wooden hooks; the best season for doing this is, for ever-greens, towards the end of August; and, for other trees, in the beginning of February. If they have taken root, they are to be cut off from the main plant the succeeding winter, and planted out. If the branch is too

high from the ground, a tub of earth is to be raised to a proper height for it. Some pare off the rind, and others twist the branch before they lay it, but this is not necessary. The end of the layer should be about a foot out of the ground; and the branch may be either tied tight round with a wire, or cut upwards from a joint, or cut round for an inch or two at the place, and it is a good method to pierce several holes through it with an awl above the part tied with the wire.

LAYING THE LAND, in navigation, the state of motion which increases the distance from the coast, so as to make it appear lower and smaller, a circumstance which evidently arises from the intervening convexity of the surface of the sea. It is used in contradiction to raising the land, which is produced by the opposite motion of approach towards it.

LAY-STALL, *n. s.* From **LAY**, to place, or deposit; and **STALL**, which see. A dung-heap.

Scarce could he footing find in that foul way,

For many corscs, like a great lay-stall

Of murdered men, which therein strewed lay.

Spenser.

LA'ZAR, *n. s.*

LA'ZARHOUSE,

LAZARETTO,

LA'ZARLY, *adj.*

LA'ZAR-WORT, *n. s.*

Italian, *lazaretto*, *lazzarino*. From Lazarus, the sick man of the Gospels; or Arab. *alazar*, sick. A man loathsome with disease. Lazar-house and lazaretto, signify a house for the reception of the diseased; an hospital. Lazarly, like, or pertaining to, the diseased.

They ever after in most wretched case,

Like loathsome lazars, by the hedges lay.

Faerie Queene.

I'll be sworn, and sworn upon't, she never shrowded any but lazars.

Shakspeare.

The church of Rome, unto her four famous orders of Jacobins, Franciscans, Augustins, and Carmelites, hath added a fifth of Jesuits; and, like another Jerusalem, for those five leprous *lazarly* orders hath built five porches; that, if the water of any state be stirred, they may put in for a share.

Bp. Hall's Contemplations.

A place

Before his eyes appeared, sad, ooisome, dark,

A *lazar-house* it seemed, where were laid

Numbers of all diseased.

Milton.

I am weary with drawing the deformities of life, and *lazars* of the people, where every figure of imperfection more resembles me.

Dryden.

Life he labours to refine

Daily, nor of his little stock denies

Fit alms to *lazars*, merciful and meek.

Phillips.

LAZARUS, Heb. **לֵאזָר**, i. e. the Lord's help, a Jew of Bethany, whom our Saviour raised from the dead, after having been four days in the grave. This miracle, with many peculiarly affecting circumstances attending it, is recorded in John xi. Lazarus, from the attention paid to his sisters by the Jews, upon his death, is supposed to have been a man of considerable property. He and his sisters, Martha and Mary, are recorded to have been among the peculiar friends of our Lord.

LAZARUS (St.), or **LAZARO**, a military order, instituted at Jerusalem by the crusaders, and whose business was, to receive pilgrims under their care, guard them on the roads, and defend

them from the insults of the Saracens. The knights of this order, being driven out of the Holy Land in 1253, followed St. Lewis into France; who put them into possession of several houses, commanderies, and hospitals, and endowed the order with ample privileges, and procured in 1255 a bull, from Alexander IV., confirming the order, and giving them permission to observe the rule of St. Augustine. In the year 1490 pope Innocent VIII. suppressed their order, and united them to the order of St. John of Jerusalem; but the bull issued for that purpose was not received in France. In 1572 pope Gregory XII. united those of the order in Italy with that of St. Maurice, then newly instituted by Emanuel Philibert, duke of Savoy. And, in 1608, this order was united in France to that of our Lady of mount Carmel, which had been instituted by Henry IV. The knights of St. Lazarus, and those of our Lady of mount Carmel, were allowed to marry, and, at the same time, to possess pensions charged upon ecclesiastical livings. The badge of this order is a cross of eight points, made of pure gold, edged with white enamel; the middle, or nucleus, of the cross is enamelled crimson, and on it is the image of the blessed virgin and child proper; the reverse has the middle enamelled green, on which is the figure of St. Lazarus; between the rays of the cross are four fleurs-de-lis, and on each of the points a small gold ball. The cross is fastened to a broad crimson riband, and is worn either on the breast or scarf-wise.

LAZULI. See LAPIS LAZULI.
 LA'ZY, *adj.* } Fr. *lache*; Goth. *losk*;
 LA'ZILY, *adv.* } Swed. *loski, lase*; Teut. *las-*
 LA'ZINESS, *n. s.* } *sig*; all, perhaps, of Latin
lassus, relaxed. Sluggish; idle; slow; feeble;
 the adverb and noun corresponding.

Our soldiers, like the night-owl's *lazy* flight,
 Or like a *lazy* thrasher with a flail,
 Fall gently down as if they struck their friends.

Shakspeare.
 Wicked condemned men will ever live like rogues,
 and not fall to work, but be *lazy*, and spend victuals.

Bacon.
 The eastern nations view the rising fires,
 Whilst night shades us, and *lazily* retires.

Creech.
 The ordinary method for recruiting their armies,
 was now too dull and *lazy* an expedient to resist this
 torrent.

Clarendon.
 Whose *lazy* waters without motion lay.

Roscommon.
 My fortune you have rescued, not only from the
 power of others, but from my own modesty and *lazi-*
ness.

Dryden.
 The *lazy* glutton safe at home will keep,
 Indulge his sloth and batten with his sleep. *Id.*

Watch him at play, when following his own in-
 clinations; and see whether he be stirring and active,
 or whether he *lazily* and listlessly dreams away his
 time.

Locke.
 The towering bard had sung, in nobler lays,
 How the last trumpet wakes the *lazy* dead. *Smith.*
 The sot cried, U'nam hoc esset laborare, while he
 lay *lazing* and lolling upon his couch. *South.*

That instance of fraud and *laziness*, the unjust
 steward, who pleaded that he could neither dig nor
 beg, would quickly have been brought both to dig
 and to beg too, rather than starve. *Id.*

Or *lazy* lakes, unconscious of a flood,
 Whose dull brown Naiads ever sleep in mna.

Parnass.
 He that floats *lazily* down the stream in presence
 of something borne along by the same current, will
 find himself move forward; but unless he lays his
 hand to the oar, and increases his speed by his own
 labour, must be always at the same distance from
 that which he is following. *Adventurer.*

Like eastern kings, a *lazy* state they keep,
 And close confined in their own palace sleep.

Pope.
Laziness travels so slowly, that poverty soon over-
 takes him. *Franklin.*

LAZZAROVICH, one of the four counties
 of AUSTRIAN DALMATIA, in the district of the
 Mouths of the Cattaro. It forms the north-west
 corner of the district of XUPPA.

LEA, *n. s.* Sax. *lea*, *ley*. See LAY. Pasture;
 enclosed ground.

Greatly agast with this pitiuous plea;
 Him rested the good man on the *lea*. *Spenser.*

Her fallow *leas*
 The darnel, hemlock, and rank fumitory
 Doth root upon. *Shakspeare.*

Dry up thy harrowed veins, and plough torn *leas*,
 Whereof ingrateful man with liquorish draughts,
 And morsels unctuous, greases his pure mind. *Id.*

Such court guise,
 As Mercury did first devise,
 With the mincing Dryades,
 On the lawns and on the *leas*. *Milton.*

The lowing herds wind slowly o'er the *lea*. *Gray.*

LEA, a river of England, which rises near
 Luton, in Bedfordshire, and running to Hertford
 and Ware, and afterwards south, dividing Essex
 from part of Hertfordshire, and from Middlesex,
 falls into the Thames below Blackwall. Great
 quantities of corn are brought by it from Hert-
 fordshire to London.

LEAD, *v. a., v. n. & n. s.* Sax. *lædan*; Goth.
 LEAD'ER, *n. s.* } *leida*; Belg. *leiden*;
 LEAD'ING, } Teut. *leiten*; Dan.
 LEAD'ING-STRINGS, } *lede*. To guide; con-
 LEAD'MAN } duct; pass or spend,
 (applied to time); introduce; hence to induce;
 persuade; allure; a lead-man is the leader or
 beginner of a dance.

Knowist thou not that the benyngnyte of god *ledith*
 thee to forthinking. *Wiclif. Rom. ii.*

I will *lead* on softly, according as the cattle that
 goeth before me, and the children, be able to endure.
Gen. xxxiii.

Which may go out before them, and which may
 go in before them, and which may *lead* them out,
 and which may bring them in. *Num. xxvii. 17.*

I have given him for a *leader* and commander to
 the people. *Isaiah lv. 4.*

The leaders of this people cause them to err, and
 they that are *led* of them are destroyed. *Id. ix. 16.*

Then brought he me out of the way, and *led* me
 about the way without unto the outer gate.

Ezek. xlvii. 2.
 Then shall they know that I am the Lord your
 God, which causeth them to be *led* into captivity
 among the heathen. *Id. xxxix. 28.*

They thrust him out of the city, and *led* him unto
 the brow of the hill. *Luke iv. 29.*

Would you *lead* forth your army against the ene-
 my, and seek him where he is to fight? *Spenser.*

There is a cliff whose high and bending head
Looks fearfully on the confined deep :

Bring me but to the very brim of it,
And I'll repair the misery thou dost bear,
With something rich about me : from that place
I shall no leading need. *Shakspeare.*

What I did, I did in honour,
Id.
Led by the impartial conduct of my soul. *Id.*
The sweet woman leads an ill life with him. *Id.*

Nay, keep your way, little gallant ; you were
wont to be a follower, now you are a leader. *Id.*

He turns head against the lion's armed jaws ;
And, being no more in debt to years than thou,
Leads antient lords, and reverend bishops, on
To bloody battles. *Id. Henry IV.*

The way of maturing of tobacco must be from the
heat of the earth or sun ; we see some leading of this
in musk-melons sown upon a hot-bed dinged below. *Bacon.*

Those escaped by flight, not without a sharp jest
against their leaders, affirming that, as they had fol-
lowed them into the field, so it was good reason they
should follow them out. *Hayward.*

His guide, as faithful from that day,
As Hesperus that leads the sun his way. *Fairfax.*

Such a light and mettled dance
Saw you never,
And by leadmen for the nonce,
That turn round like grindle stones. *Ben Jonson.*

He was driven by the necessities of the times, more
than led by his own disposition, to any rigour of
actions. *King Charles.*

When our Lycians see
Our brave examples, thy admiring say,
Behold our gallant leaders. *Denham.*

The lord Cottington, being a master of temper,
knew how to lead him into a mistake, and then drive
him into choler, and then expose him. *Clarendon.*

So shalt thou lead
Safest thy life, and best prepared endure
Thy mortal passage when it comes. *Milton.*

He led me on to mightiest deeds,
Above the nerve of mortal arm,
Against the uncircumcised, our enemies :
But now hath cast me off. *Id. Agonistes.*

They being to lead and give law, not to follow or
receive it. *Barrow.*

Cyrus was beaten and slain under the leading of a
woman, whose wit and conduct made a great figure. *Temple.*

Him, fair Lavinia, thy surviving wife
Shall breed in groves, to lead a solitary life. *Dryden.*

The vessels heavy-laden put to sea
With prosperous gales, a woman leads the way. *Id.*

Sound may serve such, ere they to sense are
grown,
Like leading-strings, till they can walk alone. *Id.*
In organised bodies, which are propagated by
seed, the shape is the leading quality, and most char-
acteristical part, that determines the species. *Locke.*

As in vegetables and animals, so in most other
bodies, not propagated by seed, it is the colour we
most fix on, and are most led by. *Id.*

Christ took not upon him flesh and blood, that he
might conquer and rule nations, lead armies, or pos-
sess places. *South.*

He left his mother a countess by patent, which
was a new leading example, grown before somewhat
rare. *Wotton.*

Luther's life was led up to the doctrines he
preached, and his death was the death of the right-
eous. *Atterbury.*

This distemper is most incident to such as lead a
sedentary life. *Arbuthnot on Aliments.*

What I say will have little influence on those
whose ends lead them to wish the continuance of the
war. *Swift.*

The understandings of a senate are enslaved by
three or four leaders, set to get or to keep employ-
ments. *Id.*

Mistakes arise from the influence of private per-
sons, upon great numbers stiled leading men and
parties. *Id.*

Was he ever able to walk without leading-strings,
or swim without bladders, without being discovered
by his hobbling and his sinking ? *Id.*

Human testimony is not so proper to lead us into
the knowledge of the essence of things, as to acquaint
us with the existence of things. *Watts.*

Yorkshire takes the lead of the other counties. *Herring.*

Prosperity is too apt to prevent us from examining
our conduct, but, as adversity leads us to think pro-
perly of our state, it is most beneficial to us. *Johnson.*

Riches are passed away from hand to hand,
As fortune, vice, or folly, may command ;
As in a dance the pair that take the lead
Turn downward, and the lowest pair succeed,
So shifting and so various is the plan,
By which Heaven rules the mixed affairs of man. *Couper.*

Slow treads fair Cannabis the breezy strand,
The distaff streams dishevelled in her hand ;
Now to the left her ivory neck inclines,
And leads in Paphian curves its azure lines. *Darwin.*

This account allows, or rather leads us to suppose,
that St. Paul, in going over Macedonia, had passed
so far to the west as to come into those parts of the
country which were contiguous to Illyricum, if he
did not enter into Illyricum itself. *Paley.*

I am—or rather was—a prince,
A chief of thousands, and could lead
Them on where each would foremost bleed ;
But could not o'er myself evince
The like control. *Byron.*

But all the cities you have taken, all the armies
which retreated before your leaders, are but paltry
subjects of self-congratulation, if your land divides
against itself, and your dragoons and executioners
must be let loose against your fellow-citizens. *Id.*

LEAD, *n. s. & v. a.* } Sax. læð. A metal.
LEAD'EN, *adj.* } See below. To cover
with lead ; in the plural, the roof of a house
or top of any thing covered with lead. Leaden,
made of lead ; and metaphorically heavy ; dull,
stupid.

Thou didst blow with thy wind, the sea covered
them ; they sank as lead in the mighty waters. *Exod. xv. 10.*

He fashioneth the clay with his arm, he applieth
himself to lead it over ; and he is diligent to make
clean the furnace. *Eccclus. xxxviii. 30.*

Thou art a soul in bliss, but I am bound
Upon a wheel of fire ; that mine own tears
Do scald like molten lead. *Shakspeare.*

Stalls, bulks, windows,
Are smothered up, leads filled, and ridges horsed
With variable complexions ; all agreeing
In earnestness to see him. *Id.*

This tiger-footed rage, when it shall find
The harm of unskanned swiftness, will, too late,
Tie *leaden* pounds to's heels. *Id.*

O murth'rous slumber!
Lay'st thou the *leaden* mace upon my boy,
That plays thee musick? *Id. Julius Cæsar.*

If thou dost find him tractable to us,
Encourage him, and tell him all our reasons:
If he be *leaden*, icy, cold, unwilling,
Be thou so too. *Id. Richard III.*

I would have the tower two stories, and goodly
leads upon the top, raised with statues interposed.
Bacon.

There is a traverse placed in a loft, at the right
hand of the chair, with a privy door, and a carved
window of glass *leaded* with gold and blue, where the
mother sitteth. *Id.*

A *leaden* bullet shot from one of these guns
against a stone wall, the space of twenty-four paces
from it, will be beaten into a thin plate. *Wilkins.*

Of *lead*, some I can show you so like steel, and so
unlike common *lead* ore, that the workmen call it
steel ore. *Boyle.*

Lead is employed for the refining of gold and sil-
ver by the cupel; hereof is made common ceruss
with vinegar; of ceruss, red *lead*; of plumbum us-
tum, the best yellow ochre; of *lead*, and half as much
tin, solder for *lead*. *Grew.*

Night, sable goddess! from her ebon throne,
In rayless majesty, now stretches forth
Her *leaden* sceptre o'er a slumbering world. *Young.*

LEAD, in mineralogy and chemistry, Lat. plum-
bum; Fr. plomb; Span. plomo; Ital. piombo;
Germ. bleg; is a metal of a bluish-white color,
very soft, flexible, and malleable, extending
easily under the hammer into very thin plates;
but its tenacity is less than that of almost any
other metal, a wire of the diameter of the tenth
of an inch breaking under a weight of three
pounds. It may easily be cut with a knife; and,
when heated, gives a very peculiar smell. Its
specific gravity is 11.33, and it melts at 612°,
rendering the refractory metals also more fusible.
In a strong heat it boils, and emits fumes; dur-
ing which time, if exposed to the air, its oxida-
tion proceeds with considerable rapidity. Lead
is brittle at the time of congelation. In this state
it may be broken to pieces with a hammer, and
the crystallisation of its internal parts will ex-
hibit an arrangement in parallel lines. Lead is
not much altered by exposure to air or water,
though the brightness of its surface, when cut or
scraped, very soon goes off. It is probable that
a thin stratum of oxide is formed on the surface,
which defends the rest of the metal from corrosion.
It is much doubted whether lead is ever found
perfectly metallic in a native state. Specimens
have been shown as native lead from Poland and
Mounmouthshire, some of which are certainly the
work of art; and, although they are not all proved
to be of this kind, yet, when we take into con-
sideration the easy calcination of this metal by the
atmosphere, &c., the existence of native lead
must be allowed to be, at least, very improbable.

The principal ores of lead are the following:—

Species 1. *Galena*, or *lead*; *glance* *bleiglanz* of
Werner.—Color lead-gray, sometimes irides-
cently variegated. Massive, imitative, and crys-
tallised in cubes, octohedrons, rectangular four-

sided prisms, broad unequiangular six-sided
prisms, six-sided tables, and three-sided tables.
Specular splendent, to glimmering. Lustre met-
allic. Cleavage hexahedral. Fragments cubical.
Harder than gypsum. Sextile and frangible.
Specific gravity 7, to 7.6. Effervesces both with
nitrous and marine acid. In a crucible it melts
easily into a yellowish slag, and some lead is com-
monly found reduced, and so much the more as
the ore is more pyritous, but mere iron renders
it refractory. Before the blow-pipe, on charcoal,
it decrepitates, but melts easily with a sulphureous
smell, part sinks into the charcoal; if alternately
heated and cooled, it will at last vanish and leave
its silver, if it contains any. Lead enters into
this ore, generally in the proportion of from forty-
five to eighty-three per cent. The sulphur is to
the lead in the proportion of sixteen to eighty-
three nearly. But the lead commonly contains
silver in the proportion of from $\frac{1}{350}$ to $\frac{1}{10}$. The
ores that have most lustre are said to contain
most silver; those that have least lustre contain
most iron, unless the want of lustre proceeds
from decay. According to Westrumb's analysis
its constituents are, lead 83, sulphur, 16.41,
silver 2.08. The following are the results of
Vauquelin's examination of this ore:—

	From Kirsch- wald in Deux Ponts.	Kampf- stein.	Eckler- berg.
Lead	54	69	68.69
Sulphur	8	16	16.18
Carbonated lime and silix	38	15	16.13
Oxide of iron	0	0	0
	100	100	101

	Kantenbach.	Cologne.
Lead	64	63.1
Sulphur	18	12
Carbonated lime and silix	18	19.67
Oxide of iron	0	3.33
	100	98.1

Dr. Thomson gives the following as the result
of his experiments:—

Lead	85.13
Sulphur	13.02
Oxide of iron	0.5
	98.65
Loss	1.35
	100

This ore abounds in various parts of Great
Britain and on the continent, particularly in
Siberia and Germany; nearly all the lead of
commerce, indeed, is procured from galena.

Species 2. *Compact galena bley schweif* of Werner.—Color lead-gray, inclining occasionally to the steel-gray. Found massive, in nodules, investing, and specular. External lustre 2, 3. Internal 0, 1, 2. Transparency 0. Fracture compact, mostly even, or inclining to the flat conchoidal, seldom discovers striæ, or inclines to the foliated; sometimes in the gross slaty. Fragments indeterminate, and presents no distinct concretions. Hardness from 6 to 8. Specific gravity from 6.886 to 7.444, Gellert. Streak, brighter lead-gray, and metallic. Often feels somewhat greasy, and stains the fingers. Effervesces with nitrous acid. In lustre, fracture, fragments, and specific gravity, it differs much from the former species: it is said to contain no silver, but often iron and zinc. The connexion it may often have with the plumbiferous silver ore, which contains so large a proportion of lead, should be noted. Before the blow-pipe it does not decrepitate so strongly as the former species, but melts easily, and is reduced on charcoal with a sulphureous smell. It occurs in veins, and is usually accompanied by the common lead-glance. When the two sub-species occur together, the compact always forms the sides of the vein, owing, probably, to its having been in a less perfect state of solution. It is accompanied with black blende, common iron pyrites, copper pyrites, quartz, and heavy spar. It is found in the lead-hills in Lanarkshire, and in Derbyshire, in divers parts of Germany, and in the valley of Chamouni in Switzerland.

Species 3. *Blue lead ore; blau bleyerz* of Werner. *Mine de plomb bleue*, Broch. Color between dark indigo-blue and lead-gray. Massive, and crystallised in regular six-sided prisms. Feebly glimmering. Soft. Sectile. Specific gravity 5.461. It is conjectured to be sulphuret of lead, intermixed with phosphate of lead. It occurs in veins. It has been found in Saxony and France.

Species 4. *Black lead ore; schwarz bleyerz* of Werner.—Light or deep black, often with some streaks of red. Found massive, cellular, stalactitic, or crystallised in small or minute hexahedral prisms, generally truncated, and often so implicated as to be difficultly distinguished. External lustre 2, 3. Internal 2, 1.5. Metallic. Transparency 0. Fracture uneven, or imperfectly conchoidal, or intermediate. Hardness from 5, 6. Brittle. Specific gravity 5.744, Brisson; 5.77, Gellert. Streak light bluish-gray. Before the blow-pipe it decrepitates, but melts easily, and is reduced. By the experiments of M. Laumont, it appears that this ore consists chiefly of sulphureted lead, arising from decayed galenas, and the red part from the brownish-red phosphoric ore. For from the black prisms he extracted sulphur, and from the red part phosphoric acid. According to Lampadius it consists of

Lead	72
Oxygen	7
Carbonic acid	18
Carbon	2
	—
	99
Loss	1
	—

100

It occurs in veins, and is almost always accompanied with white-lead ore and lead-glance, and usually in the upper part of veins, and in new lead-glance formations. It very frequently encrusts lead-glance, and is covered with white lead ore, and sometimes by green lead ore. It is found in the lead-hills of Scotland, in different parts of Bohemia, Saxony, Salzburg, Lower Brittany, and in Siberia. Previously to the analysis of Lampadius, Haiiy supposed it was a phosphate of lead; and Werner suspected that it was a compound of lead, carbonic, and sulphuric acids.

Species 5. *Cobaltic lead glance*.—Color fresh lead-gray. Minutely disseminated in exceedingly small crystals, aggregated in a moss-like form. Shining and metallic. Scaly foliated. Opaque. Soft. Soils feebly. It communicates a small-blue color to glass of borax. It occurs near Clausthal in the Hartz.

Species 6. *Tripismatic lead spar, or sulphate of lead; blei vitriol* of Werner. Colors yellowish and grayish-white. Massive and crystallised. In the primitive form the vertical prism is 120°. The principal crystallisations are, an oblique four-sided prism, variously bevelled or truncated; and a broad rectangular four-sided pyramid. Lustre shining, adamantine. Fracture conchoidal. Translucent. As hard as calcareous spar. Streak white. Brittle. Specific gravity 6.3. It decrepitates before the blow-pipe, then melts, and is soon reduced to the metallic state. Its constituents are, according to Klaproth, oxide of lead 70.5, sulphuric acid 25.75, water 2.25. It occurs in veins along with galena at Wanlockhead in Dumfries-shire, Leadhill, Pary's mine, and Penzance.

Species 7. *Pyramidal or yellow lead spar, yellow molybdenated lead ore* of Kirwan, *gelbe bleyerz* of Werner. Color wax-yellow or citron-yellow. Found massive, disseminated, or lamellar, or crystallised in small cubic or rhomboidal or octohedral tables, or thin plates, often cellularly accumulated, or acicular. Lustre 2. Waxy. Transparency 2, 3. Fracture minute, conchoidal. Fragments 3. Hardness from 5 to 6. Specific gravity of the massive, much debased with mild calx, 3.800. Streak white. Sulphureted vollalkali blackens it. Before the blow-pipe it decrepitates, and melts into a yellowish and blackish-gray mass, which to borax imparts a bluish-white color, and, if nitre be added, it is reduced. It does not effervesce with acids, though it often seems to do so from a mixture of mild calx invisibly contained in it; but, if it be digested with a large proportion of nitrous acid, the greater part will be dissolved in it, and white flakes will appear diffused through the solution. Its constituents, according to Hatchett, are, oxide of lead 58.4, molybdic acid 38, oxide of iron 2.08, silica 0.28. It occurs at Bleiberg in Carinthia.

Species 8. *Prismatic or red lead spar; roth bleyerz* of Werner. Color hyacinth-red, with a shade of yellow. In France it is said to have been found massive, but more generally disseminated or overlying. In Siberia it has hitherto occurred only crystallised in small acute angled four-sided prisms, sometimes smooth,

sometimes longitudinally streaked, often hollow, rarely in low hexahedral prisms, with two small and four broad sides. These crystals are often implicated in each other. External lustre 2, 3. Internal 2, 1·5. Common. Transparency 2, 3. Fracture, if made crossways, foliated. Otherwise compact, being fine grained, uneven, or minute conchoidal. Fragments 2. Hardness 5, 4. Specific gravity 6·0269, Brisson. Streak and powder orange yellow. Does not effervesce with acids. The vitriolic, while cold, scarcely or but slowly affects it. It refuses to unite, but not to diffuse itself in the nitrous, whether hot or cold. But the marine, even without heat, sensibly attacks it, and dissolves about one-sixteenth of its weight; if heated, an effervescence is perceived. Treated with the blow-pipe on charcoal it decrepitates, a small proportion of the lead is reduced, but the greater part of it remains a black slag, which to borax gives a grass-green color passing into the leek green. Its constituents are, according to Vauquelin, oxide of lead 63·96, chromic acid 36·4. It occurs in veins of gneiss in the gold mines of Beresofk in Siberia.

Species 9. *Green rhomboidal lead spar*. Color grass green. Occurring imitative or crystallised. The primitive form is a dirhomboid, or a flat equiangular double six-sided pyramid. The secondary forms are the equiangular six-sided prism, variously truncated and acuminate. Splendent. Fracture uneven. Translucent. Sometimes as hard as fluur. Brittle. Specific gravity 6·9 to 7·2. It dissolves in acids without effervescence. Its constituents are, according to the analysis of Klaproth, oxide of lead 80, phosphoric acid 18, muriatic acid 1·62, oxide of iron, a trace. It occurs along with galena at Leadhills, and Wanlockhead; at Alston in Cumberland, &c.

Species 10. *Brown rhomboidal lead spar*.—Color clove brown. Massive, and crystallised in an equiangular six-sided prism; and an acute double three-sided pyramid. Glistening, resinous. Feebly translucent. Streak grayish-white. Brittle. Specific gravity 6·91. It melts before the blow-pipe, and, during cooling, shoots into acicular crystals. It dissolves without effervescence in nitric acid. Its constituents are, oxide of lead 78·58, phosphoric acid 19·73, muriatic acid 1·65. It occurs in veins that traverse gneiss. It is found at Miess in Bohemia.

Species 11. *White lead spar, carbonate of lead*. Color milk white. Occurring massive, and crystallised; in a very oblique four-sided prism; an unequiangular six-sided prism; acute double six-sided pyramid; oblique double four-sided pyramid; long acicular crystals; and in twin and triple crystals. Lustre adamantine. Fracture small conchoidal. Translucent. Refracts double in a high degree. Harder than calcareous spar. Brittle. Specific gravity 6·2 to 6·6. It dissolves with effervescence in muriatic and nitric acids. It yields a metallic globule with the blow-pipe. Its constituents are, according to the analysis of Klaproth, oxide of lead 82, carbonic acid 16, water 2. It occurs in veins at Leadhills in Lanarkshire.

Species 12. *Corneous lead ore, or muriate of lead*.—Color grayish-white. Occurring crystal-

lised in an oblique four-sided prism, variously truncated, bevelled, and acuminate. Splendent and adamantine. Cleavage threefold. Fracture conchoidal. Transparent. Soft. Sextile and easily frangible. Specific gravity 6·065. It melts before the blow-pipe into an orange colored globule. Its constituents are, according to Klaproth, oxide of lead 85·5, muriatic acid 8·5, carbonic acid 6·0. It is found near Matlock in Derbyshire.

Species 13. *Arseniated lead ore*.—Color reddish brown. Shining. Fracture conchoidal. Opaque. Soft and brittle. Specific gravity 3·933. It gives out arsenical vapors with the blow-pipe. It colors glass of borax lemon-yellow. Its constituents are, oxide of lead 35, arsenic acid 25, water 10, oxide of iron 14, silver 1·15, silica 7, alumina 2. It is found in Siberia.

Treated with the blow-pipe, it reddens before it melts, and retains its color. It melts more difficultly than phosphoreted lead does. To decompose it, it must be heated to whiteness, then the arsenical acid escapes with effervescence and the lead is reduced.

Smelting and reduction of lead ore.—The only ore of lead purchased in the large way is galena, and the method of treating this is very simple, partly on account of the richness of the ore, and partly on account of the low price of the metal itself, which therefore will not admit of any but the most summary methods of bringing it into a marketable state.

When first brought up from the mine, this ore is dressed by women and boys, who with a hand hammer separate the greater part of the adhering impurities, consisting of blende, iron, pyrites, quartz, calcareous spar, &c. The residue, being broken into pieces of about the size of a hazel nut, is washed from all the adhering clay and dirt, and is then ready to be smelted. The furnace used for this purpose is the common reverberatory with a low arch. A ton or more of the ore is spread on the floor of the furnace, and by means of a pit-coal flame it is soon brought to a red heat. In this state it is occasionally stirred with iron rakes to expose fresh surfaces to the action of the flame, and facilitate the separation of the sulphur. In a short time the mass begins to acquire a pasty consistence; upon which the heat is lowered, and the ore is kept at a dull red till the sulphur is nearly all got rid of: the fire being then increased, the ore is brought to a state of perfect fusion, and visibly consists of two fluids; the lower is the metallic lead; the upper is a vitreous slagg still holding a considerable portion of lead, but mixed with various impurities. In this state of the process the fire is damped; and a few spadefuls of quick-lime are thrown into the fluid mass: by this the scorïæ are suddenly solidified, and are raked to the side of the furnace. The tap-hole is then opened, and the lead runs into moulds placed to receive it, when it congeals into oblong masses called pigs, weighing about 60lbs. each.

As soon as the lead has run out of the furnace, the tap-hole is closed, the scorïæ are replaced in the bed, and, being quickly raised to a glowing red heat, are soon melted. The greatest part of the lead that they contained by this means col-

jects into a mass at the bottom: a little lime is thrown in as before, the scoria thus rendered solid are raked aside, and the lead which they covered is let off into a mould. This second scoria, though still holding from five to eight per cent. of lead, is now removed from the furnace, and applied to no purpose but that of mending roads; the expense of separating the last portions of metal being more than the value of the produce. The lead of the first running is the best: that procured from the scoriae being sensibly harder and less malleable on account of the iron that it contains.

In order to obtain perfectly pure lead, the lead of commerce may be dissolved in pure nitric acid, and the solution be decomposed by adding to it, gradually, a solution of sulphate of soda, so long as a precipitate ensues. This precipitate, which is sulphate of lead, must then be collected on a filter, washed repeatedly in distilled water, and then dried. In order to reduce it to its metallic state, let it be mixed with two or three times its weight of black flux, introduce the mixture into a crucible, and expose it briskly to a red heat.

There are certainly two, perhaps three, oxides of lead:—1. The powder precipitated by potash from the solution of the nitrate of lead, being dried, forms the yellow protoxide. When somewhat vitrified it constitutes litharge, and, combined with carbonic acid, white-lead, or ceruse. It has been obtained by M. Houton-Labillardiere, in dodecahedral white crystals, about the size of a pin-head, by slow deposition, from a solution of litharge in soda. Heat volatilises it. It is of very great importance to know accurately the composition of this oxide of lead, especially in consequence of its great influence in the analyses of organic bodies. The mean of Berzelius's last experiments, as detailed in vol. v. of the *Afhandlingar i Fysik*, and translated into the *Ann. of Phil.* for February, 1820, gives us 7.73 for the quantity of oxygen, combined with 100 of lead in 107.73 of the protoxide, whence the prime equivalent of lead comes out 12.9366. The very near approach of this to 13 will justify us in adopting this round number; and in estimating the equivalent of the protoxide at 14. The pigment massicot is merely this oxide.

2. When massicot has been exposed for about forty-eight hours to the flame of a reverberatory furnace, it becomes red-lead, or minium. This substance has a specific gravity of 8.94. At a red heat it gives out oxygen, and passes into vitrified protoxide. It consists of 100 lead + 11.08 oxygen; and it may be represented as a compound of 2 primes of lead + 3 oxygen; or of 1 prime protoxide + 1 prime peroxide.

3. If upon 100 parts of red-lead we digest nitric acid, of the specific gravity 4.26, 92.5 parts will be dissolved, but 7.5 of a dark brown powder will remain insoluble. This is the protoxide of lead, and consists of 100 lead + 15.4 oxygen; or 13 + 2 = 15.

By passing a stream of chlorine through red-lead diffused in water, we obtain a solution, which yields by potash an abundant precipitate of the brown oxide of lead. From 100 of mi-

mium, sixty-eight of the peroxide may be obtained. It is tasteless, and with muriatic acid evolves chlorine. When heated, oxygen is disengaged, and protoxide remains. The red-lead of commerce is often very impure, containing yellow oxide, sulphate of lead, submuriate of lead, and silica.

Chloride of lead is formed, either by placing lead in chlorine, or by exposing the muriate to a moderate heat. It is a semitransparent grayish-white mass, somewhat like horn, whence the old name of *plumbum corneum*. It is fixed at a red heat in close vessels, but it evaporates at that temperature in the open air. By Dr. Davy's analysis, it consists of chlorine 25.78 + lead 74.22; or 4.5 + 13.

The iodide is easily formed, by heating the two constituents. It has a fine yellow color. It precipitates when we pour hydriodate of potash into a solution of nitrate of lead.

The salts of lead have the protoxide for their base, and are distinguishable by the following general characters:—

1. The salts which dissolve in water usually give colorless solutions, which have an astringent sweetish taste.
2. Placed on charcoal they all yield, by the blow-pipe, a button of lead.
3. Ferropussiate of potash occasions insoluble a white precipitate.
4. Hydrosulphuret of potash, a black precipitate.
5. Sulphureted hydrogen, a black precipitate.
6. Gallic acid, and infusion of galls, a white precipitate.
7. A plate of zinc, a white precipitate, or metallic lead.

Most of the acids attack lead. The sulphuric does not act upon it, unless it be concentrated and boiling. Sulphurous acid gas escapes during this process, and the acid is decomposed. When the distillation is carried on to dryness, a saline white mass remains, a small portion of which is soluble in water, and is the sulphate of lead; it affords crystals. The residue of the white mass is an insoluble sulphate of lead. It consists of 5 acid + 14 protoxide.

Nitric acid acts strongly on lead.

The nitrate solution, by evaporation, yields tetrahedral crystals, which are white, opaque, possess considerable lustre, and have a specific gravity of 4. They dissolve in 7.6 parts of boiling water. They consist of 6.75 acid + 14 protoxide; or nearly 1 + 2.

A subnitrate may be formed in pearl-colored scales, by boiling in water equal weights of the nitrate and protoxide.

A subnitrate of lead may be formed, by boiling a solution of ten parts of the nitrate on 7.8 of metallic lead. If more of the metal be used, a quadro-subnitrate results. By saturating one-half of the oxide of the subnitrate, with the equivalent proportion of sulphuric acid, a neutral nitrate is formed.

Muriatic acid acts directly on lead by heat, oxidizing it, and dissolving part of its oxide.

The acetic acid dissolves lead and its oxides; though probably the access of air may be necessary to the solution of the metal itself in this acid

White-lead, or ceruse, is made by rolling leaden plates spirally up, so as to leave the space of about an inch between each coil, and placing them vertically in earthen pots, at the bottom of which is some good vinegar. The pots are to be covered, and exposed for a length of time to a gentle heat in a sand bath, or by bedding them in dung. The vapor of the vinegar, assisted by the tendency of the lead to combine with the oxygen which is present, corrodes the lead, and converts the external portion into a white substance, which comes off in flakes, when the lead is uncoiled. The plates are thus treated repeatedly, until they are corroded through. Ceruse is the only white used in oil paintings. Commonly it is adulterated with a mixture of chalk in the shops. It may be dissolved without difficulty in the acetic acid, and affords a crystallisable salt, called sugar of lead from its sweet taste. This, like all the preparations of lead, is a deadly poison. The common sugar of lead is an acetate; and Goulard's extract, made by boiling litharge in vinegar, a subacetate. The power of this salt, as a coagulator of mucus, is superior to the other. If a bit of zinc be suspended by brass or iron wire, or a thread, in a mixture of water and the acetate of lead, the lead will be revived, and form an arbor Saturni.

The acetate, or sugar of lead, is usually crystallised in needles, which have a silky appearance. They are flat four-sided prisms with dihedral summits. Its specific gravity is 2.345. It is soluble in three and a half times its weight of cold water, and in somewhat less of boiling water. Its constituents are 26.96 acid + 58.71 base + 14.32 water.—Berzelius.

Acetate and subacetate of lead in solution, have been used as external applications to inflamed surfaces, and scrofulous sores, and as eye-washes. In some extreme cases of hæmorrhage from the lungs and bowels, and uterus, the former salt has been prescribed, but rarely and in minute doses, as a corrugant or astringent. The colic of the painters, and that formerly prevalent in certain counties of England, from the lead used in the cyder presses, show the very deleterious operation of the oxide, or salts of this metal, when habitually introduced into the system in the minutest quantities at a time. Contraction of the thumbs, paralysis of the hand, or even of the extremities, have not unfrequently supervened. A course of sulphureted hydrogen waters, laxatives, of which sulphur, castor-oil, sulphate of magnesia, or calomel, should be preferred, a mercurial course, the hot sea-bath, and electricity, are the appropriate remedies.

Dealers in wines have occasionally sweetened them, when acescent, with litharge or its salts. This deleterious adulteration may be detected by sulphureted hydrogen water, which will throw down the lead in the state of a dark brown sulphuret. Or subcarbonate of ammonia, which is a very delicate test, may be employed to precipitate the lead in the state of a white carbonate; which, on being washed and digested with sulphureted hydrogen water, will instantly become black. If the white precipitate be gently heated it will become yellow, and on charcoal, before the blowpipe, it will yield a globule of lead.

Chromate of potash will throw down from saturnine solutions a beautiful orange-yellow powder. Burgundy wine, and all such as contain tartar will not hold lead in solution, in consequence of the insolubility of the tartrate.

The proper counter-poison for a dangerous dose of sugar of lead is solution of Epsom or Glauber salt, liberally swallowed; either of which medicines instantly converts the poisonous acetate of lead into the inert and innoxious sulphate. The sulphuret of potash, so much extolled by Navier, instead of being an antidote, acts itself as a poison on the stomach.

Oils dissolve the oxide of lead, and become thick and consistent; in which state they are used as the basis of plasters, cements for water-works, paints, &c.

Sulphur readily dissolves lead in the dry way, and produces a brittle compound, of a deep gray color and brilliant appearance, which is much less fusible than lead itself; a property which is common to all the combinations of sulphur with the more fusible metals.

The phosphoric acid exposed to heat, together with charcoal and lead, becomes converted into phosphorus, which combines with the metal. This combination does not greatly differ from ordinary lead; it is malleable, and easily cut with a knife: but it loses its brilliancy more speedily than pure lead; and when fused upon charcoal with the blow-pipe the phosphorus burns, and leaves the lead behind.

Litharge fused with common salt decomposes it; the lead unites with the muriatic acid, and forms a yellow compound, used as a pigment. The same decomposition takes place in the humid way, if common salt be macerated with litharge; and the solution will contain caustic alkali.

Lead unites with most of the metals. Gold and silver are dissolved by it in a slight red-heat. Both these metals are said to be rendered brittle by a small admixture of lead, though lead itself is rendered more ductile by a small quantity of them. Platina forms a brittle compound with lead; mercury amalgamates with it; but the lead is separated from the mercury by agitation, in the form of an impalpable black powder, oxygen being at the same time absorbed. Copper and lead do not unite but with a strong heat. If lead be heated so as to boil and smoke, it soon dissolves pieces of copper thrown into it; the mixture, when cold, is brittle. The union of these two metals is remarkably slight; for, upon exposing the mass to a heat no greater than that in which lead melts, the lead almost entirely runs off by itself. This process is called eliquation. The coarser sorts of lead, which owe their brittleness and granulated texture to an admixture of copper, throw it up to the surface on being melted by a small heat. Iron does not unite with lead, as long as both substances retain their metallic form. Tin unites very easily with this metal, and forms a compound, which is much more fusible than lead by itself, and is, for this reason, used as a solder for lead. Two parts of lead and one of tin form an alloy more fusible than either metal alone: this is the solder of the plumbers. Bismuth combines readily with lead, and affords a metal of a fine close grain, but very

brittle. A mixture of eight parts bismuth, five lead, and three tin, will melt in a heat which is not sufficient to cause water to boil. Antimony forms a brittle alloy with lead. Nickel, cobalt, manganese, and zinc, do not unite with lead by fusion.

The alloys in any proportion have the singular property of being of less specific gravity than the mean, the very contrary of which is observed in most other compounds of metals. The following is a table given by Mr. Hatchett exhibiting these facts:—

Metals.	Grains.	Specific Gravity of Alloy	Bulk before Union.	Bulk after Union.	Expansion.
Gold Lead	442 38	18·08	1000	1005	5
Gold Copper Lead	442 19 19	17·765	1000	1006	6
Gold Copper Lead	442 30 8	17·312	1000	1022	22
Gold Copper Lead	442 34 4	17·032	1000	1035	35
Gold Copper Lead	442 37·5 ·5	16·627	1000	1057	57
Gold Copper Lead	442 37·75 ·25	17·039	1000	1031	31

LEAD, WHITE. See WHITE LEAD.

LEAD, BLACK. See PLUMBAGO.

LEAD, OF HAND LEAD, in maritime affairs. Fr. petit plomb de sonde. An instrument for discovering the depth of water: it is composed of a large piece of lead, from seven to ten pounds weight, and attached, by means of a strap, to a long line called the lead-line. It is shaped like the diagram, having a hole in the upper extremity, through which is reeved a gromet *a*, being well served over to keep it from chafing; and the lower extremity is hollowed for the purpose of being armed (filled with tallow), to ascertain what kind of ground you strike soundings on. In the end of the lead-line there is a long eye spiced, which is also served over. The eye is reeved through the gromet and taken over the lead, being thus secured. This line is about twenty fathoms in length, and particularly marked as follows: at the distance of two and three fathoms, a piece of black leather is thrust through the strands—at five fathoms, a white rag—at seven fathoms, a red one—at ten and thirteen, black leather; and at seventeen, a red rag.

Deep-Sea LEAD. Fr. grand plomb de sonde. A lead of a larger size, being from twenty-five to thirty pounds weight, is attached to a much longer line, and shaped like the former.

LEADHILLS, mountains of Scotland, in the county of Lanark, and district of Clydesdale, abounding with the most famous and ancient lead mines in that kingdom, the lead ores having been first discovered in 1513. In the summit of these mountains gold has also been found. The lead ore affords a portion of silver; and the chief business is carried on by the Scots Mining Company, who farm the hills from the earl of Hopetoun, the latter receiving every sixth bar of lead as a rental. The number of bars annually cast amounts to about 18,000.

LEADHILLS is a village on one of the above mountains, by some said to be the highest human habitation in Great Britain. Here reside many hundreds of miners with their families, and have a public library for the instruction and amusement of their little community. They labor in the mines about six hours only in the twenty-four; and 'Nothing,' says Mr. Pennant, 'can equal the gloomy appearance of the country round. Neither tree, nor shrub, nor verdure, nor picturesque rock, appear to amuse the eye. The spectator must plunge into the bowels of these mountains for entertainment.' But a few spots have been made to produce corn and potatoes. The veins of lead lie mostly north and south, and their thickness, which seldom exceeds forty feet, varies greatly in different parts. Some have been found filled with ore within two fathoms of the surface; others sink to the depth of ninety fathoms. The lead is all sent to Leith, where it has the privilege of being exported free of duty. The scanty pasture of this barren region feeds some sheep and cattle; but those in the neighbourhood of the mines often perish by drinking of the water in which the ore has been washed. Population about 1000.

LEAF, *n. s. & v. n.* } Sax. leaf; Goth. lauf;
LEAFLESS, *adj.* } Danish, lev. The loose
LEAFY, } green part of a plant;
LEAVY, } the petal of a flower;

foliage; any thing foliated, or beaten thin; any thing broad, flat, and open; hence part of a book (containing two pages); a broad door, or part of folding-doors; the flap of a table, &c. To leaf is to come into, or bear leaves. Leafless is destitute of leaves: leafy and leavy, full of them.

And the *leuys* of the tree ben to hee the of folkis.
Wiclif. Apoc. xxii.

And they sewed fig *leaves* together, and made themselves aprons.
Gen. iii. 7.

The two *leaves* of the one door were folding.
1 Kings.

Now, fair Madame! quod I,
(If I durst ask) what is the cause and why
That knightis have the ensigne of honour
Rather by the *leafe* than by the flour?

Chaucer
Happy, ye *leaves*, when as those lily hands
Shall handle you. *Spenser.*

This is the state of man; to-day he puts forth
The tender *leaves* of hopes, to-morrow blossoms.
Shakspeare

The frauds of men were ever so,

Since summer first was leafy. *Id.*

Now near enough : your leafy screens throw down,
And show like those you are. *Id.*

Heat drieth bodies that do easily expire, as parch-
ment, leaves, roots, and clay; and so doth time
arefy. *Bacon.*

Eleven ounces two pence sterling ought to be of
so pure silver, as is called leaf silver, and then the
melter must add of other weight seventeen pence
halfpenny farthing. *Camden.*

Leaf gold, that flies in the air as light as down, is
as truly gold as that in an ingot. *Digby.*

What chance, good lady, hath bereft you thus :

— Dim darkness, and this leafy labyrinth. *Milton.*

Most trees fall off the leaves at autumn; and, if not
kept back by cold, would leaf about the solstice.

Browne.

Strephon, with leafy twigs of laurel tree,

A garland made on temples for to wear,

For he then chosen was the dignity

Of village lord that Whitsuntide to bear. *Sidney.*

A man shall seldom fail of having cherries borne
by his graft the same year in which his incision is
made, if his graft have blossom buds; whereas, if it
were only leaf buds, it will not bear fruit till the
second season. *Boyle.*

Those things which are removed to a distant view,
ought to make but one mass; as the leaves on the
trees, and the billows in the sea. *Dryden.*

Her leafy arms with such extent were spread,

That hosts of birds, that wing the liquid air,

Perched on the boughs. *Id. Flower and Leaf.*

Bare honesty, without some other adornment,
being looked on as a leafless tree, nobody will take
himself to its shelter. *Government of the Tongue.*

Where doves in flocks the leafless trees o'ershade,
And lonely woodcocks haunt the watery glade.

Pope.

Peruse my leaves through every part,

And think thou seest my owner's heart

Scrawled o'er with trifles. *Swift.*

Oftimes its leaves of scarlet hue

A golden edging boast;

And, opened, it displays to view

Twelve pages at the most. *Cowper.*

The tempest's howl, it soothes my soul,

My griefs it seems to join;

The leafless trees my fancy please,

Their fate resembles mine!

Burns.

Again rejoicing nature sees

Her robe assume its vernal hues

Her leafy locks wave in the breeze,

All freshly steeped in morning dews. *Id.*

Though by no hand untimely snatched,

The leaves must drop away :

And yet it were a greater grief

To watch it withering leaf by leaf

Than see it plucked to-day ;

A lovely being, scarcely formed or moulded,

A rose with all its sweetest leaves yet folded.

Byron.

LEAF is defined by Miller, 'a part of a plant extended into length and breadth in such a manner as to have one side distinguishable from the other.' Linnæus defines leaves 'the organs of motion, or muscles of the plant.' The leaves are not merely ornamental to plants; they serve very useful purposes, and make part of the organs of vegetation. Most plants, especially trees, are furnished with leaves; mushrooms, and shrubby horse-tail, they are totally wanting. Ludwig defines leaves to be fibrous and cellular processes of the plant, which are of various

figures, but generally extended into a plain membranaceous or skinny substance. They are of a deeper green than the foot-stalks on which they stand, and are formed by the expansion of the vessels of the stalk, among which, in several leaves, the proper vessels are distinguished by the particular taste, color, and smell of the liquors contained within them. By the expansion of the vessels of the stalk are produced several ramifications or branches, which, crossing each other mutually, form a kind of net; the meshes or interstices of which are filled up with a tender cellular substance, called the pulp, pith, or parenchyma. This pulpy substance is frequently consumed by insects, whilst the membranous net remaining untouched exhibits the genuine skeleton of the leaf. The net is covered externally with an epidermis or scarf-skin, which appears to be a continuation of the scarf-skin of the stalk, and perhaps of that of the stem. M. De Saussure, a judicious naturalist, has attempted to prove that this scarf-skin, like that of the petals, is a true bark, composed itself of an epidermis and cortical net; these parts seem to be the organs of perspiration, which serve to dissipate the superfluous juices. The cortical net is furnished, principally on the surface of the leaf, with a great number of suckers or absorbent vessels, destined to imbibe the humidity of the air. The upper surface, turned towards heaven, serves as a defence to the lower, which looks downward; and this disposition is so essential to the vegetable economy, that if a branch is overturned, in such a manner as to destroy the natural direction of the leaves, they will of themselves, in a very short time, resume their former position; and that as often as the branch is thus overturned. Leaves are useful and necessary organs; trees perish when totally divested of them. In general, plants stript of any of their leaves cannot shoot vigorously: witness those who have undergone the depredations of insects; witness, likewise, the very common practice of stripping off some of the leaves from plants, when we would suspend their growth, or diminish the number of their shoots. This method is sometimes observed with corn and the esculent grasses; and in cold years is practised on fruit-trees and vines, to render the fruit ripener and better colored: but in this case it is proper to wait till the fruits have acquired their full bulk, as the leaves contribute greatly to their growth. See BOTANY.

LEAF, in clocks and watches, an appellation given to the notches of their pinions.

LEAF GOLD, or GOLD LEAF, fine gold beaten into plates of extreme thinness, for the purpose of gilding, &c. 'The gold is melted in a black lead crucible, with some borax, in a wind furnace, called by the workmen a wind hole: as soon as it appears in perfect fusion, it is poured out into an iron ingot mould, six or eight inches long, and three quarters of an inch wide, previously greased and heated, so as to make the tallow run and smoke, but not to take flame. The bar of gold is made red-hot, to burn off the unctuous matter, and forged on an anvil into a long plate, which is further extended, by being passed repeatedly between polished steel rollers,

till it becomes a riband as thin as paper. Formerly the whole of this extension was procured by means of the hammer, and some of the French workmen are still said to follow the same practice: but the flattening mill both abridges the operation, and renders the plate of more uniform thickness. The riband is divided by compasses, and cut with sheers into equal pieces, which consequently are of equal weights: these are forged on an anvil till they are an inch square; and afterwards well annealed to remove the rigidity which the metal has contracted in the hammering and flattening. Two ounces of gold, or 960 grains, the quantity which the workmen usually melt at a time, make 150 of these squares, when each of them weighs six grains and two-fifths; and, as 902 grains of gold make a cubic inch, the thickness of the square plates is about the 766th part of an inch. In order to the further extension of these pieces into fine leaves, it is necessary to interpose some smooth body between them and the hammer, for softening its blow, and defending them from the rudeness of its immediate action: as also to place between every two of the pieces some proper intermedium, which, while it prevents their uniting together, or injuring one another, may suffer them freely to extend. Both these ends are answered by certain animal membranes. The gold-beaters use three kinds of membranes; for the outside cover, common parchment made of sheep-skin; for interlaying with the gold, first, the smoothest and closest vellum, made of calfskin; and afterwards the much finer skins of ox-gut, stript off from the large straight gut slit open, curiously prepared on purpose for this use, and hence called gold-beater's skin. The preparation of these last is a distinct business. The general process is said to consist in applying one upon another, by the smooth sides, in a moist state, in which they readily cohere and unite inseparably; stretching them on a frame, and carefully scraping off the fat and rough matter, so as to leave only the fine exterior membrane of the gut; beating them between double leaves of paper, to force out what unctuousity may remain in them; moistening them once or twice with an infusion of warm spices; and, lastly, drying and pressing them. It is said, that some calcined gypsum or plaster of Paris is rubbed with a hare's foot both on the vellum and the ox-gut skins, which fill up such minute holes as may happen in them, and prevent the gold-leaf from sticking, as it would do to the simple animal membrane. It is observable, that, notwithstanding the vast extent to which the gold is beaten between these skins, and the great tenuity of the skins themselves, yet they sustain continual repetitions of the process for several months, without extending or growing thinner. Our workmen find, that, after seventy or eighty repetitions, the skins, though they contract no flaw, will no longer permit the gold to extend between them; but that they may be again rendered fit for use by interlaying them with leaves of paper moistened with white-wine vinegar, beating them for a whole day, and afterwards rubbing them over as at first with plaster of Paris. The gold is said to ex-

tend between them more easily after they have been used a little than when they are new. The beating of the gold is performed on a smooth block of black marble, weighing from 200 to 600 pounds, the heavier the better; about nine inches square on the upper surface, and sometimes less, fitted into the middle of a wooden frame, about two feet square, so as that the surface of the marble and the frame form one continuous plane. Three of the sides are furnished with a high ledge; and the front, which is open, has a leather flap fastened to it, which the gold-beater takes before him as an apron, to preserve the fragments of gold that fall off. Three hammers are employed, all of them with two round and somewhat convex faces, though commonly the workman uses only one of the faces: the first, called the catch-hammer, is about four inches in diameter, and weighs fifteen or sixteen pounds, and sometimes twenty, though few workmen can manage those of the last size; the second, called the shoddering-hammer, weighs about twelve pounds and is about the same diameter; the third, called the gold-hammer, or finishing hammer, weighs ten or eleven pounds, and is nearly of the same width. The French use four hammers, differing both in size and shape from those of our workmen; they have only one face, being in figure truncated cones. The first has very little convexity, is nearly five inches in diameter, and weighs fourteen or fifteen pounds: the second is more convex than the first, about an inch narrower, and scarcely half its weight: the third, still more convex, is only about two inches wide, and four or five pounds in weight: the fourth or finishing hammer, is near as heavy as the first, but narrower by an inch, and the most convex of all: 150 of the pieces of gold are interlaid with leaves of vellum, three or four inches square, one vellum leaf being placed between every two of the pieces, and about twenty more of the vellum leaves on the outsides; over these is drawn a parchment case, open at both ends, and over this another in a contrary direction, so that the assemblage of gold and vellum leaves is kept tight and close on all sides. The whole is beaten with the heaviest hammer, and every now and then turned upside down, till the gold is stretched to the extent of the vellum; the case being from time to time opened for discovering how the extension goes on, and the packet, at times, bent and rolled as it were between the hands, for procuring sufficient freedom to the gold, or, as the workmen say, to make the gold work. The pieces, taken out from between the vellum leaves, are cut in four with a steel knife; and the 600 divisions, hence resulting, are interlaid in the same manner, with pieces of the ox-gut skins five inches square. The beating being repeated with a lighter hammer, till the golden plates have again acquired the extent of the skins, they are a second time divided in four; the instrument used for this division is a piece of cane cut to an edge, the leaves being now so light, that the moisture of the air or breath condensing on a metallic knife would occasion them to stick to it. These last divisions being so numerous, that the skins necessary for interposing between them would make the packet too

thick to be beaten at once, they are parted into three parcels, which are beaten separately, with the smallest hammer, till they are stretched, for the third time, to the size of the skins: they are now found to be reduced to the greatest thinness they will admit of; and indeed many of them, before this period, break or fall. In the beating, however simple the process appears to be, a good deal of address is requisite, for applying the hammers so as to extend the metal uniformly from the middle to the sides: one improper blow is apt not only to break the gold leaves, but to cut the skins. After the last beating, the leaves are taken up by the end of a cane instrument, and, being blown flat on a leather cushion, are cut to a size, one by one, with a square frame of cane made of a proper sharpness, or with a frame of wood edged with cane: they are then fitted into books of twenty-five leaves each, the paper of which is well smoothed, and rubbed with red bole to prevent their sticking to it. The French use only the cane knife; cutting them first straight on one side, fitting them into the book by the straight side, and then paring off the superfluous parts of the gold about the edges of the book. The size of the French gold leaves is from three inches to three and three-quarters square; that of ours, from three inches to three and three-eighths. The process of gold-beating is considerably influenced by the weather. In wet weather, the skins grow somewhat damp, and in this state make the extension of the gold more tedious: the French are said to dry and press them at every time of using; with care not to overdry them, which would render them unfit for farther service. Our workmen complain more of frost, which appears to affect the metalline leaves themselves: in frost, a gold leaf cannot easily be blown flat, but breaks, wrinkles, or runs together. Gold leaf ought to be prepared from the finest gold; as the admixture of other metals, though in too small a proportion to sensibly affect the color of the leaf, would dispose it to lose much of its beauty in the air. And indeed there is little temptation to the workmen to use any other; the greater hardness of alloyed gold occasioning as much to be lost in point of time and labor, and in the greater number of leaves that break, as can be gained by any quantity of alloy that would not be at once discoverable by the eye. All metals render gold harder and more difficult of extension: even silver, which in this respect seems to alter its quality less than any other metal, produces with gold a mixture sensibly harder than either of them separately, and this hardness is in no art more felt than in gold-beating. But, though the gold-beater cannot advantageously diminish the quantity of gold in the leaf by the admixture of any other substance with the gold, yet means have been contrived, for some particular purposes, of saving the precious metal, by producing a kind of leaf called party gold, whose basis is silver, and which has only a superficial coat of gold upon one side: a thick leaf of silver and a thinner one of gold, laid flat on one another, heated and pressed together, unite and cohere; and being then beaten into fine leaves, as in the foregoing process, the gold, though its quantity is only about one-fourth of that of the silver,

continues everywhere to cover it, the extension of the former keeping pace with that of the latter. See GOLD.

LEAGUE, *n. s.* & *v. n.* } Fr. *ligue*; Lat. LEAGUED', *adj.* } *ligo*, to bind together. A confederacy; union; bond of agreement; political treaty: to unite; confederate.

Thou shalt be in *league* with the stones of the field; and the beasts of the field shall be at peace with thee. *Job.*

You peers, continue this united *league*:
I every day expect an embassy
From my Redeemer, to redeem me hence.
And now in peace my soul shall part to heaven,
Since I have made my friends at peace on earth.

Shakspeare.

It is a great error, and a narrowness of mind, to think that nations have nothing to do one with another, except there be either an union in sovereignty, or a conjunction in pacts or *leagues*: there are other bands of society and implicit confederations.

Bacon's Holy War.

Oh Tyrians, with immortal hate
Pursue this hated race: and let there be
'Twixt us and them no *league* nor amity.

Denham.

I, a private person, whom my country
As a *league* breaker gave up bound, presumed
Single rebellion, and did hostile acts.

Milton.

And now thus *leagued* by an eternal bond,
What shall retard the Britons bold designs?

Philips.

Where fraud and falsehood invade society, the band presently breaks, and men are put to a loss where to *league* and to fasten their dependances.

South.

Thus every kind their pleasure find,
The savage and the tender;
Some social join, and *leagues* combine;
Some solitary wander.

Burns.

While Israel's chiefs the sacred hill surround,
And famished armies crowd the dusty ground:
While proud Idolatry was *leagued* with death,
And withered Famine swept the desert earth.

Darwin.

When we are told that these men are *leagued* together, not only for the destruction of their own comfort, but of their very means of subsistence, can we forget that it is the bitter policy, the destructive warfare of the last eighteen years, which has destroyed their comfort, your comfort, all men's comfort?

Byron.

LEAGUE, *n. s.* Fr. *lieue*; Ital. *lega*; Lat. *leuca*; Wel. *lech*, a stone, says Camden, which used to mark every three miles; other etymologists connect it with Sax. Goth. *laga*, a place or station. Minsheu says, à Gr. λευκος, albus, 'Because they did of old time piteu white stones at every league's end.' A measure of length, equal to three miles.

Ere the ships could meet by twice five *leagues*,
We were encountered by a mighty rock.

Shakspeare.

Even Italy, though many a *league* remote,
In distant echoes answered.

Addison.

Mazeppa said—'Twere long to tell;
And we have many a *league* to go,
With every now and then a blow,
And ten to one at least the foe,
Before our steeds may graze at ease
Beyond the swift Borysthenes.

Eyrie.

A LEAGUE contains more or fewer geometrical paces, according to the different usages and customs of countries. A league at sea, where it is chiefly used by us, being a land measure mostly peculiar to the French and Germans, contains 3000 geometrical paces, or three English miles. The French league sometimes contains the same measure, and in some parts of France it consists of 3500 paces; the mean or common league consists of 2400 paces, and the little league of 2000. The Spanish leagues are longer than the French, seventeen Spanish leagues making a degree, or twenty French leagues, or sixty-nine and a half English statute miles. The league of Spain is = four ancient Roman miles = 6441·392 yards. The large league of Spain is = five ancient Roman miles = 8051·74 English yards. On roads made since 1766 the distances are laid down at the rate of 8000 varas to the league; that is, 7416 English yards; so that five such leagues = twenty-one English miles nearly. But the juridical league is 5000 varas, or 4635 English yards; so that eight of these are equal to twenty-one English miles. Marine leagues are reckoned at the rate of twenty to a degree. But in different parts of Spain the leagues are very different. The leagues of Germany and Holland contain four geographical miles each. The German league, or that of Scandinavia, is = 9662·0886 English yards. The mile or league of Germany is = 200 Rhenish yards = 8239·846 English yards. The Persian leagues are pretty nearly of the same extent with the Spanish; that is, they are equal to four Italian miles; which is pretty near to what Herodotus calls the length of the Persian parasang, which contained thirty stadia, eight whereof, according to Strabo, made a mile. The word comes from leuca, or leuga, an ancient Gaulish word for an itinerary measure, and retained in that sense by the Romans. Some derive the word leuca from λευκος, white; as the Gauls, in imitation of the Romans, marked the distances in their roads with white stones.

LEAGUE denotes also an alliance between princes and states for their mutual aid, either in attacking some common enemy, or in defending themselves. Leagues among the Greeks were of three sorts: 1. Σπονδή, συνθηκη ερηνη, whereby both parties were obliged to cease from hostilities, without even molesting the allies of each other; 2. Επιμαχια, whereby they engaged to have the same friends and enemies, and to assist each other upon all occasions. All these leagues were confirmed with oaths, imprecations, and sacrifices. The victims most generally used were a boar, ram, or goat, sometimes all three; and sometimes bulls and lambs. They cut out the testicles of the animal, and stood upon them while they swore; and some of the hair of the victim was distributed to all present. They then cut the animal's throat, which was called ορκια τεμνειν, in Latin ferire fœdus. This done, they repeated their oaths and imprecations, calling the gods to witness the honesty of their intentions. A libation was then made of wine, which at this time was mixed, to imply their conjunction and union; while this was pouring out they prayed that the blood of him who should break

the treaty might be poured out in like manner. Upon these occasions no part of the victim was eaten. Still further to increase the solemnity of this obligation, the league was engraven upon brass, fixed up in places of public concourse, and sometimes read at the solemn games. Some exchanged certain εμβολα, or tessera, upon the occasion, and frequently sent ambassadors, on some appointed day, to keep them in mind of their engagements to each other. The ceremonies of the Romans in making leagues were performed by the Feciales. See FECIALES.

LEAGUE, by way of eminence, denotes a celebrated one which existed in France, from 1576 to 1593. Its intent was to prevent the succession of Henry IV., who was of the reformed religion, to the crown; and it ended with his abjuration of that faith. The leaguers, or confederates, were of three kinds. The zealous leaguers aimed at the utter destruction, not only of the Huguenots, but also of the ministry. The Spanish leaguers had principally in view the transferring the crown of France to the king of Spain, or the infanta his daughter. The moderate leaguers aimed only at the extirpation of Calvinism, without any alteration of the government. See FRANCE.

LEAGUE, ACHÆAN. See ACHÆANS.

LEA'GUER, *n. s.* Swed. and Teut. *lager*, from Goth. *lega*, to lay or place. Siege; investment of a town.

We will bind and hoodwink him so, that he shall suppose no other but that he is carried into the leaguer of the adversaries, when we bring him to our own tents. *Shakspeare.*

LEAK, *n. s. & v. a.* } Sax. *leccen*; Belg. and
LEA'KY, *adj.* } Teut. *lecken*; Heb. לִרָק,
accipere. Minsheu. A hole or breach which lets in water; to let in or let out water; to fall through a hole or breach.

There will be always evils, which no art of man can cure: breaches and leaks more than man's wit hath hands to stop. *Hooker.*

They will allow us ne'er a jordan, and then we leak in your chimney. *Shakspeare.*

Thou'rt so leaky,
That we must leave thee to thy sinking; for
Thy dearest quit thee. *Id.*

The water, which will perhaps by degrees leak into several parts, may be emptied out again. *Wilkins.*

The water rushes in, as it doth usually in the leak of a ship. *Id.*

Golden stars hung o'er their heads,
And seemed so crowded, that they burst upon 'em,
And dart at once their baleful influence
In leaking fire. *Dryden and Lee.*

If you have not enjoyed what youth could give,
But life sunk through you like a leaky sieve,
Accuse yourself, you lived not while you might. *Id.*

Whether she sprung a leak I cannot find,
Or whether she was overset with wind,
Or that some rock below her bottom rent,
But down at once with all her crew she went. *Id.*

Women are so leaky, that I have hardly met with one that could not hold her breath longer than she could keep a secret. *I' Strange.*

His feet should be washed every day in cold water; and have his shoes so thin that they might leak, and let in water. *Locke.*

A small leak will sink a great ship.

Franklin.

As day advanced the weather seemed to abate,

And then the leak they reckoned to reduce,

And keep the ship afloat, though three feet yet

Kept two hand and one chain-pump still in use.

Byron.

A LEAK, at sea, is a hole in the ship, through which the water comes in. A ship is said to spring a leak, when she begins to leak, or to let in the water. The manner of stopping a leak is to put into it a plug wrapped in oakum, and well tarred, or in a tarpawling clout, which keeps out the water, or nailing a piece of sheet lead on the place. Seamen sometimes stop a leak by thrusting a piece of salt beef into it. The seawater, being fresher than the brine imbibed by the beef, penetrates into its body, and causes it to swell so as to bear strongly against the edges of the broken plank, and thereby stops the influx of the water.—A ready way to find a leak in a ship is, to apply the narrower end of a speaking trumpet to the ear, and the other to the side of the ship where the leak is supposed to be; when the noise of the water issuing in at the leak will be heard distinctly, whereby it may be discovered.

LEAKAGE, in commerce, is an allowance in the customs, granted to importers of wines, for the waste or damage it is supposed to have received in the passage.

LEAKE (John), M.D., an eminent English physician, born at Kirk-Oswald, in Cumberland. After going through the usual studies, in which he made rapid advances, he attended the London Hospitals, and was admitted a member of the corporation of surgeons in that city. He then set out on a tour to Portugal and Italy, and on his return commenced business in Piccadilly, and delivered lectures on the obstetrical art. His Introductory Lecture on the Theory and Practice of Midwifery was published in 1764, and went through four editions in 4to. In 1765 he published the original plan of the Westminster Lying-in Hospital; and, having purchased a piece of ground, erected a building according to his plan, and made a free gift of the whole to the governors of the hospital. In 1773 he published Practical Observations on the Child-bed Fever; in 1774 he re-published his lecture, including the History, Nature, and Tendency of Midwifery; which he afterwards considerably enlarged, and published in two volumes, under the title of Medical Observations and Instructions, on the Nature, Treatment, and Cure of Various Diseases Incident to Women. In 1792 he published a Practical Essay on the Diseases of the Viscera, particularly those of the Stomach and Bowels. But his intense application, in the composition of this work, induced an affection of the breast, which ended in his death in 1792.

LEAKE (Richard), master gunner of England, was born at Harwich in 1629, and bred to the sea. At the Restoration he was made master gunner of the Princess, a frigate of fifty guns; and, in the first Dutch war, distinguished himself by his skill and bravery in two extraordinary actions: one against fifteen sail of Dutch men of war; and another, in 1667, against two Danes in the Baltic, in which, the commanding officers of

the Princess being killed or desperately wounded, the command devolved upon him. In 1669 he was promoted to be gunner of the Royal Prince, a first-rate man of war. He was engaged, with his two sons Henry and John, in the sea-fight against Van Tromp, in 1673; when the Royal Prince had all her masts shot away, near 400 of her men killed and disabled, and most of her upper tier of guns dismantled. As she lay thus like a wreck, a large Dutch man of war came down upon her with two fire ships; and captain Rooke, afterwards Sir George, thinking it impossible to defend her, ordered the men to save their lives, and the colors to be struck. Leake, hearing this, took the command upon himself, saying, 'The Royal Prince shall never be given up to the enemy, while I am alive to defend her.' His undaunted spirit inspired the small residue of the ship's company with courage; they returned with alacrity to the fight, and, under the direction of this valiant gunner and his two sons, sunk both the fire-ships, and obliged the man of war to sheer off: having thus saved the Royal Prince, he brought her into Chatham. Soon after Leake was made commander of a yacht, and gunner of Whitehall. In 1677 he obtained a grant for life of the office of master gunner of England, and store-keeper of the ordnance at Woolwich. He was the principal contriver of what the French call infernals, used at the bombardment of St. Malo's, in 1693.

LEAKE (Sir John), an English admiral, distinguished by his bravery and success, was born in 1656, and was taught mathematics and gunnery by Richard his father. He distinguished himself in 1673 in the memorable engagement between Sir Edward Spragg and Van Tromp, when but sixteen years of age; and, being afterwards made captain, signalled himself by carrying into effect the desperate attempt of conveying some victuallers into Londonderry. In 1702, being made commodore of a squadron, he destroyed the French trade and settlements at Newfoundland, and thus restored the whole island to the British. On his return he was created rear-admiral; soon after he was made vice-admiral of the blue, and was knighted. He was engaged with admiral Rooke in taking Gibraltar; after which he distinguished himself in the general engagement off Malaga. He was soon after made vice-admiral of the white, and then twice relieved Gibraltar. The last time he attacked five ships of the French fleet coming out of the bay, of which two were taken, and two run ashore and destroyed: baron Pointi died soon after of the wounds he received in the battle; and in a few days the enemy raised the siege. In 1705 Sir John was engaged in the reduction of Barcelona; and in 1706 relieved that city, when reduced to the last extremity, and obliged king Philip to raise the siege. Soon after he took Carthage; whence, proceeding to Alicante and Joyce, they both submitted to him; and he concluded the year with the reduction of Majorca. Upon his return home prince George of Denmark made him a present of a ring valued at £400, and he received £1000 from queen Anne as a reward for his services. In 1707 he was made admiral of the white, and commander-

n-chief of the fleet; and in 1708 he surprised a convoy of the enemy's corn, sent to Barcelona. He then proceeded to Sardinia, which he reduced to the obedience of king Charles of Spain, and soon after assisted lord Stanhope in the conquest of Minorca. On his return he was appointed one of the lord high admiral's council; and, in 1709, was made rear-admiral of Great Britain. He was several times chosen M. P. for Rochester; and in 1712 conducted the English forces to take possession of Dunkirk. But upon the accession of king George I. he was superseded, and allowed a pension of £6000 a year. He died at Greenwich in 1720.

LEAKE (Stephen Martin), a writer on heraldry, was the nephew of Sir John Leake, the naval officer. At the revival of the order of the Bath he was appointed one of the esquires of the deputy earl marshal, and, in 1727, Lancaster herald, and successively Norroy, Clarendieux, and at length in 1754 garter king-at-arms. In 1750 he printed a life of his uncle Sir John Leake, 8vo., which, however, was never published, and, the impression having been restrained to fifty copies, the book is rare. His other works are, Reasons for granting Commissions to the provincial Kings-at-arms to visit their Provinces; An Historical Account of English Money; and The Statutes of the Order of the Garter. He died in 1773.

LEAMINGTON. See LYMINGTON.

LEAMINGTON, Spa, England, in the parish of Leamington Priors, and county of Warwick, celebrated for its mineral waters. This place has been rapidly progressing to prosperity and elegance since the year 1797, and from an inconsiderable village, such as it then was, it has become a populous, regularly built, fashionable rendezvous during the summer, visited not only by invalids, for whom the waters have been prescribed, but also by persons of rank and high professional reputation, who seek a restoration of their energies, in the regularity of regimen, and agreeable society of this favourite watering place. Baths, public walks, libraries, assembly and pump-rooms, are all in a style of costliness and good taste. The waters contain salt, sulphate of soda, muriate of magnesia, and sulphate of lime. Leamington is distant from Warwick two miles, from London 95 miles, has a population amounting to 6000 souls. The benefice of Leamington Priors is a vicarage in the diocese of Lichfield and Coventry, of the annual value of £141. 5s.

LEAN, *v. a.* Sax. *linian*; Belg. *lenen*, *letinen*; Goth. *ligen*, to recline. To incline or rest against; to bend or tend towards; to recline; to be in a bending posture.

The columns may be allowed somewhat above their ordinary length, because they *lean* unto so good supporters. *Wotton.*

'Mid the central depth of blackening woods,
High raised in solemn theatre around
Leans the huge elephant. *Thomson.*

Lean not on earth, 'twill pierce thee to the heart;
A broken reed at best; but oft a spear;
On its sharp point peace bleeds, and hope expires.

Young.

And oft by yon blue gushing stream,
Shall Sorrow *lean* her drooping head,
And feed deep thought with many a dream,
And lingering, pause and lightly tread,
Fond wretch; as if her step disturbed the dead.

Byron.

LEAN, *adj. & n. s.* } Sax. *læne*; Swed. *len*
LEAN'LY, } Goth. and Teut. *lin*; Lat.
LEAN'NESS. } *lenis*. Thiu; meagre;
frail; weak; not fat; wanting flesh: hence poor
in any way; hungry.

Lean raw-boned rascals! who would e'er suppose,
They had such courage and audacity! *Shakespeare.*

I would invent as bitter searching terms,

With full as many signs of deadly hate,

As *lean*-faced envy in her loathsome cave. *Id.*

That which combined us was most great, and *lean*
not

A *leaner* action rend us. *Id.*

The poor king Reignier, whose large style

Agrees not with the *leanness* of his purse. *Id.*

Let a physician beware how he purge after hard
frosty weather, and in a *lean* body, without prepara-
tion. *Bacon.*

If thy *leanness* loves such food,

There are those, that, for thy sake,

Do enough. *Ben Jonson.*

And fetch their precepts from the cynic tub,

Praising the *lean* and sallow abstinence. *Milton.*

Swear that Adrastus, and the *lean*-looked pro-
phet,

Are joint conspirators. *Dryden and Lee.*

With razors keen we cut our passage clean

Through rills of fat, and deluges of *lean*.

Farquhar.

There are two chief kinds of terrestrial liquors,

those that are fat and light, and those that are *lean*
and more earthy, like common water. *Burnet.*

No laughing graces wanton in mine eyes;

But haggard grief, *lean*-looking sallow care,

Dwell on my brow. *Rowe's Jane Shore.*

Lean people often suffer for want of fat, as fat
people may by obstruction of the vessels.

Arbuthnot.

The symptoms of too great fluidity are excess of
universal secretions, as of perspiration, sweat, urine,
liquid dejectures, *leanness* and weakness. *Id.*

With eye askance,

I view the muscular proportioned limb

Transformed to a *lean* shank. *Cowper.*

LEAO, in natural history, a mineral substance
approaching to the nature of the lapis lazuli,
found in the East Indies, and of great use in the
Chinese porcelain manufactures, being the finest
blue they are possessed of. This stone is found
in the strata of pit-coal, or in those of a yellowish
or reddish earth in the neighbourhood of the
veins of coal. Pieces of it are often found lying
on the surface of the ground, and these are a
sure indication that more will be found on dip-
ping. It is generally found in oblong pieces of
the size of a finger, not round, but flat. Some of
this is very fine, some coarse and of a bad color.
The latter is very common; but the former is
scarce, and greatly valued. It is not easy to distin-
guish them at first sight, but the trying one piece
is generally a sufficient test of the whole mine;
for all that is found in the same place is usually
of the same sort. In preparing it for use they
first wash it very clean; then lay it at the bottom
of their baking furnaces; and, when it has been
thus calcined for three or four hours, it is taken

out and powdered very fine in large mortars of porcelain, with stone pestles faced with iron. When the powder is perfectly fine, they pour in boiling water, and grind that with the rest; and, when thoroughly incorporated, they add more, and pour it off after some time settling. The remainder at the bottom of the mortar, which is the coarser part, they grind again with more water; and so on, till they have made the whole fine, excepting a little dirt or grit. All the liquors are then mixed together, and stirred; and after being allowed to stand two or three minutes, poured off with the powder remaining in them. This is suffered to subside gradually, and is the fine blue used in their best works, common small serving for the blue of all the common China.

LEAP, *v. n., v. a. & n. s.* } Saxon leapan;
LEAF'FROG, *n. s.* } Belg. loopen; Sw.

LEAF'YEAR. } lopa; Scotch leup.

To jump; bound; spring: hence to start, fly, or rush impetuously: to pass over or into by leaping: the noun signifies either the jump or bound accomplished, or the space passed over: leap-frog, a leaping play of children in imitation of frogs: leap-year is abundantly defined in the extracts.

And anon his leggis and hire feet were sowdrid togidre, and he leppide and stood and wandride, and he entride with hem into the temple and wandride and leppide and heriede God. *Wiclif. Dedis 3.*

Out of his mouth go burning lamps, and sparks of fire leap out. *Job. xli. 19.*

Rejoice ye in that day, and leap for joy. *Luke vi. 2.*

For age, with stealing steps,
Hath clawed me with his crouch,
And lusty life away she leapes,
As there had been none such.

Vncertaine Auctors. Thassault of Cupide, &c.
He ruin upon ruin heaps,

And on me, like a furious giant, leaps. *Sandys.*

He parted frowning from me, as if ruin

Leaped from his eyes; so looks the chased lion

Upon the daring huntsman that has galled him;
Then makes him nothing. *Shakspeare. Henry VIII.*

Method, it were an easy leap

To pluck bright honour from the pale-faced moon.

Shakspeare.
If I could win a lady at leap-frog, I should quickly leap into a wife. *Id. Henry V.*

A man leapeth better with weights in his hands than without; for that the weight, if it be proportionable, strengthening the sinews by contracting toem. In leaping with weights, the arms are first cast backwards and then forwards with so much the greater force; for the hands go backward before they take their rise. *Bacon.*

In a narrow pit

He saw a lion, and leaped down to it. *Cowley.*

The reason of the name of leap-year is, that a day of the week is missed; as, if on one year the first of March be on Monday, it will on the next year be on a Tuesday, but on leap-year it will leap to Wednesday.

As one condemned to leap a precipice,

Who sees before his eyes the depth below,
Stops short. *Dryden's Spanish Fryar.*

Behold that dreadful downfall of a rock,

Where you old fisher views the waves from high!
Tis the convenient leap I meau to try. *Dryden.*

Too soon they must not feel the sting of love:

Let him not leap the cow. *Id. Georg.*

Every man is not of a constitution to leap a gulf for the saving of his country. *L' Estrange.*

Wickedness comes on by degrees, as well as virtue; and sudden leaps from one extreme to another are unnatural. *Id.*

The cat made a leap at the mouse. *Id.*

Strait leaping from his horse, he raised me up. *Rowe.*

Leap-year or bissextile is every fourth year, and so called from its leaping a day more that year than in a common year: so that the common year has 365 days, but the leap-year 366; and then February hath 29 days, which in common years hath but 28. To find the leap-year you have this rule:

Divide by 4; what's left shall be
For leap-year 0; for past 1, 2, 3. *Harris.*

I am warmed, my heart

Leaps at the trumpet's voice, and burns for glory. *Addison.*

She dares pursue, if they dare lead:

As their example still prevails,

She tempts the stream or leaps the pales. *Prior.*

The commons wrested even the power of chusing a king intirely out of the hands of the nobles; which was so great a leap, and caused such a convulsion in the state, that the constitution could not bear. *Swift.*

I see the circling hunt of noisy men

Burst law's inclosure, leap the mounds of right,

Pursuing and pursued, each other's prey;

As wolves for rapine, as the fox for wiles;

Till death, that mighty hunter, earth them all. *Young.*

LEAP, in music, is when the song does not proceed by conjoint degrees, as when between each note there is an interval of a third, a fourth, a fifth, &c. It is to be observed that there are two kinds of leaps, regular and irregular, called by the Italians salti regolari, and irregolari. The regular leaps are those of a third major or minor, whether natural or accidental, fourth, fifth, sixth minor, and octave, and these either ascending or descending.

Irregular leaps are the triton, sixth major, seventh major, the ninth, tenth, and, in general, all beyond the compass of an octave; at least in vocal music. Besides these, there are others which may be used, such as the diminished fourth, the false fifth, and flat seventh. The difference between the regular and irregular leaps is, that the former are performed by the voice, without any great difficulty or effort; whereas the latter require more attention to execute.

LEAP, THE LOVER'S. See LEUCATA.

LEARN, *v. a. & v. n.* } Sax. leornian; Teut.

LEARN'ED, } lernen; Goth. and

LEARN'EDLY, } Swed. lara. To ob-

LEARN'ING, } tain knowledge or

LEARN'ER. } skill; to improve; to

take pattern (used with *of*): also, in a sense deservedly obsolete, to impart knowledge: learned is skilled or versed to some degree of proficiency in science or art: learning, scholastic knowledge; skill of any kind.

But britheren I preie ghou that ghe asprie hem that maken dissentious and hyrtyngis bisidis the doctrine that ghe han lerned, and bowe ghe awai fro hem. *Wiclif. Romayns 16.*

Learn a parable of the fig-tree.

Matt. xxiv. 32.

Take my yoke upon you, and learn of me; for I am meek and lowly. *Matt. xi. 29.*

He would learn

The lion stoop to him in lowly wise,
A lesson hard. *Spenser's Faerie Queene.*

The apostle seemed in his eyes but learnedly mad. *Hooker.*

An art of contradiction by way of scorn, a learning wherewith we were long sithence forewarned, that the miserable times whereunto we are fallen should abound. *Id.*

He, in a shorter time than was thought possible, learned both to speak and write the Arabian tongue. *Knolles.*

You taught me language, and my profit on't
Is, I know not how to curse: the red plague rid you,
For learning me your language. *Shakspeare. Tempest.*

Much

He spoke, and learnedly, for life; but all
Was either pitied in him, or forgotten. *Shakspeare.*

In imitation of sounds, that man should be the teacher is no part of the matter; for birds will learn one of another. *Bacon's Natural History.*

Learning hath its infancy, when it is almost childish; then its youth, when luxuriant and juvenile; then its strength of years, when solid; and, lastly, its old age, when dry and exhaust. *Bacon.*

The late learners cannot so well take the ply, except it be in some minds that have not suffered themselves to fix. *Id.*

He that sips of many arts, drinks of none. However, we must know that all learning, which is but one grand science hath so homogeneall a body, that the parts thereof do with a mutual service relate to, and communicate strength and lustre each to other. *Füller.*

Learn, wretches! learn the motions of the mind,
And the great moral end of humankind. *Dryden.*

Great contemporaries whet and cultivate each other: and mutual borrowing and commerce make the common riches of learning, as it does of the civil government. *Id.*

It is indifferent to the matter in hand, which way the learned shall determine of it. *Locke.*

To be learned in the lump by other men's thoughts, and to be in the right way by saying after others, is the much easier and quicker way. *Id.*

You will find it difficult to persuade learned men to fall in with your projects. *Addison on Medals.*

To tongue or pudding thou hast no pretence,
Learning thy talent is, but mine is sense. *Prior.*
The learned Vossius says his barber used to comb his head in iambics. *Steele.*

Though trained in arms, and learned in martial arts,
Thou chusest not to conquer men but hearts. *Granville.*

As Moses was learned in all the wisdom of the Egyptians, so it is manifest from this chapter, that St. Paul was a great master in all the learning of the Greeks. *Bentley.*

Some by old words to fame have made pretence:
Such laboured nothings, in so strange a style,
Amaze the unlearned, and make the learned smile. *Pope.*

As those move easiest that have learned to dance. *Id.*

Every coxcomb swears as learnedly as they. *Swift.*

The learned met with free approach,
Although they came not in a coach. *Id.*

You may rely upon my tender care,
To keep him far from perils of ambition:
All he can learn of me will be to weep!

A. Philips.

Would you be still more learned than the learned?
Learn well to know how much need not be known,
And what that knowledge which impairs your sense. *Young.*

Much learning shews how little mortals know;
Much wealth how little worldlings can enjoy. *Id.*

A man of the best, and the greatest learning, if he does not know the world by his own experience and observation, will be very absurd, and consequently very unwelcome in company. *Chesterfield.*

Learning once made popular is no longer learning; it has the appearance of something which we have bestowed upon ourselves, as the dew appears to rise from the field which it refreshes. *Johnson.*

What pity it is that men should take such immense pains, as some do, to learn those things which, as soon as they become wise, they must take as much pains to unlearn! *Mason.*

Knowledge is proud that he has learned so much;
Wisdom is humble that he knows no more. *Cowper.*

LEASE, *v. n.* } Sax. lisan; Goth. *lesan*;
LEAS'ER, *n. s.* } Teut. and Belg. *lesen*; *G.*
λεγω, to gather. To glean.

She in harvest used to lease;
But harvest done, to chare-work did aspire,
Meat, drink, and two-pence, was her daily hire. *Dryden.*

There was no office which a man from England might not have; and I looked upon all who were born here as only in the condition of lessers and gleaners. *Swift.*

LEASE, *n. s. & v. a.* Fr. *laisser*; Teut. *lassen*; Goth. *leysa*. A demise or tenure of houses or lands. See below: to lease is to demise or let property.

Why, cousin, wert thou regent of the world,
It were a shame to let this land by lease. *Shakspeare.*

Our high-placed Macbeth
Shall live the lease of nature. *Id.*
Lords of the world have but for life their lease,
And that too, if the lessor please, must cease. *Denham.*

Thou to give the world increase,
Shortened hast thy own life's lease. *Milton.*
Where the vicar leases his glebe, the tenant must pay the great tythes to the rector or impropiator, and the small tythes to the vicar. *Ayliffe.*

I have heard a man talk with contempt of bishop's leases, as on a worse foot than the rest of his estate. *Swift.*

Leases of a Dean and Chapter are good without confirmation of the Bishop. *Tomlins.*

LEASE, in law. In times of remote antiquity the feudal law imposed restrictions on the granting of leases wholly incompatible with the spirit of the common law. By this, as it has stood for many centuries, all persons seised of an estate might let leases to endure so long as their own interest lasted. A tenant, therefore, in fee simple might let leases of any duration, for he had the whole interest; but tenants in tail, or for life, could make no leases which should bind the issue in tail or reversioner; nor could a husband, seised jure uxoris, make a firm or valid lease for any longer term than the joint-lives of himself and his wife. Yet some tenants

for life, as, where the fee-simple was in abeyance, might (with the concurrence of such as had the guardianship of the fee) make leases of equal duration with those granted by tenants in fee-simple; such as parsons and vicars with consent of the patron and ordinary. Co. Lit. 44. So also bishops and deans, and such other sole ecclesiastical corporations as are seised of the fee-simple of land in their corporate right, might, with the concurrence and confirmation of such persons as the law requires, have made leases for years, or for life, estates in tail, or in fee, without any limitation or control. And corporations aggregate might have made what estates they pleased, without the confirmation of any other person whatever. Whereas now, by several statutes; this power where it was unreasonable, and might be made an ill use of, is restrained; and, where in the other cases the restraint by the common law seemed too hard, it is in some measure removed. The former statutes are called the restraining, the latter the enabling statute, 2 Comm. c. 20.

A lease may be either in writing or by word of mouth: sometimes it is made and done by record, as fine, recovery, &c., and sometimes and most frequently by writing, called a lease by indenture; it may be also made by deed-poll; when made by word of mouth, without any writing, it is called a lease-parol. But by the statute of frauds, statute 29 Car. II. c. 3, leases of lands, except leases not exceeding three years, must be in writing, and signed by the parties themselves, or their agents duly authorised, otherwise they will operate only as leases at will.

A parol agreement to lease lands for four years creates only a tenancy at will. 4 Term Rep. 680.—But see 8 Term Rep. 3, that a lease by parol endures as a tenancy from year to year; the meaning of the statute of frauds being that such an agreement should not operate as a term. As to the time a lease may be made either for life, for years, or at will. For life; as for life of the lessee, or another, or both.—For years, i. e. for a certain number of years, as ten, 100, 1000, or 10,000 years, months, weeks, or days, as the lessor and lessee agree. And then the estate is properly called a term for years; for this word term does not only signify the limits and limitation of time, but also the estate and interest that doth pass for that time. These leases for years do some of them commence in presenti, and some in futuro at a day to come; and the lease that is to begin in futuro is called an interesse termini, or future interest.—At will; i. e. when a lease is made of land to be held at the will and pleasure of the lessor and lessee together; and such a lease may be made by word of mouth, as well as the former.

A lease but for half a year, or a quarter, or any less time, this lessee is still respected as a 'tenant for years, and is styled so in some legal proceedings; a year being the shortest term which the law in this case takes notice of. Indeed every estate which must expire at a period certain and prefixed, by whatever words created, is an estate for years, and therefore this estate is frequently called a term, terminus, because its

duration or continuance is bounded, limited, and determined; for every such estate must have a certain beginning and certain end. Co. Lit. 45. But the law reckons an estate for years inferior in interest, as compared to an estate for life, or an inheritance; an estate for life, even if it be per auter vie, is a freehold; but an estate for 1000 years is only a chattel, and reckoned part of the personal estate. Co. Lit. 45. Hence it follows, that a lease for years may be made to commence in futuro, though a lease for life cannot. As if one grants lands to another to hold from Michaelmas next for twenty years, this is good; but to hold from Michaelmas next, for the term of his natural life is void.

Generally, to the making of a good lease there must concur, 1. A lessor not restrained from making a lease; 2. A lessee not disabled to receive; 3. A thing demised which is demisable, and a sufficient description of the thing demised, &c.; 4. If for years, it must have a specified commencement and termination; 5. It is to have all the usual ceremonies of sealing, delivery, and acceptance.

If the substance of a lease be put in writing, and signed by the parties, though it be not sealed, it shall have the effect of a lease for years (Wood's Inst. 266); but a lease in writing, though not under seal, cannot be given in evidence, unless it be stamped: and articles with covenants to let and make a lease of lands, for a certain term, at so much rent, have been adjudged a lease. In a covenant with the words 'have, possess, and occupy lands, in consideration of a yearly rent, without the word demise, it was held a good lease; and a license to occupy, take the profits, &c., which passes an interest, amounts to a lease. 3 Bulst. 204; 3 Salk. 223. An agreement of the parties, that the lessee shall enjoy the lands, will make a lease; but if the agreement has a reference to the lease to be made, and implies an intent not to be perfected till then, it is not a perfect lease until made. If on a promise of lease a man lays out money on the premises, he shall oblige the lessor afterwards to make the lease; the agreement being executed on the lessee's part.

A paper containing words of present contract, with an agreement that the lessee should take possession immediately, and that a lease should be executed in future, operates only as an agreement for a lease, and not as a lease itself. But an instrument containing words of present demise will operate as a lease.

A lessee has a term for a year by parol, and so from year to year, so long as both parties please; if the lessee enters on a second year, he is bound for that year, and so on; and if there is a lease by deed for a year, and so from year to year as long as both parties agree, this is binding but for one year; though, if the lessee enters upon the second year, he is for that year bound: if it is for a year, and so from year to year, so long as both parties agree, till six years expire; this is a lease for six years, but determinable every year at the will of either party; but if it is for a year, and so from year to year till six years determine, this is a certain lease for six years.

A man out of possession cannot make a lease of lands, without entering and sealing the lease upon the land. Dalis. 81. The lessee is to enter on the premises let; and such lessee for years is not in possession, so as to bring trespass, &c., until actual entry; but he may grant over his term before entry. 1 Inst. 46; 2 Lil. 160.

Lands and mines are leased to a tenant; this only extends to the open mines, and the lessee shall not have any others, if there are such: and, if land and timber are demised, the lessee is not empowered to sell it. 2 Lev. 184; 2 Mod. 193. A man makes a lease of lands for life, or years, the lessee has but a special interest in the timber trees, as annexed to the land, to have the mast and shadow for his cattle; and when they are severed from the lands, or blown down with wind, the lessor shall have them as parcel of his inheritance. 4 Rep. 62; 11 Rep. 81. A demise of premises in Westminster, late in the occupation of A, particularly describing them, part of which was a yard, does not pass a cellar situate under that yard, which was then in the occupation of B, another tenant to the lessor: and the lessor, in an ejectment brought to recover the cellar, is not estopped by his deed from going into evidence, to show that the cellar was not intended to be demised. Whether parcel or not of the thing demised is always matter of evidence.

He that is seised of an estate for life, may make a lease for his life according as he is seised; also he may make a lease for years of the estate, and it shall be good as long as the estate for life doth last; one possessed of lands, for years, may make a lease for all the years except one day, or any short part of the term; and if lessee for years make a lease for life, the lessee may enjoy it for the lessor's life, if the term of years last so long; but, if he gives livery and seisin upon it, this is a forfeiture of the estate for years. Wood's Inst. 267. If tenant in tail or for life make a lease generally, it shall be construed for his own life. 1 Inst. 42. By various acts of parliament, and also by private settlements, a power is granted of making leases in possession, but not in reversion, for a certain time; the object being that the estate may not be incumbered, by the act of the party, beyond a specific time. Yet persons who had this limited power of making in possession only, had frequently demised the premises to hold from the day of the date; and the courts in several instances determined, that the words 'from the day of the date,' excluded the day of making the deed: and that in consequence these were leases in reversion, and void; but this question having been brought again before the court of king's bench, it was determined that the words 'from the day' might either be inclusive or exclusive; and therefore that they ought to be construed so as to effectuate these important deeds, and not to destroy them. Of all kinds of powers the most frequent is that to make leases. In the making such leases all the requisites particularly specified in the power must be strictly observed; and such leases must contain all such beneficial clauses and reservations as ought to be, for the benefit of the remainderman; the principle of law in this case

being, that the estate must come to him in as beneficial a manner as the ancient owners held it. Joint-tenants, tenants in common, and coparceners, may make leases for life, years, or at will, of their own parts, which shall bind their companions; and, in some cases, persons who are not seised of lands in fee, &c., may make leases for life or years, by special power enabling them to do it; when the authority must be exactly pursued. Wood's Inst. 267. But there is a difference where there is a general power to make leases, and a particular power. See ante, et 8 Rep. 69. If joint-tenants join in a lease, this shall be but one lease, for they have but one freehold; but, if tenants in common join in a lease, it shall be several leases of their several interests. A lessor who has the fee cannot reserve rent to any other but himself, his heirs, &c. And, if he reserves a rent to his executors, the rent shall be to the heir, as incident to the reversion of the land. 1 Inst. 47. The lessor may take a distress on the tenements let for the rent; or may have action of debt for the arrears, &c. Also land leased shall be subject to those lawful remedies which the lessor provides for the recovery of his rent, possession, &c., into whose hands soever the land may come. In lands leased at will, the lessee cannot determine his will before or after the day of payment of the rent, but it must be done on that very day; and the law will not allow the lessee to do it to the prejudice of the lessor, as to the rent; nor that the lessor shall determine his will to the prejudice of the lessee, after the land is sown with corn, &c. For where lessee at will sows the land, if he does not himself determine the will, he shall have the corn: and where tenant for life sows the corn, and dies, his executors shall have it; but it is not so of a tenant for years, where the term ends before the corn is ripe, &c. 5 Rep. 116. The lessor and lessee, where the estate is at will, may determine the will when they please; but, if the lessor does it within a quarter, he shall lose that quarter's rent; and, if the lessee does it, he must pay a quarter's rent. 2 Salk. 413. By words spoken on the ground, by the lessor in the absence of the lessee, the will is not determined; but the lessee is to have notice. 1 Inst. 55. If a man makes a lease at will, and dies, the will is determined; and, if the tenant continues in possession, he is tenant at sufferance. Ibid. 57. But where a lessor makes an estate at will to two or three persons, and one of them dies, it has been adjudged this does not determine the estate at will. 5 Rep. 10. If a tenant at will grants over his estate to another, it determines his will.

The cancelling a lease is not a surrender within the statute of frauds: nor is the recital in a second lease that it was granted in part consideration of the surrender of a former lease, it not purporting in the terms of it to be of itself a surrender. If a landlord lease for seven years by parol, and agree that the tenant shall enter at Lady-day, and quit at Candlemas; though the lease be void by the statute of Frauds, as to the duration of the term, the tenant holds under the terms of the lease in other respects. When the term of a lease is to end on a particular day

there is no occasion for a notice to quit: but a demand of possession, and notice in writing, are necessary to entitle the landlord to raise his rent. See **LANDLORD and TENANT**. The enabling statute, 32 Hen. VIII. c. 28, empowers three manner of persons to make leases, to endure for three lives, or one-and-twenty years, which could not do so before. At first, tenant in tail may by such leases bind his issue in tail, but not those in remainder or reversion. Secondly, a husband seised in right of his wife, in fee-simple or fee-tail, provided the wife joins in such lease, may bind her and her heirs thereby. Lastly, all persons seised of an estate in fee-simple in right of their churches, which extends not to parsons and vicars, may, without the concurrence of any other person, bind their successors. But many requisites must be observed which the statute specifies: as, 1st, The lease must be by indenture, and not by deed-poll or parol. 2dly, It must begin from the making, or day of the making, and not at any distance of time. 3dly, If there be any old lease in being, it must be first absolutely surrendered, or be within a year of expiring. 4thly, It must be either for twenty-one years, or three lives; and not for both. 5thly, It must not exceed the term of three lives, or twenty-one years, but may be for a shorter time. 6thly, Under this statute, 32 Hen. VIII., it must have been of corporeal hereditaments, and not of such things as lie merely in grants; for no rent can be reserved thereout by the common law, as the lessor cannot resort to them to distrain. But now, by the statute 5 Geo. III. c. 17, a lease of tithes or other incorporeal hereditaments, alone may be granted by any bishop or any such ecclesiastical or eleemosynary corporation, and the successor shall be entitled to recover the rent by an action of debt; which, in case of a freehold lease, he could not have brought at the common law. 7thly, It must be of lands and tenements most commonly letten for twenty years past; so that if they had been let for above half the time, or eleven years out of the twenty, either for life, for years, at will, or by copy of court-roll, it is sufficient. 8thly, The most usual and customary feorm or rent for twenty years past must be reserved yearly on such lease. 9thly, Such lease must not be made without impeachment of waste. These are the guards imposed to prevent unreasonable abuses, in prejudice of the issue, the wife, or the successor, of the reasonable indulgence here given. Next follow, in order of time, the disabling or restraining statute, 1 Eliz. c. 19 (made entirely for the benefit of the successor); which enacts, that all grants by archbishops and bishops (which include even those confirmed by the dean and chapter, the which, however long and unreasonable, were good at common law), other than for the term of twenty-one years, or three lives from the making, or without reserving the usual rent, shall be void. Then the 13 Eliz. c. 10; 14 Eliz. c. 11 and 14; 18 Eliz. c. 11; and 43 Eliz. c. 29.

Concerning these restrictive statutes two general observations are to be made. First, that they do not, by any construction, enable any persons to make such leases as they were by

common law disabled to make. Therefore a parson or vicar, though he is restrained from making longer leases than for twenty-one years or three lives, even with the consent of the patron and ordinary, yet is not enabled to make any lease at all, so as to bind his successor, without obtaining such consent. Co. Lit. 44. Secondly, that though leases contrary to these statutes are declared void, yet they are good against the lessor, during his life, if he be a sole corporation; and are also good against an aggregate corporation, so long as the head of it lives, who is presumed to be the most concerned in interest. For the statute was intended for the benefit of the successor only; and no man shall make an advantage of his own wrong. Co. Lit. 45, 2 Comm. c. 20.

LEASE, in Scots law, is generally called a tack. See **LAW**. The shortness of leases in many parts of Scotland has been long and justly complained of, as disadvantageous, not only to the tenants, but even to the proprietors, as well as to the country in general, by tending greatly to retard improvements in husbandry. Leases for nineteen years are too short for making any material improvements. Three times that period, or fifty-seven years, is much recommended. See Stat. Acc. Index, part I. 'Although the granting of leases for nineteen years at least,' says the author of the Stat. Acc. of Dunnichen, 'is now become universal, yet there prevails a considerable diversity of opinion among proprietors, as to the expediency of including the life of the farmers in their leases. Some advantages, however, seem to give a decided preference to this last sort of lease. The tenant knows he is settled for life, and is therefore afraid to over-crop his land, lest he thereby injure himself. Many law-suits are thereby avoided. The tenant is also more attentive to the repairs of his buildings and fences; and requires a much less vigilant inspection on the part of the proprietor, or his factor. To protect the newly planted trees round the enclosed fields, the proprietor of Dunnichen has given the heirs of the tenants a right to one-third part of them at the expiration of the lease; and engages not to prosecute the tenants for any accidental damage from cattle. The tenants consider the trees as a part of their own property, and are at pains to protect them from injury. Until farms are transmitted from father to son like an inheritance, as is much the case in England, agriculture will not attain all the perfection of which it is capable. Veteres migrate coloni is an odious mandate.'

Upon this subject, however, respectable writers have given very different opinions. 'What ought to be the term of a lease,' says Mr. Loudon, 'can only be determined by a reference to the circumstances of each particular case. Lands naturally rich, or such as have already been brought to a high degree of fertility, requiring no great investment of capital, and returning all or nearly all the necessary outlay upon short leases, such as perhaps give time for two, or at most three, of the rotations or courses of crops to which the quality of the soil is best adapted. The practice of England in this re-

spect is extremely various, almost every term, from twenty years downwards, being found in different parts of it. In Scotland, by far the most common period is nineteen years, to which it was formerly the practice, in some places, to add the life of the tenant. In that country, even when it is thought expedient to agree for a much longer term, this is still expressed in periods of nineteen years, a sort of mysterious cycle, which seems to be no less a favorite with the courts of law, than with landholders and farmers. Yet this term is somewhat inconvenient, as it can never correspond with any number of the recognised rotations of arable land. A lease for twenty years, it has been maintained by several writers, is not sufficient to reimburse a tenant for any considerable improvements, and landholders have often been urged to agree to a much longer term, which, it is alleged, would be not less for their own interest than for that of the tenant. This is a question which our limits do not permit us to discuss, but, after viewing it in different lights, assisted by the experience of long leases in different parts of Scotland, we cannot help expressing some doubts of their utility, even in so far only as regards the parties themselves; and we are decidedly of opinion, that a greater produce will be brought to market, from any given extent of land held on successive leases of twenty years, for half a century, than if held on one lease of that duration, whether the term be specified or indefinite, as is the case of a lease for life. As a general mode of tenure, leases for lives seem to us particularly objectionable.

LEASE AND RELEASE is a species of conveyance used in the English law, first invented by serjeant Moore, soon after the statute of uses, and now the most common of any, and therefore not to be shaken; though very great lawyers, particularly Mr. Noy, formerly doubted its validity. It is thus contrived: a lease, or rather bargain and sale, upon some pecuniary consideration, for one year, is made by the tenant of the freehold to the lessee or bargainee. Now this, without any enrolment, makes the bargainer stand seized to the use of the bargainee, and vests in the bargainee the use of the term for a year; and then the statute immediately annexes the possession. He therefore, being thus in possession, is capable of receiving a release of the freehold and reversion, which must be made to a tenant in possession; and accordingly, the next day, a release is granted to him. This is held to supply the place of livery of seisin; and so a conveyance by lease and release is said to amount to a feoffment. See USES.

LEASH, *n. s.* & *v. a.* Fr. *lisse*, *lesse*: Ital. *laccio*; Belg. *litse*; Scot. *leich*. A cord or thong by which birds or dogs are held: hence a tierce, three; a bond generally: to leash is to bind or hold in a string.

Holding Corioli in the name of Rome,
Even like a fawning greyhound in the leash,
To let him slip at will. *Shakspeare.*
I am sworn brother to a leash of drawers, and can call them all by their Christian names. *Id.*
What I was, I am;
More straining on, for plucking back; not following
My leash unwillingly. *Id. Winter's Tale.*

Then should the warlike Harry, like himself,
Assume the port of Mars; and, at his heels,
Leasht in like hounds, should famine, sword, and fire,
Crouch for employment. *Id. Henry V.*

Some thought when he did gabble,
Th'ad heard three labourers of Babel.
Or Cerberus himself pronounce
A *leash* of languages at once. *Hudibras.*
The ravished soul being shewn such game, would break those *leashes* that tie her to the body. *Boyle.*
Thou art a living comedy; they are a *leash* of dull devils. *Dennis's Letters.*

LEASING, *n. s.* } Sax. *leare*, *leap*, deficient;
LEA'SY, *adj.* } ent; Goth. *lessing*. Lying; deceit; fraud: *leasy*, loose; flimsy.

The lawe is not sette to a iust man, but to unniuste men,—and lecchouris, to hem that doen lecherie with men, *lesing* mongeris and forsworun. *Wiclif. 1 Tymo. i.*

If thou because of thin humilitee, makest a *leasing* on thyself, though thou were not in sinne before yet arte thou than in sinne through thy *lesing*. *Chaucer. Personnes Tale.*

O ye sons of men, how long will ye have such pleasure in vanity, and seek after *leasing*? *Psalms iv. 2.*

He never leaveth, while the sense itself he leift loose and *leasy*. *Ascham's Schoolmaster.*

That false pilgrim which that *leasing* told,
Was indeed old Archimago. *Faerie Queene.*

He 'mongst ladies would their fortunes read
Out of their hands, and merry *leasings* tell. *Hubberd's Tale.*

He hates foul *leasings* and vile flattery,
Two filthy blots in noble gentery. *Id.*

I have ever verified my friends
With all the size that verity
Would without lapsing suffer: nay, sometimes,
Like to a bowl upon a subtle ground,
I've tumbled past the throw; and in his praise
Have almost stamp't the *leasing*. *Shakspeare.*

As folks, quoth Richard, prone to *leasing*,
Say things at first, because they're pleasing;
Then prove what they have once asserted,
Nor care to have their lie deserted:
Till their own dreams at length deceive them,
And oft repeating they believe them. *Prior.*

Trading free shall thrive again,
Nor *leasings* lewd affright the swain. *Gay.*

LEAST, *adj.* & *adv.* Sax. *læst*. The superlative of little (Sax. *læt*); Goth. *litest*. Wallis contends we should write it *lest*, as analogous to less. Smallest; in the lowest degree: 'at least,' 'at the least,' 'or at least-wise,' mean saying no more than necessary, or barely sufficient; at the lowest degree; also, not to say all.

He that is *leest* among you all is the grettist. *Wiclif. Luke ix.*
I am not worthy of the *least* of all the mercies shewed to thy servant. *Gen. xxxii. 10.*
Every effect doth after a sort contain, at *least-wise* resemble, the cause from which it proceedeth. *Hooker.*

To come from all things to nothing is not a descent but a downfall; and it is a rare strength and constancy, not to be maimed at *least*. *Bp. Hall's Contemplations.*

He who tempts, though in vain, at *least* aspires: The tempted with dishonour. *Milton.*

Whether such virtue spent now failed
New angels to create, if they at *leas*.
Are his created. *Id.*

He resolved to wave his suit,
Or for a while play *least* in sight.

Hudibras.

Upon the mast they saw a young man, at *least* if
he were a man, who sat as on horseback. *Sidney.*
The remedies, if any, are to be proposed from a
constant course of the milken diet, continued at
least a year. *Temple.*

Even that avert; I chuse it not;
But taste it as the *least* unhappy lot.

Dryden.

A fiend may deceive a creature of more excellency
than himself, at *least* by the tacit permission of the
omniscient Being. *Id.*

A man can no more have a positive idea of the
greatest than he has of the *least* space. *Locke.*

A true and genuine impudence is ever the effect
of ignorance without the *least* sense of it. *Steele.*

No man more truly knows to place a right value
on your friendship, than he who *least* deserves it on
all other accounts than his due sense of it. *Pope.*

Honour and fame at *least* the thunderer owed,
And ill he pays the promise of a god. *Id.*
Let useful observations be at *least* some part of the
subject of your conversation. *Watts.*

Oh! how I wished for spear or sword,

At *least* to die amidst the horde,

And perish—if it must be so—

At bay, destroying many a foe.

Byron.

LEATH'ER, n. s. & adj.	} Saxon, leðer; Belgic and Teut. leder; Dan. lædur; Goth. leder (Goth. lid, a cover). The dressed skin of an animal; any skin.
LEATH'ERCOAT,	
LEATH'DRESSER,	
LEATH'MOUTHED, adj.	
LEATH'ERN, adj.	
LEATH'ERY,	
LEATH'ERSELLER, n. s.	

Shakspeare calls apples with tough skins 'leather-coats.' See the extract for leather-mouthed: leathern is made of leather: leathery, resembling leather.

He was a hairy man, and girt with a girdle of
leather about his loins. *2 Kings* i. 8.

The shepherd's homely curds,

His cold thin drink out of his leather bottle;

Is far beyond a prince's delicacies. *Shakspeare.*

There is a dish of leathercoats for you. *Id.*

I saw her hand; she has a leathern hand,

A free-stone colored hand: I verily did think

That her old gloves were on. *Id.*

By a leather mouthed fish, I mean such as have
their teeth in their throat; as, the chub or cheven.

Walton's Angler.

In silken or in leathern purse retains

A splendid shilling. *Philips.*

Wormius calls this crust a leathery skin.

Grew.

And if two boots keep out the weather,

What need you have two hides of leather?

Prior.

He removed to Cumæ; and by the way was en-
tertained at the house of one Tychius, a leather-
dresser. *Pope.*

Returning sound in limb and wind,

Except some leather lost behind. *Swift.*

No grassy mantle hides the sable hills,

No flowery chaplet crowns the trickling rills;

Nor tufted moss, nor leathery lichen, creeps

In russet tapestry on the crumbling steeps.

Darwin.

But, ere they came to this, they that day shared
Some leathern caps, and what remained of shoes;
And then they looked around them, and despaired,
And none to be the sacrifice would choose.

Byron.

LEATHER, in commerce and the arts, is the
prepared skin of various animals. Under the
article CURRYING will be found an ample
account of that process, and the operations of
the tanner upon skins under TANNING. See also
SKINS, for miscellaneous information respecting
different modes of dressing and disposing of
them.

Leather is of three principal sorts, i. e. tanned
or tawed, oil, and alum leather. To dress
leather in oil, the skins are first soaked, then thrown
into the lime-pit; and, when taken thence, pulled
and delivered to the friezer; they are then
struck with the oil, and sent to the mill. When
milled sufficiently, they are thrown into the
ditch to be scoured; sometimes they are scudded,
and afterwards hung upon the hooks to dry.
Skins dressed in oil are those of deer, sheep,
and lambs, and some few of goats; the oil used
for the purpose is Newfoundland, or cod's-liver
oil. The alum leather-dressers' art consists in
soaking, liming, wringing (an operation some-
times omitted), and striking them in a liquor
composed of water, salt, and alum, and then
drying them properly. The skins dressed in
alum are those of sheep and lambs, and a large
quantity of kid.

The following processes for dyeing red and
yellow leather, as practised in Turkey, with
directions for preparing and tanning the skins,
were communicated by Mr. Philippo, a native
of Armenia, who received from the Society for
the Encouragement of Arts, &c., £100, besides
the society's gold medal, as a reward.

1. First preparation of the skins, for both
colors, by lime. Let the skins, dried with the
hair on, be first laid to soak in clean water for
three days; let them then be broken over the
flesh-side, put into fresh water for two days
longer, and afterwards hung up to drain half an
hour. Let them now be broken on the flesh-
side, limed in cold lime on the same side, and
doubled together with the grain-side outward.
In this state they must be hung up within doors
over a frame for five or six days, till the hair be
loose; which must then be taken off, and the
skins returned into the lime-pit for about three
weeks. Take them out, and let them be well
worked flesh and grain, every sixth or seventh
day during that time; after which let them be
washed ten times in clear water, changing the
water at each washing.

2. Preparation for both dyes, by drenching.
After squeezing the water out of the skins, put
them into a mixture of bran and water, warm as
new milk, in the following proportions: viz.
about three pounds of bran for five skins, and
water sufficient to make the mixture moderately
fluid, which will be about a gallon to each
pound of bran. In this drench let the skins lie
three days; at the end of which they must be
well worked, and then returned into the drench
two days longer. They must next be taken out
and rubbed between the hands, the water
squeezed from them, and the bran scraped off
clear from both sides of the skin. After this
they must be again washed ten times in clear
water, and the water squeezed out of them.
Thus far, the preparatory process for both

colors is the same; but after this the skins must be treated differently.

3. Preparation in honey and bran of the skins to be dyed red. Mix one pound of honey with three pints of luke-warm water, and stir them together till the honey is dissolved. Then add two double handfuls of bran: and, taking four skins (for which the above quantity of the mixture will be sufficient), work them well in it one after another. Afterwards fold up each skin separately into a round form, with the flesh-side inwards; and lay them in an earthen pan, or other proper vessel; in summer by the side, but in winter on the top of each other. Place the vessel in a sloping position, so that such part of the fluid as may spontaneously drain from the skins may pass off. An acid fermentation will then rise in the liquor, and the skins will swell considerably. In this state they must continue for seven or eight days; but the moisture that drains from them must be poured off, once or twice a-day, as occasion may require.

4. Preparation in salt of the skins to be dyed red. After the skins have been thus fermented in honey and bran, let them be taken out of that mixture on the eighth or ninth day, and well rubbed and worked with dry sea salt, in the proportion of about half a pound to each skin. This will make them contract again, and part with a considerable quantity more of moisture; which must be squeezed out by drawing each skin separately through the hands. They must next be scraped clean on both sides from the bran, superfluous salt, and remaining moisture; after which dry salt must be strewed over the grain side, and well rubbed in with the hand. They are then to be doubled with the flesh side outwards, lengthwise from neck to tail, and a little more dry salt must be thinly strewed over the flesh side and rubbed in; for the two last operations about $1\frac{1}{2}$ lb. of salt will be sufficient for each skin. They must then be put, thus folded on each other, between two clean boards, placed sloping breadthwise: and a heavy weight laid on the upper board, in order gradually to press out what moisture they will thus part with. In this state of pressure they must be continued two days or longer, till it be convenient to dye them, for which they will then be duly prepared.

5. Preparation of the red dye, in a proportion for four skins. Put eight gallons of water into a copper, with 7 oz. of shenan tied up in a linen bag. Shenan is a species of salicornia, and is much used by dyers in the east. See SALICORNIA. Light a fire under a copper, and, when the water has boiled about a quarter of an hour, take out the bag of shenan, and put into the boiling fluid or lixivium, 1st, 2 drams of alum; 2dly, 2 drams of pomegranate bark; 3dly, $\frac{3}{4}$ oz. of turmeric; 4thly, 3 oz. of cochineal; 5thly, 2 oz. of loaf sugar. Let the whole mixture boil about six minutes, then cover the fire, and take out a quart of liquor, putting it into a flat earthen pan; and, when it is as cold as new milk, take one skin, folded lengthwise, the grain side outwards, and dip it in the liquor, rubbing it gently with the hands. Then, taking out the skin, hang it up to drain, and throw away the superfluous dye. Proceed in the same manner with the other

three skins; repeating the operation of each separately, eight times, squeezing the skins by drawing them through the hands before each fresh dipping. Lay them now on one side of a large pan, set sloping, to drain off as much of the moisture as will run from them without pressure, for about two hours, or till they are cold; then tan them.

6. Tanning the red skins. Powder 4 oz. of the best white galls in a marble mortar, sifting it through a fine sieve. Mix the powder with about three quarts of water, and work the skins well in this mixture for half an hour or more, folding up the skins four-fold. Let them lie in this tan for twenty-four hours; when they must be worked again as before; then taken out, scraped clean on both sides from the first galls, and put into a like quantity of fresh galls and water. In this fresh mixture they must be again well worked for three quarters of an hour; then folded up as before, and left in the fresh tan for three days. On the fourth day they must be taken out, washed clean from the galls in seven or eight fresh quantities of water, and then hung up to dry.

7. Method of dressing the skins. When the skins are very nearly dry, they should be scraped with the proper instrument or scraper, on the flesh side, to reduce them to a proper degree of thickness. They are then to be laid on a smooth board, and glazed by rubbing them with a smooth glass. After which they must be oiled, by rubbing them with olive oil, by a linen rag, in the proportion of $1\frac{1}{2}$ oz. of oil for four skins: they are then to be grained on a graining board, lengthwise, breadthwise, and cornerwise, or from corner to corner.

8. Preparations with galls, for the skins to be dyed yellow. After the four skins are taken out of the drench of bran, and clean washed, they must be very well worked, half an hour or more, in a mixture of $1\frac{1}{2}$ lb. of the best white galls, finely powdered, with two quarts of clean water. The skins are then to be separately doubled lengthwise, rolled up with the flesh side outwards, laid in the mixture, and closely pressed down on each other, in which state they must continue two whole days. On the third day let them be again worked in the tan, and afterwards scraped clean from the galls, with an ivory or brass instrument; for no iron must touch them. They must then be put into a fresh tan, made of 2 lbs. of galls finely powdered, with about three quarts of water, and well worked therein fifteen times. After this they must be doubled, rolled up as before, and laid in the second tan for three days. On the third day $\frac{1}{4}$ lb. of sea-salt must be worked into each skin; and the skins doubled as before, and returned into the tan, till the day following, when they are to be taken out and well washed six times in cold water, and four times in water luke-warm. The water must be then well squeezed out, by laying the skins under pressure for about half an hour, between two boards, with a weight of about 200 or 300 lbs. laid upon the uppermost board, when they will be ready for the dye.

9. Preparations for the yellow dye in the proportion for four skins. Mix 6 ozs. of castai

gehira, or dgehira, or the berries of the eastern rhamnus, with the same quantity of alum; and pound them together till they be fine in a marble or brass mortar, with a brass pestle. These may be had at Aleppo, and other parts of the Levant, at a small price. The common Avignon or yellow berries may be substituted, but not with so good an effect; the cassiari gehira being a stronger and brighter yellow dye. After pounding them, divide the materials thus powdered, into three equal parts of 4 ozs. each, put one part into about 1½ pints of water, in a china or earthen vessel, and stir the mixture together. Let the fluid stand to cool, till it will not scald the hand. Then, spreading one of the skins flat on a table, in a warm room, with the grain side uppermost, pour a fourth part of the liquor over the skin with the hand, and rubbing it well in. Afterwards do the like with the other three skins. This operation must be repeated twice more on each skin separately, with the remaining 8 ozs. of the powder of the berries and alum, with the same proportions of hot water. The skins when dyed, are to be hung up on a wooden frame, without being folded, with the grain side outwards, about three quarters of an hour to drain; when they must be carried to a stream of running water, and well washed six times or more. After this they must be put under pressure for about an hour, till the water be well squeezed out; afterwards the skins must be hung up to dry in a warm room. The skins are then to be dressed and grained, as before directed for those dyed red; except the oiling, which must be omitted.

There are various statutes relating to leather: 27 Henry VIII. c. 14 directs packers to the appointment of leather intended to be transported. The 13 Eliz. c. 9 prohibits the shipping of leather on penalty of forfeitures, &c.; though, by 20 Car. II. c. 5, transportation of leather was allowed to Scotland, Ireland, or any foreign county, paying a custom or duty; which statute was considered by divers subsequent acts. See stat. 1 Jac. I. c. 22.; and NAVIGATION LAWS.

No person must ingross leather to sell again, under the penalty of forfeiture; none but tanners are to buy any rough hides of leather, or calve-skins in the hair, on pain of forfeiture; and no person shall forestall hides, under the penalty of 6s. 8d. a hide. Leather not sufficiently tanned is to be forfeited. In London the lord mayor and aldermen are to appoint and swear searchers of leather out of the company of shoemakers, &c., and also triers of sufficient leather; and the same is to be done by mayors, &c., in other towns and corporations; and searchers allowing insufficient leather incur a forfeiture of 40s. Shoemakers, making shoes of insufficient leather, are liable to 3s. 4d. penalty.

Red tanned leather is to be brought into open leather markets, and searched and sealed before exposed to sale, or shall be forfeited; and contracts for sale be void: 13 and 14 Car. II. c. 7. Hides of leather are adjudged the ware and manufacture of the carrier, and subject to search, &c. All persons dealing in leather may buy tanned leather searched in open market; and

any person may buy or sell leather hides or skins by weight: stat. 1 W. & M. c. 33. Duties are granted on leather, and entries to be made of tanneries, under the penalty of £50, and tanners and leather dressers using any private tanneries, or concealing skins, &c., shall forfeit £20 leviable by justices of the peace, by distress, &c.: stats. 9 Ann. c. 11: 5 Geo. I. c. 2: 9 Geo. I. c. 27: 52 Geo. III. c. 94: 55 Geo. III. c. 102. Artificers may freely buy their leather, and cut it and sell it in small pieces: 12 Geo. II. c. 25. Penalty on carriers neglecting to curry leather, 12 Geo. II. c. 25. By stats. 39, 40, Geo. III. c. 66: 4 Geo. III. c. 53. Regulations are made to prevent the spoiling of hides and leather, by the flaying animals injudiciously: and inspectors appointed to insure their execution.

LEAVE, *n. s.*, *v. a.* & *v. n.* } Saxon, *lefe*,
LEFT, *part. preter.* } leap (*lyran*,
LEA'VE, *n. s.* } grant); Swedish,
laf; Dan. *lov*; Belg. *lof*. Permission; grant; allowance; liberty; consent: hence farewell; permission to depart; and, probably hence also the verb to leave, i. e. to permit to remain; to quit consentingly; to desist from; to give, or voluntarily to resign; to bequeath; to abandon; not to choose or select; not to deprive of; not to take away; to reject: as a verb neuter, to cease; desist. It is compounded with *off*, which gives it intensity, both in the active and neuter form of the verb; and in the former with *out*, when it signifies to omit or neglect.

Jesus answeride to hem, now ghe bileuen, lo the our cometh and now it cometh, that ghe be disparpled ech into hise owne things, and that ghe *leue* me aloone: and I am not aloone, for the fadir is with me. *Wiclif. Jon. xvi.*

A man shall *leave* his father and his mother, and cleave to his wife. *Gen. ii. 24.*

He began at the eldest, and *left* at the youngest. *Id. xlii. 12.*

He shall eat the fruit of thy cattle; which also shall not *leave* thee either corn, wine, or oil. *Deut. xxviii. 48.*

Let us return, lest my father *leave* caring for the asses, and take thought for us. *1 Sam. ix. 5.*

When him his dearest Una did behold,
Disdaining life, desiring *leave* to die. *Spenser.*
Gritus, hoping that they in the castle would not hold out, *left off* to batter or undermine it, where-with he perceived he little prevailed. *Knolles.*

Vastius gave strict commandment, that they should *leave* behind them unnecessary baggage. *Id.*

I make bold to press upon you.
— You're welcome; give us *leave*, drawer. *Shakspeare.*

Take *leave* and part, for you must part forthwith. *Id.*

Alas, poor lady; desolate and *left*;
I weep myself to think upon thy words. *Id.*
She is my essence, and I *leave* to be,
If I be not by her fair influence
Fostered, illumined, cherished, kept alive. *Id.*
And since this business so far fair is done,
Let us not *leave* till all our own be won. *Id.*

Let the world rank me in register
A master-leaver and a fugitive. *Id.*
I am so fraught with curious business, that
I *leave* out ceremony. *Id. Winter's Tale.*
If it be done without order, the mind comprehendeth less that which is set down: and besides, it

leaveth a suspicion, as if more might be said than is expressed.

Bacon.

What is set down by order and division doth demonstrate that nothing is left out, or omitted, but all is there.

Id.

You may partake : I have told 'em who you are. — I should be loth to be left out, and here too.

Ben Jonson.

If they love lees, and leave the lusty wine,
Envy them not their palates with the swine. Id.

The days

Of Sylla's sway, when the free sword took leave
To act all that it would. Id. Catiline.

These things must be left uncertain to farther discoveries in future ages.

Abbot.

But, my dear nothings, take your leave,
No longer must you me deceive. Suckling.

If Chaldea had not been grossly idolatrous, Abraham had not left it.

Bp. Hall.

Wrongs do not leave off there where they begin,
But still beget new mischiefs in their course. Dan.

They still have left me the providence of God, and all the promises of the gospel, and my charity to them too.

Taylor.

Befriend till utmost end,

Of all thy dues be done, and none left out,

Ere nice morn on the Indian steep

From her cabined loop-hole peep. Milton.

Many stars may be visible in our hemisphere, that are not so at present; and many shall take leave of our horizon, and appear unto southern habitations.

Broune.

But, when you find that vigorous heat abate,
Leave off, and for another summons wait.

Roscommon.

Thrice happy snake! that in her sleeve

May boldly creep; we dare not give

Our thoughts so unconfined a leave. Waller.

If a wise man were left to himself, and his own choice, to wish the greatest good to himself he could devise; the sum of all his wishes would be this, That there were just such a being as God is.

Titlotson.

Offered that we fought without his leave,
He takes this time his secret hate to shew. Dryden.

If, upon any occasion, you bid him leave off the doing of any thing, you must be sure to carry the point.

Locke.

Who those are, to whom this right by descent belongs, he leaves out of the reach of any one to discover from his writings. Id.

This I leave with my reader, as an occasion for him to consider how much he may be beholden to experience. Id.

In either of these cases, though a man perhaps does but his duty in changing his side, he not only makes himself hated by those he left, but is seldom heartily esteemed by those he comes over to.

Addison.

In proportion as old age came on, he left off fox-hunting.

Id. Spectator.

I always thought this passage left out with a great deal of judgment, by Tucca and Varius, as it seems to contradict a part in the sixth Æneid.

Id. On Italy.

My father has this morning called together,

To this poor hall, his little Roman senate,

The leavings of Pharsalia. Id. Cato.

In all the common incidents of life,

I am superior, I can take or leave. Steele.

We ask, if those subvert,

Reason's established maxims, who assert

That we the world's existence may conceive

Though we one atom out of matter leave?

Blackmore.

He began to leave off some of his old acquaintance, his roaring and bullying about the streets : he put on a serious air.

Arbutnot.

LEAVEN, LOCH; a lake of Scotland, about twelve miles in circumference, in the county of Kinross. It contains four islands, on one of which was formerly a priory, and on another stand the remains of the castle of Loch Leaven, once a royal residence, which was granted by Robert III. to Douglas. In this castle Mary Stuart was confined, after her separation from Bothwell, and her capture by the confederate lords, at the battle of Carberry Hill. After several unsuccessful attempts, she made her escape, by the aid of George Douglas, her keeper's brother.

LEAVEN, *n. s. & v. a.* Fr. *levain*; Ital. *levane*, *levatura*; Span. *levadura*, all perhaps of Lat. *levo*, *levando*, lifting up. Any ferment or fermenting substance; dough fermented; yeast; and, metaphorically, any thing that powerfully but gradually changes or affects the mind and its qualities. It is used in the Bible both in a good and bad sense.

Whosoever eateth leavened bread, that soul shall be cut off.

Exod. xii. 17.

It shall not be baken with leaven.

Lev. vi. 17.

Let us keep the feast, not with old leaven, neither with the leaven of malice and wickedness.

1 Cor. v. 8.

You must tarry the leavening.

Shakspeare.

Breads we have of several grains, with divers kinds of leavenings, and seasonings; so that some do extremely move appetites.

Bacon.

Many of their propositions savour very strongly of the old leaven of innovations.

King Charles.

This gospel of mine is like unto leaven, which, though in a very small quantity it be hid amongst much dough, yet seasoneth the whole batch; so shall this gospel of mine diffuse the power and virtue thereof, to all the whole mass of the habitable world.

Bp. Hall.

That cruel something unpossest,

Corrodes and leavens all the rest. Prior.

All fermented meats and drinks are easiest digested; and those unfermented, by barm or leaven, are hardly digested.

Floyer.

Pride, like leaven in a mass of flour,

Tainted her laws, and made e'en virtue sour.

Churchill.

LEAVEN is used to ferment and render light a much larger quantity of dough or paste. See BREAD and YEAST. Leaven was strictly forbidden by the law of Moses during the seven days of the passover; and the Jews, in obedience to this law, very carefully purified their houses from all leaven as soon as the vigil of the feast began. Nothing of honey or leaven was to have place in any thing presented upon the altar during this solemnity. If, during the feast, the least particle of leaven was found in their houses, the whole was polluted.

LEBADEA, or LEBADIA, an ancient town of Bœotia, on the borders of Phocis, situated between Helicon and Chæronea, near Coronæa. In it stood the oracle of Jupiter Trophonius, where all who went to consult it descended into a subterraneous gulf.

LEBANON, a celebrated mountain in the south of Syria and north of Canaan. See **LIBANUS**.

LEBANON, a post town of New York, county of Maine, on the Piscataqua. It is twenty-eight miles north-west of New York. 2. Also a post town of Grafton county, New Hampshire, on the east side of the Connecticut, opposite Hartford, with which it is connected by a bridge; four miles south-east of Dartmouth College. White River flows into the Connecticut opposite this town. 3. A post town of Windham county, Connecticut; nine miles north-west of Norwich, and thirty south-east of Hartford. It is a pleasant and valuable agricultural town among the best in the state. 4. A post town pleasantly situated, and the capital of Lebanon county, Pennsylvania, is regularly laid out, and contains an elegant court house, a number of other public buildings, and many handsome houses, and has considerable trade. It is situated on the Quitpihilla Creek, within about a mile of the Schuylkill Canal which connects this stream with the Tulpehocken. About five miles from this town there are extensive mines of iron and copper, called the Cornwall mines. 5. A post town; the capital of Warren county, Ohio; four miles west of the Little Miami.

LEBANON, NEW, a post town in Canaan, Columbia county, New York, six miles west of Pittsfield, and twenty-four south-east of Albany. It is on the turnpike between Pittsfield and Albany. Here is a spring of considerable celebrity. It is a thermal water of the temperature of 72° of Fahrenheit, but is not characterised by any mineral substance in solution. The spring is kept constantly in ebullition by a copious emission of azotic gas.

LEBEDOS, one of the twelve ancient cities of Ionia, situated south of Smyrna. It was the residence of players, where they met from all parts of Ionia, as far as the Hellespont, and celebrated annual games in honor of Bacchus. Strabo. It was overthrown by Lysimachus, who removed the inhabitants to Ephesus; after which it dwindled down to a village. Horace.

LEBEN, or **LEBENA**, one of the port towns of the Gortynians, near the promontory of Leon, on the south-east side of Crete; famous for a temple of Æsculapius, built in imitation of that of Cyrenaica.

LEBRUN (Ponce Denis Ecouehard), called the French Pindar, was born in 1729, and early manifested a talent for poetry. He became secretary to the prince of Conti, and at the age of twenty-six he had taken his place in the first rank of French lyric poets: an ode which he now addressed to Voltaire was the means of interesting the latter in the support of the niece of Corneille. At the revolution he celebrated the birth of freedom in various odes and epigrams; but in 1793 deplored in harmonious verses the fate of his country. On the restoration of order, Lebrun became a member of the Institute, and received from Buonaparte a pension of 6000 francs: he died September 1807.

LECCE, a considerable trading town of Naples, in the province of Otranto. It is well built, and is a bishop's see. The surrounding

district is fertile, but ill cultivated. It supplies, however, the chief commerce of the town, which is in flax and tobacco. The flax is spun and manufactured into lace. Other products of this neighbourhood are oil and cotton; and its wool is esteemed. Seventeen miles west of Otranto, and twenty-eight south-east of Brindisi. Population 14,000.

LECCO, a town in the Milanese, Italy, situated on the eastern branch of the lake of Como. It has flourishing manufactures of silk, woollens, and hardware. Population 4000. Fourteen miles E. N. E. of Como.

LECH, *v. a.* Fr. *lecher*; or perhaps Lat. *litus*. To lick or smear over.

Hast thou yet *leched* the Athenian's eyes
With the love-juice? *Shakspeare.*

LECH, a large river of Bavaria, which rises in the Tyrol, and flows northward between Bavaria and Suabia. It passes Fuessen, Landsburg, Augsburg, and joins the Danube five miles below Donawert. Its stream is only navigable for rafts of wood and boats.

LECH'ER, *n. s.* & *v. n.* } According to Skin-
LECH'EROUS, *adj.* } ner, from old Fr.
LECH'EROUSLY, *adv.* } *luxure*: but the
LECH'EROUNESS, *n. s.* } Teut. *leker* or *leiker*;
LECH'ERY. } Lat. *ligurius*, seems
the more probable derivation. A loose libidinous person; an adulterer or whoremonger: the verb signifies to be addicted to the habits or practices of such a person: *lecherous*, tending to luxury or lust.

Ye han herd that it was seid to olde men thou
schalt not do *lecherie*. *Wiclif. Matt. v.*

A *lecherous* thing is wine, and dronkenesse
Is ful of striving and of wretchednesse.

Chaucer. Canterbury Tales.

The rest welter with as little shame in open
lechery as swine do in the common mire. *Ascham.*

I will now take the *lecher*; he's at my house; he
cannot 'scape me. *Shakspeare.*

Against such lewdsters, and their *lechery*,
Those that betray them do no treachery. *Id.*

Gut eats all day, and *lechers* all the night.
Ben Jonson.

Ho! all ye females that would live unshent,
Fly from the reach of Cyned's regiment.
If Trent be drawn to dregs and low refuse,
Hence, ye hot *lechour*! *Bp. Hall's Satires.*

The *lecher* soon transforms his mistress; now
In Io's place appears a lovely cow. *Dryden.*

The sapphire should grow foul, and lose its beauty,
when worn by one that is *lecherous*; the emerald
should fly to pieces, if it touch the skin of any un-
chaste person. *Derham.*

She yields her charms
To that fair *lecher*, the strong god of arms.
Pope.

LECOMTE (Felix), a modern French sculptor of eminence, was a native of Paris, and the pupil of Falconet and Vassé. Having obtained a prize for a bas-relief of the massacre of the Innocents, he was sent to Rome as a pensionary of the French school of arts. On his return he presented to the academy of painting and sculpture, a model for a statue of Phorbas preserving Edipus, which he afterwards executed in marble; and procured in 1771 admission into the academy. The statue of Fenelon, in the hall of

the National Institute, is perhaps his chef-d'œuvre. That of Rollin is also celebrated. In 1810 he was appointed by Buonaparte a member of the fourth class of the Institute; and under the regal government professor of sculpture. He died in 1817, at the age of eighty.

LECTI, beds or couches, were of two kinds amongst the Romans, being destined to two different uses; to lie upon at entertainments, and to repose on for sleep. The former were called lecti triclinares, the latter lecti cubicularii. See **BED**.

LECTICA was a litter, or vehicle, in which the Romans were carried. It was of two kinds, covered and uncovered. The covered lectica is called by Pliny cubiculum viatorum, a traveller's bed-chamber. Augustus frequently ordered his servants to stop his litter, that he might sleep upon the road. This vehicle was carried by six or eight lecticarii. The lectica differed from the sella; for in the first the traveller could recline himself for sleep, in the latter he was obliged to sit. The lectica was invented in Bithynia; the sella was a Roman machine, and esteemed the more honorable of the two. Lectica was also the name of the funeral bed, or bier for carrying out the dead.

LECTICARIUS was also an officer in the Greek church, whose business it was to bear off the bodies of those who died, and to bury them. These were otherwise denominated decani and copiate.

LECTION, *n. s.*

LECTURE, *n. s., v. a. & v. n.*

LECTURER, *n. s.*

LECTURESHIP.

Lat. lectio; Fr. lecture; Ital. lezione, lettura; Span. lecion, lectiona. A reading; a variety in a given or similar passage of an author. A lecture is a formal discourse read or pronounced: hence the act or art of reading or delivery; as a verb, to instruct formally or solemnly; to read or pronounce a discourse in public. Both the verb and noun are often used satirically.

Wrangling pedant,

When in musick we have spent an hour,
Your lectures shall have leisure for as much.

Shakspeare.

When you meet with several readings of the text (scripture) take heed you admit nothing against the tenets of your church: but do as if you was going over a bridge, be sure you hold fast by the rail, and then you may dance here and there as you please; be sure you keep to what is settled, and then you may flourish upon your various *lections*. *Selden.*

When letters from Cæsar were given to Rusticus, he refused to open them till the philosopher had done his *lectures*. *Taylor's Holy Living.*

If any minister refused to admit into his church a lecturer recommended by them, and there was not one orthodox or learned man recommended, he was presently required to attend upon the committee. *Clarendon.*

In the *lecture* of holy scripture, their apprehensions are commonly confined unto the literal sense of the text. *Broune.*

Mark him, while Dametas reads his rustic *lecture* unto him, how to feed his beasts before noon, and where to shade them in the extreme heat. *Sidney.*

Virtue is the solid good, which tutors should not only read *lectures* and talk of, but the labour and art

of education should furnish the mind with, and fasten there. *Locke.*

Numidia will be blest by Cato's *lectures*.

Addison.

He got a *lectureship* in town of sixty pounds a year, where he preached constantly in person. *Suiff.*

Every critick has his own hypothesis: if the common text be not favourable to his opinion, a various *lection* shall be made authentick. *Watts.*

Heaven waits not the last moment; owns her friends

On this side death, and points them out to men;

A *lecture* silent, but of sovereign power!

To vice confusion, and to virtue peace. *Young.*

Narcissa's youth has *lectured* me thus far:

And can her gaiety give counsel too? *Id.*

The auditor, therefore, listens as to a *lecture*, without passion, without anxiety. *Johnson.*

From dearth to plenty, and from death to life,

Is nature's progress, when she *lectures* man

In heavenly truth: evincing, as she makes

The grand transition, that there lives and works

A soul in all things, and that soul is God. *Cowper.*

But I will venture to affirm, from experience, that, if a professor does no more than deliver a set of *lectures*, his young audience will be little the wiser for having attended him. *Beattie.*

LECTISTERNIUM, a solemn ceremony observed by the Romans in times of public danger, wherein an entertainment was prepared with great magnificence, and served up in the temples. The gods were invited to partake of the good cheer, and their statues placed upon couches round the table, in the same manner as men used to sit at meat. The first lectisternum held at Rome was in honor of Apollo, Latona, Diana, Hercules, Mercury, and Neptune, to put a stop to a contagious distemper which raged amongst the cattle, A. U. C. 354. At these feasts the Epulones presided, and the sacred banquet was called epulum. Something like the lectisternum was occasionally observed among the Greeks, according to Casaubon.

LECTIUS (James), syndic of Geneva, a respectable poet and critic of the sixteenth century. His chief work is his collection entitled *Poeta Græci Veteres*, in 2 vols. folio. He died in 1612.

LECTORES, among the ancient Romans, servants in great men's houses, who read while their masters were at supper. They were called by the Greeks anagnostæ.

LECTOURE, a town of France, in the department of the Gers, and on the river Gers, is situated on a hill and accessible only on one side. It has manufactures of leather; and a trade in corn and wine. Several Roman inscriptions have been found in the neighbourhood. Population 5500. Sixteen miles north of Auch.

LECTURERS, in the church of England, are an order of preachers, distinct from the rector, vicar, and curate. They are generally chosen by the vestry or chief inhabitants, supported by voluntary subscriptions and legacies, and often preach on the Sunday afternoon. But the term is most generally applied to those who preach on any stated day. By 13 and 14 Car. II., c. 4, lecturers in churches, unlicensed, and not conforming to the liturgy, shall be disabled, and shall suffer three months' imprisonment in the com-

mon gaol; and two justices, or the mayor in a town corporate, shall, upon certificate from the ordinary, commit them. Where there are lectures founded by the donations of pious persons (such as that of lady Mayer at St. Paul's) the lecturers are appointed by the founders, without any interposition of rectors, &c., only with the leave of the bishop. But the lecturer is not entitled to the pulpit, without the consent of the rector or vicar, who is possessed of the freehold of the church.

LEDA, in fabulous history, a daughter of king Thespius and Eurythemis, who married Tyndarus king of Sparta. Jupiter saw her bathing in the Eurotas, when she was some few days advanced in pregnancy, and, struck with her beauty, resolved to deceive her. He persuaded Venus to change herself into an eagle, while he assumed the form of a swan; and after this metamorphosis Jupiter, as if fearful of the bird of prey, fled through the air into the arms of Leda, who willingly sheltered the trembling swan from the assaults of his superior enemy. Nine months after this adventure, Leda brought forth two eggs, from one of which sprung Pollux and Helena, and from the other Castor and Clytemnestra. The two former were deemed the offspring of Jupiter, and the others claimed Tyndarus for their father. Some mythologists attribute this amour to Nemesis, and not to Leda; and say that Leda was entrusted with the education of the children, which sprung from the eggs brought forth by Nemesis; others maintain that Leda received the name of Nemesis after death. Homer and Hesiod make no mention of the metamorphosis of Jupiter into a swan, whence some think that the fable was unknown to these two ancient poets, and invented after their time.

LEDBURY, a market-town of Herefordshire near the extremity of the Malvern Hills, sixteen miles east from Hereford, and 120 west by north from London. The town is well built, consisting chiefly of two streets, crossing each other at right angles. The church is a large building. Here are a free-school, a well endowed hospital, and several alms-houses. The chief manufactures are ropes and sacking. Great quantities of fine cider are made in this neighbourhood. Market on Tuesday.

LEDGE, *n. s.* Sax. *legian*; Goth. *leggia*, to plan, or order. A layer or row; ridge; or prominence.

Beneath a *ledge* of rocks his fleet he hides.
The bending brow above a safe retreat provides.

Dryden.

The lowest *ledge* or row should be merely of stone, closely laid without mortar: a general caution for all parts in building contiguous to board.

Wotton's Architecture.

The four parallel sticks rising above five inches higher than the handkerchief, served as *ledges* on each side.

Gulliver.

LEDUM, marsh cistus, or wild rosemary, a genus of the monogynia order, and decandria class of plants: natural order eighteenth, bicornes. *cal.* quinquefid: *cor.* plain and quinquepartite: *caps.* quinquelocular, and opening at the base. The principal species is

L. palustre, with very narrow leaves. It grows

naturally upon bogs and mosses in Yorkshire, Cheshire, and Lancashire; rising with a slender shrubby stalk about two feet high, dividing into many slender branches, garnished with narrow leaves, like those of heath. The flowers are produced in small clusters at the end of the branches, and are shaped like those of the strawberry tree, but spread wider at top. They are of a reddish color, and are succeeded by seed-vessels filled with small seeds which ripen in autumn. This plant is with difficulty raised in a garden: for, as it naturally grows upon bogs, unless it has a similar soil it will not thrive. It must be procured from the place of its growth, and taken up with good roots, otherwise it will not live.

LEDYARD (John), a native of North America, and greatly celebrated as a traveller. After living several years with different tribes of the American Indians, he made a voyage to the South Sea, in the humble station of a corporal of marines, with the celebrated captain Cook. On his return he became anxious to traverse the vast continent between the Pacific and Atlantic Ocean. With only ten guineas he crossed the British Channel to Ostend, and proceeded by Denmark and the Sound to Stockholm and Petersburg. On his arrival at this last metropolis he was observed as an extraordinary person; and, though without stockings and shoes, was invited to dine with the Portuguese ambassador. Being now supplied with necessaries, he travelled eastward 6000 miles through Siberia to Yakutzk, thence to Oczakow, and back again to Yakutzk, where he was seized in the empress's name by two ruffians who conveyed him on a sledge through the deserts of North Tartary, and left him on the borders of Poland, telling him that, if he returned to Russia, he would be hanged. In spite of poverty, he made his way to Konigsberg, where he obtained pecuniary assistance, which enabled him to reach London. Being introduced to the Society for promoting the discovery of the interior parts of Africa, they employed him; and he proceeded to Grand Cairo in Egypt, where he engaged with the conductor of a caravan, and was on the point of setting out for Sennaar, when he was seized with an indisposition, on the 17th of January 1789, which terminated in his death. He was a man of an amiable disposition; and, in his various peregrinations, suffered many hardships among the barbarous nations whom he visited; but, in the account he published of his travels, he pays this compliment to the female sex. 'To a woman, whether civilised or savage, I never addressed myself in the language of decency and friendship, without receiving a decent and friendly answer. With man it has often been otherwise. In wandering over the barren plains, of inhospitable Denmark, through honest Sweden and frozen Lapland, rude and churlish Finland, unprincipled Russia, and the wide spread regions of the wandering Tartar, if hungry, dry, cold, wet, or sick, the women have ever been friendly to me, and uniformly so; and to add to this virtue (so worthy the appellation of benevolence), these actions have been performed in so free and so kind a manner, that if I was dry, I drank the sweetest draught; and if hungry, I ate the coarse morsel with a double relish.'

LEE, *n. s.* } Fr. *lie*; Span. *lius*; Port. *lia*;
LEES, *plur.* } qu. Lat. *liquidus*. Dregs; sedi-
ment: more frequently used in the plural.

The memory of king Richard was so strong, that it lay like lees at the bottom of men's hearts; and, if the vessel was but stirred, it would come up.

Bacon's Henry VII.

If they love lees, and leave the lusty wine,
Envy them not their palates with the swine.

Ben Jonson.

Behold all purity above; below, the dregs and lees of all.

Bp. Hall.

Those lees that trouble it refine

The agitated soul of generous wine. *Dryden.*

My cloaths, my sex, exchanged for thee,

I'll mingle with the people's wretched lee. *Prior.*

Life's lee is not more shallow than impure

And vapid. *Young.*

LEE, *n. s.* } Sax. *lee* *leapears*; Teut.

LEEWARD, *adj.* } *lee*; Belg. and Goth. *ly*;

'Isl. *hlifa*, to cover,' observes Mr. Thomson:

'lee shore denotes that the wind blows on a vessel from the sea towards the land.' Leeward is the direction towards which the wind blows. See below.

Him, haply slumb'ring on the Norway foam,
The pilot of some small night-foundered skiff,

Deeming some island, oft, as seamen tell,

With fixed anchor in his scaly rind,

Moors by his side under the lee, while night

Invests the sea. *Milton.*

If we, in the bay of Biscay, had had a port under our lee, that we might have kept our transporting ships with our men of war, we had taken the Indian fleet. *Raleigh.*

The Hollanders were before Dunkirk with the wind at north-west, making a lee shore in all weathers. *Id.*

Unprovided of tackling and victualling, they are forced to sea by a storm; yet better do so than venture splitting and sinking on a lee shore.

King Charles.

Battered by his lee they lay,

The passing winds through their torn canvass play.

Dryden.

The classicæ were called long ships, the *oneraria* round, because of their figure approaching towards circular: this figure, though proper for the stowage of goods, was not the fittest for sailing, because of the great quantity of leeward way, except when they sailed full before the wind. *Arbuthnot.*

Let no statesman dare

A kingdom to a ship compare;

Lest he should call our common weal

A vessel with a double keel;

Which just like ours, new rigg'd and mann'd,

And got about a league from land,

By change of wind to leeward side,

The pilot knew not how to guide. *Swift.*

And others went on as they had begun,

Getting the boats out, being well aware

That a tight boat will live in a rough sea,

Unless with breakers close beneath her lee. *Byron.*

LEE is used by seamen to distinguish that part of the hemisphere to which the wind is directed, from the other part whence it arises; which last is called to windward. This expression is chiefly used when the wind crosses the line of a ship's course, so that all on that side of her is called to windward, and all on the opposite side to leeward. Hence, Under the lee, implies farther to the leeward, or farther from that part

of the horizon whence the wind blows. Under the lee of the shore, i. e. at a short distance from the shore which lies to windward. This phrase is commonly understood to express the situation of a vessel anchored, or sailing under the weather shore, where there is always smoother water, and less danger of heavy seas, than at a great distance from it.

LEE-SIDE, all that part of a ship or boat which lies between the mast and the side furthest from the direction of the wind; or, otherwise, the half of a ship, which is pressed down towards the water by the effort of the sails, as separated from the other half by a line drawn through the middle of her length. That part of the ship which lies to windward of this line is accordingly called the weather-side. Thus, admit a ship to be sailing southward, with the wind at east, then is her starboard, or right side, the lee-side; and the larboard, or left, the weather-side.

LEE (Charles), a celebrated general in the service of the American congress, was a native of England. He served under general Burgoyne, in the British army in Portugal, which he afterwards quitted for the American service. Upon the commencement of the revolution he was appointed a major-general. See AMERICA. But in 1776 he was taken prisoner by colonel Harcourt, and closely confined as a deserter; though six field officers were offered in exchange for him. He was even threatened to be tried for high treason; but the spirited conduct of general Washington, and the congress, prevented that measure. On the capture of Burgoyne and his army he was allowed his parole in New York, and, being soon after exchanged, rejoined the American army. But general Lee's misfortunes were not over. His defeat and disorderly retreat at Monmouth, with the flower of the American troops under his command, subjected him to a court martial, who suspended him from his command for one year, which he spent at his estate in Berkley county, Virginia, and during which he arranged his letters, and other papers on public affairs, for the press. These he sent by his aid-de-camp to Philadelphia, to be printed. But this ungrateful young man betrayed his trust, and gave the papers to the governor, who, on perusal, found it his interest to suppress the publication. In the beginning of 1782 Lee went to Philadelphia on this business; but, soon after his arrival, was seized with a fever, of which he died. His body was interred with military honors, and the members of the congress attended the funeral.

LEE (Nathaniel), an English dramatic writer, the son of a clergyman, educated at Westminster under the famous Dr. Busby, and afterwards at Trinity College, Cambridge, where he took the degree of B. A. in 1668. He went thence to London, where he attempted to commence actor in 1672; but, failing, he became a dramatic author. His first piece, entitled *Nero*, Emperor of Rome, appeared in 1675, and was well received. He continued to write one piece every year, till November 1684, when, showing symptoms of insanity, he was confined. In April, 1688, he was discharged, and wrote two other plays. He died in 1690, in consequence of a

drunken frolic. Lee is allowed to have great power over the passions, but his language is mere rant and bombast. His Rival Queens and Theodosius, however, are still acted with applause. He wrote eleven tragedies in all, which contain a great portion of poetic enthusiasm. Addison commends his genius highly; observing, that none of our English poets had a happier turn for tragedy, although his natural fire, and unbridled impetuosity, hurried him beyond the bounds of probability. While he was confined, a coxcomb scribbler had the cruelty to jeer him with his misfortune, observing that it was easy to write like a madman:—'No,' said Lee, 'it is not easy to write like a madman; but it is very easy to write like a fool.'

LEE (Sophia), an English novelist, and dramatic writer, of reputation, was born in London in 1750. She first became known to the public in 1780, when she published her comedy, called The Chapter of Accidents. The profit of this enabled her to open an academy at Bath. In 1784 appeared her well known novel, The Ruin, or a Tale of other Times. This was followed, in 1787, by the ballad, A Hermit's Tale, found in his Cell; and, in 1796, by a tragedy, called Almeyda, Queen of Grenada; but, although aided by the talents of Mrs. Siddons, it disappointed the public. The following year, Miss Harriet Lee published the first five volumes of the Canterbury Tales, three of which were from the pen of her sister; and one of them, Krutzner, was selected by lord Byron as the subject of a tragedy. In 1803 our authoress retired from her school, soon after which appeared her Life of a Lover, written in early life. In 1807 another comedy by Miss Lee, The Assignation, was produced at Drury Lane, but did not succeed. She died at Clifton, March 13th, 1824.

LEE (Charles Lewes), a modern comic actor of some celebrity, first appeared as a harlequin at Covent Garden. In 1776 he took the parts previously played by Woodward; and removed, in 1783, to Drury Lane. He now travelled throughout the country, delivering Stevens's Lecture on Heads; after which he went to the East Indies, Scotland, and Dublin, where he was well received. But the latter part of his life was spent in embarrassments: it terminated 24th of June, 1803, on the morning of which day he was found dead in his bed. There appeared, in 1805, an amusing work, entitled Memoirs of C. Lee Lewes, 4 vols. 12mo.

LEECH, *n. s.* & *v. a.* } Saxon *læc*, *lece*;
 LEECHCRAFT, *n. s.* } *Mæso-Goth. læk*; *Go-*
 LEECH'LESS, *adj.* } *thic* and *Swed. lakare*,
 from Sax. *lacan*, and Goth. *laka*, to diminish. A physician, surgeon, or medical practitioner of any kind; also a species of water serpent, much used to draw blood. Leechcraft is the art of healing. Leechless seems used by Mr. Maturin for neglected wounds.

And he seide to him, sotheli ye schulen seye to me this likenesse, *leche* heale thi silf. *Wiclif, Luk. 4.*

The clotered blood for any *leche-crafte*

Corrupeth, and in his bouke ylaft,

That neyther veine-blood ne ventousing,

Ne drinke of herbes, may ben his helping.

Chaucer. Cant. Tales.

A leech, the which had great insight
 In that disease of grieved conscience,
 And well could cure the same; his name was P.
 tience. *Spenser's Faerie Queene.*

We study speech, but others we persuade:
 We *leechcraft* learn, but others cure with it.

Davies.

I drew blood by *leeches* behind his ear.

Wiseman.

Sticking like *leeches*, till they burst with blood,
 Without remorse insatiably. *Roscommon.*

Physick is their bane,
 The learned *leeches* in despair depart,
 And shake their heads, desponding of their art.

Dryden.

The hoary-wrinkled *leech* has watched and toiled,
 Tried every health-restoring herb and gum,
 And wearied out his painful skill in vain. *Rowe.*

A skilful *leech*,

They say, had wrought this blessed deed;

This *leech* Arbutnot was yecept.

Gay's Pastorals.

In want, and war, and peril,
 Things that would thrill the hearer's blood to tell of,
 My heart grew human when I thought of thee—
 Imagine would have shuddered for my danger—
 Imagine would have bound my *leechless* wounds—
 Imagine would have sought my nameless corse,
 And known it well. *Maturin.*

LEECH. See *HIRUDO*.

LEECHES, in a ship, the borders or edges of a sail, which are either sloping or perpendicular. The leeches of all sails whose tops and bottoms are parallel to the deck, or at right angles to the mast, are denominated from the ship's side, and the sail to which they belong; as, the starboard leech of the main-sail, the larboard leech of the fore top-sail, &c. But the sails which are fixed obliquely on the masts have their leeches named from their situation with respect to the ship's length; as, the fore leech of the mizen, the after leech of the jib or fore stay-sail, &c.

LEECH-LINES, certain ropes fastened to the middle of the leeches of the main-sail and fore-sail, and communicating with blocks on the opposite side of the top, whence they pass downwards to the deck, serving to truss up those sails to the yard, as occasion requires.

LEECH-ROPE, a name given to that part of the bolt-ropes to which the border or skirt of a sail is sewed. In all sails whose opposite leeches are of the same length, it is terminated above the ear-ring, and below the clue. See *BOLT-ROPE*.

LEEDS, a populous and flourishing market town in the wapentake of Skyrac, in the liberty of the honor of Pontefract, in the West Riding of the county of York, England, is situate principally upon the north side of the river Aire, upon an easy ascent, which rises from the north bank of the river; it extends nearly two miles along the river from east to west, but is not quite a mile in breadth from north to south.

It is a place of considerable antiquity, and is registered in the Domesday survey. There was formerly a strong castle here, built probably by Ilbert de Laey, and which was besieged by king Stephen when on his march towards Scotland in 1139: here the unfortunate Richard II. was confined about the year 1399, a short time before his barbarous murder in Pontefract Castle. No vestige of this fortress remains; but its site

is said to have been at a place called Mill Hill. The borough of Leeds was incorporated by Charles I. in 1626; a second charter was given to it by Charles II. in 1661; and a third by James II. in 1684. The second charter was restored by William and Mary in 1689, under which it is governed by a mayor, 12 aldermen, 24 common-council-men: it returns 2 members to parliament. Leland speaks of Leeds as 'a pretty market-town, subsisting chiefly by clothing, reasonably well builded, and as large as Bradford, but not so quick as it.' At the commencement of the troubles of the reign of Charles I. it was held for the king by Sir William Saville; but its fortifications, after a sharp action, were stormed by the forces which marched out of Bradford under Sir Thomas Fairfax.

The river Aire is navigable from the Humber up to the town; and the Leeds and Liverpool Canal communicates with it about a quarter of a mile above Leeds bridge. Thus situate, in the centre of that line of fine inland navigation which extends across the island, it is equally open to the eastern and western seas, having a ready communication with those great depôts of commerce, Hull and Liverpool. The Aire also supplies the principal part of the town with water. The neighbouring mines supply the town, and the surrounding district north of the town, with coals; and to these local advantages, together with other circumstances which have rendered Leeds and its vicinity the seat of the woollen manufactures, its increasing wealth, population, and prosperity, are chiefly to be attributed. The bridge, which connects the northern and southern parts of the town, is substantially built with free stone, and is of a tolerable width; but such has been the increase of traffic in that part of the town, of late years, that it has become necessary either to widen it or to erect another bridge or bridges in the same neighbourhood; this, however, has not yet been effected. It was enlarged for carriages to pass and repass in 1730, and further enlarged in 1760. Upon this bridge the woollen market used formerly to be held, on the Tuesdays and Saturdays; the cloths being laid upon the battlements, and upon benches below: thus it continued till the 14th of June 1648, when it was removed into Brig-gate for greater accommodation. The market for cloth was held here till the erection of the mixed cloth hall in 1758.

This building is quadrangular, enclosing an open area 127½ yards long, and sixty-six yards broad. It is divided into six streets, each street containing two rows of stands, and every stand measuring twenty-two inches in front, with the name of the owner and his residence marked upon it. The total number of stands, each of which is freehold property, is 2500, and cost originally three guineas each. About thirty years

ago they sold at from £16 to £24 each, but since that time the value has been greatly reduced, and the average price is about £2 10s. In the year 1810 an additional story was erected on the north side of the colored-cloth hall, and is now used principally for the sale of ladies' cloths, in the undyed state. In the year 1775 the white-cloth hall, over the north side of which is an assembly-room, was erected on the same plan as the other, and of nearly the same dimensions, containing about 1300 stands; the price of which has undergone similar fluctuations. This depreciation in their value is not occasioned by any diminution in the quantity of woollen goods manufactured, but is owing to the great increase of factories, and the very general use of machinery, which has prevailed over the domestic system of manufacture. Cloth used formerly to be woven by hand by the clothiers in the neighbourhood, and brought to the cloth halls in an unfinished state, whence it was purchased by the merchants and dressed; but, in the factories, the operations are completed throughout, and great quantities of cloth have, since 1823, been sold at the mixed-cloth hall in a finished state. The markets for cloth are held on the Tuesdays and Saturdays, on which days only the merchants are permitted to purchase, or even to look at, the cloth in the halls. The regulations are similar in both, and tend greatly to promote expedition and regularity. The mixed-cloth hall opens at half-past eight in the morning during the summer season; at nine in spring and autumn; and at half-past nine in winter; the white-cloth hall opens when the other closes. The halls open at the ringing of a bell, and in a few minutes the merchants walk in, each manufacturer appearing behind his own cloth, and they immediately proceed to make their bargains in the most silent and expeditious manner. At the expiration of an hour a warning bell announces the approaching close of the market; and the sound of a third bell, in a quarter of an hour afterwards, terminates the business of the day; when each merchant quits the hall on pain of a penalty of 5s. for every five minutes he remains there after the last bell has rung: thus in an hour and a quarter transactions are completed, often to the amount of £15,000 or £20,000, and sometimes to a much greater extent.

From the year 1732 to the year 1821, inclusive, an annual return was made, at the general quarter sessions, held at Pontefract, according to a late act of parliament, of the quantity of cloth milled at the fulling-mills in the West Riding of Yorkshire; from which returns the following statement, showing the quantity produced in each ten years, will serve to exhibit the astonishing progress of this branch of staple manufacture:—

Years.	No. of Pieces of Broads.	No. of Pieces of Narrows.	Total No. of Pieces.
From 1732 to 1741, inclusive	387,486½	193,159	580,645½
From 1742 to 1751	557,212	679,092	1,236,304
From 1752 to 176	529,225½	726,114	1,255,339½
From 1762 to 1771	749,653½	797,169	1,546,822½

The quantity manufactured in these years is not expressed in yards

Years.	Broads.		Narrows		Total.
	Pieces.	Yards.	Pieces.	Yards.	No. of Pieces.
From 1772 to 1781, inclusive	1,063,268	31,542,321½	946,704½	24,997,158	2,009,972½
From 1782 to 1791	1,507,097	47,674,316	1,261,103	38,249,317	2,768,200
From 1792 to 1801	2,370,073	75,612,373	1,570,154	53,277,085	3,940,227
From 1802 to 1811	2,817,807	91,762,295	1,526,204	57,199,714	4,344,011
From 1812 to 1821	3,169,686	100,078,027	1,352,056	53,038,125	4,521,742

In the year 1644, or 1645, a plague commenced in this town, which raged with such violence that the inhabitants were appalled and confounded. The return of deaths to major-general Carter, governor of Leeds, from March 1644—5 to December 1645, amounted to no less than 1325. The air was so very warm in July that 126 died in one day, and it was so infectious that dogs and cats, mice and rats, died; also several birds, in their flight over the town, dropped down dead. Here are now eight ecclesiastical edifices appropriated to the established religion. Of these, the original is the parish church of St. Peter, built in the form of a cross, with a tower in the middle; and has a painting in fresco of the ascension, by Parmentier, who presented the town with this specimen of his genius. The whole edifice is 165 feet in length and ninety-seven in breadth; the high choir fifty-seven feet in length, in breadth twenty-two, in height thirty-six; and 274 in circumference, and is well adapted to, perhaps, one of the most numerous congregations in the kingdom. The steeple tower is ninety-six feet high. Leeds continued without any other place of worship than the parish church till the beginning of the reign of Charles I., when John Harrison, who also enlarged the free grammar-school and built the market-cross, which was taken down in 1825, a native of the parish, who had acquired considerable fortune by trade, and, being childless, built and endowed St. John's Church, which was consecrated September 21st in 1634. It is neither convenient nor elegant, but possesses all the gloom and obstructions of an ancient church, without one vestige of its dignity and grace. The foundation-stone of the third church in Leeds, dedicated to the Holy Trinity, was laid by Mr. Henry Robinson, on the 28th of August 1721, and it was consecrated by archbishop Blackburn, August 27th 1727. This is a beautiful edifice of moor-stone, and of the Doric order; though the capitals of the columns within are composite. The expenses of erection amounted to £4563 9s. 6d. The masonry, carpentry, and joiners' work, are all admirable. St. Paul's church, a plain, neat, handsome, commodious, and modern structure, was built by the

Rev. Miles Atkinson, at an expense little short of £10,000, and was consecrated by Dr. William Markham, archbishop of York, on the 10th of September 1793. St. James's church was erected shortly after St. Paul's. It was at first intended for an independent chapel, but was afterwards purchased by the Rev. John King, who is still the minister. This church, which is built in the form of an octagon, had formerly a dome upon it; but, the roof being found too weak to support it, it was removed. There are also three new churches here, erected by his majesty's commissioners, called Christ Church, St. Mary's, and St. Mark's; the latter of which is at Woodhouse, but a short distance from the town.

The first endowment of a free grammar-school at Leeds is found in the last will and testament of a 'Syr William Sheffield Priest, dated in the sixth year of the reign of king Edward VI.' The school was subsequently removed, and endowed, by Mr. Harrison. The national school, adapted for the instruction of 320 poor boys and 180 poor girls, on Dr. Bell's system, was opened in February 7th, 1813; the foundation-stone was laid by the Rev. P. Haddon, vicar, May 18th, 1812. The royal Lancasterian free-school was established in 1811. There are also other charity schools, schools of industry, Sunday schools, and infant and adult schools, connected with Christians of various denominations. The Methodists have five chapels; the Independents four; the Methodist new connexion two; the Baptists two; the Friends one chapel; the Unitarians one; the Arians one; the Roman Catholics one; the primitive Methodists, male, one; the primitive Methodists, female, one; the Swedborgians one; and the Inghamites one.

Among the public buildings of Leeds we may also notice the following:—the court-house, situated at the bottom of Park Row: the principal front consists of a confined portico of Corinthian columns and two wings, which have pannels highly wrought in bas-relief, containing the fasces, fleece, wreath, &c. The foundation-stone was laid on the 2d of September 1811, and it was opened in October 1813. The horse-barracks, which are situate about half a mile on the north road,

are a spacious brick building, comprising genteel apartments for the officers, rooms and stabling for 400 men and horses, a canteen, riding-school, hospital, magazine, guard-rooms, and every other convenience requisite for a military station. The site of the building, together with parade ground, &c., occupy an enclosed space of about eleven acres. The philosophical hall is a handsome stone edifice, fronting Park Row and Bond Street. The society has for its object the discussion of literary and philosophical subjects, and was established on the 14th of January, 1820. Its officers consist of a president, two vice-presidents, two secretaries, a treasurer, a librarian, a curator, a sub-curator, and a council of twelve members. The museum contains rare and valuable specimens of fossils, minerals, coins, natural history, &c. There are, also, a library and a collection of apparatus connected with the institution. There is another museum, in Commercial Street, the property of a private gentleman, open for public exhibition, also, comprising many rare and beautiful specimens.

The general infirmary is a large commodious brick building, situate in a line with the colored cloth hall, opened March 1st, 1771. This is an excellent hospital, diffusing its extensive benefits to the country around, and is liberally supported by annual subscriptions and voluntary contributions. The south front is tastefully laid out in pleasure-grounds, 4000 square yards of which were presented to the trustees by Richard Fountayne Wilson, esq., M. P. for Yorkshire, at a cost of £1500; at once forming a monument to the munificence of the donor, an ornament to the town, and a lasting benefit to the institution. The town is also indebted to Mr. Wilson for his liberal gift of one-half the expenses of commuting the tythes of the parish, by act of parliament, for ever, amounting to upwards of £7000. The house of recovery, in Vicar Lane, for the reception of persons attacked by infectious fevers, was built by public subscription in 1802; connected with this institution there is also a general dispensary. The lying-in hospital, established in 1824, for the reception of poor married women, is in St. Peter's Square.

The Leeds subscription library was established about sixty years ago. The subscribers had formerly some apartments in Kirkgate, but in the year 1808 the present handsome edifice, built of ashlar stone, was opened. It is situate in Commercial Street, and cost nearly £5000. There is a row of shops on the basement floor, and the library is above, ascended by a flight of steps on the west end of the building. Dr. Whitaker, in his *Loidis and Elmete*, says, 'It would not disgrace the library of a college.' There are some other libraries of a minor description. There are five banks in the town, exclusive of the bank of England branch in Bank Street, which was opened in August, 1827. The two principal news-rooms are in Briggate.

Among the charitable institutions are the Benevolent Strangers' Friend Society, Harrison's hospital, Potter's alms-houses, Jenkinson's alms-houses, Mrs. Dixon's charity, the Guardian Asylum, for the reception of unfortunate females; and the workhouse. The religious charitable

institutions are the Society for Promoting Christian Knowledge, bible, missionary, and tract societies. The mechanics' institute is situate in Basinghall Street. The public baths, a neat and commodious building, stands opposite the south front of the infirmary, and was completed in 1820.

The music-hall, a large brick building, consisting of a suite of rooms, including a spacious saloon, commodious picture gallery, &c., is in Albion Street. The theatre, in Hunslet Lane, is an old dilapidated, unsightly, black brick building. There are also several billiard-rooms. There are three newspapers in the town: The Leeds Intelligencer, published by Messrs. Robinson and Hernamen, in Commercial Street, on the Thursday; at which office also the Leeds and Yorkshire Almanack is printed: the Leeds Mercury, by Messrs. Baines and Son; and the Leeds Patriot, by Messrs. Fothergill and Thompson, both in Briggate. The Leeds and Yorkshire fire-office, established in 1824, is in Commercial Street; besides this there are several agents to other offices of a similar description. The coal-gas works, established in 1818, are situate in York Street; the oil-gas works are at New Road end, on the opposite side of the town, established in 1824.

One of the most substantial and serviceable edifices in the town, is the central market, in Duncan Street, which was opened on the 6th of October 1827; the foundation stone of which was laid in December 1824. The expenses of erection amounted to nearly £30,000. The principal part of the building is an enclosed market-house, the roof of which is supported by twelve cast-iron columns, and sixteen oaken pillars, and is thirty-four feet six inches high; the height from the floor to the upper point in the ceiling being fifty-four feet four inches. The size within the walls is 138 feet by 103 feet. There are twenty shops within and the same number without the building; and an outer line of shops for butchers and fishmongers, forming three sides of a quadrangle, with a street between them and the principal building. Above the shops within is a most commodious bazaar, forming together one of the most complete markets in this part of the kingdom. The main front is built of stone, the remainder of brick: the architecture is of the Grecian order. There is another bazaar in the shambles, near the top of Briggate. The corn exchange, opened in August, 1827, is a brick building, forming three sides of a quadrangle, with a colonnade on each side supported by cast-iron pillars, with offices under the north and west colonnades. The free-market is a large open space of ground, situate in the centre of the town, and is a great convenience to the inhabitants. Here the fortnight cattle fair is held every other Wednesday—established 1827. This market is bounded on the south by Kingsgate, on the west by Vicar Lane, and on the north by Ludgate Hill. Upon this site the old vicarage stood, but it was taken down in 1826; and was exchanged for an elegant house in Park Place where the Rev. Richard Fawcett, A. M., the vicar, now resides. The south market, a neat and commodious pile of buildings, with a circular

cross in the centre, is situate between Hinslet Lane and Meadow Lane. Here a quarterly leather fair was established in 1827 which is resorted to by the principal tanners and leather dealers in the county. The streets in Leeds are for the most part spacious and uniform, particularly at the west end of the town, where there are some beautiful squares, and open parades. Briggate, the main street in the centre of the town, extends nearly half a mile from north to south, and contains 177 shops. Till the year 1825 this street was obstructed by an old pile of buildings, one of which was the Moot Hall, used as a courthouse, extending 120 yards from a little above Commercial Street, upwards, dividing Briggate into two inconvenient and dangerous alleys. That on the east was the shambles, and that on the west was formerly the wool-market. A little above the upper end of these buildings stood the market-cross, built by Mr. Harrison in 1776. These obstructions are now removed, and Briggate is equalled by few streets out of the metropolis. Leeds is 196 miles from London.

The greatest ornament to the town, in point of architectural beauty, is now in a considerable state of forwardness; and is expected to be completed in a few months. This is the Leeds commercial buildings, erecting at the bottom of Park Row, and intended as a place of resort for merchants and others, similar to the exchange in Liverpool and Manchester. The architecture is of the Grecian Ionic order, and in classical simplicity and elegance will exceed any public structure in this neighbourhood. The front extends from West Street to Park Row, and the entrance is at the junction of the two. Along the front are ten chaste columns, surmounted with beautiful capitals. Above the grand staircase in the centre of the building, there will be a circular tower, richly embellished with groups of figures, and ornamented battlements.

LEEF, or } Sax. *leof*; Belg. *lieve*; *leve*.
LIEVE, *adj.* } Kind; fond. Obsolete. See
LIEF.

Whilome all these were low and *leef*,

And loved their flocks to feed;

They never strove to be the chief,

And simple was their weed. *Spenser's Pastorals.*

LEEK, *n. s.* Sax. *leac*; Dan. *leeg*; Goth. and Teut. *lauk*; Belg. *loock*, of Heb. לֶקֶח , smooth, fresh, (applied to vegetables generally). A well-known plant. See ALLIUM.

We remember the fish which we did eat in Egypt freely; the cucumbers, and the melons, and the *leeks*. *Numb. xi. 5.*

Knowest thou Fluellen?—Yes.

—Tell him I'll knock his *leek* about his pate,

Upon St. David's day. *Shakspeare.*

Leek to the Welsh, to Dutchmen butter's dear.

Gay.

We use acrid plants inwardly and outwardly in gangrenes; in the scurvy, water-cresses, horse-radish, garlic, or *leek* pottage. *Flower on Humours.*

LEEK, in botany. See ALLIUM.

LEEKATOO, or LATAKOO, a town of South Africa, in the Boshuanna country, and the best known to us of any of their towns. It has been visited since 1801 by Messrs. Trutter and Somerville, Dr. Lichtenstein, and Mr. Campbell. It

contains about 8000 inhabitants, who display considerable knowledge of the arts.

LEER, *n. s. & v. n.* Sax. *pleaene*; Swedish *leera*. A smile or oblique glance or view; arch or malignant look; to look obliquely or archly.

I spy entertainment in her; she gives the *leer* of invitation. *Shakspeare. Merry Wives of Windsor.*

I will *leer* upon him as he comes by; and do but mark the countenance that he will give me.

Shakspeare.

Aside the devil turned

For envy, yet with jealous *leer* malign

Eyed them askance.

Milton.

Bertran has been taught the arts of courts,
To gild a face with smiles, and *leer* a man to ruin.

Dryden.

Damn with faint praise, concede with civil *leer*.

Pope.

I wonder whether you taste the pleasure of independency, or whether you do not sometimes *leer* upon the court.

Swift.

A grey-haired, withered, bloody-eyed,
And bloody-handed, ghastly, ghostly thing,
Female in garb, and crowned upon the brow,
Furrowed with years, yet sneering with the passion
Of vengeance, *leering* too with that of lust,
Sate—my veins curdled.

Byron.

LEESE, *n. s.* Belg. *lesen*, *liezen*; Swed. *lisa*.
To destroy; to lose. Obsolete.

A nyght theef cometh not, but that he stele, sle,
and *leese*: and I cam that thei have lyf and haue
more plenteously.

Wiclif, Jon 10.

But nathelless yet had I lever *lese*

My lif than of my body have a shame,

Or know myselven false, or *lese* my name.

Chaucer. Cant. Tales.

Then sell to thy profit both butter and cheese,
Who buieth it sooner the more he shall *leese*.

Tusser.

No cause, nor client fat, will Chev'ril *leese*,
But as they come on both sides he takes fees;
And pleaseth both: for while he melts his grease
For this, that wins for whom he holds his peace.

Ben Jonson.

How in the port our fleet dear time did *leese*,
Withering like prisoners, which lie but for fees.

Donne.

LEET, *n. s.* Sax. *leðe*. 'Otherwise called a law-day,' says Cowell. 'The word seemeth to grow from the Saxon *leðe*, which was a court of jurisdiction above the wapentake or hundred, comprehending three or four of them, otherwise called thirshing, and contained the third part of a province or shire.' See LATH.

Who has a breast so pure,

But some uncleanly apprehensions

Keep *leets* and law-days, and in sessions sit

With meditations lawful? *Shakspeare. Othello.*

You would present her at the *leet*,

Because she bought stone jugs, and no sealed quarts.

Shakspeare.

A LEET, or COURT LEET (*leta visus franci*), is a court of record, ordained for punishing offences against the crown; and is said to be one of the most ancient courts of the land. It enquires of all offences under high treason; but those who are to be punished with loss of life or member, are only enquirable and presentable here, and to be certified over to the justices of assise. Stat. 1. Edw. III. And this court is called the view of frank pledge, because the king

is to be there certified by the view of the steward, how many people are within every leet, and have an account of their good manners and government; and every person of the age of twelve years, who hath remained there for a year and a day, may be sworn to be faithful to the king, and the people to be kept in peace, &c. A leet is incident to a hundred, as a court baron to a manor; for, by grant of a hundred, a leet passeth; and a hundred cannot be without a leet. The usual method of punishment in the court-leet, is by fine and amercement; the former assessed by the steward, and the latter by the jury.

LEEUEW (William de), an eminent engraver of the seventeenth century. He was a native of Flanders, and the disciple of Sootman, whose manner of engraving, or rather etching, he imitated. His prints generally appear harsh at first sight; but become more agreeable upon examination. Several of them have great effect; particularly his Daniel in the lion's den, a large plate lengthwise, from Rubens. The first impressions of this plate are before the name of Dankertz was added, and are extremely rare and dear.

A LEeward SHIP is a vessel that falls much to leeward of her course, when sailing close-hauled, and consequently loses much ground.

LEFEVRE (Francis Joseph), duke of Dantzic, born at Rufack, in the department of the Upper Rhine, October 25th, 1755, entered when young into the French guards, and was a sergeant at the beginning of the revolution. From being a captain he passed to the rank of adjutant-general in September, 1793; and, in the beginning of 1794, to that of general of division. In June this year he distinguished himself at the battle of Fleurus, and after the death of Hoche was raised to the command of the army of the Meuse and Sambre. Being wounded at the battle of Stockhet in 1799, he retired to Paris, where he assisted Buonaparte in seizing the supreme power. He was now made pretor of the conservative senate, which office he held to the end of the imperial government. In 1804 he was created a marshal; and at the battle of Jena he commanded the imperial guard; but his greatest exploit was the taking of Dantzic, May 24th 1807, after which he was raised to the dignity of a duke. He subsequently commanded in Spain and Germany, and he contributed greatly to the success of the French at Eckmuhl and Wagram. After the restoration of royalty, he was made a peer, and died at Paris September, 1820.

LEFOOGA, one of the Friendly Islands, in the cluster called Hapaeas; about seven miles long, and three broad; very fertile, and highly cultivated; the fences running parallel from spacious public roads. Captain Cook sowed melons, pine-apples, Indian corn, &c., on it. In this island, in 1800, the Port au Prince privateer was cut off, and almost the whole crew massacred. Long. 185° 40' E. lat. 19° 49' S.

LEFT, *adj.* } Lat. *levus*; Gr. }
LEFTHANDED, } *λαίος*. Some etymo- }
LEFTHANDEDNESS, *n. s.* } *logists* however trace }
this adjective and the Belg. *lefts*, Teut. *links*,

Lat. *linguo*, to the verb leave, i. e. as expressing the usual preference for the right hand, this being 'left.' Sinistrors: opposed to the right; not on the right side.

Among all this people there were there seven hundred chosen men *left handed*. *Judges* xx. 16.

The limbs are used most on the right side, whereby custom helpeth; for we see, that some are *left handed*, which are such as have used the left hand most. *Bacon*.

Although a squint *left handedness*
Be ungracious; yet we cannot want that hand. *Donne*.

That there is also in men a natural prepotency in the right, we cannot with constancy affirm, if we make observation in children, who, permitted the freedom of both hands, do oftentimes confine it unto the *left*, and are not without great difficulty restrained from it. *Brown's Vulgar Errors*.

For the seat of the heart and liver on one side, whereby men become *left handed*, it happeneth too rarely to countenance an effect so common: for the seat of the liver on the left side is very monstrous. *Id*.

The gods of greater nations dwell around,
And, on the right and *left*, the palace bounds;
The commons where they can. *Dryden*.

A raven from a withered oak,
Left of their lodging was obliged to croak:
That omen liked him not. *Id*.

The man who struggles in the fight,
Fatigues *left* arm as well as right. *Prior*.

LEG, *n. s.* Sax. læg; Dan. leg; Goth. *legg*, *litha*, to bend.—Thomson. The limb used in walking: that part of it particularly which is between the knee and the foot: hence the support of any thing; and a bow with the leg drawn back or upwards.

The elephant hath joints, but none for courtesy;
his *legs* are for necessity, not for pleasure.

Shakespeare.
At court, he that cannot make a *leg*, put off his cap, kiss his hand, and say nothing, has neither *leg*, hands, lip, nor cap. *Id*.

Purging comfits, and ants' eggs,
Had almost brought him off his *legs*. *Hudibras*.

Their horses never give a blow,
But when they make a *leg*, and bow. *Id*.

They haste; and what their hardy feet denied,
The trusty staff, their better *leg*, supplied. *Dryden*.

If the boy should not put off his hat, nor make *legs* very gracefully, a dancing-master will cure that defect. *Locke*.

Such intrigues people cannot meet with, who have nothing but *legs* to carry them. *Addison*

Persons of their fortune and quality could well have stood upon their own *legs*, and needed not to lay in for countenance and support. *Collier*.

He made his *leg*, and went away. *Swift*.

And I appeal to the first and most natural feelings of mankind, whether on beholding a beautiful eye, or a well fashioned mouth, or a well turned *leg*, any ideas of their being well fitted for seeing, eating, or running, ever present themselves.

Burke on the Sublime.

At length a generation more refined,
Improved the simple plan; made three *legs* four,
Gave them a twisted form vermicular. *Cowper*.

Halting on crutches of unequal size,
One *leg* by truth supported, one by lies;
They sidle to the goal with awkward pace,
Secure of nothing—but to lose the race.

Id. *Progress of Error*.

Here agonizing rolled the mouse in gore ;
 And there the frog (a scene full sad to see!)
 Shorn of one *leg*, slow sprawled along on three
 He vaults no more with vigorous hops on high,
 But mourns in hoarsest croaks his destiny.

Beattie.

LEG, in anatomy, the whole lower extremity from the acetabula of the ossa innominata, is commonly divided into three parts, viz. the thigh, the leg properly so called, and the foot. See ANATOMY.

LEG'ACY, *n. s.* Lat. *legatum*. A bequest
 LEG'ATARY, } by will: legatary and lega-
 LEGATEE', } tee both mean the party to
 LEGATOR'. } whom a legacy is left:
 legator, he who leaves one.

If there be no such thing apparent upon record, they do as if one should demand a *legacy* by force and virtue of some written testament, wherein there being no such thing specified, he pleadeth that there it must needs be, and bringeth arguments from the love or good-will which always the testator bore him; imagining, that these, or the like proofs, will convict a testament to have that in it, which other men can no where by reading find.

Hooker.

Legacy is a particular thing given by last will and testament.

Cowell.

The honour of a maid is her name; and no *legacy* is so rich as honesty.

Shakspeare.

Fetch the will hither, and we shall determine
 How to cut off some charge in *legacies*.

Id.

When the heir of this vast treasure knew

How large a *legacy* was left to you,

He wisely tyed it to the crown again.

Dryden.

Suppose debate

Betwixt pretenders to a fair estate,

Bequeathed by some *legator's* last intent.

Id.

If he chance to 'scape this dismal bout,

The former *legatees* are blotted out.

Id.

Good counsel is the best *legacy* a father can leave a child.

L'Estrange.

Leave to thy children tumult, strife, and war,
 Portions of toil, and *legacies* of care.

Prior.

An executor shall exhibit a true inventory of goods, taken in the presence of fit persons, as creditors and *legataries* are, unto the ordinary, *Ayliffe*.

My will is, that if any of the above-named *legatees* should die before me, that then the respective *legacies* shall revert to myself.

Swift.

If the *legatee* dies before the testator, the *legacy* is a lost or lapsed *legacy*, and shall sink into the residue.

Tomlin.

If the *legatee* dies before the age of twenty-one, his representatives shall receive it out of the testator's personal estate, at the same time that it would have become payable in case the *legator* had lived.

Id.

LEGACY. See WILLS.

LEG'AL, *adj.*

LEGAL'ITY,

LEGALISE, *v. a.*

LEGALLY,

lawful; authorise.

Fr. *legal*; Ital. Span. and Port. *legale*; Lat. *leges*.
 According to law; lawfulness: to legalise is to make

It was not in the power of the *legal* priesthood to perform, or promise innocency to her ministers.

Bp. Hall.

He had sinned concerning the dead body; and yet it was nothing but a *legal* impurity.

Bp. Taylor.

A prince may not, much less may inferior judges, deny justice, when it is *legally* and competently demanded.

Id.

His merits

To save them, not their own, though *legal*, works.

Milton.

It was a punishment never by the Romans, under whose law our Lord suffered, *legally* inflicted upon freemen, but upon slaves only.

Barrow.

Whatsoever was before Richard I., was before time of memory; and what is since, is, in a *legal* sense, within the time of memory.

Hale.

If any thing can *legalise* revenge, it should be injury from an extremely obliged person: but revenge is so absolutely the peculiar of Heaven, that no consideration can impose, even the best men, to assume the execution of it.

South.

In this situation, they have frequently a right to decide, and that upon their oaths, questions of nice importance, in the solution of which some *legal* skill is requisite.

Blackstone.

LEGATE, *n. s.* Fr. *legat*; Ital. *legato*; LEG'ATIVE, *adj.* Lat. *legatus*, *legare*, to send
 LEGA'TION, *n. s.* } or appoint. An ambassador or deputy, particularly of the pope. Legatine, proceeding from, or pertaining to, a legate. Legation, commission; embassy; diplomatic employment.

Look where the holy *legate* comes apace,
 To give us warrant from the hand of Heaven.

Shakspeare.

All those you have done of late,
 By your power *legatine* within this kingdom,
 Fall in the compass of a præmunire.

Id.

After a *legation* ad res repetendas, and a refusal, and a denunciation or indiction of a war, the war is no more confined to the place of the quarrel, but is left at large.

Bacon.

They are called apostles of the churches, not going from Corinth with the money, but before they came thither from whence they were to be dispatched in *legation* to Jerusalem.

Bp. Taylor.

The *legates* from the Ætolian prince return: Sad news they bring, that after all the cost, And care employed, their embassy is lost. Upon the *legate's* summons, he summited himself to an examination, and appeared before him.

Atterbury.

When any one is absolved from excommunication, it is provided by a *legatine* constitution that some one shall publish such absolution.

Ayliffe.

In attiring, the duke had a fine and unaffected politeness, and upon occasion costly, as in his *legations*.

Wotton.

A LEGATE is generally a cardinal or bishop, whom the pope sends as his ambassador to sovereign princes. See AMBASSADOR. There are three kinds of legates, viz. legates a latere, legates de latere, and legates by office, or legati nati; of these the most considerable are the legates a latere, the next are the legates de latere. See LATERE. Legates by office are those who have not any particular legation given them; but who, by virtue of their dignity and rank in the church, become legates: but the authority of these legates is much inferior to that of the legates a latere. The power of a legate is sometimes given without the title. Some of the nuncios are invested with it. It was one of the ecclesiastical privileges of England, from the Norman conquest, that no foreign legate should be obtruded upon the English, unless the king should desire it upon some extraordinary emergency, as when a case was too difficult for the English prelates to determine.

LEGATE, COURT OF THE, was a court obtained by Cardinal Wolsey of pope Leo X., in the ninth year of Henry VIII., wherein he, as legate of the pope, had power to prove wills, and dispense with offences against the spiritual laws, &c. It was but of short continuance.

LEGATIO LIBERA, was a privilege frequently obtained of the state, by senators of Rome, going into any province or country upon their own private business, to assume the quality of legati or envoys from the senate, that the dignity of this nominal office might secure them a good reception, and have an influence on the management of their concerns. The cities and towns through which they passed were obliged to defray their expenses. It was called *libera legatio*, because they might lay aside the office as soon as they pleased, and were not encumbered with any actual trust.

LEGATUS, a military officer among the ancient Romans, who commanded as deputy of the commander-in-chief. The legati, at their first institution, were not so much to command as to advise. They were generally chosen by the consuls, with the approbation of the senate. As to their number, we have no certain information, but there appears to have been at least one to every legion. In the absence of the consul or proconsul, they had the fasces. Under the emperors there were two sorts of legati, consulars and prætorii. The first commanded whole armies, as the emperor's lieutenant generals; and the latter had the command of particular legions. The legati under the proconsuls in the provinces judged inferior causes, and managed smaller concerns, remitting affairs of great moment to the governor or president. This was their original office, though they were afterwards admitted to command in the army.

LEG'END, n. s. } Fr. *legende*; Port. and
LEG'ENDARY, adj. } Lat. *legenda*. Strictly, that which may be read. See **LEGIBLE**. A tale or story, true or false; any narrative, or collection of narrations; used particularly for narrations of the lives of Romish saints; an inscription on a coin or medal. **Legendary**, pertaining to, or partaking of the character of a legend.

Legends being grown in a manner to be nothing else but heaps of frivolous and scandalous vanities, they have been even with disdain thrown out, the very nests which bred them abhorring them.

Hooker.

And in this *legend* all that glorious deed
 Read, whilst you arm you; arm you whilst you
 read.

Fairfax.

A religion that, instead of the pure milk of the gospel, hath long fed her starved souls with such idle *legends*, as the reporter can hardly deliver without laughter, and their abettors not hear without shame and disclamation.

Bp. Hall.

There are in Rome two sets of antiquities, the christian and the heathen; the former, though of a fresher date, are so embroiled with fable and *legend*, that one receives but little satisfaction. Addison.

Compare the beauty and comprehensiveness of *legends* on ancient coins.

Id. On Medals.

Writing has lost more mistresses than any mistake in the whole *legend* of love.

Steele.

Who can show the *legends*, that record
 More idle tales, or fables so absurd? Blackmore.

Then slowly climb the many-winding way,
 And frequent turn, to linger as you go,
 From loftier rocks new loveliness survey,
 And rest ye at our 'Lady's house of woe;'
 Where frugal monks their little relics show,
 And sundry *legends* to the stranger tell. Byron.

The **LEGEND** was originally a book used in the old Romish churches, containing the lessons to be read at divine services; hence the lives of the saints and martyrs came to be called legends, because chapters were read out of them at matins, and at the refectories of religious houses. Among these the Golden Legend, which is a collection of the lives of the saints, was received in the church with great applause, which it maintained for 200 years; though the Roman Catholics themselves are almost ashamed of it.

LEGEND is also used to signify the words engraven about the margins, &c., of coins. Thus the legend of a French crown was *Sit nomen domini benedictvm*; that of a moireur, *In hoc signo vinces*; on those of the last emperors of Constantinople, we find *Jesvs Christvs basilevs basileon, ihs xps nika, i. e. Jesvs Christvs vincit*. It is also applied to the inscription of medals, which serves to explain the figures or devices represented on them. In strictness, the legend differs from the inscription; this last properly signifying words placed on the reverse of a medal, in lieu of figures. It seems the ancients had intended their medals to serve both as images and as emblems; the images to represent the faces of princes; emblems their virtues and great actions. Every medal has properly two legends; that on the front, and that on the reverse. The first generally serves only to distinguish the person by his name, titles, offices, &c.; the latter is intended to express his noble deeds, and the advantages the public has reaped by him. This, however, does not hold universally; for sometimes we find the titles shared between both sides, and sometimes also the legend. In the medals of cities and provinces, as the head is usually the genius of the place, or at least some deity adored there, the legend is the name of the city, province, or deity, or of both together; and the reverse is some symbol of the city, &c., frequently without a legend, sometimes with that of one of its magistrates. Legends generally commemorate the virtues of princes, their honor and consecrations, signal events, public monuments, deities, vows, privileges, &c., which are either in Latin or Greek, or a mixture of both.

LEG'ER, n. s. Sax. *leghan*, to place in order. See **LEDGE**. Any thing or person permanently fixed in a place: thus, a leger-ambassador is one constantly resident; a leger, one of the most important, and therefore most carefully deposited, books of the merchant.

I've given him that,
 Which, if he take, shall quite unpeople her
 Of *leiders* for her sweet.

Shakspeare. *Cymbeline*.

Lord Angelo, having affairs to Heaven,
 Intends you for his swift ambassador,
 Where you shall be an everlasting *leiger*.

Shakspeare.

If *leiger* ambassadors or agents were sent to remain

near the courts of princes, to observe their motions, such were made choice of as were vigilant. *Bacon.*

Who can endeavor

Thy praise too much? thou art Heaven's *leiger* here,
Working against the states of death and hell.

Herbert.

He withdrew not his confidence from any of those who attended his person, who, in truth, lay *leiger* for the covenant, and kept up the spirits of their countrymen by their intelligence. *Clarendon.*

I call that a *ledger* bait, which is fixed, or made to rest, in one certain place, when you shall be absent; and I call that a walking bait which you have ever in motion. *Walton.*

By these means the journal is greatly shortened and simplified; but the principal advantage of such arrangement consists in posting the books; for here a whole month's cash, bills, commission, insurance, and interest, are each carried into one sum, or entry, from the journal to the *ledger*.

Nicholson's Journal.

LEG'ERDEMAIN, *n. s.* } Fr. *legereté*. Le-

LEGER'ITY. } gerdemain seems

to be contracted from Fr. *legereté de main*, or *leger de main*, i. e. levis manu, light of hand.—

Minsheu. Slight of hand; deception of the eye by nimbleness of the hand; juggle; trick; cosenage; knock. *Legerity* is lightness · nimbleness; quickness of motion.

He so light was at *legerdemain*,
That what he touched came not to light again.

Hubberd.

When the mind is quickened,
The organs, though defunct and dead before,
Break up their drowsy grave, and newly move
With casted slough and fresh *legerity*.

Shakspeare.

Whoever shall pretend that any time, easily, with a celerity, by a kind of *legerdemain*, or by any mysterious knock, a man may be settled in virtue, or converted from vice, common experience abundantly will confute him.

Barrow.

Of all the tricks and *legerdemain* by which men impose upon their own souls, there is none so common as the plea of a good intention. *South.*

LEGERDEMAIN is a denomination given to certain deceptive performances, which either depend altogether on dexterity and address, or derive a small degree of aid from philosophical principles. The former class, though they may be styled arts in one sense of the word, yet depend so entirely upon trick and deception, and have so little connexion with real science, that we are persuaded none of our readers will regret our omitting them. Of the latter class, sufficient specimens of entertaining experiments, illusions, &c., of a philosophical nature, will be found under the articles ACOUSTICS, OPTICS, ELECTRICITY, ELECTRO-MAGNETISM, HYDROSTATICS, PYROTECHNICS.

LEGHORN, *Ital.* Livorno, and the *Liburnum* and *Liburni Portus* of former times, one of the most flourishing and important sea-ports of Italy, in the grand duchy of Tuscany, stands in a marshy district, intersected by canals. The harbour is formed by a mole a mile in length, but, from the sand washed into it, requires continual clearing, for which purpose a number of galley slaves are kept employed; the sand being conveyed to the neighbouring marshes to raise the soil, and render them more healthy.

Toward the sea it is fortified, and a stone rampart encloses it on the land side. The city abounds in churches: one of which, the Duorno or high church, is a Gothic fabric, chiefly remarkable for its vault. There are six other Catholic and two Greek churches, a mosque, an American chapel, and an elegant synagogue. The streets are in general wide, straight, and clean: the west end of the town, from the circumstance of canals intersecting it so frequently, is called the New Venice: and the town altogether is considered the greatest commercial depôt in Italy. The ducal palace is an inferior building; but near the harbour is a fine statue (by John of Bologna) of the grand duke Ferdinand I. Other remarkable structures are the arsenal, the salt, tobacco, and oil warehouses, the public baths and the theatre. Here are also three lazaretos; that nearest the harbour is esteemed one of the finest establishments of this kind in Europe; the literary institutions are, an academy of lectures and the arts, and an excellent public library.

Leghorn is the residence of consuls from all the principal states of Europe, and the chief medium of Italian commerce with the Levant and Barbary. It is visited annually by upwards of 4000 vessels great and small. The manufacturers of Silesia and other parts of Germany find this a valuable market for linen, the French for silks, and the English for woollens. The chief branches of manual labor are the working of coral and alabaster; manufactures of silk, leather, paper, &c. The population is at present about 50,000. Of this number a sixth part are Jews, who here enjoy considerable privileges, and are said to be very rich. This part is entirely indebted for its prosperity to the family of Medici, the princes of which successively enlarged and fortified the town, constructed the harbour and mole, and declared it free. Good water being scarce, the government has caused a stream of excellent water to be conveyed hither from the distant mountains of Colognole, by a long and expensive aqueduct. In the environs the most interesting object is the English church-yard, where, among other monuments, is to be seen one in memory of Dr. Smollett: fifteen miles south-west of Peru, forty-seven W. S. W. of Florence, and 140 N. N. W. of Rome.

LEG'IBLE, *adj.* } Fr. Span. and *Ital. legi-*
LEG'IBLY, *adv.* } *ble*; Lat. *legibilis*. See
LEGEND. That may be read; discriminate; plain; apparent.

The deserts of men shall often be *legible* in the recompenses conferred or inflicted upon them.

Barrow.

People's opinions of themselves are *legible* in their countenances. Thus a kind imagination makes a bold man have vigour and enterprize in his air and motion; it stamps value and significance upon his face.

Collier.

You observe some clergymen with their heads held down within an inch of the cushion, to read what is hardly *legible*.

Swift.

Whate'er she meant, this truth divine
Is *legible* and plain,

'Tis power Almighty bids him shine,
Nor bids him shine in vain. *Cowper.*

LEGIO, a town of Galilee, from which Jerome determines the distances of the places in Galilee, so named from a Roman legion there. It lay fifteen miles west of Nazareth, between Mount Tabor and the Mediterranean; now thought to be Legune.

LE'GION, *n. s.* } Fr. Span. and Port. *le-*
LE'GIONARY. } *gion*; Lat. *legio*. A body of Roman soldiers, amounting to about 5000; a large military force; any large number. Legionary, pertaining to, or containing a legion or great number.

My name is *legion*, for we are many. *Mark v. 9.*

Not in the *legions*

Of horrid hell, can come a devil more damned.

Shakspeare.

My name is *legion*.—The author of discord hath borrowed a name of war: from that military order of discipline by which the Jews were subdued, doth the devil fetch his denominations. *Bp. Hall.*

Too many, applying themselves betwixt jest and earnest, make up the *legionary* body of error.

Browne's Vulgar Errors.

She to foreign realms

Sends forth her dreadful *legions*. *Philips.*

The partition between good and evil is broken down; and, where one sin has entered, *legions* will follow their way through the same breach. *Rogers.*

What can preserve my life! or what destroy!

An angel's arm can't snatch me from the grave;
Legions of angels can't confine me there. *Young.*

SAR. I fear it not; but I have felt—have seen—
A *legion* of the dead. *Byron.*

A LEGION, in Roman antiquity, consisted of different numbers at different periods. The word came from Lat. *legere* to choose; because, when the legions were raised, they chose such of their youth as were most proper to bear arms. In the time of Romulus the legion consisted of 3000 foot and 300 horse; though, after the reception of the Sabines, it was augmented to 4000. In the war with Hannibal it was raised to 5000; after this it sunk to 4000 or 4500; this was the number in the time of Polybius. In the age of Julius Cæsar we do not find any legions exceeding the Polybian number of men; and he himself expressly speaks of two legions that did not make above 7000 between them. *Commentar. lib. 5.* The number of legions kept in pay differed according to circumstances. During the consular government four legions were fitted up every year, and divided betwixt the two consuls; yet there were sometimes sixteen or eighteen, as the situation of affairs required. Augustus maintained a standing army of twenty-three or twenty-five legions; but this number in after times is seldom found. The different legions were named, or rather numbered, from the order in which they were raised; *legio prima, secunda, tertia, &c.*; and they were also surnamed from the emperors, as *Augusta, Claudiana, Galbiana, Flavia, Ulpia, Trajana, Antonina, &c.*; or from the provinces which had been conquered by their means, as *Parthica, Scythica, Gallica, Arabica, &c.*; or from the deities under whose protection the commanders had particularly placed themselves, as *Minervia, Apollinaris, &c.*; or from the region where they were quartered, as *Cretensis, Cyrenaica, Britannica, &c.*;

or from particular accidents, as *adjutrix, martia, fulminatrix, repax, victrix, &c.* Each legion was divided into ten cohorts, each cohort into ten companies, and each company into two centuries. The chief commander of the legion was called *legatus*, i. e. lieutenant. The standards borne by the legion were various; at first the standard was a wolf, in honor of Romulus's nurse; afterwards a hog, which animal was usually sacrificed at the conclusion of a treaty, to indicate that war is undertaken with a view to peace; sometimes a minotaur, a horse, and also a boar; and Marius was the first who changed all these for the eagle. In the time of Marius the four divisions of the legion which had taken place under the consuls were united into one, and augmented; and cohorts were appointed from 500 to 600 men, each under the command of a tribune. Each cohort consisted of three companies of maniples, each manipule of two centuries, and the legion was divided into ten cohorts, who made as many distinct battalions, disposed in three lines; so that the legion then consisted of 6000 men.

Isidore tells us, that the legion consisted of 6000 men, and was divided into sixty centuries, thirty manipules, twelve cohorts, and 200 troops. According to the French academy, the legion consisted of 6000 foot, and 725 horse. The legion consisted of four sorts of soldiers, who differed in their age, arms, and names: they were called *Velites, Hastati, Principes, and Triarii*. Till the destruction at Carthage these were citizens of Rome, but after the Social War the freedom of the city was granted to other towns in Italy, and legionary troops were raised which were called Roman, because, as they shared the privilege of Roman citizens, they were incorporated in the republic.

LEGISLATE, *v. n.*

LEGISLATION, *n. s.*

LEGISLATIVE, *adj. & n. s.*

LEGISLATOR, *n. s.*

Lat. *legislator*, (*lex, legis*). To make or give laws. Legislation, the act or power of making laws. Legislative, giving laws; and as a substantive, that department of a government which makes or gives them. Legislator, a law-giver.

Pythagoras joined *legislation* to his philosophy, and, like others, pretended to miracles and revelations from God, to give a more venerable sanction to the laws he prescribed. *Littleton.*

Without the concurrent consent of all three parts of the *legislature*, no law is, or can be made.

Hale's Common Law.

The poet is a kind of lawgiver, and those qualities are proper to the *legislative* style. *Dryden.*

It spoke like a *legislator*: the thing spoke was a law. *South.*

In the notion of a *legislature* is implied a power to change, repeal, and suspend laws in being, as well as to make new laws. *Addison.*

Heroes in animated marble frown,

And *legislators* seem to think in stone. *Pope.*

By the supreme magistrate is properly understood the *legislative* power; but the word magistrate seeming to denote a single person, and to express the executive power, it came to pass that the obedience due to the *legislature* was, for want of considering this easy distinction, supplied to the administration. *Swift.*

The natural liberty of man is to be free from any superior power on earth, and not to be under the will or legislative authority of man, but to have only the law of nature for his rule. *Locke.*

To embarrass justice by a multiplicity of laws, or to hazard it by a confidence in our judges, are, I grant, the opposite rocks on which legislative wisdom has been split. *Goldsmith.*

How unbecoming must it appear in a member of the legislature to vote for a new law, who is utterly ignorant of the old! *Blackstone.*

Know, sirrah, in its very nature
A law can't reach the legislature. *Beattie.*

The first maxim of a free state is, that the laws be made by one set of men, and administered by another; in other words, that the legislative and judicial characters be kept separate. *Paley.*

I believe it had occupied the serious thoughts of all descriptions of persons long before its introduction to the notice of that legislature whose interference alone could be of real service. *Byron.*

LEGISLATORS, ANCIENT. The most celebrated ancient legislators were, MOSES among the Jews; THESEUS, DRACO, and SOLON, among the Athenians; LYCURGUS among the Lacedemonians; NUMA among the Romans, &c. See these articles. The first laws among the Athenians seem to have been those of Theseus. After him came Draco, whose laws were said, for their severity, to have been written with blood: by them every offence was punished with death; so that stealing an apple, and betraying one's country, were treated as equal crimes. These were repealed by Solon, except such as related to murder: by way of distinction, Draco's laws were called *θεσμοι*, and Solon's *νομοι*. The laws of Solon were in a great measure suspended during the usurpation of Pisistratus; but after the expulsion of his family were revived with some additions by Clisthenes. After this the form of government was again changed, first by the 400, and afterwards by the thirty tyrants; but the ancient laws were again restored in the archonship of Euclides, and others established at the instance of Diocles, Aristophon, and finally of Demetrius the Phalerean. But many laws were enacted by the suffrages of the people on particular exigencies; the decrees of the senate continued to have the force of laws no longer than a year. If a new law was to be proposed to the assembly, it was necessary to write it upon a white tablet, and fix it up some days before the meeting, lest their judgment should be caught by surprise. The laws were carefully revised every year; and if any of them, from a change of circumstances, were found unsuitable or prejudicial, they were repealed: this was called *ηπιχειροτονια των νομων*, because the suffrages were given by holding up of hands. The first laws among the Grecians were not written, but composed in verse, that the people might with more ease commit them to memory. Solon penned his laws upon wooden tablets, called *αξονες*; and some authors with great probability assert, that they were written in the manner called *βασπορηθρον*, from left to right, and from right again to the left. See *BOUSTROPHEDON*. It was against the law for any person to erase a decree, and certain persons called *επιτακται*, were appointed to prevent any cor-

ruption; whose business it was also to transcribe the old and enter the new ones. At Rome the people were in a great measure their own legislators; though Solon may be said, in some sense, to have been their legislator, as the decemviri, who were created for the making of laws, borrowed a great number from those of Solon. With us the legislative power is lodged in the king, lords, and commons assembled in parliament.

LEGITIMATE, *adj. & v. a.* } Fr. *legitime* ;
LEGITIMACY, *n. s.* } Italian, Span.,
LEGITIMATELY, *adv.* } and Port., *legi-*
LEGITIMATION, *n. s.* } *timo*; Lat. *legitimus, lege* (by law). Legal, applied particularly to being born in marriage; lawfully begotten. To legitimate is to make lawful, or obtain the right of legitimate birth. Legitimacy is lawfulness; genuineness; lawfulness of birth in particular. Legitimation, the act of investing with legitimacy, or state of being so invested.

I have disclaimed my land;
Legitimation, name, and all is gone;
Then, good my mother, let me know my father. *Shakespeare.*

Legitimate Edgar, I must have your land;
Our father's love is to the bastard Edmund. *Id.*

It would be impossible for any enterprize to be lawful, if that which should legitimate it is subsequent to it, and can have no influence to make it good or bad. *Decay of Piety.*

An adulterous person is tied to make provision for the children begotten in unlawful embraces, that they may do no injury to the legitimate, by receiving a portion. *Taylor.*

By degrees he rose to Jove's imperial seat;
Thus difficulties prove a soul legitimately great. *Dryden.*

From whence will arise many questions of *legitimation*, and what in nature is the difference betwixt a wife and a concubine. *Locke.*

In respect of his *legitimacy*, it will be good. *Ayliffe.*

Legitimate him that was a bastard. *Id.*
The *legitimacy* or reality of these marine bodies vindicated, I now inquire by what means they were hurried out of the ocean. *Woodward.*

Had divines taught them the true and proper and peculiar end of this revelation, they would then have seen that universal history afforded the most legitimate prejudice in favour of Christianity. *Warburton.*

LEGITIME, in Scottish law, the share of the moveable effects belonging to a husband and wife, which upon the husband's death falls to the children.

LEGNANO, a fortified and populous town of Italy, in the department of the Mincio, and district of Verona. It has a great trade in grain, particularly rice; and a canal erected in 1762, which runs between the Adige, the Tartaro, and the Po. It surrendered to the French September 13th 1796; but on the 26th of March 1799 the French attacked the Austrians under general Kray here, and were defeated, with the loss of 1500 killed, twenty-two officers, and 500 men taken prisoners; besides fifteen cannons, fifteen loaded waggons, &c. Population 6350. It lies twenty-two miles E.S.E. of Verona, and twenty-eight N.N.W. of Ferrara.

LEG'UME, *n. s.* } Fr. *legume*; Lat. *legu-*
 LEGU'MEN, } *men*. Seeds not reaped,
 LEGU'MINOUS, *adj.* } but gathered by the hand;
 as beans; all larger seeds; pulse: of or belong-
 ing to pulse.

Some *legumens*, as peas or beans, if newly gathered and distilled in a retort, will afford an acid spirit.

Boyle.

In the spring fell great rains, upon which ensued a most destructive mildew upon the corn and *legumes*.

Arbuthnot.

The properest food of the vegetable kingdom is taken from the farinaceous seeds: as oats, barley, and wheat: or of some of the siliquose or *legumi-*
vous; as peas or beans. *Id.*

LEGUMEN OR POD. See BOTANY.

LEGUMINOUS is applied to all plants whose fruit is a legumen, or pod. See BOTANY.

LEIBNITZ (Godfrey William de), an eminent mathematician and philosopher, born at Leipsic in Saxony in 1646. At the age of fifteen he studied mathematics at Leipsic and Jena; and in 1663 maintained a thesis de Principiis Individuationis. In 1664 he was admitted M. A. He endeavoured to reconcile Plato with Aristotle, as he afterwards did Aristotle with Des Cartes. But the study of the law was his principal object, and he was admitted LL. B. in 1665. In 1666 he would have taken the degree of doctor, but was refused it, on pretence that he was too young, though in reality because he had rejected the principles of Aristotle and the schoolmen. Upon this he went to Altorf, where he maintained a thesis de Casibus Perplexis, with such applause, that the degree of LL. D. was conferred on him. He might have settled to great advantage in Paris: but his aversion to the Roman Catholic religion made him refuse all offers. In 1673 he went to England; where he became acquainted with John Collins, F. R. S., and Mr. Oldenburgh, the secretary of the Royal Society. In 1676 he returned to England, and thence went into Holland, in order to proceed to Hanover, where he proposed to settle. Upon his arrival there, he applied himself to enrich the duke's library with the best works of all kinds. The duke dying, in 1679, his successor Ernest Augustus continued to patronise him, and employed him to write the history of the house of Brunswick. He travelled over Germany and Italy to collect materials. Frederick I. king of Prussia, then elector of Brandenburg, founded an academy at Berlin by his advice, and appointed him perpetual president, though he could not reside constantly at Berlin. He projected an academy of the same kind at Dresden, but the execution of this design was prevented by the confusions in Poland. His writings had long before made him famous over all Europe. Besides the office of privy-counsellor of justice, which king George I., then elector of Hanover, had given him, the emperor appointed him in 1711 aulic-counsellor; and Peter the Great made him privy-counsellor of justice, with a pension of 1000 ducats. He undertook the establishment of an academy of sciences at Vienna; but the plague prevented the execution of it. However the emperor, as a mark of his favor, settled a pension on him of 2000 florins, and promised him another of 4000,

if he would come and reside at Vienna, but he was prevented by death in 1716. His memory was so strong, that he could, even in his old age, repeat the whole *Æneid* without error. He professed the Lutheran religion, but never went to church; and, upon his death bed, his favorite servant desiring him to send for a minister, he replied, he had no need of one. Foreigners for some time ascribed to him the invention of fluxions, which had been previously discovered by Sir Isaac Newton. See FLUXIONS.

LEICESTER, the capital of the county of this name, is situated on the banks of the river Soare, in the centre of the finest wold district of England. On three sides, north, south, and east, it has canal communications with the rest of the kingdom, and though, from its late rapid increase as a manufacturing town, the houses are chiefly modern, the town itself is of great antiquity, and often mentioned in our history.

It is divided into six parishes, possessing respectively the churches of St. Nicholas, St. Mary, All Saints, St. Martin, St. Margaret, and St. George: in 1220 it is said no fewer than nine churches were standing here. St. Nicholas's, a Saxon building, is the most ancient; and consists only of a nave and south aisle, with a square tower at the west end. St. Mary's is a large pile of irregular building, exhibiting various styles of architecture. All Saints is a small modern church. St. Martin's, an old building of commodious size, consists of a nave, side aisles, chancel, and handsome tower. Leland calls it the 'fairest church in the place, which once was a cathedral.' The interior is handsome, and contains several elegant monuments. St. George's is a modern erection and considered an elegant specimen of architecture. Here are also places of worship for the Particular and General Baptists, the Independents, the Methodists, the Unitarians, and the Roman Catholics. Other public buildings are, the town jail, a commodious stone edifice, erected in 1791; the infirmary, a plain square building, with two wings, at the south end of the town; and, exclusive of the fever ward, calculated to receive fifty-four patients; near it is an asylum for indigent lunatics: and the exchange, a plain building, in the open square of the market place. A new county jail has just been finished, situated near the infirmary, with all the modern improvements of which such erections are susceptible. Leicester is also distinguished for its excellent inns. The hotel is a handsome modern building, originally intended for a coffee-room and tavern, but now converted into assembly-rooms, lodgings for the judges at the circuits, and rooms for the sittings of the magistrates. Adjoining is the theatre. The free grammar school was augmented and re-established in the reign of Elizabeth, when a new school-house was erected. The New Walk, south-east of the town, is a very agreeable promenade, twenty feet broad and extending three-fourths of a mile in length. In the meadows are the ruins of the abbey where cardinal Wolsey bade farewell to this world's greatness.

Near the north bridge is an old mint house, Leicester having long had the privilege of coining; and a series of coins from Athelstan to Henry II. are preserved in the town. In what

is called the 'Newark' part of the town is an ancient mound, the only relic of the once extensive castle of Leicester: this part of Leicester appears to have an enclosed area belonging to the castle, and is said to have contained an hospital, church, college, &c.

The chief manufacture of Leicester is connected with the staple production of the county, i. e. wool, and consists in the combing, spinning, and manufacturing it into stockings. A very considerable portion of what is called the Nottingham lace has likewise for some years past been manufactured in this town and neighbourhood. Between 10,000 and 12,000 persons are said to be employed in the various branches of the hosiery business; there are about 150 master hosiers, and 3500 stocking machines. In prosperous times, about 6000 dozen stockings are manufactured per week. The government of the town is vested in a corporation, consisting of a mayor, recorder, steward, bailiff, twenty-four aldermen, and forty-eight common-council-men, &c. It has sent two members to parliament since the time of Edward I. The right of election vests in the freemen not receiving alms, and the inhabitants paying scot and lot; the number of whom together is about 5000.

Leicester, previously to that period the capital of the Coritani, became after the Roman conquest the *Ratæ* of the *itnera* and was situated in the Fosse way. Tessellated pavements, and coins of brass and silver, have been found in such numbers, that, had they been collected together, they would have formed a complete series from the emperor Nero to Valerius; also urns, and various domestic and military relics: a Roman mile-stone was discovered in 1771, on the side of the Fosse road, two miles north of the town. During the Saxon heptarchy, Leicester was called a city, and some think it was a bishop's see. At the Norman conquest it was very populous, according to the Domesday book. It suffered greatly during the subsequent civil wars, and in that of Charles I. was stormed by the royal army, and with a considerable slaughter of the inhabitants. The market is on Saturday and the fairs are numerous. It is ninety-eight miles north-west of London.

LEICESTER, a post town of Worcester county, Massachusetts, distant six miles south-west from Worcester, forty-eight W. S. W. from Boston. Large quantities of cotton and wool cards are manufactured in this town; and here is a respectable and flourishing academy, which was incorporated in 1784, and has a principal, an assistant, and about 100 students. The building is a spacious and elegant edifice, three stories high, and has an elevated and pleasant situation. The town contains also three meeting-houses for the Baptists, and one for Friends.

LEICESTERSHIRE, an important county of England, situated between $52^{\circ} 24'$ and $53^{\circ} N.$ lat., and between $35'$ and $1^{\circ} 32' W.$ long. It is an inland county, bounded on the north by Derbyshire and Nottinghamshire; on the east by Lincolnshire and Rutlandshire; on the south by Northamptonshire, from which it is divided by the river Welland; and on the south-west and west by Warwickshire; from which it is divided

by the Roman road Watling-Street Way, from near Atherstone to south of Lutterworth about twenty miles. It also just touches upon Staffordshire in one point between Warwickshire and Derbyshire. Its greatest length, from the south of Lutterworth to the north part of the vale of Belvoir, is forty-five miles; and its greatest breadth, from Nethersoil in the west to Wymondham or Easton Magna in the east, is upwards of forty miles. Its mean diameter is about thirty miles, and it contains about 816 square miles and 522,240 acres. This county is divided into six hundreds, containing twelve market-towns and 196 parishes. It is in the province of Canterbury and diocese of Lincoln.

The Saxon word *Ledcesterscyre* has been generally supposed to signify a town or castle upon the Seir, which was the ancient name of the river Soar. Previous to the Roman invasion this county formed part of the principality of the Coritani. The Romans made it part of the province of Flavia Casariensis. During the Saxon heptarchy it belonged to the kingdom of Mercia.

The climate, says Mr. Pitt in his Agricultural Report, is in general mild and temperate, as there are no mountains or bogs. He conjectures that the average annual fall of rain may be about thirty inches. There is no surface soil that can properly be denominated clay or sand; it has no chalk, and its peat bogs, having been long since drained, are now become a meadow soil, being a compost of peat and sediment; the peat being originally formed by aquatic vegetation, and the sediment brought down by streams and rain-water from the upland. The soil of the county may therefore be divided into three classes: first, clay loam, having a considerable degree of tenacity, and holding the rain as it falls, generally of a good depth. Secondly, sandy or gravelly loam, more loose, porous, and friable than the last, generally of a good depth. Thirdly, meadow soil, formed as above. The best soil is generally upon the hills, and the worst and coldest in the valleys. The soil varies much in short distances, respecting its strong or friable qualities. The general characteristic of the uplands is grayish-brownish friable loam, of greater or less depth, upon an under stratum of clay, marl, gravel, or rock, and may be divided as follows:—strong clay loam 160,000 acres; one-half only in occasional tillage, 80,000 acres; milder friable loam, in occasional tillage, 160,000 acres; total occasional tillage 240,000. Strong clay loam in permanent grass 80,000 acres; natural meadows in permanent grass, upland pasture attached to farms and occupations, and near towns, parks, and pleasure-grounds in permanent grass about 240,000.

The general face and appearance of the county is marked with interest and variety; the hills and vales are connected by easy slopes, and with few abrupt precipices: so that almost the whole surface is practicable and useful. There is nothing that approaches the sterility of sand or the hardness of clay. The margins of rivers, brooks, and rivulets, are natural grass lands; and the upland is in some places gravelly, but generally loam, more or less tenacious, the strongest of which is in the vale of Belvoir.

The principal rivers are the Welland, the Soar and the Anker. The Welland rises near Market-Harborough, and, running in a north-west direction, divides Leicestershire from Northamptonshire; and, entering Rutlandshire, continues its course through that county and through the south part of Lincolnshire, and falls into a bay of the German Ocean, called the Wash. The Soar rises about half way between Lutterworth and Hinckley, and running north-east, by Leicester, receives a small rivulet called the Eye; and then directing its course N. N. W. falls into the Trent, a few miles north of Ashby-de-la Zouch. The Anker has its origin near the source of the Soar; and running north-west, dividing Leicestershire from Warwickshire, falls into the Avon, a river belonging to this latter county. Leicestershire is tolerably well supplied with the conveniences of inland navigation, although it may be considered more an agricultural than a commercial district, and is also deprived of any particular mines. We may enumerate the following canals. *Loughborough Canal*:—This canal commences at the river Soar, a little below Grace-Dieu Brook, and takes a straight course to the Rushes at Loughborough. This being a chain of connexion with the river Trent, and from thence with most of the canals in the kingdom, is of the greatest utility, particularly to the town of Loughborough. Its course is about a mile, the whole of which is level. *Leicester Canal* commences at, and connects itself with, the basin of the Loughborough Canal, passes on the north side of the town, and falls into the river Soar at Quorndon. Thus far it is a new cut; the remainder is only an improvement of the river, with occasional cuts and deviations. From Thinkstone Bridge to the Loughborough Canal is about seven miles and a half, with a fall of about 185 feet. From the Loughborough Canal to its junction with the Soar is a level of about three miles; and from thence to Leicester is eleven miles, with a rise of forty-five feet. *Union Canal*:—We must not omit to notice in this place the Union Canal, for which an act of parliament was obtained some years back. The following may be stated as the line of route originally suggested:—It was proposed that it should join the River Soar on the west side of Leicester, and, passing on by Aylestone and Sadlington by means of two tunnels, it was to have united with the branch at Market-Harborough. From thence it was to make a bend, and cross the river Welland, and pass between Marston, Trussel, and Hallorp, and turn up by East Farnon and Oxendon Magna, with a small tunnel of thirteen chains. Near here was to be the reservoir for the summit level, supplied by the Oxendon Brook. From Oxendon it was to pass by Kelmars, and thence, by another tunnel of forty-five chains, proceed through Maidwell, Lamport, Hanging, Houghton, Brixworth, and parallel with that branch of the river Nen called the Northern River. Its route was to be continued by Stratton, Pitsford, Chapel Brampton, Kingsthorp, Dillington, and, on the west side of Northampton, join the river Nen navigation. *Ashby-de-la-Zouch Canal*:—This canal joins the Coventry Canal at Morston Bridge, about two miles

to the south of Nuneaton, from whence it passes to Stoke Golding, crosses the river Leuce, and at Snareston has a small tunnel, whence it winds along to Ashby-de-la-Zouch; from whence it is continued about a mile and a half, and then, passing a tunnel of near a mile, one branch goes to Tickenhall to the west, and another to the lime-works at Cloudhill to the east. From the Tickenhall branch is also a short cut to the lime-works at Stanton. The total length of this canal is fifty miles, with 252 feet lockage. The *Grantham Canal* commences on the east side of Grantham, passes Harleston, the Point, at the foot of Woolthorp Hill, Stainworth, Redmill, along Belvoir Vale, by Brakestone, Plainger, Harby, Long Clomton, to Hinckley, being from Grantham a south-west course. From Hinckley it bends to the north and passes through Kinnoulton, Coulton Basset, Cropwell Bishop, and joins the Trent between Holme Pierrepont and Radcliffe. There is a branch from near Cropwell Bishop to Bingham. The length of this canal from Grantham to the river Trent is thirty miles, with 148 feet fall to the river. The branch to Bingham is more than three miles, and level. *Melton Navigation*:—The rivers Wreak and Eye are made navigable from the junction at Turnwater Meadow to Melton Mowbray, by several new cuts and deviations where necessary. *Oakham Canal*:—This canal commences at and joins the Melton navigation on the south side of the town of Melton; and, proceeding on the north side of the river Eye, passes Brentingby, Wively, Stapleford, Saxby, Wymondham, Edmonthorpe, Teigh, Market-Overton, Barrow, Coltesmore, and Busley; and joins the town of Oakham on the north side, being a course of fifteen miles, with 126 feet regular rise in the first eight miles and a half, that is to Edmonthorpe, and from thence to Oakham is level. The reservoir is on the west side of the canal near Langham.

Leicestershire is famous for its breed of large black cart-horses, and for its fine cattle and sheep. Though there are but few mineral or fossil productions peculiar to this county, or very common in it, yet it produces more or less of limestone, lead, coal, ironstone, slate, and free-stone; and there have been found in the fissures of the limestone at Barrow many curious fossil productions; also, in the neighbourhood of Hinckley, fossil shells in gravel are frequently found. There are a few medicinal springs, particularly one at Burton Lazars; and a cathartic water at Nevil Holt, near Market-Harborough.

This county returns only six members to the British parliament, viz. four for the county, and two for the town of Leicester.

Leicestershire is biographically rich: for in this county were born, among others,—John Bainbridge, physician and astronomer. He was born at Ashby-de-la-Zouch in the year 1582, and died at Oxford, in a house opposite Merton College, in the year 1643.—Robert Bakewell, the experimental farmer and cattle breeder.—Francis Beaumont, the dramatic writer. He died in March 1613, not being then thirty years of age.—The learned bishop Beveridge. He was born at Barrow in 1638, and died on the 5th of March 1707.—William Burton, historian of this

county. Born at Lindley, August 24th, 1573, and became a barrister and reporter in the court of common pleas. His history of this county, so often and justly praised, is valuable only on account of its being early written, being preceded only by Lambard's Kent in 1576, Carew's Cornwall in 1602, and Norden's Surveys. (Mr. Nicholas has, however, entirely superseded the use of all other works on this county, by his elaborate and valuable history.)—Robert Burton, brother of William, and author of the Anatomy of Melancholy, known also by the name of Democritus junior. He also was born at Lindley, February 8th, 1576.—The learned Dr. William Cave, the biographer and ecclesiastical historian, born in 1637.—William Cheselden, the physician and anatomist.—Dr. R. Farmer, an ingenious poet and critic.—George Fox, the founder of the Quakers, born at Drayton-in-the-Clay in the year 1624.—The excellent bishop Hall, author of Meditations, &c., born in Bristow Park, within the parish of Ashby-de-la-Zouch, July 1, 1574.—John Henley, commonly called Orator Henley.—Daniel Lambert, who exhibited himself as an instance of extraordinary weight and size.—William de Langton, bishop of Litchfield and Coventry, and lord high treasurer of England in the reign of Edward I.—The pious martyr, Dr. Hugh Latimer, born at Thurstaston about 1470.—Sir Edward Leigh, critic and Hebrew lexicographer.—William Lilly, the celebrated astrologer.—Thomas Marshall, divine, and Anglo-Saxon critic. Died 1685.—William Melton, archbishop of York, and lord chancellor in the reign of Edward III.—John Ozell, dramatic and miscellaneous writer.—Dr. Richard Pulteney, the botanist.—T. Simpson, the mathematician.—Dr. Thomas Skeffington, bishop of Bangor. Died in 1533.—Thomas Staveley, author of the Romish Horse-leech.—Dr. Styan Thirby, a learned and ingenious critic.—George Villiers, duke of Buckingham, the celebrated statesman and royal favorite. His profligate son, author of the Rehearsal, died a beggar.—The honest, learned, but eccentric William Whiston.—William Wirley, antiquary and heraldic writer.—The late amiable Rev. Hugh Worthington, of Salters' Hall. Mr. W. died in the year 1813.

LEIGH (Charles), M. D., and F. R. S., an eminent physician and naturalist, born in Lancashire. He published, 1. An Account of the Natural History of Lancashire, Cheshire, and Derby; 2. A History of Virginia; and several other works. He died about 1701

LEIGH (Sir Edward), a learned historical writer and divine, was born at Shawell in Leicestershire, in 1602, and entered as commoner of Magdalen Hall, Oxford, in 1616; after taking his degree of M. A. he removed to the Middle Temple as a student of law. In 1625, the plague being in London, he went to France: on his return he devoted many years to literary researches, and, soon after the commencement of the civil war, was chosen M. P. for Stafford. He was one of the commons who were delegates to the assembly of divines at Westminster. Sir Edward was also colonel of a regiment in the service of parliament; but in 1648 was, with other Presbyterian members, expelled from the

house of commons, and imprisoned. After the Restoration he chiefly occupied himself in literature. He died at his seat, Rushall Hall, in Staffordshire, in 1671. His works are chiefly biblical: the most important is his well known *Critica Sacra*.

LEIGHLIN, a town of Ireland, in the county of Carlow, Leinster: about forty-three miles from Dublin, near the river Barrow. At the east end of the church is a famous well, covered with ash trees, and dedicated to St. Lazarian. This place was formerly a city, though now only a village, and the cathedral has been kept in good repair. It was a sole bishopric, founded in 632, but joined to Ferns in 1600. Gurmund, a Danish prince, was buried in this church. This cathedral was burnt by lightning, and rebuilt A. D. 1232; since the sees were joined it has been used as a parish church.

LEIGHTON (Alexander), a presbyterian divine, born in Edinburgh in 1587, and remarkable for his sufferings under archbishop Laud. Having published some pieces against episcopacy, and censured the measures of king Charles I., he was tried for sedition, and condemned to be publicly whipped, to have his ears cut off, and his nose slit; which barbarous sentence was accordingly executed. As some compensation for his sufferings, the parliament, in 1640, appointed him keeper of Lambeth palace, which they had converted into a state prison. He died in 1644.

LEIGHTON (Robert), D. D., archbishop of Glasgow, the son of the preceding, was also born in Edinburgh. During the times of the Commonwealth he was minister of a church near Edinburgh, and distinguished himself by his charity, and his aversion to religious disputations. The ministers were then called over yearly in the synod; and were commonly asked, Whether they had preached to the times? When all my bretheren, answered Leighton, preach to the times, pray suffer me to preach about eternity. His moderation, however, giving offence, he retired to a life of privacy. But soon after he was called, by the unanimous voice of the magistrates, to preside over the college of Edinburgh; where, during ten years, he displayed all the talents of a prudent, wise, and learned governor. In 1662 it was resolved to introduce episcopacy into Scotland, and Leighton was consecrated bishop of Dunblane; when, however, Sharpe and the other bishops proposed to enter Edinburgh in a pompous manner, Leighton remonstrated, and went to Edinburgh alone. In his own diocese, he set such an example of moderation, that he was revered even by the most rigid Presbyterians. He went about preaching without pomp; gave liberally to the poor; and removed none of the ministers however exceptionable he might think their political principles. But finding that none of the other bishops could be induced to join in his moderate plan, he resigned his bishopric. He was, however, persuaded in 1669 to accept of the archbishopric of Glasgow; but, finding it not in his power to stem the violence of the times, he resigned this also in 1675, and retired into Sussex, where he devoted himself to acts of piety. He died in London, in 1684. He wrote a Commentary on St. Peter;

besides many sermons and useful tracts, which are greatly esteemed. He bequeathed his library to the church and clergy of Dunblane; and sunk about £840 for bursaries and other charitable purposes, in the colleges of Edinburgh and Glasgow.

LEIGHTON, or LEIGHTON-BUZZARD, a market town of Bedfordshire, standing on the river Ouse, forty-one miles N. N. W. from London, and six west by north from Dunstable. The church is a fine ancient pentangular building, with a handsome cross ornamented with the figures of the saints. There are also several dissenting meeting houses; the Grand Junction Canal passes this place. The business of the town consists of cattle, corn, lace, platted straw, &c. The market on Tuesday is generally well supplied with cattle.

LEINSTER (anciently called *Lagenia*) is one of the four provinces into which Ireland was ecclesiastically divided, in the year 1152, by pope Eugenius III.; this arrangement is topographically injurious, and, in the Ordinance Survey now executing, should be wholly neglected. Leinster is bounded on the north by the province of Ulster; on the west by the river Shannon; on the south by the province of Munster; and on the east by the Irish Sea. The ancient *Lagenia* was the kingdom of the notorious Dermot, who occasioned and invited the English invasion of Ireland; to whom succeeded the famous Strongbow, earl of Strigul. After centuries of warfare and devastation, Leinster conferred the honor of a dukedom on Schomberg in 1690, but that prince did not long survive the dignity, and it is now the ornament of the ancient and illustrious house of Fitzgerald. The province of Leinster is partitioned into twelve shires or counties: Carlow, Dublin, Kildare, Kilkenny, King's County, Longford, Louth, East Meath, Queen's County, West Meath, Wexford, and Wicklow. Its superficial contents amount to 4,460,657 English acres, which are divided between ninety-two baronies, and 992 parishes.

Its mineral productions are granite and limestone, in great abundance. Copper and lead ore, the latter in large quantities. Carbonaceous or stone coal, in Kilkenny, Queen's County, and Carlow; and gold has been found in the county of Wicklow. There are, besides, quarries of excellent marble in the limestone-district, adjacent to the coal. The chief rivers of this province are the Boyne, Barrow, Slaney, Inney, Brusna, and Liffey, none of which are considerable; this deficiency of natural inland navigation is amply compensated by two noble artificial water-courses, called the Royal and Grand Canals. These great ducts connect the bay of Dublin with the river Shannon, the one locking in at Tarmonbury, in the county of Longford, the other at Banagher, in the King's County. The Grand Canal projects a branch also to the river Barrow at Monasterevan, thereby completing an inland navigation to Waterford Harbour and Dunmore from Dublin Bay. The surface of Leinster is in general level, the soil productive, resting chiefly on limestone, which presents itself at the surface also, sufficiently often, both for agricultural and architect-

ural purposes. One county only, Wicklow, is totally encumbered with mountains, the highest of which, Lugnaquilla, is 3070 feet above sea-level; this county abounds in natural beauties and curiosities, and is extremely rich in mineral wealth. The greatest natural disadvantage under which this province labors is a want of safe or commodious harbours, the line of coast having scarcely any; and, though art has been called in to alleviate the misfortune, its pressure still continues to be felt. The bays of Carlingford, Dundalk, Drogheda, and the coasts of Wicklow and Wexford continue in a state of either inutility or imminent peril, while King's-town is the only port in Leinster capable of affording safe anchorage and deep water at all times of tide, for vessels of any magnitude.

LEIPSI, a circle of the kingdom of Saxony, is bounded on the east by that of Meissen, on the south by Erzgebirg and the principality of Altenburg, and on the west and north by Prussian Saxony. It has an area of 1537 square miles, and is fertile in corn, but deficient in wood. Potters' clay, limestone, marble, porphyry, chalk, and near Froburg excellent jasper are found. This circle comprises fourteen bailiwicks, and is the seat of considerable manufactures. Population 220,000.

LEIPSI, the capital of the foregoing province, is situate on the river Pleisse, and was anciently fortified, but its fortifications have been dismantled, and its ramparts converted into gardens. It, however, is still entered by four handsome gates, and contains several fine churches and hospitals, with a spacious square. Its streets are kept clean, but the town is represented as having on the whole rather a grotesque appearance. Goethe describes its houses, we are told, correctly, when he calls them 'extraordinary shining buildings, with a front to two streets, enclosing courts, and containing every class of citizens, within heaven-high buildings, which resemble large castles, and are equal to half a city.' 'Roofs,' says another writer, 'which alone contain six stories of windows, with small steeples on their tops; circular houses diminishing at every story, resembling the pictures of the tower of Babel; two or three towers placed by the sides of houses, as if a staircase separate from the building had been provided for it; some fronts which had been modernised, and disfigured by a multitude of pillars and pilasters above pillars and pilasters; and the ancient gaol-like, but fantastical town-house, made the market-place of Leipsic one of the most grotesque looking spots I ever saw.' Among the public edifices of this city may be noticed the exchange, the cloth-hall, the church of St. Nicholas, the Catholic chapel, the theatre, and some of the hospitals. The university, one of the most celebrated in Germany, particularly for its medical departments, contains usually from 900 to 1200 students: it is divided into four nations, the Misnian, Saxon, Polish, and Franconian, and is composed of six colleges; the number of its regular professors is twenty-seven. The largest book trade belonging to any one place in Germany is here carried on, and there are several literary and scientific societies, with libraries,

and collections of curiosities. Upwards of fifty booksellers are settled in the town, and between 200 and 300 assemble at the Easter fair, from other parts of the continent, bringing the books they have published. The average number of works that are thus exposed to sale, is estimated at 5000, and the annual value of them exceeds £200,000. Here are, also, manufactures of silk, velvet, linen, musical instruments, jewellery, &c., which, added to its central situation, render it a kind of emporium of North Germany. Its three great fairs are held at the commencement of the year, at Easter, and at Michaelmas, and are frequented by merchants from all parts of the civilised world. Immense quantities both of native and foreign manufactures and products are disposed of, or exchanged, on these occasions, the whole annual amount of this trade having been stated at £3,000,000, exclusively of the book-trade.

Leipzig has been the theatre of numerous bloody conflicts. It was more than once distinguished as the scene of action during the thirty years' war; and became in 1813 the general hospital of the French army. The battle which took place here in the October of that year, between the French and allies, involved the greatest number of men of any conflict recorded in the last two centuries. The former were 160,000, the latter 240,000 strong. It began on the 18th of that month, about seven miles east of Leipzig, and soon became close and sanguinary, particularly at the village of Probstheyde, on the right of the French, where Buonaparte soon appeared in person. This place was repeatedly taken and retaken; the fire of the artillery on both sides was most destructive, and all was undecided, when at noon a messenger from the left of the French position announced that the Saxon artillery and cavalry had gone over to the allies. This was followed at three o'clock by the still more alarming information of the desertion of the Saxon infantry, and though the intelligence was kept secret, and a detachment of the French guards replaced the Saxons, the superiority now acquired by the allies was decisive, and the battle closed with the loss of a great part of the French position. A retreat to the Rhine was finally unavoidable, and orders for it were issued at night fall, but the execution was necessarily slow, all the men and baggage being obliged to take one road. The French army accordingly suffered dreadfully on this occasion, and from this conflict the superiority of the allies and the deliverance of Europe may be dated. Sixty-four miles west by north of Dresden, ninety south by west of Berlin, and 180 E.N.E. of Frankfort on the Maine. Population 35,000.

LEISURE, *n. s.* } Fr. *loisir*; Swed.
LEISURABLE, *adj.* } *lisa*; Dan. *lisé* (forté
LEISURABLY, *adv.* } à Gr. *λυσίς*, Min-
LEISURELY, *adj. & adv.* } shen); or perhaps
Sax *leap*, loose. Freedom from occupation, hurry, or anxiety; convenience in regard to time. Johnson strangely defines the use of it in Shakspeare's Richard III. 'Want of leisure,' which, he says (happily), is obsolete: it clearly means, in the instances subjoined, convenience, or the leisure considered as to its limit, i. e. the little leisure possessed by the speakers.

Wherefore we axen *leiser* and space to have deliberation in this cas to deme.

Chaucer. *Cant. Tales.*

Let us beg of God, that, when the hour of our rest is come, the patterns of our dissolution may be Jacob, Moses, Joshua, and David, who, *leisureably* ending their lives in peace, prayed for the mercies of God upon their posterity.

Hooker.

We'll make our *leisures* to attend on yours.

Shakspeare.

They summoned up their meiny, strait took horse; Commanded me to follow and attend
The *leisure* of their answer.

Id. *King Lear.*

More than I have said, loving countrymen,

The *leisure* and enforcement of the time

Forbids to dwell on.

Id. *Richard III.*

Farewell. The *leisure* and the fearful time
Cuts off the ceremonious vows of love.

Id. *Stanley in Richard III.*

A gentleman fell very sick, and a friend said to him, Send for a physician: but the sick man answered, It is no matter; for if I die, I will die at *leisure*.

Bacon's *Apothegms.*

The earl of Warwick, with a handful of men, fired Leith and Edinburgh, and returned by a *leisurely* march.

Hayward.

There are some men who are busy in idleness, and make the *leisure* of peace not only more troublesome, but even more wicked than the business of war.

Burton.

Where ambition and avarice have made no entrance, the desire of *leisure* is much more natural than of business and care.

Temple.

You enjoy your quiet in a garden, where you have not only the *leisure* of thinking, but the pleasure to think of nothing which can discompose your mind.

Dryden.

The Belgians hoped, that with disordered haste,
Our deep-cut keels upon the sands might run;

Or if with caution *leisurely* we past,

Their numerous gross might charge us one by one.

Id.

I shall leave with him that rebuke, to be considered at his *leisure*.

Locke.

We descended very *leisurely*, my friend being careful to count the steps.

Addison.

You shall seldom find a dull fellow of good education, but, if he happens to have any *leisure* upon his hands, will turn his head to one of those two amusements for all fools of eminence, politics or poetry.

Steele.

It has been computed by some political arithmetician, that, if every man and woman would work for four hours each day on something useful, that labour would produce sufficient to procure all the necessaries and comforts of life; want and misery would be banished out of the world, and the rest of the twenty-four hours might be *leisure* and pleasure.

Franklin.

Just now I've taen the fit o' rhyme,

My barmie noddle's working prime,

My fancy yerkit up sublime

Wi' hasty summon:

Hae ye a *leisure*-moment's time

To hear what's comin'?

Burns.

Such short recollections as these, and a little *leisure* to take a view of the nature and consequences of things or actions, before we reject or approve them.

Mason.

The expectations of those who retire from their shops and counting-houses, to enjoy the remainder of their days in *leisure* and tranquillity, are seldom answered by the effect.

Paley.

LEITH, a sea-port town of Scotland, in the county of Edinburgh, and the port of that city, is situate between one and two miles north-east of the metropolis, on the banks of the Water of Leith, at its confluence with the Frith of Forth, which forms the harbour. This also divides the town into two districts, called South and North Leith, communicating by two drawbridges. Formerly there was here a stone bridge of three arches, founded in 1493 by Robert Ballentine, abbot of Holyrood. The largest ships lie in the roads, a mile and a half from Leith, perfectly secure. At the entrance of the harbour is a noble stone pier, erected at the beginning of the last century.

The town stands principally on the south side of the river, and, with the exception of the numerous modern erections, is irregularly built. The new streets are laid out on a regular and generally excellent plan; and consist of well-built and elegant houses. North Leith, indeed, is now full three times its former size; and the whole town is rapidly extending on all sides. On the east of what is called Leith Walk, additions are in course of being made, which, when completed, will entirely unite Leith with Edinburgh. Extensive improvements were projected, in 1800, for the accommodation of the increasing trade of this port; amongst which were a magnificent suite of wet-docks, the first of which was opened in 1806, and a second in 1817. These, together with three graving-docks, cost £250,000; and it is intended to construct another, equal in size to the two former, which will be capable of receiving frigates. A battery of nine guns was erected to the west of the citadel of Oliver Cromwell, during the American war, in consequence of the appearance of Paul Jones in this neighbourhood: since that period the boundaries of the fort have been extended; and it is now the head-quarters of the royal artillery in Scotland, who have commodious barracks; and there are besides warehouses and magazines for the various military and naval stores, which may be required in the service. The harbour is defended by a martello tower, about a quarter of a mile from the pier. In 1785 a naval yard or dépôt was established here, for supplying materials to his majesty's vessels coming to the Forth. What is called the parish church is a Gothic edifice, surmounted with a tower and spire: but in 1816 was erected, in North Leith, a new church, which has a spire 140 feet high. The chapel of ease to the church of South Leith is a plain but neat building; and an episcopal chapel was erected here in 1805. The other places of worship are, two burgher meeting-houses, and an anti-burgher one. The public charities are numerous: the principal are, King James VI.'s Hospital, founded in 1614; the Mariner's Hospital, or Trinity House, rebuilt in a stately manner in 1817; a female society, for relieving indigent and sick women; a society for the relief of the destitute sick; a female school of industry; a boy's charity school, and many religious societies. Leith high school was built in 1805. The exchange is also an extensive edifice, of free-stone, containing the assembly-rooms, coffee-rooms, sale-rooms, subscription

library, and reading-rooms. The custom-house, which contains the excise-office, was re-built in 1812. East of the town are the baths, which are constructed upon a grand scale, and in a style of great elegance. The prison was erected in 1565, and contains the court-house, and town-clerk's office. The butchers' shambles have been lately erected. The bank is in Bernard Street. The harbour of Leith was granted to the town of Edinburgh by king Robert I. in 1329; but, the adjacent ground belonging to Logan of Restalrig, the inhabitants were obliged to purchase it on high terms, for their accommodation. It has been gradually improved, according to the increase of its trade. There were, at an early period, no quays for the accommodation of the shipping; the vessels, which were small, lying at the mouth and on the banks of the river which runs through the harbour. A breastwork or quay was first built by the city of Edinburgh, some time after the purchase of Leith, with the adjoining lands; but, at the beginning of the last century, it was prolonged to the northward, a considerable way into the sea, somewhat in the form of a crescent, by the extension of wooden and stone piers, at the extremity of which is a light-house.

Leith has a considerable trade with the Baltic, Holland, France, Spain, Portugal, the Mediterranean, and the West Indies. In the London trade twenty-seven smacks were lately employed by four companies; registering from 145 to 195 tons. They sail regularly twice a week. There are two Hamburg shipping companies, who employ ten vessels of 150 tons, which sail weekly; and there are, besides, regular traders to Hull, Newcastle, Berwick, Liverpool, Dublin, and on the east coast of Scotland to Arbroath, Montrose, Dundee, Aberdeen, Banff, Shetland, the Orkneys, &c. The Greenland fishery is also prosecuted with activity. Betwixt Leith and Kinghorn, on the opposite shore of Fife, a distance of about seven miles, large passage-boats and pinnaces ply twice a-day; and steam-boats are constantly sailing from Leith to Grangemouth, Stirling, &c. It has also extensive rope-works and canvas manufactories; six or seven glass-houses; sugar refineries, soap-works, breweries, iron and vinegar works, distilleries, a card manufactory, with an apparatus for drawing wire, and a large manufactory of excellent agricultural implements. Ship-building is also carried on to a great extent. Leith is under the civil jurisdiction of three bailies, who continue two years in office, aided by an assessor appointed by the magistrates of Edinburgh, one of whose number presides as admiral of Leith. In conjunction with Porto Bello and Musselburgh, it returns one representative. The annual amount of shore dues averages £10,000; harbour dues, after deducting pilotage, about £2000; and dock-dues, £5000.

LEITRIM (i. e. Lighth-drum, the gray ridge), a county in the province of Connaught, in Ireland, bounded on the north by Donegal Bay and part of Fermanagh County; on the east by the county of Cavan; on the west by parts of Sligo and Roscommon; and on the south by Langford County; having a sea-coast of two miles in

length only, intercepted between the rivers Duffe and Bundroise. The length of this county is about fifty-two miles, while its breadth varies from seven and a half to twenty statute miles. The superficial contents amount to 407,260 acres, i. e. 652 square miles, which are partitioned into five baronies, viz. Carrigallen, Dromahaire, Leitrim, Mohill, Rosclogher; and into seventeen parishes.

The surface is varied and uneven, the greater part mountainous, but nowhere completely barren, excellent pasturage abounding amidst the recesses of the mountainous district; hence the universal practice in this shire of rearing black cattle. The linen trade is cultivated here with vigor and success, and tillage is adopted in the low lands. But the greatest and most certain supply of wealth and occupation in this county is yet hardly opened to the inhabitants; this consists in the beds of coal and quantities of iron stone which appear in every region of the county. Three miles from Manor-Hamilton, and only ten from Sligo, is an extensive bed of inflammable coal, in Lacca Mountain, at an elevation of 1150 feet above the first mentioned town. A second bed of coal is known to exist in Lugnaquilla Mountain (part of which is in this county), and a third at Meueask, 1010 feet above Lough Allen. To the two latter there is not, at present, any road. Another bed exists at Aughnarashiel, where pits have been sunk, and works carried on, with profit to the proprietary, and benefit to the county. Besides these prospects of advantage to Leitrim, the iron-stone of Drumshabro, and of the Sliabh-an-Erin Mountain, promises greater accessions of wealth and occupation. Limestone occurs in abundance and of fine quality: fire-clay of excellent quality is readily raised in many places; and superior sandstone, which is used not only for flagging but for ornamental work, is wrought in the quarries of Glan-furn and elsewhere. The towns of Leitrim are but few, and these not important. Carrick-on-Shannon, the assizes town, contains only a population of 1600, exclusive of the military in barrack at this station; and the village of Leitrim has only a population of 246, in forty-nine houses. The other towns, or rather villages, are Ballynamore, Dromahaire, where there is a pottery established, Killargy, Manor Hamilton, Drumker, the picturesque and elegant village of Drumsna, with Cashgarin and Mo. The family of Clements now bear the title of Leitrim. The ancient families were O'Rourke's, Macgauran's, and M'Ranalls. The ruins of the monastic edifices remain in Leitrim, besides many ancient castles, chiefly of the O'Rourke's or O'Ruarc's. Leitrim is also the name of a river in the county of Wicklow.

LELAND (John), the great English antiquary, was born in London about the year 1507. Having lost his parents when a child, he found a friend and patron in Mr. Thomas Miles, who placed him in St. Paul's school, of which the grammarian Lily was master. From that school he was sent to Cambridge, and, after some years, to Oxford. From Oxford he went to Paris, chiefly with a design to study the Greek language, which was then but little understood in

this kingdom. On his return to England he entered into orders, and was appointed chaplain to Henry VIII., who also gave him the rectory of Poppeling, in the marshes of Calais, appointed him his librarian, and in 1533 made him king's antiquary; an office never borne by any other person before or since. By this commission he was empowered to search for ancient writings in all the libraries of colleges, abbeys, priories, &c., in his majesty's dominions. It is said that he renounced popery soon after his return to England. In 1536 he obtained a dispensation to keep a curate at Poppeling, and set out on his journey in search of antiquities. In this employment he spent six years, during which time he visited every part of England where monuments of antiquity were to be expected. After his return, in 1542, the king gave him the rich rectory of Haseley in Oxfordshire; and, in 1555, a prebend of King's College, now Christ's Church, in Oxford, besides that of east and west Knowles, in Salisbury. Being thus amply provided for, he retired to a house of his own in the parish of St. Michael le Querne in London, where he spent six years in digesting the materials he had collected. Henry VIII. died in 1547; and, not long after, Leland lost his senses. In this dreadful state he continued till 1552, when he died. He was a man of great learning, a universal linguist, an excellent Latin poet, and a most indefatigable and skilful antiquary. On his death, Edward VI. gave all his papers to Sir John Checke, his tutor and Latin secretary of state. The king dying, and Sir John being obliged to leave the kingdom, he gave four folio volumes of Leland's collections to Humphrey Purefoy, esq.; which, in 1612, were, by his son, given to William Burton, author of the History of Leicestershire. This gentleman also became possessed of the Itinerary, in 8 vols. folio, which, in 1632, he deposited in the Bodleian library. Many other of Leland's MSS., after the death of Sir John Checke, fell into the hands of lord Paget, Sir William Cecil, and others, and at last, fortunately, came into the possession of Sir John Cotton. These MSS. were of great use to all our subsequent antiquarians, particularly Camden, Sir William Dugdale, Stowe, Lambard, Dr. Batteley, Anthony Wood, &c. His Itinerary throughout most parts of England and Wales was published by Mr. Hearne, in 9 vols. 8vo. in 1710-11; as was also his *Collectanea de rebus Britannicis*, in 6 vols. 8vo. in 1715.

LELAND (John), an eminent writer in defence of Christianity, born at Wigan in Lancashire, in 1691. His parents settled in Dublin, which gave him an easy introduction to learning and the sciences. When properly qualified, he was called to be pastor to a congregation of Protestant dissenters in that city. He was an able preacher, but his labors were not confined to the pulpit. The many attacks made on Christianity, and some of them by writers of no contemptible abilities, led him to examine the subject with the strictest care. After the most deliberate enquiry, he published answers to several authors who successively appeared in that cause. He was, indeed, a master in this controversy; and his history of it, entitled *A View of the*

Deistical Writers, that have appeared in England, in the last and present Century, &c., is highly and justly esteemed. In the decline of life he published another laborious work, entitled *The Advantage and Necessity of the Christian Revelation*, shown from the State of Religion in the ancient Heathen World, especially with respect to the Knowledge and Worship of the One True God; a Rule of Moral Duty, and a State of future Rewards and Punishments; to which is prefixed a long preliminary Discourse on Natural and Revealed Religion: 2 vols. 4to. This noble and extensive subject, the several parts of which have been slightly and occasionally handled by other writers, Leland has treated at large with the greatest care, accuracy, and candor. And, in his View of the Deistical Writers, his cool and dispassionate manner of treating their arguments and his solid confutation of them, have contributed more to depress the cause of atheism and infidelity than the angry zeal of warm disputants. According to Dr. Watkins he died in 1766, or in 1761.

LELEGES, an ancient people of Asia, of Greek original; the name denoting a collection of people. They first occupied the islands; then, passing over to the continent, they settled partly in Mysia on the Sinus Adramyttenus, and partly in that part of Ionia next to Caria.

LELEGES, a people of Laconia, who went to the Trojan war with Altes their king. Achilles plundered their country, and obliged them to retire to the neighbourhood of Halicarnassus, where they fixed their habitation.

LELONG (James), a French ecclesiastic, born in 1655. He wrote a curious work, entitled *An Historical Library of France*. He died in 1721, aged sixty-six.

LELY (Sir Peter), a celebrated painter, born in Westphalia in 1617. He was a disciple of Peter Grebber at Haerlem; and, in 1641, was induced, by the encouragement Charles I. gave to the fine arts, to come to England. He became state painter to Charles II., who knighted him. As a portrait-painter he was preferred before all his contemporaries: and had so many engagements always on his hands that he was prevented from going to Italy to finish his studies. To compensate for this, he procured the best drawings, prints, and paintings, of the most celebrated Italian masters. Among these were part of the Arundel Collection, which he procured from that family, many of which were sold after his death at prodigious prices, bearing upon them his usual mark of P. L. In his correct draught and beautiful coloring, but especially in the graceful airs of his heads, and the pleasing variety of his postures, together with the gentle and loose management of the draperies, he excelled most of his predecessors. Yet critics remark, that he preserved in almost all his female faces a drowsy sweetness of the eyes peculiar to himself; for which he is reckoned a mannerist. The hands of his portraits are remarkably fine and elegantly turned; and he frequently added landscapes in the back grounds of his pictures, in a style peculiar to himself. He excelled, likewise, in crayon-painting. He became enamoured of a beautiful English lady, whom he married; and he pur-

chased an estate at Kew, in Surrey, to which he often retired. He died of an apoplexy in 1680, at London; and was buried in Covent Garden church.

LEMAN, *n. s.* According to Junius from *leop*, beloved, and man: other etymologists suggest the Fr. *l'aimant*; and Minshew Fr. *le mignon*, i. e. minion; favorite. Our old poets (see the instances from Chaucer) use the word both for a male and female favorite; a gallant, or a mistress.

Unto his *lemman* Dalila he told
That in his heras all his strength lay,
And falsely to his foman she him sold.

Chaucer. Cant. Tales.

A thief that had reneyed our creance
Came into the ship alone, and said he wolde
Hire *lemman* be whether she wolde or n'olde.

Id.

O hold thy mortal hand for ladie's sake.
Hold for my sake, and do him not to die;
But vanquished, thine eternal bondslave make,
And me thy worthy meed unto thy *leman* take.

Spenser.

A cup of wine,
That's brisk and fine,
And drink unto the *leman* mine.

Shakspeare.

LEMAN, or **LAC LEMAN**, a former department of France, comprehending the republic of Geneva; and so named from Lemanus, the ancient name of the lake of Geneva. See **GENEVA**.

LEMBERG, a city of Austrian Poland, once the capital of Red Russia, and now of Galicia and Lodomeria, stands on the Pelten, a branch of the Dniester. It contains, with the suburbs, 29,000 Christian and 15,000 Jewish inhabitants. Its former ramparts are now converted into streets and public walks; but it has still two castles. The towers and cupolas of the cathedral and churches, and the height of the house, which are generally built of stone, give the town from a distance an air of grandeur. Several of the streets are wide, and the squares spacious. The environs contain numerous villas. Here is a high-school, two Jewish schools, and a university, which was removed to Cracow. Next to Brody, Lemberg is the greatest trading town of Galicia. Its nankeen and cotton manufactures are also considerable. The circle has an area of 720 square miles and a population of 130,000. 156 miles east of Cracow.

LEMERY (Nicholas), a celebrated chemist, born at Rouen in Normandy in 1645. After having made the tour of France, he, in 1672, commenced an acquaintance with M. Martyn, apothecary to the prince; and performed several courses of chemistry in his laboratory at the Hotel de Condé. Having procured a laboratory of his own, he gave lectures on chemistry, which were attended by such numbers of scholars as scarcely to allow him room to perform his operations. He was the first modern chemist who abolished the senseless jargon of barbarous terms, reduced the science to clear and simple ideas, and promised nothing that he did not perform. In 1681 he was persecuted on account of his religion; and came to England, where he was well received by Charles II.: he returned to France, where,

on the revocation of the edict of Nantes, he became a Catholic. He then became associate chemist and pensionary in the royal academy of sciences, and died in 1715. He wrote, 1. A Course of Chemistry; 2. A Universal Pharmacopeia; 3. A Universal Treatise of Drugs; and, 4. A Treatise on Antimony.

LEMMA, *λημμα*, I assume, in mathematics, denotes a proposition laid down to clear the way for some following demonstration; and prefixed either to theorems, to render their demonstration less intricate; or to problems, to make their resolution more easy. Thus, to prove a pyramid one-third of a prism, or paralleloiped, of the same base and height with it, the demonstration of which, in the ordinary way, is difficult and troublesome; this lemma may be premised, which is proved in the rules of progression, that the sum of the series of the squares in numbers in arithmetical progression, beginning from 0, and going on 1, 4, 9, 16, 25, 36, &c., is always subtriple of the sum of as many terms, each equal to the greatest; or is always one-third of the greatest term multiplied by the number of terms. Thus, to find the inflection of a curve line, this lemma is first premised: that a tangent may be drawn to the given curve in a given point. So, in physics, to the demonstration of most propositions, such lemmata as these are necessary first to be allowed:—that there is no penetration of dimensions; that all matter is divisible; and the like: and, in medicine, that where the blood circulates there is life, &c.

LEMNA, duck's meat, in botany, a genus of the diandria order and monœcia class of plants; natural order fifty-fourth, miscellanea. Male, CAL. monophyllous: cor. none. Female, CAL. monophyllous: cor. none; one style: caps. unilocular. There are three species; all natives of Britain, growing in ditches and stagnant waters; all acceptable food for ducks and geese.

LEMNIAN EARTH, in mineralogy, sometimes also called sphragide, as a substance of a yellowish gray color, frequently variegated with rusty spots. Lustre dull. Fracture fine earthy. Meagre to the feel. Adheres slightly to the tongue. When plunged in water, it falls to pieces with disengagement of air-bubbles. Its constituents are, according to Klaproth, 66 silica, 14.5 alumina, 0.25 magnesia, 0.25 lime, 3.5 soda, 6 oxide of iron, 8.5 water. It has hitherto been found only in the island of Stalimene or Lemnos. It is reckoned a medicine in Turkey; and is dug up only once a year, with religious solemnities, cut into spindle-shaped pieces, and stamped with a seal. It was esteemed an antidote to poison and the plague in the days of Homer.

LEMNIUS (Lævinius), a famous physician, born at Zeric-Zee in Zealand, in 1505. He practised physic with applause; and after his wife's death, being made priest, became canon of Zeric-Zee, where he died in 1560. He wrote, 1. An Account of the Plants mentioned in Scripture: 2. A book on astrology: 3. De Occultis Naturæ Miraculis.

LEMNOS, an island in the northern part of the Archipelago, lying at almost equal distances from mount Athos and that part of the Asiatic

continent called the Troad, having the island of Imbro to the north-east, and the peninsula of mount Athos rather to the north-west of it, and situated in N. lat. 39° 55', E. long. 22° 46'. In ancient times it was dedicated to the god Vulcan, who was supposed to have established his forges in the volcanoes of this island, and, every time the craters threw out smoke and flames, it was thought to arise from the blows of the Cyclops, striking their anvils. From the time of Homer to the age of Pericles, and even later, Greek authors speak of the eruptions of Lemnos; so that its continual fires passed into a proverb, and the Greeks were accustomed to say, when speaking of a great fire, that it was like the fire of Lemnos. In time, however, its eruptions ceased, and nothing is now left but the traces of these devastations. Towards the reign of the emperor Antoninus, it appears that a part of the island was engulfed by one of those revolutions so common in this part of the Archipelago, and another island called Chryseus, or the Isle of Gold, was also swallowed up.

It was on the island of Lemnos, that Philoctetes was abandoned: Lucullus saw here in his time the altar near which a serpent had wounded the Grecian hero. The soundings taken during the voyage of count Choiseul-Gouffier, enabled him to trace the line of the sand banks and the rocks under water, to the east of the island, which appeared to be the remains of the destroyed part of the ancient Lemnos and Chryseus. The situation of the ancient volcano has been a subject of much dispute among the learned, as well as the site of Hephastia, or the city of Vulcan. In a corner of the precincts of this ancient city, called by the present inhabitants Palaio-Castro, or the Old Fort, you descend by a flight of fifty-one steps, of which nearly every twelfth is of marble, into a subterranean cavern, where many have expected to find the celebrated labyrinth, but the stairs terminate in a small saloon, containing a well which the Christians of the island hold to be sacred. No sculptures or ancient medals have been found in these ruins; generally not a single medal is to be met with in the whole island, and the only Grecian remains are some blocks of white marble, one pillar of granite, and a few fragments of ancient Greek pottery.

Lemnos has been famed from the earliest antiquity for the quarries, whence is extracted the bole, known in ancient medicine under the name of terra sigillata. The Greek priests, who were clever at availing themselves of every branch of revenue, used to accompany the working of these quarries with religious ceremonies, ascribing to them wonderful properties, and the present inhabitants never fail to boast of its effects as a febrifuge. Galen took a journey to Lemnos on purpose to procure it. On the 16th of August every year the Lemnians begin working the quarry, before the rising of the sun, without which precaution, they pretend, it would not heal fevers; they mix it with water, riddle it through a sieve, and harden it into various forms. In the neighbourhood of these quarries, near the village of Charous, there is a warm spring which appears to have some medicinal qualities. Hassan Pacha

caused some baths and an inn to be built on the spot.

Pieces of calcined rock, scoriae, red-brown earth, and a soil shaded by not a single tree, announce the destructive effects of volcanic eruptions throughout the whole island; but the valleys covered with vegetable mould and watered by numerous rivulets, present an aspect of fertility amidst the surrounding desert. The islanders, in number about 10,000 and almost all of them Græeks, cultivate a sufficient quantity of grain to be able to export it: they also send out oil, silk, wax, and honey; and they have a sort of dark red wine of little value, of which they export a part. Besides the grape, the soil produces figs; but oranges and citrons will not grow in it. They have about fifty vessels, with which they trade to Constantinople and the ports of Egypt. The dock yard is situated near the city and port of Lemnos. At the back of this city, which lies on the southwest coast, is a rock, which, jutting out into the sea, separates two bays, and on which the citadel stands. At the time that the Russians made their appearance in the Archipelago, Orlov's squadron blockaded Lemnos without success for three months. The Turks have lately kept up a garrison there of 300 janissaries and 400 cannoniers; the artillery consisted of fifty pieces of cannon and a few mortars. Only 1000 of the islanders live in the city: the rest inhabit different villages. They have excellent anchorage on the coasts of the island. At Saint Antoine and Condée or Candia, on the southern coast, vessels find a safe and commodious harbour. The road of Cape Cochino is not safe on account of the northerly winds, to which it is exposed. A French traveller, Sonnini, was much struck with the beauty of the women; and another, an Englishman, admired their costume, consisting of a corset of scarlet cloth with wide sleeves, a short jacket, pantaloons drawn close round the ancles, yellow slippers without stockings, and a head-dress of white stuff in the form of a turban. They always veil themselves at the appearance of a Turk.

The coasts of Lemnos swarm with fish; such as red and gray mullets, several kinds of sparus, graylings, pike, &c.

LEM'ON, *n. s.* } Fr. *limon*, Ital. *limini*;
LEM'ONADE. } barb. Lat. *limenium*. A species of CITRUS, which see; the tree bearing lemons: lemonade, a beverage in which the juice of lemons is a principal ingredient.

The dyers use it for dyeing of bright yellows and lemon colours. *Mortimer.*

The juice of lemons is more cooling and astringent than that of oranges. *Arbuthnot.*

Thou, and thy wife and children, should walk in my gardens, buy toys, and drink lemonade.

Id. John Bull.

Bear me, Pomona!

To where the lemon and the piercing lime,
With the deep orange, glowing through the green,
Their lighter glories blend. *Thomson.*

The lemon tree hath large stiff leaves; the flower consists of many leaves, which expand in form of a rose: the fruit is almost of an oval figure, and divided into several cells, in which are lodged hard seeds, surrounded by a thick fleshy substance, which, for the most part, is full of an acid juice. *Miller.*

Lemons are cooling and grateful to the stomach, quenching thirst and increasing appetite.

Dr. A. Rees.

LEMÓN, in botany. See CITRUS.

LEMÓN (George William), an English divine and lexicographer of considerable learning and industry. He was born in 1726; and published An English Etymological Dictionary, in one vol. 4to., which is esteemed. He died in 1797, aged seventy-one.

LEMÓN ISLAND, one of the Skelig Islands, situated off the coast of Kerry, in Munster, Ireland. It is a round rock, always above water, and therefore no way dangerous to ships. An incredible number of gannets and other birds breed here; and it is remarkable that the gannet nestles nowhere on the coast of Ireland but on this rock on the south, and another on the north coast, though many of them are seen on all parts of our coasts on the wing.

LEMOVICES, a people of Aquitania, situated between the Bituriges Cubi on the north, the Arverni on the east, the Cadurci on the south, and the Pictones on the west.

LEMPRIERE (John), D. D., a learned classical author, was a native of Jersey, and educated at Winchester school, whence he removed to Pembroke College, Oxford, and graduated A. M. in 1792, B. D. in 1801, and D. D. in 1803. His reputation for learning procured him in 1792 the head mastership of Abingdon grammar school, which he conducted several years. He then removed to the free grammar school at Exeter, where he remained till, in consequence of some disputes with the trustees, he was obliged to resign. In the year 1811 he was presented to the rectory of Meeth, Devonshire, which living, together with that of Newton Petrock, in the same county, he held till his death. Dr. Lempriere's Bibliotheca Classica, first published in 8vo. in 1788, has furnished one of the most useful assistants in the study of the heathen mythology. The year following he published a sermon, preached on the 12th of August in that summer, at the parish church of St. Helier, in his native island, the great object of which seems to be his own vindication from aspersions. His other writings are the first volume of a translation of Herodotus, with notes, which appeared in 1792, and was intended to have been followed by two others, but, an entire translation of that historian being given to the world in the mean time by Mr. Beloe, Dr. L. desisted. A compilation of Universal Biography, first printed in 4to., with an abridgment of the same in 8vo., both in 1808, was his last work. He died of apoplexy February 1st, 1824, in Southampton Street, Strand.

LEMUR, the maucauco, in zoology, a genus of the mammalia class of quadrupeds, and of the order of primates. The characters are these:— There are four fore teeth in the upper jaw, the intermediate ones being remote; and six long, compressed, parallel teeth in the under jaw, the dog teeth are solitary, and the grinders somewhat lobated. Kerr and Gmelin enumerate thirteen species; viz.

1. L. bicolor, the American maucauco, inhabits South America. It has a tail; the upper parts of the body are a blackish-gray, the under,

a dirty white color; with a heartshaped spot of the same color on the forehead. The head resembles a bull-dog; the toes have narrow sharp claws.

2. *L. catta*, the ring-tailed maucauco, inhabits Madagascar, Mauritius, Joanna, and the neighbouring African continent. It is of the size of a cat; has the hair on the top and hind part of the head of a deep ash-color, the back and sides reddish, the belly and insides of the limbs white; all its hair is very soft, close, and fine, and erect like the pile of velvet; the tail is twice the length of the body. In a wild state they go in troops of thirty or forty, but are easily tamed when taken young.

3. *L. ecaudatus*, the tail-less maucauco, a small animal found in Bengal and the island of Ceylon. It is of a very singular construction, and perhaps longer in proportion to its thickness than any other quadruped. The head is roundish, with a sharp-pointed nose and small ears; the body is covered with short, soft, and silky ash-colored and reddish fur: the toes are naked, and the nails flat; excepting those of the inner toe on each hind foot, which are long, crooked, and sharp. Its length from the nose to the rump is sixteen inches. It lives in the woods, and feeds on fruits: in a tame state it appears to be fond of eggs, and devours small birds. This animal has the inactivity of the sloth, and creeps slowly along the ground; it is very tenacious of its hold, and makes a plaintive noise. Some confound this species with the loris.

4. *L. indri*, the indri, inhabits Madagascar. It is black and has no tail; is about three feet and a half high; has eight canine teeth in each jaw, two cutting teeth in the upper jaw, and four close set in the lower; all the feet have five toes, with flat sharp nails; the great toes are very large; the hair is silky and thick, gray on the face, white and curled on the rump; all the rest black. It is easily tamed. Its voice resembles that of a child.

5. *L. laniger*, the curly maucauco, inhabits Madagascar. It is of a brick-dust color on the upper parts, and white on the under; the face black; the tail a tawny red. The head and body are twenty-one inches long; the tail nine. It has two foreteeth in the upper, and four in the lower jaw: the eyes are large; the ears small: the paws have five toes each: the thumbs and great toes have flat rounded nails; the rest pointed claws. The hair is very soft and curled like wool; whence the name.

6. *L. macaco*, or *caudatus*, the ruffed maucauco, or the vari of Buffon, is an inhabitant of Madagascar. It is somewhat larger than the *catta*, and has long hair standing out round the sides of the head like a ruff; a long tail; the color of the whole animal generally black; but sometimes white spotted with black. In a wild state it is very fierce; and makes such a noise in the woods, that the cries of two might be easily mistaken for 100. Kerr distinguishes four varieties of this species.

7. *L. mongoz*, the mongoz or wool'y maucauco, inhabits Madagascar, and the islands to the eastward, as far as Celebes. It is about the size of a cat, and has the whole upper part of

the body and the tail covered with long, soft and thick fur, a little curled or waved, of a deep brownish ash-color; the tail is very long. It lives on fruits, turns its tail over its head to protect it from rain, and sleeps on trees; it is very sportive and good-natured; and very tender. Kerr describes five varieties of the Mongooz.

8. *L. murinus*, the murine maucauco, inhabits Madagascar; is of an ash color, with a rusty brown tail; all the toes and fingers have flat rounded nails.

9. *L. podji*, the tarsier of Buffon, has a pointed visage; slender nose, bilobed at the end: eyes large and prominent; ears erect, broad, naked, semitransparent, an inch and a half long, with a tuft of hair between them on the top of the head, and long hairs on each side of the nose and on the upper eye-brow. In each jaw are two cutting and two canine teeth; which form an exception in this genus. There are four long slender toes, and a distinct thumb on each foot; the thumbs on the hind feet are very broad and greatly dilated at their ends: the tail is almost naked; the greater part round and scaly like that of a rat, but growing hairy towards the end, which is tufted. Its length from nose to tail is nearly six inches; to the hind toes eleven and a half, the hind legs being of a great length; the tail is nine inches and a half long. It inhabits the remotest islands of India, especially Amboyna.

10. *L. potto*, the potto, inhabits Guinea; has a tail, and is all of a pale rusty brown color. In other particulars it is very like the indri.

11. *L. prehensilis*, the prehensile or little maucauco, has a rounded head, sharp nose, long whiskers; two canine teeth in each jaw; four cutting teeth in the upper jaw, six in the lower: seven grinders on each side: the nearest sharp, the more distant lobated: the ears are large, roundish, naked, and membranaceous; the eyes very large and full. The toes are long, and of unequal lengths; the ends round; the nails round, and very short; the tail is hairy, as long as the body, and prehensile. The animal is rather less than the black rat: and, in Mr. Pennant's opinion, seems to be the same which Buffon calls *le rat de Madagascar*. It is supposed to live in the palm-trees, and feed on fruits. It holds its food in its fore feet like a squirrel; is lively, and has a weak cry; and when it sleeps it rolls itself up.

12. *L. tardigradus* of Seba, the loris of Buffon, or sloth of Ceylon, has a produced dog-like visage, with the forehead high above the nose: the ears are large, thin, and rounded: the body is slender and weak; the limbs are very long and slender; the thumb on each side is distinct, and separate from the toes: the hair on the body is universally short and delicately soft; the color on the upper part tawny, beneath whitish. From the tip of the nose to the anus the animal is only eight inches long. It differs totally in form and nature from the *ecaudatus*; and, notwithstanding the epithet of *tardigradus* or sloth given in Seba, it is very active, and ascends trees most nimbly. It has the actions of an ape; and Seba says, the male climbs the

trees, and tastes the fruits, before it presents them to its mate.

13. *L. volans*, the flying maucauco, the colugo of Pallas, or flying cat of Ternate, resembles a bat, being furnished with a strong membrane like that animal, by which it is enabled to fly. It inhabits the country about Guzarat, the Molucca Isles, and the Philippines; feeds on fruits, and is very distinct both from the bat and flying squirrel. Pennant says it is three feet long, nearly as broad when expanded; the tail one foot; the head long; mouth, teeth, and ears small; the hair ash-colored; the legs covered with yellow down; the paws five-toed; the claws crooked and very sharp.

LEMURES, in antiquity, sprites or hobgoblins; restless ghosts of departed persons, who were supposed to return to terrify and torment the living. These are the same with the *larvæ*, whom the ancients imagined to wander round the world, to frighten good people, and plague the bad. For which reason, at Rome, they had *lemuria*, or feasts instituted to appease the manes of the defunct. See **LARES**. Apuleius explains the ancient notion of manes thus: the souls of men released from the bands of the body, and freed from performing their bodily functions, become a kind of *dæmons* or *genii*, formerly called *lemures*. Of these *lemures*, those that were kind to their families were called *lares familiares*; but those who, for their crimes, were condemned to wander continually, without meeting with any place of rest, and terrified good men and hurt the bad, are vulgarly called *larvæ*. Apuleius observes, that, in the ancient Latin, *lemur* signified the soul of a man separated from the body by death.

LEMURIA, or **LEMURALIA**, a feast solemnised at Rome on the 9th of May, to pacify the manes of the dead, or in honor of the *lemures*. It was instituted by Romulus, to appease the ghost of his murdered brother Remus, which he thought was continually pursuing him to revenge the horrid crime. Sacrifices continued for three nights, the temples were shut up, and marriages were prohibited during the solemnity. A variety of whimsical ceremonies were performed, magical words made use of, and the *lemures* desired to withdraw, without endeavouring to hurt or affright their friends above ground. The chief formalities were ablution, putting black beans into their mouths, and beating kettles and pans to make the goblins keep at a distance.

LENA, a river of Asiatic Russia, rises in the mountains to the north-west of the lake Baikal, and flows almost from south-west to north-east, till near Yakoutsk. Here it receives the Wilime and the Olekma, and, combined with the Obi and the Toungouska, furnishes an almost continued navigation from west to east, across Siberia. Soon after, passing Yakoutsk, it receives the Aldane, the largest of its tributaries, by which the navigation is continued nearly to Okhotsk. The course of the Lena is now north, with a slight declination westward. The Wilhoui is the only other considerable river which falls into it. The channel of this river is broad and deep, and it forms numerous islands in its course, which may be estimated at nearly 2000 miles

LENÆA, from *ληνος*, a wine-press; a festival kept by the Greeks in honor of Bacchus, at which there was much feasting and Bacchanalian jollity, accompanied with poetical contentions, and the exhibition of tragedies. A goat was generally sacrificed on the occasion, and treated with various marks of cruelty and contempt, as being naturally fond of brouising on the vine shoots.

LEND, *v. a.* } Sax. *lænan*; Belg. *leenen*;
LEND'ER, *n. s.* } *lehen*. To grant the use of; to grant, afford, or bestow generally; to let on hire: a lender is one who either freely, for hire, or by way of trade, lends or lets out any thing. Thou shalt not give him thy money upon usury, nor lend him thy victuals for increase.

Lev. xxv. 37.

Thou pinchist at my mutabilitie,
 For I the *lent* a droppe of my riches,
 And now me likith to withdrawin me,
 Why shouldist thou my roialtie oppresse?

Chaucer's Balades.

In common worldly things 'tis called ungrateful
 With dull unwillingness to pay a debt,
 Which, with a bounteous hand, was kindly *lent*:
 Much more to be thus opposite with Heaven.

Shakspeare.

I'll *lend* it thee, my dear, but have no power to
 give it from me.

Id.

Let the state be answered some small matter, and the rest left to the *lender*; if the abatement be small, it will not discourage the *lender*: he that took ten in the hundred, will sooner descend to eight than give over his trade.

Bacon.

This gave them at once freedom, victory, riches; bestowing upon them the remainder of that wealth, which the Egyptians had but *lent*.

Bp. Hall.

One would think a man of sense would grutch to *lend* his ear, or incline his attention to such motley ragged discourse.

Barrow.

They dare not give, and e'en refuse to *lend*,
 To their poor kindred, or a wanting friend.

Dryden.

Covetousness, like the sea, receives the tribute of all rivers, though far unlike it in *lending* any back again.

Decay of Piety.

From thy new hope, and from thy growing store,
 Now *lend* assistance, and relieve the poor.

Dryden.

Whole droves of *lenders* crowd the bankers' doors
 To call in money.

Id. Spanish Fryar.

Cato, *lend* me for a while thy patience,
 And condescend to hear a young man speak.

Addison.

By Jove the stranger and the poor are sent,
 And what to those we give, to Jove is *lent*.

Pope.

Wilt *lend* a hand to close thy mistress' eyes.

A. Philips.

Man wants but little, nor that little long;
 How soon must he resign his very dust,
 Which frugal nature *lent* him for an hour!

Young

He now began to engage in the controversies of the times, and *lent* his breath to blow the flames of contention.

Johnson.

L'ENFANT (James), a learned French writer, born in 1661. After studying at Saumur, he went to Heidelberg, where he became minister of the French church in 1684, and chaplain to the electress dowager Palatine. The descent of the French into the palatinate obliged him to leave Heidelberg in 1688. He went to Berlin, where the elector Frederick, afterwards king of

Prussia, appointed him one of the ministers. There he continued thirty-nine years, distinguishing himself by his writings. He was preacher to Charlotta Sophia, queen of Prussia; and, after her death, to Frederick the Great. In 1707 he took a journey to England and Holland, where he preached before queen Anne. In 1712 he went to Helmstadt, in 1715 to Leipsic, and in 1725 to Breslaw, to search for rare books and MSS. He died in 1728. His principal works are, 1. The History of the Council of Constance, 2 vols. 4to.; 2. A History of the Council of Pisa, 2 vols. 4to.; 3. The New Testament translated from the Greek into the French, with Notes by Beausobre and L'enfant, 2 vols. 4to.; 4. The History of Pope Joan, from Spanheim's Latin Dissertation; 5. Several Pieces in the Bibliotheque Choisie, La Republique des Lettres, La Bibliotheque Germanique, &c.

LENGLET (Nicholas, du Fresnoy, abbé), a celebrated French author, born at Beauvois, in 1674. He wrote on various subjects. The following works merit notice: 1. A Method of Studying History, with a Catalogue of the Principal Historians of every Age and Country; 1713. This work was translated into most modern languages, particularly our own, with improvements, by Richard Rawlinson, LL.D. and F.R.S., and published in London in 1730, in 2 vols. 8vo.; 2. A copious abridgment of universal history and biography, in chronological order, under the title of Tablettes Chronologiques; which first appeared at Paris in 1744, in 2 vols. 8vo., and was universally admired. In subsequent editions he made several corrections and improvements; and from one of these an English translation was published in London, in 1762, in 2 vols large 8vo. Another edition appeared in 1763 in which the general history was brought down to 1762. Du Fresnoy, however, loaded his work with catalogues of saints, martyrs, councils, heresies, and other ecclesiastical matters, fit only for the libraries of popish convents. He was secretary to the French ambassador at Cologne in 1705, where he discovered a plot of delivering up Mons to the English. In 1721 he became librarian to prince Eugene. He lived eighty-two years, but his end was tragical; for, falling asleep by the fire, he fell into it, and was burnt to death before the accident was discovered. This happened in 1756.

LENGTH, *n. s.* } Sax. leng; Teu-
LENGTH'EN, *v. a. & v. n.* } tonic *lengthen*; Belg.
LENGTH'ISE, *adv.* } *lengthde*. See LONG
Full extent; utmost expansion or duration; uncontracted state; comparative extent (in which sense it admits of a plural); distance; end; from which last sense comes the phrase at length: once written 'at the length.' To lengthen is, to draw out; elongate; make longer; protract: it sometimes has 'out,' affixed by way of emphasis; also, to grow, or become longer. Lengthwise is, in the direction of the length; longitudinally.

That the rootid and groundid in charite moun comprehend with alle seyntis which is the breede and the *lengthe* and the hyghenesse and the depesse.

Wiclif, *Effes*. iii.

Break off thy sins by righteousness, and thine iniquities by showing mercy to the poor: if it may be a *lengthening* of thy tranquillity. Dan.

A crooked stick is not straitened, unless it be bent as far on the clear contrary side, that so it may settle itself at *length* in a middle state of evenness between them both. Hooker.

Large *lengths* of seas and shores
Between my father and my mother lay.

Shakspeare

Frame your mind to mirth and merriment,
Which bars a thousand harms, and *lengthens* life.

Id.

There is in Ticinum a church that is in length one hundred feet, in breadth twenty, and in height near fifty; it reporteth the voice twelve or thirteen times.

Bacon.

He had marched to the *length* of Exeter, which he had some thoughts of besieging. Clarendon

To get from the' enemy, and Ralph, free;
Left dangers, fears, and foes, behind,
And beat, at least, three *lengths* the wind.

Hudibras.

Mezentius rushes on his foes,
And first unhappy Acron overthrows:
Stretched at his *length* he spurns the swarthy ground.

Dryden.

Time glides along with undiscovered haste,

The future but a *length* beyond the past. Id.

What *length* of lands, what oceans have you passed. Id.

May Heaven, great monarch, still augment your bliss,

With *length* of days, and every day like this. Id.

At *length*, at *length*, I have thee in my arms,
Though our malevolent stars have struggled hard,
And held us long asunder. Id. King Arthur.

The learned languages were less constrained in the quantity of every syllable, besides helps of grammatical figures for the *lengthening* or abbreviation of them. Dryden.

Having thus got the idea of duration, the next thing is to get some measure of this common duration, whereby to judge of its different *lengths*. Locke.

One may as well make a yard, whose parts *lengthen* and shrink, as a measure of trade in materials that have not always a settled value. Id.

If Lætitia, who sent me this account, will acquaint me with the worthy gentleman's name, I will insert it at *length* in one of my papers.

Addison's Spectator.

In *length* of time it will cover the whole plain, and make one mountain with that on which it now stands.

Addison.

It *lengthens out* every act of worship, and produces more lasting and permanent impressions in the mind, than those which accompany any transient form of words. Id.

Still 'tis farther from its end;

Still finds its error *lengthen* with its way.

Prior.

Relaxing the fibres, is making them flexible, or easy to be *lengthened* without rupture. Arbuthnot.

It is in our power to secure to ourselves an interest in the divine mercies that are yet to come, and to *lengthen* the course of our present prosperity.

Atterbury's Sermons.

Falling dews with spangles decked the glade,
And the low sun had *lengthened* every shade. Pope.

I do not recommend to all a pursuit of sciences, to those extensive *lengths* to which the moderns have advanced. Watts.

What folly can be ranker? like our shadows,
Our wishes *lengthen* as our sun declines. Young.

Extension is either in *length*, height, or depth.

Burke on the Sublime.

In faithful memory she records the crimes
Or real, or fictitious, of the times;
Laughs at the reputations she has torn,
And holds them dangling at arm's length in scorn.
Cowper.

'Comrades, good night!'—The Hetman threw
His length beneath the oak-tree shade,
With leafy couch already made,
A bed nor comfortless nor new
To him, who took his rest where'er
The hour arrived, no matter where.
Byron.
Those lonely walks, and lengthening reveries,
Could not escape the gentle Julia's eyes;
She saw that Juan was not at his ease. *Id.*

LENGTHENING, in ship carpentry, the operation of cutting a ship down across the middle, and adding a certain portion to her length. It is performed by sawing her planks asunder in different places of her length, on each side of the midshipframe, to prevent her from being too much weakened in one place. The two ends are then drawn apart to a limited distance, which must be equal to the proposed addition of length. An intermediate piece of timber is next added to the keel, upon which a sufficient number of timbers are erected to fill up the vacancy produced by the separation. The two parts of the keelson are afterwards united by an additional piece, which is scored down upon the floor timbers, and as many beams as may be necessary are fixed across the ship in the new interval. Finally, the planks of the side are prolonged so as to unite with each other; and those of the ceiling refitted in the same manner; by which the whole process is completed.

LENIENT, *adj. & n. s.* } *Fr. lenifier, len-*
LEN'IFY, *v. n.* } *nitif; Lat. lenio,*
LEN'ITIVE, *adj. & n. s.* } *leniens. Assua-*
LEN'ITY, *n. s.* } *sive; softening;*
qualifying; laxative; emollient. To lenify, is to mitigate or assuage. Lenitive is an adjective synonymous with lenient: as a substantive, any thing applied to relieve pain or suffering. Lenity, generally applied to the mind or temper, signifies mercy; tenderness; sweetness.

Henry gives consent,
Of meer compassion, and of lenity,
To ease your country. *Shakspeare. Henry VI.*
Used for squinancies, and inflammations in the throat, it seemeth to have a mollifying and lenifying virtue. *Bacon.*

Some plants have a milk in them; the cause may be an interception of putrefaction; for those milks have all an acrimony, though one would think they should be lenitive. *Id.*
Albeit so ample a pardon was proclaimed touching treason, yet could not the boldness be beaten down either with severity, or with lenity be abated. *Hayward.*

Lenity must gain
The mighty men, and please the discontent. *Dan.*
Consolatories writ
With studied argument, and much persuasion sought,
Lenient of grief and anxious thought. *Milton.*

These jealousies
Have but one root, the old imprisoned king,
Whose lenity first pleased the gaping crowd:
But when long tried, and found supinely good,
Like Æsop's log, they leapt upon his back. *Dryden.*
All softening simples, known of sov'reign use,
He presses out, and pours their noble juice;
These first infused, to lenify the pain,
He tues with pinners, but he tugs in vain. *Id.*

There are lenitives that friendship will apply, before it would be brought to decretory rigours.

There is aliment lenitive expelling the faces without stimulating the bowels; such are animal oils.
South's Sermons.
Arbutnot.

Oils relax the fibres, are lenient, balsamick, and abate acrimony in the blood. *Id. on Aliments.*

In this one passion man can strength enjoy;
Time, that on all things lays his lenient hand,
Yet tames not this: it sticks to our last sand. *Pope.*

I dressed it with lenients. *Wiseman's Surgery.*

The king, with lenity of which the world has had perhaps no other example, declined to be the judge or avenger of his own or his father's wrongs. *Johnson.*

LENNEP (John Daniel Van), an able critic and classical scholar, a native of Leenwarden in Friesland, commenced his career in 1747, by an edition of the Greek poem of Coluthus, on the Rape of Helen. He was professor of Greek and Latin literature at Groningen in 1752; and in 1768 succeeded Gisbert Koen as professor at Franeker. He died February 6th, 1771, at Aix-la-Chapelle. Lennep was the author of two treatises, *De Analogiâ Linguæ Græcæ*; and *Etymologicon Linguæ Græcæ*, republished at Leyden in 1805-1808, with the Notes of Scheidius.

LENNOX, or Dunbartonshire, a county of Scotland, twenty-four miles long and twenty broad, bounded on the south by the river and frith of Clyde; on the west by Lochlong and Argyleshire; on the north by the Grampians; and on the east by Monteith and Stirlingshire. Great part of it is fit for nothing but pasturage and sport; even in the lower lands the soil is not fertile: yet the face of the country is agreeably diversified with hills, dales, mountains, heaths, rivulets, rivers, lakes, woods, fields of corn, and gentlemen's seats and plantations. Part of it is washed by the Clyde, which, at the castle of Dunbarton, is two miles broad at high water, and continues extending in width and depth until it joins the ocean. From the mouth of the Clyde, the two bays of Lochlong and Lochfyne make large indentations in the county. The only river of any note is the Leven. See **LEVEN**. But the greatest curiosity of this county is Loch-lomond, a vast body of fresh water supplied by subterraneous springs and rivulets, surrounded with huge mountains extending twenty-five miles in length, and in some places five in breadth, incredibly deep in every part, interspersed with twenty-four verdant isles, some of which are stocked with red-deer, and inhabited. Nothing can be more wildly romantic than this part of the country during summer, on the south side of the lake: the high road runs in some places through natural woods; overhung, on one hand, by steep mountains covered with flowery heath; and on the other opening in long vistas upon the lake, terminated by green islands that seem to float upon the water. Among the rivers we must not omit the Blane, which, though an inconsiderable stream, has been rendered famous by the birth of George Buchanan, the celebrated Latin poet and historian, on its banks. Near his birth-place (which, however, lies in Stirlingshire), is Buchanan House, an elegant seat belonging to the duke of Mon-

trose, head of the noble family of Graham, so often distinguished by its loyalty, integrity, and valor. The same part of the country gave birth to the great mathematician and naturalist, Napier, lord Merchiston, inventor of the logarithms. The title of Lennox, with the property of great part of the shire, was formerly vested in a branch of the royal family of Stuart, with which it was reunited in the person of king James VI., whose father, Henry lord Darnley, was son to the earl of Lennox. This prince conferred the title upon his kinsman Esme Stuart, son of John lord Aubigny in France: but his race failing at the death of Charles duke of Lennox and Richmond, and the estate devolving to the crown, Charles II. conferred both titles on his own natural son by the duchess of Portsmouth; and they are still enjoyed by his posterity. The people of Lennox are chiefly Lowlanders, though in some parts of it divine service is performed in the Erse language. The most numerous clans in this district are the Macfarlanes, the Colquhouns, and the Buchananans. They generally profess the Protestant faith, according to the Presbyterian discipline; though some of the gentry follow the English ritual. The people are sober, honest, and industrious; and are tall, vigorous, and healthy.

LENNOX (Charlotte), a literary lady, a native of North America, much respected by Dr. Johnson and Samuel Richardson. She was born at New York in 1720 (her father, colonel James Ramsay, being then governor of that state), but received her education in England. Little is known of her subsequent history until she married a Mr. Lennox. In 1751 she published the Memoirs of Harriet Stuart; and in 1752 the Female Quixote, a very ingenious production; to which a dedication was written by Johnson. In the following year appeared her Shakspeare Illustrated. In 1756 she published the Countess de Berci, from the French, and translated Sully's Memoirs. These were followed by Philander, a dramatic pastoral, and the novel of Henrietta, in 2 vols. In 1759 she was assisted by the earl of Cork and Dr. Johnson, in translating Brumoy's Greek Theatre; and the next year started the well known Ladies' Museum. Her other works are, Sophia, a novel, 2 vols.; The Sisters, a comedy; Old City Manners; and Euphemia, a novel in 4 vols. published 1790. With all her talents and industry, however, she was doomed to penury and sickness in declining life, but was effectually relieved, we are told, by the Literary Fund Society. She died 4th of June, 1804.

LENS, *n. s.* } Lat. *lens*, a plant. This
LENTICULAR, *adj.* } word is understood to be
LENTIFORM. } formed from the resemblance of the glass in question to the seed of the lentil. A glass generally convex on both sides: but there are also concave lenses. Lenticular, lentiform, of the form of a lens.

The crystalline humour is of a lenticular figure, convex on both sides. *Ray on the Creation.*

A glass spherically convex on both sides, is usually called a *lens*; such as is a burning-glass, or spectacle-glass, or an object-glass of a telescope.

Newton's Opticks.

According to the difference of the *lenses*, I used various distances. *Id.*

So the clear *lens* collects with magic power:
The countless glories of the midnight hour;
Stars after stars with quivering lustre fall,
And twinkling glide along the whitened wall.

Darwin.

A LENS is a piece of glass, or any other transparent substance, the surfaces of which are so formed, that the rays of light by passing through it, are made to change their direction, either tending to meet in a point beyond the lens, or made to become parallel after converging or diverging; or proceeding as if they had issued from a point before they fell upon the lens. See OPHIS.

LENT, *n. s.* } Saxon *lent*; Belgic *lent*;
LENTEN, *adj.* } Teut. *lente*, *glent* (spring).
See the extract from Camden. The quadragesimal fast in spring: hence any fast. Lenten, pertaining to, or used in Lent; sparing.

My lord, if you delight not in man, what *lenten* entertainment the players shall receive from you!

Shakspeare. Hamlet.

Lent is from springing, because it falleth in the spring; for which our progenitors, the Germans, use *glent*. *Camden.*

What the church debars us one day, she gives us leave to take out in another: first we fast, and then we feast; first there is a carnival, and then a *lent*.

Selden.

Giving of ashes on Ash Wednesday, is to put in remembrance every Christian man in the beginning of *Lent* and penance, that he is but ashes and earth, and thereto shall return. *Fuller.*

She quenched her fury at the flood,
And with a *lenten* sallad cooled her blood,
Their commons, though but coarse, were nothing scant. *Dryden's Hind and Panther.*

Those have a short *Lent* who owe money to be paid at Easter. *Franklin.*

LENT is a solemn time of fasting in the church. Those of the Romish church, and some of the Protestant communion, maintain, that it was always a fast of forty days, and, as such, of apostolical institution. Others think it was only of ecclesiastical institution, and that it was variously observed in different churches, and grew by degrees from a fast of forty hours to a fast of forty days. This is the opinion of Morton, bishop Taylor, Du Moulin, Daille, and others. The ancient manner of observing Lent, among those who were piously disposed, was to abstain from food till evening: their only refreshment was a supper; and it was indifferent whether it was flesh or any other food, provided it was used with sobriety and moderation. Lent was thought the proper time for exercising, more abundantly, every species of charity. Thus what they spared from their own bodies by abridging them of a meal, was usually given to the poor; they employed their vacant hours in visiting the sick, and those that were in prison; in entertaining strangers, and reconciling differences. The imperial laws forbad all prosecution of men in criminal actions that might bring them to corporal punishment and torture, during the whole season. This was a time of more than ordinary strictness and devotion, and therefore, in many of the great churches, they had religious assemblies for prayer and preaching every day. All public games and stage plays were prohibited; as well as the celebration of all festivals, birth-days, and marriages,

as unsuitable to the occasion. The Christians of the Greek church observe four Lents; the first commences on the 15th of November; the second is the same with that of the church of England; the third begins the week after Whitsuntide, and continues till the festival of St. Peter and St. Paul; and the fourth commences on the 1st of August, and lasts till the 15th. All these Lents are observed with great strictness; but on Saturdays and Sundays they drink wine and use oil, which are prohibited on other days.

LENTIL, *n. s.* Fr. *lentille*; Lat. *lens*. A species of *ERVUM*, which see.

The Philistines were gathered together, where was a piece of ground full of *lentiles*. 2 Sam. xxiii, 11.

Lentils grow a foot and a half in length, with stalks and leaves like those of tares, but smaller; and, like them, they bear their seeds generally three or four in a pod.

Dr. A. Rees.

LENTISCK, in botany. See *PISTACIA*.

LENTISCK, AFRICAN, } in botany. See *SCHILENTISCK, PERUVIAN, } NUS.*

LENTNER, *n. s.* Lat. *lentus*, slow. A kind of hawk.

I should enlarge my discourse to the observation of the haggard, and the two sorts of *lentners*.

Walton's Angler.

LENTOR, *n. s.* } Fr. *lenteur*; Lat. *lentor*.

LENTOUS, *adj.* } Tenacity; viscosity; slowness.

Some bodies have a kind of *lentor*, and more delectable nature than others.

Bacon.

In this spawn of a *lentous* and transparent body, are to be discerned many specks which become black, a substance more compacted and terrestrious than the other; for it riseth not in distillation.

Browne.

The *lentor* of eruptions, not inflammatory, points to an acid cause.

Arbuthnot on Diet.

LENTULUS, the surname of a branch of the Cornelian family at Rome, which produced several great men during the republic. See *ROME*.

LENTULUS (Cneius Cornelius), surnamed *Gætulicus*, was consul A. D. 26, and was also a literary character. He wrote a history, mentioned by Suetonius, and Martial informs us that he was a poet; but his works are lost. He was put to death by Tiberius, who was jealous of his popularity.

LEO, in zoology. See *FELIS*.

LEO, a native of Byzantium, who flourished about A. A. C. 350, and wrote some treatises on physic and history, which are lost. His philosophy, patriotism, and political abilities, while they endeared him to his countrymen, who employed him as ambassador to Athens, Macedonia, &c., on their most important business, excited the jealousy of Philip III. of Macedon; who saw his ambitious designs would be frustrated while such a vigilant patriot lived. He therefore forged a letter in Leo's name, offering to betray Byzantium to the king of Persia, which produced the desired effect. The mob ran enraged to the house of the philosopher, who, to avoid their fury, killed himself.

LEO III., the Isaurian, emperor of Constantinople, was the son of a poor mechanic, but entering the army, became one of the body-guard to Justinian II; and was made a general

by Anastasius II., who, in 717, made him his colleague in the empire. The Saracens having ravaged Thrace, besieged Constantinople, but Leo bravely defended it, and repulsed them. After this he proved a tyrant, and burnt the library of Constantinople, containing above 30,000 volumes, besides a vast quantity of medals and other antiquities. He died in 741, and was succeeded by his son Constantine V.

LEO VI., surnamed the philosopher, the son of Leo I., was associated by his father in 876, and succeeded him in 878. The Saracens, Bulgarians, and Hungarians, having united against him, he imprudently called the Turks to his aid, who ravaged Bulgaria with fire and sword. He drove out and deposed the patriarchs Phocas and Nicholas; and died in 911. He wrote several books; the principal of which is a Treatise on Tactics; printed at Leyden in 1612.

LEO I., surnamed the Great, an Italian, who succeeded Sextus III. in 440. He showed great zeal against the Manichees and other heretics. His works amount to 3 vols. folio. He died in 461.

LEO X., whose proper name was John de Medicis, was made a cardinal at fourteen years of age, and some years after a legate, by Julius II. He was in that quality in the army which was defeated by the French near Ravenna, in 1512, where he was taken prisoner. The soldiers who took him humbly asked his pardon, besought him to give them absolution for it, and promised never to bear arms against the pope. When Julius died, Medicis was very ill at Florence, and was carried to Rome in a litter. The cardinals consulted his physicians to know whether he was likely to live long, and they being bribed, said the cardinal de Medicis could not live a month; which principally occasioned his being chosen pope. Thus when not thirty years of age, he was elected and soon recovered his health. He was better calculated for a temporal than a spiritual prince, being ambitious, luxurious, and a connoisseur in the fine arts; he is supposed to have disbelieved Christianity itself, which he called a very profitable fable for him and his predecessors. In 1517 he published general indulgences throughout Europe (and ordered the priests to recommend them) in favor of those who would contribute any sum towards completing the church of St. Peter; and thus paved the way for the reformation. (See *INDULGENCE* and *LUTHER*). Leo died in 1521, aged forty-five. It is but justice to add, that to this pope was principally owing the revival of literature in Italy. He spared neither pains nor expense to recover ancient MSS. and procure good editions of them; he favored the arts and sciences; and gloried in being the patron of learned and ingenious men, who, in return, have been very lavish in his praise. Pope, in his Essay on Criticism, celebrates this pontiff in the following lines:—

But see! each muse, in Leo's golden days,
Starts from her trance, and trims her withered bays;
Rome's ancient Genius, o'er its ruins spread,
Shakes off the dust, and rears his reverend head.
Then sculpture and her sister arts revive:
Stones leap to form, and rocks begin to live;
With sweeter notes each rising temple rung,
A Raphael painted, and a Vida sung.

LEO OF MODENA, a learned rabbi of Venice, who flourished in the seventeenth century. He wrote a history of the Jewish rites and ceremonies; and compiled a Hebrew and Italian Dictionary.

LEO PILATUS, the first professor of Greek at Florence, about A. D. 1360. He was a man of great erudition; and went to Constantinople to procure MSS., but was shipwrecked on his return to Italy, in the Adriatic.

LEOBEN, a town of Austria, on the Mur, in Upper Styria. It has a traffic in iron, there being mines in the vicinity; and here are barracks, and a public magazine for salt. The convention was concluded here between the French and Austrians, on the 20th of April 1797, which terminated in the peace of Campo Formio. Population 2400. Eighty miles south-west of Vienna.

LEOMINSTER, a large and populous borough of Herefordshire, seated on the Lug, which waters the north and east sides of it, and over which it has several bridges. It extends about a mile from north to south, and half a mile from west to east. The modern houses are well built with brick, but those of ancient date are of timber and plaster, ornamented with grotesque carvings. The town-hall stands on twelve oak pillars, and under it is held the butter-market. In this hall are held the town quarter-sessions, and the corporation meetings. In 1750 a new gaol was built, and in 1803 a neat market-house was erected for the sale of wheat and other grain, hops, flax, wool, and cider, of which articles the neighbourhood yields great plenty. The church is a neat spacious building, and appears to have been built at different periods; the roof is supported by four large Tuscan pillars. It has a beautiful altar-piece from Rubens, and in the tower is a musical peal of eight bells. In king John's reign this town was burnt, but soon rebuilt. It was incorporated by queen Mary I. and is governed by a high steward, bailiff, recorder, twelve burgesses, and a town-clerk. Its market is on Friday, and its fairs are noted for horses and black cattle. The inhabitants carry on a considerable trade in wool, gloves, leather, hats, &c., and they have mills and other machines on the river. Near its church are some remains of its ancient priory. It has several good inns, and sends two members to parliament. It lies twenty-six miles west by north of Worcester, and 137 W. N. W. of London.

LEOMINSTER, a town of Massachusetts, in Worcester county; forty-six miles west of Boston. It carries on various manufactures of cloth, bricks, combs, &c.

LEON (Peter Cicca de), author of the history of Peru. He left Spain, his native country, at thirteen years of age, to go into America. The first part of his history was printed at Seville in 1553. He began it in 1541, and ended it in 1550. He was at Lima, the capital of the kingdom of Peru, when he finished it, and was then thirty-two years of age.

LEON, an important north-west division of Spain, still retaining the title of a kingdom, is surrounded by Estremadura, Old Castile, Galicia and Portugal. It is of an irregular oblong figure

being about 200 miles from north to south and 168 from east to west, and having a territorial area of 21,000 square miles. It is divided into six provinces, of which the population has been thus given:—

Provinces.	Inhabitants.
Leon	240,000
Salamanca	210,000
Palencia	120,000
Zamora	72,000
Toro	100,000
Valladolid	188,000
Total	930,000

This province is divided by the Douro into two nearly equal parts; and is watered besides by the Carrion, the Eresma, the Tormes, and other smaller streams. Several of its mountain-chains also are remarkable, particularly those which form a part of the Sierras, of Pico and Occa. It contains abundance of fine pasturage, on which noble herds of cattle and flocks of sheep are found, and is fruitful in maize, olives, wheat, and flax. The mountains are covered with oak and other saleable timber; but the plains and valleys are remarkably destitute both of wood and fruit trees. On the south-east side of the province only is the wine an article of exportation. Nor has Leon any manufactures worth notice, though there are mines of iron and copper in the mountains. Mules are bred in large numbers. Madder finds its way from this province through Portugal to England. The kingdom of Leon was founded in the eighth century by Pelagius, but Ordonno II. was the first who assumed the title of king. In 1030 this state was united to that of Castile, by Ferdinand the Great, and both are now governed by the same laws.

LEON, a province of Spain, in the northern part of the above kingdom of Leon, is surrounded by the Asturias, Palencia, Toro, Valladolid, Zamora, and Galicia. Its extent is about 6200 square miles: the soil is stony, and the surface divided between a large chain of mountains and extensive valleys. The climate is moist and cold in the winter months. The vegetable products are wheat, barley, pulse, fruit, flax, and a few vines; but the chief source of employment is the rearing of cattle. The manufactures are linen and hardware.

LEON (Lat. legio, from the seventh Roman legion being stationed here), the capital of the foregoing province, is situated at the confluence of the Torio and Bernesga. It is a compound of great and mean buildings of all kinds. A great part of the walls are of green marble, in a decayed state. It has thirteen churches, a number of convents, and noble mansions, but the streets are filled with beggars. The Plaza Mayor, opposite to the town-house, contains several good buildings. The cathedral surpasses in grandeur and beauty all the ecclesiastical edifices of Spain; and has a claim to be considered one of the finest monuments of Gothic architecture extant. It encloses the tombs of thirty-seven kings, and the shrines of several saints. Founded in the reign of the emperor Galba, Leon was the first town

of consequence recovered from the Moors; after which it continued for three centuries the residence of the Catholic kings of Spain. The ancient palace of the kings is now in a decayed state, and has been converted into a manufactory. The town has small manufactures of woollens, linen, stockings, and leather; but the inhabitants subsist chiefly on the expenditure of the clergy. The environs contain many fine avenues of ash, poplars, and elms; they are also productive in corn, fruit, and in flax. Population 6200; 174 miles N. N. W. of Madrid, and seventy-four N. N. W. of Valladolid.

LEON, ISLA DE, a tract of land on the southwest coast of Spain, containing the city of Cadiz, and another city of this name. It is separated from the main land by a canal and river, ten miles in length, and from twenty to thirty feet in depth. The defence thus afforded against an enemy in possession of the main land (as the French were in 1810) is strengthened by the salt marshes, which extend eastward, and are impassable, except along a causeway. This causeway leads to the Puente de Zuarzo, a bridge built over the river in the fifteenth century, and strongly fortified on the island side. The length of the island of Leon is ten miles; its breadth three. Cadiz is at one extremity, and the naval arsenal of La Caracca on the other. In 1811 or 1812 the French could not make themselves masters of this island, though enabled, by a projecting point of the main land, to bombard Cadiz from a distance of four miles, or at a point. Bay salt in vast quantities is made in the marshes we have mentioned.

The city of Leon, or of Isla de Leon, is situated at the distance of eleven miles south-east of Cadiz. Its population, including St. Carlos, is said by Mr. Jacob to amount to 40,000, and is supported by the works carried on at the neighbouring arsenal and dock-yard of Caraccas. It is chiefly a modern place; the streets are wide and many of the houses large; and there is much more animation here than in most Spanish towns. The principal street is two miles in length. In the great square is the Hotel de Ville, a handsome building. The principal church is remarkable for its repository for the dead, called the Pantheon, an open court of an oval form, with a corridor and walls, which are of sufficient thickness to contain receptacles for the clergy in the form of ovens.

‘I counted 500 of these places,’ says our traveller, ‘all of which were filled; and I was told that, when a priest died, the bodies which had been longest deposited there were removed to make room for the new occupier.’

‘There cannot be a more unfounded prejudice,’ adds Mr. Jacob, ‘than the idea of the superiority of Spanish over English salt, if the process of evaporation goes on slowly, as it must necessarily do when performed by the power of the sun alone: the crystals are formed very large, and the size depends more on the slowness of the operation than on the strength of the brine; and the bay salt made in Cheshire, by applying a small portion of heat to the brine, falls in crystals equally large with those formed by nature in the pits in this vicinity. The quantity of salt col-

lected here, however, is prodigious. It is piled in large heaps, of a pyramidal form; and, when the rain has fallen upon them once, the heat of the sun again crystallises that portion which the rain had melted, and the top becomes a cold cake of salt, from which the rain that may afterwards fall is carried off without penetrating or damaging the heap. Bay salt is permitted to be exported on the payment of a very trifling duty; but that which is used for the consumption of the interior becomes the subject of a royal monopoly, and is charged with a very heavy tax. The heaps of salt, at a distance, give the morass on which it is collected the appearance of a plain covered with stone buildings, in the form generally of pyramids, but mixed with others of a cubical shape, with slanting roofs.’

LEON, NEW, a mountainous province of Mexico, is bounded on the north by Coaguila, on the west by Coaguila and New Biscay, on the east by New Santander, on the south by Zacatecas and St. Luis Potosi, or Guastica. It is thinly inhabited, possessing few other mines than those of lead. The chief town is Monterey. There are also several villages and small stations; but, although it has been sometimes designated by the high sounding title of the New Kingdom of Leon, it is only a small tract, and little known.

LEON, OR LEON DE NICARAGUA, the capital of the province of Nicaragua, South America, and a bishop's see, is situated on a fresh water lake of this name, abounding with fish. It has also a mountain near it, with a volcano, which has often caused it to suffer by earthquakes. It contains about 1200 houses, four churches, and many convents. Its port is Realejo, situated near it, and a fortified town, with a good harbour. The river Realejo is so deep here and commodious as to be capable of containing 200 sail of vessels. Long. 87° 20' W., lat. 12° 24' N.

LEONCLAVIUS (John), one of the most learned men of the sixteenth century, was a native of Westphalia. He travelled into Turkey, and collected excellent materials for composing *The Ottoman History*; and it is to him the public is indebted for one of the best accounts we have of that empire. To his knowledge in the learned languages, he had added that of the civil law; whereby he was well qualified to translate the *Basilica*. His other versions were esteemed. He died in 1593, aged sixty.

LEONICENUS (Nicolas), an eminent Italian physician, born in 1428. He was professor of medicine at Ferrara, for above sixty years. He was the first who translated Galen's works, which he illustrated with commentaries. He also translated Hippocrates's Aphorisms, and the works of Lucian and Dion Cassius, into Italian; and wrote *De Plinii et plurium medicorum aliorum in medicina erroribus*. He died in 1524, aged ninety-six.

LEONIDAS I., king of Sparta, a renowned warrior, slain in defending the straits of Thermopylæ against Xerxes, 480 B. C. See SPARTA. There were other two Spartan kings of this name.

LEONFORTE, a large town in the interior of Sicily, in the Val di Noto, seven miles west of San Filippo d'Argiro. It has an annual

fair, much frequented; but it is a place little visited by travellers. Population 8000.

LEONINE, *adj.* Lat. *leoninus*. Having the nature of, or belonging to, a lion.

Save wine and women, nothing might assuage
His high entente in armes and labour,
So was he ful of *leoin* corage.

Chaucer. Cant. Tales.

LEONINE VERSES are those of which the end rhymes to the middle, as,

Gloria factorum temere conceditur horum.

They were much used in ancient hymns, epigrams, prophecies, &c. The origin of the word is uncertain; Pasquier derives it from one Leoninus or Leonius, who excelled in this way; and dedicated several pieces to pope Alexander III.; others derive it from pope Leo; and others from leo, the lion, esteeming it the loftiest of verses, as the lion is styled the king of beasts.

LEONTICA, feasts or sacrifices celebrated among the ancients in honor of the sun. They were called Leontica, and the priests who officiated at them Leones, because they represented the sun under the figure of a lion radiant, bearing a tiara, and griping in his two fore-paws the horns of a bull, who struggled with him in vain to disengage himself. The critics are extremely divided about this feast. Some will have it anniversary, and to have made its return not in a solar but in a lunar year; but others hold its return more frequent, and give instances where the period was not above 220 days. The ceremony was sometimes also called Mithraica; Mithras being the name of the sun among the ancient Persians. See **MITHRAS**. A man was always sacrificed at these feasts, till the time of Adrian, who prohibited it by a law. Commodus introduced the custom afresh, after whose time it was again exploded.

LEONTICE, lion's leaf, a genus of the monogynia order, and hexandria class of plants; natural order twenty-fourth, corydalis: cor. hexapetalous; nectarium hexaphyllous, standing on the heels of the corolla, with its limb patent: *CAL.* hexaphyllous, and deciduous. There are five species, natives of the southern part of Europe, two of which are sometimes cultivated in this country. These are,

L. chrysozonum, with winged leaves; and

L. leontopetalum, with decompounded leaves.

Both are natives of the Archipelago islands, and also grow in the corn fields about Aleppo, in Syria, where they flower soon after Christmas. They have large tuberous roots, like those of the cyclamen, covered with a dark-brown bark. The flowers sit upon naked foot-stalks: those of the first sort sustain many yellow flowers, but the flowers of the second are of a paler color. Both are propagated by seeds, which must be sown soon after they are ripe, otherwise they seldom succeed. When sent to distant countries they must be preserved in sand. The plants are, however, very difficult to be preserved in this country: for they will not thrive in pots; and, when planted in the full ground, frost frequently destroys them. The best way is to sow the seed as soon as it comes from abroad, covering

it with glasses in the winter to protect it from frost; and in the spring, when the plants begin to appear, they must have free air admitted to them at all times when the weather is mild, otherwise they will be weak.

LEONTINI, or **LEONTIUM**, in ancient geography, a town of Sicily on the south side of the Terias, twenty miles north-west of Syracuse. The territory called Campi Leontini, was extremely fertile; anciently called Campi Læstrigoniæ, the seat of the Læstrigons, according to the commentators on the poets: the name Leontini is from Leo, the impression on their coin being a lion. It is now called Lentini.

LEONTIUM, one of the twelve towns of Achaia, whether on, or at some distant from, the bay of Corinth, is uncertain.

LEONTIUM, a celebrated courtesan of Athens, who studied philosophy under Epicurus. She was either the wife or concubine of Metrodorus the philosopher, by whom she had a son, to whom Epicurus left a legacy. She had also a daughter named Danae, who married the poet Sophron. She wrote a book in defence of the doctrines of Epicurus, against Theophrastus, and which Cicero praises for purity of style.

LEONTODON, dandelion, a genus of the polygamia æqualis order, and syngenesia class of plants; natural order forty-ninth, composite. The receptacle naked: *CAL.* imbricated, with the scales somewhat loose; the pappus feathery. There are nine species, of which the most remarkable one is,

L. taraxacum, the common dandelion, found on the road sides, in pastures, and on the banks of ditches. Early in spring, the leaves, whilst yet white and hardly unfolded, are an excellent ingredient in salads. The French eat the roots and tender leaves with bread and butter. When a swarm of locusts had destroyed the harvest in the island of Minorca, many of the inhabitants subsisted upon this plant. The expressed juice has been given to the quantity of 4 ozs. three or four times a-day; and Boerhaave had a great opinion of the utility of this and other lactescens plants in visceral obstructions. Goats eat it; swine devour it greedily; sheep and cows are not fond of it, and horses refuse it. Small birds are fond of the seeds.

LEONURUS, lion's tail, a genus of the gymnospermia order, and didynamia class of plants; natural order forty-second, verticillatæ. The antheræ are powdered with shining points, or small elevated globular particles. There are six species.

1. *L. Africana*, with spear-shaped leaves, is a native of Ethiopia. It rises with a shrubby stalk seven or eight feet high, sending out several four-cornered branches, garnished with oblong narrow leaves, acutely indented on their edges, hairy on their upper side, standing opposite. The flowers are produced in whirls, each branch having two or three of these whirls towards the end. They are of the lip kind, shaped somewhat like those of the dead nettle, but much longer, and covered with short hairs. They are of a golden scarlet color, and make a fine appearance. The flowers commonly appear in October and November, and sometimes continue till the

middle of December, but are not succeeded by seeds in this country. There is a variety with variegated leaves which is admired, but the whorls are smaller than those of the plain sort.

2. *L. nepetæfolia*, with oval leaves, is a native of the Cape of Good Hope. It rises with a square shrubby stalk about three feet high, sending out several four-cornered branches, garnished with oval crenated leaves, rough on their under side like the dead nettle, but veined on the upper side, and placed opposite. The flowers come out in whirls like those of the former sort, but are not so long nor so deep colored. They appear at the same season with the first, and continue as long in beauty. Both these species are propagated by cuttings, which should be exposed to the air long enough to harden the shoots, and planted in the beginning of July, after which they will take root very freely. They should be planted in a loamy border to an eastern aspect; covered closely with a bell or hand glass to exclude the air, and shaded from the sun. As soon as they have taken good root they should be taken up, and planted in separate pots, filled with soft loamy earth, and placed in the shade till they have taken new root. In October they must be removed into the green-house.

LEOPARD, *n. s.* Lat. *leo*, and *pardus*, a panther. A spotted beast of prey. See **FELIS**.

Look from the lion's dens, from the mountains of the leopards. *Cant. iv. 8.*

About this king ther ran on every part
Ful many a tame leon and leopart.

Chaucer. Cant. Tales.

Sheep run not half so timorous from the wolf,
Or horse or oxen from the leopard,
As you fly from your oft-subdued slaves. *Shakspeare.*

Before the king tame leopards led the way,
And troops of lions innocently play. *Dryden.*
A leopard is every way, in shape and actions, like a cat; his head, teeth, tongue, feet, claws, tail, all like a cat's: he boxes with his fore feet, as a cat doth her kittens; leaps at the prey, as a cat at a mouse; and will also spit much after the same manner: so that they seem to differ, just as a kite doth from an eagle. *Grew.*

LEOPARD. See **FELIS**.

LEOPARDALIS. See **FELIS**.

LEOTAUD (Vincent), a French Jesuit and mathematician, who published a work entitled *Examen Quadraturæ*, in 4to. 1654; in which he asserts, the impossibility of demonstrating the quadrature of the circle.

LEOTYCHIDES, king of Sparta, a celebrated general of the Greeks, who by his courage and conduct put an end to the Persian war, at the famous battle of Mycale. He afterwards fell a sacrifice to the intrigues of the Ephori, after reigning twenty-two years; A. A. C. 469.

LEOVITUS, or **LEOWICQU** (Cyprian), a Bohemian astronomer and astrologer, born in 1504, and descended from a noble family. He published *Ephemerides*, and some other works, in which he inverted predictions that alarmed great numbers in Germany; particularly that the world would come to an end in 1584. But he did not live to see his prediction falsified, as he died in 1574.

LEPANTO, **GULF** and **TOWN OF**, are situated on the south coast of Romania, in the

Morea. The former was known to the ancients as the gulf of Corinth. It extends from Patras on the west to the isthmus of Corinth east; its entrance is defended by two old castles; and it is seventy miles long. The town is of inferior consideration, surrounded by old fortifications. It was the ancient Naupactus, and is 360 mile. W. S. W. of Constantinople.

LEPAS, the acorn, in zoology, a genus belonging to the order of vermes testaceæ. The animal is the triton; the shell is multivalve, unequal, fixed by a stem or sessile. There are several species, of which the most remarkable is, the

L. anatifera, consisting of five shells depressed affixed to a pedicle, and in clusters. It adheres to the bottom of ships by its pedicles. The tentacula are feathered; and gave the old English historians and naturalists the idea of a bird. They ascribed the origin of the barnacle goose to these shells.

LEPAS, the limpet. See **PATELLA**.

LEP'ER, *n. s.* Fr. *lepre*; Span. and

LEP'EROUS, or

LEP'ROUS, *adj.*

LEPROS'ITY, *n. s.*

LEP'ROSY.

per is a person infected with this disease. Leprosity, scaly disease. For leprosy see **MEDICINE**.

And whanne he had seid this, anon the lepre partide away fro him and he was clensid.

Wiclif, Mark 1.

The leper in whom the plague is, his cloaths shall be rent.

Lev. xiii. 45.

It is a plague of leprosy.

Id. 3.

I am no loathsome leper; look on me.

Shakspeare.

Upon my secure hour thy uncle stole,

With juice of cursed hebenon in a vial,

And in the porches of mine ears did pour

The leperous distilment. *Id. Hamlet.*

Itches, blains,

Sow all the Athenian bosoms, and their crop

Be general leprosy. *Id. Timon of Athens.*

If the crudities, impurities, and leprositites of metals were cured, they would become gold.

Bacon's Natural History.

The silly amoros sucks his death,

By drawing in a leprous harlot's breath.

Donne.

Our mere-learned mē; and modern wise

Taste not poor poesies ingenuities,

Being crusted with their couetous leprositites.

Chapman. Homer. The Battaille of Frogs

and Mice. Epistle Dedicatorie.

Between the malice of my enemies and other men's mistakes, I put as great a difference as between the itch of novelty and leprosy of disloyalty.

King Charles.

Since she would acknowledge no difference betwixt herself and her brother Moses, every Israelite now sees his face glorious, hers leprous. *Bp. Hall.*

These and many more do not intend that any one grace alone is sufficient, much less any one act of one grace, proceeding from the Spirit of God, can be sufficient to wipe off our leprositites. *Bp. Taylor.*

Authors, upon the first entrance of the pox, looked upon it as so highly infectious, that they ran away from it as much as the Jews did from the leprosy. *Wiseman's Surgery*

LEPIDIDIUM, dittander, or pepper-wort, a genus of the siliculosæ order, and tetradynamia class of plants; natural order thirty-ninth, siliquosæ: siliculæ emarginated, cordated, and polyspermous, with the valves carinated contrary or broader than the partition. There are twenty-nine species, of which the most remarkable is,

L. latifolium, or the common dittander. It is a native of both Scotland and England. It has small, white, creeping roots, by which it multiplies very fast, and is difficult to be eradicated after it has long grown in any place. The stalks are smooth, rise two feet high, and send out many side branches. The flowers grow in close bunches towards the top of the branches, coming out from the side; they are small, and composed of four small white petals. The seeds ripen in autumn. The whole plant has a hot biting taste like pepper; and the leaves have been often used by the country people to give a relish to their viands instead of that spice, whence the plant has got the appellation of poor man's pepper. It is reckoned an antiscorbutic.

LEPIDOLITE is a mineral of a light red color, sometimes gray. Massive, and in small concretions. Lustre glistening, pearly. Cleavage single. Fracture coarse splintery. Feebly translucent. Soft. Rather sectile. Rather easily frangible. Specific gravity 2.6 to 2.8. It intumesces before the blow-pipe, and melts easily into a milk-white translucent globule. Its constituents are, according to Vauquelin, 54 silica, 0 alumina, 18 potassa, 4 fluat of lime, 3 manganese, and 1 iron. It occurs in limestone at Dalmally, and on the north side of Lochfine; on the east side of Lochleven, nearly opposite the Inn at Balachulish. It is found in many places on the Continent. On account of its beautiful color, it has been cut into snuff-boxes, but it is rather soft and greasy to the aspect.

LEPIDOPTERA, in zoology, an order of insects with four wings, covered with imbricated squamulæ. See **ENTOMOLOGY**.

LEPIDUS (*M. Æmilius*), one of the triumvirs with Anthony and Octavius. (See **ROME**.) He was compelled to resign by Augustus, and died in obscurity at Cerceli; A. A. C. 13.

LEPISMA, in zoology, a genus of apterous insects, the characters of which are: they have six feet formed for running; the mouth is furnished with four palpi, two of which are cetaceous and two capitated; the tail is terminated by extended bristles, and the body imbricated with scales. There are several species.

L. saccharina is an American species, so called because mostly found among sugar; but is now common in Europe. It is of a leaden color, rather inclining to that of silver, by the small silvery scales with which it is covered; in which circumstance it resembles the silver fish, especially in its under part. It is found in gardens, under boxes, and in the crevices of window-sashes in houses, where it is very common. It runs with great swiftness, and is difficult to catch. When touched, it loses part of its scales and its softness makes it easy to crush.

LEPIUM, in natural history, a genus of fossils of the harder gypsum, composed of very small

particles, and of a less glittering hue. There is only one species of this genus, being one of the least valuable and most impure of the class of gypsums. It is of an extremely rude, irregular, coarse, and unequal structure; a little soft to the touch, of a very dull appearance, and of different degrees of a grayish-white. It is burnt in plaster for the coarser works; it calcines very slowly and unequally, and makes but a very coarse plaster.

LEPROSY is a foul cutaneous disease, appearing in dry, white, thin, scurvy scabs, either on the whole body, or part of it, and usually attended with a violent itching and other pains. See **MEDICINE**. The leprosy is of various kinds, but the Jews were particularly subject to that called elephantiasis. The Jewish law excluded all lepers from communion with mankind, without excepting even kings. And various ceremonies were ordained to be performed by them after they were cleansed, previously to their re-admission into society. See **Levit. xiii. 42—59; xiv. 1—57**.

LEPTODECORHOMBES, in natural history, a genus of fossils of the order of the selenitæ; consisting of ten planes, each so nearly equal to that opposite to it as very much to approach to a decahedral paralleliped, though never truly or regularly so. There are only five known species, viz. 1. A thin, fine, pellucid, and slender-streaked kind, with transverse striæ, found in considerable quantities in the strata of clay in most parts of England, particularly near Haddington in Oxfordshire. 2. A thin, dull-looking, opaque, and slender-streaked sort, more scarce, found principally in Leicestershire and Staffordshire. 3. A thin fine-streaked species, with longitudinal striæ, found in the clay pits at Richmond, generally at great depths. This has often on its top and bottom a very elegant smaller rhomboid, described by four regular lines. 4. A rough kind, with thick transverse striæ, and a scabrous surface, very common in Leicestershire and Yorkshire. And, 5. A very short kind, with thick plates, common in the clay-pits of Northamptonshire and Yorkshire.

LEPTURA, in zoology, a genus of insects belonging to the order of coleoptera, the characters of which are these. The feelers are bristly; the elytra are attenuated towards the apex: and the thorax is somewhat cylindrical. There are several species, principally distinguished by their colors. See **ENTOMOLOGY**.

LEPUS, the hare, in astronomy, a constellation of the southern hemisphere. See **ASTRONOMY**.

LEPUS, the hare, in zoology, a genus of the mammalia class of quadrupeds, and order of glires. The characters are these: they have two fore teeth in each jaw; those in the upper jaw are double, the interior ones being smallest. The fore feet have five toes each, and the hind feet four.

L. Alpinus, the mountain hare, or Alpine rabbit, has short, broad, rounded, ears; no tail; a long head, and very long whiskers, with two very long hairs above each eye: the color of the fur at the bottom is dusky, towards the ends of a bright ferruginous color; the tips white, and

intermixed are several long dusky hairs, though on first inspection the whole seems of a bright bay. The length of the animal is nine inches. This species is first seen on the Altaic chain; extends to Lake Baikal; thence to Kamtschatka; and is found in the Fox Islands: inhabiting always the middle region of the snowy mountains in the rudest places, which abound with herbs and moisture. They sometimes form burrows between the rocks, and often lodge in the crevices. They are generally found in pairs; but in cloudy weather they collect together, and lie on the rocks, and give a keen whistle, very like that of a sparrow. On the report of a gun they run into their holes, but soon come out again. A company of them, towards autumn, collect together vast heaps of herbs and grasses, nicely dried, which they place either beneath the over-hanging rocks, or between the chasms, or round the trunks of trees. In many places the herbs appear scattered, as if to be dried in the sun. The heaps are formed of round or conoid ricks; and are of various sizes, according to the number of the society employed in forming them. They are sometimes of a man's height, and many feet in diameter. Without this provision of winter's stock they would perish during the storms of snow. These ricks occasion fertility amidst the rocks; for the reliques, mixed with the dung of the animal, rot in the barren chasms, and form a soil productive of vegetables. These ricks are also of great service to those people who hunt sables; for their horses would often perish if they had not the provisions of these little industrious animals to support them; which are easily to be discovered. The people of Jakutz feed both their horses and cattle with the reliques of the winter stock of these hares. These animals are neglected as a food by mankind; but are the prey of sables and the Siberian weasels. They are likewise greatly infested with a sort of gad-fly, which lodges its egg in their skin in August and September, and thus often proves destructive to them.

L. Americanus, the American hare, or hedge coney, has the ears tipped with gray: the upper part of the tail is black, the lower white; the neck and body are mixed with cinereous, rust color, and black; the legs are of a pale ferruginous color, and the belly is white; the fore legs are shorter, and the hind legs longer, in proportion, than those of the common hare. It is eighteen inches long, and weighs from 3lbs. to 4lbs. This species inhabits all parts of North America. In New Jersey, and the states south of it, it retains its color the whole year. In New England, Canada, and about Hudson's Bay, at the approach of winter, it changes its short summer's fur for one very long, silky, and silvery, even to the roots of the hairs; the edges of the ears only preserving their color. These hares are then in the highest season for the table; and are of vast use to those who winter in Hudson's Bay, where they are taken in great abundance in springs made of brass wire, to which they are led by a hedge made for that purpose, with holes left before the snares for the hares to pass through. They breed once or twice a year, and have from five to seven at a time. They do not

migrate, but always haunt the same places; neither do they burrow, but lodge under fallen timber, and in hollow trees. They breed in the grass; but in spring shelter their young in the trees, to which they also run when pursued; from which, in the southern states, the hunters force them by a hooked stick, or by making a fire, and driving them out by the smoke.

L. Capensis, the Cape hare, has long ears dilated in the middle; the outsides naked, and of a rose color, the insides and edges covered with short gray hairs: the crown and back are of a dusky color, mixed with tawny; the cheeks and sides cinereous; the breast, belly, and legs, rust-colored; the tail is bushy, carried upwards, and of a pale ferruginous color. This species is about the size of a rabbit. It inhabits the country three days' journey north of the Cape of Good Hope; where it is called the mountain hare, for it lives only in the rocky mountains, and does not burrow. It is difficult to shoot it, as on the sight of any one it instantly runs into the fissures of the rocks.

L. cuniculus, the common rabbit, has a very short tail, and naked ears. The color of the fur, in a wild state, is brown; the tail black above, white beneath: in a tame state the general color varies, and the eyes are of a fine red. The original native country of this species is Spain, where they were formerly taken with ferrets, as is now practised here. They love a temperate or warm climate, and are incapable of bearing great cold: In Sweden they are kept in houses. They abound in Britain. Their furs make a considerable article in the hat manufactories; and of late such part of the fur as is unfit for that purpose has been found as good as feathers for stuffing beds and bolsters. Numbers of the skins are annually exported to China. The English counties most noted for rabbits are Lincolnshire, Norfolk, and Cambridgeshire. Methwold is famous for the best kind for the table; the soil there is sandy, and full of mosses and carex grass. Rabbits swarm in the Orkneys, where their skins form a considerable article of commerce. They are in general gray, those which inhabit the hills grow hoary in winter. Kerr enumerates five varieties, viz. the wild rabbit; the black, the white, the pied, and the silvery tame rabbit. The last was formerly in great esteem, and their skins were sold at 3s. a piece, for lining clothes; but since the introduction of more elegant furs their price has fallen to 6d. The Sunk Island in the Humber was once famous for a mouse-colored sort, which has since been extirpated on account of the injury they did to the banks by burrowing. The fecundity of the rabbit is greater than that of the hare. They breed seven times in the year, and the female sometimes brings eight young ones at a time. Supposing this to happen regularly for four years, the number of rabbits from a single pair will amount to 1,274,840. From this we might apprehend being overstocked with these animals, but a great number of enemies prevent their increase; not only men, but birds and beasts of prey making dreadful havoc among them. Notwithstanding all these enemies, we are told by Pliny and Strabo that they once proved such a nuisance to the inhabitants of the

Balearic Islands that they were obliged to implore the assistance of a military force from Augustus to exterminate them. They devour herbs of all kinds, roots, grain, fruits, &c. They are in a condition for generating at the end of six months; the female is almost constantly in season; goes with young about thirty days, and brings forth from four to eight at a litter. A few days before littering she digs a hole in the earth in a zig-zag form: the bottom of this hole she enlarges every way, and then pulls off a great quantity of hair from her belly, of which she makes a kind of bed for her young. During the two first days after birth she never leaves them but when pressed with hunger, and then she eats quickly and returns; and in this manner she suckles and attends her young for six weeks. All this time both the hole and the young are concealed from the male, sometimes, when the female goes out, she, to deceive the male, fills up the mouth of the hole with earth mixed with her own urine. But when the young ones begin to come to the mouth of the hole, and to eat such herbs as the mother brings to them, the father seems to know them; he takes them betwixt his paws, smooths their hair, and caresses them with great fondness.

L. niger, the black hare, has a very short tail; the fur is entirely black, or very dark tawny, all the year. It is much larger than the common hare. Mr. Muller says he once saw two black hares in Siberia, of a wonderfully fine gloss, and full as black as jet. Near Cason was taken another, in the middle of winter 1768. In the south and west provinces of Russia is a mixed breed of hares, between this and the common species. It sustains, during winter only, a partial loss of color; the sides and more exposed parts of the ears and legs in that season becoming white, the other parts retaining their colors. This variety is unknown beyond the Uralian chain. They are called by the Russians russacks; they take them in great numbers in snares, and export their skins to England and other places. The Russians and Tartars, like the ancient Britons, esteem the flesh of hares impure.

L. Ogotona, the Ogotona hare, has oblong oval ears, a little pointed, with short whiskers, and hairs long and smooth: the color of those on the body is brown at the roots, light gray in the middle, and white at the ends, intermixed with a few dusky hairs; there is a yellowish spot on the nose, and a space about the rump of the same color: the outside of the limbs is yellowish; the belly is white. The length is about six inches: weight of the male from 6½ to 7½ ozs.; of the female, from 4 to 4½ ozs. This species inhabits only the country beyond lake Baikal, and thence is common in all parts of the Mongolian desert, and the vast desert of Gobeë, which extends on the back of China and Thibet, even to India. They frequent the valleys and rocky mountains in vast abundance. They live under heaps of stones, or burrow in the sandy soil, leaving two or three entrances, which all run obliquely. They make a nest of soft grass; and the old females make for security a number of burrows near each other, that they may retreat from one to the other. They wander out chiefly in

the night. Their voice is excessively shrill, and they emit a note like that of a sparrow, twice or thrice repeated, but very easily to be distinguished from that of the Alpine rabbit. They live principally on the tender bark of a sort of service, and the dwarf elm; in spring on various herbs. Before the approach of severe cold they collect great quantities of herbs, and fill their holes with them, which the inhabitants consider as a sure sign of change of weather. Like the Alpine hares they form in autumn ricks of hay of a hemispherical shape, about a foot high and wide; in spring these disappear, and nothing but the relics are seen. They copulate in spring, and about the end of June their young are full grown. They are the prey of hawks, magpies, and owls; but the ermine and fitchet make most havoc among them.

L. pusillus, the calling hare, with a long head, thickly covered with fur even to the tip of the nose; numerous hairs in the whiskers; ears large and triangular; legs very short, and the soles furred beneath; its whole coat is very soft long, and smooth, with a thick, long, fine, down beneath, of a brownish lead color; the hairs are of the same color, towards the ends of a light gray, and tipped with black; the lower part of the body is hoary; the sides and ends of the fur are yellowish. The length of the animal is about six inches; weighs from 3½ to 4½ ozs.; but in winter scarcely 2½ ozs. This species inhabits the south-east parts of Russia, and about all the ridges of hills extending south from the Uralian chain; also about the Irtish, and in the west part of the Altaic chain; but no where in the east beyond the Oby. They delight in sunny valleys and green hills, especially near woods, to which they run on any alarm. They live so concealed as rarely to be seen: but are often taken in winter in the snares laid for the ermines. About the Volga they are called *semLANOI Saetshik*, or ground hares: the Tartars, from their voice, style them *tschotshot*, or *ittitskan*, or the barking mouse: the Kalmucs call them *rusla*. They choose for their habitation a dry spot, amidst bushes covered with a firm sod, preferring the western sides of the hills. In these they burrow, leaving a very small hole for the entrance, and forming long galleries for their nests. Those of the old ones are numerous and intricate; so that their places would be scarcely known but for their excrements; and even these they drop, by instinct, under some bush, lest their dwelling should be discovered. Their voice alone betrays their abode; it is like the piping of a quail, but deeper, and so loud as to be heard at the distance of half a German mile. It is repeated at just intervals, three, four, and often six times. The voice is emitted at night and morning; never in winter or bad weather. It is common to both sexes; but the female is silent for some time after parturition, which is about the beginning of May N. S. She brings forth six at a time, blind and naked; which she suckles often, and covers carefully with the materials of her nest. These harmless animals never go from their holes. They feed and make their excursions by night: they are easily tamed, and scarcely bite when handled. The males in con-

finement attack one another, and express their anger by a grunting noise.

L. timidus, the common hare, has a short tail; the points of the ears are black; the upper lip is divided up to the nostrils; the length of the body is generally about a foot and a half; and the hair is reddish, interspersed with white. It is naturally a timid animal. It sleeps during the day, and feeds, copulates, &c. in the night. In a moon-light evening a number of them are sometimes seen sporting together, leaping, and pursuing each other: but the least motion, the falling of a leaf, alarms them; and then they all run off separately, each taking a different route. They are extremely swift; their motion is a kind of gallop, or a succession of quick leaps. When pursued, they always take to the higher grounds: as their fore feet are much shorter than the hind ones, they run with more ease up hill than down hill. The hare is endowed with all those instincts which are necessary for its preservation. In winter he chooses a form exposed to the south, and in summer to the north. He conceals himself among vegetables of his own color. Mr. Fouilloux says, that he observed a hare, as soon as she heard the sound of the horn, or the noise of the dogs, although a mile distant, rise from her seat, swim across a rivulet, then lie down among the bushes, and thus evade the scent of the dogs. After being chased for two hours, a hare will sometimes push another from its form, and lie down in it himself. When hard pressed, the hare will mingle with a flock of sheep, run up an old wall and conceal himself among the grass on the top of it, or cross a river several times at small distances. He never runs against the wind, or straight forward; but constantly doubles, to make the dogs lose their scent. A hare, although ever so often pursued by the dogs, seldom leaves the place where she was brought forth, or even the form in which she usually sits. It is common to find them in the same place next day, after being long and keenly chased the day before. The females are more gross than the males, and have less strength and agility; they are likewise more timid, and never allow the dogs to approach so near their form before rising as the males. They likewise practise more arts, and double more frequently than the males. Hares are found almost over every climate; and, notwithstanding they are every where hunted, the species never diminishes. They propagate in their first year; the females go with young about thirty days, and produce four or five at a time; as soon as they have brought forth they again admit the embraces of the male; so that they may be said to be always pregnant. The eyes of the young are open at birth; the mother suckles them about twenty days, after which they separate from her and procure their own food. The young live solitary, and make forms about thirty paces distant from each other. On finding a young hare, therefore, one may almost be certain of finding several others within a small distance. The hare is not so savage as his manners would indicate. He is gentle, and is susceptible of a kind of education. He is pretty easily tamed, and will even show a kind of attachment to his benefactors;

but it is not so strong as to engage him to become altogether domestic; for although taken very young, and brought up in the house, he no sooner arrives at a certain age than he takes the first opportunity of recovering his liberty, and flying to the fields. He lives about seven or eight years; and feeds upon grass and other vegetables. His flesh is excellent food. Hares are very subject to fleas. Linnæus informs us, that the Dalecarlians make a sort of cloth, called felt, of the fur; which, by attracting these insects, preserves the wearer from their troublesome attacks. The hair makes a great article in the hat manufacture; and a great deal is annually imported from Russia and Siberia. The hare was reckoned a great delicacy among the Romans; but the Britons thought it impious even to taste it; yet they bred them, either for the chase, or for the purposes of superstition. Boadicea, immediately before her last conflict with the Romans, let loose a hare she had concealed in her bosom, which, taking what was deemed a fortunate course, animated the soldiers by the omen of an easy victory over a timid enemy. Mr. Kerr mentions two varieties, viz. the cornutus, or horned hare; and the melinus, or yellow hare. The former he suspects to be fabulous.

L. variabilis, the varying hare of Pallas, has soft hair, which in summer is gray, with a slight mixture of black and tawny; the ears are shorter, and the legs more slender than those of the common hare; the tail is entirely white, even in summer; and the feet are most closely and warmly furred. In winter the whole hair changes to a snowy whiteness, except the tips and edges of the ears, which remain black, as well as the soles of the feet, on which, in Siberia, the fur is doubly thick, and of a yellow color. It is less than the common species. These animals inhabit the highest Scottish Alps, Norway, Lapland, Russia, Siberia, Kamtschatka, the banks of the Wolga, and Hudson's Bay. In Scotland they keep on the tops of the highest hills, and never descend into the vales; nor do they ever mix with the common hare, though these abound in the neighbourhood. They do not run fast; and are apt to take shelter in clefts of rocks. They are easily tamed, and are very frolicsome. They are fond of honey and caraway comfits. They change their color in September; resume their gray coat in April; and in the extreme cold of Greenland are always white. Both these and the common hares abound in Siberia, on the Wolga, and in the Orenourg government. The one never changes color: the other, a native of the same place, constantly assumes the whiteness of the snow during winter, not only in the open air and in a state of liberty, but, as experiment has proved, even when kept tame, and preserved in houses in the stove-warmed apartments, in which it experiences the same changes of color as if it had dwelt on the snowy plains.—They collect together, and are seen in troops of 500 or 600, migrating in spring, and returning in autumn, in search of subsistence. In winter they quit the lofty hills, the south boundaries of Siberia, and seek the plains and wooded parts, where vegetables abound; and in spring seek again the mountainous quarters. The flesh

of the variable hare, in its white state, is excessively insipid. There have been several instances of what may be called monsters in this species, horned hares, having excrescences growing out of their heads, like the horns of the roe-buck. These instances have occurred in Saxony, in Denmark, and near Astracan.

L. viscacia, the Peruvian hare; the *viscachos*, or *vizacha*, mentioned by Acosta and Feuille, in their accounts of Peru, is reckoned by Mr. Pennant nearly allied to the Cape hare. Feuille says, they inhabit the colder parts of Peru. Their hair is very soft, and of a mouse color; the tail is pretty long, and turns up; and the ears and whiskers are like those of the common rabbit. In the time of the Incas the hair was spun, and woven into cloth, which was so fine as to be used only by the nobility.

LERCHEA, in botany, a genus of the pentandria order, and monadelphia class of plants: CAL. five-toothed: COR. funnel-shaped and quinquefid; there are five antheræ sitting on the tube of the germ; there is one style: CAPS. trilocular and polyspermous.

LERE, *n.s. & v. a.* Sax. lære; Belg. *leere*; Goth. *ler*. Doctrine; lesson; lore. As a verb, to learn a lesson. Obsolete.

But all ther horne harnes and other gere
Was in sute according everichone,
As ye have herd the forsaid trumpets were,
And by seming they were nothing to *lere*
And ther guiding they did so manirly. *Chaucer.*

The kid, pitying his heaviness,
Asked the cause of his great distress;
And also who, and whence, that he were,
Though he had well ycond his *lere*,
Thus melled his talk with many a teare.

Spenser.

LERIDA, the Herda of Lucan, a large town of Catalonia, Spain, on the right bank of the Segre, and a bishop's see. It forms a long triangle, and is situated on the slope of a hill, but the streets are crooked, narrow, and ill paved, except next the river, where there is a good quay. The university of Lerida was formerly in great repute, but was suppressed by Philip V. At present, however, here is a college supported by the bishop, and a school for young ladies, conducted by Franciscan nuns. On the top of the hill are the remains of a palace of the kings of Arragon. The modern cathedral has been erected in the town, but the original one stood on this spot. The trade of the place is confined to the exportation of the products of the neighbourhood, which is very fertile, and beautifully intersected with canals. Lerida was taken by the Goths and Moors, and was for some time the capital of a kingdom under the latter. Population 17,000. Sixty-nine miles east by south of Saragossa, and ninety west by north of Barcelona.

LERINS, *TRE*, two small islands of the Mediterranean, on the south-east coast of France, and belonging to the department of the Var. The larger is called St. Marguerite, the other St. Honorat.

LERMA, an ancient town of Spain, having the title of a duchy, in the province of Burgos, and standing on the river Arlanza. It has a magnificent castle, built by the duke of Lerma,

minister of Philip III. Twenty-three miles south of Burgos.

LERNA, in ancient geography, a town, territory, or lake, of Argolis, situated on the confines of Laconica. Some suppose it to be a town of Laconica, on the borders of Argolis. Pausanias places it near Temenium, on the sea; without adding whether it is a town, river, or lake. According to Strabo it is a lake, situated between the territories of Argos and Mycene. If there was a town of this name it seems to have stood towards the sea, and the lake to have been more inland. Mela calls it a well known town on the Sinus Argolicus; and Statius, by Lerna, seems to mean something more than a lake. The lake, however, is that in which, according to Strabo, was the fabled Hydra of Hercules, and therefore called Lerna Anguifera. Statius. Mr. Lempriere calls it 'a country of Argolis celebrated for a grove and a lake, into which the Danaides threw the heads of their husbands.'

LERNÆA, a festival celebrated at Lerna, in honor of Proserpina, Ceres, and Bacchus.

LERNEA, in zoology, a genus of insects of the order of vermes mollusca, the characters of which are, that the body fixes itself by its tentacula, is oblong, and rather tapering; there are two ovaries like tails, and the tentacula are shaped like arms.

1. *L. asellina* has a lunated body and cordated thorax, and inhabits the gills of the codfish and ling of the northern ocean.

2. *L. cyprinacea* has four tentacula, two of which are lunulated at the top. It is about half an inch long, and of the thickness of a small straw: the body is rounded, of a pale grayish white, glossy on the surface, and somewhat pellucid: it is thrust out of a kind of coat or sheath, as it were at the base, which is of a white color and a thick skin: towards the other extremity of the body there are three obtuse tubercles, one of which is much larger than the rest; the mouth is situated in the anterior part, and near it there are two soft and fleshy processes; and near these there is also on each side another soft process, which is lunated at the extremity. It is found on the sides of the bream, carp, and roach, in many of our ponds and rivers, in great abundance.

3. *L. salmonæa*, the salmon louse, has an ovated body, cordated thorax, and two linear arms approaching nearly to each other.

LERNICA, in ancient geography, a city of Cyprus, as appears from its ruins; but now only a large village, seated on the south coast, where there is a good road, and a small fort for its defence.

LERNUTIUS (John), a Latin poet of the sixteenth century, born at Bruges. His works were published by Elzevir, under this title: *Jani Lernutii Basia, Ocelli, et alia Poemata*. He died in 1619.

LERO, in ancient geography, one of the two small islands in the Mediterranean opposite to Antipolis, and half a mile distant from it on the south. Now called St. Margaret, over against Antibes.

LERWICK, a celebrated sea-port town of Shetland, situated in the island called Mainland.

At the north end there is a regular fort, which was built in the reign of Charles II., who, during his first war with the Dutch, sent over a garrison of 300 men under colonel William Sinclair, a native of Shetland; with Milne, an architect, to build the fort, and twenty-five or thirty cannons to plant upon it for protection of the country. A house was built within the fort to lodge 100 men. When the garrison removed they carried off the cannon; and in the Dutch war, which followed soon after, a Dutch frigate came into Bressay Sound, and burnt the house in the fort, and several others of the best in the town. It is usually garrisoned by a party of invalids, and serves to protect the north entry of the harbour. About a mile and a half from the town are the remains of two ancient Danish castles. The parish extends about six miles along the coast, but at no point is more than one in breadth. The surface of the ground is for the most part rocky and mountainous. Immediately upon the shore, however, there are many very fine arable fields, the soil of which, though light and sandy, possesses considerable fertility. Lerwick is governed by a bailie.

LESBIANS, the ancient people of Lesbos. They were so debauched and dissipated that Lesbian was often used to signify debauchery and extravagance.

LESBONAX, a philosopher of Mytilene, who flourished in the first century. Two of his orations are inserted in Aldus's edition of Ancient Orators; and his treatise *De Figuris Grammaticis* was printed at Leyden in 1739.

LESBOS, or Mytilenê, an island in the Archipelago, to the south-west of the gulf of Adramyttium, now called Adramiti, in lat. 39° 12' N., and long. 23° 50' E. The Turks are the masters of it, and, as usual, the monuments of antiquity are fast crumbling to the dust, the original inhabitants disappearing, and even vegetation itself seeming to wither. When Lesbos was free it inspired Alceus and Sappho, and the genius of music and lyric poetry was peculiar to the Lesbians, who had so refined upon the pleasures of the body and the mind, that they had fallen into effeminate softness. That fine climate, to the influence of which Hippocrates attributed the genius of the inhabitants, must have been altered through want of the cultivation of the soil; for we are told that there are now whole villages inhabited by leprous persons.

The native richness of the land, however, still struggles with some success against the stupid indifference of its masters. Woods of olive trees overshadow part of the island, without requiring any cultivation: they surround the bay, which from these woods has taken the name of the bay or port of the Olive trees, and is capable of containing a whole fleet. It lies on the south-eastern side of the island. There is also another extensive bay or lake in the centre of the island. Lesbos still produces excellent figs, and, if we cannot now find the wine once celebrated in the songs of Horace and Catullus, it is because they know not, or do not care, how to prepare it; the grapes are still delicious; as are also some other fruits. There are fine pastures, forests abounding in wood for building, and

fertile plains. The fisheries, would be sufficient for the revival of industry, commerce, and prosperity, if there were a free and active people to take advantage of such resources.

Although destitute of rivers, the soil of Mytilenê is watered by too many springs to be dry; and agriculture is so easy here, that it is still almost the only occupation and means of subsistence for the inhabitants. Their dock-yards, which derive their materials for building from the forests in the neighbourhood, were of late very nearly abandoned.

Travellers differ as to the population of this island. According to Olivier there are still 20,000 Greeks, and as many Turks; but others do not reckon them so many. Every Greek, from the age of seven years, is condemned to the carach, or capitation tax, imposed by the Turks upon Christians. The island is divided into two dioceses; that of Methymnê extends over the southern part, and derives its appellation from the ancient city of that name, now a poor village called Molivo. The diocese of Mytilenê has for its chief place the capital of the island, Castro, which takes its name from the strong fort built near it; it occupies the site of the ancient Mytilenê, of which there are no remains, except a few fragments of sculpture and architecture, which are said to be very fine, but travellers have given us no particular account of them. The capital contains about 6000 inhabitants, two-thirds of whom are Turks, besides about forty Jewish families.

The ancient custom of this island bestows the family inheritance with the paternal mansion upon the eldest son; the bishop of Mytilenê has, however, recently modified in his diocese this usage, more singular than it is useful, and which originated in the time when the men were devoted to maritime occupations.

LESCAILLE (Katharine), surnamed the Sappho of Holland, and the tenth muse, died in 1711. A collection of her poems has been printed, in which are the tragedies of Genserich, Wenceslaus, Herod and Mariamne, Hercules and Dejanira, Nicomedes, Ariadne, Cassandra, &c.

LESGHÏSTAN, a narrow but long slip of territory in the Caucasus, forming the north-eastern frontier of Georgia. To the north it has Circassia, and to the east Daghestan. It is chiefly composed of the loftiest mountains in the great range of the Caucasus, on the top of which many of the houses of the inhabitants are built, and along the edge of some of the most tremendous precipices. The Lesghis consist almost entirely of hordes of robbers of the most desperate character. Secure in their inaccessible abodes, they set all laws and all attack at defiance, and carry off at pleasure the flocks, and even the inhabitants of the neighbouring regions on their swift coursers. Shah Nadir failed to subdue them; and it is a Persian proverb, that no prince who is not mad will make war against them. They wear a light Tartar dress, and go armed with a gun, pistols, dagger, and sabre. They carry in their expeditions nothing but a small quantity of provisions in bottles of goat skins; when reduced to the last extremity they have been known to

cast lots, and sacrifice one of their company to satisfy the hunger of the rest. It is also common for them to hire themselves out to fight the battles of their neighbours, at the rate of twelve roubles for a campaign of three months. Their women are said to be of superior beauty, and to bring a higher price in the market of Constantinople than those belonging to any other of these tribes. The Mahomedan is the prevailing religion; but some of them are still Pagans, and adore the sun, moon, trees, and rivers. There is a remarkable diversity in their language, which is said to have eight very distinct dialects.

LESIGNAU, a small town in the south of France, department of the Aude. Population 1500. Eleven miles west of Narbonne.

LESINA, or **LEZINA**, the ancient Pharos or Pharia, an island in the Adriatic, on the south coast of Austrian Dalmatia, lying between the islands of Brazzola, Durzola, and Sabioncello. It is about sixty-five miles long, and fourteen broad, and is fruitful in wine, olives, and rosemary, of which a distilled liquor is produced. Population 14,000.

LESKEARD, a large and well built town of Cornwall, which has sent two members to parliament since the 23d of Edward I. It had formerly a castle, now in ruins. It has the greatest market in Cornwall. It was first incorporated by Edward earl of Cornwall; afterwards by Richard king of the Romans, and had privileges from Edward the Black Prince. Queen Elizabeth granted it a charter; by which it was to have a mayor and burgesses, with power to purchase lands, &c. It has a handsome town-hall built on stone pillars, with a turret on it, and a clock with four dials that cost nearly £200. It has a large church, three meeting-houses, an eminent free-school, and a curious conduit. The adjacent commons feed multitudes of sheep. It has a market on Saturday, and a very great trade in the various branches of the leather manufacture. Spinning has been of late encouraged by the clothiers of Devonshire. On the hills of Leskeard are many tin-mines; the metal obtained from which is cast into blocks at the blowing-houses, and, this being one of the stannary towns, it is sent hither to be coined.

LESLIE (Charles), an Irish divine, and a zealous protestant; who, being attached to the house of Stuart, left Ireland, and went to the pretender at Bar le Duc, and resided with him till near the time of his death; endeavouring to convert him, but without effect. He died in 1722. His principal works are, 1. *A Short and Easy Method with the Deists.* 2. *A Short and Easy Method with the Jews.* 3. *The Snake in the Grass.* 4. *Hereditary Right to the Crown of England asserted.* 5. *The Socinian controversy discussed.* 6. *The Rehearsals*, a periodical paper in 6 vols. large 12mo. 7. *The Charge of Socinianism against Dr. Tillotson considered; and many others.* All his theological pieces, except the last, were collected and published by himself, in 2 vols. folio.

LESLIE (John), bishop of Ross in Scotland, the son of Gavin Leslie, an eminent lawyer, was born in 1526, and educated at the university of Aberdeen; of which diocese he was made official,

when but a youth. He was soon after created LL. D.; but, being peculiarly attached to the study of divinity, he entered into orders, and became priest of Une. When the reformation began to spread in Scotland, Dr. Leslie, in 1560, distinguished himself at Edinburgh as a principal advocate for the Romish church, and was afterwards deputed by the chief nobility of that religion, to condole with Mary queen of Scots on the death of her husband the king of France, and to invite her to return to her native dominions. Accordingly, they embarked together at Calais, in 1561, and landed at Leith. She immediately made him one of her privy council, and a senator of the college of justice. In 1564 he was made abbot of Lindores; and, on the death of Sinclair, was promoted to the bishopric of Ross. The influence derived from these accumulated honors he exerted for the good of his country. To him Scotland is indebted for the publication of its laws, commonly called *The Black Acts of Parliament*, from the Saxon character in which they were printed. At his desire the revision and collection of them were committed to the great officers of the crown. In 1568 queen Mary having fled to England for refuge, and being detained a prisoner, queen Elizabeth appointed commissioners at York to examine into the dispute between Mary and her subjects. These commissioners were met by others from the queen of Scots. The bishop of Ross was of the number, and pleaded the cause of his royal mistress with great energy, though without success. Mary, disappointed in her expectations from the conference at York, sent the bishop ambassador to Elizabeth, who paid little attention to his complaints. He then began to negotiate a marriage between his royal mistress and the duke of Norfolk; which negotiation proved fatal to the duke, and was the cause of Leslie's being sent to the Tower. In 1573 he was banished the kingdom, and retired to Holland. The two following years he spent in fruitless endeavours, to engage the powers of Europe to espouse the cause of his queen. His last application was to the pope; but the power of the heretic Elizabeth had no less weight with his holiness than with the other Roman Catholic princes of Europe. Finding all his personal applications ineffectual, he had recourse to his pen in queen Mary's vindication; but Elizabeth's *ultima ratio regum* was too potent for all his arguments. Bishop Leslie, during his exile, was made coadjutor to the archbishop of Rouen. He was at Brussels when he received the account of queen Mary's execution; and immediately entered the convent of Guirtemberg near that city, where he died in 1596. During the long captivity of Mary he wrote his *History of Scotland*, and other works. His knowledge and judgment as an historian are equally to be recommended. His other works are, 1. *Afflicti Animi Consolationes*, &c., composed for the consolation of the captive queen. 2. *De Origine, Morbis, et Gestis Scotorum.* 3. *De Titulo et Jure serenissimæ Mariæ Scotorum reginæ, quo regni Angliæ successionem sibi justè vindicat.* 4. *Parænesis ad Anglos et Scotos.* 5. *De Illust. Fæminarum in republ. administranda*, &c. 6. *Oratio ad reginam Elizabetham pro Libertate*

Impetranda. 7. Parænesis ad Nobilitatem Populumque Scoticum. 8. An Account of his Proceedings during his Embassy in England from 1568 to 1572; MS. Oxon. 9. Apology for the Bishop of Ross, concerning the Duke of Norfolk; MS. Oxon. 10. Several Letters, MSS.

LESLIE (sir John), a distinguished Scotch chemist, mathematician, and natural philosopher, professor of natural philosophy in the University of Edinburgh, author of numerous scientific works of great value. Among them are, An Inquiry into the Nature and Propagation of Heat; Elements of Geometry, Geometrical Analysis, and Plane Trigonometry; Account of Experiments and Instruments depending on the Relation of Air to Heat and Moisture; Philosophy of Arithmetic; and various papers in scientific journals. He has likewise invented several curious and valuable philosophical instruments. His differential thermometer is an important acquisition to physics. His election to the professorship, for which he was a candidate, did not succeed without a violent altercation between the members of the University, and some of the divines of the church of Scotland, who opposed Leslie on account, as they alleged, of his being a sceptic in religious matters. Leslie was one of the contributors to the Edinburgh Review, and the Supplement to the Encyclopædia Britannica. The author of Peter's Letters says: "He (Leslie) is a very fat, heavy figure of a man, without much more appearance of strength than of activity; and yet by no means a slothful looking person. His face is one which, at first sight, you would pronounce to be merely a coarse one, but in which, once informed to whom it belongs, you are at no loss to discover a thousand marks of vigorous intellect, and fancy too. Of this last quality, indeed, his eyes are, at times, full to overflowing. In the midst of the sombre gravity of his usual look, there are always little flashes of enthusiasm breaking through the cloud; and, in this respect, he forms a striking contrast to the calm, tranquil uniformity of Playfair's physiognomy and deportment." He died on the 3rd of November, 1833, in the sixty-sixth year of his age.

LESS, *adj., n. s. & adv.* } Sax. leaf. Com-
 LESS'EN, *v. a. & v. n.* } parative of little;
 LESS'ER, *adj. & adv.* } not so much; in a
 lower or smaller degree: to lessen is to make
 smaller or less; diminish; degrade; deprive of
 dimensions, power, dignity, or esteem; to grow
 less; shrink: lesser, 'a barbarous corruption of
 less.'

Who seeks

To lessen thee, against his purpose serves

To manifest the more thy might. *Milton.*

All government may be esteemed to grow strong or weak, as the general opinion in those that govern is seen to lessen or increase. *Temple.*

Yet could he not his closing eyes withdraw,
 Though less and less of Emily he saw. *Dryden.*

The mountains, and higher parts of the earth, grow lesser and lesser from age to age: sometimes the roots of them are weakened by subterraneous

fires, and sometimes tumbled by earthquakes into caverns that are under them. *Burnet.*

'Tis less to conquer, than to make wars cease,
 And, without fighting, awe the world to peace.

Holifax.

Company lessens the shame of vice by sharing it, and abates the torrent of a common odium by driving it into many channels. *South.*

This thirst after fame betrays him into such indecencies as are lessening to his reputation, and is looked upon as a weakness in the greatest characters. *Addison's Spectator.*

The less they themselves want from others, they will be less careful to supply the necessities of the indigent. *Smalridge.*

Their learning lay chiefly in flourish; they were not much wiser than the less pretending multitude. *Collier on Pride.*

Any heat promotes the ascent of mineral matter, but more especially of that which is subtle, and is consequently moveable more easily, and with a lesser power. *Woodward.*

St. Paul chose to magnify his office, when ill men conspired to lessen it. *Atterbury's Sermons.*

Though charity alone will not make one happy in the other world, yet it shall lessen his punishment. *Calamy's Sermons.*

The larger here, and there the lesser lambs,
 The new-fallen young herd bleating for their dams. *Pope.*

Happy, and happy still, she might have proved,
 Were she less beautiful, or less beloved. *Id.*

Who builds on less than an immortal base,
 Fond as he seems, condemns his joys to death. *Young.*

The poor, inured to drudgery and distress,
 Act without aim, think little, and feel less,
 And no where, but in feigned Arcadian scenes,
 Taste happiness, or know what pleasure means. *Cowper.*

An unnatural parent is a character that raises not only disapprobation but horror; nor less odious is an undutiful child: indeed it is not easy to determine which of the two is the more detestable. *Beattie.*

Prepared and spread his slender stock;
 And to the monarch and his men
 The whole or portion offered then,
 With far less of inquietude
 Than courtiers at a banquet would. *Byron.*

LES'SON, *n. s. & v. n.* Belg. *lesse*; Fr. *leçon*; Lat. *lectio*. See LECTON. Any thing read or pronounced before a teacher; precepts; lecture; opinion inculcated; a portion of Scripture read in divine service: as a verb, to teach; instruct.

Be not jealous over the wife of thy bosom, and teach her not an evil lesson against thyself. *Eccclus. ix. 1.*

This day's ensample hath this lesson dear
 Deep written in my heart with iron pen,
 That bliss may not abide in state of mortal men. *Faerie Queene.*

Notwithstanding so eminent properties, whereof lessons are happily destitute; yet, lessons being free from some inconveniencies whereunto sermons are most subject, they may, in this respect, no less take, than in other they must give the hand which betokeneth pre-eminence. *Hooker.*

Even in kind love, I do conjure thee
 To lesson me. *Shakspeare. Two Gentlemen of Verona.*

Well hast thou lessoned us, this shall we do. *Shakspeare.*

Those good laws were like good lessons set for a

flute out of tune; of which *lessons* little use can be made, till the flute be made fit to be played on.

Davies on Ireland.

The pleasance of numbers is, that rudeness and barbarism might the better taste and digest the *lessons* of civility.

Peacham.

I but repeat that *lesson*
Which I have learned from thee.

Denham's Sophy.

She would give her a *lesson* for walking so late, that should make her keep within doors for one fortnight.

Sidney.

Children should be seasoned betimes, and *lessoned* into a contempt and detestation of this vice.

L'Esrange's Fables.

Meditation here

May think down hours to moments. Here the heart
May give a useful *lesson* to the head,
And Learning wiser grow without his books.

Cowper.

What were we,
If Brutus had not lived? He died in giving
Rome liberty, but left a deathless *lesson*—
A name which is a virtue, and a soul
Which multiplies itself throughout all time,
When wicked men wax mighty, and a state
Turns servile.

Byron.

LESSONS, among ecclesiastical writers. In the ancient church reading the Scriptures was part of the service of the catechumens; at which all persons were allowed to be present, to obtain instruction. The church of England, in the choice of lessons, proceeds as follows: for the first lesson, on ordinary days, she directs to begin at the beginning of the year with Genesis, and so continue on, till the books of the Old Testament are read over; only omitting the Chronicles, which are for the most part the same with the books of Samuel and Kings, and other particular chapters in other books, because they contain either names of persons, or places, or other matters less profitable to ordinary readers. The course of the first lessons for Sundays is regulated after a different manner. From Advent to Septuagesima Sunday some particular chapters of Isaiah are appointed to be read, because that book contains the clearest prophecies concerning Christ. Upon Septuagesima Sunday Genesis is begun, because that book, which treats of the fall of man, and the severe judgment of God inflicted on the world for sin, best suits with a time of repentance and mortification. After Genesis, follow chapters out of the books of the Old Testament, as they lie in order; only on festival Sundays, such as Easter, Whitsunday, &c., the particular history relating to these days is appointed to be read; and on the saints' days the church appoints lessons out of the Proverbs, Ecclesiastes, Ecclesiasticus, &c., as containing excellent instructions for the conduct of life. As to the second lessons, the church observes the same course both on Sundays and week days; reading the gospels and Acts of the Apostles in the morning, and the Epistles in the evening, in the order they stand in the New Testament: excepting on saints' days and holy days, when such lessons are appointed as either explain the mystery, relate the history, or enforce the example.

LESSOR, *n. s.* From lease. He who disposes of and or other property by lease.

Lords of the world have but for life their lease.
And that too, if the lessor please, must cease.

Denham.

If he demises the glebe to a layman, the tenant must pay the small tithes to the vicar, and the great tithes to the lessor.

Ayliffe's Parergon.

A lease which is only voidable, and not absolutely void, must be made void by the lessor by re-entry.

Tomlin.

LEST, *conj.* Sax. lær, lær, (corresponding with the Lat. *minus*), that not; for fear that. expressing care to prevent a thing or event happening.

But I drede, *lest* as the serpent disseyyude eue with his sutil fraude, so ghoure wittis ben corrupt and fallen down fro the sympleness that is in Crist.

Wiclif; 2 Cor. 11.

Forty stripes he may give him, and not exceed, *lest* if he should exceed, then thy brother should seem vile.

Deut. xxv.

Lest they faint,
At the sad sentence rigorously urged,
All terror hide.

Milton.

One doubt
Pursues me still, *lest* all I cannot die,
Lest that pure breath of life, the spirit of man,
Which God inspired, cannot together perish
With this corporeal clod. *Id.*
King Luitprand brought hither the corps, *lest* it might be abused by the barbarous nations.

Addison.

L'ESTRANGE (Sir Roger), a noted writer in the seventeenth century, descended from an ancient family in Norfolk, where he was born in 1616. Having in 1644 obtained a commission from king Charles I. for reducing Lynn in Norfolk, then in possession of the parliament, his design was discovered, and his person seized. He was tried by a court martial at Guildhall in London, and condemned to die as a spy; but was reprieved, and continued in Newgate for some time. He afterwards went beyond sea; and in August 1653 returned to England, where he applied to Oliver Cromwell, and, having once played before him on the bass-viol, he was by some nicknamed Oliver's fiddler. Being a man of talent, but in narrow circumstances, he set up a newspaper, entitled The Public Intelligencer, in 1663; but gave it up upon the publication of the first London gazette in 1665, having been allowed, however, a sum of money by government. Some time after the Popish plot, when the Tories began to gain the ascendant, he, in a paper called the Observer, became a zealous champion for them. He was afterwards knighted, and served in the parliament called by James II. in 1685. He continued licenser of the press till king William's accession, in whose reign he met with some trouble as a disaffected person. He published many political tracts, and translated several works from the Greek, Latin, and Spanish; viz. Josephus's works, Cicero's Offices, Seneca's Morals, Erasmus's Colloquies, Æsop's Fables, and Bonas's Guide to Eternity. His style has been variously represented; his language being esteemed by some easy and humorous, while others reckon it low and grovelling.

LET. Sax. lætan; Goth. *leta*; Swed. *latu*; Belg. *laatan*. To permit; admit; allow; suffer; leave; relinquish; drop: used as a sign of entreating, exhorting, and commanding, as 'let me

go; 'let us go; 'let him go;' also to lend or put out on hire; grant to a tenant; free from obstruction or confinement; discharge (taking off intensively).

The seventh year thou shalt *let* it rest, and lie still.

Exodus.
Let me die with the Philistines. *Judges.*

She *let* them down by a cord through the window.

Joshua.

The beginning of strife is as when one *letteth out* water.

Proverbs xvii. 14.

Solomon had a vineyard at Baal Hamon; he *let* the vineyard unto keepers.

Canticles viii. 11.

And curteis, as a man of your estat,

In compagnie we wiln have no debat:

Telleth your tale, and *let* the Sompnour be.

Nay, quod the Sompnour, *let* him say by me

What so him list. *Chaucer. Cant. Tales.*

Let reason teach impossibility in any thing, and the will of man doth *let* it go.

Hooker.

Roscetes presented his army before the gates of the city, in hopes that the citizens would raise some tumult, and *let* him in.

Knolles.

Let us seek out some desolate shade.

Shakspeare.

They did me too much injury,

That ever said I hearkened for your death.

If it were so, I might have *let* alone

The' insulting hand of Douglas over you. *Id.*

His ancient knot of dangerous adversaries

To-morrow are *let* blood at Pomfret castle. *Id.*

Let in your king, whose laboured spirits

Crave harbourage within your city walls. *Id.*

As terebration doth meliorate fruits, so doth *letting* tears blood, as pricking vines, thereby *letting* forth tears.

Bacon.

Let Indians, and the gay, like Indians, fond

Of feather'd fopperies, the sun adorn;

Darkness has more divinity for me;

It strikes thought inward;—

Young.

Nay, nay, quoth he, *let* be your strife and doubt.

Fairfax.

Where there is a certainty and an uncertainty, *let* the uncertainty go, and hold to that which is certain.

Bishop Sanderson.

The more tender our spirits are made by religion, the more easy we are to *let* in grief, if the cause be innocent.

Taylor.

To give a period to my life, and to his fears, you're welcome; here's a throat, a heart or any other part, ready to *let* in death, and receive his commands.

Denham.

What boots it at one gate to make defence,

And at another to *let* in the foe,

Effeminately vanquished? *Milton's Agonistes.*

Let Euclid rest, and Archimedes pause.

Milton.

(Persons) who have a conscience, but are shy of disclosing it, or *letting* it take air, and walk in open day-light, confining it as a criminal to close restraint or obscure retirement.

Barrow.

And if I knew which way to do't,

Your honour safe, I'd *let* you out. *Hudibras,*

Finding an ease in not understanding, he *let* loose his thoughts wholly to pleasure.

Sidney.

The *letting out* our love to mutable objects doth but enlarge our hearts, and make them the wider marks for fortune to be wounded.

Boyle.

Let me alone to accuse him afterwards.

Dryden.

On the crowd he cast a furious look,
And withered all their strength before he spoke;
Back on your lives, *let* he, said he, my prey,
And *let* my vengeance take the destined way. *Id.*

But one submissive word which you *let* fall, Will make him in good humour with us all. *Id.*
Nothing deadens so much the composition of a picture, as figures which appertain not to the subject: we may call them figures to be *let*. *Id.*

This is of no use, and had been better *let* alone: he is fain to resolve all into present possession.

Locke.

One who fixes his thoughts intently on one thing, so as to take but little notice of the succession of ideas in his mind, *lets* slip out of his account a good part of that duration.

Id.

They should speak properly and correctly, whereby they may *let* their thoughts into other men's minds the more easily.

Id.

You must *let* it down, that is, make it softer by tempering it.

Moxon's Mechanical Exercises.

She *let* her second floor to a very genteel man.

Taitler.

It is the key that *lets* them into their very heart, and enables them to command all that is there.

South's Sermons.

Nestor, do not *let* us alone till you have shortened our necks, and reduced them to their antient standard.

Addison.

He was *let* loose among the woods as soon as he was able to ride on horseback, or carry a gun.

Id. Spectator.

There are pictures of such as have been distinguished by their birth or miracles, with inscriptions, that *let* you into the name and history of the person represented.

Addison.

As soon as they have hewn down any quantity of the rocks, they *let* in their springs and reservoirs among their works.

Id.

We must not *let* go manifest truths, because we cannot answer all questions about them.

Collier.

A solution of mercury in aqua fortis being poured upon iron, copper, tin, or lead, dissolves the metal, and *lets* go the mercury.

Newton's Opticks.

This notion might be *let* alone and despised, as a piece of harmless unintelligible enthusiasm.

Rogers.

Hippocrates *let* great quantities of blood, and opened several veins at a time.

Arbutnot on Coins.

O'er golden sands *let* rich Pactolus flow,
Or trees weep amber on the banks of Po,
While by our oaks the precious loads are born,
And realms commanded which those trees adorn.

Pope.

From this point of the story, the poet is *let* down to his traditional poverty.

Id.

A law was enacted, prohibiting all bishops, and other ecclesiastical corporations, from *letting* their lands for above the term of twenty years.

Swift.

Charging my pistol with powder, I cautioned the emperor not to be afraid, and then *let* it off in the air.

Id.

Here *let* me sit,

And hold high converse with the mighty dead.

Thomson.

Life's a debtor to the grave;

Dark lattice! *letting* in eternal day. *Young.*

LET, *v. a., v. n. & n. s.* Sax. *lettan*: Goth. *letta*; Belg. *letten*. To hinder; obstruct; oppose: as a verb neuter, to forbear; desist; withhold one's self. 'To let, when it signifies to permit or leave, has let in the preterite and part. passive; but, when it signifies to hinder, it has letted; as, 'many things have letted me.' As a noun, it signifies hindrance; obstacle; impediment.

Wherefore do ye *let* the people from their works? go you unto your burdens. *Exodus v. 4.*

I will work, and who will let it? *Isa.* xliiii. 11.

The mystery of iniquity doth already work; only he who now letteth will let, until he be taken out of the way. *2 Thess.*

And in she goth withouten lenger lette,
And to the markis she hire fader sette,

Chaucer. Cant. Tales.

Just judge, two lets remove; that, free from dread,
I may before thy high tribunal plead. *Sandys.*

Leave, ah, leave off, whatever wight thou be,
To let a weary wretch from her due rest,
And trouble dying soul's tranquillity!

Faerie Queene.

To glorify him in all things is to do nothing
whereby the name of God may be blasphemed;
nothing whereby the salvation of Jew or Grecian,
or any in the church of Christ, may be let or hindered.

Hooker.

The secret lets and difficulties in public proceedings are innumerable and inevitable. *Id.*

After king Ferdinando had taken upon him the person of a fraternal ally to the king, he would not let to counsel the king. *Bacon.*

Solyman without let presented his army before the city of Belgrade. *Knolles's History of the Turks.*

It had been done ere this, had I been consul;
We had had no stop, no let. *Ben Jonson's Catiline.*

Whosoever seeks the land of promise, shall find many lets. *Bp. Hall.*

Their senses are not letted from enjoying their objects: we have the impediments of honour, and the torments of conscience. *Sidney.*

And now, no longer letted of his prey,
He leaps up at it with enraged desire.

Dryden.

To these internal dispositions to sin, add the external opportunities and occasions concurring with them, and removing all lets and rubs out of the way, and making the path of destruction plain before the sinner's face, so that he may run his course freely. *South.*

LETHARGIC, *adj.* } Fr. *lethargic*; *letar-*
LETHARGICNESS, *n. s.* } *gic*; Ital. *lethargio*, *le-*
LETHARGY, *n. s.* } *targo*; Span. and Port. *le-*
LETHE. } *targia*; Lat. *lethar-*
gia, *lethargus*; Gr. *ληθαργος*, *ληθη*, as Parkhurst and Minshew suggest, from the Heb. *לשון*, to hide. Drowsy; morbid; sleepy through disease, or unnaturally: lethargicness, and lethargy, both signify morbid drowsiness: lethe, oblivion; an oblivious draught. See below.

I wold make invocacion,
With devoute speciall devocion,
Unto the god of Slepe anone,
That dwellith in a cave of stone,
Upon a streme that cometh fro Lete.

Chaucer. House of Fame.

The conquering wine hath steapt our sense
In soft and delicate lethe. *Shakspeare.*

The lethargy must have his quiet course;
If not, he foams at mouth, and by and by
Breaks out to savage madness. *Id.*

His motion weakens, or his discernings
Are lethargied. *Id. King Lear.*

A grain of glory mixt with humbleness,
Cures both a fever, and lethargickness. *Herbert.*

Though his eye is open, as the morning's,
Towards lusts and pleasures; yet, so fast a lethargy
Has seized his powers towards public cares and dangers,

He sleeps like death. *Denham's Sophy.*

Lethe, the river of oblivion, rolls
His watery labyrinth, which whoso drinks
Forgets both joy and grief. *Milton.*

As sharp physic to cure public or private distempers; as an instrument of rousing us out of our sinful lethargies. *Barrow.*

When I behold a fashionable set out in all its magnificence, I fancy that I see gout and dropsies, fevers and lethargies, with other innumerable distempers, lying in ambuscade among the dishes. *Addison.*

Europe lay then under a deep lethargy; and was no otherwise to be rescued from it, but by one that would cry mightily. *Atterbury.*

A lethargy demands the same cure and diet as an apoplexy from a phlegmatick case, such being the constitution of the lethargick. *Arbuthnot on Diet.*

Vengeance is as if minutely proclaimed in thunder from heaven, to give men no rest in their sins, till they awake from the lethargick sleep, and arise from so dead, so mortiferous a state. *Hammond's Fundamentals.*

And therefore all fools, and distracted persons, and children, and lethargical and apoplectical people, or that are any ways senseless and incapable of human and reasonable acts, are to be assisted only by prayers. *Paley.*

Away! away! my early dream

Remembrance never must awake:

Oh! where is Lethe's fabled stream?

My foolish heart be still, or break. *Byron.*

LETHE, in ancient mythology, one of the rivers of hell, signifying oblivion or forgetfulness; its waters having, according to the poetic fictions of the priests, the power of making those who drank of them to forget every thing past.

LETI (Gregory), an eminent Italian writer, born in Milan in 1630, and who studied under the Jesuits at Cosenza, and was afterward sent by an uncle to Rome, who wished him to enter into the church; but he, being averse to it, went to Geneva. Thence he went to Lausanne; and contracting an acquaintance with John Anthony Guerin, an eminent physician, lodged at his house, professed the Calvinist religion, and married his daughter. He settled at Geneva; where he spent almost twenty years, carrying on a correspondence with learned men, especially those of Italy. Some contests obliged him to leave that city in 1679; upon which he went to France and then into England, where he was received with great civility by Charles II., who, after his first audience, made him a present of 1000 crowns, and promised him the place of historiographer. He wrote there the History of England; but, that work not pleasing the court, he was ordered to leave the kingdom. He went to Amsterdam in 1682, and was honored with the place of historiographer to that city. He died suddenly in 1701. He was a man of indefatigable application, as the multiplicity of his works show. The principal of these are, 1. The Universal Monarchy of Louis XIV. 2. The Life of Pope Sixtus V. 3. The Life of Philip II. King of Spain. 4. The Life of the Emperor Charles V. 5. The Life of Elizabeth, Queen of England. 6. The History of Oliver Cromwell. 7. The History of Great Britain, 5 vols. 12mo 8. The History of Geneva, &c.

LETTER, *n. s. & v. a.* } Fr. *lettre*; Italian
LETTERS, *n. s.* } *lettera*; Lat. *litera*.
LETTERED, *adj.* } An alphabetical character; one of the elements of a syllable; verbal expression; written message or communication;

an epistle; printers' type. Letters (only used in the plural in this sense), signify learning; scholastic knowledge. To letter is to inscribe or stamp with letters. Lettered, learned; literary.

For if ye bileueden to Moyses perauenture ye schulden bileue also to me; for he wroot of me. But if ye bileuen not hise *lettris*, how schulen ye bileue to my wordis? *Wiclif, Jon 5.*

Need we, as some others, epistles of commendation: to you, or *letters* of commendation: *2 Cor. iii. 1.*

A superscription was written over him in *letters* of Greek, Latin, and Hebrew. *Luke xxiii. 38.*

The Jews marvelled, saying, How knoweth this man *letters*, having never learned? *John vii. 15.*

Touching translations of holy scripture, we may not disallow of their painful travels herein, who strictly have tied themselves to the very original *letter*. *Hooker.*

I have a *letter* from her
Of such contents as you will wonder at.

Shaks.

When a Spaniard would write a *letter* by him, the Indian would marvel how it should be possible that he, to whom he came, should be able to know all things. *Abbot.*

In obedience to human laws, we must observe the *letter* of the law, without doing violence to the reason of the law, and the intention of the lawgiver. *Taylor's Holy Living.*

Having once surveyed the true and proper natural alphabet, we may easily discover the deviations from it, in all the alphabets in use, either by defect of single characters, of *letters*, or by confusion of them. *Holder.*

What! since the pretor did my fetters loose,
And left me freely at my own dispose,
May I not live without controul and awe,
Excepting still the *letter* of the law? *Dryden.*

The asses will do very well for trumpeters, and the hares will make excellent *letter* carriers. *L'Estrange.*

The iron ladles that *letter* founders use to the casting of printing *letters*, are kept constantly in melting metal. *Moxon.*

The stile of *letters* ought to be free, easy, and natural; as near approaching to familiar conversation as possible: the two best qualities in conversation are, good humour and good breeding; those *letters* are therefore certainly the best that shew the most of these qualities. *Walsh.*

Those words of his must be understood not according to the bare rigour of the *letter*, but according to the allowances of expression. *South.*

Good laws are at best but a dead *letter*. *Addison.*

I observed one weight *lettered* on both sides; and I found on one side, written in the dialect of men, and underneath it, Calamities; on the other side was written, in the language of the gods, and underneath, Blessings. *Id.*

A martial man, not sweetened by a *lettered* education, is apt to have a tincture of sourness. *Collier on Pride.*

There is no rule in the world to be made for writing *letters*, but that of being as near what you speak face to face as you can; which is so great a truth, that I am of opinion, writing has lost more mistresses than any one mistake in the legend of love. *Steele.*

The flowers of eloquence, profusely poured
O'er spotted vice, fill half the *lettered* world. *John*

Whatever absurdities men of *letters* have indulged,

and how fantastical soever the modes of science have been, their anger is still more subject to ridicule.

Goldsmith.

'There's ither poets much your betters,
Far seen in Greek, deep men o' *letters*,
Hae thought they had insured their debtors,
A' future ages. *Burns.*

The volume of Christian Scriptures contains thirteen *letters*, purporting to be written by St. Paul. *Paley.*

Julia was sent into a convent: she
Grieved, but, perhaps, her feelings may be better
Shown in the following copy of her *letter*. *Byron.*

LETTER is a character used to express one of the simple sounds of the voice; and, as the different simple sounds are expressed by different letters, these, by being differently compounded, become the visible signs or characters of all the modulations and mixtures of sounds used to express our ideas in a regular language. See LANGUAGE. Thus, as by the help of speech we render our ideas audible, by the assistance of letters we render them visible, and by their help we can preserve our thoughts, and send them to the most distant parts of the earth and read the transactions of different ages. Philo attributes the invention of letters to Abraham; Josephus, St. Irenæus, and others, to Enoch; Bibliander, to Adam; Eusebius, Clemens Alexandrinus, Cornelius Agrippa, and others, to Moses; Pomponius Mela, Herodian, Rufus, Festus, Pliny, Lucan, &c., to the Phœnicians; St. Cyprian, to Saturn; Tacitus, to the Egyptians; some, to the Ethiopians. There have been also various conjectures about the different kinds of letters used in different languages: thus, according to Crinitus, Moses invented the Hebrew letters; Abraham, the Syriac and Chaldee; The Phœnicians, those of Attica, brought into Greece by Cadmus, thence into Italy by the Pelasgians; Nicostrata, the Roman; Isis, the Egyptian; and Vulsilas, those of the Goths. It is probable that hieroglyphics were the first writings; but whether Cadmus and the Phœnicians learned the use of letters from the Egyptians, or from their neighbours of Judea or Samaria, is a question that cannot be determined. But, wheresoever the Phœnicians learned this art, it is generally agreed, that Cadmus the son of Agenor first brought letters into Greece; whence, in following ages, they spread over the rest of Europe. The alphabet of every language consists of a number of letters, which ought each to have a different sound, figure, and use. As the difference of articulate sounds was intended to express the different ideas of the mind, so one letter was originally intended to signify only one sound, and not, as at present, to express sometimes one sound and sometimes another; which practice has brought confusion into the languages, and rendered the acquisition of modern tongues a more difficult task than it would otherwise have been. This consideration, together with the deficiency of all the known alphabets, from their wanting some letters to express certain sounds, has occasioned several attempts towards a universal alphabet, to contain an enumeration of all such single sounds or letters as are used in any language. Grammarians distinguish letters into vowels, consonants

mutes, liquids, diphthongs, and characteristics.

LETTER, or type, among printers, is not only used to signify the **CAPITALS**, **SMALL CAPITALS**, and small letters, but all the points, figures, and other marks cast and used in printing. They are also denominated from the shape and turn of the letters; and are distinguished into different hands, German text, Roman, Italic, black letter, &c. The letters used in printing are cast at the ends of small pieces of metal, about three quarters of an inch in length; and the letter being not indented, but raised, easily gives the impression, when, after being blacked with a glutinous ink, paper is closely pressed upon it. See the article **PRINTING**. A font of letters includes small letters, capitals, small capitals, points, figures, spaces, &c.; but besides, they have different kinds of two-line letters, only used for titles, and the beginning of books, chapters, &c.

LETTER OF ATTORNEY, in law, is a writing by which one person authorises another to do some lawful act in his stead; as to give seisin of lands, to receive debts, sue a third person, &c. The nature of this instrument is to transfer to the person to whom it is given the power of the maker, to enable him to accomplish the act intended to be performed. It is either general or special; and sometimes it is made recoverable, which is when a bare authority only is given; and sometimes it is irrecoverable, as where debts, &c., are assigned from one person to another. It is generally held, that the power granted to the attorney must be strictly pursued; and that where it is made to three persons two cannot execute it. In most cases the power given by a letter of attorney determines upon the death of the person who gave it. No letter of attorney made by any seamen, &c., in any ship of war, or having letters of marque, or by their executors, &c., in order to empower any person to receive any share of prizes or bounty money, shall be valid, unless the same be made revocably, and for the use of such seamen, and be signed and executed before, and attested by, the captain and one other of the signing officers of the ship, or the mayor or chief magistrate of some corporation.

LETTER OF MARQUE. See **MARQUE**.

LETTERS, PATENT, or overt, are writings sealed with the great seal of England, whereby a man is authorised to do, or enjoy any thing, which of himself he could not do. See **PATENT**. They are so called, by reason of their form; as being open with the seal affixed, ready to be shown for the confirmation of the authority given by them.

LETTSON (John Coakley), M. D., an ingenious medical and miscellaneous writer, was born in the Island of Little Vandyke, near Tortola, in the West Indies, of a Quaker family. He was sent to England at an early age, and placed under the tuition of a Mr. Thompson, near Warrington, where Dr. Fothergill had a summer residence, and also superintended his studies. He was then apprenticed to an apothecary at Settle, and attended for two years at St. Thomas's Hospital, London. His father having now died, he returned to the West Indies, to take possession of some property which devolved on him, and

settled as a medical practitioner at Tortola. The slaves of his paternal estate he at this time nobly liberated. Shortly after he re-crossed the Atlantic, and visited the medical schools of Edinburgh, Paris, and Leyden, at the last of which he took his degree of M. D. Having married a lady of considerable fortune, he settled in London as a physician, and obtained a lucrative practice. In 1769 he was admitted a member of the college of physicians, the next year F. S. A., and the year succeeding F. R. S. Besides papers in the Philosophical Transactions, and medical periodical works, he published *The Natural History of the Tea-tree*; 1772, 4to. *The Naturalist's and Traveller's Companion*; 1774, 8vo., third edition 1800. *Medical Memoirs of the General Dispensary*, 1774, 8vo. *Hints on Beneficence, Temperance, and Medical Science*, 1801, 3 vols. 8vo. *Memoirs of Dr. Fothergill*; &c. He died in Sambreok Court, London, November 1st, 1815, aged seventy-one. His life, and a collection of his works, were published by Mr. Pettigrew.

LETTUCE, *n. s.* Teut. *lattuh*; Ital. *lattuca*; Span. *lechuga*; Lat. **LACTUCA**, which see. A herb.

Fat colworts, and comforting purseline,

Cold lettuce, and refreshing rosemerine. *Spenser*.
Lettuce is thought to be poisonous, when it is so old as to have milk. *Bacon's Natural History*.

The medicaments proper to diminish milk, are lettuce, purslane, endive. *Wise man's Surgery*.

The species are, common or garden lettuce; cabbage lettuce; Silesia lettuce; white and black cos; white cos; red capuchin lettuce. *Miller*.

His diet was of wheaten bread,

And milk, and oats, and straw;

Thistles, or lettuces instead,

With sand to scour his maw. *Cowper*.

LETTUCE, in botany. See **LACTUCA**.

LETTUCE, HARES. See **SONCHUS**.

LETTUCE, WILD. See **PRENANTHES**.

LEVANT, *adj. & n. s.* Fr. *levant*; Lat. *levo*. Eastern; the quarter of sun-rise; the Mediterranean coasts east of Italy.

Thwart of those, as fierce

Forth rush the *levant*, and the potent winds.

Eurus and Zephyr. *Milton's Paradise Lost*.

LEVANT, or Titan, one of the Hieres.

LEVANT SEA, the eastern part of the Mediterranean, bounded by Lesser Asia on the north; by Syria and Palestine on the east; by Egypt and Barca on the south; and by Candia and the other ports of the Mediterranean on the west.

LEVATOR, *n. s.* Lat. *levator* (*levis*). A surgical instrument, whereby depressed parts of the skull are lifted up: now more commonly called an elevator.

Some surgeons bring out the bone in the bore; but it will be safer to raise it up with your *levator*, when it is but lightly retained in some part.

Wise man's Surgery.

LEUCA, in antiquity, a geographical measure of length, in use among the later Gauls; which according to Jornandes, who calls it leuga, contained 1500 paces, or one mile and a half. Hence the word league, now reckoned at three miles; in the lower age called leua.

LEUCADIA, formerly called Neritis, a peninsula of Acarnania (Homer); but afterwards,

by cutting through the peninsula, made an island, as it is at this day, called St. Maura.

LEUCAS, in ancient geography, a city of Leucadia, formerly called Neritos and Neritus, situated near a narrow neck of land, or isthmus, on a hill facing the east and Acarnania: the foot or lower part of the town was a plain lying on the sea, by which Leucadia was divided from Acarnania (Livy); though Thucydides places Leucas more inward in the island, which was joined to the continent by a bridge. It was an illustrious city, the capital of Acarnania, and the place of general assembly.

LEUCAS, in zoology. See **DELPHINUS**.

LEUCATA, or **LEUCATE**, in ancient geography, a promontory of Leucadia, according to Strabo, a white rock projecting into the sea towards Cephalenia, on which stood a temple of Apollo, surnamed Leucadius. At his festival, which was annually celebrated here, the people offered an expiatory sacrifice, to avert on the head of the victim all the calamities with which they might be threatened. For this purpose they made choice of a criminal condemned to die; and, leading him to the brink of the promontory, precipitated him into the sea amidst the loud shouts of the spectators. The criminal, however, seldom perished in the water: for it was the custom to cover him with feathers, and fasten birds to his body, which by spreading their wings might serve to break his fall. No sooner did he touch the sea, than a number of boats, stationed for that purpose, flew to his assistance, and drew him out; and, after being thus saved, he was banished for ever from the territory of Leucadia. Strabo, lib. 10, p. 452. According to ancient authors, a strange opinion concerning this promontory prevailed for some time among the Greeks. They imagined that the leap of Leucata was a certain remedy for excessive love. Hence disappointed or despairing lovers often came to Leucadia; and, having ascended the promontory, offered sacrifices in the temple, and, engaging by a formal vow to perform the desperate act, they voluntarily precipitated themselves into the sea. Some are reported to have recovered from the effects of the fall; and, among others, mention is made of a citizen of Buthroton, in Epirus, whose passions always taking fire at new objects, he four times had recourse to the same remedy, and always with the same success. As those who made the trial, however, seldom took any precaution to render their fall less rapid, they were generally destroyed; and women often fell victims to this act of desperation. At Leucata was shown the tomb of Artemisia, that celebrated queen of Caria, who gave so many proofs of courage at the battle of Salamis. Inflamed with a violent passion for a young man who inflexibly refused her love, she surprised him in his sleep and put out his eyes. Regret and despair soon brought her to Leucata, where she perished in the waves, notwithstanding every effort to save her. Such, likewise, was the end of the unhappy Sappho. Forsaken by her lover Phaon, she came hither to seek relief from her sufferings, and found her death.

LEUCE, a triangular island, in the Euxine

Sea, between the mouths of the Borysthenes and the Danube. The poets fabied it to be a kind of Elysian receptacle for departed heroes, and hence styled it the Island of the Blessed.

LEUCIPPUS, a celebrated Greek philosopher and mathematician; first author of the famous system of atoms and vacuums, and of the hypothesis of storms; since attributed to the moderns. He flourished about A. A. C. 428.

LEUCOGÆUS, in ancient geography, a hill of Italy, between Putuoli and Neapolis, in Campania, abounding in sulphur; now l'Alumera. It had springs called Lecogæi fontes; the waters of which, according to Pliny, gave a firmness to the teeth, clearness to the eyes, and proved a cure to wounds.

LEUCOJUM, great snow-drop, a genus of the monogynia order, and hexandria class of plants; natural order ninth, spathaceæ: cor. campanulated, sexpartite; the segments increased at the points; the stigma simple. There are four species, viz.

1. *L. æstivum*, the summer leucojum, has a large, oblong bulbous root, crowned with several long, flat, broad leaves; and amidst them an upright, thick, hollow stalk, fifteen or eighteen inches high; terminated by a spatha protruding many white flowers, on slender foot-stalks, drooping downwards; flowering in May.

2. *L. autumnale*, the autumnal leucojum, has a large, oblong, bulbous root, crowned with many narrow leaves; an upright, naked, hollow stalk, terminated by a spatha protruding many white flowers on long weak foot-stalks, hanging downwards, and flowering in autumn.

3. *L. vernalis*, the spring leucojum, has an oblong, bulbous root, sending up several flat leaves, six or eight inches long; and amidst them an upright, channelled, hollow, naked stalk, about a foot high, terminated by a spatha, protruding one or two white flowers on slender foot-stalks, drooping downwards, and appearing in March. All these species are very hardy, durable in the roots, and increase exceedingly by offsets, which may be separated every two or three years.

LEUCOMA, in antiquity, a public register among the Athenians, in which were inserted the names of all the citizens, as soon as they were of age to enter upon their paternal inheritance.

LEUCOMA, in surgery, a distemper of the eye. See **SURGERY**.

LEUCOPETRA, in ancient geography, a promontory of Italy, so called from its white color (Strabo); in the country of the Brutii, and territory of Rhegium; the termination of the Appenine, and the outmost extremity of the Brutii, or the modern Calabria Ultra; as the Japygium is of the ancient Calabria, or the modern Calabria Citra.

LEUCOPETRIANS, in ecclesiastical history, a fanatical sect, which sprang up in the Greek and Eastern churches towards the close of the twelfth century: the fanatics of this denomination professed to believe in a double Trinity rejected wedlock, abstained from flesh, treated with the utmost contempt the sacraments of baptism and the Lord's supper, and all the vari-

ous branches of external worship; placed the essence of religion in internal prayer alone, and maintained, as it is said, that an evil being or genius dwelt in the breast of every mortal, and could be expelled thence by no other method than by perpetual supplication to the Supreme Being.

LEUCOPHLEG'MACY, *n. s.* } From λευ-
LEUCOPHLEGΜΑΤ'IC, *adj.* } κορ, white,
and φλεγμα, phlegm. Paleness, with viscid
juices and cold sweatings.

Spirits produce debility, flatulency, fevers, *leuco-*
phlegmacy, and dropsies. *Arbuthnot on Aliments.*

Asthmatick persons have voracious appetites, and
for want of a right sanguification are *leucophlegma-*
tick. *Arbuthnot.*

LEUCOTHEA, or LEUCOTHOE, in mytho-
logy, the wife of Athamas, changed into a sea
deity: see INO. She was called Matuta by the
Romans. She had a temple at Rome, where all
the people, particularly women, offered vows for
their brother's children. They did not intreat
the deity to protect their own children, because
Ino had been unfortunate in hers. No female
slaves were permitted to enter the temple; or, if
their curiosity tempted them to transgress this
rule, they were beaten with great severity.

LEUCTRA, in ancient geography, a town of
Bœotia, west of Thebes, or between Plateæ and
Thespia, where the Lacedemonians were com-
pletely defeated by Epaminondas and Pelopidas
the Theban generals. The Theban army con-
sisted at most but of 6000 men, whereas that of
the enemy was at least 18,000; but Epaminon-
das trusted most in his horse, wherein he had
much the advantage, both in their quality and
good management; the rest he endeavoured to
supply by the disposition of his men, and the
vigor of the attack. He suffered none to serve
under him in the engagement, but such as he
knew to be fully resolved to conquer or die.
He put himself at the head of the left wing, op-
posite to Cleombrotus, king of Sparta; con-
cluding, that if he could break the body of the
Spartans, which was but twelve men deep, while
his own was fifty, the rest would be soon put to
flight. He closed his own with the sacred
band, which was commanded by Pelopidas;
and placed his horse in the front. His right, from
which he had drawn so many men, he ordered
to fall back, in a slanting line, as if they de-
clined to fight, that they might serve for a corps
of reserve in case of need. This wise disposi-
tion of their few but resolute forces succeeded
according to the wish of the Theban generals.
Epaminondas advanced with his left wing, ex-
tending it obliquely, to draw the enemy's right
from the main body; and Pelopidas charged them
with such desperate speed and fury, at the head
of his battalion, before they could reunite, that
their horse were forced back upon their infantry,
which threw the whole into the greatest confu-
sion; so that though the Spartans were of all
the Greeks the most expert in recovering from
any surprise, yet their skill on this occasion
failed them; for the Thebans, observing the im-
pression they had made with their horse, pushed
furiously upon the Spartan king, who fell with
vast numbers of his troops. Upon the death

of Cleombrotus, and several officers of note, the
Spartans renewed the fight with double fury to
recover his body. Epaminondas chose rather
to gratify them in that point, than to hazard the
success of a second onset: and, leaving them in
possession of their king's corpse, marched
straight against their other wing, commanded by
Archidamus, and consisting chiefly of such aux-
iliaries as had not heartily engaged in the Spar-
tan interest. These were so discouraged by the
death of the king and the defeat of that wing,
that they betook themselves to flight, and were
presently after followed by the rest of the army.
The Thebans, however, pursued them so closely,
that they made a second dreadful slaughter
among them; which completed Epaminondas's
victory, who remained master of the field, and
erected a trophy in memory of it. In this
famed battle of Leuctra the Lacedemonians lost
4000 men, and the Thebans only 300.

LEV'EE, *n. s.* Fr. *lever*, from Lat. *levo*; *levee*.
Strictly, the time of rising: hence the attendants
or concourse round a man of power in the
morning.

Would'st thou be first minister of state;
To have thy levees crouded with resort
Of a depending, gaping, servile court?

Dryden.

Be levees ne'er so full, afford it room,
And give it audience in the cabinet. *Young.*
He chides the tardiness of every post,
Pants to be told of battles won or lost,
Blames his own indolence, observes, though late,
'Tis criminal to leave a sinking state,
Flies to the levee, and, received with grace,
Kneels, kisses hands, and shines again in place.

Cowper.

LEV'EL, *adj., n. s., v. a. & v. n.* } Sax. læfel;
LEV'ELLER, *n. s.* } old Fr. level;
LEV'ELNESS. } Lat. libella.

Even; flat; plane; on a line with something
else; and, metaphorically, without gradations
of superiority: a level is a surface thus equal,
even, or flat; it also signifies standard; line of
general or average height; state of equality; line
of right, or direction; rule; plan; and a me-
chanical instrument for ascertaining the truth or
flatness of masons' and carpenters' work: a level-
ler is generally used in a bad sense, or for one
who seeks to destroy the authority with the
superiority of station: levelness, evenness;
equality.

He will thy foes with silent shame confound,
And their proud structures level with the ground.

Sandys.

Those bred in a mountainous country oversize
those that dwell on low levels. *Id. Travels.*

The glory of God, and the good of his church,
was the thing which the apostles aimed at, and
therefore ought to be the mark whereto we also level.

Hooker.

Dogged York, that reaches at the moon,
Whose over-weening arm I have plucked back,
By false accuse doth level at my life.

Shakspeare. Henry VI.

Our navy is addressed, our power collected,
And every thing lies level to our wish.

Shakspeare.

As if that name,
Shot from the deadly level of a gun,
Did murder her. *Id. Romeo and Juliet.*

I stood i' the' level

Of a full charged confederacy, and gave thanks
To you that choked it. *Id. Henry VIII.*

We know by experience, that all downright rains
do evermore dissolve the violence of outrageous
winds, and beat down and level the swelling and
mountainous billows of the sea. *Raleigh.*

The river Tiber is expressed lying along, for so you
must remember to draw rivers, to express their level-
ness with the earth. *Peacham.*

Reason can never assent to the admission of those
orutish appetites which would over-run the soul,
and level its superior with its inferior faculties.

Decay of Piety.

It might perhaps advance their minds so far
Above the level of subjection, as

T' assume to them the glory of that war. *Daniel.*

Now shaves with level wing the deep. *Milton.*

Less bright the moon,

But opposite in levelled west was set. *Id.*

Each at the head

Levelled his deadly aim. *Id.*

After draining of the level in Northamptonshire,
innumerable mice did upon a sudden arise.

Hale's Origin of Mankind.

It (Christianity) levelleth the rich and the poor,
the prince and the peasant, the philosopher and idiot,
in spiritual regards; yea far preferreth the meanest
and simplest persons endued with true piety, above
the mightiest and wealthiest who is devoid thereof.

Barrow.

He to his engine flew,
Placed near at hand in open view,
And raised it till it levelled right
Against the glow-worm tail of kite.

Hudibras.

Love of her made us raise up our thoughts above
the ordinary level of the world, so as great clerks do
not disdain our conference. *Sidney.*

Thrice happy is that humble pair,
Beneath the level of all care,
Over whose heads those arrows fly,
Of sad distrust and jealousy. *Waller.*

There is a knowledge which is very proper to man,
and lies level to human understanding, the knowledge
of our Creator, and of the duty we owe to him.

Tillotson.

The garden, seated on the level floor
She left behind. *Dryden's Boccace.*
With unresisted might the monarch reigns;
He levels mountains, and he raises plains;
And, not regarding difference of degree,
Abased your daughter, and exalted me. *Dryden.*

One to the gunners on St. Jago's tower,
Bid 'em for shame level their cannon lower. *Id.*
Behold the law

And rule of beings in your Maker's mind;
And thence, like limbecks, rich ideas draw,
To fit the levelled use of humankind. *Id.*

The level is from two to ten feet long, that it may
reach over a considerable length of the work: if
the plumb-line hang just upon the perpendicular, when
the level is set flat down upon the work, the work is
level; but if it hangs on either side the perpendicular,
the floor or work must be raised on that side, till the
plumb-line hang exactly on the perpendicular.

Maxon's Mechanical Exercises.

Providence, for the most part, sets us upon a level,
and observes proportion in its dispensations towards
us. *Addison's Spectator.*

Be the fair level of thy actions laud,
As temperance wills, and prudence may persuade,
And try if life be worth the liver's care. *Prior.*

You are an everlasting leveller; you won't allow
encouragement to extraordinary merit. *Collier.*

The time is not far off when we shall be upon the
level.—I am resolved to anticipate the time, and be
upon the level with them now: for he is so that
neither seeks nor wants them. *Atterbury to Pope.*

Be level in preferences, and you will soon be as
level in your learning. *Bentley.*

Fired at first sight with what the muse imparts,
In fearless youth we tempt the heights of arts;
While from the bounded level of our mind
Short views we take, nor see the lengths behind.

Pope.

I suppose, by the stile of old friends, and the like,
it must be somebody there of his own level; among
whom his party have, indeed, more friends than I
could wish. *Swift.*

It pleads exemption from the laws of sense,
Considers reason as a leveller,
And scorns to share a blessing with the crowd.

Young.

A level plain of a vast extent on land is certainly
no mean idea; the prospect of such a plain may be
as extensive as a prospect of the ocean: but it can
never fill the mind with any thing so great as the
ocean itself. *Burke on the Sublime.*

Each sate him down, all sad and mute,
Beside his monarch and his steed,
For danger levels man and brute,
And all are fellows in their need. *Byron.*

LEVEL, in the arts, is an instrument with
which to draw a line parallel to the horizon, and
thus to find the true level, or the difference of
ascent or descent between several places, for con-
veying water, draining fens, &c. There are
several instruments of different contrivance and
matter, invented for the perfection of levelling;
the principles of all which, however, may be
found in the following:—

LEVEL, AIR.—The air-level is that which
shows the line of level, by means of a bubble of
air enclosed with some liquor in a glass tube of
an indeterminate length and thickness, whose
two ends are hermetically sealed. When the
bubble fixes itself at a certain mark, made exactly
in the middle of the tube, the plane or ruler
wherein it is fixed is level. When it is not level,
the bubble will rise to one end. This glass tube
may be set in another of brass, having an aper-
ture in the middle, whence the bubble of air may
be observed. The liquor wherewith the tube is
filled is oil of Tartar, or aqua secunda; these not
being liable to freeze as common water, nor to
rarify and condense, as spirit of wine is. This
application of a bubble of air was the invention
of Dr. Hooke. There is one of these instru-
ments, which, by the addition of sights, becomes
much more exact. It consists of an air-level
(fig. 1. plate LEVELS), about eight inches long,
and seven or eight lines in diameter, set in a brass
tube 2, with an aperture in the middle, C. The
tubes are carried in a strong straight ruler, a
foot long; at whose ends are fixed two sights, 3,
3, exactly perpendicular to the tubes, and of an
equal height, having a square hole, formed by
two fillets of brass crossing each other at right
angles, in the middle whereof is drilled a very
small hole, through which the point on a level
with the instrument is observed. The brass tube
is fastened on the ruler by means of two screws.
The top of the ball and socket is rivetted to a
little ruler that springs, one end whereof is fas-
tened with screws to the great ruler, and at the

other end has a screw, serving to raise and depress the instrument when nearly level. The following instrument, however, is still more commodious, because, though the holes be ever so small, yet they will still take in too great a space to determine the point of level precisely. It consists of an air-level, with telescope sights. This level, fig. 2, is like the last; with this difference, that, instead of plain sights, it carries a telescope to determine exactly the point of level at a distance. The telescope is a little brass tube about fifteen inches long, fastened on the same ruler as the level. At the end of the tube of the telescope, marked 1, enters the little tube, 1, carrying the eye-glass and a hair horizontally placed in the focus of the object-glass, 2; which little tube may be drawn out, or pushed into the great one, for adjusting the telescope to different sights; at the other end of the telescope is placed the object-glass. The screw, 3, is for raising or lowering the little fork, carrying the hair, and making it agree with the bubble of air when the instrument is level; and the screw, 4, is for making the bubble of air E agree with the telescope: the whole is fitted to a ball and socket. M. Huygens is said to be the first inventor of this level; which has this advantage, that it may be inverted by turning the rules and telescope half round; and if then the hair cut the same point that it did before, the operation is just. A telescope may be added to any kind of level, by applying it upon, or parallel to, the base or ruler, when there is occasion to take the level of remote objects.

LEVEL, ARTILLERY FOOT, is in form like a carpenter's square, having its two legs or branches of an equal length; at their juncture is a little hole, whence hangs a thread and plummet playing on a perpendicular line in the middle of a quadrant. It is divided into twice forty-five degrees from the middle. This instrument may be used on other occasions, by placing the ends of its two branches on a plane; for, when the thread plays perpendicularly over the middle division of the quadrant, that plane is assuredly level. To use it in gunnery, place the two ends on the piece of artillery, which you may raise to any proposed height, by means of the plummet, whose thread will give the degree above the level. See fig. 3, plate LEVELS.

LEVEL, CARPENTER'S AND PAVIOR'S, consists of a long rule, to which is fitted, at right angles, another rule at the top of which is fastened a line, which, when it hangs over a fiducial line at right angles with the base, shows that the said base is horizontal. Sometimes this level is all of one board. See figs. 4 and 5.

LEVEL, DR. DESAGULIERS'S. Dr. Desaguliers contrived an instrument, by which the difference of level of two places, which could not be taken in less than four or five days with the best telescope levels, may be taken in as few hours.—To the ball C (fig. 6, plate LEVELS), is joined a recurve tube BA, with a very fine bore, and a small bubble at top A, whose upper part is open. If the air at C be so expanded with heat, as to drive the liquor to the top of the tube, the cavity A will receive the liquor, which will come down again and settle at D, or near it, according to the level of the place where the instrument is, as soon as

the air at C returns to the same temperament as to heat and cold. To preserve the same degree of heat, when the different observations are made, the machine is fixed in a tin vessel EF, filled with water up to *g h*, above the ball, and a very sensible thermometer has also its ball under water, that the height of the liquor at D, in each experiment may be noticed, when the thermometer stands at the same height as before. The instrument is carried by means of the wooden frame, which is set upright by the three screws, S, S, fig. 7, and a line and plummet P P, fig. 8. At the back part of the wooden frame, from the piece at top K, hangs the plummet P, over a brass point at N; fig. 9 represents a front view of the machine, supposing the fore part of the tin-vessel transparent; and here the brass socket of the recurve tube, into which the ball is screwed, has two wings at I, I, fixed to the bottom, that the ball may not break the tube by its endeavour to emerge when the water is poured in at *g h*. After the doctor had contrived this machine, he considered, that, as the tube is of a very small bore, if the liquor should rise into the ball at A, in carrying the instrument from one place to another, some of it would adhere to the sides of the ball A, and, upon his descent in making the experiment, so much might be left behind, that the liquor would not be high enough at D to show the difference of the level; therefore, to prevent that inconveniency, he contrived a blank screw, to shut up the hole at A, as soon as one experiment is made, that, in carrying the machine, the air in A may balance that in C, so that the liquor shall not run up and down the tube, whatever degree of heat and cold may act upon the instrument, in going from one place to another. Observe and set down the degree of the thermometer at which the spirit stands, and likewise the degree of the water in the barometer at D; then screw on the cap at A, pour out the water, and carry the instrument to the place whose level you would know; then pour in your water, and, when the thermometer is come to the same degree as before, open the screw at top, and observe the liquor in the barometer. The doctor's scale for the barometer is ten inches long, and divided into tenths; so that such an instrument will serve for any height not exceeding ten feet, each tenth of an inch answering to a foot in height. The doctor made no allowance for the decrease of density in the air, because he did not propose this machine for measuring mountains (though, with a proper allowance for the decreasing density of the air, it will do very well), but for heights that are wanted to be known in gardens, plantations, and the conveyance of water, where an experiment that answers two or three feet in a distance of twenty miles, will render this a very useful instrument.

LEVEL, GUNNER'S, for levelling cannons and mortars, consists of a triangular brass plate, about four inches high, fig. 10, at the bottom of which is a portion of a circle, divided into 45°; which number is sufficient for the highest elevation of cannons and mortars, and for giving shot the greatest range: on the centre of this segment of a circle is screwed a piece of brass, by means of which it may be fixed or screwed off at pleasure: the end of this piece of brass is made so as to

LEVELS.

serve for a plummet and index, in order to show the different degrees of elevation of pieces of artillery. This instrument has sometimes also a brass foot to set upon cannons or mortars, so as, when those pieces are horizontal, the instrument will be perpendicular. The foot of this instrument is to be placed on the piece to be elevated, in such a manner as that the point of the plummet may fall on the proper degree. The most curious instrument for the use of the artillerist has been invented by the ingenious colonel Congreve, of the royal artillery; having the following qualifications, viz.: 1. It will find the inclination of any plane, whether above or below the horizon. 2. By applying it either to the cylinder, or outside of any piece of ordnance, angles of elevation or depression may be given to the sixtieth part of a degree, with less trouble than the common gunners' quadrant, which only gives to the fourth part of a degree. 3. It will give the line of direction for laying either guns or mortars to an object above or below the horizon. 4. It will find the centre of metals of any piece of ordnance. 5. With it, a point may be found in the rear of a mortar-bed, in the vertical plane of the mortar's axis; consequently a longer line of sight is given for directing them to the object than the usual way. 6. It answers all the purposes of a pair of callipers, with the advantage of knowing (to the 100th part of an inch) diameters, whether concave or convex, without the trouble of laying the claws upon a diagonal scale. 7. On the sides of the instrument are the following lines, viz. equal parts, solids, planes, and polygons, logarithms, tangents, versed sines, sines and numbers, plotting scales, and diagonal scale of inches for cutting fuses by. 8. In the lid of the instrument-case is a pendulum to vibrate half seconds. It is likewise of singular use in surveying; as (1.) It takes horizontal angles to the sixtieth part of a degree. (2.) Vertical angles. (3.) Levels. (4.) Solves right-angled plane triangles. (5.) Oblique-angled plane triangles. (6.) Answers all the purposes of a protractor, with the advantage of laying down angles exactly as taken in the field.

LEVEL, MASON'S, is composed of three rules, so joined as to form an isosceles rectangle, somewhat like a Roman A; at the vertex of which is fastened a thread, from which hangs a plummet, that passes over a siducial line, marked in the middle of the base, when the surface to which the level is applied is horizontal; but declines from the mark when it is lower on the one side than on the other.

LEVEL, HUYGENS'. Mr. Huygens' invention consists of a telescope *a*, fig. 11, in form of a cylinder, going through a scerule, in which it is fastened by the middle. This scerule has two flat branches *b, b*, one above, and the other below: at the ends whereof are fastened little moving pieces, which carry two rings, by one of which the telescope is suspended to a hook at the end of the screw *3*, and by the other a heavy weight is suspended, to keep the telescope in equilibrio. This weight hangs in the box *5*, which is almost filled with linseed-oil, or other matter that will not easily coagulate, for more aptly settling the balance of the weight and telescope. The instru-

ment carries two telescopes close and very parallel to each other; the eye-glass of the one being against the object-glass of the other, that one may see each way without turning the level. In the focus of the object-glass of each telescope a little hair must be stretched horizontally, to be raised and lowered as occasion requires, by a little screw. The look on which the instrument is hung is fixed to a flat wooden cross, to which is applied another hollow one, that serves as a case for the instrument, that the telescope may be secured from the weather, and always in a condition to be used. The foot of this instrument is a round brass plate *4*, to which are fastened three brass scerules, moveable by means of joints, whereon staves are put.

LEVEL, PLUMB, OR PENDULUM, that which shows the horizontal lines by another line perpendicular to that described by a plummet or pendulum. This instrument, fig. 12, consists of two legs or branches, joined together at right angles, whereof that which carries the thread and plummet is about a foot and a half long; the thread is hung towards the top of the branch, at the point *2*. The middle of the branch where the thread passes is hollow, so that it may hang free every where; but towards the bottom, where there is a little blade of silver *3*, whereon is drawn a line perpendicular to the telescope *1*, the cavity is covered by two pieces of brass, making as it were a kind of case, lest the wind should agitate the thread; for which reason the silver blade is covered with a glass *G*, to the end that it may be seen when the thread and plummet are perpendicular: the telescope is fastened to the other branch of the instrument, and is about two feet long; having a hair placed horizontally across the focus of the object-glass, which determines the point of the level. The telescope must be fitted at right angles to the perpendicular. It has a ball and socket, by which it is fastened to the foot, and was invented by M. Picard.

LEVEL, REFLECTING, that made by means of a pretty long surface of water representing the same object inverted which we see erected by the eye, so that the point where these two objects appear to meet is level with the place where the surface of the water is found. This is the invention of M. Marriotte. There is another reflecting level, consisting of a mirror of steel or the like, well polished, and placed a little before the object-glass of a telescope, suspended perpendicularly. This mirror must make an angle of 45° with the telescope, in which case the perpendicular line of the telescope is converted into a horizontal line, which is the same with the line of level. This is the invention of M. Cassini.

LEVEL, SPIRIT, the most accurate levelling instrument. The following is a description of one of the best of these levels. Fig. 13. is a representation of the instrument mounted on its complete staves. The telescope, *A B C*, is made from fifteen inches to two feet in length, as may be required. It is a chromatic, of the best kind and shows the objects erect. In the focus of the eye-glasses are exceedingly fine cross wires, the intersection of which is evidently shown to be perfectly in the axis of the tube; for, by turning

it round on its two supporters DE, and looking through the telescope, the intersection of the wires will constantly cut the same part of the object viewed. By turning the screw *a*, at the side of the telescope, the object-glass at *g* is moved; and thus the telescope is exactly adapted to the eye. If these cross wires are at any time out of their adjustment, which is discovered by their intersection not cutting the same part of the object during the revolution of the telescope on its axis, they are easily adjusted by means of the screws *bb*, placed on the telescope, about an inch from the end, for the eye. These screws act in perpendicular directions to one another, by unscrewing one and tightening the other opposite to the wire, so that, if connected with it, it may be moved either way at pleasure; and in this manner the other wire perpendicular to it may be moved, and thus the intersection of the wires brought exactly in the axis of the tube. To the telescope is fixed, by two small screws, *cc*, the level tube containing the spirits, with a small bubble of air: this bubble of air, when the instrument is well adjusted, will settle exactly in the same place, in or near the middle of its tube, whether the telescope be reversed or not on the supporters, which in this case are kept unmoved. It is evident that the axis of the telescope, or the intersection of the wires, must be in this case truly level. In this facile mode of adjustment consists the new improvement of the instrument; and it is hereby capable of being adjusted by only one station and one object, which will at the same time determine it to be in a true level. If by change of weather, accident, or otherwise, the instrument should have lost its level adjustment, it may thus be readily restored and re-adjusted at the first station; which is an advantage none of the other instruments formerly made have been capable of. The two supporters DE, on which the level rests and turns, are shaped like the letter Y. The telescope rests within the upper part of them; and the inner sides of each of these Y's are tangents to the cylindrical tube of the telescope, which is turned to a true cylinder. The lower end of these supporters is inserted into a strong brass plate, F, and so as to stand perpendicularly on it. One is kept fast by a tightening screw G, and to the other is applied a fine threaded screw H, to adjust the tube when on its supporters to a true level. To the supporter D is sometimes applied a line of tangents as far as 12° , in order to take an angle of depression or elevation to that extent. Between the supporters is also sometimes fixed a compass-box, I, divided into 360° , and again into four 90° ; having a centre pin, and needle and trigger, at *d*, to throw off the needle from the centre when not used; so in this manner it constitutes a perfect circumferentor, connected with all the foregoing improvements. This plate is fixed on a conical brass ferule, K, which is adapted to the bell-metal frustum of a cone at top of the brass head of the staves, having a ball and socket, with three bell-metal joints, two strong brass parallel plates L, L, the four screws *e, e, e, e*, for adjusting the horizontal motion, a regulating screw, M, to this motion, and a fastening screw, N, to lighten it on the cone when necessary.

The fastening screw N, and the regulating screw M, by which the whole instrument is moved with accuracy through a small space in an horizontal direction, was an addition of Mr. Ramsden's. To adjust it at the first station, the whole level being placed steadily on its staves, it must be rendered parallel to the axis of the telescope before adjusting the horizontal motion. To this end the telescope must be placed in a line with two of the screws *e, e*, and then levelled thereby till the bubble of air in the spirit-tube keeps its position in the middle, while turned about to three points, making nearly right angles at the centre to one another. The horizontal motion being thus adjusted, the rims of the Y's are to be opened, the telescope taken off, and laid the contrary way upon the supporters. If the bubble of air then rests exactly the same, the level and telescope are rightly adjusted to one another; but, if the bubble does not remain the same, the end to which the air-bubble goes must be noticed, and the distance of it from the telescope altered; correcting one-half the error by the screws *c, c*, and the other half by the screws *e, e*. Now the intersection of the wires being directed to any distant object: if they continue to be precisely against it while the telescope is turned round on its Y's, it proves, as before mentioned, that the axis of the telescope coincides with the intersection of the wires, and that the instrument will give the true level direction.

LEVEL, WATER, that which shows the horizontal line by means of a surface of water, founded on the principle that water always places itself level. The most simple is made of a long wooden trough or canal, whose sides are parallel to the base; so that, being equally filled with water, its surface shows the line of level. This is the chorobates of the ancients. It is also made with two cups fitted to the two ends of a pipe, three or four feet long, about an inch in diameter, by means of which the water communicates from the one to the other cup; and this pipe being moveable on its stand by means of a ball and socket, when the two cups become equally full of water, their two surfaces mark the line of level. This instrument, instead of cups, may also be made with two short cylinders of glass, three or four inches long, fastened to each extremity of the pipe with wax or mastic. Into the pipe is poured some common or colored water, which shows itself through the cylinders, and thus the line of level is determined; the height of the water, with respect to the centre of the earth, being always the same in both cylinders: this level, though very simple, is yet very commodious for levelling small distances.

LEVELLING may be defined, the art which instructs us in finding how much higher or lower any given point on the surface of the earth is than another; or, in other words, the difference in their distance from the centre of the earth. The practice of levelling, therefore, consists, 1. In finding and marking two or more points that shall be in the circumference of a circle whose centre is that of the earth. 2. In comparing the points thus found with other points, to ascertain the difference in their distances from the earth's centre. With regard to

the theory of levelling, we must observe; that a plumb-line, hanging freely in the air, points directly towards the centre of the earth; and a line drawn at right angles, crossing the direction of the plumb-line, and touching the earth's surface, is a true level only in that particular spot; but if this line, which crosses the plumb, be continued for any considerable length, it will rise above the earth's surface, and the apparent level will be above the true one, because the earth is globular; and this rising will be as the square of the distance to which the said right line is produced; that is to say, however much it is raised above the earth's surface at one mile's distance, it will rise four times as much at the distance of two miles, nine times at the distance of three, &c. This is owing to the globular figure of the earth; and this rising is the difference between the true and apparent levels; the real curve of the earth being the true level, and the tangent to it the apparent level. Hence it appears, that the less distance we take betwixt any two stations, the truer will be our operations in levelling; and so soon does the difference betwixt the true and apparent levels become perceptible, that it is necessary to make an allowance for it, if the distance betwixt the two stations exceeds two chains in length. The following is an infallible rule for determining the allowance to be made: multiply the number of Gunter's decimal statute chains, that are contained in length between any two stations where the levels are to be taken, by itself, and the product arising therefrom again by 124; which is a common multiplier for all manner of distances for this purpose on account of the earth's curvature: then divide the second product arising therefrom by 100,000; or, which is also the same, with the dash of the pen cut off five figures on the right hand side of the product, and what remains on the left side is inches, and the five figures cut off decimal parts of an inch.

TABLE of CURVATURE of the EARTH, showing the quantity below the apparent level, at the end of every number of chains to 100.

LEVELLING STAVES, instruments used in levelling, serving to carry the marks to be observed,

and at the same time to measure the heights of those marks from the ground. They usually consist of two mahogany staves, ten feet long, divided into 1000 equal parts, and numbered at every tenth division by ten, twenty, thirty, &c., to 1000; and on one side the feet and inches are also sometimes marked. See plate LEVELS, fig. 14. A vane, A, slides up and down upon each set of these staves, which by brass springs will stand at any part. These vanes are about ten inches long and four inches broad; the breadth is first divided into three equal parts, the two extremes painted white, the middle space divided again into three equal parts, which are less; the middle one of them is also painted white, and the two other parts black; and thus they are suited to all the common distances. These vanes have each a brass wire across a small square hole in the centre, which serves to point out the height corrected, by coinciding with the horizontal wire of the telescope of the level.

LEV'EN. See LEAVEN.

LEV'ENTIN, a considerable lake of Prussian Lithuania, which is joined to the lake of Angerburg by a small canal. Fifty-six miles south-east of Konigsberg.

LEV'ER, *n. s.* Fr. *levier*; Lat. *levator*. An important mechanical power; a species of balance. See the extract from Harris.

Have you any leavers to lift me up again, being down?
Shakspeare.

Some draw with cords, and some the monster drive
With rolls and levers.
Denham.

In a lever, the motion can be continued only for so short a space, as may be answerable to that little distance betwixt the fulcrum and the weight: which is always by so much lesser, as the disproportion betwixt the weight and the power is greater, and the motion itself more easy.

Wilkin's Mathematical Magick.

Some hoisting leavers, some the wheels prepare.

Dryden.

The second mechanical power is a balance supported by a hypomechlion; only the centre is not in the middle, as in the common balance, but near one end; for which reason it is used to elevate or raise a great weight; whence comes the name lever. *Harris.*

The leever is the simplest of all machines, and is only a staigt bar of iron, wood, or other material, supported on, and moveable round, a prop called the fulcrum.
Imson's Elements.

LEVER, in mechanics, is a bar of iron or wood, one part of which being supported by a prop, all other parts turn upon that fulcrum as their centre of motion. This instrument is of two kinds. First, that in which the weight we desire to raise rests at one end of it, our strength is applied at the other end, and the prop is between both. When we stir up the fire with a poker, we make use of this lever; the poker is the lever, it rests upon one of the bars of the grate as a fulcrum; the incumbent fire is the weight to be overcome, and the other end held in the hand is the strength or power. In this, as in all the rest, we have only to increase the distance between the strength and prop to give the man that works the instrument greater power. The lever of the second kind has the fulcrum at one end, the strength is applied to the other, and the weight to be raised rests between them. In this lever, also, the greater the distance of the ful-

crum from the power, the greater is the workman's ability. See MECHANICS.

LEVER (Sir Ashton), a celebrated collector of curiosities in natural history, was the son of Sir D'Arcy Lever, knight, of Alcame, gentleman commoner of Corpus Christi College. On leaving it, he soon rendered his family seat famous by the best aviary in the kingdom. He afterwards extended his plan to all branches of natural history, and thus rendered his museum one of the most complete in the world. He died in 1788, and his museum was sold by lottery.

LEVERET, *n. s.* Fr. *lievret*; Ital. *leprezza*; (Lat. *lepus*). A young hare.

Their travels o'er that silver field does show
Like track of *leverets* in morning snow. *Waller.*

Ye squirrels, rabbits, *leverets*, rejoice,
Your haunts no longer echo to his voice;
This record of his fate exulting view,
He died worn out with vain pursuit of you.

Cowper.

LEVET, *n. s.* Fr. *lever*. A blast on the trumpet; probably that by which the soldiers are roused in the morning.

He that led the cavalcade
Wore a sowgelder's flagellet,
On which he blew as strong a *levet*
As well-feed lawyer on his breviate.

Hudibras.

LEVEROOK, *n. s.* Sax. *læfene*. An old name for the lark, retained in Scotland.

The smaller birds have their particular seasons;
as, the *leverook*.

Watson's Angler.

If the luft fa' 'twill smooere aw the *leverooks*.

Scotch Proverbs.

LEVI, Heb. *לוי*, i. e. joined, the third son of Jacob by Leah, and the progenitor of the priests and Levites, was born about A. M. 2254. His treacherous and bloody combination with Simeon, to murder the Schechemites, is recorded in Gen. xxxiv.: as well as Jacob's detestation of it, and his curse denounced against them for it, on his death-bed.

LEVI (David), an English Jew and mechanic, was born in London in 1740. Though of humble rank, he became possessed of considerable information with regard to the antiquities of his own people; and, in 1787, entered into a polemical controversy with Dr. Priestley, whose Letters to the Jews he answered in two collections of essays, in the same epistolary form. He also wrote a Hebrew and English Lexicon, in 3 vols.; a Translation of the Pentateuch, another of the Hebrew Liturgy, in 6 vols.; and Dissertations on the Mosaic Rites and Ceremonies; On the Prophecies, &c. His death took place in 1799.

LEVIATHAN, *n. s.* Heb. *לוייתן*. A water or amphibious animal mentioned in the book of Job. Not inaptly applied by lord Byron to our men of war.

Canst thou draw out *leviathan* with a hook?

Job.

We may, as bootless, spend our vain command
Upon the enraged soldiers in their spoil,
As send our precepts to the *leviathan*,
To come ashore.

Shakspeare. Henry V.

More to embroil the deep, *leviathan*,
And his unwieldy train, in dreadful sport
Tempest the loosened brinc.

Thomson's Winter.

The magnificent description of the unicorn and of *leviathan*, in the same book, is full of the same heightening circumstances.

Burke on the Sublime.

The armaments which thunder-strike the walls
Of rock-built cities, bidding nations quake,
And monarchs tremble in their capitals;
The oak *leviathans*, whose huge ribs make
Their clay creator the vain title take
Of lord of thee, and arbiter of war.

Byron.

LEVIATHAN. Zoologists and commentators have been much puzzled to determine to what genus of animals the *leviathan* belongs. Some suppose it to be the whale; others a species of land dragon, said to frequent the banks of the Red Sea; others the crocodile; while a fourth class do not reckon it an animal at all, but a whirlpool. This last opinion is too absurd to refutation, as the whole description, in Job xli., of his parts, passions, motions, strength, invulnerability, &c., evidently refer to an animated being, and not to a collection of dead matter, such as a whirlpool. Of the dragon nothing yet certainly known suits the description of the *leviathan*. See DRACO. As to the whale, many parts of the description, particularly verses sixth and seventh, cannot, by any construction of language, be made to apply to it; for it is well known that the whale's 'skin' is often 'filled with barbed irons,' and 'his head with fish-spears;' and that those engaged in the whale-fishery 'part him' (his blubber, bones, spermaceti, &c.) 'among the merchants.' In a word, no animal, that we have any certain knowledge of, comes any thing near the grand and majestic description given of the *leviathan*, by his Creator, except the crocodile, who, it is well ascertained, cannot be 'drawn out' or taken 'with a hook,' or his 'jaw bored through with a thorn,' whose teeth are indeed 'terrible round about,' whose scales may be said to be 'his pride,' shut up together as with a close seal; one so near to another, that no air can come between them; so joined one to another, and sticking together, 'that they cannot be sundered,' &c. See LACERTA.

LEVIGATE, *v. a.* Lat. *lavigo*. To grind

LEVIGATION, *n. s.* } to an impalpable powder.

Levigation is the reducing of hard bodies, as coral, tully, and precious stones, into a subtle powder, by grinding upon marble with a muller; but, unless the instruments are extremely hard, they will so wear as to double the weight of the medicine. *Quincy.*

The chyle is white, as consisting of salt, oil, and water, much *levigated* or smooth. *Arbutnot.*

Levigation (is) the grinding down hard substances to an impalpable powder on a stone with a muller, or in a mill adapted to the purpose.

Parke's Chemical Dictionary.

LEVIGATION, in pharmacy and chemistry. The mechanical process of grinding the parts of bodies to a fine paste, by rubbing the flat face of a stone called the muller, upon a table or slab called the stone. Some fluid is always added in this process. The advantage of *levigation* with a stone and muller, beyond that of triturating in a mortar, is, that the materials can more easily be scraped together, and subjected to the action of the muller, than in the other case to that of the pestle; and, from the flatness of the two surfaces, they cannot elude the pressure.

LEVITE, *n. s.* } Lat. *levita*, from Heb.
 LEVITICAL, *adj.* } לוי, a son of Jacob, the father of the tribe set apart as priests by Moses; a Jewish priest; any priest: levitical, pertaining to the Levites or priesthood, or to the Jewish dispensation.

If therefore perfection were by the levitical priesthood, what further need was there that another priest should rise? *Heb. vii. 11.*

Love procures truer servitude than necessity: mercy becomes well the heart of any man, but most of a Levite. *Bp. Hall.*

In the Christian church, the office of deacons succeeded in the place of the levites among the Jews, who were as ministers and servants to the priests.

Ayliffe's Parergon.

By the levitical law, both the man and the woman were stoned to death; so heinous a crime was adultery. *Id.*

LEVITES, in a general sense, include all the descendants of Levi, among whom were the Jewish priests. In a more particular sense, the Levites were an order of officers in the Jewish church, who were employed in performing the manual service of the temple. They were obedient to the priests, the descendants of Aaron, in their ministration, and brought them wood, water, and other necessities for the sacrifice. They sung and played upon instruments in the temple and other places. They applied themselves to the study of the law, and were the ordinary judges of the country, but always subordinate to the priests. Their subsistence was the tithes of corn, fruit, and cattle, throughout Israel: but the priests were entitled to a tenth of their tithes, by way of first-fruits to the Lord: forty-eight cities were assigned for the residence of the Levites, of which the priests claimed thirteen, six of which were appointed cities of refuge. They were consecrated, before they entered upon their ministry, by shaving their flesh, washing their clothes, and sprinkling with the water of expiation. Imposition of hands was used in consecration, and two bullocks were offered at the door of the tabernacle. They waited weekly, and by turns, in the temple, beginning their attendance on one sabbath and ending the next: during this time they were maintained out of the offerings, &c. In the time of Solomon the number of Levites, above the age of twenty, capable of serving, was 38,000.

LEVITICUS, a canonical book of the Old Testament, so called from its containing the laws and regulations relating to the priests, Levites, and sacrifices.

LEVITY. Lat. *levitas*, *levo*. Lightness; applied to physical weight; to tempers of the mind; to manners; and to character.

They every day broached some new thing; which restless levity they did interpret to be their growing in spiritual perfection. *Hooker.*

Our graver business frowns at this levity.

Shakspeare.

He gave the form of levity to that which ascended; to that which descended, the form of gravity.

Raleigh.

It is more than probable that in Egypt it was very ordinary to admit lapsed persons, and even idolators, to repentance, because of the strange levity of the nation. *Jeremy Taylor.*

Hopton abhorred the licence, and the levities with which he saw too many corrupted. *Clarendon.*

I unbosomed all my secrets to thee;

Not out of levity, but over-powered

By thy request.

Milton's Agonistes.

As we may well stoop to friendly complaisance, so we should take heed of falling into contemptible levity. *Barrow.*

He never employed his omnipotence out of levity or ostentation, but as the necessities of men required.

Calamy.

That spirit of religion and seriousness vanished, and a spirit of levity and libertinism, infidelity and profaneness, started up in the room of it.

Atterbury.

This bubble, by reason of its comparative levity to the fluidity that encloses it, would ascend to the top.

Bentley.

Where wigs with wigs, with sword-knots sword-knots strive,

Beaus banish beaus, and coaches coaches drive,

This erring mortals levity may call.

Pope.

Why spur the speedy? why with levities

New-wing thy short, short, day's too rapid flight?

Young.

His cheerfulness is without levity, and his pensiveness without asperity.

Johnson.

He was the only man I ever saw who was a greater fool than myself, where woman was the presiding star; but he spoke of illicit love with the levity of a sailor, which hitherto I had regarded with horror.

Burns.

Such a regulation and right management of your thoughts and rational powers will be of great and general advantage to you in the pursuit of youthful knowledge, and a good guard against the levities and frantic sallies of the imagination.

Mason.

Besides that ignorance, inattention, prejudice, rashness, levity, obstinacy, in short all those passions, and all those vices, which pervert the judgment in other matters, prejudice it no less in its more refined and elegant province.

Burke on the Sublime.

LEVIZAC (John Pons Victor Lacoutz de), a French author, descended of a noble family in Languedoc, became an ecclesiastic when young, and obtained a canonry at Vabres. In 1776 he commenced his literary career, by a poem called *Le Bienfait rendu*, which gained the prize at the Floral games of Toulouse. He quitted France for Holland at the revolution, and afterwards settled in England as a teacher. Here he died in 1813. Levizac is advantageously known as the author of *Bibliothèque portative des écrivains Français, ou Choix des meilleurs morceaux Extraits de leurs Ouvrages; et Dictionnaire des Synonymes*; and other works designed to facilitate an acquaintance with the language and literature of France.

LEUNCLAVIUS (John), a learned German, descended of a noble family, and born at Amelbrun in Westphalia in 1533. He travelled through most countries in Europe. While he was in Turkey he collected materials for a History of the Ottoman Empire; which he published, and several other pieces concerning it, in Latin. He also translated Xenophon, Zosimus, &c., into Latin. To a knowledge of the learned languages he added that of the civil law. He died at Vienna in 1593, aged sixty.

LEUSDEN (John), a celebrated philologist, born in 1624. He studied the learned languages and mathematics at Utrecht; and then visited

Amsterdam, to converse with the rabbies and perfect himself in the Hebrew tongue. After which he became professor of Hebrew at Utrecht, where he acquired a great reputation, and died in 1699. He wrote many valuable works; the principal of which are, 1. *Onomasticum Sacrum*, 8vo. 2. *Clavis Hebraica et Philologica Veteris Testamenti*, 4to. 3. *Novi Testamenti Clavis Græca, cum Annotationibus Philologicis*, 8vo. 4. *Compendium Biblicum Veteris Testamenti*, 8vo. 5. *Compendium Græcum Novi Testamenti*; the best edition of which is that of London, in 1668, 12mo. 6. *Philologus Hebræus*, 4to. 7. *Philologus Hebræo-mixtus*. 4to. 8. *Philologus Hebræo-Græcus*, 4to. 9. Notes on Jonas, Joel, Hosea, &c.

LEUTMERITZ, a circle of Bohemia, lies in the north of that kingdom, and is bounded by Saxony and the circles of Rakonitz and Bunzlau. Its territorial extent is 1336 square miles: the Elbe traverses its whole length; receiving here the Eger, the Bila, and the Polzen. The most lofty mountains of the Erzgebirg chain also penetrate this circle, and it is consequently in many places barren and uncultivated; in others it is so fertile as to be called 'the Paradise of Bohemia.' In its mountains are occasionally found garnets, and other precious stones. Here are also several mineral springs, among which is that of Toplitz. Population 292,000.

LEUTMERITZ, a town of Bohemia, the capital of the preceding circle, is a neat well-built place, on the Elbe, over which is a wooden bridge, 1646 feet long, leading to the fortress of Theresienstadt. It has a cathedral, theological seminary, and an academy, together with a productive fishery in the Elbe. Population 3600: thirty-six miles N. N. E. of Prague.

LEUTOMISCHL, a manufacturing town of Bohemia, containing a public school, manufactures of cloth and dye-stuffs, with extensive distilleries. In 1758 this town was taken by the Prussians, and suffered severely from fire in 1775. Population 4650. It is eighty-six miles east by south of Prague, and twenty-two east of Chrudim.

LEUTSCHAU, an old town in the county of Zips, Hungary, the place of meeting for the provincial assemblies, stands partly on the slope of a hill. It has a large square, in which is a handsome church; but is irregularly built. This town, formerly walled, was frequently taken and retaken during the commotions of the seventeenth century. It has also suffered considerably from fires. Population 4500: twenty-five miles west by south of Szeben.

LEUWENHOEK (Anthony de), F. R. S., a celebrated Dutch physician and naturalist, born at Delft in 1632. He was of an ancient family, and acquired great reputation throughout all Europe, by his experiments and discoveries. He particularly excelled in making glasses for microscopes and spectacles: he died in 1723. His letters to the Royal Society of London were printed at Leyden in 1722, in 4to.

LEVY, *v. a. & n. s.* } Fr. *levée, lever*; Lat. *LEVABLE, adj.* } *levo*. To raise; applied to the raising men and money for public purposes; and hence to the making war: leviable, that which may be imposed or raised by law.

Levy a tribute unto the Lord of the men of war
Numbers.

Treason has done his worst: nor steel, nor poison,
Malice domestick, foreign *levy*, nothing
Can touch him further. *Shakspeare. Macbeth.*

The sums which any agreed to pay, and were not brought in, were to be *leviable* by course of law.

Bacon's Henry VII.

He resolved to finish the conquest of Ireland, and to that end *levied* a mighty army.

Davies on Ireland.

The ancient discipline of the church, in imposing penances, was made so loose that the indulgence was more than the imposition, and began not to be an act of mercy but remissness, and absolution without amends: it became a trumpet, and a *levy* for the Holy War.

Bp. Taylor.

Instead of a ship, he should *levy* upon his county such a sum of money.

Clarendon.

They live in hatred, enmity, and strife,

Among themselves, and *levy* cruel wars. *Milton.*

These were the misdoers of those in the late times, who, instead of praying for their sovereign, did raise tumults, and *levy* war against him, pretending by rude force to reduce him to his duty.

Barrow.

As none but kings have power to raise

A *levy* which the subject pays,

And though they call that tax a loan,

Yet when 'tis gathered 'tis their own. *Hudibras.*

They have already contributed all their superfluous hands, and every new *levy* they make must be at the expence of their farms and commerce.

Addison's State of the War.

LEWD, *adj.* } Sax. *læpene, leow*; Goth.

LEWD'LY, *adv.* } *lyd*, the people. Lay, not

LEWD'NESS, *n. s.* } clerical; common; vulgar:

LEWD'STER. } hence, low; gross; sensual; wicked; dissolute; licentious; libidinous. (Few words have descended in their signification more singularly.) A *lewdster* is a lecher.

For *lewdy* men this boke I wrot. *Bp. Grossthead.*

He loved fair lady Elted, *lewdly* loved,

Whose wanton pleasures him too much did please,

That quite his heart from Guendeline removed.

Spenser.

If some be admitted into the ministry, either void of learning, or *lewd* in life, are all the rest to be condemned?

Whiggle.

He is not lolling on a *lewd* love-bed;

But on his knees at meditation. *Shakspeare.*

A sort of naughty persons, *lewdly* bent,

Have practised dangerously against your state.

Id.

Against such *lewdsters*, and their lechery,

Those that betray them do no treachery. *Id.*

So these great clerks their little wisdom shew
To mock the *lewd*, as learned in this as they.

Davies.

Then *lewd* Anchemolus he laid in dust,

Who stained his step-dame's bed with impious lust.

Dryden.

Suffer no *lewdness*, nor indecent speech,

The' apartment of the tender youth to reach. *Id.*

There is no such slavery in the dear name of a sister, that it should bind us to give either aid or countenance to *lewdness*.

Bp. Hall.

What do their prophetic writings contain beside pathetic comminations of judgment upon them, for their prodigious impieties, iniquities, and *lewdnesses*.

Barrow.

Damianus's letter to Nicholas is an authentick record of the *lewdnesses* committed under the reign of celibacy.

Atterbury.

Then mark him weltering in his nasty sty,
Bare his lewd transports to the public eye.

Canning.

LEWDNESS. See **FORNICATION.** Lewdness is punishable by our law by fine, imprisonment, &c. Formerly, when any man granted a lease of his house, it was usual to insert an express covenant, that the tenant should not entertain any lewd women, &c.

LEWENZ, or LEVA, a large town of the palatinate of Barsch, in the interior of Hungary. It carries on a traffic in corn, cattle, wine, and tobacco; and manufactured leather. Here are several distilleries; and in the neighbourhood various mineral springs. Eight miles east of Barsch.

LEWES, an ancient, large, and well-built town of Sussex, seated on an eminence on the banks of the Ouse, fifty miles from London. A bloody battle was fought near it, wherein king Henry III. was defeated and taken prisoner by the barons. King Athelstan appointed two mint-houses here; and in the reign of Edward the Confessor it had 127 burgesses. The gate and two towers of its ancient castle, built in the eleventh century, still remain. Several religious houses appear to have been established here; viz. a priory of Cluniac monks, founded in 1078, and the first of that order in England; a priory of gray friars; a monastery dedicated to St. James, and an hospital to St. Nicholas. A borough by prescription. The constables are chosen yearly. It has handsome streets and suburbs, with six parish churches. It carries on a good trade; and the Ouse, which runs through it, brings goods in barges from the port of Newhaven, seven miles off. On this river are several iron works, where cannons, &c., are cast. A charity-school was opened in 1711, where twenty-eight boys are taught, clothed, and maintained. The market is on Saturday. Lewes is a handsome town, and one of the largest and most populous in the county, having two extensive suburbs, one on the west side of the town, and the other on the east bank of the river, called Cliffs. From a windmill in the neighbourhood is a fine view of the sea and the circumjacent towns, gentlemen's seats, &c., not to be exceeded in England. It sends two members to parliament, and lies thirty miles east of Chichester, and forty-eight south of London.

LEWIS. See **LOUIS.**

LEWIS (John), M. A., a learned English divine, born in Bristol in 1675, and educated at Exeter College, Oxford. Archbishop Tenison gave him the vicarage of Minster in the Isle of Thanet. He published, 1. *The Life of John Wickliffe*, D. D. 8vo. 1720; 2. *The History and Antiquities of the Isle of Thanet*, 4to. 1723; 3. *History of the Abbey and Church of Feversham*; 4to. 1727; 4. *Life of William Caxton*, the first printer in England, 8vo; 5. *A complete History of the Translations of the Bible into English*; 8vo. He also published Wickliffe's Translation; and died in 1746.

LEWIS, in geography, one of the largest of the Western Islands of Scotland, extending about sixty miles in length from north to south, and from thirteen to fourteen in breadth, consisting

of a great number of isles and rocks, and connected by an isthmus of six miles with the isle of Harris. See **HARRIS.** Lewis belongs to the county of Ross; is divided by several channels, distinguished by several names, and portioned out among different proprietors; but Lewis, strictly so called, stretches about thirty-six miles in length, from the north point of Bowling-head to the south extremity of Hussiness in Harris. The air is moderately cold, moist, and healthy; great part of the low ground is flooded with lakes; the rest is arable in many places, and fruitful in oats, barley, rye, flax, and hemp. The soil in these parts is a light sand, which the inhabitants manure with soot and sea-ware. Of their corn they not only make malt for ale, but likewise a strong spirit called trestareg, which is whisky three times distilled. Lewis abounds with convenient bays and harbours, in which are caught, in great plenty, cod, ling, and herring; whales of different sizes are also often driven into the bays, and killed with harpoons. These bays afford great plenty of shell-fish, such as clams, oysters, cockles, muscles, limpets, welks. The cows, horses, sheep, goats, hogs, and deer, are all of a diminutive size; but the beef, mutton, and pork, are juicy and delicious: the horses are active and hardy: the deer, which are of the red kind, confine themselves to the chase of Oservaul, about fifteen miles in compass, which affords tolerable pasturage; but in winter, when the ground is covered with snow, these animals feed on sea-ware. There is likewise a small grove of birch and hazel on the south-west side of Loch-Stornaway. Along this coast are several natural mounts or forts, called duns; such as Dun-rowly, Dun-coradel, and Dun-eisten. There are also the remains of some old castles, and other monuments of antiquity. At Stornaway village are the ruins of a fortress destroyed by the English garrison sent thither by Oliver Cromwell. To the north of Brago there is a round tower built of large stones, three stories high, tapering to the top, with a double wall, and a circular staircase between, by which one may go quite round the building. On the summits of the hills there are several cairns. The most remarkable monument of this kind appears by the village of Classerniss. Here we find thirty-nine pyramidal stones standing upright, about six or seven feet high from the surface, each about two feet in breadth. They are placed in form of an avenue, eight feet wide; the distance between every stone being six feet, and a single piece stands at the entrance. This avenue leads to a circle of twelve stones of the same dimensions, with one in the centre, thirteen feet in length, and shaped like a rudder: on the east, south, and west, sides of this circle, are four stones, forming three lines, or as it were rays from the body of the circle. This is supposed to have been a Druid temple; and tradition reports, that the chief Druid stood by the large stone in the centre, and harangued the audience. As the distance of a quarter of a mile there is another circle of the same nature; but without the range and avenue. In all probability, these were places of worship erected by the Druids in time of Pagan superstition. The chief town is Stor-

naway. Lewis is divided into the two parishes of Barvas and Eye, and in each of these one minister is settled.

LEWISTOWN, the capital of Mifflin county, Pennsylvania, on the Juniatta; fifty-six miles north-west of Harrisburg, 162 W. N. W. of Philadelphia. It is regularly laid out, and contains a court-house, a jail, a market-house, a bank, and has considerable trade. Large quantities of wheat are annually exported.

LEWISTOWN, a post town of Sussex county, Delaware, North America, on Lewes Creek, three miles from its entrance into Delaware Bay; three miles W. N. W. of Cape Henlopen Light House, and 112 south of Philadelphia. It has an elevated and pleasant situation, and contains an academy, a presbyterian and a methodist meeting-house, &c. It was formerly the seat of justice for the county: and the neighbourhood contains salt works 10,000 feet in extent, which are considered a great curiosity.

LEX, Law. The Roman laws were of three kinds: first, such as were made by their kings. Secondly, The laws of the XII tables, brought by the decemviri from Athens, &c. And, thirdly, Such as were proposed by the superior magistrates in the times of the republic. Romulus made laws by his sole authority; but his successors sought the approbation of the people. The laws of the third class were enacted in the following manner: No law could be proposed but by some of the following magistrates, viz. the prætor, consuls, dictator, interrex, decemviri, military tribunes, triumviri, tribunes of the people. If any of these proposed a law, it was first committed to writing, and privately examined as to its utility and probable consequences, by persons qualified for the task; sometimes it was referred to the whole senate for their sentiments. It was then hung up publicly for three market days, that all the people might have time to examine it, and consider its tendency: this was called legis promulgatio. If the person who framed the bill did not in the mean time drop it, the people were convened in comitia, and he addressed them in an oration, being also seconded by his friends setting forth the expediency and probable utility of such a law: this was called rogatio legis, because the address was always prefaced with this petitionary form of words, VELITIS, jubeatisne, Quiritibus? 'Will you, O Romans, consent and order this law to pass?' This being done, those that disliked the motion delivered their sentiments in opposition to it. An urn was then brought to certain priests who attended upon the occasion, into which were cast the names of the tribes, centuries, or curia, as the comitia happened to be tributa, centuriata, or curiata. See COMITIA. The names were shaken together, and the first drawn tribe or century was called prærogativa, because their suffrages were first asked. The curia first drawn was called principium, for the same reason. The other tribes, centuries, &c., were called tribus jure vocatæ, centuriæ jure vocatæ, &c. In this situation, the veto or negative voice of the tribunes of the people might put an end to the proceedings, and dissolve the assembly. The tribune's interference was called intercessio. The consul also had it in his power to stop fur-

ther proceedings, by commanding any of the holidays called feriæ imperativæ to be observed. The comitia would also be dissolved by any person being seized with the falling sickness, or upon the appearance of any unlucky omen. If the business met with no interruption of this sort each of the people were presented with two tablets, on one of which was written A, on the other U. R. Their disapprobation of the bill was expressed by throwing into an urn the tablet inscribed A. Their assent by throwing in the one marked U. R. According to the majority of these tablets, the law passed or not. If it passed, it was written upon record, and carried into the treasury; this was called legem ferre. Afterwards it was engraved upon plates of brass, and hung up in the most public and conspicuous places: this was termed legem figure, and a future repeal of this was legem refigere. If a law passed in the comitia curiata, it was called lex curiata; if in the comitia centuriata, it had the name of lex centuriata; but, if it passed in the comitia tributa, it was termed plebiscitum. The law, too, generally bore the names of the proposers, as lex Ælia, lex Fusia, &c.

LEXAWACSEIN, a river of Pennsylvania, which rises in Northampton county, on the east side of Mount Ararat, and falls into the Delaware, 174 miles above Philadelphia.

LEXIARCHI, at Athens, six officers, assisted by thirty inferior ones, whose business it was to fine such as came not to the public assemblies, and to make scrutiny among such as were present. They kept a register of the age, manners, and abilities of all the citizens, who were enrolled at the age of twenty.

LEXICON, *n. s.* } Gr. λεξικον. A dictionary: a list of the LEXICOGRAPHY. } words of a language, their etymology, and meaning. A lexicographer, Dr. Johnson defines, 'a writer of dictionaries,' and adds, with more spleen than accuracy, 'a harmless drudge that busies himself in tracing the original, and detailing the signification of words:' some lexicographers have been far from 'harmless;' and others aspire (circumspectly) to be something more than 'drudges:' lexicography is the act or art of making dictionaries.

Though a linguist should pride himself to have all the tongues that Babel cleft the world into, yet if he had not studied the solid things in them as well as the words and *lexicons*, he were nothing so much to be esteemed a learned man as any yeoman competently wise in his mother dialect only. *Milton.*

Commentators and *lexicographers*, acquainted with the Syrian language, have given these hints in their writings on scripture. *Watts.*

When Scaliger, whole years of labour past, Beheld his *lexicon* complete at last, And, weary of his task, with wondering eyes, Saw from words piled on words a fabrick rise, He cursed the industry, inertly strong, In creeping toil that could persist so long. *Murphy.*

With equal justice may the *lexicographer* be derided, who, being able to produce no example of a nation that has preserved their words and phrases from mutability, shall imagine that his dictionary can embalm his language, and secure it from corruption and decay. *Johnson.*

LEXINGTON, a post town of Middlesex county, Massachusetts, is eleven miles north-west of Boston. This town is famous for being the place where hostilities commenced between Great Britain and America, April 19th, 1775. A stone monument, with an inscription, is erected on the ground where the battle was fought.

LEXINGTON, a post town, the capital of Rockbridge county, Virginia, on the north branch of James River, is thirty miles S. S. W. of Staunton, and thirty-eight N. N. W. It is a handsome town, finely situated, and contains a court-house, a jail, a female academy, a presbyterian meeting-house, and a college. The surrounding country is fertile and well cultivated.

Washington College, at this place, was originally incorporated as an academy, in 1782, under the name of Liberty Hall Academy; and in 1813 it was erected into a college, called Washington College, from general Washington, who presented to the institution 100 shares in the James River Canal, amounting to 20,000 dollars. This stock for a number of years was unproductive, but since the late war it has produced 16 per cent. per annum. There are two college buildings of brick, sixty feet by twenty, of two stories, a steward's house, and a refectory. In addition to these buildings, the trustees contemplate erecting a large college edifice. The college has a philosophical apparatus, and a library of about 2000 volumes. The board of trustees consists of thirty members. The executive government is entrusted to a president, who is also professor of belles lettres and mathematics, a professor of natural philosophy and astronomy, a professor of languages, and one tutor. The number of students is usually from forty to fifty.

The studies of which a knowledge is necessary, in order to admission into the freshman class, are Virgil, Greek Testament, Minor Dialogues of Lucian, and the fundamental rules of arithmetic! The studies of the first year are the Latin and Greek languages; of the second year, mathematics, arithmetic, algebra, Euclid six books, surveying, navigation, and conic sections; of the third, natural philosophy, astronomy, and geography; and, of the fourth, belles lettres, logic, natural and political law.

LEXINGTON, a post town of Fayette county, Kentucky, twenty-two miles E. S. E. of Frankfort, and seventy-four east of Louisville. It is situated on Town Fork, a small stream which falls into the south branch of the Elkhorn. It is regularly laid out, and contains a court-house; a jail; a market-house; a theatre; a masonic hall; a museum; a public library; a female academy; a university; three banks, one of which is a branch of the United States bank; three printing offices, from each of which is issued a weekly newspaper; and seven houses of public worship, three for Presbyterians, one for Episcopalians, one for Baptists, one for Methodists, and one for Roman Catholics.

Lexington has had a very rapid growth. In 1797 it contained only about fifty houses. It is the largest town in Kentucky, and the most wealthy and best built town in the western states. The houses are mostly of brick, and the streets are paved and have side walks; the principal

one is about eighty feet wide. Near the centre of the town is a public square, surrounded with brick buildings.

This town contains various and extensive manufacturing establishments, among which are four nail manufactories, two copper and tin manufactories, two steam paper-mills, a number of large rope-walks, cotton and woollen manufactories, distilleries, breweries, &c.—The site on which the town is built is in a gently descending valley, which is one of the most fertile tracts in the United States. The climate is healthy and delightful, and in the vicinity there are a number of handsome country seats. The surrounding country is greatly admired for its rich and beautiful scenery.

Transylvania University was incorporated here a number of years ago, and is now about to be reorganised, and it is intended to place it on a respectable foundation. There are two college edifices of brick, one erected several years since, the other an elegant edifice built in the year 1818, and calculated to accommodate about 100 students. The library contains between 1000 and 2000 volumes. Large additions are about to be made to it. The philosophical apparatus is now small, but is soon to be made complete. The funds consist of lands, houses, house lots, and bank stock. There are thirteen trustees, all elected biennially by the legislature. The executive government is entrusted to a president, a professor of languages, one of mathematics and natural philosophy, one of chemistry and mineralogy, two tutors, a professor of law, and four professors in the medical department.

The institution, as a regular college, is not perfectly organised; all the votes, however, necessary for this purpose, have been passed by the trustees, and the officers are elected. The requisitions for admission, and the course of study, are to be the same as at the university in Cambridge, Massachusetts, and it is intended to make the standard of education as high as in any of the eastern colleges. Commencement to be held on the second Wednesday in July, and followed by a vacation of about eleven weeks. Instruction is already provided for in the departments of law and medicine. The course of medical lectures was commenced for the first time in November 1817.

LEYDEN (in Lat. Lugdunum Batavorum), one of the largest and finest cities of Holland, in the department of Delft, abounding with canals, along which are rows of lofty trees, that afford very pleasant walks. Its form is oblong; its length being about two miles from east to west. A small branch of the Rhine runs through it. Over the canals are, it is said, 145 bridges, chiefly of stone or brick, and the streets are remarkably clean. The street in which the stadthouse is situated, is accounted equal to almost any in Europe. The university is the oldest in the republic, and has a library rich in MSS.; a botanical garden well stocked with exotic plants; an anatomy-hall and observatory. The professors are generally eminent. Its buildings, however, have a humble appearance; but the government in 1819 began a more stately structure. The number of professors is twenty-

one; viz. four of theology, four of law, four of medicine, four of philosophy, and five of languages. Their lectures are delivered in Latin; and their salaries, independent of a house, and the small fees paid by the pupils, are rarely more than £250. The number of students is at present about 300. Of these about eighty study medicine, 100 philosophy and languages, and the others divinity and law. The session, as in other Dutch colleges, commences in September, and terminates at the end of June. Greek literary names are connected with the history of Leyden. We may instance those of Heinsius, Scalger, and Salmasius. In the centre of the town is a very ancient and lofty castle or fort, considered traditionally as a work of the Romans. It rises above the tops of the highest houses, and affords an extensive view of the town and neighbourhood. The church of St. Peter, the finest of the seventeen that belong to the city, is a large and handsome building in the Gothic style. It contains the tombs of Boerhaave, P. Camper, and Meerman. The cloth manufacture formerly flourished to such a degree, that 100,000 pieces have sometimes been made in a year. At present this is in a low state; but soap and indigo are manufactured in large quantities. The city sustained a long and severe siege, in 1573, against the Spaniards. That illustrious magistrate, Adrian de Verf, when the citizens represented to him the havoc made by the famine during the siege, and insisted upon his surrendering, said, 'Friends, here is my body, divide it among you to satisfy your hunger, but banish all thoughts of surrendering to the cruel and perfidious Spaniards.' They took his advice, and told the Spaniards, they would hold out as long as they had one arm to eat and another to fight. In 1655 the city was greatly depopulated by the plague: in January 1795 the citizens opened their gates to the French under general Pichegru, and in 1809 there was a remarkably destructive explosion of gunpowder here. The neighbourhood is quite a flat country, too wet for tillage, but productive of pasturage, cheese, and butter. It is ten miles north-east of the Hague, and twenty-two south-west of Amsterdam.

LEYDEN PHIAL, a phial coated on the inside and outside with tinfoil, or other conducting substance, and furnished with a brass wire and knob, for giving the electrical shock. See **ELECTRICITY**.

LEYSERA, in botany, a genus of the polygama superflua order, and syngenesia class of plants; natural order forty-ninth, composite: receptacle naked; pappus paleaceous; that of the disc plumy: **CAL.** scariosus.

LEYTA, one of the southern Philippine Islands, ninety-five miles in length, by thirty-eight in average breadth. The soil is very fertile, and the mountains abound in deer, cows, wild hogs, and fowls; cocoas grow without culture. The air is pure and healthy. A chain of mountains runs north-west and south-east; and so materially do they influence the climate, that the seasons differ entirely on the different sides of them. The inhabitants are mild, peaceable, and hospitable. They are about

9000, and pay a tribute in wax, rice, and cloth. Long. 124° 40' E., lat. 10° 50' N.

LEZAY-MARNESIA (Claude Francis Adrian, marquis de), was born at Metz in 1735, and early entered the French army. He soon, however, retired to his estate of St. Julian, near Lons-le-Saunier, and devoted himself to study. At the revolution he declared in favor of the abolition of the feudal impositions and privileges, and was chosen a deputy from the states-general and the constituent assembly: alarmed, however, at the prospect of affairs, he emigrated to North America in 1790, taking with him artists, laborers, &c., to form a colony on a tract of land which he had purchased of the Scioto company. This scheme failing, he returned to France in 1792. During the reign of terror he was confined in prison at Besançon, but, the fall of Robespierre liberating him, he returned home to his old pursuits. At length, after passing some time in Switzerland, he settled at Besançon, where he died November 9th, 1800. He was the author of *Essai sur la Mineralogie du Bailliage d'Orgelet, en Franche-Comté*, 1778, 8vo.; *Le Bonheur dans les Campagnes*, 1778, 8vo.; *Les Paysages, ou Essais sur la Nature*, a poem; *Lettres écrites des Rives de l'Ohio*, 1792, 8vo.; and other works.

LEZAY-MAREZIA (Adrian, count de), son of the preceding, distinguished himself as a diplomatist. He also was for a short time in the army. He then studied diplomacy at the school of Brunswick, and at the revolution travelled in Germany and England. Returning to France he became a contributor to the *Journal de Paris*. Having too freely predicted the destruction of the directorial government, he was forced to leave Paris. He returned under the consulate, and was employed on various diplomatic missions. In 1806 he was made prefect of the department of the Rhine and Moselle, and in 1810 of that of the Lower Rhine, in which office he was continued on the restoration of the Bourbons. He died at Strasburgh in 1814, owing to a fall. He translated into French, Schiller's tragedy, *Don Carlos*, and wrote several popular political tracts.

LHOYD, LHUYD, or LHWYD (Humphrey), a learned antiquarian of the sixteenth century, born at Denbigh, who applied to the study of physic; and, living mostly in the walls of Denbigh Castle, practised there as a physician; and died in 1570. He wrote and translated several pieces relative to history and antiquities; in particular the history of Cambria, now called Wales, from Caradoc of Langarvan, &c., but died before it was finished: however, Sir Henry Sidney, lord president of Wales, employed Dr. David Powel to finish it, who published it in 1584. A new and improved edition of this work was published in 1774.

LHUYD (Edward), keeper of the museum at Oxford, was a native of South Wales, and was educated at Jesus College, Oxford, where he was created M. A. July 21st, 1701. He succeeded Dr. Plot as keeper of the Ashmolean museum, and had the use of all Vaughan's collections. With incessant labor and great exact-

ness he searched into the Welsh antiquities; collected and perused a great deal of ancient and valuable matter from their MSS.; transcribed all the old charters of their monasteries that he could find; travelled several times over Wales, Cornwall, Scotland, Ireland, Armoric Bretagne; compared their antiquities, and made observations on the whole; but died in July 1709, before he had digested them, as he had intended, into the form of a treatise on the ancient inhabitants of this island. He communicated many observations to bishop Gibson, whose edition of the Britannia he revised; and published *Archæologia Britannica*, giving some additional account of the languages, histories, and customs of the original inhabitants of Great Britain, from collections and observations in travels through Wales, Cornwall, Bas Bretagne, Ireland, and Scotland.

LIABLE, *adj.* } Old Fr. *liable*, *lier*.
LIABILITY, *n. s.* } Subject or obnoxious to;
not exempt: taking to after it.

But what is strength without a double share
Of wisdom? vast, unwieldy, burthensome,
Proudly secure, yet liable to fall
By weakest subtleties. *Milton's Agonistes*.
Seeing they are so liable to sin, they must consequently stand often in need of God's mercy to bear with them, and to pardon them. *Barrow*.

The English boast of Spenser and Milton, who neither of them wanted genius or learning; and yet both of them are liable to many censures.

Dryden.
They think, that whatever is called old must have the decay of time upon it, and truth too were liable to mould and rottenness. *Locke*.

This, or any other scheme, coming from a private hand, might be liable to many defects. *Swift*.

And that the apostle John should be liable to this censure, whose temper seemed to be all love and sweetness. *Mason*.

People are not liable to be mistaken in their feelings, but they are very frequently wrong in the names they give them, and their reasonings about them.

Burke on the Sublime.

LIAR. From LIE, which see. This word, as Dr. Johnson observes, would analogically be *liar*; but this orthography has prevailed, and the convenience of distinction from *lier*, he who lies down, is sufficient to confirm it.

He approves the common *liar*, fame,
Who speaks him thus at Rome. *Shakspeare*.

I do not reject his observation as untrue, much less condemn the person himself as a *liar*, whensoever it seems to be contradicted. *Boyle*.

Thy better soul abhors a *liar's* part,
Wise is thy voice, and noble is thy heart.

Pope.

The maxim, in vino veritas—'a man who is well warmed with wine will speak truth,' may be an argument for drinking, if you suppose men in general to be *liars*: but, Sir, I would not keep company with a fellow who *lies* as long as he is sober, and whom you must make drunk before you can get a word of truth out of him. *Johnson*.

LIARD, *adj.* Fr. *liard*; It. *leardo*; Scot. *liart*, *liard*. Roan; gray; hoary.

That was wel twight, min owen *liard* boy.
Chaucer.

LIBANIUS, a famous Greek rhetorician and sophist in the fourth century, born at Antioch. He had a great share in the friendship of Julian

the Apostate, who offered him the dignity of Præfectus Prætorio; but Libanius refused it, thinking the title of sophist, or professor of eloquence, much more honorable. There are still extant several of his letters and Greek orations, by which he acquired great reputation; but his style is somewhat affected and obscure. He was a Pagan. Basil and Chrysostom were his disciples about A. D. 360. His letters were published at Amsterdam in 1738; his orations at Venice, in 1755.

LIBANOMANTIA, in antiquity, a species of divination performed with frankincense; which, if it presently caught fire, and sent forth a grateful odor, was esteemed a happy omen, and vice versa.

LIBANUS, a chain of mountains of Turkey in Asia, which lie between Syria Proper and Palestine, extending from west to east from the Mediterranean Sea as far as Arabia. The summits are always covered with snow, but below there are very pleasant and fertile valleys. Dr. Clarke saw snow here in July. The basis of the range is limestone, which presents itself occasionally in the shape of towers, castles, and various grotesque forms; near Damascus there are immense caverns, one of which is capable of containing 4000 men. They were formerly famous for great numbers of cedar trees, but now there are very few remaining. Geographers distinguish this chain into Libanus and Antilibanus; the latter of which lies on the south side of the valley, rising near the ruins of Sidon, and terminates in Arabia, in N. lat. 34°. They are separated from each other at an equal distance throughout, by a country called by the ancients Cœlesyria.

LIBATION, *n. s.* Lat. *libatio*, à *libo*, to taste or drink, or to offer a drink-offering. The act of pouring wine on the ground in honor of some deity; the wine poured.

In digging new earth pour in some wine, that the vapour of the earth and wine may comfort the spirits, provided it be not taken for a heathen sacrifice, or libation to the earth. *Bacon's Natural History*.

They had no other crime to object against the Christians but that they did not offer up libations, and the smoke of sacrifices, to dead men.

Stillingfleet on Romish Idolatry.

The goblet then she took, with nectar crowned,
Sprinkling the first libations on the ground.

Dryden's Æneid.

The ancient Greeks and Romans used at their meals to make libations, pour out and even drink wine in honour of the gods. *Brand's Antiquities*.

In sighs he worships his supremely fair,
And weeps a sad libation in despair;
Adores a creature, and, devout in vain,
Wins in return an answer of disdain. *Cowper*.

LIBATION, amongst the ancient Greeks and Romans, was an essential part of solemn sacrifices. It was also performed alone, as a drink-offering, by way of procuring the protection and favor of the gods, in the ordinary affairs of life. Libations, according to the different attributes of the gods in honor of whom they were made, consisted of different liquids, but wine was the most usual. It was always unmixed with water. Libations of water, of honey, of milk, and of oil, were called *νηφάλια ἑρα*. They were all made

with a serious deportment and solemn prayer. At sacrifices, the libation, after it had been tasted by the priest, and handed to the bystanders, was poured upon the victim. At entertainments, a little wine was generally poured out of the cup, before the liquor began to circulate, to show their gratitude to the gods for the blessings they enjoyed. Libations were also in use among the Hebrews, who poured a hin of wine on the victim after it was killed, and the several pieces of the sacrifice were laid on the altar, ready to be burnt.

LIBAU, a sea-port of Russia, in the government of Courland, on the Baltic. It exports hemp, linseed, &c., the produce of the surrounding country. This town was a place of trade in the thirteenth century; but it afterwards suffered severely from the wars which the Swedes carried on here. It has a commodious harbour for small vessels. Population 5000. Sixty-six miles west of Mittau.

LIBBARD, *n. s.* Teut. *liebard*, *leopard*; Lat. *leopardus*. See LEOPARD. A leopard. Obsolete.

Make the *libbard* stern

Leave roaring, when in rage he for revenge did yearn. *Spenser.*

The *libbard* and the tiger, as the mole Rising, the crumbled earth above them threw.

Milton.

The torrid parts of Africk are by Pise resembled to a *libbard's* skin, the distance of whose spots represents the disperseness of habitations, or towns of Africk. *Brerewood.*

LIBEL, *n. s., v. n. & v. a.* } Fr. *libelle*; Lat. }
 LIBELLER, *n. s.* } *libellus*, a little }
 LIBELLOUS, *adj.* } book. The civil law retains its primitive sense of a written charge; and hence it has been used to signify a defamatory writing, satire, or lampoon: as a neuter verb it formerly took *against* after it, see the extracts: as a verb active it means to defame; satirise: a libeller is the author of a libel: libellous, defamatory.

And it hath ben seid, whoevere leveth his wyf, give he to hir a *libel* of forsaking. *Wiclif. Matt. v.*

Sweet scrawls to fly about the streets of Rome: What's this but *libelling* against the senate!

Shakespeare.

He, like a privileged spy, whom nothing can discredit, *libels* now 'gainst each great man. *Donne.*

It was the most malicious surmise that had ever been brewed, howsoever countenanced by a *libellous* pamphlet. *Wotton.*

For the stopping of that deluge of *libellous* invectives, wherewith we are thus impetuously overflown. *Bp. Hall.*

Though some make slight of *libels*, yet you may see by them how the wind sits: as take a straw and throw it up in the air, you shall see by that which way the wind is, which you shall not do by casting up a stone. More solid things do not show the complexion of the times so well as ballads and *libels*. *Selden.*

Are we reproached for the name of Christ? that ignominy serves but to advance our future glory; every such *libel* here becomes a panegyric there. *Decay of Piety.*

Good heaven! that sots and knaves should be so vain,
 To wish their vile resemblance may remain!

And stand recorded, at their own request, To future days, a *libel* or a jest. *Dryden.*

The squibs are those who, in the common phrase, are called *libellers* and lampooners. *Tale.*

But what so pure which envious tongues will spare?

Some wicked wits have *libelled* all the fair. *Pope.*

The common *libellers*, in their invectives, tax the church with an insatiable desire of power and wealth, equally common to all bodies of men. *Swift.*

LIBEL, *libellus famosus*, taken in its largest and most extensive sense, signifies any writing, picture, or the like, of an immoral or illegal tendency; but, in a peculiar sense, is used to denote a malicious defamation of any person, and especially a magistrate, made public by either printing, writing, signs, or pictures, in order to provoke him to wrath, or expose him to public hatred, contempt, and ridicule. The direct tendency of these libels is the breach of the public peace, by stirring up the objects of them to revenge, and perhaps to bloodshed. The communication of a libel to any one person is a publication in the eye of the law: and therefore the sending an abusive private letter to a man is as much a libel as if it were openly printed, for it equally tends to a breach of the peace. With regard to libels, in general, there are two remedies; one by indictment, and another by action. The former for the public offence; for every libel has a tendency to break the peace, or provoke others to break it: which offence is the same, whether the matter contained be true or false; and therefore the defendant, on an indictment for publishing a libel, is not allowed to allege the truth of it by way of justification. But in the remedy by action on the case, which is to repair the party in damages for the injury done him, the defendant may, as for words spoken, justify the truth of the facts, and show that the plaintiff has received no injury at all. What was said with regard to words spoken, will also hold in every particular with regard to libels by writing or printing, and the civil actions consequent thereupon: but as to signs or pictures, it seems necessary always to show, by proper innuendos and averments of the defendant's meaning, the import and application of the scandal, and that some special damage has followed; otherwise it cannot appear that such libel by picture was understood to be levelled at the plaintiff, or that it was attended with any actionable consequences. In a civil action, then, a libel must appear to be false, as well as scandalous: for, if the charge be true, the plaintiff has received no private injury, and has no ground to demand a compensation for himself, whatever offence it may be against the public peace: and therefore, upon a civil action, the truth of the accusation may be pleaded in bar of the suit. But, in a criminal prosecution, the tendency which all libels have to create animosities, and to disturb the public peace, is the sole consideration of the law. And, therefore, in such prosecutions, the only points to be considered are, first, the making or publishing of the book or writing; and, secondly, whether the matter be criminal: and, if both these points are against the defendant, the offence against the

public is complete. The punishment of such libellers, for either making, repeating, printing, or publishing the libel, is a fine, and such corporal punishment as the court in its discretion shall inflict; regarding the quantity of the offence, and the quality of the offender. By the law of the XII. tables, at Rome, libels, which affected the reputation of another, were made a capital offence: but, before the reign of Augustus, the punishment became corporal only. Under Valentinian it was again made capital, not only to write, but to publish, or even to omit destroying them. Our law, in this and many other respects, corresponds rather with the middle age of Roman jurisprudence, when liberty, learning, and humanity, were in their full vigor, than with the cruel edicts that were established in the dark and tyrannical ages of the ancient decemviri, or the later emperors. In this and other instances, where blasphemous, immoral, treasonable, schismatical, seditious, or scandalous libels are punished by the English law, some with a greater, others with a less degree of severity, the liberty of the press, properly understood, is by no means infringed or violated. See LAW, part I.

LIBELLA, a piece of money amongst the Romans, being the tenth part of the denarius, and equal in value to the as. It was called libella, as being a little pound, because equal to a pound of brass. Its value in our money is 1 ob. 1 qu., or a halfpenny farthing. See MONEY.

LIBELLA, or **LIBELLULA**, in zoology, a genus of four-winged flies, called in English dragon-flies, or adder-flies. The characters are these: the mouth is furnished with jaws; the feelers are shorter than the breast: and the tail of the male terminates in a kind of hooked forceps. See ENTOMOLOGY.

LIBELLI was the name given to the bills which were put up amongst the Romans, giving notice of the time when a show of gladiators would be exhibited, with the number of combatants, and other circumstances. This was called munus pronounciare, or proponere. These bills were sometimes termed edicta. These public notices were given by the person who designed to oblige the people with the show, and were frequently attended with pictures representing the engagement of some celebrated gladiator. This custom is alluded to by Horace.

LIBELLI FAMOSI, defamatory libels. Seneca calls them contumeliosi libelli, defamatory rhymes which by a Roman ordinance were punishable with death.

LIBELLULA. See **LIBELLA**.

LIBENTINA, a surname of Venus, who had a temple at Rome, where young girls, arrived at puberty, dedicated their juvenile toys.

LIBER, in botany, the bark or rind, principally of trees. This is conceived to consist of a number of cylindric and concentric surfaces, whose texture is reticular, and in some trees plainly extrusible every way, as the fibres are soft and flexible. While in this condition, they are either hollow regular canals, or have interstitial spaces, which serve the office of canals. The nutritious juice which they are continually receiving, remains in part in them, makes them

grow in length and thickness, and strengthens and brings them closer together; and thus the texture, which was before reticular, becomes an assemblage of straight fibres ranged vertically and parallel to each other; that is, as they are thus altered behind one another, they by degrees become a new substance, more woody, called blea.

LIBER, Lat. i. e. free, in mythology, a title conferred on Bacchus, in memory of the freedom which he granted to the people of Bœotia; or, perhaps, because wine, whereof he was the reputed deity, delivers men from care, and sets their mind at ease and freedom.

LIBERA, in mythology, a goddess whom Cicero, in his book De Nat. Deor., styles the daughter of Jupiter and Ceres. Ovid, in his Fasti, says that the name was given by Bacchus to Ariadne. Libera is exhibited on medals as a kind of female Bacchus, crowned with vine leaves.

LIB'ERAL, *adj.* & *n. s.* } *Fr. liberal*; Lat. **LIBERALITY**, *n. s.* } *liberalis*. Free; un-
LIB'ERALLY, *adv.* } controlled; bland; generous; munificent: hence not mean in any way; not of low origin or birth; genteel: it takes of before things and to before persons.

If any of you lack wisdom, let him ask of God, that giveth to all men *liberally*, and upbraideth not. James i. 5.

Some are unwisely *liberal*, and more delight to give presents than to pay debts. Sir P. Sidney.

Her name was Mercy, well-known over all To be both gracious and eke *liberal*.

Faerie Queene.

Sparing would shew a worse sin than ill doctrine. Men of his way should be most *liberal*; They're set here for examples.

Shakspeare. Henry VIII.

Why should he despair, that knows to court With words, fair looks, and *liberality*?

Shakspeare.

There is no art better than to be *liberal* of praise and commendation to others, in that wherein a man's self hath any perfection. Bacon's Essays

Such moderation with thy bounty join,
That thou may'st nothing give that is not thine;
That *liberality* is but cast away,
Which makes us borrow what we cannot pay.

Denham.

Needs must the power
That made us, and for us this ample world,
Be infinitely good, and of his good
As *liberal* and free as infinite.

Milton.

The painter is, as to the execution of his work, a mechanic; but as to his conception, his spirit, and design, he is hardly below even the poet, in *liberal* art. Steele.

The *liberal* are secure alone,
For what we frankly give, for ever is our own.

Granville.

Several clergymen, otherwise little fond of obscure terms, are, in their sermons, very *liberal* of all those which they find in ecclesiastical writers, as if it were our duty to understand them. Swift.

He seldom lives frugally, who lives by chance. Hope is always *liberal*, and they that trust her promises make little scruple of revelling to-day, on the profits of to-morrow. Johnson.

Virtue and vice are oftentimes so near neighbours that we pass into each other's borders without obser-

vation, and think we do justice when we are cruel ; or call ourselves *liberal* when we are loose and foolish in our expenses. *Paley.*

Poets, and orators, and painters, and those who cultivate other branches of the *liberal* arts, have without this critical knowledge succeeded well in their several provinces. *Burke on the Sublime.*

LIBERALIA, feasts celebrated by the ancient Romans, in honor of Liber or Bacchus, the same with those which the Greeks called Dionysia, and Dionysiaca. Varro derives the name of this feast from liber, considered as a noun adjective, and signifying free; because the priests were free from their functions, and eased of all care, during the time of the *liberalia*, as the old women officiated in the ceremonies and sacrifices of these feasts.

LIBERIA, in Roman antiquity, a festival observed on the sixteenth of the kalends of April, at which time the youth laid aside their juvenile habit for the toga virilis, or habit peculiar to grown men. See **TOGA**.

LIBERTINE, *n. s. & adj.* } French *libertin* ;
LIBERTINISM, *n. s.* } Latin *libertinus*
 (*liber, free*). Uncontrolled by law or morals ; legally, the son of a freedman.

And steuene, ful of grace and of the strengthe, made woundris and grete signes in the peple, but summe risen of the synagoge that was clepid of *libertyns*—disputiden with steuene. *Wiclif. Dedis vi.*

When he speaks,

The air, a chartered *libertine*, is still ;
 And the mute wonder lurketh in men's ears,
 To steal his sweet and honied sentences.

Shakspeare. Henry V.

They say this town is full of couzenage,
 Disguised cheaters, prating mountebanks,
 And many such like *libertines* of sin.

Shakspeare.

There are men that marry not, but choose rather a *libertine* and impure single life, than to be yoked in marriage. *Bacon.*

Man, the lawless *libertine*, may rove,
 Free and unquestioned. *Rowe's Jane Shore.*

Some persons are forbidden to be accusers on the score of their sex, as women ; others on the score of their age, as pupils and infants ; others on the score of their condition, as *libertines* against their patrons.

That word may be applied to some few *libertines* in the audience. *Ayliffe's Paragon.*
Collier's View of the Stage.

That spirit of religion and seriousness vanished all at once, and a spirit of liberty and *libertinism*, of infidelity and profaneness, started up in the room of it. *Atterbury's Sermons.*

Might not the queen make diligent inquiry, if any person about her should happen to be of *libertine* principles or morals ? *Swift's Project.*

Thus the atheists, *libertines*, and despisers of religion, usually pass under the name of free-thinkers. *Swift.*

Want of power is the only bound that a *libertine* puts to his views upon any of the sex. *Clarissa.*

LIBERTINES, **LIBERTINI**, in ecclesiastical history, a religious sect, which arose in 1525, whose principal tenets were, that the Deity was the sole operating cause in the mind of man, and the immediate author of all human actions ; that, consequently, the distinctions of good and evil, which had been established with regard to those actions, were false and groundless, and that men could not, properly speaking, commit sin ; that religion, consisted in the union of the spirit or

rational soul with the Supreme Being ; that all those who had attained this happy union, by sublime contemplation and elevation of mind, were then allowed to indulge, without exception or restraint, their appetites or passions ; that all their actions and pursuits were then perfectly innocent ; and that, after the death of the body, they were to be united to the Deity. They likewise said that Jesus Christ was nothing but a mere *je ne sai quoi*, composed of the Spirit of God, and of the opinion of men.—These maxims occasioned their being called *Libertines* ; and the word has been used in a bad sense ever since. They spread principally in Holland and Brabant. Their leaders were Quintin, Picard, Pockesius, Ruffus, and Chopin, who joined with Quintin, and became his disciple. This sect obtained a footing in France through the favor of Margaret, queen of Navarre, and sister to Francis I., and found patrons in several of the reformed churches.

LIBERTUS, or **LIBERTINUS**, among the Romans, a freed man, or a person set free from a legal servitude. These still retained some mark of their ancient state : he who made a slave free having a right of patronage over the *libertus* ; so that, if the latter failed of showing due respect to his patron, he was restored to his servitude ; and if the *libertus* died without children, his patron was his heir. See **SLAVE**. In the beginning of the republic, *libertinus* denoted the son of a *libertus* or freedman : but afterwards, before the time of Cicero, and under the emperors, the terms *libertus* and *libertinus*, as Suetonius remarks were used synonymously.

LIBERTY, *n. s.* Fr. *liberté* ; Lat. *libertas, liber*. Freedom ; state of being uncontrolled ; hence opposed to necessity and restraint ; exemption ; privilege ; leave ; permission. See the fine exemplification and caution of Burke below.

Where the spirit of the Lord is there is *liberty*.
 2 Cor. iii. 17.

My master knows of your being here, and hath threatened to put me into everlasting *liberty*, if I tell you of it ; for he swears, he'll turn me away.

Shakspeare.

His majesty gave not an intire country to any, much less did he grant jura regalia, or any extraordinary *liberties*. *Davies.*

Justly thou abhorrest
 The son, who, on the quiet state of man,
 Such trouble brought, affecting to subdue
 Rational *liberty* ; yet know withal
 Since thy original lapse, true *liberty*
 Is lost, which always with right reason dwells.
Milton.

Not assuming the *liberty* to find fault with princes, we should practise the duty of seeking God for his blessing on their proceedings. *Barrow.*

Liberty is the power in any agent to do, or forbear, any particular action, according to the determination, or thought of the mind, whereby either of them is preferred to the other. *Locke.*

I shall take the *liberty* to consider a third ground, which, with some men, has the same authority. *Id.*

O *Liberty* ! thou goddess, heavenly bright !
 Profuse of bliss, and pregnant with delight,
 Eternal pleasures in thy presence reign. *Addison.*
 It is some loss of *liberty* to resolve on schemes beforehand. *Shenstone.*

Show me the man, who knows what life is, who

dreads death; and I'll show thee a prisoner who dreads his *liberty*.
Sterne.

News-writers by profession, are the rudest brawlers for *liberty*, a subject which they seem to have considered least of any.
Joineriana, 1772.

The effect of *liberty* to individuals is, that they may do what they please: we ought to see what it will please them to do, before we risk congratulations which may be soon turned into complaints.
Burke.

Now, Virtue, now thy powerful succour lend,
Shield them for *liberty* who dare to die—
Ah, *Liberty!* will none thy cause befriend?
Are these thy sons, thy generous sons, that fly?
Beattie.

LIBERTY may be considered as either natural or civil.

LIBERTY, NATURAL. The absolute rights of man, considered as a free agent, endowed with discernment to know good from evil, and with power of choosing those measures which appear to him to be most desirable, are usually summed up in one general appellation, and denominated the natural liberty of mankind. This natural liberty consists properly in a power of acting as one thinks fit, without any restraint or control, unless by the law of nature; being a right inherent in us by birth, and one of the gifts of God to man at his creation, when he endued him with the faculty of free-will. But every man, when he enters into society, gives up a part of his natural liberty, and, in consideration of receiving the advantages of mutual commerce, obliges himself to conform to those laws which the community has thought proper to establish. And this species of legal obedience, and conformity, is infinitely more desirable than that wild and savage liberty which is sacrificed to obtain it. For no man, who considers a moment, would wish to retain the absolute and uncontrolled power of doing whatever he pleases: the consequence of which would be, that every other man would also have the same power; and then there would be no security to individuals in any of the enjoyments of life.

LIBERTY, POLITICAL, therefore, or civil liberty, which is that of a member of society, is no other than natural liberty, so far restrained by human laws (and no farther) as is necessary and expedient for the general advantage of the public. Hence we may collect, that the law, which restrains a man from doing mischief to his fellow-citizens, though it diminishes the natural, increases the civil liberty of mankind; but every wanton and causeless restraint of the will of the subject, whether practised by a monarch, a nobility, or a popular assembly, is a degree of tyranny. Nay, that even laws themselves, whether made with or without our consent, if they regulate and constrain our conduct in matters of mere indifference, without any good end in view, are laws destructive of liberty: whereas, if any public advantage can arise from observing such precepts, the control of our private inclinations, in one or two particular points, will conduce to preserve our general freedom in others of more importance, by supporting that state of society which alone can secure our independence. Thus the statute of Edward IV., which forbade the fine

gentlemen of those times (under the degree of a lord) to wear pikes upon their shoes or boots of more than two inches in length, was a law that savored of oppression; because, however ridiculous the fashion then in use might appear, the restraining it by pecuniary penalties could serve no purpose of common utility. But the statute of Charles II. which prescribes a thing seemingly as indifferent, viz. a dress for the dead, who were all ordered to be buried in woollen, was a law consistent with public liberty; so far as it encouraged the staple trade in wool, on which in a great measure depended the universal good of the nation. So that laws, when prudently framed, are by no means subversive, but rather introductive, of liberty; for (as Mr. Locke has well observed) where there is no law there is no freedom. On the other hand, that constitution or frame of government, that system of laws, is alone calculated to maintain civil liberty, which leaves the subject entire master of his own conduct, except in those points wherein the public good requires some direction or restraint. But the reader will find this subject amply discussed in the introduction to our article LAW.

LIBERTY, in mythology, was a goddess both among the Greeks and Romans. Among the former she was invoked under the title Eleutheria, and by the latter she was called Libertas, and held in singular veneration; temples, altars, and statues, were erected in honor of her. A very magnificent temple was consecrated to her on mount Aventine by Tiberius Gracchus, before which was a spacious court, called atrium libertatis. The Romans also erected a new temple in honor of Liberty when Julius Cæsar established his empire over them, as if their liberty had been secured by an event which destroyed it.

LIBERTY OF THE PRESS. The art of printing, soon after its introduction, was looked upon in England, as well as in other countries, as merely a matter of state, and subject to the coercion of the crown. It was therefore regulated with us by the king's proclamations, prohibitions, charters of privilege and license, and finally by the decrees of the court of star-chamber, which limited the number of printers, and of presses which each should employ, and prohibited new publications unless previously approved by proper licensers. On the demolition of this odious jurisdiction in 1641, the long parliament of Charles I., after their rupture with that prince, assumed the same powers as the star-chamber had exercised with respect to the licensing of books: and in 1643, 1647, 1649, and 1652 (Scobell, i. 44, 134, ii. 88, 230), issued their ordinances for that purpose, founded principally on the star-chamber's decree of 1637. In 1662 was passed the statute 13 and 14 Car. II. c. 33, which, with some few alterations, was copied from the parliamentary ordinances. This act expired in 1679: but was revived by statute 1 Jac. II. c. 17, and continued till 1692. It was then continued for two years longer by statute 4 W. & M. c. 24; but though frequent attempts were made by the government to revive it in the subsequent part of that reign (Com. Journ. 12th of February 1694, 26th of November 1695, 21st of October 1696, 9th of February 1697, 32nd

January 1698), yet the parliament resisted it so strongly, that it finally expired, and the press became properly free in 1694, and has continued so ever since. The liberty of the press, however, so essential to the existence of a free state, consists not in freedom from any criminal matter that may be published, but in laying no previous restraints upon publications. Every free man has undoubtedly a right to lay what sentiments he pleases before the public; to forbid this, is to destroy the freedom of the press: but if he publishes what is improper, mischievous, or illegal, he must take the consequences of his own temerity. See **LIBEL** and **LAW**. To subject the press to the restrictive power of a licenser, in the manner above mentioned, is to subject all freedom of sentiment to the prejudices of one man, and make him the arbitrary and infallible judge of all disputed points in learning, religion, and government. But to punish (as the law does at present) any dangerous or offensive writings which, when published, shall, on a fair and impartial trial, be adjudged of a pernicious tendency, is necessary for the preservation of peace and good order, of government and religion, the only solid foundations of civil liberty. Thus the will of individuals is still left free; the abuse only of that free-will is the object of legal punishment. Neither is any restraint hereby laid upon freedom of thought or inquiry; the disseminating or making public of bad sentiments, destructive of the ends of society, is the crime which society corrects. A man (says a fine writer on this subject) may be allowed to keep poisons in his closet, but not publicly to vend them as cordials. And to this we may add, that the only plausible argument heretofore used for restraining the just freedom of the press, 'that it was necessary to prevent the daily abuse of it,' will entirely lose its force, when it is shown (by a seasonable exertion of the laws) that the press cannot be abused to any bad purpose without incurring a suitable punishment: whereas, it can never be used to any good one when under the control of an inspector. So true will it be found, that to censure the licentiousness is to maintain the liberty of the press. It is curious and gratifying to observe how much the late experiment of an established censorship of the press in France confirms the above reasoning.

LIBETHRA, in ancient geography, a town and fountain of Thessaly. The latter was called the fountain of song, and was situated in Magnesia, a district of Macedonia annexed to Thessaly. The town stood on mount Olympus, where it verges towards Macedonia: hence the muses are called Libethrides. (Virgil). Strabo places on Helicon, not only Hippocrene, and the temple of the Muses, but also the caves of the nymphs Libethrides.

LIBETHRIUS MONS, **LIBETHRUS**, in ancient geography, a mountain of Bœotia, forty stadia from Coronea; where stood the statues of the Muses, and of the Libethrides. It was either conjoined with, or at least very near to, Helicon.

LIBIDINOUS, *adj.* Lat. *libidinosus*, *libido*, lust. Lustful; wanton.

None revolt from the faith because they must not look upon a woman to lust after her, but because they are much more restrained from the perpetration of their lusts. If wanton glances and *libidinous* thoughts had been permitted by the gospel, they would have apostatized nevertheless.

Bentley.

LIBITINA, in Roman mythology, a goddess who presided over funerals. She was the same with the Venus infera or Epithymia of the Greeks. She had a temple at Rome, where was lodged a certain piece of money for every person who died, whose name was recorded in a register called *Libitinæ ratio*. This practice was established by Servius Tullius, in order to obtain an account of the number of annual deaths in the city of Rome, and consequently the increase or decrease of its inhabitants. All things requisite for funerals were sold in the temple of Libitina.

LIBITINARII, from Libitina, were undertakers whose office it was to take care of funerals, prepare all things necessary upon the solemn occasion, and furnish every article required. They kept a number of servants to perform the working part of the profession, such as the pollinctores, vespillones, &c. See **FUNERAL**.

LIBILLA. See **LIBELLA**.

LIBNA, in ancient geography, a sacerdotal city in the tribe of Judah, a place of strength, as appears from Sennacherib's laying siege to it. In Jerome's time it was a village, called Lobna, in the territory of Eleutheropolis.

LIBRA, in astronomy, one of the twelve signs of the zodiac, exactly opposite to Aries; so called because when the sun is in this sign, at the autumnal equinox, the days and nights are equal, as if weighed in a balance. See **ASTRONOMY**.

LIBRA also denotes the ancient Roman pound, borrowed from the Sicilians, who called it *lira*. The libra was divided into twelve *uncie* or ounces, and the ounce into twenty-four scruples. The divisions of the libra were, the *uncia*, one-twelfth; *sextans*, one-sixth; *quadrans*, one-fourth; *triens*, one-third; *quincunx*, five ounces; *semis*, the half pound or six ounces; *septunx*, seven; *bes*, eight; *dodrans*, nine; *dextrans*, ten; *deunx*, eleven; lastly, the *as* weighed twelve ounces or one libra. The Roman libra was used in France for the proportion of their coin, till the time of Charlemagne, or perhaps till that of Philip I. in 1093, their sols being so proportioned as that twenty of them were equal to the libra. By degrees it became a term of account; and every thing of the value of twenty sols was called a *livre*. Hence too £. stands for pound sterling, and lb. for a pound in weight.

LIBRA PENZA, in law books, denotes a pound of money in weight. It was anciently the custom not only to tell the money but to weigh it; because many cities, lords, and bishops, having their mints, coined money, and often too light; for which reason, though the pound consisted of 20s., they always weighed it.

LIBRARIJ, among the ancients, were a sort of copyists who transcribed, in beautiful or at least legible characters, what had been written by the notarii in notes and abbreviations.

LIBRARY, *n. s.* } Fr. *librarie*, of Lat. *liber*,
LIBRARIAN. } a book. A collection of
books; the librarian, the appointed keeper of
them. It was also used formerly for a transcriber
of books or MSS.

Then as they 'gan his *library* to view,
And antique registers for to advise,
There chanced to the prince's hand to rise
An ancient book, hight Briton's monument
Faerie Queene.

I have given you the *library* of a painter, and a
catalogue of such books as he ought to read.

Dryden's Dufresnoy.

Charybdis thrice swallows, and thrice refunds the
waves: this must be understood of regular tides.
There are indeed but two tides in a day, but this is
the error of the *librarians*.

Broome.

There is a book, which we may call
(Its excellence is such)

A lone a *library*, though small:

The ladies thumb it much.

Cowper.

A *library*, pharmaceutically disposed, would have
the appearance of a dispensatory, and might be pro-
perly enough so called.

Cumberland.

LIBRARY. 'Books,' says lord Bacon, 'must
follow sciences, not sciences books'; yet modern
bibliographers, or bibliomaniacs, as they have
most aptly been termed, have followed the mere
impulse of collecting books, and especially those
which are rare and costly, until bibliography
itself has been called a science, and the time and
taste to profit by what is collected have been
alike sacrificed to this most unscientific mania.
Mere costliness is with collectors of this descrip-
tion no small proof of value, and rareness an ab-
solute demonstration.

We confess we would sooner employ the hum-
blest man of *letters*, connected with the typogra-
phical composition of our work, to form for us
a library, than the popular author of a late Li-
brary Companion, the high priest of these sacri-
ficers of sovereigns and good sense to **Roxburgh**
partialities, and title-page learning. The latter,
for instance, can omit in this misnamed Young
Man's Guide and Old Man's Comfort, Hooker's
Polity, Dr. Lardner's, Dr. Leland's, and Hannah
More's works; Reid and Stewart, and Hartley
and Brown, on the Philosophy of the Mind:
while he can recommend the purchase of the
'Universal History, Ancient and Modern, in the
folio edition, and bound in white calf by C.
Lewis, with marble edges and full chased gilt
backs,' 'for the not unconscionable price of £52
10s.' 'To which work add,' he says, 'Calmet
Histoire Universelle, 17 vols. 4to.'

Although, therefore, we had designed to afford
the reader some hints toward the formation of
a general library in the present article, we feel
distanced, we confess, into absolute heresi-
archs on the subject of bibliography, by the re-
cent and most appalling contribution to it just
named; and shall, under the article RARE AND
SCARCE BOOKS, endeavour to furnish a brief view
of the criteria of this important part of that
science, according to this and other writers:
while the article USEFUL BOOKS will contain our
opinions on the selection and arrangement of a
general library, as distinct from any professional
one (respecting which a professional and exclu-

sive catalogue can alone be consulted), within
the means, and really uniting the cultivation of
a moral feeling with the literary taste of our in-
telligent readers.

Some authors refer the origin of libraries to
the Hebrews; and observe that the care they
took to preserve their sacred books, and the
memory and actions of their ancestors, became
an example to other nations, particularly to the
Egyptians. Osymandyas, king of Egypt, accord-
ing to Diodorus, had a library built in his palace
with this inscription over the door, ΨΥΧΗΣ
ΙΑΤΡΕΙΟΝ. Nor were the Ptolemies, who
reigned in the same country, less curious and
magnificent in books. The first who erected a
library at Athens was the tyrant Pisistratus;
though Strabo ascribes the honor to Aristotle.
That of Pisistratus was transported by Xerxes
into Persia, and was afterwards brought back by
Seleucus Nicator to Athens. Some time after it
was plundered by Sylla, and re-established by
Adrian. Plutarch informs us, that under Eu-
menes there was a library at Pergamus, contain-
ing 200,000 books. Tyrannion, a celebrated
grammarian, contemporary with Pompey, had a
library of 30,000 volumes. That of Ptolemy
Philadelphus contained, according to A. Gellius,
700,000 rolls, accidentally burnt by Cæsar's
soldiers. The most celebrated libraries of an-
cient Rome were the Ulpian and the Palatine.
Those of Paulus Æmilus (who conquered Per-
seus) of Lucilius, Lucullus, of Asinius Pollio,
Atticus, Julius Severus, Domitius Serenus, Pam-
philus Martyr, and the emperors Gordian and
Trajan, are also much celebrated; and Constan-
tine erected a magnificent one in his new capi-
tal. Pope Nicholas laid the foundation of the
Vatican in 1450. It was destroyed by the con-
stable Bourbon, in the sacking of Rome; restored
by pope Sixtus V.; and considerably enriched
with books from that of Heidelberg, plundered
by count Tilly in 1622. One of the most com-
plete libraries in Europe was said to be that
erected at Florence by Cosmo de Medicis, over
the gate of which is written, Labor absque labore.
The emperor's library at Vienna, according to
Lambecius, consists of 80,000 volumes: but the
Bodleian at Oxford used to exceed that of any
university in Europe. See OXFORD and CAM-
BRIDGE. The principal public libraries in Lon-
don, besides that of the British Museum, are
those of the college of Heralds, of the college of
Physicians, of Doctors' Commons, Gray's Inn,
Lincoln's Inn, Inner Temple, and Middle Tem-
ple; that of Lambeth, founded by archbishop
Bancroft in 1610, for the use of succeeding arch-
bishops of Canterbury, and increased by the
benefactions of archbishops Abbot, Sheldon, and
Tennison, and said to consist of at least 15,000
printed books, and 617 volumes in MS.; that of
Red-cross Street, founded by Dr. Daniel Wil-
liams, a Presbyterian divine, and since enriched
by many private benefactions: that of the Royal
Society; that of St. Paul's, and of Sion College.
See LONDON and ROYAL SOCIETY.

LIBRARY, THE COTTONIAN, originally con-
sisted of 958 volumes of original charters, grants,
instruments, letters of sovereign princes, trans-
actions between this and other kingdoms and

states, genealogies, histories, registers of monasteries, remains of Saxon laws, the book of Genesis, thought to be the most ancient Greek copy extant, and said to have been written by Origen in the second century, and the curious Alexandrian MS. copy, in Greek capitals. This library is kept in the British Museum, with the large and valuable library of Sir Hans Sloane, amounting to upwards of 42,000 volumes, &c.

LIBRARY, THE KING'S, at St. James's, was founded by Henry, eldest son of James I., and made up partly of books, and partly of MSS., with many other curiosities, for the advancement of learning. It has received many additions from the libraries of Isaac Casaubon and others.

LIBURNA, or **LIBURNICA**, denoted a kind of light and swift skiff, used by the Liburnians in their piracies, for which they were noted. Horace.

LIBRATION. Fr. *libration*; Lat. *libratio*, *libra*, a balance. The state of being balanced. Its astronomical use is well explained in the extract below.

This is what may be said of the balance, and the *libration* of the body. *Dryden's Dufresnoy.*

Those planets which move upon their axis, do not all make entire revolutions; for the moon maketh only a kind of *libration*, or a reciprocated motion on her own axis. *Grew.*

Their pinions still

In loose *librations* stretched, to trust the void
Trembling refuse. *Thomson's Spring.*

Libration is the balancing motion or trepidation in the firmament, whereby the declination of the sun, and the latitude of the stars, change from time to time. Astronomers likewise ascribe to the moon a *libratory* motion, or motion of trepidation, which they pretend is from east to west, and from north to south, because that at full moon they sometimes discover parts of her disk which are not discovered at other times. These kinds are called, the one a *libration* in longitude, and the other a *libration* in latitude. Besides this, there is a third kind, which they call an apparent *libration*, and which consists in this, that when the moon is at her greatest elongation from the south, her axis, being then almost perpendicular to the plane of the ecliptick, the sun must enlighten towards the north pole of the moon some parts which he did not before, and that, on the contrary, some parts of those which he enlightened towards the opposite pole are obscured: and this produces the same effect which the *libration* in latitude does. *Dict. Trev.*

LIBURNIA, in ancient geography, a district of Illyricum, extending towards the Adriatic, between Istria on the west, Dalmatia on the east, and mount Albius on the north.

LIBURNIANS, **LIBURNI**, or **LIBURNI**, the people of Liburnia. The apparitors, who at the command of the Roman magistrate summoned the people from the country, were called *Liburnii*, because generally from Liburnia.

LIBURNUM was a species of litter made in form of Liburnian skiffs, wherein the noblemen of Rome were carried, and where they sat at their ease, either reading or writing. Juvenal.

LIBURNUS, in ancient geography a mountain of Campania.

LIBYA, in a general sense, among the Greeks, denoted Africa, a name derived from

lub, thirst, being a dry and thirsty country. AFRICA.

LIBYA, in a more restrained sense, was the middle part of Africa, extending north and west according to Pliny, between the Mediterranean on the north, and Ethiopia on the east; and was divided into the Hither or Exterior Libya, and the Farther or Interior. The former lay between the Mediterranean on the north, and the Farther Libya, and Ethiopia beyond Egypt, on the south. Ptolemy. The Farther or Interior Libya was a vast country, lying between the Hither Libya on the north, the Atlantic Ocean on the west, the Ethiopic on the south, and Ethiopia beyond Egypt on the east. Ptolemy.

LIBYA, in a still more restrained sense, called, for distinction's sake, *Libya Propria*, was a northern district of Africa, and a part of the Hither Libya; situated between Egypt on the east, the Mediterranean on the north, the Syrtis Major and the Regio Tripolitana on the west, the Garamantes and Ethiopia beyond Egypt on the south: now the kingdom and desert of Barca.

LIBYECUM MARE, the Libyan Sea, a part of the Mediterranean, on the coast of Cyrene.

LIBYSSA, a town and river of Bithynia, where the tomb of Hannibal the Great was visible in Pliny's time.

LICE, plural of Louse, which see.

LICENCE, *v. a. & n. s.*

LICENSER, *n. s.*

LICENTIATE, *v. a. & n. s.*

LICENTIOUS, *adj.*

LICENTIOUSLY, *adv.*

LICENTIOUSNESS, *n. s.*

Fr. *licence*; Lat. *licentia*, *liceo*, to be lawful. To permit by law: liberty; permission; grant of freedom, or leave; freedom from restraint of any kind: hence extravagant liberty; contempt of restraint or authority: licentiate, probably from the Fr. *licentier*, seems an unnecessary synonyme of the verb *licence*: as a noun it means one who uses or acts upon a licence, rule, or law; hence it is a Spanish literary distinction or degree: licentious and its derivatives are always used in the sense of excessive freedom or liberty, or in 'a bad sense.'

It is not the manner of the Romans to deliver any man to die, before that he which is accused have the accusers face to face, and have *licence* to answer for himself. *Acts.*

They sent some to bring them a *licence* from the senate. *Judith xi. 14.*

Later ages pride, like corn-fed steed,
Abused her plenty, and fat swoln increase,
To all *licentious* lust, and gan exceed
The measure of her mean, and natural first need.

Faerie Queene.

Taunt my faults

With such full *licence*, as both truth and malice
Have power to utter.

Shakspeare. Antony and Cleopatra.

How would it touch thee to the quick,
Should'st thou but hear I were *licentious*?
And that this body, consecrate to thee,
With ruffian lust should be contaminate?

Shakspeare.

One error is so fruitful, as it begetteth a thousand children, if the *licentiousness* thereof be not timely restrained. *Raleigh.*

The *licentiate*s somewhat *licentiously*, lest they should prejudice poetical liberty, will pardon themselves for doubling or rejecting a letter, if the sense fall aptly.

Camden.

They baul for freedom in their senseless moods,
And still revolt when truth would set them free;
Licence they mean, when they cry liberty. *Milton.*

We ought to have an especial care of perverting
this excellent truth by mistakes and vain presump-
tions; that we do not turn the grace of God into
wantonness, or occasion of *licentious* practice.

Borrow.

Some of the wiser, seeing that a popular *licence* is
indeed the many-headed tyranny, prevailed with the
rest to make *Musidorus* their chief. *Sidney.*

The privilege that ancient poets claim,
Now turned to *licence* by too just a name.

Roscommon.

The Tyber, whose *licentious* waves,
So often overflowed the neighbouring fields,
Now runs a smooth and inoffensive course. *Id.*

We may not hazard either the stifling of generous
inclinations, or the *licentiating* of any thing that is
coarse. *L'Estrange.*

Though this be a state of liberty, yet it is not a
state of *licence*: though man, in that state, have an
uncontrollable liberty to dispose of his person or pos-
sessions, yet he has not liberty to destroy himself.

Locke.

A man might, after that time, sue for the degree
of *licentiate* or master in this faculty. *Ayliffe.*

We procured a *licence* of the duke of Parma to
enter the theatre and gallery. *Addison on Italy.*

It is not the increase of vices inseparable from hu-
manity that alarms us, the riots of the *licentious*, or
the outrages of the profligate; but it is the absence
of that integrity, the neglect of that virtue, the con-
tempt of that honour, which by connecting individuals
formed society, and without which society can no
longer subsist. *Adventurer.*

Wit's Titans braved the skies,
And the press groaned with *licensed* blasphemies.

Pope.

This custom has been always looked upon, by the
wisest men, as an effect of *licentiousness*, and not of
liberty. *Swift.*

He would play well, and willingly at some games
of greatest attention, which shewed, that when he
listed he could *licence* his thoughts. *Wotton.*

While she seems, nodding o'er her charge, to drop
On headlong appetite the slackened rein,
And give us up to *licence* unrecalled,
Unmarked;—see from behind her secret stand,
The sly informer minutes every fault. *Young.*

On this history the *licenser* again fixed his claws,
and before he could transmit it to the press tore out
several parts. *Johnson.*

His interposition of a long paragraph of blank
verses is unwarrantably *licentious*. *Id.*

Alternate follies take the sway;

Licentious passions burn;

Which tenfold force give nature's law,

That man was made to mourn. *Burns.*

The other part of our rule is the sacred scriptures,
which we are to use as our guard against the *licen-
tious* excursions of fancy, which is often imposing
itself upon us for right reason. *Mason.*

His suit consisted of three servants, and

A tutor, the *licentiate* Pedrillo,

Who several languages did understand,

But now lay sick and speechless on his pillow.

Byron.

LICENTIATE, in England, usually means a
physician who has a license to practice, granted
by the college of physicians. Licentiate also
signifies a degree granted in the English univer-

sities in medicine to persons who are neither
bachelors nor doctors in that faculty.

LICENTIATE. The greatest number of the
officers of justice in Spain are distinguished by
no other title than that of licentiate. To pass
licentiate in common law, civil law, and physic,
they must have studied seven years, and in divi-
nity ten years.

LICETUS, a celebrated physician of Italy,
born at Rappollo, in Genoa, in 1577. He came
into the world before his mother had completed
the seventh month of her pregnancy; but his
father, an ingenious physician, nurtured him up
in cotton, so that he lived to be seventy-seven
years of age. He became a very distinguished
man in his profession; and was the author of a
great number of works: his treatise *De Mon-
stris* is well known. He was professor of phi-
losophy and physic at Padua, where he died in
1655.

LICHEN, liver wort, in botany, a genus of
the natural order of algæ, and cryptogamia class
of plants. The male receptacle is roundish,
somewhat plain, and shining. In the female the
leaves have a farina or mealy substance scat-
tered over them. There are about 130 species,
all found in Britain. The following are among
the most remarkable:—

1. *L. apthosus*, the green ground liver-wort,
with black warts, grows upon the ground at the
roots of trees in woods, and other stony and
mossy places. It differs very little from the *can-
inus*, and, according to some, is only a variety
of it. Linnæus informs us that the country peo-
ple of Upland, in Sweden, give an infusion of
this lichen in milk to children that are troubled
with the thrush or apthia, which induced that
distinguished naturalist to bestow upon it the
trivial name of apthosus.

2. *L. barbatus*, the bearded lichen, grows upon
the branches of old trees in thick woods and
pine-forests. The stalks or strings are slightly
branched and pendulous, from half a foot to two
feet in length, little bigger than a thread; cylin-
drically jointed towards the base; but surrounded
every where else with numerous, horizontal, ca-
pillary fibres, either simple or slightly branched.
Their color is a whitish-green. This has an as-
tringent quality. When steeped in water it
acquires an orange color; and is used for dyeing
that color.

3. *L. calicaris*, the beaked lichen, grows some-
times upon rocks, especially on the coasts; but
is not very common. It is smooth, glossy, and
whitish, producing flat or convex shields, of the
same color as the leaves, very near the summits
of the segments, which are acute and rigid, and,
being often reflected from the perpendicular by
the growth of the shields, appear from, under their
limbs like a hooked beak.

4. *L. candelarius*, or yellow farinaceous
lichen, is common upon walls, rocks, boards, and
old pales. There are two varieties. The first
has a farinaceous crust of no regular figure,
covered with numerous, small, greenish-yellow,
or olive shields, and grows commonly upon old
boards. The other has a smooth, hard, circular
crust, wrinkled and lobed at the circumference
which adheres closely to rocks and stones. In

the centre are numerous shields of a deeper yellow or orange color, which, as they grow old, swell in the middle, and assume the figure of tubercles. The inhabitants of Smaland, in Sweden, scrape this lichen from the rocks, and mix it with their tallow, to make candles to burn on festival days.

5. *L. caninus*, the ash-colored ground liverwort, grows upon the ground among moss, at the roots of trees in shady woods, and in heaths and stony places. The leaves are large, gradually dilated towards the extremities, and divided into roundish elevated lobes. Their upper side, in dry weather, is ash-colored; in rainy weather of a dull fuscous green color: the under side white and hoary, having many thick downy nerves, from which descend numerous, long, white, pencil-like radicles. The shields grow at the extremities of the elevated lobes, shaped like the human nail; of a roundish oval form, convex above, and concave beneath; of a chocolate color on the upper side, and the same color with the leaves on the under. There are two varieties, the one called reddish, and the other many-fingered ground liverwort. The former is most common. This species was recommended by the celebrated Dr. Mead as a preventive of the dreadful consequences attending the bite of a mad dog. He directed half an ounce of the leaves, dried and pulverised, to be mixed with two drachms of powdered black pepper; divided into four doses, one to be taken by the patient every morning fasting, for four mornings successively, in half a pint of warm cow's milk; after which, to use the cold bath every morning for a month. But the success has not answered the expectation.

6. *L. cocciferus*, the scarlet-tipped cup lichen, is frequent and moors and heaths. It has, in the first state, a granulated crust for its ground, which is afterwards turned into small lacinated leaves, green above, and hoary beneath. The plant assumes a very different aspect, according to the age, situation, and other accidents of its growth; but may be, in general, readily distinguished by its fructifications, which are fungous tubercles of a fine scarlet color, placed on the rim of the cup, or on the top of the stalk. These tubercles, steeped in an alkaline lixivium, are said to dye a fine durable red color.

7. *L. Islandicus*, the eatable Iceland lichen, or rock grass, grows on many mountains both of the Highlands and Lowlands of Scotland. It consists of nearly erect leaves about two inches high, of a stiff substance when dry, but soft and pliant when moist, variously divided without order into broad distant segments, bifid or trifid at the extremities. The upper or interior surface of the leaves is concave, chestnut color, smooth, and shining, but red at the base; the under or exterior surface is smooth and whitish, a little pitted, and sprinkled with very minute black warts. The margins of the leaves, and all the segments from bottom to top are ciliated with small, short, stiff, hair-like spinules, of a dark chestnut color, turning towards the upper side. The Icelanders use it as an esculent herb. Made into broth or gruel, it is said to be useful in coughs and consumptions.

8. *L. juniperinus*, the common yellow tree lichen, is common upon the trunks and branches of elms and many other trees. Linnæus says it is very common upon the juniper. The Gothland Swedes dye their yarn of a yellow color with it, and give it as a specific in the jaundice.

9. *L. omphaloides*, the dark-colored dyer's lichen, is frequent upon rocks. It forms a thick widely expanded crust of no regular figure, composed of numerous imbricated leaves of a brown or dark purple color, divided into small segments. The margins of the shields are a little crisped and turned inwards, and their outsides ash-colored. The lichen is much used by the Highlanders in dyeing a reddish-brown color. They steep it in urine for a considerable time, till it becomes soft and like a paste: then, forming the paste into cakes, they dry them in the sun, and preserve them for use as they do the tartarius.

10. *L. parellus*, the crawfish-eye lichen, grows upon walls and rocks, but is not very common. The crusts spread closely upon the place where they grow, and cover them to a considerable extent. They are rough, tartareous, and ash-colored, of a tough coriaceous substance. The shields are numerous and crowded, having white or ash-colored, shallow, plain discs, with obtuse margins. This is used by the French for dyeing a red color.

11. *L. plicatus*, the officinal stringy lichen, grows on the branches of old trees, but is not very common. The stalks are a foot or more in length, cylindrical, rigid, and string-shaped, very irregularly branched, the branches entangled together, of a cinereous or ash-color; brittle and stringy if doubled short, otherwise tough and pliant; and hang pendent from the trees on which they grow. The shields grow generally at the extremities of the branches, are nearly flat, or slightly concave, thin, ash-colored above, pale brown underneath, and radiated with fine rigid fibres. As the plant grows old the branches become covered with a white, rough, warty crust; but the young ones are destitute of it. It was formerly used in the shops as an astringent to stop hæmorrhages; but is out of the modern practice. Linnæus says, the Laplanders apply it to their feet to relieve the excoriations occasioned by much walking.

12. *L. prunastri*, the common ragged hoary lichen, grows upon all sorts of trees, but is generally most white and hoary on the sloe and old palm trees, or upon old pales. This is the most variable of the whole genus, appearing different in figure, magnitude, and color, according to its age, place of growth, and sex. The young plants are of a glaucous color, slightly divided into small acute crested segments. As they grow older they are divided, like a stag's horn, into more and deeper segments, somewhat broad, flat, soft, and pitted on both sides, the upper surface of a glaucous color, the under one white and hoary. The male plants are short, seldom more than an inch high, not hoary on the under side, and have pale glaucous shields situated at the extremities of the segments, standing on short peduncles, which are only small stiff portions of the leaf produced. The females have

numerous farinaceous tubercles both on the edges of their leaves, and the wrinkles of their surface. The pulverised leaves have been used as a powder for the hair, and also in dyeing yarn of a red color.

13. *L. pulmonarius*, the lung-wort lichen, grows in shady woods upon the trunks of old trees. The leaves are as broad as a man's hand, of a kind of leather-like substance, hanging loose from the trunk on which it grows, and lacinated into wide angular segments. Their natural color, when fresh, is green; but in drying they turn first to a glaucous, and afterwards to a fuscous color. It has an astringent bitter taste; and, according to Gmelin, is boiled in ale in Siberia, instead of hops. The ancients used it in coughs and, asthmas, &c., but it is not used in modern practice.

14. *L. rangiferinus*, the rein-deer lichen, is common in woods, heaths, and mountainous places. Its general height, when full grown, is about two inches. The stalk is hollow, and very much branched from bottom to top; the branches are divided and subdivided, and at last terminated by two, three, four, or five, very fine, short, nodding horns. The axillæ of the branches are often perforated. The whole plant is of a hoary white or gray color, covered with white farinaceous particles, light and brittle when dry, soft and elastic when moist. The fructifications are very minute, round, fuscous, or reddish-brown tubercles, which grow on the very extremities of the finest branches; but these tubercles are very seldom found. The plant seems to have no foliaceous ground for the base, nor scarcely any visible roots. Linnæus informs us that, in Lapland, this moss grows so luxuriant that it is sometimes found a foot high. There are many varieties of this species, of which the principal is the *sylvaticus*, or brown-tipt rein-deer lichen. The most remarkable difference between them is, that the *sylvaticus* turns fuscous by age, while the other always continues white.

15. *L. saxatilis*, the gray-blue pitted lichen, is very common upon trunks of trees, rocks, tiles, and old wood. It forms a circle two or three inches diameter. The upper surface is of a blue-gray, and sometimes of a whitish ash color, uneven, and full of numerous small pits or cavities; the under side is black, and covered all over, even to the edges, with short simple hairs or radicles. A variety sometimes occurs, with leaves tinged of a red or purple color. This is used by finches and other small birds, in constructing the outside of their curiously formed nests.

16. *L. tartarius*, the large yellow-saucered dyer's lichen, is frequent on rocks, both in the Highlands and Lowlands of Scotland. The crust is thick and tough, either white or greenish white, and has a rough warted surface. The shields are yellow or buff-colored, of various sizes, from that of a pin's head to the diameter of a silver penny. Their margins are of the same color as the crust. This lichen is much used by the Highlanders for dyeing a fine claret red color.

17. *L. ventosus*, the red spangled tartareous lichen, has a hard tartareous crust, cracked and

tessellated on the surface, of a pale yellow color when fresh, and a light olive when dry. The tubercles are of a blood-red color at top, their margin and base of the same color as the crust.

18. *L. vulpinus*, the gold-wiry lichen, grows upon the trunks of old trees, but is not very common. It is produced in erect tufts, from half an inch to two inches in height, of a fine yellow or lemon color, which readily discovers it. The filaments which compose it are not cylindrical, but a little compressed and uneven in the surface, variously branched, the angles obtuse, and the branches straggling and entangled one with another. Linnæus informs us that the inhabitants of Smaland, in Sweden, dye their yarn of a yellow color with this lichen; and that the Norwegians destroy wolves by stuffing dead carcasses with this moss reduced to powder, and mixed with pounded glass, and so exposing them in the winter season to be devoured by those animals.

LICHFIELD, or LITCHFIELD, an ancient city of Staffordshire in the hundred of Offlow. It stands near the site of an old Roman station named Etocetum: which has been traced about a mile distant from the present town, at the place where the Ikenild and Watling Street Roads cross each other. 'Lichenfield' the oldest name by which it is known, is said by some antiquaries, see the word LICKWAKE, to signify the field of dead bodies, from a massacre of the Christians; which took place here in the reign of Dioclesian. Other writers derive the name of this town from its marshy situation; the Sax. *leccian*, signifying land covered with water.

Mr. Shaw, the historian of Staffordshire, considers this by far the more probable origin of the name, and that the place owes its entire origin to the Saxons. He thinks it was one of the first established seats of that people in Britain; but observes that, so late as A. D. 669, when St. Chad was bishop, it was little more than a village. Berracapil in the neighbourhood seems to have been a chief residence of the Saxon princes. At the Norman conquest the synod held in London decided that Lichenfield was too mean a place for an episcopal residence, and it appears to have been entirely neglected until the reign of Henry I., when it was encompassed with a ditch, and a castle, which Bishop Clinton fortified. There is still a field of the neighbourhood called from this circumstance Castle field.

Stephen granted the right of coining to this town, which it seems only however to have enjoyed for a short period. The reign of Edward I. brings it forward to considerable notice. In 1305 it first sent two members to parliament, and enjoyed in the same reign the patronage of its celebrated bishop Langton, who built a respectable bridge over the lake, or pool of water, which separated it from the Castle field. Following its political history we find Edward VI. constituting it a city by charter, dated 1549, queen Mary confirmed and enlarged four years afterwards, constituting this city a county by itself, from and after the then ensuing feast of St. Thomas. All actions of whatever denomination, arising within the city, were ordained to

be held by the bailiffs and citizens, if they could determine them, and if not by the justices next coming into the city, and not on any account by any authority out of the city. These great privileges were conferred in consequence of the faithful services of the citizens in the time of rebellion. These charters were both ratified by queen Elizabeth, and further confirmed by her successor James I. Charles II. confirmed all the privileges of this city, by a charter dated the 5th of November 1664. The government is vested at present in two bailiffs, elected from the common-council, one of whom is named by the bishop, and the other by the council themselves, a recorder, a sheriff, a steward, and other inferior officers. The burgesses are twenty-four in number. The right of election of the two members is in the bailiffs, magistrates, freeholders of 40s. a-year, the holders of burgage tenements, and such freemen as are enrolled and pay scot and lot.

Lichfield stands on an enchanting situation in a healthy valley, and is chiefly inhabited by persons of respectable property and independence; its pretensions as a trading or manufacturing town being small. It was formerly divided into two portions, by three lakes or pools of water, one of which is now dried up, and contains three parishes, but part of the lands of St. Chad's and St. Michael's lie without the boundaries of the city. It is adorned with various buildings well worthy of notice, both on account of their antiquity and splendid architecture. The most conspicuous of these is the cathedral, which stands in the close, and is said to have been first fortified by bishop Clinton; though Dr. Shaw thinks he only repaired the fortifications. Some ascribe the foundation of the cathedral to king Oswy, in the year 655; others attribute it to Peada, his son-in-law. St. Chad is generally allowed the honor of being the first bishop. The cathedral, then called the Mercian church, was probably at first only constructed of wood, and the whole was taken down in 1148, by bishop Clinton, who substituted another of enlarged dimensions, and more elegant design. To this prelate it is indebted for that magnificent stone vault, which is to this day one of the finest works of its kind extant. The next benefactor to this cathedral was Walter de Langton, who expended the sum of £2000 on a shrine for the relics of St. Chad, laid the foundation of the choir, and obtained many privileges for the vicars and canons; amongst which was the formidable one of hanging upon the next gallows, without trial, persons who withheld some disputed lands from the church. This beautiful edifice continued in undiminished glory till the Reformation, when it was despoiled of many valuable relics.

Lichfield, in the civil wars, was the first cathedral that fell into the hands of the parliament, when the roof was stripped, and many of the curious statues, monuments, and other carved works, demolished with axes and hammers. The inimitable painted windows were battered to pieces. In short, it scarcely escaped ruin; and what did remain was further desolated in 1651, when colonel Danvers, by authority of the Rump Parliament, employed workmen in order to effect

this purpose. At this time, the bell called 'Jesus bell,' was knocked to pieces by a pewterer, and Dr. John Hacket rendered himself remarkable for his courageous perseverance in his sacred duties. When a serjeant and trooper were sent to stop the performance of the daily service, and putting a pistol to his head, threatened to shoot him instantly if he did not desist, this prelate calmly, but resolutely, replied, 'Soldier, I am doing my duty; do you your's:' a sentence which so impressed the minds of the soldiers, that they left him to the free performance of the service. No sooner was he nominated to the bishopric of Lichfield, than he vigorously set himself to restore the splendor of the cathedral. By his large benefactions, and those of the dean and chapter and neighbouring gentleman, he greatly succeeded in restoring this building. In the bishopric of Dr. James Cornwallis it received its last addition in the painted window at the east end of the choir, the execution of which reflects high honor on the artist Mr. Eginton. The whole edifice is now 411 feet in length, and 155 in breadth. From the centre rises an elegant spire 256 feet high. At the west front are two towers, terminated by spires, sixty-six feet high. The chancel is paved with alabaster and channel stone, in imitation of black and white marble. The north door is particularly rich in sculpture. On the western front are a number of beautiful images, the subjects of which are taken from the sacred writings.

The government of the cathedral is in a dean and four residentiary canons. The diocese, joined to Coventry, contains all the county of Stafford (with the exception of Brome and Clent), all Derbyshire, and nearly one-half of Shropshire. The arch-deaconries are Coventry, Stafford, Derby, and Salop. At the north-east side of the close is the bishop's palace. The original building said to have been founded by bishop Clinton, but probably of earlier date, was destroyed in the civil wars, when bishop Hacket expended £1000, it is said, on the present house, and fixed upon it as his residence. It is now not inhabited by the bishop, whose residence has long been at Eccleshall.

Another ecclesiastical building worth notice is the church of St. Chad or Stowe church, considered as the oldest edifice in or near Lichfield. St. Ceadda or Chadda had his cell here in the year 653. The interior has been lately repaired and improved; and contains a number of neat monuments. St. Mary's church stands in the market-place, near the guild-hall. Leland calls it a right beautiful piece of work, in the very 'market-place.' The body of the building certainly is of pleasing appearance, and it is adorned with a handsome altar-piece. St. Michael's church is on the summit of Greenhill, at the south-east extremity of the city, and is remarkable for the extent of its burial-ground. This hill is likewise remarkable for a court held here annually on Whit-Monday, in a temporary stand for wood, and anciently called the court of array. On the top of the hill a small edifice has been erected by subscription, with seats. Not far from hence is the hospital and chapel of St. John, originally a monastery. The

front of the building is remarkable for the antique form and great number of its chimneys. An inscription over the door-way ascribes its erection to bishop Smith, the founder of Brazen-nose College, Oxford. The free grammar school, built nearly at the same time, stands opposite.

Dr. Samuel Johnson was born in a stuccoed house situated at the corner of Market-street, Lichfield, where his father kept a bookseller's shop. Garrick was a native of this town. Two neat monuments to their memory are now to be found in the cathedral. The guildhall, the theatre, and free English school, are in Broad Street. The latter is in an ancient building, erected and endowed about the year 1670. At the back of the guildhall is a gaol for the debtors and felons of the city. To the west of Bird Street is a pleasant seat called the Friary, having been formerly a monastery of Franciscan or Gray friars.

The history of this see is curious. St. Ceadda, or Chad, was consecrated in the year 669. A century afterwards, Offa, king of Mercia, of which Staffordshire formed a part, insisted upon his kingdom being governed by an archiepiscopal see, and that the bishop of Lichfield should be appointed to it. Accordingly Adolphus, the successor of Sigebert, was created archbishop of Lichfield by pope Adrian, and the pall sent to him from Rome, about the year 786. The see, however, did not long enjoy this pre-eminence, for upon the death of Offa it again became a bishopric, at the earnest request of the archbishop of Canterbury, who presented pope Leo with a large sum of money, as a bribe. For a long period the bishoprics of Coventry and Lichfield were united, but at the Reformation they were disjoined.

In the castle, built by bishop Clinton, king Richard II. is said to have kept his sumptuous Christmas festival, in 1397, when he consumed 200 tuns of wine and two thousand oxen. This fortress was, afterwards, likewise the place of his confinement when on his way to London as a prisoner. He attempted to effect his escape from it, it is said, by slipping from the window of the high tower into the garden, but, being discovered, was carried back. In the civil wars between king Charles and the parliament, many of the inhabitants voluntarily subscribed considerable sums of money for his use, and enrolled themselves under the command of captain Richard Dyott, for the protection of their city against the parliament. The cathedral and close were now fixed upon as a proper place of defence. But in a short time after the garrison was attacked by the republicans. They maintained their post, however, with resolution, but the town, as well as the cathedral, suffered much damage. In one assault, lord Brook, who commanded the parliamentary army, lost his life in a singular manner. His army was about half a mile from Lichfield, and his lordship, having prayed most devoutly for the destruction of the cathedral, ordered an immediate attack, placing himself in a small house near the south gate, with the view of directing the operations of the gunners. Some sudden accident at this juncture occasioned the soldiers to give a shout, when lord Brook came to the door, and being perceived by

a gentleman of the name of Dyott, who stood on the top of the tower, he levelled his piece at him, and the ball penetrated directly into the socket of the eye, lodged in his brain, and caused his instant death. The loss of their commander, however, did not dismay the besiegers, who at last succeeded in compelling the garrison to submit. The troops of the parliament were, however, soon after attacked by prince Rupert; and the commanding situation chosen by him, and the explosion of a mine, soon effected an extensive breach. The prince then conferred the government of the town on colonel Hervey Bagot, who maintained it for the king till the utter destruction of his affairs.

The markets of this city are held on Tuesday and Friday; the fairs on the three first Thursdays after Twelfth day, Ash Wednesday, May 1st, and the Friday before St. Simon and St. Jude. It is sixteen miles north of Birmingham; fourteen south-east of Stafford, and 119 north-west of London.

LICH-WAKE, *n. s.* Sax. *lic*, or *lice*; Goth. and Swed. *lik*, a corpse, and *wake*, a vigil or watching. See WAKE. Watching with a corpse. Mr. Pennant, speaking of Highland customs, says, 'The late-wake is a ceremony used at funerals:—The evening after the death of any person, the relation or friends of the deceased meet at the house, attended by bag-pipe or fiddle; the nearest of kin, be it wife, son, or daughter, opens a melancholy ball, dancing and greeting, i. e. crying violently at the same time; and this continues till day-light, but with such gambols and frolics among the younger part of the company, that the loss which occasioned them is often more than supplied by the consequences of that night. If the corpse remains unburied for two nights, the same rites are renewed. Thus, Scythian-like, they rejoice at the deliverance of their friends out of this life of misery.' Lichgate, as Dr. Johnson observes, was the gate through which the dead were carried to the grave; Lichfield, the field of the dead, a city in Staffordshire, so named from martyred Christians. Lichowl, a sort of owl supposed by the vulgar to foretel death.

How Arcite is brent to ashen cold;

Ne how the *liche-wake* was yhold

All thilke night

I woul not tellen.

Chaucer. Cant. Tales.

LICIUS (Stolo, Caius), a celebrated Roman tribune, styled Stolo, on account of a law he made, that no Roman citizen should possess more than 500 acres of land; alleging that, when they occupied more, they could not cultivate it with care, nor pull up the useless shoots (*stolones*) that grow from the roots of tree. He is memorable also for enacting, that one of the consuls should always be of a plebeian family. He lived about A. A. C. 362.

LICK, *v. a.* Sax. *liccan*, *liccan*; Belg. *licken*; Teut. *lecken*; Fr. *lecher*; Lat. *lingua*; Gr. *λειψω*, à Heb. *לחל*. To lap or take up with the tongue; to pass the tongue over; to take food in this way; hence to devour. The Scripture use of this word in Numb. xxii. 4, et passim, is particularly justified by the rapid manner in which all ruminating animals take in their food

Now shall this company *lick up* all that are round about us, as the ox *licketh up* the grass. *Numbers.*

At once pluck out

The multitudinous tongue; let them not *lick*
The sweet which is their poison. *Shakspeare.*

Were a man designed only, like a fly, to buzz about here for a time, sucking in the air, and *licking* the dew, then 'soon to vanish back into nothing, or to be transformed into worms; how sorry and despicable a thing were he! And such, without religion, we should be. *Barrow.*

A bear's a savage beast;
Whelped without form, until the dam
Has *licked* it into shape and frame. *Hudibras.*

Esculapius went about with a dog and a she-goat, both which he used much in his cures; the first for *licking* all ulcerated wounds, and the goat's milk for the diseases of the stomach and lungs. *Temple.*

He with his tepid rays the rose renews,
And *licks* the drooping leaves, and dries the dew. *Dryden.*

I have seen an antiquary *lick* an old coin, among other trials, to distinguish the age of it by its taste. *Addison.*

When luxury has *licked up* all thy pelf,
Cursed by thy neighbours, thy trustees, thyself:
Think how posterity will treat thy name. *Pope.*

Our love is principle, and has its root
In reason, is judicious, manly, free;
Yours, a blind instinct, crouches to the rod,
And *licks* the foot that treads it in the dust. *Cowper.*

LICK, *v. a.* Sax. *lecgan*; Goth. *leggja*. To beat, or strike. Retained only in vulgar language.

He turned upon me as round as a chafed board, and gave me a *lick* across the face. *Dryden.*

LICKERISH, *adj.* } Sax. *liceþa*, a glut-
LICK'EROUS, } ton; Teut. and Swed.
LICK'ERISHNESS, *n. s.* } *lecker*, soft, luxurious.
Pampered in appetite or food; eager; greedy; lustful.

Certain rare manuscripts, sought in the most remote parts by Erpenius, the most excellent linguist, had been left to his widow, and were upon sale to the Jesuits, *liquorish* chapmen of all such ware. *Wolton.*

The first motive that inclined our *liquorish* grandmother Eve, was, that she saw the tree was good for food. *Bp. Hall.*

Wouldest thou seek again to trap me here
With *lickerish* baits, fit to ensnare a brute? *Milton.*

In vain he proffered all his goods to save
His body, destined to that living grave;
The *liquorish* hag rejects the pelf with scorn,
And nothing but the man would serve her turn. *Dryden.*

Voluptuous men sacrifice all substantial satisfactions to a *liquorish* palate. *L'Strange.*

In some provinces they were so *liquorish* after man's flesh, that they would suck the blood as it run from the dying men. *Locke.*

LICKS, in geography, a name given to several places in the United States of America, particularly in the north-western territory, abounding with salt springs; where the earth is furrowed up in a very curious manner by the deer and buffaloes, which lick it on account of the saline particles with which it is impregnated. Streams of brackish water run through these licks, the

soil of which is a soft clay. They are distinguished by various names; but the most remarkable are

LICKS, BIG BONE, lying on each side of Big Bone Creek, a river of Kentucky, so named from a number of extraordinary large bores belonging to the Mammoth found about it. See MAMMOTH. Big Bone Licks lie eight miles above the mouth of Big Bone Creek.

LICNON, in the Dionysian solemnities, the mystical van of Bacchus; so essential to all the solemnities of this god that they could not be duly celebrated without it. See DIONYSIA.

LICOLA, a lake of Naples, formerly famous for plenty of excellent fish; but in 1538 an explosion of a volcano changed one part of it into a mountain of ashes 1000 feet high, and four miles in circumference, and the other into a morass. It was anciently called Lucrinus Lacus.

LIC'ORICE, *n. s.* Old Fr. *liquerice*; Ital. *ligoritia*; Belg. *likeresse*, see LICKERISH; Gr. *γλυκυρριζα*. A sweet root.

Liquorice root is long and slender, externally of a dusky reddish brown, but within of a fine yellow, full of juice, and of a taste sweeter than sugar: it grows wild in many parts of France, Italy, Spain, and Germany. The inspissated juice of this root is brought to us from Spain and Holland; from the first of which places it obtained the name of Spanish juice. *Hill's Materia Medica.*

LICORICE. See GLYCYRRHIZA.

LICTORS, *n. s.* Lat. *lictor*. Officers or beadles, among the Romans, who always attended the chief magistrates when they appeared in public.

Saucy *lictors*

Will catch at us like strumpets. *Shakspeare.*

Proconsuls to their provinces

Hasting, or on return, in robes of state,
Lictors and rods the ensigns of their power. *Milt. n.*

Democritus could feed his spleen, and shake
His sides and shoulders till he felt 'em ake;
Though in his country-town no *lictors* were,
Nor rods, nor ax, nor tribune. *Dryden. Juvenal.*

LICTORS, among the ancient Romans, were officers established by Romulus, who attended the consuls when they appeared in public. The duties of their office were these: 1. Submotio, or clearing the way for the magistrate they attended: this they did by word of mouth; or, if there was occasion, by using the rods they always carried with them. 2. Animadversio, or causing the people to pay the usual respect to the magistrate; as, to alight, if on horseback or in a chariot; to rise up, uncover, make way, and the like. 3. Praetio, or walking before the magistrates: this they did, not confusedly, or all together, nor by two or three abreast, but singly following one another in a straight line. They also preceded the triumphal car in public triumphs; and it was also part of their office to arrest criminals, and to be public executioners in beheading, &c. Their ensigns were the fasces and securis. As to the number of *lictors* allowed each magistrate, a dictator had twenty-four; a master of the horse six; a consul twelve; a praetor six; and each vestal virgin, when she appeared abroad, had one.

LID, *n. s.* Sax. *līð*; Goth. *lid*; Teut. *lied*. A cover of any kind; any thing that closes the mouth or aperture of a vessel: often particularly applied to the eye-lid.

But Jehoiada the priest took a chest, and bored a hole in the lid of it, and set it beside the altar.

2 Kings xii. 9.

Do not for ever with thy veiled lids,
Seek for thy noble father in the dust. *Shakspeare*.
Our eyes have lids, our ears still open we keep.

Davies.

Hope, instead of flying off with the rest, stuck so close to the lid of the cup, that it was shut down upon her.

Addison.

That eye dropped sense distinct and clear,
As any muse's tongue could speak;
When from its lid a pearly tear
Ran trickling down her beauteous cheek. *Prior*.

The rod of Hermes

To sleep could mortal eye-lids fix,
And drive departed souls to Styx
That rod was just a type of Sid's,
Which o'er a British senate's lids
Could scatter opium full as well,
And drive as many souls to hell. *Swift*.

Tired Nature's sweet restorer, balmy sleep!
He, like the world, his ready visit pays
Where fortune smiles; the wretched he forsakes:
Swift on his downy pinions flies from woe,
And lights on lids unsmiled with a tear. *Young*.

LIDDEL (*Duncan*), M. D., professor of mathematics and medicine in the university of Helmstadt, was born in 1561 at Aberdeen, where he received the first part of his education. About the age of eighteen he went to the university of Frankfort, where he spent three years in studying mathematics and philosophy. From Frankfort he proceeded to Breslaw, where he made great progress in mathematics, under professor Paul Witichius. After a year he returned to Frankfort, where he studied physic for three years. A contagious distemper having appeared in that place, Liddel retired to the university of Rostock; where he renewed his studies, rather as a companion than a pupil of the celebrated Brucæus; whom, though an excellent mathematician, he instructed in the more perfect knowledge of the Copernican System, and other astronomical subjects. In 1590 he returned again to Frankfort. But having there heard of the increasing reputation of the Academia Julia, established at Helmstadt by Henry duke of Brunswick, he removed thither; and soon after his arrival was appointed to the lower professorship of mathematics. Thence he was promoted to the more dignified mathematical chair, which he occupied for nine years with much credit to himself and to the Julian Academy. In 1596 he obtained the decree of M. D.; began to teach physic, and by his teaching and writings became the chief support of the medical school at Helmstadt; was employed as first physician at the court of Brunswick, and had much practice among the principal inhabitants. Having been several times elected dean of the faculties both of philosophy and physic, he in 1604 was chosen pro-rector of the university. But neither academical honors, nor the profits of an extensive practice abroad, could make him forget his native country. In 1606 he took leave of the Academia Julia; and, after travelling through Germany and Italy, at length

settled in Scotland. He died in 1613, in the fifty-second year of his age. By his last will he bestowed certain lands near Aberdeen upon the university there, for the education of six poor scholars. Among various regulations and injunctions, for the management of this charity, he appointed the magistrates of Aberdeen his trustees, and solemnly denounced the curse of God on any person who should abuse or misapply it. His works are, 1. Disputationes Medicinales; Helmstadt, 1603, 4to. 2. Ars Medica succincte et perspicue explicata; Hamburgi, 1607, 8vo., dedicated to king James VI. and divided into five books, viz. Introductio in totam Medicinam; De Physiologiâ; De Pathologiâ; De Signorum doctrinâ; De Therapeuticiâ. 3. De Febribus, Libri tres; Hamburgi, 1610, 12mo.

LIDDISDALE, an extensive district of Scotland, so named from a small river named Liddel, which runs through it from east to west and south. It was anciently styled a county and lordship, and comprehends the whole southern angle of Roxburghshire. Being mountainous, it is chiefly adapted for pasture, though the soil of the low land is excellent, and produces very good crops of wheat, barley, oats, peas, flax, turnips, potatoes, and clover. Limestone abounds, and there are many cairns, Druidical temples, Pictish camps, and other antiquities in this district.

LIDO DI SOTTO MARINO, an island and town of Maritime Austria, near Chioggia, containing about 2600 souls. It is built on a bank, which separates the Venetian Lagunes from the sea, and protected by a strong pier, with walls composed of enormous masses of freestone, thirty-two feet thick, and many fathoms high.

LIE, *v. n.* Sax. *līzan*, *līezan*; Goth. *ligga*; Teut. *liegan*; Belg. *leggen*; pret. lay, lain, lien. To rest; remain; recline; be recumbent: (hence to sleep); lean; incline; press upon; be deposited; consist; remain fixed: hence, metaphorically, to be imputed; be burdensome, or troublesome; be in a helpless, afflicted, or confined state; be in prison; be in the power of, or belong to; be judicially valid; oblige; be buried. It is used with the prepositions *at*, *by*, *down*, *in* (to express the confinement of women in child-bed), *under*, *upon*, *with*; but retains throughout these uses one or other of the above senses, implying, as Dr. Johnson says, 'something of sluggishness, inaction, or steadiness, as applied to persons; and some gravity, or permanency of condition, as applied to things.'

And he found a man, eneas bi name, that fro eighte gheer he hadde *leye* in bed, and was syk in palesie. *Dedís ix.*

If thou doest well, shalt thou not be accepted? and if thou doest not well, sin lieth at the door.

Gen. iv. 7.

One of the people might lightly have *lien* with thy wife. *Gen. xxvii. 10.*

I will *lie* with my fathers, and thou shalt carry me out of Egypt, and bury me in your burying-place. *Gen. xlviii. 30.*

The seventh year thou shalt let it rest and *lie* still. *Ezo us.*

There were *liers* in ambush against him behind the city. *Josh. viii. 14.*

His bones are full of the sin of his youth, which shall *lie down* with him in the dust. *Job xx. 11.*

The highways *lie* waste, the wayfaring man ceaseth.

Isaiah.

My little daughter *lieth* at the point of death; I pray thee come and lay thy hands on her, that she may be healed.

Mark.

What houndes *liggen* on the floor adoun.

Chaucer. Cant. Tales.

As for all other good women that love to do but little work, how handsome it is to *lie in* and sleep, or to louse themselves in the sun-shine, they that have been but a while in Ireland can well witness.

Spenser on Ireland.

Thou kenst the great care
I have of thy health and thy welfare,
Which many wild beasts *liggen* in wait,
For to entrap in thy tender state.

Id. Pastorals.

Death *lies* on her like an untimely shower
Upon the sweetest flower of all the field.

Shakspeare.

If money go before, all ways do *lie* open.
How many good young princes would do so; their fathers *lying* so sick as yours at this time is?

Id.

Your imprisonment shall not be long;

I will deliver you, or else *lie* for you.

Id.

The image of it gives me content already; and I trust it will grow to a most prosperous perfection:—
It *lies* much in your holding up.

Id.

Every thing that heard him play,

Even the billows of the sea,

Hung their heads, and then *lay by*;

In sweet musick is such art,

Killing care, and grief of heart,

Fall asleep, or hearing die.

Id. Henry VIII.

You confine yourself most unreasonably. Come, you must go visit the lady that *lies in*.

Id. Coriolanus.

Pardon me, Bassanio,

For by this ring she *lay with* me.

Shakspeare.

Do'st thou endeavour, as much as in thee *lies*, to preserve the lives of all men?

Duppa's Rules for Devotion.

He that commits a sin shall find

The pressing guilt *lie* heavy on his mind,

Though bribes or favour shall assert his cause.

Creech.

But their way

Lies through the perplexed paths of this drear wood,
The nodding horror of whose shady brows
Threats the forlorn and wandering passenger.

Milton.

It is but a very small comfort, that a plain man, *lying* under a sharp fit of the stone for a week, receives from this fine sentence.

Tillotson.

He shews himself very malicious if he knows I deserve credit, and yet goes about to blast it, as much as in him *lies*.

Stillingfleet on Idolatry.

I have seen where copperas is made, great variety of them, divers of which I have yet *lying* by me.

Boyle.

The Spaniards have but one temptation to quarrel with us, the recovery of Jamaica, for that has ever *lien* at their hearts.

Temple.

So the false spider, when her nets are spread,
Deep ambushed in her silent den does *lie*.

Dryden.

The watchful traveller,

That by the moon's mistaken light did rise,
Lay down again, and closed his weary eyes.

Id.

Mars is the warrior's god; in him it *lies*

On whom he favors to confer the prize.

Id.

Are the gods to do your drudgery, and you *lie* bellowing with your finger in your mouth?

L'Estrange's Fables.

What *lies* beyond our positive idea towards infinity, *lies* in obscurity, and has the undeterminate confusion of a negative idea.

Locke.

He that thinks that diversion may not *lie* in hard labour, forgets the early rising, and hard riding of huntsmen.

Id.

The doctor has practised both by sea and land, and therefore cures the green sickness and *lyings-in*.

Spectator.

Shew the power of religion, in abating that particular anguish which seems to *lie* so heavy on Leonora.

Addison.

It were to be wished, that men would promote the happiness of one another, in all their private dealings, among those who *lie within* their influence.

Id.

As a man should always be upon his guard against the vices to which he is most exposed, so we should take a more than ordinary care not to *lie* at the mercy of the weather in our moral conduct.

Id. Freeholder.

A generous person will *lie under* a great disadvantage.

Smalridge's Sermons.

Forlorn he must, and persecuted be;

Climb the steep mountain, in the cavern *lie*.

Prior.

When Florimel designed to *lie* privately in; She chose with such prudence her pangs to conceal, That her nurse, nay her midwife, scarce heard her once squeal.

Id.

Envy *lies* between beings equal in nature, though unequal in circumstances.

Collier of Envy.

Lie heavy on him, earth, for he

Laid many a heavy load on thee.

Epitaph on Vanbrugh.

Europe *lay* then *under* a deep lethargy, and was no otherwise to be rescued but by one that would cry mightily.

Atterbury.

These are not places merely of favor, the charge of souls *lies upon* them; the greatest account whereof will be required at their hands.

Bacon.

It should *lie upon* him to make out how matter, by undirected motion, could at first necessarily fall, without ever erring or miscarrying, into such a curious formation of human bodies.

Bentley's Sermons.

This mistake never ought to be imputed to Dryden, but to those who suffered so noble a genius to *lie under* necessity.

Pope.

The maintenance of the clergy is precarious, and collected from a most miserable race of farmers, at whose mercy every minister *lies* to be defrauded.

Swift.

Do not think that the knowledge of any particular subject cannot be improved, merely because it has *lain* without improvement.

Watts.

And last (the sum of a' my griefs!)

My noble master *lies* in clay;

The flower among our barons bold,

His country's pride, his country's stay.

Burns.

A man that hath so far lost the command of himself, as to *lie* at the mercy of every foolish or vexing thought, is much in the same situation as an host, whose house is open to all comers.

Mason.

LIE, or } Sax. liza, lizan; Goth.

LYE, n.s. & v. n. } *lygi*, of læ, deceit, proud.

A verbal fraud or deception; criminal falsehood; any fiction. 'To give the lie' is to charge with lying; to make the imputation of this crime: to lie is to utter lies, or tell what is untrue, deceitfully. See the extract from Watts.

If a soul *lye* unto his neighbour in that which was delivered him to keep, he shall restore that which was delivered.

Lev.

Should I *lye* against my right? *Job xxxiv. 6.*

Thou *liest*, abhorred tyrant! with my sword I'll prove the *lie* thou speakest.

Shakspeare. Macbeth.

That *lie* shall *lye* so heavy on my sword,
That it shall render vengeance and revenge;
Till thou the *lie* giver, and that *lie*, rest
In earth as quiet as thy father's skull.

Shakspeare.

Truth is the object of our understanding, as good is of our will; and the understanding can no more be delighted with a *lye*, than the will can choose an apparent evil.

Dryden.

The cock and fox, the fool and knave imply;
The truth is moral, though the tale a *lie*. *Id.*

Men will *give* their own experience the *lie*, rather than admit of any thing disagreeing with these tenets.

Locke.

Thy better soul abhors a *liar's* part,
Wise is thy voice, and noble is thy heart. *Pope.*

He who tells a *lie* is not sensible how great a task he undertakes; for he must be forced to invent twenty more to maintain that one. *Id.*

Inform us, will the emperor treat?
Or do the prints and papers *lie*? *Swift.*

When I hear my neighbour speak that which is not true, and I say to him, This is not true, or this is false, I only convey to him the naked idea of his error; this is the primary idea; but if I say it is a *lie*, the word *lie* carries also a secondary idea; for it implies both the falsehood of the speech, and my reproach and censure of the speaker. *Watts's Logick.*

Here the soul sits in council, ponders past,
Predestines future action; sees, not feels,
Tumultuous life, and reasons with the storm;
All her *lies* answers, and thinks down her charms. *Young.*

The common people do not accurately adapt their thoughts to the objects; nor, secondly, do they accurately adapt their words to their thoughts: they do not mean to *lie*; but, taking no pains to be exact, they give you very false accounts. A great part of their language is proverbial: if any thing rocks at all, they say it rocks like a cradle; and in this way they go on. *Johnson.*

Have I not had my brain seared, my heart riven,
Hopes snapped, name blighted, Life's life *lied* away?
And only not to desperation driven,
Because not altogether of such clay
As rots into the souls of those whom I survey. *Byron.*

Byron.

LIE, in morals. Dr. Paley observes, on this subject, that there are falsehoods which are not lies: that is, which are not criminal: and there are lies which are not literally and directly false. I. Cases of the first class are those, 1. Where no one is deceived: as for instance in parables, fables, novels, jests, tales to create mirth or ludicrous embellishments of a story, in which the declared design of the speaker is not to inform, but to divert; compliments in the subscription of a letter; a prisoner's pleading not guilty; an advocate asserting the justice of his client's cause. In such instances no confidence is destroyed, because none was reposed; no promise to speak the truth is violated, because none was given or understood to be given. 2. Where the person you speak to has no right to know the truth; as where you tell a falsehood to a robber to conceal your property; to an assassin to defeat or to

divert him from his purpose. It is upon this principle, that, by the laws of war, it is allowed to deceive an enemy by feints, false intelligence, and the like: but by no means in treaties, truces, signals of capitulation, or surrender: and the difference is, that the former suppose hostilities to continue, the latter are calculated to terminate or suspend them. II. As there may be falsehoods which are not lies, so there may be lies without literal or direct falsehood. An opening is always left for this species of prevarication, when the literal and grammatical signification of a sentence is different from the popular and customary meaning. It is the wilful deceit that makes the lie; and we wilfully deceive, when our expressions are not true, in the sense in which we believe the hearer apprehends them. Besides, it is absurd to contend for any sense of words, in opposition to usage; for all senses of all words are founded upon usage, and upon nothing else. Or a man may act a lie; as by pointing his finger in a wrong direction, when a traveller enquires of him his road; or when a tradesman shuts up his windows, to induce his creditors to believe that he is abroad; for to all moral purposes, and therefore as to veracity speech and actions are the same; speech being only a mode of action.

LIEF, or } Sax. *leoþ*; Belg. *lief*,
LIEVE, *adj. & adv.* } *lieve*, to love. Be-
loved; dear: as an adverb, willingly, by choice.

Ye wot yourself, she may not wedden so
At ones, though ye fighten evermo;
But on of you, al be he loth or lefe,
He mot gon pipen in an ivry lefe.

Chaucer. Canterbury Tales.

My *liefest* lord she thus beguiled had,
For he was flesh; all flesh doth frailty breed.

Faerie Queene.

You with the rest,
Causeless have laid disgraces on my head;
And with your best endeavour have stirred up
My *liefest* liege to be mine enemy.

Shakspeare. Henry VI.

Speak the speech, I pray you, as I pronounced it to you, trippingly on the tongue: but if you mouth it, as many of our players do, I had as *lieve* the town-crier had spoke my lines. *Shakspeare.*

Action is death to some sort of people, and they would as *lieve* hang as work. *L'Esrange.*

LIEGE, *adj. & n. s.* } Fr. *lige*, *liege*; Ital.
LIEGEMAN, } *ligio*; barb. Lat. *li-*
gius, from *ligo*, to bind. Bound by feudal tenure, or law; hence supreme or sovereign, by such tenure: and, as a substantive, the supreme lord or sovereign; liegeman is one who owes allegiance; a subject man.

For sothe, my *liege*, quod I
An hundred times I have been at the gate
Afore this tyme, yet coude I ner espie,
Of myne acquaintance eny in mine eye.

Chaucer.

This *liegeman* 'gan to wax more bold,
And when he felt the folly of his lord,
In his own kind, he 'gan himself unfold.

Faerie Queene.

Sith then the ancestors of those that now live,
Yielded themselves then subject's and *liegemen*, shall
It not tye their children to the same subjection?

Spenser on Ireland.

Did not the whole realm acknowledge Henry VIII.
for their king and liege lord? *Spenser.*

O pardon me, my liege! but for my tears
I had forestalled this dear and deep rebuke.
Shakspeare.

The other part reserved I by consent,
For that my sovereign liege was in my debt. *Id.*

Stand, ho! who is there?
—Friends to this ground, and liegemen to the Dane.
Id.

My lady liege, said he
What all your sex desire is sovereignty.
Dryden.

The natives, dubious whom
They must obey, in consternation wait
Till rigid conquest will pronounce their liege.
Philips.

So much of it as is founded on the law of nature,
may be stiled natural religion; that is to say, a
devotedness unto God our liege lord, so as to act
in all things according to his will.
Grew's Cosmogony.

LIEGE, in law, properly signifies a vassal, who holds a kind of fee, that binds him in a closer obligation to his lord than other people. The term seems to be derived from the Latin ligo, to bind; on account of a ceremony used in rendering faith or homage; which was by locking the vassal's thumb or his hand in that of the lord, to show that he was fast bound by his oath of fidelity. Cujas, Vignere, and Bignon, choose rather to derive the word from the same source with leudis or leodi, i. e. loyal or faithful. But Du Cange agrees with those who derive it from liti, a kind of vassals, so firmly attached to their lord, on account of lands or fees held of him, that they were obliged to do him all manner of service, as if they were his domestics. He adds, this was formerly called litium servitium, and the person litge. In this sense the word is used, Leg. Edw. c. 29. Judæi sub tutela regis liegeas debent esse, that is, wholly under his protection. By liege homage, the vassal was obliged to serve his lord towards all, and against all, excepting his father. In which sense the word was used in opposition to simple homage; which last only obliged the vassal to pay the rights and accustomed dues to his lord; and not to bear arms against the emperor, prince, or other superior lord; so that liegeman was a person wholly devoted to his lord, and entirely under his command. Omnibus, &c., Reginaldus, rex Insularum, salutem. Sciatis quod deveni homo liegeus domini regis Angliæ Johannis, contra omnes mortales quamdiu vixero; &c. MS. penes W. Dugdale. But, it must be observed, there were formerly two kinds of liege homage: the one, by which the vassal was obliged to serve his lord against all, without exception even of his sovereign; the other, by which he was to serve him against all, except such other lords as he had formerly owed liege homage to. In the old English statutes, lieges, and liege people, are terms peculiarly appropriated to the king's subject; as being lieges, ligi, or ligati, obliged to pay allegiance to him; 8 Henry VI.; 14 Henry VII. &c., though private persons had their lieges too.

LIEGE, a large and fertile province in the south-east part of the kingdom of the Nether-

lands, surrounded by the Prussian province of the Lower Rhine, the grand duchy of Luxemburg, and the Belgic provinces of Namur, South Brabant, and Limburg. Its superficial extent is 2200 square miles, and it is divided into the four districts of Liege, Huy, Viviers, and Marche. The aspect of the country is that of an undulating plain, except in the south and east, where it is hilly and well wooded. These districts border on the forest of Ardennes. The principal river is the Maese, with its subordinate streams, the Ourthe, the Loose, and the Semoys. Most parts of the province are better adapted to pasture than tillage, and cattle and sheep are reared in large quantities. The districts of Liege and Huy produce corn, and an inferior wine resembling that of Burgundy. The mineral productions are coal, which is said to be worked to the extent of 450,000 tons annually, alum, calamine, lead, and iron. The principal mineral waters are those of the celebrated Spa fountains. Large quantities of woollens, hardware, and arms, are made and exported, together with cheese, Spawater, timber, coal, and the various minerals.

This province sends six deputies to the states-general, and belongs to the fifth military division of the Netherlands. Before the French revolution it was subject to the prince bishop of Liege, a member of the Germanic body, whose revenue exceeded £100,000 a-year; the members of the states consisted almost entirely of the clergy and the nobles. In 1792 the French took possession of the whole bishopric, which they retained at the peace of Luneville, and formed into parts of the departments of the Lower Meuse, the Ourthe, and the Sambre and Meuse. On the fall of Buonaparte the bishopric of Liege was re-incorporated with the Netherlands by the congress of Vienna. Its inhabitants, amounting to 354,000, are chiefly Catholics.

LIEGE, a large old town of the Netherlands, formerly the capital of the bishopric of Liege, is upwards of four miles in circumference, and is seated on the Meuse, in a fine valley surrounded with hills and woods. At this city the Meuse is divided into three branches, which after passing through it, under several bridges, unite again below it. It was formerly a free imperial city of Germany, and one of the largest and most eminent in Europe. Though 100 miles from the sea by water, the Meuse is navigable up to it. It is divided into the upper and lower town, the former of which is very irregularly built, and has a dark and gloomy aspect; the houses being lofty, and the streets narrow, and surcharged with filth. The latter is subdivided into the Isle and the Quarter beyond the Maese. The suburb of Maestricht, distinct from the whole, is a double range of buildings extending along the left bank of the river to the north. There are also the suburb of Valbarga (north-west) and St. Marguerite to the south.

The fortifications of Liege were once imposing, and the town had sixteen gates, and a citadel to the north-west, now rased; but it is no longer considered a garrison town. The public buildings are not very remarkable: the cathedral, built in the eighth century, is an inelegant Gothic edifice. Of the ten other churches, that

of St. Paul is the most remarkable, both for structure and ornaments. Besides a great number of other convents, of both sexes, here was formerly a college of English Jesuits, founded in 1616, and a fine English nunnery. Churches, convents, and other religious foundations, occupied indeed a large part of the town, whence it was called the paradise of priests, the purgatory of men, and the hell of women. In St. William's convent, without the city, is the tomb of the famous English traveller Sir John Mandeville. Near it were long kept the saddle, spurs, and knife, that he used in his travels. Existing institutions worth notice are the lyceum, a great provincial school; the arsenal; and the theatre. The fountains are also fine, particularly one in the centre of the great square. At this place is made a great quantity of excellent cannon and musketry: its clock-work is also superior; and the manufacture of mats is said to occupy from 10,000 to 14,000 hands. All these are large articles of export. Grates and various other hardware articles are also exported from Liege. The cloths and tanneries have also long been in good repute. The carrying trade with Holland and Germany is considerable, the town having ample water communications; and the scenery of the environs fully counterbalances the gloom of the town.

It was bombarded in 1691, and delivered up to the French in 1701. The allies retook it in 1702, and the French besieged it again in 1705, but were obliged to raise the siege on the approach of the duke of Marlborough. In 1734 a fire happened here, which consumed the bishop's palace, with all the furniture and MSS. In 1789 the inhabitants, who had long complained of the oppression which they experienced under the government of their bishop, insisted upon a charter of privileges, and, as that prelate and his chapter would not comply with their demands, they had recourse to arms; until the bishop, apprehensive for his safety, left the city, and appealed to the imperial chamber of Wetzlar. Decrees were now issued by the chamber in his favor; while the king of Prussia, in 1790, seemed to act as a mediator for the citizens: the sentences, however, issued by the imperial chamber against the insurgents, were followed by requisitorial letters, addressed to the government of the Austrian Netherlands, desiring that his imperial majesty's troops would assist those of the electoral princes in enforcing their decrees; in consequence of which the Austrians entered Liege in 1791, restored the old magistracy, who had been expelled, to their functions, and reinstated the bishop. In November, 1792, the French, under Dumouriez, took the city, and effected another revolution; but being driven thence by the allies in March, 1793, the citizens were once more obliged to submit. Early in 1794 it was again however taken by the French under Pichegru, and annexed to that country in 1796, and until the downfall of Buonaparte. Liege is sixteen miles S.S.W. of Maestricht, and fifty-three east by south of Brussels.

LIEGER, *n. s.* OR LEGER, which see. A resident ambassador.

His passions and his fears
Lie *liegers* for you in his breast, and there
Negociate your affairs. *Denham's Sophy.*

LIEGNITZ, a large government of Prussian Silesia, occupying the country which lies to the north of the governments of Breslau and Reichenbach. Its area is 4100 square miles. It includes the former duchies and principalities of Glogau, Sagan, Liegnitz, and Karolath, with part of those of Jauer and Upper Lusatia; and is divided into thirteen circles, viz. Lowenberg, Bunzlau, Goldberg, Liegnitz, Luben, Glogau, Sprottau, Sagan, Friestadt, Grunberg, Gorlitz, Rothenburg, and Lauban. Population 506,000.

This country is generally of level surface, and intersected by hills of but little elevation. The soil is sandy, but in many places fertile, and producing corn for exportation. The climate is mild, and vines are reared in the eastern part. Timber abounds, and forms a large article of export. The pasturage is also good. The manufactures are of linen and woollen. The rivers are the Oder, the Bober, the Neisse, the Queis, the Schwartzwasser, and the Katzbach.

LIEGNITZ, a town of Lower Silesia, the capital of the preceding government, is situated at the conflux of the Katzbach, the Schwartzwasser, and the Neisse, and surrounded by an earthen mound, covered with fine alleys of lime, mulberry, and chestnut trees. It has four gates, but is not fortified. An old palace of the princes is surrounded by a distinct moat and wall. The castle, town-house, and public school, are worth notice: as also the college formerly belonging to the Jesuits; the Catholic church of St. John, and the noble chapel where the former dukes of Liegnitz were buried. There is also an academy, having five professors, in the town. The chief trade is in woollens and madder. Inhabitants 10,000.

LIEN, *Fr.*, in the English law is of two significations; i. e. personal lien, such as bond, covenant, or contract; and real lien, i. e. a judgment, statute, recognizance, which oblige and affect the land. It signifies an obligation, tie, or claim annexed to, or attaching upon, any property: without satisfying which such property cannot be demanded by the owner. Thus the costs of an attorney are a lien upon deeds and papers in his hands; a factor has a lien on goods in his hands for balance due from his principal, &c. By the common law every person, whether attorney or not, has a lien on the specific deed or paper, delivered to him to do any specific work or business upon; but not on other papers of the same party, unless he be an attorney. A banker has a lien for the amount of his balance upon securities (bills and checks) paid in by a customer upon his running account. A printer has a lien generally upon the copies of a work not delivered, for his balance. But the lien of a common carrier for his general balance, however it may arise in point of law from an implied agreement to be inferred from a general usage of trade, and proved by numerous instances; yet is not to be favored, nor can it be supported by a few recent instances of detention of goods by four or five carriers for their general

balance. But such a lien may be inferred from evidence of the particular words of dealing between the respective parties. The master of a ship has no lien on it for money expended, or debts incurred by him for repairs done to it on the voyage.

LIENTERY, *n. s.* } Fr. *lienterie*; from Gr.
LIENTERIC, *adj.* } *λειων, lave*, smooth, and
εντερον, intestinum, gut. A particular looseness, or diarrhoea, wherein the food passes too quickly through the stomach.

There are many medicinal preparations of iron, but none equal to the tincture made without acids; especially in obstructions, and to strengthen the tone of the parts; as in *lienterick* and other like cases. *Grew's Museum.*

LIENTERY, in medicine, a disease considered by Cullen as a variety of diarrhoea, in which great portions of the food pass off by stool almost unchanged. The term is derived from Gr. *λειος*, smooth, and *εντερον*, intestine, ancient physicians conceiving that this disease was owing to the excessive smoothness and lubricity of the internal membrane of the stomach, which allowed the food to slip through it in an undigested state.

Many writers have treated the lientery as a disease altogether distinct from diarrhoea: its principal cause, according to Cullen, appears to consist in a morbid irritability of the stomach and bowels; by which the former organ is excited to an excessive motion of its muscular coat, and consequently expels the aliment into the bowels in an undigested state; and the latter being likewise morbidly sensible to the same stimulus, carry on the undigested matter speedily through the whole canal. The fœces are at the same time loose or liquid, because, while the undigested matter is not taken up by the lacteals, the irritation caused by its rapid passage excites the exhalant vessels, and the excretories of the mucous glands, to pour out a more abundant quantity of their fluids. This symptom causes generally great weakness of the digestive powers as well as an increased morbid irritability of the stomach.

It is one of those diseases which are called hereditary, from their often proceeding through several generations in particular families. In this case, however, nothing more seems to descend than a general looseness of habit. With proper care that the aliment is given in small quantities, and of a digestible quality; that the child have plenty of wholesome air, not that of Fleet Street or Cheapside; and plenty of good exercise, not mere walking in Temple Gardens; the disease may be often overcome as the patient grows up.

It is therefore the endeavour of the physician first to lessen the irritability of the whole alimentary canal; and, secondly, to strengthen as much as possible the digestive powers of the stomach: for, although food, when converted into chyle by the process of digestion, passes through the bowels without producing any irritating effect; yet the same food, when it is transmitted into them from the stomach in a crude unaltered condition, operates as an extraneous and foreign matter on the irritable villous lining of the bowels, and excites them to an extraordinary peristaltic action.

The first indication of allaying the irritability

of the stomach and intestines must, of course, be fulfilled by the administration of narcotic medicines, and of astringents. Opium itself is the most effectual soother of morbid irritability that we possess; and, in cases like that under consideration, its operation is improved by the union of some aromatic substance; hence the opiate confection, according to the formula of the London pharmacopeia, is a grateful and efficacious medicine for this purpose. But the irritability is still more effectually allayed, when astringents and absorbents are employed at the same time with the opiates; the best of these are the catechu, and the testaceous powders, or chalk. The confectio catechu of the Edinburgh pharmacopeia, which combines the opiate, astringent, and aromatic, in one substance, is a valuable medicine for the fulfilment of this indication. These substances may be administered in a little distilled water of some aromatic vegetable.

Or, with a view to strengthening the digestive powers of the stomach, the same medicines may be usefully combined with bitters, as the infusion of cascarrilla, gentium root, or orange peel, or either the decoction or infusion of cinchona or Jesuit's bark. At the same time moderate exercise, especially on horseback, will aid in re-establishing the functions of the stomach. But, above all, every cold and debilitating kind of food, all substances of difficult solubility, and even the most nourishing and digestible in large quantities, must be studiously avoided. This is the more important as instances sometimes happen in which this disease is accompanied with a bulimia or excessive appetite, and parents often feel considerable difficulty in denying their children common articles of food when they desire them, though certain they can only be injurious. Of this fact we have ourselves known instances. All such things as ice sallads, water-cresses, cucumbers, or other raw vegetables, vegetable acids, &c., are to be avoided. We have heard of a severe lientery being brought on by eating a little ice-cream, at a time when a considerable degree of indigestion already prevailed; it appeared at once to sink the feeble digestive powers of the stomach, and the food was discharged almost unchanged. Cheese, hard or salted meats, fatty substances, &c., which require all the energy of the healthy stomach to subdue them into chyle, should on no account be allowed. When the alimentary canal is in the irritable condition above mentioned, it is advisable for the invalid to avoid active exercise immediately after his meals, which is liable to hurry on the food into the intestines before the digestion is completed, and thus to occasion a lienteric attack. Persons subject to habitual indigestion, or at least great feebleness of stomach, have at those times frequently brought on lienteric diarrhoea, unless they remained quiet for some time after every meal. See MEDICINE.

LIEU, Fr. *lieu*. Place; stead: always used with *in*; and his not a very respectable Gallicism.

God, of his great liberality, had determined, *in lieu* of man's endeavours, to bestow the same by the rule of that justice which best becometh him.

Hooker.

In lieu of such an increase of dominion, it is our business to extend our trade. *Addison's Freeholder.*

She shall stoop to be

A province for an empire, petty town
In lieu of capital, with slaves for senates;
Beggars for nobles; panders for a people!

Byron.

LIEVENS (John), a celebrated painter, born in Leyden in 1607. He was the disciple of Joris Van Schooten, and afterwards of Peter Lastman. He excelled principally in portraits; but he also executed several historical pieces with great success. He resided three years in England, and painted the portraits of Charles I., the queen, the prince, and several of the nobility; after which he returned to Antwerp, where he met with full employment. There are several of his etchings extant, performed in a slight, but masterly manner. The chiaro scuro is very skilfully managed in them, so as to produce a most powerful effect. His style of etching resembles that of Rembrandt; but is coarser and less finished.

LIEUTAUD (Joseph), M. D., counsellor of state and first physician to the court of France, was born at Aix in Provence, and resided principally there till he took his degree. After this he studied for some years at Montpellier. He returned to Aix, where he soon acquired extensive practice, and became eminent for his literary abilities. There he resided till 1750, when he was invited to act as physician to the royal infirmary at Versailles; where he practised with such reputation and success, that he soon arrived at the head of his profession; and in 1774, upon the death of M. Senac, was appointed archiater. He published many valuable works; particularly, 1. *Elementa Philologiæ*; 2. *Precis de la Médecine*; 3. *Pratique Précis de Matière Médicale*; 4. *Essais Anatomiques*; 5. *Synopsis Universæ Præcox Medicinæ*; 6. *Historia Anatomico-Médica*. He died at Versailles in 1780, aged seventy-eight.

LIEUTENANCY, *n. s.* } *Fr. lieutenant,*
LIEUTEN'ANT, } *lieutenant.* A de-
LIEUTEN'ANTSHIP. } puty; a subordinate
officer; and who acts in the place or stead of another.

It were meet that such captains only were employed as have formerly served in that country, and been at least *lieutenants* there. *Spenser on Ireland.*

If such tricks as these strip you of your *lieutenancy*, it had been better you had not kissed your three fingers so oft. *Shakspeare.*

Whither away so fast?

—No farther than the tower.

—We'll enter all together,

And in good time here the *lieutenant* comes. *Id.*

I must put you in mind of the lords *lieutenants*, and deputy *lieutenants*, of the counties: their proper use is for ordering the military affairs, in order to oppose an invasion from abroad, or a rebellion or sedition at home. *Bacon.*

Killing, as it is considered in itself without all undue circumstances, was never prohibited to the lawful magistrate, who is the viceroy, or *lieutenant* of God, from whom he derives his power of life and death. *Bramhall against Hobbes.*

The earl of Essex was made *lieutenant* general of the army; the most popular man of the kingdom, and the darling of the swordsmen. *Clarendon.*

Sent by our new *lieutenant*, who in Rome,
And since from me, has heard of your renown,
I come to offer peace. *Philips's Briton.*

His *lieutenant*, engaging against his positive orders being beaten by Lysander, Alcibiades was again banished. *Swift.*

Canst thou so many gallant soldiers see,
And captains and *lieutenants* slight for me?

Gay.

According to military custom the place was good, and the *lieutenant* of the colonel's company might well pretend to the next vacant captainship.

Wotton.

The list of undisputed masters is hardly so long as the list of the *lieutenancy* of our metropolis.

Felton on the Classics.

The *lieutenant* brought up the rear, and took care that none of the soldiers were left behind, or deserted.

Potter's Antiquities.

He was born in Ireland during the *lieutenancy* of Stafford, who, being both his uncle and his godfather, gave him his own surname. *Johnson.*

A LIEUTENANT is an officer who supplies the place and discharges the offices of a superior in his absence. Of these some are civil, as the lords *lieutenants* of kingdoms and counties; others military, as the *lieutenant-general*, *lieutenant-colonel*, &c.

LIEUTENANT, in the land service, is the second commissioned officer in every company of both foot and horse, being next to the captain, and taking the command upon the death or absence of the captain.

LIEUTENANT-COLONEL, the second officer of a regiment, who commands in the absence of the colonel.

LIEUTENANT-GENERAL is the next in command after the general; and, provided he should die or be killed, the order is, that the oldest *lieutenant-general* shall take the command. This office is the first military dignity after that of a general. *Lieutenant-generals* have multiplied in Europe, in proportion as the armies have become numerous. They serve either in field or in the sieges, according to the dates of their commissions.

LIEUTENANT OF ARTILLERY. The *lieutenant* has the same detail of duty with the captain; because in his absence he commands the company: he is to see that the soldiers are clean and neat; that their clothes, arms, and accoutrements, are in good and serviceable order; and to watch over every thing else which may contribute to their health. He must attend to their being taught the exercise, see them punctually paid, their messes regularly kept, and visit them in the hospitals when sick. He must assist at all parades, &c. He ought to understand the theory of projectiles, and the science of artillery, with the various effects of gunpowder, however managed or directed; to enable him to construct and dispose his batteries to the best advantage; to plant his cannon, mortars, and howitzers, so as to produce the greatest annoyance to an enemy. He is to be well skilled in the attack and defence of fortified places; and to be conversant in arithmetic, mathematics, mechanics, &c.

LIEUTENANT OF A SHIP OF WAR, an officer next in rank and power to the captain, in whose

absence he is charged with the command of the ship, and the execution of whatever orders he may have received from the commander relating to the king's service. The lieutenant who commands the watch at sea keeps a list of all the officers and men thereunto belonging, in order to muster them when he judges it expedient, and report to the captain the names of those who are absent from their duty. During the night-watch, he occasionally visits the lower decks, or sends thither a careful officer, to see that the proper sentinels are at their duty, and that there is no disorder amongst the men; no tobacco smoked between decks, nor any fire or candles burning there, except the lights which are in lanterns, under the care of a proper watch. He is expected to be always upon deck in his watch, as well to give the necessary orders with regard to trimming the sails and superintending the navigation, as to prevent any noise or confusion; but he is never to change the ship's course without the captain's directions, unless to avoid an immediate danger. The lieutenant, in time of battle, must particularly take care that all the men are present at their quarters, where they have been previously stationed according to the regulations made by the captain. He should exhort them every where to perform their duty; and acquaint the captain at all times of the misbehaviour of any person in the ship, and of whatever else concerns the service. The youngest lieutenant in the ship, who is also styled lieutenant at arms, besides his common duty, is particularly ordered, by his instructions, to train the seamen to the use of small arms, and frequently to exercise and discipline them therein. His office in time of battle is chiefly to direct and attend them; and at other times to have a due regard to the preservation of the small arms, that they be not lost or embezzled, and that they be kept in good condition for service.

LIEUTENANT, REFORMED, he whose company or troop is broken or disbanded, but himself continued in whole or half pay, still preserving his right of seniority and rank in the army.

LIEUTENANTS, LORDS, OF COUNTIES, are officers, who, upon any invasion or rebellion, have power to raise the militia, and to give commissions to colonels and other officers, to arm and form them into regiments, troops, and companies. Under the lords lieutenants are deputy lieutenants, who have the same power; these are chosen by the lords lieutenants out of the principal gentlemen of each county, and presented to the king for his approbation.

LIEWARDEN, or LEWARDEN, a large town of the Netherlands, the capital of the province of Friesland, situated on the river Ee. It is surrounded with an earthen mound and broad moat. The streets, which are straight and wide, are intersected by canals, which communicate with the sea. The chief public buildings are the town-house, arsenal, the house belonging to the prince of Orange, as hereditary stadtholder of the province, and a large and handsome church, containing the tombs of the princes of his family. The walls and banks of the canals are delightful promenades, planted with trees. Twenty-eight miles west of Groningen.

LIFE, *n. s.*

LIFE'BLOOD,

LIFE'GIVING,

LIFE'GUARD,

LIFE'LESS, *adj.*

LIFE'LESSLY, *adv.*

LIFE'LIKE, *adj.*

LIFE'STRING, *n. s.*

LIFE'TIME,

LIFE'WEARY.

Sax. *lifian*; Teut. *leben*; Belg. *leven*, to exist; Goth. and Swed. *lif*; Dan. *liv*. Existence; animated existence; human existence; man's present state of being: hence, conduct; condition; manner of life; human affairs; living person; narrative of a life: spirit; briskness: activity; enjoyment; and blood, the supposed vehicle of life; a living, or real form, as opposed to copies: life-blood, the blood necessary to life: life-guard, the guard of the king's life or person: life-string, nerve; strings supposed essential to life: lifetime, time of the duration of life: life-weary, tired of life, or living; wretched.

But be clothid aboue, that thilk thing that is deedli be sopun up of *luf*. *Wiclif. 2 Cor. v.*

Let the waters bring forth abundantly the moving creature that hath *life*. *Gen. i. 20.*

For the *life* of the flesh is in the blood.

Lev. xvii. 11.

Wel coude he peinten *lifty* that it wrought,
With many a florein he the hewes bought.

Chaucer. Cant. Tales.

Thus I know, not only by reading of books in my study, but also by experience of *life* abroad in the world. *Ascham.*

The weapon bright,
Taking advantage of his open jaw,
Ran through his mouth with so importune might,
That deep empurst his darksome hollow maw,
And back retired, his *life-blood* forth withal did draw. *Spenser. Faerie Queene.*

Then avarice 'gan through his veins to i. spire
His greedy flames, and kindle *life* devouring fire. *Id.*

His own heat,
Kindled at first from heaven's *lifegiving* fire. *Spenser.*

On thy *life* no more.

—My *life* I never held but as a pawn
To wage against thy foes. *Shakspeare. King Lear.*

She shews a body rather than a *life*,
A statue than a breather. *Id. Antony and Cleopatra.*

Why should I play the Roman fool, and die
On mine own sword? whilst I see *lives* the gashes
Do better upon them. *Id. Macbeth.*

How couldest thou drain the *lifeblood* of the child?
Shakspeare.

Hopeless and helpless doth Ægeon wend,
But to procrastinate his *lifeless* end. *Id.*

Let me have
A dram of poison, such soon speeding geer,
As will disperse itself through all the veins,
That the *life-weary* taker may fall dead. *Id.*

This is the best part of beauty which a picture
cannot express, no, nor the first sight of the *life*. *Bacon's Essays.*

There is a false gravity that is a very ill symptom; and it may be said, that, as rivers which run very slowly have always the most mud at the bottom; so a solid stiffness, in the constant course of a man's *life*, is a sign of a thick bed of mud at the bottom of his brain. *Sorilla.*

And since this *life* our nonage is,
And we in wardship to thine Angels ice,
Native in heaven's fair palaces,
Where we shall be but denized by thee. *Davies. Divine Poems.*

He that through inconsiderateness doubted twice
of his own *life*, doubted not the *life* of his seed,
even from the dead and dry womb of Sarah.

Bp. Hall.

These lines are the veins, the arteries,
The undecaying *lifestrings* of those hearts
That still shall pant, and still shall exercise
The motion spirit and nature both impart. *Daniel.*

O *life*, thou nothing's younger brother!
So like, that we may take the one for t'other!
Dream of a shadow: a reflection made
From the false glories of the gay reflected bow,
Is more a solid thing than thou! *Cowley.*
I believe no character of any person was ever
better drawn to the *life* than this. *Denham.*
Nor love thy *life*, nor hate; but what thou livest
Live well, how long or short permit to Heaven. *Milton.*

Not to know at large of things remote
From use, obscure and subtle; but to know
That which before us lies in daily *life*,
Is the prime wisdom. *Id. Paradise Lost.*

He sat devising death
To them who lived; nor on the virtue thought
Of that *lifegiving* plant. *Id.*

Was I to have never parted from thy side?
As good have grown there still a *lifeless* rib!
Milton.

The Helots bent thitherward with a new *life* of re-
solution, as if their captain had been a root out of
which their courage had sprung. *Sidney.*

When I consider *life*, 'tis all a cheat,
Yet fooled by hope men favour the deceit,
Live on, and think to-morrow will repay;
To-morrow's falser than the former day;
Lies more; and, when it says we shall be blest
With some new joy, takes off what we possess.
Strange cozenage! none would live past years again,
Yet all hope pleasure in what yet remain;
And from the dregs of *life* think to receive
What the first sprightly running could not give. *Dryden.*

Rich carvings, portraiture, and imagery,
Where every figure to the *life* expressed
The godhead's power. *Id. Knight's Tale.*
His forehead struck the ground,
Lifeblood and *life* rushed mingled through the wound. *Dryden.*

The other victor-flame a moment stood,
Then fell, and *lifeless* left the extinguished wood. *Id.*

The identity of the same man consists in nothing
but a participation of the same continued *life*, by
constantly fleeting particles of matter, in succes-
sion vitally united to the same organized body. *Locke.*

Some have not any clear ideas all their *lives*. *Id.*
They loved with that calm and noble value which
dwells in the heart, with a warmth like that of *life*-
blood. *Spectator.*

Jordain talked prose all his *life-time*, without know-
ing what it was. *Addison on Medals.*

The administration of this bank is for *life*, and
partly in the hands of the chief citizens. *Id. On Italy.*

Not with half the fire and *life*,
With which he kissed Amphitryon's wife. *Prior.*
I, who make the triumph of to-day,
May of to-morrow's pomp one part appear,
Ghastly with wounds, and *lifeless* on the bier. *Id.*
Untamed and fierce the tyger still remains,
And tires his *life* with biting on his chains. *Id.*
He that would be a master, must draw by the *life*
as well as copy from originals, and join theory and
experience together. *Catlier.*

They have no notion of *life* and fire in fancy and
in words; and any thing that is just in grammar and
in measure is as good oratory and poetry to them as
the best. *Felton.*

The power which produces their motions, springs
from something without themselves: if this power
were suspended, they would become a *lifeless* unactive
heap of matter. *Cheyne.*

So peaceful shalt thou end thy blissful days,
And steal thyself from *life* by slow decays. *Pope.*
His gushing entrails smok'd upon the ground,
And the warm *life* came issuing through the wound. *Id.*

Minerva, *lifelike*, on embodied air
Impressed the form of Iphemia the fair. *Id.*
Henry and Edward, brightest sons of fame,
And virtuous Alfred, a more sacred name,
After a *life* of glorious toils endured,
Closed their long glories with a sigh. *Id.*
Money, the *lifeblood* of the nation,
Corrupts and stagnates in the veins,
Unless a proper circulation
Its motion and its heat maintains. *Swift.*
He entreated me not to take his *life*, but exact a
sum of money. *Broomer on the Odyssey.*

That *life* is long which answers *life's* great end;
The time that bears no fruit deserves no name. *Young.*

What is the *life* of man? Is it not to shift from
side to side?—from sorrow to sorrow!—to button up
one cause of vexation—and unbutton another?
Sterne.

There's nought but care on every han',
In every hour that passes, O;
What signifies the *life* o' man,
An' 'twerna for the lasses, O? *Burns.*

The first is, because out of it are the issues of *life*;
i. e. As our heart is, so will the tenor of our *life*
and conduct be. *Mason.*

The Lord of all, himself through all diffused,
Sustains, and is the *life* of all that *lives*:
Nature is but a name for an effect,
Whose cause is God. *Cowper.*

—With weak unsteady step the fainting maid
Seeks the cold garden's solitary shade,
Sinks in the pillowy moss her drooping head,
And prints with *lifeless* limbs her leafy bed. *Darwin.*

Therefore, they who all their *lifetime* derive bless-
ings from the Fountain of Grace, by the channels
of ecclesiastical ministers, ought then more especially
to do it in the time of their sickness. *Paley.*

But vain the wish—for Beauty still
Will shrink, as shrinks the ebbing breath,
And woman's tears, produced at will,
Deceive in *life*, unman in death. *Byron.*

But the white shroud, and each extended tress,
Long—fair—but spread in utter *lifelessness*,
Which, late the sport of every summer wind,
Escaped the baffled wreath that strove to bind. *Id.*

LIFE ANNUITIES AND ASSURANCE. We
have disposed of a portion of this subject under
the article ASSURANCE, i. e. the history and chief
practical details; and our article ENGLAND con-
tains M. Babbage's list all the respectable com-
panies for the assurance of lives, against fires,
&c., with remarks on the principles of their
calculations and procedure.

That gentleman, unquestionably the first
among those practical mathematicians of our age
who have investigated these topics, disappointed us
however, with many others of his readers, in

his 'Comparative View' of the various institutions for the assurance of lives, published in 1826. It is in fact only a popular introduction to the scientific consideration of the topics involved; digesting into a very convenient Manual, the preceding labors and investigations of Mr. Morgan, Mr. Baily, and Mr. Milne. But we understand that his wonderful machinery for the computation of logarithms has been for some time employed in the calculation of an entirely new and most important series of Tables on this subject :

From the age of 10 to 20	the deaths occurring	have been only as	1 to 2	on the Northampton
20 to 30			1 to 2	Tables.
30 to 40			3 to 5	
40 to 50			3 to 5	
50 to 60			5 to 7	
60 to 70			4 to 5	

This society on the whole is said for the last thirty years to have paid therefore only two claims where the tables in question state that three would arise: and hence the source of its exorbitant profits. Government, we may add, is understood to have liberally assisted in the designs of our author, and that the appearance of the calculations in question may be confidently looked for in a few months. We shall, in this case, not fail to avail ourselves of them in the article SURVIVORSHIP, to which under these circumstances the reader is referred.

LIFE BOAT. See BOAT.

LIFFEY, THE, a river of Ireland, which rises in the Wicklow mountains and falls into the bay of Dublin. Its course is about seventy-one miles, although the direct distance from its source to its estuary is not more than ten. In Kildare its banks are well wooded, and when it enters the county of Dublin they present most interesting and picturesque scenery. The tide conducts vessels of burden to the city, but is stopped by a beautiful fall at its western extremity. Its floods, shallows, and rapids, are very frequent.

LIFT, *v. a., v. n. & n. s.* } Sax. *plifian*; Goth.

LIFTER, *n. s.* } *lofa*; Swed. *lyfta*; Teut. *liften*. To heave; raise up; exalt; hold on high; used with *up*, emphatically: hence to elevate mentally; exalt in station, fortune, dignity, or esteem; inflate with pride: as a neuter verb, to strive to raise: as a noun, the act, manner, or effect of raising any thing; also a weight lifted; or a load: a dead lift is a load that remains immovable after a given exertion, and exhaustion (the consequence of extreme exertions). See DEAD.

I wole that men prei in alle place *liftyng*e up cleene hondis withouten wrathe and strf.

Wiclif. 1 *Tymo.* ii.

Arise, *lift up* the lad, and hold him in thine hand.

Genesis.

My heart was *lift up* in the ways of the Lord.

2 *Chron.*

Thou, O Lord, art my glory, and the *lifter up* of mine head.

Psalm iii. 3.

Lifted up with pride. 1 *Tim.* iii. 6.

Pinch cattle of pasture while summer doth last, And *lift* at their tails ere a winter be past.

Tusser.

So down he fell, that the' earth him underneath Did groan, as feeble so great load to *lift*.

Faerie Queene

and we need not remind our readers, who have looked into it, of the jarring claims of former calculations, and the entire dependence of every practical question involved on such data. The Northampton Tables, for instance, which have been the chief basis of all the insurances hitherto made, of the rate of premium charged, &c., compared with the actual deaths among the members of the Equitable Society, according to Mr. Morgan, exhibit the following curious result.

Neither can it be thought, because some lessons are chosen out of the Apocrypha, that we do offer disgrace to the word of God, or *lift up* the writings of men above it.

Hooker.

Your guests are coming;

Lift up our countenance, as 'twere the day Of celebration of that nuptial.

Shakspeare. *Winter's Tale.*

Filial ingratitude!

Is it not as this mouth should tear this hand

For *lifting* food to't? *Id.* *King Lear.*

In the *lift* of the feet, when a man goeth up the hill, the weight of the body beareth most upon the knees.

Bacon.

Myself and Trulla made a shift

To help him out at a *dead lift*. *Hudibras.*

Propped by the spring, it *lifts* aloft the head,

But of a sickly beauty soon to shed,

In summer living, and in winter dead. *Dryden.*

The goat gives the fox a *lift*, and out he springs.

L'Estrange.

The mind by being engaged in a task beyond its strength, like the body strained by *lifting* at a weight too heavy, has often its force broken.

Locke.

See to what a godlike height

The Roman virtues *lift up* mortal man!

Addison.

Our successes have been great, and our hearts have been too much *lifted up* by them, so that we have reason to humble ourselves.

Atterbury.

Of Orpheus now no more let poets tell,

To bright Cæcilia greater power is given;

His numbers raised a shade from hell,

Hers *lift* the soul to heaven.

Pope.

Mr. Doctor had puzzled his brains

In making a ballad, but was at a dead *lift*.

And you freely must own, you were at a *dead lift*.

Swift.

As some tall cliff that *lifts* its awful form, Swells from the vale, and midway leaves the storm.

Goldsmith.

The quiet night, now dappling 'gan to wane,

Dividing darkness from the dawning main:

The dolphins, not unconscious of the day,

Swam high, as eager of the coming ray;

The stars from broader beams began to creep,

And *lift* their shining eyelids from the deep.

Byron.

LIG, *v. n.* To lie. See LIE.

LIG'AMENT, *n. s.* } Fr. *ligament*; Latin
LIGAMENT'AL, *adj.* } *ligamentum*, à *ligo*, to
LIGAMENT'OUS, } bind. A cartilaginous
LIG'ATION, *n. s.* } appendage or bandage
LIG'ATURE. } of the joints; any tie or

bond: ligation is the act of binding, or state of being bound: ligature, a bandage, that which is bound round something; it is also used synonymously with ligation.

Be all their ligaments at once unbound,
And their disjointed bones to powder ground.

Sandys.

But he in a battail seeing his father in danger to be slain, in zeal to save his father's life strained the ligature of his tongue, till that broke which bound him.

Bp. Taylor.

Though our ligaments betimes grow weak,
We must not force them till themselves they break.

Denham.

The urachos, or ligamental passage, is derived from the bottom of the bladder, whereby it dischargeth the watery and urinary part of its aliment.

Broune's Vulgar Errors.

He deludeth us also by philters, ligatures, charms, and many superstitious ways in the cure of diseases.

Broune.

The incus is one way joined to the malleus, the other end being a process is fixed with a ligament to the stapes.

Holder.

If you slit the artery, and thrust into it a pipe, and cast a strait ligature upon that part of the artery; notwithstanding the blood hath free passage through the pipe, yet will not the artery beat below the ligature; but do but take off the ligature, it will beat immediately.

Ray on the Creation.

Sand and gravel grounds easily admit of heat and moisture, for which they are not much the better, because they let it pass too soon, and contract no ligature.

Mortimer's Husbandry.

The many ligatures of our English dress check the circulation of the blood.

Spectator.

Men sometimes, upon the hour of departure, do speak and reason above themselves; for then the soul, beginning to be freed from the ligaments of the body, reasons like herself, and discourses in a strain above mortality.

Addison's Spectator.

The slumber of the body seems to be but the waking of the soul; it is the ligation of sense, but the liberty of reason.

Addison.

The fatal noose performed its office, and with most strict ligature squeezed the blood into his face.

Arbuthnot's John Bull.

The clavicle is inserted into the first bone of the sternon, and bound in by a strong ligamentous membrane.

Wiseman.

I found my arms and legs very strongly fastened on each side to the ground; I likewise felt several slender ligatures across my body, from my arm-pits to my thighs.

Gulliver's Travels.

LIGATURE, in surgery, is a cord, band, or string; or the binding any part of the body with a cord, band, fillet, &c. Ligatures are used to extend or replace bones that are broken or dislocated; to tie the patients down in lithotomy and amputations; to tie upon the veins in phlebotomy; on the arteries in amputations, or in large wounds; to secure the splints that are applied to fractures, &c., and in taking off warts or other excrescences by ligature.

LIGATURE, in the Italian music, signifies a binding together of notes. Hence syncopes are often called ligatures, because they are made by the ligature of many notes. There is another sort of ligatures for breves, when there are many of these on different lines, or on different spaces, to be sung to one syllable.

LIGNY, a village of the Netherlands, in Na-

mur, only remarkable as the scene of an obstinate and sanguinary battle between the Prussians and French, on the 16th of June 1815, the prelude to the decisive battle of Waterloo. It is three miles north-east of Fleurus, and eleven W. N. W. of Namur.

LIGHT, *adj. & adv.*

LIGHT-FOOT, *adj.*

LIGHTEN, *v. a.*

LIGHTLEGGED, *adj.*

LIGHTLY, *adv.*

LIGHT-MIND'ED, *adj.*

LIGHTNESS, *n. s.*

Sax. leopt; Goth.

lett; Teut. leicht; Belg.

leiht. Of small weight,

opposed to heavy;

hence active; nimble;

unincumbered; easy to

be lifted, worn, or carried;

not dense or gross: and, metaphorically, easy of endurance; not afflictive; not mentally burdensome; easy, generally; not heavy-armed; airy; gay; unsteady; unsettled; unchaste: light, as an adverb, means cheaply, but is a barbarism: to lighten is to make of less weight; to relieve of a burden or affliction; to cheer: the other derivatives seem to require no explanation.

He seith to hem, what thinke ye these thingis in youre hertis? What is lightere to seye to the syk man in palesye synnes be forghiven to thee; or to seye rise take thi bed and walke?

Wiclif. Mark i.

In the wilderness there is no bread, nor water, and our soul loatheth this light bread.

Numbers xxi. 5.

Asahel was as light of foot as a wild roe.

2 Sam. ii. 18.

The mariners were afraid, and cast forth the wares that were in the ship into the sea, to lighten it of them.

Jonah i. 7.

He that is hasty to give credit is lightminded.

Eccles. xix. 4.

To you my purse, and to none othir wight,

Complain I, for ye be my ladie dere;

I am sorie now that ye be so light,

For certis ye now make me hevie chere.

Chaucer's Balades.

Horse, oxen, plough, tumbrel, cart, waggon, and wain,

The lighter and stronger the greater thy gaine.

Tusser.

He so light was at legerdemin,

That what he touched came not to light again.

Spenser.

Land some of our passengers,

And light this weary vessel of her load.

Faerie Queene.

For, unto knight there is no greater shame,

Than lightness and inconstancy in love.

Id.

Him so far had born his lightfoot steed,

Pricked with wrath and fiery fierce disdain,

That him to follow was but fruitless pain.

Id.

Shall we set light by that custom of reading, from whence so precious a benefit: hath grown?

Hooker.

If they write or speak publicly but five words, one of them is lightly about the dangerous estate of the church of England in respect of abused ceremonies.

Id.

Of two things they must choose one; namely, whether they would, to their endless disgrace, with ridiculous lightness, dismiss him, whose restitution they had in so importunate manner desired, or else condescend unto that demand.

Id.

Paulus Bachitius, with a company of light horsemen, lay close in ambush, in a convenient place for that purpose.

Knolles.

It will be light, that you may bear it

Under a cloak that is of any length.

False of heart, light of ear, bloody of hand.

Id.

Let me not be light,

For a light wife doth make a heavy husband.

Id.

Believe 't not lightly that your son
Will not exceed the common, or be caught
With cautelous baits and practice. *Id.*

Bid that welcome
Which comes to punish us, and we punish it,
Seeming to bear it *lightly*. *Id.*

As I blow this feather from my face,
Obeying with my wind when I do blow,
And yielding to another when it blows,
Commanded always by the greatest gut;
Such is the *lightness* of you common men. *Id.*

A trusty villain, very oft,
When I am dull with care and melancholy,
Lighens my humour with his merry jest. *Id.*

How oft when men are at the point of death,
Have they been merry! which their keepers call
A *lightning* before death. *Id. Romeo and Juliet.*

A king that would not feel his crown too heavy,
must wear it every day; but, if he think it too *light*,
he knoweth not of what metal it is made.

Bacon's Essays.
Unmarried men are best masters, but not best sub-
jects; for they are *light* to run away. *Bacon.*

Some are for masts of ships, as fir and pine, be-
cause of their length, straightness, and *lightness*.

Id. Natural History.
These *light* vain persons still are drunk and mad
With surfeitings and pleasures of their youth. *Davies.*

This grave partakes the fleshly birth,
Which cover *lightly*, gentle earth. *Ben Jonson.*
They have cock-boats for passengers, and *lighters*
for burthen. *Carew.*
They are *light* of belief, great listeners after news. *Howell.*

Flatter not the rich; neither do thou willingly or
lightly appear before great personages. *Taylor.*

There Stamford came, for his honor was lame
Of the gout three months together;
But it proved, when they fought, but a running
gout,

For heels were *lighter* than ever. *Denham.*
The English Liturgy, how piously and wisely
soever framed, had found great opposition; the cere-
monies had wrought only upon *lightheaded*, weak,
men, yet learned men excepted against some particu-
lars. *Clarendon.*

Strive
In offices of love how we may *lighten*
Each other's burden. *Milton.*
To entitle every petty chance that arriveth to spe-
cial providence, may signify *lightness*. *Barrow.*
Lightlegged Pas has got the middle space. *Sidney.*

Is it the disdain of my estate, or the opinion of my
lightness, that emboldened such base fancies towards
me? *Id.*

A *light* error in the manner of making the follow-
ing trials was enough to render some of them unsuc-
cessful. *Boyle.*

There is no greater argument of a *light* and incon-
siderate person, than profanely to scoff at religion. *Tillotson.*

The audience are grown weary of continued melan-
choly scenes; and few tragedies shall succeed in
this age, if they are not *lightened* with a course of
mirth. *Dryden.*

Light fumes are merry, grosser fumes are sad;
Both are the reasonable soul run mad. *Id.*

Hot and cold were in one body fixt,
And soft with hard, and *light* with heavy mixt. *Id.*

Light sufferings give us leisure to complain;
We groan, but cannot speak, in greater pain. *Id.*

The force of fire ascended first on high,
And took its dwelling in the vaulted sky;
Then air succeeds, in *lightness* next to fire. *Id.*
Suppose many degrees of littleness and *lightness* in
particles, so as many might float in the air a good
while before they fell. *Burnet.*

A cheerful temper, joined with innocence, will
make beauty attractive, knowledge delightful, and
wit good-natured. It will *lighten* sickness, poverty,
and affliction; convert ignorance into an amiable
simplicity, and render deformity itself agreeable. *Addison.*

These weights did not exert their natural gravity
till they were laid in the golden balance, insomuch
that I could not guess which was *light* or heavy
whilst I held them in my hand. *Id.*

We were once in hopes of his recovery; upon a
kind of message from the widow; but this only
proved a *lightening* before death. *Id. Spectator.*

The soft ideas of the cheerful note,
Lightly received were easily forgot. *Prior.*

Youths, a blooming band;
Light bounding from the earth at once they rise,
Their feet half viewless quiver in the skies. *Pope.*
I am bright as an angel, and *light* as a feather. *Swift.*

I was the Queen o' bonnie France,
Where happy I hae been,
Fu' *lightly* rose I in the morn,
As blythe lay down at e'en. *Burns.*

The redbreast warbles still, but is content
With slender notes, and more than half suppressed:
Pleased with his solitude, and fitting *light*
From spray to spray, where'er he rests he shakes
From many a twig the pendent drops of ice,
That tinkle in the withered leaves below. *Cowper.*

Upon his hand she laid her own—
Light was the touch, but it thrilled to the bone,
And shot a chillness to his heart,
Which fixed him beyond the power to start. *Byron.*

What mortal among us is there, that, when any
misfortune comes on him unexpectedly, does not find
himself wonderfully *lightened* of the load of his sor-
row, by pouring out the abundance of his vexation in
showers of curses on the author of his calamity? *Canning.*

LIGHT, v. n. Sax. *līptan*; Goth. *līgta*; Teut.
lighten. From *Lor*, which see. To descend
or fall upon; to happen to find; to fall in a
particular direction; descend from a horse or
carriage; desist from motion; rest.

Rebekah lifted up her eyes, and, when she saw
Isaac, she *lighted* off the camel. *Gen. xxiv. 64.*

When Naaman saw him running after him, he
lighted down from the chariot to meet him. *2 Kings v. 21.*

They shall hunger no more; neither shall the sun
light on them, nor any heat. *Rev. vii. 16.*

O Lord, let thy mercy *lighten* upon us, as we do
put our trust in thee. *Common Prayer.*

And when she saw her fadir in the strete,
She *light* adoun and falleth him to fete. *Chaucer. Canterbury Tales.*

The prince, by chance, did on a lady *light*,
That was right fair, and fresh as morning rose. *Spenser.*

He at his foe with furious rigour smites,
That strongest oak might seem to overthrow;

The stroke upon his shield so heavy *lights*,
That to the ground it doubleth him full low. *Id.*

At an uncertain lot none can find themselves
grieved on whomsoever it *lighteth*. *Hooker.*

Haply your eye should *light upon* some toy
You have desired to purchase. *Shakspeare.*

I saw 'em salute on horseback,
Beheld them when they *lighted*, how they clung
In their embracement. *Id.*

I placed a quire of such enticing birds,
That she will *light* to listen to their lays. *Id.*
As in the tides of people once up there want not
stirring winds to make them more rough; so this
people did *light upon* two ringleaders. *Bacon.*

Then as a bee which amongst weeds did fall,
Which seem sweet flowers, with lustre fresh and gay
She *lights* on that, and this, and tasteth all,
But pleased with none, doth rise, and soar away. *Davies.*

Of late years, the royal oak did *light upon* count
Rthodophil. *Howell.*

On me, me only, as the source and spring
Of all corruption, all the blame *lights due*.

Milton's Paradise Lost.

No more settled in valour than disposed to justice,
if either they had *lighted* on a better friend, or
could have learned to make friendship a child, and
not the father of virtue. *Sidney.*

The way of producing such a change in colours
may be easily enough *lighted on*, by those conversant
in the solutions of mercury. *Boyle.*

The wounded steed curvets; and raised upright,
Lights on his feet before: his hoofs behind
Spring up in air aloft, and lash the wind. *Dryden.*

He sought by arguments to sooth her pain;
Nor those availed: at length he *lights* on one,
Before two moons their orb with light adorn,
If Heaven allow me life, I will return. *Id.*

Truth, *light upon* this way, is of no more avail to
us than error; for what is so taken up by us, may be
false as well as true; and he has not done his duty,
who has thus stumbled upon truth in his way to pre-
ferment. *Locke.*

Whosoever first *lit on* a parcel of that substance
we call gold, could not rationally take the bulk and
figure to depend on its real essence. *Id.*

Plant trees and shrubs near home, for bees to
pitch on at their swarming, that they may not be
in danger of being lost for want of a *lighting* place.
Mortimer's Husbandry.

A curse *lights upon* him presently after: his great
army is utterly ruined, he himself slain in it, and
his head and right hand cut off, and hung up before
Jerusalem. *South.*

As wily reynard walk'd the streets at night,
On a tragedian's mask he chanced to *light*;
'Turning it o'er he muttered with disdain,
'How vast a head is here without a brain!
Addison.

The god laid down his feeble rays,
Then *lighted* from his glittering couch. *Scift.*

A weaker man may sometimes *light* on notions
which have escaped a wiser. *Watts on the Mind.*

The wretched he forsakes,
Swift on his downy pinions flies from woe,
And *lights on* lids unsullied with a tear. *Young.*

LIGHT, *n. s., adj. & v. a.* } Sax. *lǣt*, *leopt*;
LIGHT'EN, *v. a.* } Teut. *licht*; Lat. *lux*; Gr. *λῦξ*, *λῦξ*.
LIGHTHOUSE, *n. s.* } *lux*; Gr. *λῦξ*, *λῦξ*.
LIGHTSOME, *adj.* } The medium of
LIGHTSOMENESS, *n. s.* } vision; luminous
matter; state of the elements in the day time;
power of vision: hence sometimes synonymous
with day and with sight; also with life (as a
great medium of enjoyment): artificial illumina-
tion; any instrument or body yielding such
illumination; that part of a picture on which

the light appears to fall; point of view; direc-
tion in which light falls; public view: metapho-
rically, instruction; knowledge; mental view or
illumination; explanation: light, as an adjective,
means bright; clear; not dark; approaching to
whiteness: to light, is to inflame; kindle; make
a flame (i. e. a light); to give light to; to illu-
minate, literally or mentally; as signifies also
the verb to lighten: light is also used with *up*,
emphatically: lit is the preterite of light: light-
house, an edifice erected to give light on danger-
ous coasts or seas: lightsome, cheerful; airy;
opposed to gloominess or darkness of condi-
tion.

I am the *light* of the world: he that sueth me,
walketh not in derknessis, but schal have the *light*
of lyf. *Wiclif. Jon. viii.*

The lanterne of thi bodi is thin iye: yf thin iye be
suple, al thi bodi schal be *lightful*. *Wiclif. Matt. vi.*

God called the *light* day, and the darkness he
called night. *Genesis i.*

As soon as the morning was *light*, the men were
sent away. *Gen. xlv. 3.*

Seven lamps shall give *light*. *Numb.*
The murderer rising with the *light* killeth the poor. *Job.*

Infants that never saw *light*. *Id.*
My strength faileth me; as for the *light* of mine
eyes, it also is gone from me. *Psalms.*

Light, and understanding, and wisdom, like the
wisdom of the gods, was found in him. *Daniel v. 11.*

Then he called for a *light*, and sprang in and fell
down before Paul. *Acts xvi. 29.*

Of those things which are for direction of all the
parts of our life needful, and not impossible to be
discerned by the *light* of nature itself, are there not
many which few men's natural capacity hath been
able to find out? *Hooker.*

It suiteth so fitly with that *lightsome* affection of
joy, wherein God delighteth when his saints praise
him. *Id.*

The horses ran up and down with their tails and
manes on a *light* fire. *Knoll s.*

That *light* you see is burning in my hall:
How far that little candle throws his beams,
So shines a good deed in a naughty world. *Shakspeare.*

Upon his bloody finger he doth wear
A precious ring, that *lightens* all the hole. *Id.*

Neither the sun, nor any thing sensible is that
light itself, which is the cause that things are *light-
some*, though it make itself, and all things else, visi-
ble; but a body most enlightened, by whom the
neighbouring region, which the Greeks call æther,
the place of the supposed element of fire, is affected
and qualified. *Raleigh.*

Light may be taken from the experiment of the
horse-tooth ring, how that those things which as-
suage the strife of the spirits, do help diseases con-
trary to the intention desired. *Bacon's Natural History.*

Equal posture, and quick spirits, are required to
make colours *lightsome*. *Id.*

They have brought to *light* not a few profitable
experiments. *Id.*

White walls make rooms more *lightsome* than
black. *Bacon.*

O *Light*, which mak'st the *light* which makes the
day,

Which settest the eye without, and mind within;
Lighten my spirit with one clear heavenly ray,

Which now to view itself doth first begin. *Davies.*

So alike thou drivest away
Light and darkness, night and day. *Carew.*

A beam that falls

Fresh from the pure glance of thine eye,
Lighting to eternity. *Crashaw.*

But whence, O God, was that first light? the sun
was not made till the fourth day; light the first. If
man had been he might have seen all lightsome; but
whence it had come he had not seen. *Bp. Hall.*

Several lights will not be seen
If there be nothing else between;
Men doubt, because they stand so thick i' the sky,
If those be stars that paint the galaxy. *Cowley.*

Ere the third dawning light
Return, the stars of morn shall see him rise
Out of his grave, fresh as the dawning light. *Milton.*

Let them be for signs,
For seasons, and for days, and circling years;
And let them be for lights, as I ordain
Their office in the firmament of heaven,
To give light on the earth. *Id.*

If it be true that light is in the soul,
She all in every part, why was the sight
To such a slender ball as the eye confined,
So obvious and so easy to be quenched,
And not as feeling through all parts diffused
That she might look at will through every pore?
Id.

What light is without, that is truth within, shining
on our inward world, illustrating, quickening, and
comforting all things there, exciting all our faculties
to action, and guiding them in it. *Barrow.*

Thus did that morning of divine knowledge, from
the first dawning, by degrees grow more lightsome. *Id.*

I put as great difference between our new lights
and ancient truths, as between the sun and a meteor. *Glanville.*

This truth shines so clear, that to go about to
prove it, were to light a candle to seek the sun. *Id.*
Swinging coals about in the wire, thoroughly
lighted them. *Boyle.*

I will make some offers at their safety, by fixing
some marks like lights upon a coast, by which the
ships may avoid at least known rocks. *Temple.*

Never admit two equal lights in the same picture;
but the greater light must strike forcibly on those
places of the picture where the principal figures are;
diminishing as it comes nearer the borders. *Dryden's Dufresnoy.*

The sun
His course exalted through the Ram had run,
Through Taurus, and the lightsome realms of love. *Dryden.*

The sun was set, and Vesper, to supply
His absent beams, had lighted up the sky. *Id.*
Be witness, gods, and strike Jocasta dead,
If an immodest thought, or low desire,
Inflamed my breast since first our loves were lighted. *Id.*

In painting, the light and a white colour are but
one and the same thing: no colour more resembles
the air than white, and by consequence no colour
which is lighter. *Id.*

If internal light, or any proposition which we take
for inspired, be conformable to the principles of reason,
or to the word of God, which is attested revelation,
reason warrants it. *Locke.*

Frequent consideration of a thing wears off the
strangeness of it; and shews it in its several lights,
and various ways of appearance, to the view of the
mind. *South.*

The lightsome passion of joy was not that which
now often usurps the name; that trivial, vanishing,

superficial thing, that only gilds the apprehension,
and plays upon the surface of the soul. *Id.*

It is impossible for a man of the greatest parts to
consider any thing in its whole extent, and in all its
variety of lights. *Spectator.*

Allegories, when well chosen, are like so many
tracks of light in a discourse, that make every thing
about them clear and beautiful. *Addisen.*

Absence might cure it, or a second mistress
Light up another flame, and put out this. *Id. Cato.*

He still must mourn
The sun, and moon, and every starry light,
Eclipsed to him, and lost in everlasting night. *Prior.*

Light is propagated from luminous bodies in time,
and spends about seven or eight minutes of an hour
in passing from the sun to the earth. *Newton's Opticks.*

Two cylindrick bodies with annular sulci, found
with sharks' teeth, and other shells, in a light coloured
clay. *Woodward.*

Here pensive I behold the fading light,
And o'er the distant billow lose my sight. *Gay.*
The books of Varro concerning navigation are lost,
which no doubt would give us great light in those
matters. *Arbutnot on Coins.*

He charged himself with the risque of such ves-
sels as carried corn in winter; and built a pharos
or lighthouse. *Arbutnot.*

It is to our atmosphere that the variety of colours,
which are painted on the skies, the lightsomeness of
our air, and the twilight, are owing. *Cheyne's Philosophical Principles.*

Thin glitt'ring textures of the filmy dew;
Dipt in the richest tincture of the skies,
When light disports in ever mingling dyes. *Pope.*

Ah hopeless, lasting flames! like those that burn
To light the dead, and warm the unfruitful urn. *Id.*

Swift roll the years, and rise the expected morn,
O spring to light, auspicious babe be born! *Id.*

Grave epistles bringing vice to light,
Such as a king might read, a bishop write. *Id.*
It is in disputes, as in armies; where the weaker
side sets up false lights, and makes a great noise,
to make the enemy believe them more numerous and
strong than they really are. *Swift.*

I humbly conceive, though I light my candle at
my neighbour's fire, that does not alter the property
of make the wick, the wax, or the flame, or the whole
candle less my own. *Id.*

Believe thyself, thy eyes,
That first inflamed, and lit me to thy love,
Those stars, that still must guide me to my joy. *Southerne.*

Sounds, which address the ear, are lost and die
In one short hour; but that which strikes the eye,
Lives long upon the mind: the faithful sight
Engraves the knowledge with a beam of light. *Watts.*

Nature from the storm
Shines out afresh; and through the lightened air
A higher lustre, and a clearer calm,
Diffusive tremble. *Thomson's Summer.*

Books (says Lord Bacon) can never teach the use
of books; the student must learn by commerce with
mankind to reduce his speculations to practice. No
man should think so highly of himself, as to think
he can receive but little light from books, nor so
meanly as to believe he can discover nothing but
what is to be learned from them. *Johnson.*

She's fresh as the morning, the fairest in May ;
 She's sweet as the evening 'among the new hay ;
 As blithe and as artless as the lamb on the lea,
 And dear to my heart as the *light* to my ee. *Burns.*

An easy observation of the most common, sometimes of the meanest things in nature, will give the truest *lights*, where the greatest sagacity and industry that slights such observation, must leave us in the dark, or, what is worse, amuse and mislead us by false *lights*. *Burke on the Sublime.*

But, though life's valley be a vale of tears,
 A brighter scene beyond that vale appears,
 Whose glory, with a *light* that never fades,
 Shoots between scattered rocks and opening shades,
 And, while it shows the land the soul desires,
 The language of the land she seeks inspires.

Cowper.

With silver darts he pierced the kindling frame,
 And lit with torch divine the ever-living flame.

Darwin.

We sped like meteors through the sky,
 When with its crackling sound the night
 Is chequered with the northern light. *Byron.*
 Theirs be the dreadful glory to destroy,
 And theirs the pride of pomp, and praise suborned,
 Whose eye ne'er *lightened* at the smile of Joy,
 Whose cheek the tear of Pity ne'er adorned. *Id.*

LIGHT. The *nature* of light is a subject in many respects extremely interesting; especially as it tends to assist our views both of the nature of our sensations, and of the constitution of the universe at large. The examination of the production of colors, in a variety of circumstances, is intimately connected with the theory of their essential properties, and their causes; and we shall find that many of these phenomena will afford us considerable assistance in forming our opinion respecting the nature and origin of light in general.

It is allowed, on all sides, that light either consists in the emission of very minute particles from luminous substances, which are actually projected, and continue to move with the velocity commonly attributed to light; or in the excitation of an undulatory motion, analogous to that which constitutes sound, in a highly light and elastic medium pervading the universe; but the judgments of philosophers of all ages have been much divided with respect to the preference of one or the other of these opinions. There are also some circumstances which induce those who entertain the first hypothesis, either to believe, with Newton, that the emanation of the particles of light is always attended by the undulations of an ethereal medium, accompanying it in its passage; or to suppose, with Boscovich, that the minute particles of light themselves receive, at the time of their emission, certain rotatory and vibratory motions, which they retain as long as their projectile motion continues. These additional suppositions, however necessary they may have been thought for explaining some particular phenomena, have never been very generally understood or admitted, although no attempt has been made to accommodate the theory in any other manner to those phenomena.

We shall proceed to examine in detail the manner in which the two principal hypotheses respecting light may be applied to its various properties and affections; and in the first place to the simple propagation of light in right lines

through a vacuum, or a very rare homogeneous medium. In this circumstance there is nothing inconsistent with either hypothesis; but it undergoes some modifications, which require to be noticed, when a portion of light is admitted through an aperture, and spreads itself in a slight degree in every direction. In this case it is maintained by Newton that the margin of the aperture possesses an attractive force, which is incapable of inflecting the rays: but there is some improbability in supposing that bodies of different forms and of various refractive powers should possess an equal force of inflection, as they appear to do in the production of these effects; and there is reason to conclude from experiments, that such a force, if it existed, must extend to a very considerable distance from the surfaces concerned, at least a quarter of an inch, and perhaps much more, which is a condition not easily reconciled with other phenomena. In the Huygenian System of undulation, this divergence or diffraction is illustrated by a comparison with the motions of waves of water, and of sound, both of which diverge when they are admitted into a wide space through an aperture, so much indeed that it has usually been considered as an objection to this opinion, that the rays of light do not diverge in the degree that would be expected if they were analogous to the waves of the water. But as it has been remarked by Newton, that the pulses of sound diverge less than the waves of water, so it may fairly be inferred, that, in a still more highly elastic medium, the undulations, constituting light, must diverge much less considerably than either.

With respect, however, to the transmission of light through perfectly transparent mediums of considerable density, the system of emanation labors under some difficulties. It is not to be supposed that the particles of light can perforate with freedom the ultimate atoms of matter, which compose a substance of any kind; they must, therefore, be admitted in all directions through the pores or interstices of those atoms; for if we allow such suppositions as Boscovich's, that matter itself is penetrable, that is, immaterial, it is almost useless to argue the question further. It is certain that some substances retain all their properties when they are reduced to the thickness of $\frac{1}{1000000}$ th of an inch at most, and we cannot therefore suppose the distances of the atoms of matter in general to be so great as $\frac{1}{100000000}$ th of an inch. Now if ten feet of the most transparent water transmits, without interruption, one-half of the light that enters it, each section or stratum of the thickness of one of these pores of matter must intercept only about $\frac{1}{100000000}$ th, and so much must the space or area occupied by the particles be smaller than the interstices between them, and the diameter of each atom must be less than $\frac{1}{1000000}$ th part of its distance from the neighbouring particles, so that the whole space occupied by the substance must be as little filled as the whole of England would be filled by 100 men, placed at the distance of about thirty miles from each other. This astonishing degree of porosity is not indeed absolutely inadmissible and there are many reasons for believing the statement to agree in some measure with the ac

tual constitution of material substances; but the Huygenian hypothesis does not require the disproportion to be by any means so great, since the general direction and even the intensity of an undulation would be very little affected by the interposition of the atoms of matter, while these atoms may at the same time be supposed to assist in the transmission of the impulse, by propagating it through their own substance. Euler, indeed, imagined that the undulations of light might be transmitted through the gross substance of material bodies alone, precisely in the same manner as sound is propagated; but this supposition is for many reasons inadmissible.

A very striking circumstance, respecting the propagation of light, is the uniformity of its velocity in the same medium. According to the projectile hypothesis, the force employed in the free emission of light must be about a million million times as great as the force of gravity at the earth's surface; and it must either act with equal intensity on all the particles of light, or must impel some of them through a greater space than others, if its action be less powerful, since the velocity is the same in all cases; for example, if the projectile force is weaker with respect to red light than with respect to violet light, it must continue its action on the red rays to a greater distance than on the violet rays. There is no instance in nature besides of a simple projectile moving with a velocity uniform in all cases, whatever may be its cause, and it is extremely difficult to imagine that so immense a force of repulsion can reside in all substances capable of becoming luminous, so that the light of decaying wood, or of two pebbles rubbed together, may be projected precisely with the same velocity as the light emitted by iron burning in oxygen gas, or by the reservoir of liquid fire on the surface of the sun. Another cause would also naturally interfere with the uniformity of the velocity of light, if it consisted merely in the motion of projected corpuscles of matter; M. Laplace has calculated that, if any of the stars were 250 times as great in diameter as the sun, its attraction would be so strong as to destroy the whole momentum of the corpuscles of light proceeding from it, and to render the star invisible at a great distance, and, although there is no reason to imagine that any of the stars are actually of this magnitude, yet some of them are probably many times greater than our sun, and therefore large enough to produce such a retardation in the motion of their light as would materially alter its effects. It is almost unnecessary to observe that the uniformity of the velocity of light, in those spaces which are free from all material substances, is a necessary consequence of the Huygenian hypothesis, since the undulations of every homogeneous elastic medium are always propagated, like those of sound, with the same velocity, as long as the medium remains unaltered.

To determine whether light consists of particles emitted from the luminous body, or only in the vibrations of a subtile fluid, it has been attempted to find out its momentum, or the force with which it moves. The first who set about this with any tolerable pretensions to ac-

curacy was M. Mairan Hartsocker and Homberg had indeed pretended, that in certain cases this momentum was very perceptible; but M. Mairan proved, that the effects mentioned by them were owing to currents of heated air produced by the burning-glasses used in their experiments, or to some other causes overlooked by these philosophers. To decide the matter, therefore, he began with trying the effects of rays collected by lenses of four and six inches diameter, and thrown upon the needle of a compass; but the result was nothing more than some tremulous motion, whence he could draw no conclusion. After this he and M. Du Fay constructed a kind of mill of copper, which moved with an exceeding slight impulse; but, though they threw upon it the focus of a lens of seven or eight inches diameter, they were still unable to draw any conclusions from the result. M. Mairan afterwards procured a horizontal wheel of iron three inches in diameter, having six radii, at the extremity of each of which was a small wing fixed obliquely. The axis of the wheel, which was also of iron, was suspended by a magnet. The wheel and the axis together did not weigh more than thirty grains; but, though a motion was given to this wheel when the focus of the burning-glass was thrown upon the extremities of the radii, yet it was so irregular, that he could not but conclude that it was occasioned by the motion of the heated air. He then intended to have made his experiment in vacuo, but he concluded that it was unnecessary: for, besides the difficulty of making a vacuum, he was persuaded that there was in our atmosphere a thinner medium which freely penetrates even glass itself, the existence of which he imagined that he had fully proved in his treatise on the aurora borealis.

Mr. Mitchell some years ago endeavoured to ascertain the momentum of light in a manner still more accurate. The instrument he made use of consisted of a very thin plate of copper, a little more than an inch square, which was fastened to one end of a slender harpsichord wire about ten inches long. To the middle of this was fixed an agate cap, such as is commonly used for small mariner's compasses, after the manner of which it was intended to turn; and at the other end of the wire was a middling sized shot corn, as a counterpoise to the copperplate. The instrument had also fixed to it in the middle, at right angles to the length of the wire, and in a horizontal direction, a small bit of a very slender sewing needle, about one-third or perhaps half an inch long, which was made magetical. In this state the whole instrument weighed about ten grains. It was placed on a very sharp-pointed needle, on which the agate cap turned extremely freely; and to prevent its being disturbed by any motion of the air, it was enclosed in a box, the lid and front of which were of glass. This box was about twelve inches long, six or seven inches deep, and about as much in width; the needle standing upright in the middle. At the time of making the experiment, the box was so placed, that a line drawn from the sun passed at right angles to the length of it; and the instrument was brought to

range in the same direction with the box, by means of the magnetical bit of needle above mentioned, and a magnet properly placed on the outside, which would retain it, though with extremely little force, in any situation. The rays of the sun were now thrown upon the copper-plate from a concave mirror of about two feet diameter, which, passing through the front glass of the box, were collected into the focus of the mirror upon the plate. In consequence of this the plate began to move with a slow motion of about an inch in a second of time, till it had moved through a space of about two inches and a half when it struck against the back of the box. The mirror being removed, the instrument returned to its former situation by means of the little needle and magnet; and, the rays of the sun being then again thrown upon it, it again began to move, and struck against the back of the box as before; and this was repeated three or four times with the same success. The instrument was then placed the contrary way in the box to that in which it had been placed before, so that the end to which the copper-plate was affixed, and which had lain, in the former experiment, towards the right hand, now lay towards the left; and, the rays of the sun being again thrown upon it, it began to move with a slow motion, and struck against the back of the box as before; and this was repeated once or twice with the same success. But by this time the copper-plate was so much altered in its form, by the extreme heat which it underwent in each experiment, and which brought it nearly into a state of fusion, that it became very much bent, and the more so as it had been unwarily supported by the middle, half of it lying above and half below the wire to which it was fastened. By these means it now varied so much from the vertical position, that it began to act in the same manner as the sail of a windmill, being impelled by the stream of heated air which moved upwards, with a force sufficient to drive it in opposition to the impulse of the rays of light. If we impute, says Dr. Priestley, the motion produced in the above experiment to the impulse of the rays of light, and suppose that the instrument weighed ten grains, and acquired a velocity of one inch in a second, we shall find that the quantity of matter contained in the rays falling upon the instrument in that time amounted to no more than one 1200 millionth part of a grain, the velocity of light exceeding the velocity of one inch in a second in the proportion of about 1,200,000,000 to 1. The light was collected from a surface of about three square feet, which reflecting only about half what falls upon it, the quantity of matter contained in the rays of the sun incident upon a square foot and a half of surface in one second of time, ought to be no more than the 1200 millionth part of a grain, or upon one square foot only the 1800 millionth part of a grain. But the density of the rays of light at the surface of the sun is greater than at the earth in the proportion of 45,000 to 1; there ought, therefore, to issue from one square foot of the sun's surface in one second of time, in order to supply the waste by light, one 40,000th part of a grain of matter; that is, a little more than

two grains in a day, or about 4,752,000 grains or 670 pounds avoirdupois nearly in 6000 years a quantity which would have shortened the sun's semi-diameter no more than about ten feet, if it was formed of the density of water only.

Mr. Partington observes, 'that experience has long ago established the fact, that vegetables become destitute of smell and color, and lose much of their combustibility, by growing in the dark. In Dr. Black's Lectures we find an illustration of this circumstance, in an account given by the celebrated Dr. Robinson of Edinburgh. In the drain of a coal-work under ground, he accidentally laid his hand upon a very luxuriant plant, with large indented foliage, and perfectly white. He had not seen any thing like it, nor could any one inform him what it was. He had the plant brought into the open air in the light. In a little time the leaves withered, and soon after new leaves began to spring up, of a green color, and of a different shape from that of the old ones. On rubbing one of the leaves between his fingers he found that it had the smell of common tansy, and ultimately it proved to be that plant, which had been so changed by growing in the dark. Indeed, it was recollected that some soil had been taken into the drain from a neighbouring garden, some time before it was found so altered.

'This effect of light is not less conspicuous in the growth of celery. By covering it with earth, the light is shut out, which would very soon turn it green, and make its flavor so strong as to render it unfit to be eaten, at the same time that it would render it more fibrous and tenacious.

'The parts of fish, also, which are exposed to the light, such as the back or fins, are uniformly colored; but the belly, which is deprived of it, is white in nearly all of them; while birds that inhabit tropical countries have much brighter plumage than those of the north; and this is also the case with every species of insect.'—*Manual of Natural and Experimental Philosophy, by C. F. Partington, vol. II. p. 5.*

If the white sunbeam, admitted through a small hole of a window-shutter into a darkened room, be made to pass through a triangular prism of glass, it will be divided into a number of splendid colors, which may be thrown upon a sheet of paper. Newton ascertained, that if this colored image, or spectrum as it is called, be divided into 360 parts, the red will occupy forty five, the orange twenty-seven, the yellow forty-eight, the green sixty, the blue sixty, the indigo forty, and the violet eighty. The red rays, being least bent by the prism from the direction of the white beam, are said to be least refracted, or the least refrangible; while the violet rays, being always at the other extremity of the spectrum, are called the most refrangible. According to Dr. Wollaston, when the beam of light is only $\frac{1}{20}$ of an inch broad, and received by the eye at the distance of ten feet through a clear prism of flint glass, only four colors appear, red, yellowish-green, blue, and violet.

If the differently colored rays of light, thus separated by the prism, be concentrated on one spot by a lens, they will reproduce colorless light. Newton ascribes the different colors of

bodies, to their power of absorbing all the primitive colors except the peculiar one which they reflect, and of which color they therefore appear to our eye.

According to Sir William Herschel, the different colored rays possess very different powers of illumination. The lightest green, or deepest yellow, which are near the centre, throw more light on a printed page than any of the rays towards either side of the spectrum. Sir H. Davy remarks, that, as there are more green rays in a given part of the spectrum than blue rays, the difference of illuminating power may depend on this circumstance. The rays separated by one prism are not capable of being further divided by being passed through another; and in their relations to double refraction and reflection they appear to agree with direct light. An object illuminated by any of the rays in the spectrum is seen double through island crystal, in the same manner as if it had been visible by white light.

If the white luna cornea, the muriate of silver moistened, be exposed to the different rays in the prismatic spectrum, it will be found that no effect is produced upon it in the least refrangible rays, which occasion heat without light; that only a slight discoloration will be occasioned by the red rays; that the blackening power will be greater in the violet than in any other ray; and that beyond the violet, in a space perfectly obscure to our eyes, the darkening effect will be manifest on the muriate. This fine observation, due to M. Ritter and Dr. Wollaston, proves that there are rays more refrangible than the rays producing light and heat. As it appears, from the observations of M. Berthollet, that muriatic acid gas is formed when horn-silver is blackened by light, the above rays may be called hydrogenating. Sir H. Davy found that a mixture of chlorine and hydrogen acted more rapidly upon each other, combining without explosion, when exposed to the red rays, than when placed in the violet rays; but that solution of chlorine in water became solution of muriatic acid most rapidly, when placed in the most refrangible rays in the spectrum. He also observed, that the puce-colored oxide of lead, when moistened, gradually gained a tint of red in the least refrangible rays, and at last became black, but was not affected in the most refrangible rays. The same change was produced by exposing it to a current of hydrogen gas. The oxide of mercury from calomel and water of potassa, when exposed to the spectrum, was not changed in the most refrangible rays, but became red in the least refrangible, which must have been owing to the absorption of oxygen. The violet rays produced, upon moistened red oxide of mercury, the same effect as hydrogen gas.

Dr. Wollaston found that guaiac, exposed to the violet rays, passed rapidly from yellow to green; and M. M. Gay Lussac and Thenard applied to the same influence a gaseous mixture of hydrogen and chlorine, when explosion immediately took place. By placing small bits of card, coated with moist horn-silver, or little joints of those mixed gases, in the different parts of the spectrum, M. Berard verified the former observations of the chemical power

acquiring a maximum in the violet ray, and existing even beyond it; but he also found, that, by leaving the tests a sufficient time in the indigo and blue rays, a perceptible effect was produced upon them. He concentrated by a lens all that portion of the spectrum which extends from the green to the extreme boundary of the violet; and by another lens he collected the other half of the spectrum, comprehending the red. The latter formed the focus of a white light, so brilliant that the eye could not endure it; yet in two hours it produced no sensible change on muriate of silver. On the contrary, the focus of the other half of the spectrum, whose light and heat were far less intense, blackened the muriate in ten minutes. The investigations of Delaroché enable us, in some measure, to reduce these dissimilar effects of light to a common principle.

In Mr. Brande's Bakerian lecture, on the composition and analysis of coal and oil gases, this ingenious chemist shows, that the light produced by these, or by olefiant gas, even when concentrated so as to produce a sensible degree of heat, occasioned no change on the color of muriate of silver, nor on a mixture of chlorine and hydrogen; while the light emitted by electrified charcoal speedily affects the muriate, causes these gases to unite rapidly, and sometimes with explosion. The concentrated light of the moon, like that of the gases, produced no change. He concludes with stating, that he found the photometer of Mr. Leslie ineffectual. He employed one filled with the vapor of ether (renewable from a column of that fluid), which he found to be more delicate.

The general facts, says Sir H. Davy, of the refraction and effects of the solar beam, offer an analogy to the agencies of electricity. In the voltaic circuit, the maximum of heat seems to be at the positive pole, where the power of combining with oxygen is given to bodies, and the agency of rendering bodies inflammable is exerted at the opposite surface; and similar chemical effects are produced by negative electricity, and by the most refrangible rays of the solar beam. In general, in nature, the effects of the solar rays are very compounded. Healthy vegetation depends upon the presence of the solar beams, or of light; and, whilst the heat gives fluidity and mobility to the vegetable juices, chemical effects likewise are occasioned, oxygen is separated from them, and inflammable compounds formed. Plants deprived of light become white, and contain an excess of saccharine and aqueous particles; and flowers owe the variety of their hues to the influence of the solar beams. Even animals require the presence of the rays of the sun, and their colors seem materially to depend upon the chemical influence of these rays; a comparison between the polar and tropical animals, and between the parts of their bodies exposed and those not exposed to light, shows the correctness of this opinion.

If air which has been heated up to 900° of Fahrenheit, and which is in itself obscure, be made to fall on pieces of metal, earth, &c., it will speedily communicate to them the power of radiating light. The brilliant flame, exhibited in the burning of charcoal and phosphorus, re-

sults from the ignition of the solid particles of these bodies. At a certain elevation of temperature, about 800° Fahrenheit, all solid bodies begin to give out light. The same effect is produced in vacuo by transmitting voltaic electricity through a metallic wire.

The most complete account which we have of mineral phosphorescence is that recently given

by Dr. Brewster, in the first volume of the Edinburgh Philosophical Journal. His method of examination was ingenious and accurate. He never reduced the body to powder, but placed a fragment of it upon a thick mass of hot iron, or, in delicate experiments, introduced it into the bottom of a pistol barrel, heated a little below redness. The following Table presents his results :

Names of the minerals.	Color of the minerals.	Color and intensity of the light.
Fluor spar,	Pink,	Green.
Compact fluor, Sandy fluor, Calcareous spar,	Purple, Bluish-white, Yellowish, White, Yellow, Transparent,	Bluish. Blue. Fine green. White sparks. Yellow.
Limestone from north of Ireland, Phosphate of lime, Aragonite, Carbonate of barytes, Harmotome, Dipyre, Grammatite from G'entilt, Cornwall,	Yellowish, White, Yellow, Transparent, Pink, Dirty white, Whitish, Colorless, White,	Yellowish. Yellowish-red. Yellow. Reddish-yellow. Pale white. Reddish-yellow. Specks of light. Yellow. Bluish.
Topaz, Aberdeenshire, —, Brazilian, —, New Holland, Rubellite, Sulphate of lime, — barytes, — strontites, — lead,	Blue, Yellow, White, Reddish, Yellowish, Yellow, Slate color, Bluish, Transparent.	Faint yellowish. Bluish. Scarlet. Faint light. Pale light.
Anhydrite, Sodalite, Bitter spar, Red silver ore, Barystrontianite, Arseniate of lead, Sphene, Tremolite, Mica, — from Waygatz,	Reddish, Dark green, Yellowish, Red, White, Yellowish, Yellow, Whitish, Greenish, Black, Brown, Black, Gray, Whitish, Blue, Greenish,	Faint and by fits. Faint light. Pretty bright. Faint white. Pretty bright, but fitting Faint. Bright white.
Titanium sand, Hornstone, Table spar, Dognatska, Lapis lazuli, Spodumene, Titanite, Cyanite, Calamine, Augite, Petalite, Asbestos, rigid, Datholite, Corundum, Anatase, Tungstate of lime, Quartz, Amethyst, Obsidian, Mesotype from Auvergne, Glassy actinolite, Rnuy silver, Muriate of silver, Carbonate of copper, Green telesie,	Yellow, Whitish, Greenish, Black, Brown, Black, Gray, Whitish, Blue, Greenish, Reddish, Yellowish-white, Brown, Green, Reddish tinge, Transparent, Brown, Dark, Yellowish-white,	A fragment shone pretty bright. Faint light. Pretty bright. Faint white. Pretty bright, but fitting Faint. Bright white. Reddish-yellow. Whitish. White specks. Pretty bright. Feeble specks. Yellowish.
	The phosphorescence of these nine minerals was observed in the pistol barrel.	Faint. Extremely faint. Bluish. Faint. Pretty bright. Blue and very bright. Pretty bright. Bright. Reddish yellow. Britt, like a burning coal. Very faint. Faint. Pretty bright, dirty blue. Very faint. Little specks. Rather bright. Blue. Very faint. Pale blue, and pretty bright

The phosphorescence of anatase is entirely different from that of the other minerals. It appears suddenly like a flame, and is soon over. Dr. Brewster found, in opposition to what Mr. Vedgewood had stated, that exposure of green fluor spar to the heat of a common fire in a crucible, for half an hour, entirely deprived it of phosphorescence. Though he placed one fragment for several days in the beams of a summer sun, and even exposed it to the bright light near the focus of a burning glass, he could not succeed in obtaining from it the slightest indication of phosphorescence. The light emitted in combustion belongs to the same head. The phosphoric light of minerals has the same properties as the direct light of the sun, according to Dr. Brewster.

Of light emitted from bodies in consequence of the action of extraneous light.—To this section we refer solar phosphori. The most powerful of these is the artificial compound of Canton. If we mix three parts of calcined oyster shells in powder, with one of flowers of sulphur, and, ramming the mixture into a crucible, ignite it for half an hour, we shall find, that the bright parts will, on exposure to the sunbeam, or to the common day-light, or to an electrical explosion, acquire the faculty of shining in the dark, so as to illuminate the dial of a watch, and make its figures legible. It will, indeed, after a while cease to shine; but, if we keep the powder in a well corked phial, a new exposure to the sunbeam will restore the luminescence. Oyster shells, stratified with sulphur, in a crucible, and ignited, yield a more powerful phosphorescent substance than the powder. It also must be kept in a close phial. When the electric discharge is transmitted along the surfaces of certain bodies, or a little above them, a somewhat durable phosphorescence is occasioned, which probably belongs to this division.

Sulphate of barytes gives a bright green light.	
Carbonate,	Do. less brilliant.
Acetate of potassa,	Brilliant green light.
Succinic acid,	Do. more durable.
Loaf sugar,	Do.
Selenite,	Do. but transient.
Rock-crystal gives a light red, and then white.	
Quartz,	Dull white light.
Borax,	Faint green light.
Boracic acid,	Bright green light.

Mr. Skrimshire has given an extensive catalogue of such substances in Nicholson's Journal 8vo., vols. xv. xvi. and xix. He shows that Canton's pyrophorus yields more light by this treatment than any other body; but that almost every native mineral, except metallic ores and metals, becomes more or less luminous after the electric explosion. A slate from Colly Weston, Northamptonshire, which effervesced with acids, gives a beautiful effect. When the explosion of a jar is taken above the centre of a piece some inches square, not only the part above the discharging rods is luminous, but the surface of the slate appears bespangled with very minute brilliant points, to some distance from its centre; and, when the points of the dischargers rest upon the surface of the slate, these minute spangles

are detached and scattered about the table in a luminous state.

Of light emitted during chemical changes, independent of heat, or in which no perceptible heat is developed. The substances from which such light is emitted are principally the following:— Marine animals, both in a living state, and when deprived of life. As instances of the first may be mentioned the shell-fish called pholas, the medusa phosphorea, and various other molluscæ. When deprived of life, marine fishes, in general, seem to abound with this kind of light. The flesh of quadrupeds also evolves light. In the class of insects are many which emit light very copiously, particularly several species of fulgora, or lantern-fly; and of lampyris or glow-worm; also the scolopendra electrica, and a species of crab called cancer fulgens. Rotten wood is well known to evolve light copiously, as well as peat earth.

Dr. Hulme, in an elaborate dissertation on this light, published in the Philosophical Transactions for 1790, establishes the following important propositions:—

1. The quantity of light emitted by dead animal substances is not in proportion to the degree of putrefaction in them, as is commonly supposed; but, on the contrary, the greater putrescence, the less light is evolved. It would seem that this element, endowed with pre-eminent elasticity, is the first to escape from the condensed state of combination in which it had been imprisoned by the powers of life; and is followed, after some time, by the relatively less elastic gases, whose evolution constitutes putrefaction.

2. This light is a constituent chemical principle of some bodies, particularly of marine fishes, from which it may be separated by a peculiar process, retained and rendered permanent for some time. A solution of one part of sulphate of magnesia in eight of water is the most convenient menstruum for extracting, retaining, and increasing the brilliancy of this light. Sulphate and muriate of soda, also, answer in a proper state of dilution with water. When any of the saline solutions is too concentrated, the light disappears, but instantly bursts forth again from absolute darkness, by dilution with water. This curious experiment has frequently been made with the light procured from whitening. Common water, lime water, fermented liquors, acids even very dilute, alkaline lies, and many other bodies, permanently extinguish this spontaneous light. Boiling water destroys it, but congelation merely suspends its exhibition; for it reappears on liquefaction. A gentle heat increases the vividness of the phenomenon, but lessens its duration. *Vide Dr. Ure's Chemical Dictionary.*

The *inflection* of light is distinct from the peculiar properties of refraction and reflection, both of which will be fully examined under our article on OPTICS. Inflection was first discovered by Grimaldi, who made many curious experiments and observations relative to it; but the following experiments of Sir Isaac Newton will be better adapted than Grimaldi's to explain the nature of this property of light. At the distance of two or three feet from the window of a darkened

room, in which there was a hole three-fourths of an inch broad, to admit the light, he placed a black sheet of pasteboard, having in the middle a hole about a quarter of an inch square, and behind the hole the blade of a sharp knife, to intercept a small part of the light which would otherwise have passed through the hole. The planes of the pasteboard and blade were parallel to each other, and, when the pasteboard was removed to such a distance from the window that all the light coming into the room must pass through this hole in the pasteboard, he received what came through the hole on a piece of paper, two or three feet beyond the knife, and perceived two streams of faint light shooting out both ways, from the beam of light into the shadow. As the brightness of the direct rays obscured the fainter light, by making a hole in his paper he let them pass through, and had thus an opportunity of attending closely to the two streams, which were nearly equal in length, breadth, and quantity of light. That part which was nearest to the sun's direct light was pretty strong for the space of about a quarter of an inch, decreasing gradually until it became imperceptible; and at the edge of the knife it subtended an angle of about 12° or at most of 14° . Another knife was then placed opposite to the former, and he observed that, when the distance of their edges was about the $\frac{1}{10}$ th part of an inch, the stream divided in the middle, and left a shadow between the two parts, which was so dark that all the light passing between the knives seemed to be bent to each other; this shadow grew broader, till upon the contact of the knives the whole light disappeared. He observed, also, fringes of different colored light, three made on one side by the edge of one knife, and three on the other side by the edge of the other. Grimaldi, Dr. Hooke, and all the philosophers who made experiments on inflection before the time of Newton, ascribed the broad shadows, and even the fringes which he mentions, to the ordinary refraction of the air; but the investigation upon which he entered, to discover their cause, afforded him satisfactory evidence to conclude that bodies have the power of acting upon light at a distance.

We must now briefly notice the experiments of Mr. Brougham on this interesting subject: they are detailed in the Transactions of the Royal Society for 1796. He commenced by admitting a beam from the sun into a darkened room, through a hole in a metal plate (fixed in the window shutter) of $\frac{1}{10}$ th of an inch in diameter; and, all other light being absorbed by black cloth hung before the window in the room, at the hole he placed a prism of glass, whose refracting angle was 45° , and which was covered all over with black paper, except a small part on each side, which was free from impurities, and through which the light was refracted, so as to form a distinct and homogeneous spectrum on a sheet of paper at six feet from the window. In the rays, at two feet from the prism, he placed a black unpolished pin, one-tenth of an inch in diameter, parallel to the paper, in a vertical position; its shadow was formed in the spectrum on the paper, and had a considerable penumbra, especially in the brightest red. It varied very

materially in its width; in the violet it was broadest and most distinct; in the red it was narrowest and most confused; and in the intermediate colors it was of an intermediate degree of distinctness. It was not bounded by straight, but by curvilinear sides, which were concave outwardly. This figure of the shadow was not owing to any irregularity in the pin, for the same thing happened with all sorts of bodies that were used; and also if the prism was caused to revolve on its axis, so that the colors might ascend and descend on these bodies, still, wherever the red fell, it made the least, and the violet the greatest shadow. In the next place he fixed a screen, having in it a large hole, on which was a brass plate, pierced with a small hole of $\frac{1}{10}$ of an inch in diameter; then, causing an assistant to move the prism slowly on its axis, he observed the round image made by the different rays passing through the hole to the paper; that made by the red was greatest; by the violet least; and by the intermediate rays of an intermediate size. When he employed the sharp blade of a knife, so as to produce the fringes mentioned by Grimaldi and Newton, those fringes in the red were broadest, and most moved inwards to the shadow, and most dilated when the knife was moved over the hole; and the hole itself on the paper was more dilated, during the motion, when illuminated by the red, than when illuminated by any of the other rays, and least of all when illuminated by the violet. From these, and a great variety of other experiments, well devised, and often repeated with the greatest care, he infers, that the rays of light are separable into their primitive colors, by inflection, deflection, and reflection, as well as by refraction; that these properties of the rays are inversely as their refrangibilities; that is, those which deviate the least by refraction, deviate the most by flection, and are reflected the farthest from the perpendicular; and that these different phenomena are all produced by the differences in the magnitude of the particles. He calculates that the size of the red particles are to those of the violet as 1275 to 1253. This he extends to all the other colors by similar calculations, their sizes lying between 1275 and 1253; which are the extreme red and extreme violet; the red therefore, according to this hypothesis, is from 1275 to $1272\frac{1}{2}$; the orange from $1272\frac{1}{2}$ to 1270; the yellow from 1270 to 1267; the green from 1267 to 1264; the blue from 1264 to 1260; the indigo from 1260 to 1258; and the violet from 1258 to 1253.

Dr. Thomson, after enumerating the general properties of light, concludes thus: 'such are the properties of light as far as they have been examined. They are sufficient to convince us that it is a body, and possesses many qualities in common with other bodies. It is attracted by them, and combines with them, precisely as other bodies do. But it is distinguished from all other substances, by possessing three peculiar properties of which they are destitute. The first is the power which it has of exciting in us the sensation of vision, by moving from the object seen and entering the eye. The phenomena of colors, and the prismatic spectrum, indicate the existence of

seven different species of light; but to what the difference of these species is owing has not been ascertained. We are altogether ignorant of the component parts of every one of these species. The second peculiar property of light is the prodigious velocity with which it moves, whenever it is separated from any body with which it was formerly combined. This velocity it acquires in a moment, and in all cases, whatever the body be from which it separates. The third and not the least singular of its peculiar properties, is, that its particles are never found cohering together so as to form masses of any sensible magnitude. This difference between light and other bodies can only be accounted for by supposing that its particles repel each other. This seems to constitute the grand distinction between light and other bodies. Its particles repel each other, while the particles of other bodies attract each other; and, accordingly, are found cohering together, in masses of more or less magnitude.

We cannot better conclude this paper than with the following important and practical problem: Count Rumford has shown that the quantity of light emitted by a given portion of inflammable matter, in combustion, is proportional in some high ratio to the elevation of temperature; and that a lamp having many wicks very near each other, so as mutually to increase their heat, burns with infinitely more brilliancy than the Argand lamps in common use.

To measure the proportional intensities of two or more lights: Place them a few inches asunder, and at the distance of a few feet or yards from a screen of white paper, on a white wall. On holding a small card near the wall, two shadows will be projected on it, the darker one by the interception of the brighter light, and the lighter shadow by the interception of the duller light. Bring the fainter light nearer to the card, or remove the brighter one further from it, till both shadows acquire the same intensity; which the eye can judge of with great precision, particularly from the conterminous shadows at the angles. Measure now the distances of the two lights from the wall or screen, square them, and you have the ratio of illumination. Thus if an Argand flame, and a candle, stand at the distance of ten feet, and four feet, respectively, when their shadows are equally deep, we have 10^2 and 4^2 , or 100 and 16, or $6\frac{1}{4}$ and 1, for their relative quantities of light.

LIGHTEN, *v. a.* } Sax. *lyg*, *lyge*. From the
LIGHTNING, *n. s.* } verb to LIGHTEN, above.
To flash with the electric fire of the clouds; to shine like lightning: lightning, the flame, or fire, which proceeds from the clouds; the flash preceding thunder.

He directeth it under the whole heavens, and his lightning unto the ends of the earth. *Job*. xxxvii. 3.

The lightning that lighteneth out of the one part under heaven, shineth unto the other part.

Luke xvii. 24.

Yet looks he like a king; behold his eye,
As bright as is the eagle's, lightens forth
Controlling majesty. *Shakspeare*.

This dreadful night,
That thunders, lightens, opens graves, and roars,
As doth the lion. *Id.*

Although I joy in thee,
I have no joy of this contract to-night;
It is too rash, too unadvised, too sudden,
Too like the lightning, which doth cease to be
Ere one can say it lightens.

Id. *Romeo and Juliet*.

Sense thinks the lightning born before the thunder;
What tells us then they both together are? *Davies*.

Misery assails riches, as lightning does the highest towers. *Burton*.

Salmonius, suffering cruel pains, I found,
For emulating Jove; the rattling sound
Of mimic thunder, and the glittering blaze
Of pointed lightnings and their forky rays.

Dryden.

No warning of the approach of flame,
Swiftly, like sudden death, it came;
Like travellers by lightning killed,
It burst the moment I beheld.

Granville.

Through sparkling spray, in thundering clash,
The lightnings of the waters flash
In awful whiteness o'er the shore,
That shines and shakes beneath the roar. *Byron*.

LIGHTER, *n. s.* From light, lightening, to make less heavy. A boat into which ships are lightened or unloaded.

They have cock-boats for passengers, and lighter's for burthen. *Carew*.

He climbed a stranded lighter's height,
Shot to the black abyss, and plunged downright.

Pope.

LIGHTERMAN, *n. s.* Lighter and man. One who manages a lighter.

Where much shipping is employed, whatever be comes of the merchant, multitudes of people will be gainers; as shipwrights, butchers, carmen, and lighter-men. *Child*.

LIGHTFOOT (John), D. D., a learned English divine, born in 1602, at Stoke upon Trent in Staffordshire. Having finished his studies at Morton-green, Cheshire, he went in 1617 to Cambridge. Here he made an extraordinary proficiency in the Latin and Greek; but neglected the Hebrew. His taste for the oriental languages was not yet excited. As soon as he had taken the degree of B. A. he left the university, and became assistant to a school at Repton in Derbyshire. About two years after he entered into orders, and became curate of Norton under Hales in Shropshire, near Bellaport, the seat of Sir Rowland Cotton; who, being his constant hearer, made him his chaplain, and took him into his house. This gentleman, being a perfect master of the Hebrew language, engaged Lightfoot in that study; who soon applied himself to it, and made great progress. In 1628 he was offered the living of Stone in Staffordshire, which he accepted, and having, when at Bellaport, formed an acquaintance with the daughter of William Crompton, esq., of Stonepark, he now married her. But his unquenchable thirst after rabbinical learning would not suffer him to continue long in this place. Sion College library, he knew was well stocked with books of that kind. He therefore quitted his charge at Stone, and removed with his family to Hornsey, near London, where he gave the public a specimen of his advancement in those studies, by his *Eurubhim*, or *Miscellanies Christian and Judaical*, 1629. He was then only twenty-seven years

of age; and appears to have been well acquainted with the Latin and the Greek fathers, as well as with the classics. These first fruits of his studies were dedicated to Sir Rowland Cotton; who, in 1631, presented him to the rectory of Ashley in Staffordshire, where he applied himself with indefatigable diligence to the study of the Scriptures. In 1642 he was nominated a member of the memorable assembly of divines at Westminster for settling a new form of ecclesiastical polity. This induced him to resign his rectory, and, having obtained the presentation for a younger brother, he set out for London in 1642. He had provided the chief materials, as well as formed the plan of his Harmony; and he now embraced the opportunity of putting it to the press in London, where he had not long been before he was chosen minister of St. Bartholomew's. In the assembly of divines which met in 1643, Mr. Lightfoot became distinguished for his eloquence in debate, and activity in business. His learning recommended him to the parliament, whose visitors, having ejected Dr. William Spurstow from the mastership of Catherine Hall, in Cambridge, substituted Lightfoot in his place in 1653; and he was also presented to the living of Much-Munden, in Hertfordshire, upon the death of Dr. Samuel Ward. Meanwhile he often preached before the house of commons, warmly pressing the speedy settlement of the church in the Presbyterian form, as most agreeable to Scripture. He was during this time employed in publishing the several branches of his Harmony; but he met with great discouragements in that work, chiefly from that anti-erudition spirit which prevailed, and threatened even the destruction of the universities. In 1655 he entered upon the office of vice-chancellor of Cambridge, to which he was chosen that year, having taken the degree of D. D. in 1652, with great applause. He executed the office of vice-chancellor with exemplary diligence, and, at the commencement, supplied the place of professor of divinity, then undisposed of. At the same time he was engaged with others in perfecting the Polyglot Bible, then in the press. At the Restoration he offered to resign the mastership of Catherine Hall; but, as he had acted from no spirit of opposition to the king and government, a confirmation was granted him from the crown, both of the place and of his living. Soon after this he was appointed one of the assistants at the conference upon the liturgy, held in 1661, but attended only once or twice. He died December 6th, 1675, and was buried in Munden church. Dr. Lightfoot's works were collected and published first in 1684, in two volumes folio. The second edition was printed in Amsterdam, 1686, in two volumes folio, containing all his Latin writings, with a Latin translation of those which he wrote in English. At the end of both these editions there is a list of such pieces as he left unfinished. There was also published a third edition of his works, by John Leusden, in Utrecht, in 1699, folio. Mr. Strype, in 1700, published another collection of these papers, under the title of *Some genuine remains of the late pious and learned Dr. John Lightfoot.*

A LIGHT-HOUSE is generally erected upon a cape or promontory on the sea-coast, or upon some rock in the sea, and has on its top in the night-time a great fire, or light formed by candles, which is constantly attended by some careful person, so as to be seen at a great distance from the land. It is used to direct the shipping on the coast, that might otherwise run ashore, or steer an improper course when the darkness of the night and the uncertainty of currents, &c., might render their situation with regard to the shore extremely doubtful. Lamp lights are, on many accounts, preferable to coal fires or candles; and the effect of these may be increased by placing them either behind glass hemispheres, or before properly disposed glass or metal reflectors; which last method is now generally adopted.

LIGHTNING is a bright and vivid flash of fire, suddenly appearing in the atmosphere, and commonly disappearing in an instant, sometimes attended with clouds and thunder, and sometimes not.

Lightning was looked upon as sacred both by the Greeks and Romans, and was supposed to be sent to execute vengeance on the earth. Hence persons killed by lightning, being thought hateful to the gods, were buried by themselves, lest the ashes of other men should be polluted by them. Some say they were suffered to rot where they fell because it was unlawful for any man to approach the place. For this reason the ground was hedged in lest any person should be polluted by it. All places struck by lightning were fenced round, from an opinion that Jupiter had either fixed upon them the mark of his displeasure, or that he had thus chosen them as sacred to himself. The ground thus fenced about was called by the Romans *bidental*. Lightning was much observed in augury, and was a good or bad omen, according to the circumstances attending it.

In a serenity, the lightning almost always has a kind of indistinct appearance without any determinate form, like the sudden illumination of the atmosphere occasioned by firing a quantity of loose gunpowder; but when accompanied with thunder it is well defined, and has very often a zig-zag form. Sometimes it makes an angle, like the letter V, sometimes it has several branches, and sometimes it appears like the arch of a circle. But the most formidable and destructive form which lightning is ever known to assume is that of balls of fire. The motion of these is very often easily perceptible to the eye; but, wherever they fall, much mischief is occasioned by their bursting, which they always do with a sudden explosion like that of fire arms. Sometimes they will quietly run along, or rest for a time upon any thing, and then break into several pieces, each of which will explode; or the whole ball will burst at once, and produce its terrible effects in one place only. The next to this in destructiveness is the zig-zag kind; for that which appears like indistinct flashes, whose form cannot be observed, is never known to do injury. The color of the lightning also indicates in some measure its power to do mischief; the palest and brightest flashes being most destructive; such as are red,

L I G H T N I N G.

or of a darker color, commonly doing less damage. Besides these kinds of lightning, it is not uncommon to see flashes unattended by any report. These are always of the sheet kind; they happen very frequently in windy weather, when the sky is clear, and likewise, when the sky is cloudy, immediately before a fall of rain or snow. The general reason of these appears to be, that the electric fluid is the medium by which vapors are suspended in the atmosphere; and, of consequence, every separation of vapor, whether as rain, snow, or hail, must be attended with a discharge of electrical matter. The reason why this kind of lightning is never attended with any report is, that there is no particular object against which the force of the flash is directed; but it dissipates itself among the innumerable conducting bodies with which the atmosphere always abounds. A flash of lightning, however limited its extent may appear, diffuses its effects over a great space of atmosphere; for, after one of these silent flashes, it is no uncommon thing to observe the sky become obscure, though it had been quite serene before; or, if it had been cloudy, to see rain or snow begin to fall in a very few minutes.

A very surprising property of lightning, the zig-zag kind especially, when near, is its seeming omnipresence. If two persons are standing in a room looking different ways, and a loud clap of thunder accompanied with zig-zag lightning happens, they will both distinctly see the flash, not only by that indistinct illumination of the atmosphere which is occasioned by fire of any kind; but the very form of the lightning itself, and every angle it makes in its course, will be as distinctly perceptible as if both had looked directly at the cloud whence it proceeded. If a person happened at that time to be looking on a book, or other object which he held in his hand, he would distinctly see the form of the lightning between him and the object at which he looked. The effects of lightning are seldom similar to those which accompany explosions of gunpowder or inflammable air. Upon one occasion, a tent in a gentleman's garden was carried to the distance of 4000 paces; and a branch torn from a large tree, struck a girl in the forehead at the distance of forty paces from the trunk of the tree, and killed her on the spot. These terrible effects seem to have been owing to the prodigious agitation in the air, occasioned by the emission of such a vast quantity of lightning at once; or perhaps to the agitation of the electric fluid itself, which is still more dangerous than any concussion of the atmosphere; for thunderstorms will sometimes produce most violent whirlwinds. Instances are commonly occurring where lightning, by its own proper force, without any assistance from those less common agitations of the atmosphere or electric fluid, has thrown stones of immense weight to considerable distances; torn up trees by the roots, broken them in pieces; shattered rocks; beaten down houses, and set them on fire, &c. The following singular effect of lightning is recorded, in the Philosophical Transactions, upon a pied bullock. In the evening of Sunday the 28th of August, 1774, there was an appearance of a thunder-

storm, but no report was heard. A gentleman who was riding near the marshes, not far from Lewes, saw two strong flashes of lightning running along the ground of the marsh, at about nine o'clock P. M. On Monday morning, when the servants went to fetch some oxen to their work, they found a four year old steer, standing up, to appearance much burnt, and so weak as to be scarcely able to walk. The animal seemed to have been struck by lightning in a very extraordinary manner. He was of a white and red color; the white in large marks, beginning at the rump bone, and running in various directions along both sides; the belly all white; and the whole head and horns white likewise. The lightning, with which he must have been undoubtedly struck, fell upon the rump bone, which was white, and distributed itself along the sides in such a manner as to take off all the hair from the white marks as low as the bottom of the ribs, but so as to leave a list of white hair, about half an inch broad, all round where it joined to the red, and not a single hair of the red was touched. The whole belly was unhurt, but the end of the sheath of the penis had the hair taken off; it was also taken off from the dewlap; the horns and the curled hair on the forehead were uninjured; but the hair was taken off from the sides of the face. The farmer anointed the ox with oil for a fortnight; the animal was greatly reduced in flesh, but at length recovered. One very singular effect of lightning is, that it has been observed to kill alternately; that is, supposing a number of people standing in a line; if the first person was killed, the second would be safe; the third would be killed, and the fourth safe; &c. Effects of this kind are generally produced by the most violent kind of lightning; namely, that which appears in the form of balls, which frequently divide themselves into several parts before they strike. If one of these parts of a fire-ball strike a man, another will not strike the person who stands immediately close to him; because there is always a repulsion between bodies electrified the same way. Now, as these parts into which the ball breaks have all the same kind of electricity, it is evident that they must for that reason repel one another; and this repulsion is so strong that a person may be interposed within the stroke of two of them, without being hurt by either. Another singular effect of lightning is said to have taken place, when Julian the apostate ordered the temple of Jerusalem to be rebuilt; when those who attempted to rebuild the temple are reported to have had the marks of crosses impressed upon their garments and bodies. This some have supposed to have arisen from the same cause to which the angular appearance of lightning in the air is owing, namely, its violent impetus and velocity, together with the opposition of the atmosphere; and have endeavoured to account for it on electrical principles. See Warburton's Julian, where this opinion is maintained with equal learning and acuteness; and a similar fact (of crosses impressed in a thunder storm on the bodies of several persons), which happened in England in the seventeenth century, is related. The fact is unquestionable, to account for it may be difficult.

The identity of the electric matter and lightning is now established beyond a doubt. The different forms of the flashes are all exemplified in those of electrical sparks, and the subject of atmospheric electricity or lightning has been fully entered into under that title. See *ELECTRICITY*.

Though the zig-zag kind of lightning is dangerous, yet the most destructive kind is that which assumes the form of balls. These are produced by an exceedingly strong power of electricity gradually accumulated till the resistance of the atmosphere is no longer able to confine it. In general, the lightning breaks out from the electrified cloud by means of the approach of some conducting substance; either a cloud, or some terrestrial substance: but the fire-balls seem to be formed, not because there is any substance at hand to attract the electric matter from the cloud, but because the electricity is accumulated in such quantity that the cloud can no longer contain it. Hence such balls fly off slowly, and have no particular destination. Their appearance indicates a prodigious commotion and accumulation of electricity in the atmosphere, without a proportionable disposition in the earth to receive it. This disposition, however, is perpetually altered by a thousand circumstances, and the place which first becomes most capable of admitting electricity will certainly receive a fire-ball. Hence this kind of lightning moves slowly backwards and forwards in the air for a considerable time, and then suddenly falls on one or more houses according to their being more or less affected with an electricity opposite to that of the ball at the time. It will also run along the ground, break into several parts, and produce several explosions at once. It is very difficult to imitate lightning of this kind in electrical experiments. The only cases in which it has been done in any degree are those in which Dr. Priestley made the explosion of a battery pass for a considerable way over the surface of raw flesh, water, &c., and in Mr. Arden's experiment, when a fire-ball ascended to the top of an electrified jar, and burst it with a violent explosion. In these cases, if, while the electric flash passed over the surface of the flesh, it had been possible to interrupt the metallic circuit by taking away the chain, the electric matter discharged from the battery would have been precisely in the situation of one of the fire-balls above mentioned; i. e. it would have been at a loss for a conductor. The negative side of the battery was the place of its destination; but to that it would not have easily got, because of the atmosphere which lay in its way, and the incapacity of the neighbouring bodies to receive it. But, while the electric matter was thus stationary for want of a conductor, if any person standing near, or touching the negative side of the battery, presented a finger to that seemingly inoffensive luminous body, he would instantly be struck very violently: because, a free communication being now made by means of his body, the powers by which the electric fluid is impelled from one place to another would instantly urge it upon him. But, if we suppose a person who has no communication with the battery to present his finger to the same

body, he may perhaps receive a slight spark from it, but not a shock of any consequence; because there is not a perfect communication by means of his body with the place to which the electric fire is destined. Hence we may account for the seemingly capricious nature of lightning, but especially of that kind which appears in the form of balls. Sometimes it will strike trees, high houses, steeples, and towers, without touching cottages, men or other animals, who are in the neighbourhood. In such cases people would be apt to say, that the neighbourhood of these higher objects preserved the others from the stroke; but with little reason, since low houses, men walking in the fields, cattle, nay the surface of the earth itself, have all been struck, while high trees and steeples in the neighbourhood have not been touched. In like manner, fire-balls have passed very near certain persons without hurting them, while they have, as it were, gone considerably out of their way to kill others. The reason of all this is, that in thunder-storms there is constantly a certain zone of earth considerably under the surface, which the lightning desires (if we may use the expression) to strike, because it hath an electricity opposite to that of the lightning itself. Those objects, therefore, which form the most perfect conductors between the electrified clouds and that zone of earth, will be struck by the lightning, whether they are high or low.

The following account of a melancholy accident which happened near Coldstream, on the Tweed, is given by Mr. Brydone, F. R. S., in the *Philosophical Transactions*:—'The morning was fine, with the thermometer at 68°; but about eleven A. M. the sky became obscured with clouds in the south-east; and betwixt twelve and one a storm of thunder and lightning came on. This storm was at a distance of five or six miles from Mr. Brydone's house; but, while our author was observing the progress of the storm, he was suddenly surprised with a loud report, neither preceded nor accompanied by any flash of lightning, which resembled the explosion of a great number of muskets, in such quick succession that the ear could scarcely discriminate the sounds. On this the thunder and lightning instantly ceased, the clouds began to separate, and the sky soon recovered its serenity. In a little time Mr. Brydone was informed, that a man with two horses had been killed; and, on returning out to the place, our author found the two horses lying on the spot where they had been first struck, and still yoked to the cart. As the body of the man who was killed had been carried off, Mr. Brydone had not an opportunity of examining it, but was informed by Mr. Bell, minister of Coldstream, who saw it, that the skin of the right thigh was much burnt and shrivelled; that there were many marks of the same kind all over the body, but none on the legs: his clothes, particularly his shirt, had a strong smell of burning; and there was a zig-zag line of about an inch and a quarter broad, extending from the chin to the right thigh, and which seemed to have followed the direction of the buttons of his waistcoat. The body was buried in two days, without any appearance of putrefaction. Mr. Brydone was

informed, by another person who accompanied him that was killed, of the particular circumstances. They were both driving carts loaded with coals; and James Lauder, the person who was killed, had the charge of the foremost cart, and was sitting on the fore part of it. They had crossed the Tweed a few minutes before at a deep ford, and had almost gained the highest part of an ascent of about sixty-five or seventy feet above the bed of the river, when he was stunned with the report above mentioned, and saw his companion with the horses and cart fall down. On running up to him, he found him quite dead, with his face livid, his clothes torn in pieces, and a great smell of burning about him. At the time of the explosion he was about twenty-four yards distant from Lauder's cart, and had him fully in view when he fell, but felt no shock, neither did he perceive any flash or appearance of fire. At the time of the explosion his horses turned round, and broke their harness. The horses of the first cart had fallen on their left side, and their legs had made a deep impression on the dust; which, on lifting them up, showed the exact form of each leg, so that every principle of life seemed to have been extinguished at once, without the least struggle or convulsive motion. The hair was singed over the greatest part of their bodies, but was most perceptible on their belly and legs. Their eyes were dull and opaque, as if they had been long dead, though Mr. Brydone saw them in half an hour after the accident happened. The joints were all supple, and he could not observe that any of the bones were broken or dissolved, as is said to be sometimes the case with those who are killed by lightning. The left shaft of the cart was broken, and splinters had been thrown off in many places; particularly where the timber of the cart was connected by nails or cramps of iron. Many pieces of the coals were thrown to a considerable distance; and some of them had the appearance of having been some time on a fire. Lauder's hat was torn into innumerable small pieces; some part of his hair was strongly united to those which had composed the crown of it. About four feet and a half behind each wheel of the cart he observed a circular hole, of about twenty inches diameter, the centre of which was exactly in the track of each wheel. The earth was torn up as if by violent blows of a pick-axe; and the small stones and dust were scattered on each side of the road. The tracks of the wheels were strongly marked in the dust, both before and behind these holes, but did not in the smallest degree appear on the spots themselves for upwards of a foot and a half. There were evident marks of fusion on the iron rings of the wheels; the surface of the iron, the whole breadth of the wheel, and for the length of about three inches was become bluish, had lost its polish and smoothness, and was formed into drops which projected sensibly, and had a roundish form; but the wood did not appear any way injured by the heat which the iron must have received. To determine whether these were made by the explosion which had torn up the ground, the cart was pushed back on the same tracks which it had described on the road;

and the marks of fusion were found exactly to correspond with the centres of the holes. They had made almost half a revolution after the explosion; which our author ascribes to the cart being pulled a little forward by the fall of the horses. Nothing remarkable was observed on the opposite part of the wheel. The broken ground had a smell something like that of ether; the soil itself was very dry and gravelly. The catastrophe was likewise observed by a shepherd, at the distance of about 200 or 300 yards from the spot. He said, that he was looking at the two carts going up the bank when he heard the report, and saw the foremost man and horses fall down; but observed no lightning, nor the least appearance of fire, only he saw the dust rise about the place. There had been several flashes of lightning before that from the south-east; whereas the accident happened to the north-west of the place where he stood. He was not sensible of any shock. Our author next gives an account of several phenomena which happened the same day, and which were evidently connected with the explosion. A shepherd, attending his flock in the neighbourhood, observed a lamb drop down; and said, that he felt at the same time as if fire had passed over his face, though the lightning and claps of thunder were at a considerable distance. He ran up to the creature immediately, but found it quite dead; on which he bled it with his knife, and the blood flowed freely. The earth was not torn up; nor did he observe any dust rise, though he was only a few yards distant. This happened about a quarter of an hour before Lauder was killed, and the place was only about 300 yards distant. About an hour before the explosion, two men standing in the middle of the Tweed, fishing for salmon, were caught in a violent whirlwind, which felt sultry and hot, and almost prevented them from breathing. They could not reach the bank without much difficulty and fatigue; but the whirlwind lasted only a very short time, and was succeeded by a perfect calm. A woman, making hay near the banks of the river fell suddenly to the ground, and called out that she had received a violent blow on the foot, and could not imagine whence it came; and Mr. Bell, the minister above mentioned, when walking in his garden, a little before the accident happened to Lauder, felt several times a tremor in the ground. The conclusion drawn from these facts by Brydone is, that at the time of the explosion the equilibrium between the earth and the atmosphere seems to have been completely restored, as no more thunder was heard, nor lightning observed; the clouds were dispelled, and the atmosphere resumed the most perfect tranquillity; 'But how this vast quantity of electric matter,' says he, 'could be discharged from the one element to the other, without any appearance of fire, I shall not pretend to examine. From the whole it would appear, that the earth had acquired a great superabundance of electrical matter, which was every where endeavouring to fly off into the atmosphere. Perhaps it might be accounted for from the excessive dryness of the ground, and for many months the almost total want of rain, which is probably the agent

that nature employs in preserving the equilibrium between the two elements.'

The following account of a similar accident which occurred in May, 1821, from Schweigger's Journal, may serve to throw some light upon the mode of action of this formidable meteor. As two carts were proceeding in a hollow way, bordered on either side by a wood, they were successively struck by a thunder-bolt. In the first cart were seated the two brothers Teele, the one aged thirty-three years, the other twenty-nine: in the second, Mr. Teele the nephew, a young man of twenty, and Mr. Decker. The lightning struck successively the horse of the first cart, the two brothers, Mr. Decker, and his companion, the latter of whom did not survive the accident. The horse was killed upon the spot; the skin of the belly was torn in all the lower part; the mouth left open; and the teeth blackened. It struck the younger Teele, passing through his umbrella, which was thrown to a distance of twenty-four paces from the cart; the cart itself was perforated with a hole of half a foot in diameter. The body, on being carried to the nearest village, was put into a tepid bath, and rubbed; blood flowed from the nose, the mouth, and ears, but no sign of life appeared. The mouth and nose were blackened; the skin and muscles of the arms and hands, which were both employed in holding the shaft of the umbrella, were furrowed to the bone; the sleeves of the coat and shirt were torn; but the lesions of the skin were not of the nature of tumors or scars, such as are produced by the application of red-hot iron: the skin looked as if it had been raised by a very quick rubbing. In the same manner, the clothes bore no marks of burning, but seemed as if they had been torn by the rapid passage of a sharp point. Mr. Decker, who was in the same cart, received, at the same instant, so violent a blow in the lower belly that he was precipitated from the cart, and remained senseless for half an hour. When he was undressed, the place in which he had felt the shock was of a bright red color, but without any open wound. He was by this time in a condition for continuing his journey.

The two brothers Teele had suffered considerable damage from the lightning; they, however, quickly recovered, as will presently be seen. But it will be interesting, in the first place, to follow the progress of the electric fluid over the different parts of their bodies, and to observe the nature of the wounds which resulted. They were sitting by the side of one another when struck. The lightning first hit the head of the elder; it tore to pieces the velvet cap which he had on, grazed the temporal bone an inch above the left ear, and then behind the ear; after which, slightly raising the skin, it descended upon the neck, traversed the back part obliquely, and ascended towards the right ear; here it scratched the inner part of the ear, near the tragus and antihelix; it then fell upon the right shoulder, passed beneath the chin, over the right breast and arm; and, returning to the back, descended along the vertebral column to the sacrum. In this latter part of the course of the lightning the skin was not cut, but only a little

raised, and very red. Impressions of the same nature were seen across the arms; and attested, as well as the rupture of the clothes, the zig-zag progress of the lightning, which had passed alternately from the right side of the younger brother to the left side of the elder. It fixed upon the latter, on meeting with some pieces of metal that were in his waistcoat pocket: here it raised the skin upon a space about the size of the hand. After this it descended upon the left part of the region of the pubis, and traversed the inner surface of the thigh, the ham and calf of the leg. A piece of steel, which the younger of the brothers carried in his fob, led the lightning to the region of the groin, where a space of the size of the piece was deprived of the skin, and affected with a deep wound. The breadth of the mark left by the lightning upon the different parts of the body was in general two inches; the wounds were more extended and deeper at the intersections of this mark; several of them were very painful, and suppurated abundantly. The skin had been rolled, in close folds, to the right and left, by the rapid passage of the lightning. The wounds did not bleed; and all needful to be done was to provide for the renovation of the skin destroyed. In a word, there was no indication of any lesion of organs by fire or heat; but the effect produced might be compared to that which takes place when a ball grazes the surface of a limb.

Dr. Tilesius, having assisted at the two first dressings, had all the leisure necessary for carefully examining the form and nature of the hurts; he even took a sketch of them, which accompanies his memoir.

The brothers Teele, after having perfectly recovered themselves, were affected with violent nausea, and vomited repeatedly, when some cups of ea were given them to drink; they threw up a little blood at first, as had happened to the one who had been killed. Notwithstanding the great extent of their wounds, and their being besides of a robust habit, they had no fever. The elder was perfectly deaf on the day of the accident; but, on the following day, he recovered his hearing to a certain degree. No trace of paralysis made its appearance in the limbs struck by the lightning; the wounds were cicatrised in the space of a few weeks.

Dr. Tilesius having seen Dr. Bauer, the physician of the brothers Teele, a year after the accident (which took place in May 1821), received from him the following information. The elder remained somewhat dull of hearing, more or less so, according to the season. He experiences a marked disposition to sleep, and would often remain twenty-four hours together asleep, were he not awakened. The younger has latterly had an inflammatory fever. He is subject to a periodical weakness or state of relaxation, which was before unknown to him. In general, it has had a much greater influence upon the nervous system of the two brothers than might have been presumed from the vigor of their constitution. The cicatrices of the wounds now present, in several places, the appearance of the turns of a screw.

Professor Pictet, of Geneva, communicated to

the Helvetic Society an account of a singular effect produced by a stroke of lightning on the 3rd of July, 1824. The house had no conductors, but its roof was covered with white iron, and had bars of the same metal communicating with the ground. The stroke of lightning did no damage to the house, but the lightning perforated a piece of white iron with two holes, of an inch in diameter, and five inches distant; and, what was very remarkable, the bars at the edges of the noles were in opposite directions. Hence, as Professor Pictet remarks, it appears to follow, either that the electric fluid had passed through the white iron, forming one hole, and, after moving five inches along it, had penetrated it again in an opposite direction; or that two currents of electric fluid had moved simultaneously in opposite directions, and at the distance of five inches from each other.

The mineralogists of Philipothal, East Prussia, have availed themselves of the force of lightning to shiver or blast the rock instead of gunpowder. For this purpose an iron-rod, similar to a conductor, is fixed in the work that is intended to be blasted; when the occurrence of the first thunder-storm generally conveys the electric fluid down the rod in such quantity as to split it into several pieces without displacing it. See ELECTRICITY, ATMOSPHERIC.

LIGHT-ROOM, a small apartment enclosed with glass windows, near the magazine of a ship of war. It is used to contain the lights by which the gunner and his assistants are enabled to fill the cartridges with powder to be ready for action.

LIGHTS, *n. s.* From light, not heavy; so called from their lightness in proportion to their bulk. The lungs; the organs of breathing in animals.

The complaint was chiefly from the *lights*, a part as of no quick sense, so no seat for any sharp disease.

Hayward.

LIGNAC (Joseph Adrian de), a French ecclesiastic, born at Poitiers, who published several works, particularly Letters to an American, concerning Buffon's Natural History. He died in Rome in 1762.

LIGN-ALOES, *n. s.* Lat. *lignumaloes*. Aloes wood.

The vallies spread forth as gardens by the river's side, as the trees of *lignaloës* which the Lord hath planted, and as cedar trees beside the water.

Numb. xxiv. 6.

The woful teris that thei leten fal
As bitter werein, out of teris kinde,
For paine, as is *lignaloës* or gal.

Chaucer. Troilus and Creseide.

LIGNE (Charles Joseph, prince de), was born at Brussels in 1735, of an ancient Flemish family. He entered the army of his country in 1752, and made his first campaign as captain in 1757. He was made a colonel for his gallantry at Hochkirchen; and was a major-general at the accession of Joseph II. In 1771 he became a proprietor of a regiment of infantry, and added greatly to his military reputation in the war relating to the succession of Bavaria in 1778, when he commanded the advanced guard of Laudohn. Going in 1782 on a mission to Russia, he became a favorite with Catharine II., who nominated

him a field marshal of that empire, and gave him an estate in the Crimea. In 1788 Joseph II. made him general of artillery, and sent him to assist prince Potemkin at the siege of Okzakow; he also divided with Laudohn the glory of taking Belgrade. The death of Joseph II. terminated his military career. Francis II. in 1808 made him a field marshal, and he was often consulted on public affairs. He died in 1814. He published a collection of his writings in 30 vols. 12mo. in 1807; and subsequently Vie du Prince Eugène de Savoie, écrite par lui-même; and Lettres et Pensées du Marechal Prince de Ligne, both which were translated into English. His posthumous works were published in 1817 in 6 vols. 8vo.

LIGNE, a town of the Netherlands, in the department of Gemappes, and late province of Austrian Hainault, on the Dender, twelve miles north-west of Mons, and twenty north of Valenciennes.

LIGNEOUS, *adj.* Fr. *ligneux*; Lat. *ligneus*. Wooden; made of, or resembling, wood.

It should be tried with shoots of vines, and roots of red roses; for it may be they, being of a more *ligneous* nature, will incorporate with the tree itself.

Bacon's Natural History.

Ten thousand seeds of the plant hart's-tongue hardly make the bulk of a pepper-corn: now the covers, and the true body of each seed, the parenchymous and *ligneous* part of both, and the fibres of those parts, multiplied one by another, afford a hundred thousand millions of formed atoms, but how many more we cannot define.

Grew.

LIGNET, among goldsmiths, a longitudinal hollow iron mould, made for receiving melted masses of gold or silver. It has a large hollow for the former, and a small one for the latter. See **INGOT**. This word is by some derived from lignum, wood; ingots of gold and silver having been probably at first thrown into lignets made of hollow hard wood, till their rapid consumption by the melted metal had shown the necessity of making them of more durable stuff. They are now made of iron, and are also called ingots.

LIGNICENSIS TERRA, in the materia medica, a fine yellow bole dug in many parts of Germany, particularly about Emeric in Westphalia, and used in astringent complaints.

LIGNIERE, or **LIGNIERES**, a town of France, in the department of Cher, and late province of Berry, with a castle: twenty-four miles south of Bourges, and thirteen and a half south-east of Issoudon. Long. 2° 24' E., lat. 46° 47' N.

LIGNUM VITÆ. See **GUAIACUM**.

LIGNY, a town of France, in the department of the Meuse, and late duchy of Bar, with a castle on the Orney, nine miles south-east of Bar le Duc, and 125 south-east of Paris. Long. 5° 25' E., lat. 48° 39' N.

LIGON, a sea-port of Siam, in Malacca. capital of a territory so named, with a magazine belonging to the Dutch East India Company, on the east coast. Long. 100° 5' E., lat. 7° 40' N.

LIGUEIL, a town of France, in the department of Indre and Loire, nine miles south-west of Loches, and twenty-one south-east of Tours. Long. 0° 52' E., lat. 47° 3' N.

LIGUEUX, a town of France, in the department of Dordogne, nine miles N. N. E. of Périgueux.

LIGULATED, among botanists, an appellation given to such floscules as have a straight end turned downwards, with three indentures, but not separated into segments.

The **LIGURE**, in Hebrew antiquity, was the first stone in the third row of the high priest's breast-plate, and had the name of Gad inscribed on it. Exod. xxviii. 19. It is said to have been spotted like the ounce. Some suppose it to be the jacinth.

LIGURIA, in ancient geography, a country of Italy, bounded on the south by the Mediterranean Sea; on the north by the Appennine mountains, on the west by part of Transalpine Gaul, and on the east by Etruria.

LIGURIANS, the ancient inhabitants of Liguria. There is a great disagreement among critics concerning their origin, though most probably they were descended from the Gauls. Some carry up their origin as far as the fabulous heroes of antiquity; while others trace them from the Ligyes, a people mentioned by Herodotus as attending Xerxes in his expedition against Greece. They are by some ancient geographers placed in Colchis, by others in Albania. According to Diodorus Siculus, the Ligurians led a very wretched life; their country being entirely overgrown with woods, which they were obliged to pull up by the roots in order to cultivate their land, which, being naturally barren, made but very poor returns for all their labor. They were much addicted to hunting; and, by a life of continual exercise and labor, became very strong. The women are said to have been almost as strong as the men, and to have borne an equal share in all laborious enterprises. They were, however, subdued by the Romans about A. A. C. 211.

LIGUSTICUM, in botany, lovage, a genus of the digynia order and pentandria class of plants; natural order forty-fifth, umbellatæ. The fruit is oblong, and quinquesulcated on each side; the florets are equal; the petals involuted or rolled inwards and entire. There are fourteen species: the most remarkable are,

1. *L. levesticum*, the common lovage, a native of the Appennine mountains in Italy. It has a thick, fleshy, deeply penetrating perennial root, crowned by very large, many-parted, radical leaves, with broad lobes, having incisions at top, upright, strong channelled stalks, branching six or seven feet high, and all the branches terminated by yellow flowers in large umbels. The root agrees nearly in quality with that of angelica: the principal difference is, that the lovage root has a stronger smell, and somewhat less pungent taste, accompanied with a more durable sweetness, the seeds being rather warmer than the root.

2. *L. Scoticum* is a native of Scotland, and grows near the sea. It has a thickish, fleshy, penetrating, perennial root, crowned by large doubly trifoliated leaves, with broad, short, indented lobes, upright round stalks, half a yard high, terminated by small yellow umbels. The leaves are sometimes eaten raw as a salad, or

boiled as greens, by the inhabitants of the Hebrides. The root is reckoned a good carminative. Both these species are hardy, and easily propagated by seeds sown in spring or autumn.

LIGUSTRUM, privet, in botany, a genus of the monogynia order, and diandria class of plants; natural order forty-fourth, sepiariæ: cor. quadrifid; berry tetraspermous. There are four species.

L. sempervirens, the evergreen privet, is a hardy plant, rising from ten to fifteen feet high, adorned with oblong entire leaves and spikes of infundibuliform oblong white flowers, succeeded by black berries. It is easily propagated by seed, layers, suckers, or cuttings, and is used for making hedges. With the addition of alum, the berries are said to dye wool and silk of a good durable green; for which purpose they must be gathered as soon as they are ripe. The leaves are bitter and slightly astringent. Oxen, goats, and sheep, eat the plant; horses refuse it,

LIKE, <i>adj., adv., n. s., v. a. & v. n.</i>	} Sax. lic; Sw. like; Goth. and Belg. lyk; Teut. lych. Similar; equal; of the same
LIKE'LHOOD, <i>n. s.</i>	
LIKE'NESS,	
LIKE'LY, <i>adj. & adv.</i>	
LI'KEN, <i>v. a.</i>	
LIKE'NESS, <i>n. s.</i>	
LIKE'WISE, <i>adv.</i>	
LI'KING, <i>adj. & n. s.</i>	

quality or quantity; resembling; hence probable credible; as an adverb, in the same manner, or in a befitting manner: like and likely are both used also for probably; credibly: such as may reasonably be thought or expected. It is often, Dr. Johnson observes, not easy to determine whether like is used as an adverb or adjective. To like is to choose; prefer; approve; please; or be pleased with (taking of before the object), but both these last are obsolete senses: likelihood was in Shakspeare's time used for show; appearance; resemblance: it now signifies probability; verisimilitude: to liken is, to exhibit or represent as resembling; compare: likeness, similarity; resemblance; counterpart: likewise, in like manner: liking, in good condition; plump: pleasure or delight in; plumpness; inclination; state of trial or approval.

What euer things he doith, the son doith in *liĥ* maner tho thingis. *Wiclif. Jon. v.*

Blynde, louers of lustes more than of God, hauynge *likenesse* of pitee, but denyynge the vertue of it. *Id. 2 Tymo. iiii.*

He shall dwell where it *liketh* him best. *Deut.*

Be strong, and quit yourselves *like* men. *1 Sam. iv. 9.*

Their young ones are in good *liking*; they grow up with corn. *Job xxxix. 4.*

Like as a father pitieth his children, so the Lord pitieth them that fear him. *Psaln ciii. 13.*

He is *like* to die for hunger, for there is no more bread. *Jeremiah xxxviii. 9.*

Jesus said unto them, I also will ask you one thing, which if ye tell me, I *likewise* will tell you by what authority I do these things. *Matt. xxi. 24.*

Conformity with them is only then a disgrace, when either we follow them in that they think or do amiss, or follow them generally in that they do, without other reason than only the *liking* we have to

the pattern of their example. which *liking* doth intimate a more universal approbation of them than is allowable.

Hooker.

That way we are contented to prove, which being the worse in itself is notwithstanding now, by reason of common imbecility, the fitter and *likelier* to be brooked.

Id.

Of any thing more than of God they could not by any means *like*, as long as whatsoever they knew besides God, they apprehended it not in itself without dependency upon God.

Id.

The man who has nothing to boast of but his illustrious ancestors, is *like* a potatoe—the only good belonging to him is under ground.

Sir T. Overbury.

The joyous nymphs and lightfoot fairies,
Which thither came to hear their musick sweet,
Now hearing them so heavily lament,
Like heavily lamenting from them went. *Spenser.*

Well hoped he, ere long that hardy guest,
If ever covetous hand, or lustful eye,
Or lips be laid on thing that *liked* him best,
Should be his prey. *Spenser. Faerie Queene.*

Why do you longer feed on loathed light,
Or *liking* find to gaze on earthly mold? *Id.*

The young soldiers did with such cheerfulness *like* of this resolution, that they thought two days a long delay.

Knolles.

He was a man, take him for all in all,
I shall not look upon his *like* again.

Shakspeare.

I *like* the work well; ere it be demanded,
As *like* enough it will, I'd have it copied. *Id.*

I looked upon her with a soldier's eye;
That *liked*, but had a rougher task in hand
Than to drive *liking* to the name of love. *Id.*

What of his heart perceive you in his face,
By any *likelihood* he shewed to-day?

—That with no man here he is offended. *Id.*

Many of *likelihood* informed me of this before,
which hung so tottering in the balance, that I could neither believe nor misdoubt.

These young companions make themselves believe they love at the first looking of a *likely* beauty.

Id.

Are we proud and passionate, malicious and revengeful? Is this to be *like*-minded with Christ, who was meek and lowly?

Tillotson.

They roared *like* lions caught in toils, and raged: The man knew what they were, who heretofore Had seen the *like* lie murdered on the shore.

Waller.

Two *likes* may be mistaken.

L'Estrange.

His son, or one of his illustrious name,
How *like* the former, and almost the same.

Dryden's Æneid.

Beasts can *like*, but not distinguish too,
Nor their own *liking* by reflection know.

Dryden.

The royal soul, that, like the labouring moon,

By charms of art was hurried down;

Forced with regret to leave her native sphere,

Came but a while on *liking* here.

Id.

He that has the prison doors set open is *likely* at liberty, because he may either go or stay, as he best *likes*.

Locke.

What will be my confusion, when he sees me Neglected, and forsaken *like* himself.

Philips.

More clergymen were impoverished by the late war, than ever in the *like* space before.

Sprat.

Scarce any man passes to a *liking* of sin in others, but by first practising it himself.

South.

Where things are least to be put to the venture, as the eternal interests of the other world ought to be; there every, even the least, probability, or *likelihood* of danger, should be provided against.

Id.

There are predictions of our Saviour recorded by the evangelists, which were not completed till after their deaths, and had no *likelihood* of being so when they were pronounced by our blessed Saviour.

Addison on the Christian Religion.

Full fifteen thousand lusty fellows

With fire and sword the fort maintain;

Each was a Hercules, you tell us,

Yet out they marched *like* common men.

Prior.

Poor Cupid, sobbing, scarce could speak;

Indeed, mamma, I do not know ye:

Alas! how easy my mistake?

I took you for your likeness Cloe.

Id.

We like our present circumstances well, and dream of no change.

Atterbury.

Thus, in all likelihood, would it be with a libertine, who should have a visit from the other world: the first horror it raised would go off, as new diversions come on.

Id.

Spirit of vitriol poured to pure unmixed serum, coagulates as if it had been boiled. Spirit of sea-salt makes a perfect coagulation of the serum likewise, but with some different phenomena.

Arbutnot on Aliments.

If the fluid be supposed to consist of heterogeneous particles, we cannot conceive how those dissimilar parts can have a like situation.

Bentley.

She'd study to reform the men,

Or add some grains of folly more

To women than they had before;

This might their mutual fancy strike,

Since every being loves its like.

Swift.

This plan, as laid down by him, looks liker an universal art than a distinct logic.

Baker.

A few seem favourites of fate,

In pleasure's lap carest;

Yet think not all the rich and great

Are likewise truly blest.

Burns.

A man to whom sculpture is new, sees a barber's block, or some ordinary piece of statuary; he is immediately struck and pleased, because he sees something like an human figure; and, entirely taken up with this likeness, he does not at all attend to its defects.

Burke on the Sublime.

By these, and the like arguments, the spiritual man may raise the drooping spirits of good men in their causeless dejections.

Paley.

Moments like to these

Rend men's lives into immortalities.

Byron.

So when destruction lurks unseen,

Which men, like mice, may share,

May some kind angel clear thy path,

And break the hidden snare.

Barbauld.

LIL'ACH, *n. s.* Fr. *lilas*; Span. *lila*. A shrub.

The white thorn is in leaf, and the lilach tree.

Bacon.

LILACH, or LILAC. See SYRINGA.

LILBURNE (John), an enthusiastic English republican, born in 1618, and descended of an ancient family in Durham. He was brought up a clothier, but he gave up business in 1636, and became assistant to Dr. Bastwick, in whose sufferings he shared. In 1636 he went over to Holland to get Bastwick's Merry Liturgy printed; and on his return, in 1637, was tyrannically punished by the star-chamber court; being put in the pillory, whipped, fined, and imprisoned, and loaded with heavy irons, for publishing pamphlets, reflecting on the church of England and its bishops, particularly Prynne's News from Ipswich. In 1641 he was released by the long parliament; and from that period made himself formidable to all parties, by his bold aspiring genius. He signalized himself in the parliamentary army, in which he was made a major in 1643, and a colonel in 1644. He was at one time the secret friend and confidant of Cromwell, and at another his avowed enemy and accuser; so that, in 1650, Cromwell found it his interest to silence him by a grant of £3000 out

of some forfeited estates. Yet, after this, he attacked the protector's government; became chief of the levellers; and was twice tried for high treason, but acquitted by the juries. After this he settled at Eltham, where he joined the Quakers; and died August 29th, 1657, aged thirty-nine. His funeral was attended by 4000 persons. His brother Robert was a major-general in Cromwell's army. He wrote his Christian Man's Trial, in 1637, 4to., and many similar pieces while in prison.

LILIUM, the lily, in botany, a genus of the monogynia order, and hexandria class of plants; natural order tenth, coronariæ: cor. hexapetalous and campanulated, with a longitudinal nectariferous line or furrow: caps. connected by small cancellated hairs. There are many species, all bulbous-rooted, herbaceous, flowery perennials, rising with erect annual stalks three or four feet high, garnished with long narrow leaves, and terminated by clusters of large, bell-shaped, hexapetalous flowers of exceeding great beauty, of white, red, scarlet, orange, purple, and yellow colors. All the species are propagated by sowing the seeds; and, if care is taken to preserve these seeds from good flowers, very beautiful varieties are often produced. The manner of sowing them is as follows: Some square boxes should be procured, about six inches deep, with holes bored in the bottoms to let out the wet; these must be filled with fresh, light, sandy earth; and the seeds sown upon them pretty thick in the beginning of August, and covered over about half an inch deep with light sifted earth of the same kind. They should then be placed where they may have the morning sun; and, if the weather proves dry, they must be watered at times, and the weeds carefully picked out. In October the boxes are to be removed to a place where they may have as much sun as possible, and be secured from the north and north-east winds. In spring the young plants will appear, and the boxes are then removed into their former situation. In August the smallest roots are to be emptied out of these boxes, strewed over a bed of light earth, and covered with about half an inch depth of the same earth sifted over them. Here they must be watered, shaded at times, and defended from the severity of winter by a slight covering of straw in the hardest weather. In February the surface of the bed should be cleared, and a little light earth sifted over it. When the leaves are decayed, the earth should be a little stirred over the roots; and in the month of September following some more earth sifted on. In the September of the following year the roots must be transplanted to the places where they are to remain, and set at the distance of eight inches; the roots being placed four inches below the surface: this should be done in moist weather. They will now require the same care as in the preceding winters; and, the second year after they are transplanted, the strongest roots will begin to flower. The fine ones should then be removed at the proper season into flower beds, and planted at great distances from one another, that they may flower strong. The roots of the white lily are emollient, maturing, and greatly supplicative. They are used externally in cata-

plasma for these purposes. The common form of applying them is boiled and bruised; but some prefer roasting them till tender, and then beating them to a paste with oil, in which form they are said to be excellent against burns. Gerard recommends them internally against dropsies.

L. Kamtschatense, or Kamtschatka lily, called there *saranne*, makes a principal part of the food of the Kamtschatkans. Its roots are gathered by the women in August, dried in the sun, and laid up for use: they are the best bread of the country; and after being baked are reduced to powder, and serve instead of flour in soups and several dishes. They are sometimes washed, and eaten as potatoes; are extremely nourishing, and have a pleasant bitterish taste. The natives often parboil and beat them up with several sorts of berries, so as to form a very agreeable confection. Providentially it is a universal plant there, and all the grounds bloom with its flower during the season. Another remarkable circumstance is, that while fish are scarce the *saranne* is plentiful; and when it is scarce the rivers abound with fish. A species of mouse saves the Kamtschatkan women a great deal of trouble. The *saranne* forms part of their winter provisions; they not only gather them in the proper season, and lay them up in their magazines, but bring them out in sunny weather to dry them, lest they should spoil. The natives search for their hoards, but leave part for the owners, being unwilling to suffer such useful caterers to perish.

LILLE, a large, handsome, and strong town of France, in the department of the north (French Flanders) and the chief place of a prefecture. It is the capital of the *arrondissement* of the same name, being a post town, containing 64,291 inhabitants, and is situated in the midst of a fertile country, on the canal which connects the river *Sensée* with the sea, and on the *Moyenne-Deule*, which crosses it, and is navigable. Surrounded by immense fortifications, and defended by a citadel, the work of the celebrated *Vauban*; it is regarded as the finest remaining specimen of his skill in Europe. The streets are broad, clean, and airy, the houses well built, the squares spacious and regular, and the public edifices of singular beauty.

It was founded in 1009, by *Baudouin IV.* earl of Flanders; fell into the hands of *Philip the Fair* in 1296, after a siege of three months; and was retaken by *Guy earl of Flanders* in 1302. The protestants attempted in vain to surprise it in 1581, and in 1645 the French were equally unsuccessful. Being taken from the *Spaniards* on the 27th of April 1667, and retaken by the allies in 1708, after a very long and obstinate siege, it was yielded to France by the treaty of *Utrecht*. The Austrians bombarded it from the 29th of September to the 6th of October 1792; but the garrison, aided by the courage of the inhabitants, forced them to raise the siege. The manufactures consist of unbleached and bleached coarse linen, ticking, calicoes, table linen, handkerchiefs, and printed cottons. It has also factories for thread, for sewing and lace-making; cloths, camlets, waggoners' frocks, wool-combing, lace-making, stay-laces cotton yarn, white lead,

powder blue, soap, and ropes. There are many distilleries of brandy from corn; salt and sugar refining houses; oil mills; bleaching grounds; starch, paper, glass and porcelain manufactories; and tanning and currying yards. It has likewise a royal factory for the refining of saltpetre, and in the neighbourhood there are more than 200 wind-mills for the preparation of oil. It carries on a considerable trade in linens, thread, flax, lace, spun cotton, combed wool, corn, oils, tobacco, madder, endive, coffee, colonial produce, spices, wines, brandy, hollands, &c. Among its public buildings and institutions may be mentioned, the public library, containing 18,000 volumes, the museum of pictures, the citadel, the arsenal, the *depôt* of arms, the town hall, the infirmary, the circus, the markets, and the botanical garden. It is 168 miles north of Paris, fifty-seven south-east of *Dunkirk*, fifty-seven north-west of *Mons*, seventy-five W. S. W. of *Brussels*, twenty-four north of *Donay*, and thirty-three N. N. E. of *Arras*.

LILLERS, a town of France, in the department of the Straits of *Calais*, and *ci-devant* province of *Artois*; ceded to France by Spain at the peace of the *Pyrenees*, when its fortifications were demolished. It is seated on the *Navez*, six miles north-west of *Bethune* and seventeen of *Arras*. Long. 2° 35' E., lat. 50° 30' N.

LILLO (*George*), a celebrated dramatic writer, born in London in 1693. He was a jeweller by profession, and followed his business for many years in that neighbourhood with reputation. His *George Barnwell*, *Fatal Curiosity*, and *Arden of Feversham*, are all planned on common and well known stories; yet they have perhaps oftener drawn tears from an audience than more pompous tragedies. He died in 1737, in the forty-seventh year of his age. His works were published, with his *Life*, in 2 vols 12mo., by *Mr. T. Davis*.

LILLY, or LYLLY (*John*), a dramatic poet, born in Kent, about 1553, and educated in *Magdalen College, Oxford*, where he took the degree of A. B. in 1573, and that of M. A. in 1575. From Oxford he removed to Cambridge, and thence to London, where he became acquainted with some of queen *Elizabeth's* courtiers, by whom he was caressed as a poet and a wit, and on particular festivals the queen honored his dramatic pieces with her presence. He wrote nine plays, but his first publication, printed in 1580, was a romance, which was called *Euphues*, and which was universally read and admired. 'Lilly was,' says *Oldys*, 'a man of great reading, good memory, ready faculty of application, and uncommon eloquence; but he ran into a vast excess of allusion.' When or where he died is not known. *Wood* says he was living in 1597, when his last comedy was published. After attending the court of queen *Elizabeth* thirteen years, notwithstanding his reputation as an author, he was under a necessity of petitioning the queen for support in his old age. His two letters to her majesty on that subject are preserved in MS.

LILLY (*William*), a noted English astrologer, born in *Leicestershire* in 1602. He arrived in London in 1620, and lived four years as a ser-

vant to a mantua-maker; after which he entered into the service of Mr. Wright, master of the Salters' Company, who not being able to write, Lilly kept his books. In 1627, his master dying, he married the widow, with a fortune of £1000. Being now his own master, he followed the puritanical preachers; and, turning his mind to judicial astrology, became pupil to one Evans, a Welsh parson, in that pretended art. He was the author of *The Book of Fortune*; *Merlinus Anglicus junior*; *The Supernatural Sight*; and *The White King's Prophecy*. In him we have an instance of the general superstition that prevailed during the civil war between Charles I. and his parliament; for the king consulted this astrologer to know in what quarter he should conceal himself, if he could escape from Hampton Court; and general Fairfax, on the other side, sent for him to ask, whether God was with them and their cause? In 1648 he published his *Treatise of the three Suns* seen the preceding winter; and also an astrological judgment upon a conjunction of Saturn and Mars. This year the council of state gave him £50, and a pension of £100 per annum, which he received for two years, and then resigned on some disgust. In June 1660 he was taken into custody by order of the parliament, by whom he was examined concerning the person who cut off the head of Charles I. The same year he sued out his pardon under the great seal of England. The plague raging in London, he removed with his family to his estate at Hershams; and in October 1666 was examined before a committee of the house of commons concerning the fire of London, which happened in September that year. After this he studied physic, and, by means of Mr. Ashmole, obtained from archbishop Sheldon a license to practise it. He adopted for his son, by the name of Merlin junior, one Henry Coley, a tailor, and gave him the property of his almanac after it had been printed for thirty-six years. He died in 1681, of a dead palsy. Mr. Ashmole erected a monument over his grave in the church of Walton upon Thames. His *Observations on the Life and Death of Charles, late King of England*, if we overlook the astrological nonsense, may be read with as much satisfaction as more celebrated histories, Lilly being not only well informed, but strictly impartial. This work, with the *Lives of Lilly and Ashmole*, written by themselves, were published in 1 vol. 8vo. in 1774, by Mr. Burman.

LILY, *n. s.* } Lat. *lilium*. A flower:
LIL'YED, *adj.* } lilled, abounding with
LIL'YLIVERED, *adj.* } lilies: lilylivered, white-livered; cowardly.

Biholde ye the *lilies* of the feeld hou thei weren,
thei travelen not neither spynnen.

Wiclif. *Matt. vi.*

I am the rose of Sharon and the *lily* of the valleys.
Cant. ii. 1.

O rubi cunde rose, and white as the *lily*,

Clarified chrystal of worldly portraiture!

O courfn figure, resplendent with glory,

Geme of beauti! o carbuncle shining pure!

Your faireness exceedeth the craft of nature.

Chaucer's Balades.

Shiprecked upon a kingdom, where no pity!

No friends! no hope! no kindred weep for me!

Almost no grave allowed me! Like the *lily*,
That once was mistress of the field, and flourished,
I'll hang my head, and perish. *Shakspeare.*

A base, *lilylivered*, action-taking knave.

Id. King Lear.

Arnus, a river of Italy, is drawn like an old man,
by his right side a lion, holding forth in his right
paw a red *lily*, or flower-de-luce.

Peacham on Drawing.

Nymphs and shepherds dance no more

By sandy Ladon's *lilled* banks. *Milton.*

Lily of the valley has a strong root that runs into
the ground. *Mortimer's Husbandry.*

Take but the humblest *lily* of the field;

And if our pride will to our reason yield,

It must by sure comparison be shown,

That on the regal seat great David's son,

Arrayed in all his robes, and types of power,

Shines with less glory than that simple flower. *Prior.*

For her the *lilies* hang their heads, and die. *Id.*

There are thirty-two species of this plant, including
white *lilies*, orange *lilies*, red *lilies*, and martagons
of various sorts. *Miller.*

Now blooms the *lily* by the bank,

The primrose down the brae;

The hawthorn's budding in the glen,

And milk-white is the slae. *Burns.*

What scenes of glory rise

Before my dazzled eyes!

Young Zephyrs wave their wanton wings,

And melody celestial rings:

Along the *lilled* lawn the nymphs advance,

Flushed with love's bloom, and range the sprightly
dance. *Beattie.*

And her dead drooped as when the *lily* lies

O'ercharged with rain. *Byron.*

To be enfolded to this desolate heart—

A blighted *lily* on its icy bed—

Nay, look not up, 'tis thus I would behold thee. *Maturin.*

LILY, in botany. See LILIUM, and AMARYLLIS.

LILY, HYACINTH. See SCILLA.

LILY OF THE VALLEY. See CONVALLARIA.

LILYBÆUM, in ancient geography, a city of Sicily, seated on the most westerly cape of Sicily, and said to have been founded by the Carthaginians, on their expulsion from Motya by Dionysius tyrant of Syracuse. It sustained three sieges; one by Dionysius, another by Pyrrhus king of Epirus, and the third by the Romans. The first two failed in their attempts, but the Romans made themselves masters of it, though with no small difficulty. No remains of this once stately city are now to be seen, except some aqueducts and temples; though it was standing in Strabo's time.

LILYE (William), the grammarian, was born in 1466 at Oldham in Ilamshire; and in 1486 was admitted a semi-commoner of Magdalen College, in Oxford. Having taken the degree of A. B. he left the university, and travelled to Jerusalem. Returning thence, he continued five years in Rhodes, where he studied the Greek, several learned men having retired thither after the taking of Constantinople. From Rhodes he travelled to Rome; where he improved himself in the learned languages, under Sulpitius and P. Sabinus. He then returned to London, where for sometime he taught a private grammar-school, being the first person, it is said, who taught

Greek in this metropolis. In 1510, when Dr. Colet founded St. Paul's school, Lilye was appointed the first master; at which time he was married and had many children. In this employment he had labored twelve years, when being seized by the plague, which then raged in London, he died in February 1523, and was buried in St. Paul's. He had the character of an excellent grammarian, and a successful teacher. His principal work is *Brevissima Institutio, seu ratio Grammaticæ Cognoscendæ*; London, 1513, very often reprinted, and commonly called Lilye's Grammar. The English rudiments were written by Dr. Colet, dean of St. Paul's; and the preface to the first edition by cardinal Wolsey. The Latin syntax was chiefly the work of Erasmus. The rest was written by Lilye. See Ward's preface to his edition of Lilye's Grammar, 1732.

LIMA, a province of Peru, bounded on the north by Truxillo, east by Tarma and Guanacavelica, west by the Pacific, and south by Arequipa. Its principal districts are Lima Proper, Chancay, Huarachiri, Canta, Canete, Ica, Pisco, and Nasca. Rain is seldom or never known to fall on the west of the Cordillera of the Andes, which runs along its eastern side; and on the sea coast the climate is intensely warm, but towards the interior it becomes milder and more salubrious. The wealth of the province greatly consists in the produce of the mines of Tarma, which are worked by proprietors in Lima; but agriculture is not neglected, and the new and more liberal institutions of South America are now where more highly appreciated.

LIMA (or in the Indian language Rimai), the capital of the above province, and of Peru, has also been called by way of eminence Ciudad de los Reyes, or the City of Kings, and was founded by the celebrated Francisco Pizarro, in the beginning of the sixteenth century. It stands in the valley of Rimai and on the river of that name, both called after the name of an idol, who was here said to afford auricular responses to his votaries, the word Rimai signifying to speak. Over the river, which when not flooded is small, is an elegant stone bridge, having at one end a gate which forms an entrance into the city by the grand square. The form of the city is triangular; the base, or longest side, extending along the banks of the river, being about 1920 toises, or exactly two-thirds of a league, in length. Its greatest breadth from north to south, that is, from the bridge to the angle opposite to the base, is 1080 toises, or two-fifths of a league. It is surrounded with a brick wall, flanked with thirty-four bastions, without platforms or embrasure; the intention of it being merely to enclose the city against any sudden attack of the Indians. It has, in its whole circumference, seven gates and three posterns. On the other side of the river is a suburb called St. Lazaro.

The pavement of the streets, which are all built at right angles, is formed of small rounded stones washed down from the mountains, extremely fatiguing to walk over; all those in the direction of east and west have a small stream of water running down them. The suburb alluded to is inhabited by the less respectable part

of the community. The plaza, or great square, is said to be 500 feet above the Pacific, the cabildo occupies one side. It is a building very much in the Chinese style, and in front of it is the cathedral, a very handsome pile. The riches which have been lavished at various times upon the interior of this edifice are scarcely to be credited any where, says Mr. Caldcleugh, but in a city which once paved a street with ingots of silver to do honor to a new viceroy. The balustrades surrounding the great altar, and the pipes of the organ, were of silver. It may be mentioned, as a proof of the abundance of silver ornaments, that three weeks prior to my arrival a ton and a half of silver was taken from the various churches, without being missed, to meet the exigencies of the state.

This writer notices the church of San Pedro as remarkable for its architecture, and the small church built by Pizarro, which has never been totally ruined by the earthquakes, and which is situate abajo de la puente. Of the monastic establishments, which are very numerous and of singular extent and splendor, the convent of the Franciscans seems most worthy of attention. It is calculated to cover an eighth part of the whole city. The usual number of its inmates is only however about 160. Other public buildings worthy of notice are the palace of the archbishop, the mint, the famous palace of the inquisition, and a noble establishment for retired secular clergymen, adjoining the church of San Pedro. The former college of the Jesuits is converted into a foundling hospital. On the right bank of the river a late viceroy laid out large sums in forming a public walk called the Paseo d'Agua; at the termination of it the bull-ring is seen. Another object which strangers are directed to visit is the Pantheon, or burial place of a part of the city. It is surrounded and divided by walls with niches for the reception of the dead. The funeral service is performed in the church which adjoins.

Several years ago a municipal regulation was published to prevent the towers of the churches being constructed of any other materials than wood and painted canvas, in order to obviate the horrors which occurred during earthquakes: latterly they have been built of clay, which in time takes the hardness of stone. For the same reason the houses have rarely an upper story; when they have, an overhanging wooden balcony is attached to the windows: they are all constructed of unburnt bricks, with a court and garden in the rear. The walls of the court and gateway are covered with fresco paintings; and when there is a dead wall in front it is often decorated in the same way. The rooms are gaudily adorned with gold and silver, and the floors are generally tiled; an estrada or long narrow sofa fills up one side, before which is a piece of carpet. The roofs of all the houses are perfectly flat, and are merely composed of lath and plaster.

Mr. Caldcleugh, who was here in 1818, supplies us with the following lively picture of the manner of the inhabitants: 'The nobility and higher orders of the clergy appeared to live in some style, and drove about in their caleches

richly gilt, and drawn by one horse at a foot pace. The streets were at all times full of monks, the whole number of whom in the city is computed at nearly 1100. They still preserve that custom of begging which, until a few years ago, distinguished the cloistered inhabitants of Europe, and proved so annoying to travellers. Lately the vicéroy, finding the army in want of recruits, threw every difficulty in the way of professing. The influence of religion is considerable; one order, that of Buena Muerte, is distinguished by the black gown and large red cross on the left arm. As these friars have the peculiar privilege of attending persons in their last moments, they are mounted on mules, and are seen at all times galloping about the city and running a race with death. The convents for women consist of fourteen, with a rental of not less than 150,000 dollars. Independently of these are several establishments of Beatas (*sœurs de la charité*) and of Casas de Ejercicio, where ladies, leaving their families, shut themselves up for two or three weeks at a time, in order to submit themselves to a stricter discipline in fasting and prayer than they can observe in their own houses.

As a university has existed in Lima since the year 1551 (the most ancient consequently of the New World), as well as many other establishments for learning, besides many private schools; and as, in addition to these reasons, the Spaniards sent to Lima were always of a better class and more educated than those who went to Buenos Ayres, Chile, and New Granada, literature has been by no means overlooked, and several works published in Lima have been much sought after. The opportunities of acquiring information in Lima are so numerous that the generality of men are well informed and polite.

The ladies have also the full benefit of the various nunneries and establishments for instruction, which abound in this capital. They are generally endowed with great beauty, and their figures boast that rich fulness of person which is the truest symptom of health in a warm country. They have very small feet and ankles, and no means are resorted to to produce this effect. Their persons are shown to great advantage in the usual walking-dress, the *saya* and *manto*. The former is composed of an elastic silk petticoat, like a stocking, which is drawn over the head down to the ankles, and then fastened round the waist with a buckle;—this is the *saya*. It is usually worn of a deep blue, black, or cinnamon color. Its elasticity makes it sit perfectly tight, showing the contour of the person; and some ladies wear it so contracted at the ankles that they can scarcely step over the little streams which run down the streets. The *manto* is formed of a large square piece of black silk, which is first placed behind, and two strings attached to the corners are tied in front, it is then brought over the back of the head down to the waist, and held there by the arms, which are enveloped in it. One eye is alone visible, and generally the left. It appears at first impossible to recognise one's acquaintance in the streets in this costume, but custom soon overcomes the difficulty. This is the walking dress of all the respectable persons, indeed of every class above the menial slaves, and they

may be seen occasionally with an old *saya* that does not fit them, which belonged to their mistress. An Englishman, who arrived at Lima during my stay there, observed a remarkably fine figure in the street, and determined to find out her abode. He followed her down several streets, and as she entered her house she threw back her *manto*, and to his great regret he discovered a black face. I am informed that the ladies wear during the warm months, under the *saya* and *manto*, merely a shift finely ornamented with lace, and a neckerchief. The ladies, when concealed in this dress, are termed *tapadas*, and the appearance of so many in the streets is not a little extraordinary.

In the house the costume partakes more of the ordinary fashion of Spain than of France. The hair is ornamented with flowers, and a black veil is thrown back on the head. The manners of the ladies are extremely agreeable, and they are as kind and attentive to foreigners as the Spanish women every where show themselves. In their persons they are extremely cleanly, taking the cold bath several times a day, although it must be stated that they smoke a little, and occasionally take snuff. They get rid of the unpleasantness which attends the former operation by chewing paper. It is not unusual for them to smoke a little at the theatre, but they always choose small cigars, and, placing their fan before them, retire to the back of the box. This custom may be therefore considered on the wane. It proceeds in a great measure from the almost constant fogs which prevail in Lima, and from an idea, not without foundation, that it prevents stomach attacks. The habits of the people have generally a tropical turn in every thing. Dances are not so common as in Chile, nor any of these games so prevalent in that country. Cards, chess, and music, which require little exertion, and sitting tranquilly at the bull ring, are the more usual enjoyments of Lima. The people of rank rise early, and their slaves bring them directly a light breakfast of chocolate and fruit; sometimes, it must be confessed, stewed meat is added. Dinner takes place about two o'clock, and consists of excellent fish, meat dressed in a variety of ways, and highly seasoned. The wine is either Peruvian or European. The siesta follows until six o'clock, and about nine o'clock a cup of chocolate forms their supper. At evening parties, which are of constant occurrence, punch is the more usual beverage. Before the earthquake in 1687, when this city suffered so dreadfully, the harvests of wheat and barley were sufficient to supply the country around without importation; but by this convulsion of nature the soil was so vitiated, that the wheat rotted soon after it was sown, occasioned it is supposed by the vast clouds of sulphureous particles exhaled, and the prodigious quantities of nitrous effluvia diffused through it. The land continued forty years in this state of sterility, when the husbandmen began to perceive an alteration, and upon trial, wheat was now found to thrive as before. The olive plantations appear like forests; the height, magnitude, and fulness of their leaves exceed those of Spain. The grapes are of various kinds, and among them one, called the Italian, is very delicious.

The bread at Lima is said to be the best in all this part of America. Mutton is the most common and palatable meat, though the beef also is good. Here is also plenty of poultry, partridges, turtle-doves, &c.; and pork is in great abundance. Of fish there is a great variety daily brought from the neighbouring parts. Most of the dried fruits are brought from Chili. Among the most noted of the manufactures to be met with here are articles of silver filagree of exquisite workmanship, which are chiefly made in Huamanga, consisting of animals, and devices for burning pastilles, holding fruit, &c. The workmen are of a mixed race, like the greater proportion of those exercising handicrafts in the city.

Another noted fabric of this place and neighbourhood is that of a species of grass, bleached and plaited into various articles, such as pouches and cigar cases, of extreme regularity and fineness. Hats of the same material, but coarser, are exported in large quantities. The raw material grows on the coast to the northward in profusion. The pastilles of Lima are also very celebrated and much used to drive away insects. But, whether the latter have become accustomed to them I know not, says the traveller we have already quoted: these insects may be considered the only plagues of this part of the world. The mosquito is not so troublesome as in other warm countries, but fleas of more than usual size and activity try the tempers, not only of foreigners but of the natives, who make war upon them in every way. I never saw such numbers of these disgusting and annoying insects in any other place; they swarmed like flies on the sea beach. The other entomological production incident to beds (to use the expression of the worthy doctors Hoppe and Hornschuch in their erudite travels), it must be confessed is far too numerous. Dr. Unanue asserted that insects were not more common in Lima than in the large cities of Europe, and that in Paris alone there were upwards of seventy species of *cimex*; but after making every allowance for climate and want of rain, I was obliged to give him credit for a large stock of the 'amor patriæ.' The earthquakes to which this country is so subject, have more than once involved Lima in almost total ruin. The first concussion, after the establishment of the Spaniards in these parts, happened in 1582, a few years after its foundation and was chiefly felt at Arequipa. One on the 9th of July, 1586, is solemnly commemorated. In 1609 was another. On the 27th of November 1630 such prodigious damage was done that it is noted by a festival annually. In 1655, on the 3d of November, the inhabitants fled into the country, and remained there several days, to avoid the threatening danger. On the 17th of June 1678 another earthquake happened, by which several houses were destroyed, and the churches much damaged: but one of the most dreadful of which we have any account was that of the 20th of October 1687. During this concussion the sea retired considerably from its bounds, and, returning in immense waves, totally overwhelmed Callao, and the neighbouring parts. Others happened on the 29th of September 1697;

on the 14th of July 1699; the 6th of February 1716; on the 8th of January 1725; and on the 2d of December 1732; in the years 1690, 1734, and 1745. These, however, were less terrible than one on the 28th of October 1746. In little more than three minutes the greatest part, if not all the buildings, great and small, in the whole city, were destroyed on this occasion, burying under their ruins those inhabitants who had not made sufficient haste into the streets and squares. European goods in greatest request in Lima, and Peru, are silk, superfine cloth, lace, and fine linen. There is also a considerable demand for ordinary linen, and for all the inferior cloths and woollens, cutlery, and hardware. The inhabitants amount to about 70,000. See AMERICA, SOUTH. Lima is about two leagues from the sea-coast, and thirty from the Cordilleras.

LIMASSOL, or LIMISSO, a town of Cyprus, in the south of the island. Of the ancient city nothing but ruins remain, though it was a celebrated place, even under the government of the dukes. King Richard I., the conqueror of the last of these vassals of the empire, raised it in 1191, and it was never rebuilt. It was the ancient Amathus, or Amathonte; famous, as Pausanias tells us, for its temple of Venus and Adonis; and was the residence of the first nine kings of Cyprus. It was erected into an archbishopric in the time of the Christians, and has produced a number of personages celebrated for their learning and sanctity. Near it are copper mines, which the Turks have been forced to abandon.

Ovid takes notice of its metals in the *Metamorphoses*, lib. X. ver. 220 and 531: where he styles it 'fœcundam, gravidamque Amathunta metallis;' and where he relates the metamorphosis of its inhabitants into wild bulls, on account of their ferocious barbarity in sacrificing all strangers to Jupiter. (Fab. vi.) The place where Limassol stands had also formerly had the name of Nemosia, from the many woods which surrounded it. Richard I. king of England, having destroyed Amathonte, Guy de Lusignan in the twelfth century laid the foundations of a new city, which the Greeks called Neopoleos. The family of Lusignan, which continued to embellish and fortify it, built palaces, and Greek and Latin churches; and made it the seat of a bishop. When Cyprus was taken by the Turks, in July 1570, they plundered and burnt this city. The harbour is commodious, and, being sheltered from impetuous winds, affords a safe asylum to vessels overtaken by a storm. The best Cyprian wine is made from the vines on the hills of Limassol.

LIMAX, the slug, or naked snail, a genus of insects belonging to the order of *vermes mollusca*. The body is oblong, fitted for crawling, with a kind of muscular coat on the upper part; and the belly is plain. They have four tentacula, or horns, situated above the mouth, which they extend or retract at pleasure. This reptile is always destitute of shell; but besides that its skin is more clammy, and of a greater consistency than that of the snail, the black naked slug has a furrowed cloak, almost as thick and as hard as leather, under which it withdraws its head as within a shell.

The head is distinguished from the breast by a black line. In its head and back the snail-stone is found; which is a small pearly and sandy stone, of the nature of limestones: according to a popular opinion, it cures the tertian ague, if fastened to the patient's arm. These slugs move on slowly, leaving every where clammy and shining marks of their passage. They come together about the end of spring. They deposit their eggs in the earth. There are eight species, distinguished entirely by their color; as the black, the white, the reddish, the ash-colored slug, &c. The black slug is hermaphrodite. A black slug powdered over with snuff, salt, or sugar, falls into convulsions, casts forth all its foam, and dies.

LIMB, *n. s. & v. a.* } Sax. *lim*; Scott. *lim*,
LIMBED, *adj.* } *lem*; Swed. and Belg.
lem. A member; a jointed or articulated part of animals: to supply with limbs; and, strangely enough, to tear them off, or to dismember

A second Hector, for his grim aspect,
And large proportion of his strong knit limbs.

Shakspeare.

O! that I had her here, to tear her limb meal?

Id.

Now am I come each limb to survey,
If thy appearance answer loud report.

Milton's Agonistes.

As they please,
They limb themselves, and colour, shape, and size
Assume, as likes them best, condense, or rare.

Milton.

A steer of five years age, large limbed, and fed,
To Jove's high altars Agamemnon led.

Pope's Iliad.

Chill horror the dissolving limbs invades;
Smit by the blasting lightning of his eyes,
A bloated paleness beauty's bloom o'erspreads,
Fades every flowery field, and every verdure dies.

Beattie.

'Bring forth the horse!'—the horse was brought;
In truth he was a noble steed,
A Tartar of the Ukraine breed,
Who looked as though the speed of thought
Were in his limbs.

Byron.

LIMB, *n. s.* Fr. *limbe*; Lat. *limbus*. An edge; a border; a philosophical term.

By moving the prisms about, the colours again emerged out of the whiteness, the violet and the blue at its inward limb, and at its outward limb the red and yellow.

Newton.

LIMBECK, *n. s.* Corruption of ALEMBOIC, which see. A still.

Her cheeks, on which this streaming nectar fell,
Stilled through the limbeck of her diamond eyes.

Fairfax.

Fires of Spain, and the line,
Whose countries limbecks to our bodies be,
Canst thou for gain bear?

Donne.

The earth, by secret conveyances, lets in the sea,
and sends it back fresh, her bowels serving for a limbeck.

Hewel.

Call up, unbound,
In various shapes, old Proteus from the sea,
Drained through a limbeck to his naked form.

Milton.

He first surveyed the charge with careful eyes,
Yet judged, like vapours that from limbecks rise,
It would in richer showers descend again.

Dryden.

The warm limbeck draws
Salubrious waters from the noon: brood.

Philips.

LIMBER, *adj.* From limb. Flexible; easily bent or twisted.

You put me off with limber vows. *Shakspeare.*

At once came forth whatever creeps the ground,
Insect, or worm; those waved their limber fans
For wings; and smallest lineaments exact
In all the liveries decked of summer's pride.

Milton.

She durst never stand at the bay, having nothing
but her long soft limber ears to defend her.

More on Atheism.

The muscles were strong on both sides of the aspera arteria, but on the under side, opposite to that of the oesophagus, very limber. *Ray on Creation.*

I wonder how, among these jealousies of court and state, Edward Atheling could subsist, being the indubitate heir of the Saxon line: but he had tried, and found him a prince of limber virtues; so as though he might have some place in his caution, yet he reckoned him beneath his fear. *Wotton.*

LIM'BO, *n. s.* Ital. *limbo*; Lat. *limbus*. *Et* quod sit limbus inferorum. Du Cange. According to the Romish writers, a region bordering upon hell, in which there is neither pleasure nor pain. Popularly hell; and hence any place of restraint or misery.

Oh, what a sympathy of woe is this!

As far from help as limbo is from bliss.

Shakspeare.

All these up-whirled aloft

Fly o'er the backside of the world far off,
Into a limbo large, and broad, since called
The paradise of fools. *Milton's Paradise Lost.*

For he no sooner was at large,
But Trulla straight brought on the charge;
And in the self-same limbo put
The knight and squire, where he was shunt.

Hudibras.

Friar, thou art come off thyself, but poor I am left in limbo. *Dryden's Spanish Fryar.*

LIMBORCH (Philip), a learned writer among the Remonstrants, born at Amsterdam in 1633. After having made great proficiency in his studies, he was, in 1655, licensed to preach, which he did first at Haerlem. He was chosen minister of Goudja, whence he was called to Amsterdam, and appointed professor of divinity, in which office he acquired great reputation. He had great talents, and a tenacious memory; and corresponded with the most eminent men of his age. His letters to Mr. Locke are printed with those of that celebrated author. He preserved his vigor of body and mind till he died, in 1712, aged seventy-nine. He wrote many works, the principal of which are, 1. *Amica collatio de veritate religionis Christianæ cum erudito Judæo*, in 12mo. 2. A complete body of Divinity, according to the opinions and doctrines of the Remonstrants. 3. A history of the Inquisition; translated into English by Dr. Samuel Chandler.

LIMBURG, a province of the Netherlands, bounded by Prussia, and the provinces of Liege, Antwerp, South and North Brabant. It has a territorial extent of 1500 square miles; and though a flat and marshy yet fruitful soil, which rears corn, flax, and tobacco in considerable quantities. Here is also very rich pasturage, and numerous herds of cattle. Its coal mines pro-

duce annually about 150,000 tons; and there are also mines of calamine and iron. The capital is Maestricht.

LIMBURG, a town of the Netherlands, in the province of Liege, and celebrated for its cheese, is seated on a steep rock near the Vesle, among shady woods: it consists chiefly of one broad street. It was taken by the French in 1675, and by the confederates under the duke of Marlborough in 1702. It contains about 30,000 inhabitants, and lies eighteen miles south-east of Liege.

LIMBUS, in the church of Rome, is used in two different senses: 1. The *limbus patrum*, or *limbus of the patriarchs*, is said to be the place where the patriarchs waited for the redemption of mankind: in this place they suppose our Saviour's soul continued from the time of his death to his resurrection. 2. The *limbus of infants dying without baptism* is a place supposed to be distinct both from heaven and hell; since, say the Catholics, children dying innocent of any actual sin do not deserve hell; and, by reason of their original sin, cannot be admitted into heaven.

LIME, *n. s.* Sax. *lind*; Lat. *tilia*. The linden tree: also Fr. *lime*; Span. *lima*; a species of lemon.

For her the *limes* their pleasing shades deny,
For her the lilies hang their heads and die.

Pope.

Bear me, Pomona! to thy citron groves!
To where the lemon and the piercing *lime*,
With the deep orange glowing through the green,
Their lighter glories blend.

Thomson's Summer.

LIME, *n. s. & v. a.* Sax. *lime*; Goth. *lim*;
LIME-KILN, *n. s.* Swed. *lijm*; Lat. *limus*,
LIMESTONE, slime. A viscous vege-
LIME-WATER, table substance with
LIMOUS, *adj.* which twigs were smear-
LIMY, ed formerly to catch
birds; a calx of stone, of which mortar is made:
to lime, to smear or spread with lime; to en-
tangle; to entrap. The other words are explained
in the extracts.

And the people shall be as the burnings of *lime*.
Isaiah xxxiii. 12.

But for all this, whan that he seeth his time,
He held his pees, no othir bote him gained,
For love began his fethers so to *lime*,
That wel unneeth unto his folke he fained
That other besy nedis his distrained.

Chaucer. *Troilus and Creseide.*

Laws are not made like *lime*-twigs or nets, to catch
at every thing that toucheth them, but rather like
sea-marks, to guide from shipwreck the ignorant pas-
senger.

Sir P. Sidney.

Striving more, the more in laces strong
Himself he tied, and wrapt his wings twain
In *limy* snares, the subtil loops among.

Spenser.

You must lay *lime*, to tangle her desires,
By wailful sonnets, whose composed rhimes
Should be full fraught with serviceable vows.

Shakspeare.

The bird that hath been *limed* in a bush,
With trembling wings misdoubteth every bush
And I, the hapless male to one sweet bird,
Have now the fatal object in my eye,
Where my poor young was *limed*, was caught, and
killed.

Id.

I will not ruinate my father's house,
Who gave his blood to *lime* the stones together,
And set up Lancaster.

Id. Henry VI.

The counter gate is as hateful to me, as the reek
of a *lime-kiln*.

Id. Merry Wives of Windsor.

They were now, like sand without *lime*, ill bound
together, especially as many as were English, who
were at a gaze, looking strange one upon another,
not knowing who was faithful to their side.

Bacon

Jollier of this state
Than are new-beneficed ministers, he throws,

Like nets or *lime* twigs, whereso'er he goes,

His title of barrister on every wench.
That country became a gained ground by the muddy and *limous* matter brought down by the Nilus,
which settled by degrees unto a firm land.

Donne.

Encouragement that abatement of interest gave to
landlords and tenants, to improve by draining, mar-
ling, and *liming*.

Child.

Then toils for beasts, and *lime* for birds were found,
And deep-mouthed dogs did forest walks surround.

Dryden.

A thrush was taken with a bush of *lime* twigs.

L'Estrange.

All sorts of pease love *limed* or marled land.

Mortimer.

Fire stone and *lime* stone, if broke small and laid
on cold lands, must be of advantage.

Id.

Lime is commonly made of chalk, or of any sort of
stone that is not sandy, or very cold.

Id.

A human skull covered with the skin, having been
buried in some *limy* soil, was tanned, or turned into
a kind of leather.

Grew's Museum.

They were found in a *lime-kiln*, and having passed
the fire, each is a little vitrified.

Woodward.

They esteemed this natural melancholick acidity
to be the *limous* or *slimy* feculent part of the blood.

Floyer.

Or court a wife, spread out his wily parts,

Like nets or *lime* twigs, for rich widows' hearts.

Pope.

As when a lofty pile is raised,

We never hear the workmen praised,

Who bring the *lime*, or place the stones,

But all admire Inigo Jones.

Swift.

Lime-water, made by pouring water upon quick
lime, with some other ingredients to take off its ill
flavour, is of great service internally in all cutaneous
eruptions, and diseases of the lungs.

Hill.

A knowledge of the first principles of chemistry
will teach him when to use *lime* hot from the kiln,
and when slacked.

Parkes's Chemistry.

What is called poor *lime* has this peculiar pro-
perty; but as this species of *limestone* rarely occurs,
it is often an expensive article.

Id.

LIME. See CHEMISTRY and CALCIUM. The
most important compounds of lime will be
found noticed under the different acids, com-
bustibles, &c. We shall therefore only now
notice its use as a cement. There are two modes
in which lime acts as a cement; in its combina-
tion with water, and in its combination with
carbonic acid.

When quicklime is rapidly made into a paste
with water it soon loses its softness, and the
water and the lime form together a solid coherent
mass, which consists of one part of water to three
parts of lime. When hydrate of lime, whilst it
is consolidating, is mixed with red oxide of iron,
alumina, or silica, the mixture becomes harder
and more coherent than when lime alone is
used; and it appears that this is owing to a

certain degree of chemical attraction between hydrate of lime and these bodies; and they render it less liable to decompose by the action of the carbonic acid in the air, and less soluble in water.

The basis of all cements that are used for works which are to be covered with water must be formed from hydrate of lime: and the lime made from impure lime-stones answers this purpose very well. Puzzolana is composed principally of silica, alumina, and oxide of iron; and it is used mixed with lime to form cements intended to be employed under water. Mr. Smeaton, in the construction of the Eddystone light-house, used a cement composed of equal parts by weight of slaked lime and puzzolana. Puzzolana is a decomposed lava. Tarras, which was formerly imported in considerable quantities from Holland, is a mere decomposed basalt; two parts of slaked lime and one part of tarras form the principal part of the mortar used in the great dykes of Holland. Substances which will answer all the ends of puzzolana and tarras are abundant in the British Islands. An excellent red tarras may be procured in any quantities from the Giant's Causeway, in the north of Ireland; and decomposing basalt is abundant many parts of Scotland, and in the northern districts of England in which coal is found.

Parker's cement, and cements of the same kind made at the alum works of lord Dundas and lord Mulgrave, are mixtures of calcined ferruginous, siliceous, and aluminous matter, with hydrate of lime. See CEMENT.

The cements which act by combining with carbonic acid, or the common mortars, are made by mixing together slaked lime and sand. These mortars at first solidify as hydrates, and are slowly converted into carbonate of lime by the action of the carbonic acid of the air. Mr. Tennant found that a mortar of this kind, in three years and a quarter, had regained sixty-three per cent. of the quantity of carbonic acid gas, which constitutes the definite proportion in carbonate of lime. The rubbish of mortar from houses owes its power to benefit lands principally to the carbonate of lime it contains, and the sand in it; and its state of cohesion renders it particularly fitted to improve clayey soils. The hardness of the mortar, in very old buildings, depends upon the perfect conversion of all its parts into carbonate of lime. The purest lime-stones are the best adapted for making this kind of mortar: the magnesian limestones make excellent water cements, but act with too little energy upon carbonic acid gas to make good common mortar.

The Romans, according to Pliny, made their best mortar a year before it was used; so that it was partially combined with carbonic acid gas before it was employed.

In burning lime there are some particular precautions required for the different kinds of limestones. In general, one bushel of coal is sufficient to make four or five bushels of lime. The magnesian limestone requires less fuel than the common limestone. In all cases in which a limestone containing much aluminous or siliceous earth is burnt, great care should be taken to

prevent the fire from becoming too intense; for such lime easily vitrifies, in consequence of the affinity of lime for silica and alumina. And, as in some places there are no other limestones than such as contain other earths, it is important to attend to this circumstance. A moderately good lime may be made at a low red heat; but it will melt into a glass at a white heat. In limekilns, for burning such lime, there should be always a damper.

In general, when limestones are not magnesian, their purity will be indicated by their loss of weight in burning; the more they lose, the larger is the quantity of calcareous matter they contain. The magnesian limestones contain more carbonic acid than the common limestones; and all of them lose more than half their weight by calcination. See CHEMISTRY.

LIME, CHLORIDE OF, the more scientific and proper name of the bleaching powder of Mr. Tennant, commonly called oxymuriate of lime, see CHEMISTRY and CHLORINE. The following account of its manufacture and the methods of ascertaining its purity, from a paper communicated to the Journal of Science and the Arts by Dr. Ure in 1823, may not be unacceptable to some of our readers. 'A great variety of apparatus,' says that writer, 'has been at different times contrived to assist the combination of chlorine with slaked lime, for the purposes of commerce. One of the most ingenious forms was that of a cylinder, with narrow wooden shelves within, and suspended on a hollow axis, by which the chlorine was admitted, and round which the barrel was made to revolve. By this means the lime-dust being exposed on the most extensive surface, was speedily impregnated with the gas to the requisite degree. But this is a costly refinement, inadmissible on the largest scale of British manufacture. The simplest and best construction for exposing the lime-powder to chlorine, is a large chamber of siliceous sandstone, eight or nine feet, having the joints of the masonry secured with a cement composed of pitch, rosin, and dry gypsum, in equal parts. A door is fitted into it at one end, which can be made air-tight by stripes of cloth and clay lute. A window in each side enables the operator to judge how the impregnation goes on by the color of the air, and also gives light for making the arrangements within at the commencement of the process. If a large valve be made in the roof, which together with the door may be opened by cords passing over a pulley, it will let off the vapors and supersede entirely the necessity of the workmen approaching the deleterious gas, when the apartment is to be opened. A great number of wooden shelves, eight or ten feet long, two feet broad, and one inch deep, are provided to receive the sifted slack lime, containing generally about two parts of lime to three of water. These shelves are piled one over another in the chamber, to the height of five or six feet, cross-bars below each keeping them about an inch asunder, that the gas may have free room to circulate over the surface of the calcareous hydrate.

The alembics for generating the chlorine, which are usually nearly spherical, are in some cases made entirely of lead; in others, of two he-

mispheres joined together in the middle, the upper hemisphere being lead, the under one cast iron. The first kind of alembic is enclosed for two-thirds from its bottom in a leaden or iron case, an interval of two inches left between the two to receive steam from an adjoining boiler. Those whose lower part consists of cast iron have their bottom directly exposed to a very gentle fire; round the outer edge of the iron hemisphere a groove is cast, into which the under edge of the leaden hemisphere fits, the joint being rendered air-tight by Roman or patent cement. In this leaden dome there are four apertures. The first is about ten or twelve inches square, shut with an air-tight leaden valve, and is destined for the admission of a workman to rectify any derangement in the apparatus, or to detach hard concretions of salt from the bottom. The second aperture is in the centre of the top, and is secured by water lute. Here a tube of lead is fixed, which descends nearly to the bottom, and down which the vertical axis passes, to whose lower end the cross bars of iron, sheathed with lead, are attached, by whose revolution the materials receive the proper agitation for mixing the dense manganese with the sulphuric acid and salt. The motion is communicated either by the hand of a workman applied from time to time to a winch at top, or it is given by connecting the axis with wheel work, impelled by a stream of water, or a steam-engine. The third opening admits the syphon-formed funnel, through which the sulphuric acid is introduced and the fourth is the orifice of the eduction pipe.

Manufacturers differ much about the proportion of their materials for generating the chlorine. In general 10 cwt. of salt (muriate of soda), are mixed with 13 cwt. of manganese on which, after its introduction into the alembic, from 16 to 18 cwt. of sulphuric acid diluted to the specific gravity of about 1.65, are poured. But indeed this dilution is seldom actually made, for the manufacturer of bleaching powder almost always prepares his own sulphuric acid for the purpose, and therefore carries its concentration no higher in the leaden boilers than the density of 1.65, which indicates one-fourth of its weight to be water. The fourth aperture admits the eduction pipe. This pipe is afterwards conveyed into a leaden chest, or cylinder, in which all the other deduction pipes also terminate. In this general diversorium the chlorine is washed from adhering muriatic acid, by passing through a little water, in which each tube is immersed, and from this the gas is led off by a pretty large leaden tube, into the combination room. It usually enters in the top of the ceiling, whence it diffuses its heavy gas equally around. Four days are required, at the ordinary rate of working, to make good marketable bleaching powder. A more rapid formation would produce muriate of lime, at the expense of the bleaching quality. But skilful manufacturers use here an alternating process. They pile up first of all the wooden trays only in alternate shelves in each column. At the end of two days the distillation is intermitted, and the chamber is laid open. After two hours the workman enters to introduce the alternate trays covered with fresh hydrate of lime, and at the same time takes up thoroughly the

half-formed chloride in the others. The door is then secured, and the chamber, after being filled for two days more with chlorine, is again opened, to allow the first set of trays to be removed, and to be replaced by others containing fresh as before. Thus the process is conducted in regular alternation; and very superior bleaching powder is manufactured, and thus the chlorine may be suffered to enter in a pretty uniform stream. But for this judicious plan, as the hydrate advances in impregnation, its faculty of absorption becoming diminished, it would be requisite to diminish proportionately the evolution of chlorine, or to allow the excess to escape, to the great loss of the proprietor. The manufacturer generally reckons on obtaining from one ton of rock-salt, employed as above, a ton and a half of good bleaching powder. But the following analysis of the operation will show, that he ought to obtain two tons.

Science has done only half her duty, when she describes the best apparatus and manipulations of a process. The maximum produce should be also demonstrated, in order to show the manufacturer the perfection which he should strive to reach with the minimum expense of time, labor, and materials. 'For this end,' says Dr. Ure, 'I instituted the following research:— I first examined fresh commercial specimens of bleaching powder; 100 grains of these afforded from 20 to 28 grains of chlorine. This is the widest range of result, and it is undoubtedly considerable; the first being to the second, as 100 to 71. The first yielded by saturation with muriatic acid, 82 grains of chloride of calcium, equivalent to about 41 of lime; it contained besides 26 per cent. of water, and a very little common muriate ready formed. On heating such powder in a glass apparatus, it yielded at first a little chlorine, and then oxygen tolerably pure. The bulk of chlorine did not exceed one-tenth of the whole gaseous product.

'Sulphate of indigo, largely diluted with water, has been long used for estimating the bleaching powder of chloride of lime; and it affords, no doubt, a good comparative test, though from the variability of indigo it can form no absolute standard. Thus three parts of indigo, from the East Indies, have been found to saturate as much bleaching powder as four parts of good Spanish indigo.'

M. Welter's method is the following:—He prepared a solution of indigo in sulphuric acid, which he diluted, so that the indigo formed $\frac{1}{1000}$ of the whole. He satisfied himself by experiments, that 14 litres (85.4 cubic inches, or 3.7 wine gallons English) of chlorine, which weigh $651\frac{1}{2}$ English grains, destroyed the color of 164 litres of the above blue solution. He properly observes, that chlorine discolors more or less of the tincture, according to the manner of proceeding; that is, according as we pour the tincture on the aqueous chlorine, and as we operate at different times, with considerable intervals; if the aqueous chlorine or chloride solution be concentrated, we have the minimum of discoloration; if it be very weak, the maximum. He says, that solution of indigo, containing about $\frac{1}{155}$ part, will give constant results to nearly $\frac{1}{10}$ and to greater nicety still, if we dilute the chlo-

rine solution, so that it snall amount to nearly one-half the volume of the tincture which it can discolor ; if we use the precaution to keep the solution of chlorine and the tincture in two separate vessels ; and, finally, to pour both together into a third vessel. We should, at the same time, make a trial on another sample of chlorine whose strength is known, in order to judge accurately of the hue. On the whole, he considers that fourteen measures of gaseous chlorine can discolor 164 measures of the above indigo solution, being a ratio of nearly one to twelve. The advantage of the very dilute tincture obviously consists in this, that the excess of water condenses the chlorine separated from combination by the sulphuric acid, and confines its whole efficacy to the liquor ; whereas, from concentrated solutions, much of it escapes into the atmosphere. ' Though,' says Dr. Ure, ' I have made very numerous experiments with the indigo test, yet I never could obtain such consistency of result as M. Welter describes : when the blue color begins to fade, a greenish hue appears, which graduates into brownish yellow by imperceptible shades. Hence an error of $\frac{1}{20}$ may readily be allowed, and even more, with ordinary opsers.

When a mixture of sulphuric acid, common salt, and black oxide of manganese, are the ingredients used, as by the manufacturer of bleaching powder, the absolute proportions are,

1 atom muriate of soda . . .	7.5	29.70	100.0
1 atom peroxide of manganese	5.5	21.78	73.3
2 atom oil of vitriol	1.846	12.25	48.52
			163.3
	25.25	100.00	

And the products ought to be

Chlorine disengaged . . .	1 atom	4.5	17.82
Sulphate of soda . . .	1	9.0	35.64
Protosulphate of manganese	1	9.5	37.62
Water . . .	2	2.25	8.92

25.25 100.00

These proportions are, however, very different from those employed by many, nay, I believe, by all manufactures ; and they ought to be so, on account of the impurity of their oxide of manganese.

From the preceding computation, it is evident that 1 ton of salt with 1 ton of the above native oxide of manganese properly treated, would yield 0.59 of a ton of chlorine, which would impregnate 1.41 tons of slacked lime, producing 2 tons of bleaching powder, stronger than the average of the commercial specimens ; or allowing for a little loss, which is unavoidable, would afford 2 tons of ordinary powder, with a little more slacked lime.

MM. Orfila, Lesecure, Gerdy, and Hennelle, having to examine the body of an individual who was supposed to have been poisoned, and who had been dead nearly a month, found the smell so insupportable that they were induced to try the application of the chloride of lime, as recommended by M. Labarraque. A solution of this substance was frequently sprinkled over the body, and produced quite a wonderful effect ; for scarcely had they made a few aspersions,

when the unpleasant odor was instantly destroyed and the operation was proceeded in with comparative ease.

Since the above experiment, a commission was appointed by the prefect of the police in Paris to clear out offensive drains, in the execution of which much benefit to the protection of the workmen's health was derived from chloride of lime. M. Gaultier de Claubry, after stating that carbonic acid expels the chlorine from the chloride of lime, proposes, as the best and most durable means of disinfecting the air in hospitals moistening the chloride of lime in the apartments of the sick. The carbonic acid of the air will slowly and steadily evolve the chlorine without annoying the patients. This indeed is the only admissible plan of fumigating with chlorine where the rooms cannot be emptied.

LIMERICK, a county in Ireland, in the province of Munster, having for its boundaries, on the north, the river Shannon ; on the north and east Tipperary county ; on the west the county of Kerry ; and Cork county on the south. Its area contains 622,975 acres, or 970 square miles, according to Dr. Beaufort ; and it extends fifty-one miles in length by thirty-two in breadth. It is divided into ten baronies, viz. Upper Connelloe, Lower Connelloe, Costla, Coshma, Small county, Clanwilliam, Coonah, Kerry, Pobble-Brien, Owneybeg, besides the liberties of Kilmallock, and the county of the city of Limerick ; these baronies again are subdivided into 125 parishes. The population of the county, exclusive of ' the county of the city,' is returned at 218,432 souls, and the number of habitations amounts to about 35,000. Its chief towns are Limerick, Kilmallock, Askeaton, Rathkeal, Adare, Newcastle, Hospital, Bruff, Kilfinan : the principal rivers are the Deel, the Maig, the Cogue (the two latter of which should be deepened and straightened), the Feale, the Gale, and the Blackwater, besides the noble river Shannon, which may rather be said to flow by the county. The surface of the county of Limerick is not much varied, being tolerably level, but sheltered on the south-east by a range of mountains called the Galteas, the highest of which is 2500 feet above the sea level. This chain of lofty and beautiful hills, which extends twenty-five miles in length, is composed of old red sandstone resting on gray-wacke, or transition-slate, the surface on each side being limestone of the latter formation. To the north of the Galteas lies the tract of land so celebrated for its fertility as to be known only by the appellation of the Golden Vein ; and on the banks of the Shannon lie the coreahs, or swamps, grass lands, rendered fertile by the annual deposits of rich manure derived from the inundations of the river Shannon ; so that this county is proverbial for its fertility and agricultural capabilities. The non-flaming coal-field of Tipperary extends to Loughill in Limerick, and slates of an excellent quality are distant from this county only by the breadth of the river Shannon, being raised at Killaloe. The remains of antiquity here are very numerous, upwards of fifty monastic ruins being still traceable ; of these Adare is particularly conspicuous for the romantic character of its beautiful though ruined abbey

built about the year 1315. The ancient families of Limerick were the Fitzgeralds, O'Briens, O'Quins, Purcells, and O'Scanlans. In 1709 the lord Southwell introduced a colony of industrious farmers from Germany, called Palatines, whose example was of important consequences to the native peasantry, and which continues its beneficial operation to the present time; these were planted at Bruff, and under their auspices, and by their energies, the linen manufacture was prosecuted with much success. There are at present about 3000 acres of land, in this county, annually employed in growing flax. Hemp was also a staple here, and was sold in the Cork and Limerick markets for the sail-cloth manufactory, but this trade has considerably decayed from various causes. The fisheries also, once a source of great emolument to the county, have totally degenerated, and require both protection and excitation. The Irish government have not been neglectful of the statistical improvements, which this district chiefly called for; a new line of road has been opened, at the public cost, from Cork to Limerick, under the advice and inspection of Mr. Griffith, and £45,000 is now granted for the execution of a rail-way from Limerick to Waterford, after the design of Mr. Nimms, between the cities of Dublin and Limerick.

LIMERICK, or Lough-Meath, a market-town, borough, and bishop's see of Ireland, seated on the Shannon, the metropolis of the above county as well as of the province of Munster. It is a county in itself, and is divided into the Irish and English town, the latter being built on an island of the Shannon called King's Island. It is ninety-four miles from Dublin; and was once the strongest fortress in the kingdom.

Its ancient name was Lunneach; and after the arrival of the Danes in Ireland it was a place of considerable trade. It was plundered by Mahon, brother of Brien Borom, after the battle of Sulchoid, in 970: Brien afterwards exacted from the Danes of this city 365 tons of wine as a tribute, which shows the extensive traffic carried on in that article. About A. D. 550 St. Munchin is said to have founded a bishopric and built a church here, which, however, was destroyed by the Danes on their taking the port in 853, and remained in ruins until their conversion in the tenth century. Donald O'Brien, about the time of the arrival of the English, founded and endowed the cathedral; and Donat O'Brien, bishop of Limerick, in the thirteenth century, contributed much to the opulence of the see. About the close of the twelfth century the bishopric of Innis-Cathay was united to that of Limerick.

Limerick was besieged by king William III. in 1690, but without being taken. On the 21st of September, 1691, it was invested by the English and Dutch, and surrendered on the 13th of October, after losing many men; but the garrison had very honorable terms, forming what have been called in history the articles of Limerick. At that period, it was reckoned the second city in Ireland, but has since lost its rank, in the rapid growth of Cork. Limerick is three miles in circumference; has markets on Wednesday and Saturday, and fairs on Easter Tuesday, 1st of July, 4th of August, and 12th of December.

Latterly a new quarter of the town has been erected by lord Pery between the Irish and English towns.

This city is governed by a mayor, sheriffs, recorder, aldermen, and burgesses. It had once the privilege of coinage; and different parliaments have been held in it. It was formerly walled, and in 1760 there were seventeen of the gates standing. Since its fortifications have been dismantled, however, a number of handsome streets and convenient quays have added to its respectability. Linen, woollen, and paper manufactures are carried on here to great extent, and the export of provisions is considerable. Besides the ancient cathedral and churches it has a modern episcopal palace at the west end of the city; Methodist, Presbyterian, and Quaker places of worship; and eight chapels for the Catholics. There is also an extensive barrack; and it has a military governor, constable, and town major. A charter was granted to it by king John, and confirmed in succeeding reigns. Limerick obtained the privilege of having mayors ten years before that right was allowed to the citizens of London. Its first provost was John Stafford, in 1195 and 1197; and, during the provostship of Henry Troy, a charter was granted by Richard I. whereby the citizens were allowed to choose mayors and bailiffs, Adam Servant, in 1198 being the first mayor. It continued to be thus governed, until the office of bailiff was changed to that of sheriff, in 1609. Limerick is fifty miles north of Cork and ninety-four south-west of Dublin. The country around is fertile and pleasant.

LIMESTONE, in mineralogy, a species of minerals, divided by professor Jameson into twelve sub-species.

1. *Foliated limestone*.—Color white, of various shades; sometimes it is spotted. Massive, and in distinct angulo-granular concretions. Lustre glistening, between pearly and vitreous. Fracture foliated. Translucent. Hard as calcareous spar. Brittle. Specific gravity, Carrara marble 2.717. It generally phosphoresces when pounded, or when thrown on glowing coals. Infusible. Effervesces with acids. It is a pure carbonate of lime. It occurs in beds in granite, gneiss, &c., and rarely in secondary rocks. It is found in all the great ranges of primitive rocks in Europe. Parian marble, Pentelic marble, the Marmo Greco, the white marble of Luni, of Carrara, and of Mount Hymettus, the translucent white marble of statuaries, and flexible white marble, are the chief of the white marbles which the ancients used for sculpture and architecture. The red antique marble, Rosso antico of the Italians, and Egyptian of the ancients; the Verdo antico, an indeterminate mixture of white marble and green serpentine; yellow antique marble; the antique Cipolin marble, marked with green-colored zones, caused by talc or chlorite; and African breccia marble, are the principal colored marbles of the ancients. The Scottish marbles are the red and white Tires, the former of which contains hornblende, sabbite, mica, and green earth; the Iona marble, harder than most others, consisting of limestone and tremolite, or occasionally a dolomite; the Skye marble; the Assynt in Sutherland, intro-

duced into commerce by Mr. Joplin of Gateshead. It is white and gray of various shades. The Glentilt marble; the Balachulish; the Boyne; the Blairgowrie; and the Glenavon. Hitherto but few marbles of granular foliated limestone have been quarried in England. The Mona marble is not unlike Verde antico. The black marbles of Ireland, now so generally used by architects, are Lucullites. The Tureen, in the county of Waterford, is a fine variegated sort; and a gray marble, beautifully clouded with white, has been found near Kilcrump, in the same county. At Loughlougher, in Tipperary, a fine purple marble is found. The county of Kerry affords several variegated marbles. Of the continental marbles a good account is given by professor Jameson, *Mineralogy*, vol. ii. p. 502.

2. *Compact limestone*.—Common compact limestone has usually a gray color, with colored delineations. Massive, corroded, and in various extraneous shapes. Dull. Fracture fine splintery. Translucent on the edges. Softer than the preceding sub-species. Easily frangible. Streak grayish-white. Specific gravity 2·6 to 2·7. It effervesces with acids, and burns into quicklime. It is a carbonate of lime, with variable and generally minute proportions of silica, alumina, iron, magnesia, and manganese. It occurs principally in secondary formations, along with sandstone, gypsum, and coal. Many animal petrifications, and some vegetable, are found in it. It is rich in ores of lead and zinc; the English mines of the former metal being situated in limestone. When it is so hard as to take a polish, it is worked as a marble, under the name of shell, or lumacella marble. It abounds in the sandstone and coal formations, both in Scotland and England; and in Ireland it is a very abundant mineral in all the districts where clay-slate and red sandstone occur. The Florentine marble, or ruin marble, is a compact limestone. Its constituents are, lime 58, carbonic acid 28·5, water somewhat ammoniacal 11, magnesia 0·5, oxide of iron 0·25, carbon 0·25, and silica 1·25. Klaproth.

3. *CHALK*, which see.

4. *Agaric mineral*, or rock-milk. Color white. In crusts or tuberos pieces. Dull. Composed of fine dusty particles. Soils strongly. Feels meagre. Adheres slightly to the tongue. Light, almost supernatant. It dissolves in muriatic acid with effervescence, being a pure carbonate of lime. It is found on the north side of Oxford, between the Isis and the Cherwell, and near Clipping Norton; as also in the fissures of limestone caves on the Continent. It is formed by the attrition of water on limestone rocks.

5. *Limestone fibrous*. Color white of various shades. Massive and in distinct fibrous concretions. Lustre glistening and pearly; fragments splintery; feebly translucent; as hard as calcareous spar; easily frangible; specific gravity 2·7. Its constituents are, lime 50·8, carbonic acid 47·6. Stromeyer says it contains some per cents of gypsum. It occurs in thin layers in clay-slate at Aldstone-moor in Cumberland; in layers and veins in the middle district of Scotland, as in Fifeshire. It is sometimes cut into necklaces, &c.

6. *Tufaceous limestone*. Color gray. Massive, and in imitative shapes, enclosing leaves, bones, shells, &c. Dull Fracture fine grained, uneven. Opaque. Soft. Feels rough. Brittle. It is pure carbonate of lime. It occurs in beds, generally in the neighbourhood of rivers; near Starly-burn in Fifeshire, and other places. Used for lime.

7. Sub-species. Pisiform limestone, or peastone. Color yellowish-white. Massive, and in distinct concretions, which are round granular, composed of others which are very thin and concentric lamellar. In the centre there is a bubble of air, a grain of sand, or of some mineral matter. Dull. Fracture even. Opaque. Soft. Brittle. Specific gravity 2·532. It is carbonate of lime. It is found in great masses in the vicinity of Carlsbad in Bohemia.

8. Sub-species. Slate spar. Schieferspath. Color white of various shades. Massive, and in distinct curved lamellar concretions. Lustre glistening and pearly. Feebly translucent. Soft; between sectile and brittle. Feels rather greasy. Specific gravity 2·63. Its constituents are, carbonate of lime, with three per cent. of oxide of manganese. It occurs in primitive limestone, in metalliferous beds, and in veins. It is found in Glentilt; in Assynt; in Cornwall; and near Granard in Ireland.

9. *APHRITE*, which see.

10. *Lucullite*. Color grayish-black. Massive. Glimmering. Fracture fine grained, uneven. Opaque. Semihard. Streak, dark ash-gray. Brittle. Specific gravity 3. When two pieces are rubbed together a fetid urinous odor is exhaled, which is increased by breathing on them. It burns white, but forms a black-colored mass with sulphuric acid. Its constituents are, lime 53·38, carbonic acid 41·5, carbon 0·75, magnesia and oxide of manganese 0·12, oxide of iron 0·25, silica 1·13, sulphur 0·25, muriates and sulphates of potassa with water 2·62.—John. It is said to occur in beds in primitive and older secondary rocks. Hills of this mineral occur in the district of Assynt in Sutherland. Varieties of it are met with in Derbyshire, at Kilkenny, and in the counties of Cork and Galway. The consul Lucullus admired it so much as to give it his name. It is the Nero antico of the Italians. Two varieties of this are,

Prismatic lucullite. Colors black, gray, and brown. Massive, in balls, and in distinct concretions. External surface sometimes streaked. Internal lustre shining. Cleavage threefold. Translucent on the edges. Semi-hard. Streak gray colored. Brittle. When rubbed it emits a strong fetid urinous smell. Specific gravity 2·67. When its powder is boiled in water, it gives out a transient hepatic odor. The water becomes slightly alkaline. It dissolves with effervescence in muriatic acid, leaving a charcoaly residuum. Its constituents resemble those of the preceding. It occurs in balls, in brown dolomite, at Building Hill, near Sunderland. It was at one time called madreporie.

Foliated or sparry lucullite. Colors white, gray, and black. Massive disseminated and crystallised in acute six-sided pyramids. Internal lustre glimmering. Fragments rhomboidal. Translu-

cent. Semi-hard. Brittle. Emits on friction a urinous smell. Specific gravity 2.65. In other respects similar to the preceding. It is found in veins at Andreasburg in the Hartz.

11. *Marl*; of which there are two kinds, earthy and compact. Earthy marl has a gray color, consists of fine dusty particles, feebly cohering; dull; soils slightly; is light; effervesces with acids; and emits a urinous smell when first dug up. Its constituents are, carbonate of lime, with a little alumina, silica, and bitumen. It occurs in beds in the secondary limestone and gypsum formations in Thuringia and Mansfeld. Compact marl has a gray color; is massive, vesicular, or in flattened balls; contains petrifications; dull; fracture earthy, but in the great slaty; yields to the nail; opaque; streak grayish-white; brittle; feels meagre; specific gravity 2.4. It intumescs before the blow-pipe, and melts into a greenish-black slag. It effervesces with acids. Its constituents are, carbonate of lime 50, silica 12, alumina 32, iron and oxide of manganese 2.—Kirwan. It occurs in beds in the secondary flötz limestone. It is frequent in the coal formations of Scotland and England.

12. *Bituminous marl-slate*.—Color grayish-black. Massive and frequently with impressions of fishes and plants. Lustre glistening. Fracture slaty. Opaque. Shining streak. Soft. Sectile. Frangible. Specific gravity 2.66. It is said to be carbonate of lime, with albumen, iron, and bitumen. It occurs in flötz limestone. It frequently contains cupreous minerals, petrified fishes, and fossil remains of cryptogamous plants. It abounds in the Hartzgebirge.

LIMIT, *n. s. & v. a.* } Fr. *limité*, *limiter*;
 LIMITARY, *adj.* } Latin *limito*. Bound-
 LIMITATION, *n. s.* } dary; border; utmost
 LIMTOUR, *n. s.* } reach or extent; to
 confine or restrict within certain bounds: lim-
 itary is used by Milton for belonging to, or
 guarding, certain bounds: limitation is the act
 or state of restriction or confinement: limitour,
 a friar licensed to beg within certain limits.

The whole *limit* of the mountain round about
 shall be most holy. *Ezod. xliii. 12.*

They tempted God, and *limited* the Holy One of
 Israel. *Psalms.*

Ther walketh now the *limitour* himself
 In undermeles and in morweninges,
 And sayth his matines and his holy thingis,
 As he goeth in his *limitatioun*.

Chaucer. Cant. Tales.

Limitation of each creature, is both the perfection
 and the preservation thereof. *Hooker.*

Thanks I must you con, that you
 Are thieves profest: for there is boundless theft
 In *limited* professions.

Shakspeare. Timon of Athens.

Am I yourself,

But, as it were, in sort of *limitation*?

Shakspeare.

Covetousness and ambition know no *limits*.

Bp. Hall.

Then, when I am thy captive, talk of chains,
 Proud *limitary* cherub! *Milton's Paradise Lost.*

To kill the body is, as our Lord himself taught,
 the utmost *limit* of all human power and malice,
 the most and worst that man can do. *Barrow.*

We went, great emperor! by thy command,
 To view the utmost *limits* of the land:
 E'en to the place where no more world is found,
 But foaming billows beating on the ground.

Dryden.

I despair, how this *limitation* of Adam's empire
 to his line and posterity, will help us to one heir.
 This *limitation*, indeed, of our author, will save
 those the labour, who would look for him amongst
 the race of brutes; but will very little contribute to
 the discovery amongst men. *Locke.*

If a king come in by conquest, he is no longer a
limited monarch; if he afterwards consent to *limi-*
tations, he becomes immediately king de jure.

Swift.

How our hearts burnt within us at the scene,
 Whence this brave bound o'er *limits* fixed to man!
 His God sustains him in his final hour!
 His final hour brings glory to his God!
 Man's glory heaven vouchsafes to call her own.

Young.

With what *limitations* this universality is to be
 understood, who shall inform us? *Johnson.*

We are *limited* in our enquiry by the strict laws
 to which we have submitted at our setting out.

Burke on the Sublime.

Now to this view of the matter I have no other
 objection than this—that the British constitution is
 a *limited* monarchy; that a *limited* monarchy is, in
 the nature of things, a mixed government; but that
 such a House of commons as the radical reformer
 requires would, in effect, constitute a pure demo-
 cracy, which, it appears to me, would be inconsistent
 with any monarchy, and unsusceptible of any *limi-*
tation. *Canning.*

LIMM'ER, *n. s.* Fr. *limier*. A bloodhound.

There overtoke I a grete rout

Of huntirs and of foresters,

And many relaes and *limers*,

That hied them to the forest fast,

And I with hem.

Chaucer's Dream.

LIMN, *v. a.*

Fr. *enluminer*, of Lat. *lumino*.

LIMN'ER, *n. s.* } To adorn; paint; take a like-
 ness: the limner is the painter.

Mine eye doth his effigies witness,

Most truly *limned*, and living in your face.

Shakspeare.

Emblems *limned* in lively colours.

Peacham.

Like as some skillful artizan, some exquisite *limner*,
 or carver, when he hath made a master-piece of his
 art, he doth not hide it up in some dark corner, where
 it may not be seen.

Bp. Hall.

Poets are *limners* of another kind,

To copy out ideas in the mind;

Words are the paint by which their thoughts are
 shown,

And nature is their object to be drawn.

Granville.

How are the glories of the field spun, and by what
 pencil are they *limned* in their unaffected bravery?

Id.

LIMNING, the art of painting in water-
 colors, in contradistinction to painting which is
 done in oil colors. Limning is the most ancient
 kind of painting. Till John Van Eick found
 out the art of painting in oil, the painters all
 painted in water and in fresco. See EICK.
 When they used boards, they usually glued a fine
 linen cloth over them, to prevent their opening;
 then laid on a ground of white; and lastly mixed
 up their colors with water and size, or with
 water and yolks of eggs, well beaten with the
 branches of a fig-tree, the juice whereof thus

mixed with the eggs; and with this mixture they painted their pieces. In limning all colors are proper, except the white made of lime, which is only used in fresco. The azure and ultramarine must always be mixed with size or gum; but there are always applied two layers of hot size before the size-colors are laid on: the colors are all ground in water each by itself; and, as they are required in working, are diluted with size-water. When the piece is finished, go over it with the white of an egg well beaten; and with varnish if required.

LIMOGES AUGUSTORITUM, a large and ancient city of France, the chief place of the arrondissement of Limoges, in the department of the Upper Vienne; which formerly constituted part of the province of Limousin. It contains a royal court for the departments of Upper Vienne, La Corrige, and La Creuse, a tribunal of justice for petty causes, boards of trade and manufactures, a royal college, a university academy, lectures on anatomy and midwifery, an agricultural society, a society for arts and sciences, and a mint. It is a bishopric and a post town, with 25,000 inhabitants.

This place is situated in an amphitheatre on the top and side of a hill, at the foot of which flows the Vienne, watering a delightful valley, covered with meadows and bordered with picturesque uplands. It is for the most part badly built; the streets are narrow, crooked, and steep, but they are clean, and washed by the waters of a fountain, brought from a distance by means of an aqueduct. The higher part of the town is surrounded by long boulevards, agreeably planted, and has several spacious squares and fine walks. The air is fresh and pure.

Julius Cæsar speaks of Limoges, in his commentaries, as a place of considerable importance, inhabited by the Lemovices. In the fifth century it was invaded by the Visigoths; in 1360 it was ceded to England, and re-united to the French crown, nine years afterwards, in the reign of Charles V. It was the native place of D'Aguesseau, of marshal Jourdan, and of Vergniaud, an eloquent lawyer and member of the legislative assembly and the convention, who was beheaded at Paris on the 1st of October 1793, when he was only thirty-one years old. There are here extensive manufactories of porcelain and crucibles, cloth, kerseymeres, druggets, sheep-skins, flannel, glue, wax-candles, wooden shoes, and horse-shoe nails; some hydraulic machines for the spinning of cotton and wool, fine paper-mills, brass foundries, potteries, and delf factories. It is the great mart for Toulouse and the southern departments, and carries on a trade in corn, chestnuts, wines, brandy, liqueurs, iron, copper, and brass. The races here are resorted to by the people of thirty-two departments. The buildings most worthy of notice are, the public library, containing 11,000 volumes; the museum of natural history, mechanics, arts, and antiquities; the cathedral; the bishop's palace; the fountain of Aizoulène; and the public squares and promenades. Limoges is situated 291 miles south of Paris, fifty-seven south-east of Poitiers, and seventy-two east by north of Angoulême.

LIMOUSIN, or LIMOSIN, a considerable pro-

vince of the interior of France, forming the departments of the Upper Vienne and the Corrèze. It is divided into two parts, Upper and Lower Limousin. The former is hilly, and contains mines of copper, lead, tin, and iron, the Lower Limousin is fertile, and highly beautiful in its scenery. The whole extends seventy miles in length, and in breadth about sixty.

LIMOUX, a trading town of France, in the department of the Aude, situated on the river Aude. Its traffic is in the hardware manufactured, and in the white wine raised in the neighbourhood. Some woollens, leather, and soap, are also made here: fifteen miles south-west of Carcassonne. Population 5200.

LIMP, *adj.* Sax. *lempe*; Teut. *limp*; Ital. *limpio*. Limber; pliant; weak. Obsolete.

The chub eats waterish, and the flesh of him is not firm, *limp*, and tasteless. *Walton's Angler.*

LIMP, *v. n.* Sax. *lempan*. To halt; walk lamely.

An old poor man,
Who after me hath many a weary step
Limped in pure love. *Shakspeare.* *As You Like It*
Son of sixteen,

Pluck the lined crutch from thy old *limping* sire.
Shakspeare.

When Plutus, with his riches, is sent from Jupiter, he *limps* and goes slowly; but when he is sent by Pluto he runs, and is swift of foot. *Bacon.*

Limping death, lashed on by fate,
Comes up to shorten half our date. *Dryden.*

Can syllogism set things right?
No: majors soon with minors fight:
Or both in friendly concert joined,
The consequence *limps* false behind. *Prior.*

He with the mitred head, and cloven heel:—
Doomed the coarse edge of Hewbell's jest to feel;
To stand the playful buffet, and to hear
The frequent ink-stand whizzing past his ear;
While all the five directors laugh to see
The *limping* priest so deft at his new ministry.
Canning.

LIMPID, *adj.* Fr. *limpide*; Lat. *limpidus*.
Clear; pure; transparent.

The springs which were clear, fresh, and *limpid*, become thick and turbid, and impregnated with sulphur as long as the earthquake lasts. *Woodward.*

The brook that purls along
The vocal grove, now fretting o'er a rock,
Gently diffused into a *limpid* plain.
Thomson's Summer.

Thou foundest me, like the morning sun
That melts the fogs in *limpid* air;
The friendless bard, and rustic song,
Became alike thy fostering care. *Burns.*

By cautiously continuing to add the pure ammonia, this oxide will again be dissolved, and the whole become a *limpid* colourless solution.

Parke's Chemical Catechism.

LIN, *v. n.* Sax. *ablinnan*, *alinnan*. To yield; relinquish.

Unto his foe he came,
Resolved in mind all suddenly to win,
Or soon to lose before he once would *lin*.
Fæerie Queene.

LINACRE (Thomas), M.D., was born in Canterbury about 1460, and there educated under the learned William Selling; thence he removed to Oxford, and in 1484 was chosen fellow of All-Souls College. Selling being ap-

pointed ambassador from king Henry VII. to the pope, Linacre accompanied him to Rome, where he attained the highest perfection in Greek and Latin, and studied Aristotle and Galen. On his return to Oxford, he graduated, and was chosen professor of medicine. He was soon after called to court by Henry VII., to attend prince Arthur as his tutor and physician. He was afterwards appointed physician to the king, and, on his death, to Henry VIII. He founded two medical lectures at Oxford, and one at Cambridge; and immortalised his name by being the founder of the college of physicians in London. Observing the wretched state of physic, he applied to cardinal Wolsey, and obtained a patent, in 1518, incorporating the physicians of London, in order to prevent illiterate and ignorant medicesters from practising the art. Dr. Linacre was the first president, and held the office as long as he lived. Their meetings were held in his own house in Knight-riding Street, which house he bequeathed to the college. When he was about the age of fifty he began to study divinity; entered into orders; and was collated, in 1509, to the rectory of Mersham; installed prebendary of Wells; in 1518 prebendary of York; and in 1519 was admitted precentor of that cathedral, which he resigned for other preferments. He died of the stone in October 1524, aged sixty-four; and was buried in St. Paul's. Dr. Caius, or Kay, thirty-three years after his death, caused a monument to be erected to his memory, with a Latin inscription. He was a man of great natural talents, a skilful physician, a profound grammarian, and one of the best Greek and Latin scholars of his time. Erasmus in his epistles speaks highly of his translations from Galen. His works are, 1. *De Emendatâ Structurâ Latini Sermonis, libri sex*; London, printed by Pynson, 1524, 8vo. and by Stephens, 1527, 1532. 2. The rudiments of grammar, for the use of the princess Mary, by Pynson. Buchanan translated it into Latin; Paris, 1536. He likewise translated into very elegant Latin several of Galen's works, printed chiefly abroad at different periods. Also *Procli Diadochi sphaera*, from the Greek; Venet. 1499, 1500.

LINCOLN, the capital of the county of this name, extends, in a long street, from the foot of a hill, near the Witham, to the south. On the north side, without the walls, is a suburb, called Newport, supposed to have been the outwork of a Roman station. Camden states that this place was a strong hold of the Britons, anterior to the Roman colonisation; and that then it bore the name of 'Lindcoit, from the woods (for which some copies have, corruptly, Lincoit). By Ptolemy and Antoninus the name of the place is written Lindum; and, having the privilege of a colony, it was called Lindum Colonia. The form of the station was that of a parallelogram, divided into four equal parts by two streets, which crossed it at right angles. At the extremities of these were four gates, nearly facing the four cardinal points. The whole was encompassed by an embattled wall, which, on three sides, was flanked by a deep ditch, but on the south side the steepness of the hill rendered a foss unnecessary. The area thus enclosed is es-

timated to have contained thirty-eight acres. The remaining gate to the north, which is called Newport gate, is described by Stukeley as 'the noblest remnant of this sort in Britain, as far as I know;' and he expresses surprise that it had not 'been taken notice of' before his time. The great or central gateway has a semi-circular arch, sixteen feet in diameter, formed with twenty-six large stones, apparently without mortar. The height is twenty-two feet and a half, of which eleven are buried beneath the ground. Each side of the arch has seven courses of horizontal stones, called springers, some of which are from six to seven feet in length. On each side of the arch are two small lateral doorways or posterns. A mass of the old Roman wall is still to be seen eastward of this gate; and to the west is another large mass, not part of the city-wall, called the mint-wall, which was about sixteen feet high, and forty feet long, and had scaffold holes, and marks of arches. Mr. Gough supposed this to be part of a Roman granary. South of this station were other Roman works, which extended from the brow to the bottom of the hill. In 1793 three stone coffins were found at the south-west corner of the close, near the chequer gate. Beneath was a tessellated pavement, and under that a Roman hypocaust. A similar discovery was made in 1782. In 1790 was found, about three or four feet below the surface, a curious sepulchral monument, evidently of some Roman of high rank. Many fragments of antiquity were preserved by the Rev. Dr. Gordon, the precentor of the cathedral, who gives an account of several earthen and glass urns, which were discovered in the same field, some of which were of singular shape. He also describes a room, twenty feet by sixteen, which was discovered in a quarry. At what period the Saxons possessed themselves of this city does not appear: but early in the sixth century we find Arthur, king of Britain, obtaining great advantages over them here. At this period the old town was nearly destroyed, and, according to Leland, 'new Lincoln was made out of a piece of old Lincoln.' The Saxons fortified the southern part of the hill with ditches and ramparts, walled the town, and erected gates. At the time of the Norman conquest Lincoln was one of the richest and most populous cities in England. The Domesday Survey mentions its 1070 mansions, 900 burgesses, and twelve lagemen, 'having sac and soke.' On the accession of the Conqueror to the throne, he ordered a strong castle to be built on the ridge of the hill, on which this city was situated. The building was 644 yards in circumference, and occupied the space on which it is asserted that 166 houses had stood; seventy-four more were at the same time demolished without the limits, that the whole might be insulated. In the time of Henry I. a navigable canal was made or enlarged, from the river Witham at Lincoln, to the Trent near Torksey; probably the first canal of the kind ever made in England. It is at present called the Foss dyke. By this a communication was formed with the Trent, and down that by the Humber to the sea, and an unobstructed navigation secured to the then good part of Boston.

‘Lincoln was now stored,’ says a poet of that age, ‘with good things, and became the support of the neighbouring country.’ When, in 1140, the empress Maud came to England, to assert her title to the crown, she took up her residence at Lincoln, as a place of safety, and conveniently situated for communication with her friends. Stephen on this marched quickly hither, and besieged the city, and took it: but the empress had escaped. During the contest, Lincoln acquired great notoriety. This city and its castle were materially concerned in the contentions between king John and his barons. They continued in the occupation of the crown till the time of Edward I., when Henry de Lacy died seized of them, and they passed, with other parts of his inheritance, to the earl of Lincoln, and so became annexed to the duchy of Lancaster. John of Gaunt greatly improved the castle, and made it his summer residence. Parliaments were held at Lincoln in the reigns of Edward I. II. and III. In 1348 the weavers of Lincoln obtained a charter from Edward III., of what they considered and called their liberties. By this they were invested with the power of depriving any weaver not of their guild, of the privilege of working at his trade within twelve leagues of the city. This and other monopolies were abolished in 1351, by an act called the Statute of Cloths. In the year following the staple of wool was removed from Flanders to England; and Lincoln was one of the staple towns. It was also made a staple for leather, lead, and various other articles; and ranked the second of those towns for the quantity exported, as appears by the record of the sums collected for the king’s duties. At the commencement of the civil war, between Charles I. and his parliament, the king came to Lincoln, and convened the freeholders of the county.

The diocese of Lincoln early included so many counties, that it is described as being ready to sink under the weight of its own greatness; and though Henry II. took out of it the diocese of Ely, and Henry VIII. those of Peterborough and Oxford, it is still the largest in England, and except the two archbishoprics, and the principality bishoprics of Winchester, Durham, and Ely, no see has been so well endowed. Prior to the time of Elizabeth, there is no instance of a bishop of this see being translated to another, except Winchester. It is remarkable for the number of its episcopal palaces. In 1547 it had eight. In this county, Lincoln, Sleaford, and Nettleham; in Rutlandshire, Liddington; in Huntingdonshire, Buckden, now the usual residence of the bishops; in Bedfordshire, Woburn; in Buckinghamshire, Fingest; in Oxfordshire, Banbury Castle; two at Newark in Nottinghamshire; and Lincoln Place, Chancery Lane, London. All these, except that at Lincoln, with about thirty manors, were given up in the first year of Edward VI., by Holbech, the first married bishop; so that now only four manors remain of the ancient demesnes.

The cathedral is a magnificent structure, raised at a vast expense by the munificence of several prelates; and its western front attracts the attention of every traveller. On the see being trans-

lated from Dorchester, in 1088, St. Remigius de Fescamp, the first bishop, founded a cathedral church, which in four years was ready for consecration; and all the bishops of England were summoned to attend on the occasion. Remigius died two days before the solemnity. His successor, Robert Bloet, finished the building, and dedicated it to the Virgin Mary. Having been destroyed by fire, it was rebuilt by Alexander de Blois in 1124, who arched the new fabric with stone, and greatly increased the size of it. Bishop Hugh Burgundus, who died in 1200, enlarged it by what is called the New Work, and the chapter-house. Kings John of England and William of Scotland assisted to carry his body to the cathedral, where it was enshrined in silver, according to Stukeley; but, according to Sanderson, the shrine was of beaten gold. Bishop Gynewell added the chapel of St. Mary Magdalen. Bishop Fleming, a chapel on the north side, in which he was buried: on his monument is his figure in free-stone. Bishop Alnwick was also a considerable benefactor to the cathedral, and built the stately porch at the great south door. It at present consists of a nave, with its aisles; a transept at the west end; and two other transepts, one near the centre and the other towards the eastern end; and a choir and chancel, with their aisles, of corresponding height and width with the nave and aisles. The great transept has a nave towards the east: attached to the western side of this transept is a gallilee, or grand porch; and on the southern side of the eastern aisle are two oratories, or private chapels; while the northern side has one of nearly similar shape and character: Diverging from the northern side are the cloisters, which communicate with the chapter-house. The whole is surmounted with three lofty towers; one at the centre, and two at the western end, decorated with varied tracery, pillars, pilasters, &c. The dimensions of the whole structure are as follow. The height of the two western towers 180 feet. Previous to the year 1808 each of these was surmounted by a central spire of 101 feet high. The great tower in the centre of the church, from the top of the corner pinnacle to the ground, is 300 feet; its width fifty-three feet. Exterior length of the church, with its buttresses, 524 feet; interior length 482 feet; width of the western front 174 feet; exterior length of great transept 250 feet; interior 222; width 66; the less or eastern transept 170 feet in length, forty-four in width, including the side chapels; width of the cathedral eighty feet; height of the vaulting of the nave eighty feet. The chapter-house is a decagon, and measures, interior diameter, sixty feet six inches. The cloisters measure 118 feet on the north and south sides, and ninety-one on the eastern and western sides. The grand western front, wherein the greatest variety of styles prevails, is certainly the workmanship of three, if not more, distinct and distant eras. It consists of a large square-shaped façade; the whole of which is decorated with door-ways, windows, arcades, niches, &c., and has a pediment in the centre, and two octangular stair-case turrets at the extreme angles, surmounted by plain spire-shaped pinnacles. The

upper transept and the choir appear the next in point of date. These are in the sharp-pointed style; and their architecture is very irregular. The vaulting is generally simple; the ribs of a few groins only have a filleted moulding. A double row of arches or arcades, one placed before the other, is continued round the inside of the aisles, beneath the lower tier of windows. The windows are lofty and narrow, placed two or three together; the greater buttresses in front are ornamented in a singular manner with detached shafts, terminating in rich foliage. The great transept, the gallerie porch, and the vestry, are nearly of the same, but in a later style. The vestry is vaulted, the groining having strong ribs; and beneath it is a crypt with groins, converging into pointed arches. The nave and central tower were next rebuilt, probably begun by bishop Hugh de Welles, as the style of their architecture is that of the latter part of the reign of John, or the beginning of Henry III. The part extending from the smaller transept to the east end appears to have been built by bishops Gravesend, Sutton, and D'Alderby, about the commencement of the fourteenth century. The latter prelate built the upper story of the rood tower, and added a lofty wooden spire, which was blown down in a violent storm in the year 1547: the damages then sustained were not wholly repaired till 1775. Dugdale says that Henry VIII. took away from this church 2621 ounces of gold, and 4285 ounces of silver, besides precious stones of great value: at the Reformation, indeed, what the ravages of time had left, the zealots pulled down or defaced; so that at the close of the year 1548 there was scarcely a perfect tomb remaining. Among illustrious persons buried here, who had monuments erected to their memory, were Catharine Swinford, wife of John of Gaunt; Joan, countess of Westmoreland, their daughter; and Bartholomew, lord Burghersh, brother to the bishop of that name. On the north side of, and connected with the cathedral, are the cloisters, of which only three sides remain in the original state.

The chapter-house forms a decagon, the groined roof of which is supported by an umbilical pillar, consisting of a circular shaft, with ten small fluted columns attached to it; having a band in the centre, with foliated capitals. One of the ten sides forms the entrance: in the other sides are nine windows, having pointed arches with two lights each. Over the north side of the cloisters is the library, which contains a large collection of books, and some curious specimens of Roman antiquities. It was built by dean Honeywood. A magnificent work containing several finely engraved views of this cathedral, and a concise well written history of it, was published in 1819 by Mr. C. Wild.

Lincoln had formerly more than fifty churches. Eleven only, exclusive of the cathedral, now remain: scarcely any of which merit a particular description. The most remarkable are, St. Benedict's, St. Mary de Wigford's, and St. Peter's at Gowts: having lofty square Norman towers. St. Peter's is an ancient structure, and appears to have been the chapel of some religious house.

The Dissenters' chapels are, 1. A Presbyterian or Unitarian meeting, erected early in the last century. 2. The Particular Baptist meeting-house in Mint Lane, a very neat and recent erection. 3. The Catholic chapel in New Street a small, neat, brick building, erected in 1799, contains a good painting brought from the convent at Gravelines by the English nuns of that place when expelled at the Revolution. 4. The general Baptist meeting, behind St. Benedict's church, near the High-bridge: they have also now erected (1827) a small building for public worship, about a mile distant from the old one, or near Newport Gate at the northern extremity of the city. 5. The Wesleyan Methodists have a handsome chapel in St. Swithin's Lane, erected in 1816. 6. The Independents have two congregations, one meeting in Zion Chapel nearly adjoining the Catholic Chapel, and erected in 1802; and another meeting in a spacious brick edifice erected in the year 1820, towards the south end of the city. 7. The Society of Friends have also a small building in Newland, made use of for their quarterly meetings.

The number of parishes in the city of Lincoln is twelve, which, with the four townships within its jurisdiction, make sixteen. It has an extensive trade in corn and wool, of which great quantities are exported into Yorkshire and Lancashire, by vessels which obtain a back freightage of coals, &c. This city is a county of itself, having subject to it four townships in the vicinity, Bracebridge, Canwick, Branston, and Waddington; and in official acts it is denominated 'The city and county of the city of Lincoln. Its vicinial jurisdiction extends over twenty miles in circumference. In the history of the boroughs of Great Britain, it is said, 'This city had summons, with London and York, to send members to parliament, the forty-ninth of Henry III.' The right of election is considered to be in the freemen, and the number of voters is about 1300. The civil government is vested in a corporation, consisting of a mayor, twelve aldermen, two sheriffs, twenty-eight common-council-men, and four chamberlains; with a recorder, deputy recorder, steward of the courts of borough-mote, a town-clerk, four coroners, four sergeants of the key, or bailiffs, and other inferior officers. The city was incorporated so early as the seventh year of Edward II.; Henry Best being then the first mayor.

Of the castle, built by William I., little remains; but the few vestiges remaining exhibit the same original structure as that of York. The keep stood half without and half within the castle wall, which ascended up the slopes of the hill, and joined the great tower. It was nearly round, and covered the summit of a high artificial mount. The walls are above seven feet in thickness. In the north-east corner of the castle yard is a curious small building, appearing on the outside like a tower, called Cob's Hall; which Mr. King thinks was originally used as a chapel; it is now made use of as a place of execution for criminals by a drop machine. The mint-wall, mentioned by Mr. Gough, is still remaining, and forms part of the enclosure of a garden.

Checquer gate, at the west end of the cathedral, had two gate-houses; the western one has been taken down about thirty-five years; the remaining one to the east has three gateways, and two turrets between them. In Eastgate Street were two very ancient gateways, both of which are now removed. At the bottom of the town, near Brayford water, are remains of a fort, called Lucy Tower. An oblong building in Broadgate Street was appropriated to the gray friars, and still displays much of its ancient architecture: part of this edifice is now used as a free-school. On the south side of the hill is the bishop's palace, which, from being situated near the summit, Leland describes as 'hanging in declivity,' and was built by bishop Chesney, to whom the site was granted by Henry II. It was enlarged by succeeding prelates, and was scarcely at one time exceeded in grandeur by any of our ancient castles. Nearly opposite to the church of St. Peter, at Gowts, formerly stood the palace of the celebrated John of Gaunt. Opposite to this house is a large building, called John of Gaunt's stables. It was a large structure, probably conventional, in the Norman style; the north and west fronts remain. The Jew's house, on the side of the hill, is a curious object, and is ornamented in front, and in some of its mouldings similar to the west doors of the cathedral: in the centre of the front is a semicircular arched door-way, with a projecting pilaster. It is recorded to have been originally possessed by Belaset de Wallingford, a Jewess, who was hanged for clipping in the 18th of Edward I. Formerly here were two grammar schools, one in the close, the other in the city: they were united in 1583.

The principal modern buildings are, a good market house, with assembly rooms over, erected in 1736; the county hospital, a large brick edifice on the brow of the hill, erected in 1769, and accommodating yearly about 200 in-patients, and 170 out-patients on an average, at an expenditure of about £1300 per annum; Christ's Hospital, situated near the last mentioned, is a blue-coat school, which maintains, educates, and apprentices sixty poor boys; the county jail, built in 1788, within the area of the castle walls, a neat and strong building: nearly adjoining to which, within the same area, is a splendid county hall, erected in 1823-6, from a Gothic design by Smirke, at an expense of about £40,000, including decorations; the county assembly rooms are in the bail; a good theatre, below the hill, where a respectable company perform from the last week in September to about the second week in November. The city jail and sessions house is a new brick structure, finished in 1809, and situated by the side of the new road, at the foot of the hill: it is to be regretted that increasing crime proves the great want of room in this building, there being no means of classing or separating prisoners, nor any system of employment for them. The national school, a good brick building, near St. Peter's church, was erected about 1814, from funds collected from various parts of the county, but maintained by the annual subscriptions of the inhabitants. It receives about 300 boys and 200 girls: there is

no school on the British or Lancasterian system in Lincoln. The lunatic asylum, a handsome edifice with a stuccoed front, standing conspicuously on the hill, rather west of the city, the front is 260 feet long, and the area, with gardens, &c. occupies about three acres and a half of ground. It was erected in 1820, at an expense of upwards of £15,000.

The judges lodgings is an elegant mansion, erected at the expense of the county for the accommodation of the judges during the assizes; the magistrates of the district also hold their weekly meetings there: it is situated on the castle hill. The race stand, erected in 1826, on Carholm Hill, upon the west common (where the races are held), has cost the corporation, together with other improvements of the course, nearly £5000. The race course is now one of the finest in the kingdom, as well for the convenience of running, as for its beautiful panoramic effect upon the spectator; the annual meetings are said, however, to be but indifferently attended.

Though not the seat of any fixed manufacture, Lincoln possesses considerable advantages as an inland commercial station, communicating with the sea-port of Boston, thirty-two miles distant, by means of the Witham and with the Trent, Humber, and their tributaries; by the Fossdyke Canal from Lincoln to Torksey on the Trent, twelve miles distant. The river Witham, from Lincoln to Boston, is placed in the hands of a joint-stock company, and after many years of vast expenditure the works may now (1827) be considered as very nearly completed; the channel through the town is undergoing most important improvements in respect of width and depth and a new lock of great dimensions and excellent workmanship is in course of erection. The Fossdyke Canal, mentioned above, had in times past been suffered to fall into such disuse and decay as to have been assigned by the corporation of Lincoln to a Mr. Elliston of Thorne, in 1741, for a term of 999 years, at the trifling annual rent of £75; a comparatively insignificant outlay soon sufficed to render it again navigable, and the descendants of that gentleman now derive an annual income of between £10,000 and £12,000 from the tolls. In consequence, however, of the shallow and very inefficient state into which it was suffered to fall, dry seasons and floods alike rendering it almost impassable, a formidable opposition was organised about the year 1826, and a close scrutiny disclosed, in the opinion of eminent counsel, some very serious defects in the title of the lessees. The consequence of the agitation of the subject, and of the strong general feeling produced, has been the offer of such concessions on their part as regarded the necessary improvements required, provided that an act of parliament were procured expressly confirming their title; and it appears probable that an agreement of this kind will be effected.

The picturesque beauty of the city, viewed in almost any direction, together with the peculiar interest attached to many of its antiquities, induces a considerable annual resort of travellers to Lincoln. This is much aided by the greatly improved state of travelling in the district:

while, from the great facility with which passengers are steam-ferried over the Humber at Barton several times a day, Lincoln has become a favorite line of connexion from the south, with the east of Yorkshire, and the northern parts of England. There is, perhaps, no point between London and York which better repays a day's delay to a traveller. Lincoln is 131 miles north by west from London.

LINCOLN, a county in the south part of Maine, bounded north by Kennebeck county, east by Hancock county, south by the Atlantic, and west by Cumberland county: the chief towns, Wiscasset and Bath. 2. A county in the central part of Kentucky: chief town, Stanford. 3. A county on the south side of west Tennessee: chief town, Fayetteville. 4. A county in the west part of North Carolina: chief town Lincolntown. 5. A county north part of Georgia: chief towns, Lincolnton and Goshen.

LINCOLNSHIRE.—This county was called by the Saxons Lincollnscyre, and by the Norman invaders Nicholshire: but its etymology is extremely doubtful. Before the Roman invasion it belonged to a people whom the invaders called Coritani; but when the Romans took possession of it they made it a part of the division called Britannia Prima. By the Anglo-Saxons it was attached to the kingdom of Mercia, but was subsequently incorporated with that of Wessex. The Norman conqueror divided the whole county among his followers.

It is a large maritime county, the third with respect to size in the kingdom, bounded on the north by Yorkshire, from which it is separated by the Humber; on the east by the German Ocean, by that arm of the sea called the Wash; on the west by Nottinghamshire, Leicestershire, and Yorkshire; and on the south by Rutland, Northamptonshire, and Cambridgeshire. Its form is an irregular oblong. The late ingenious secretary to the board of agriculture gives the following estimate of the extent of the county in square miles, including the wolds, the heath north and south of Lincoln, the lowland tracts, and a remainder or miscellaneous tract of 1122 miles: in all 2888 square miles, or 1,848,320 acres. Its circumference is about 160 miles. The county consists of three divisions, viz. Lindsey, Kesteven, and Holland; thirty hundreds, five sokes, one city, thirty-one market towns, and 630 parishes. It is in the diocese of its own name, in the province of Canterbury, and is included in the midland circuit.

The climate of this county has long been considered cold, damp, and unhealthy; but these disadvantages have, for some years, been decreasing. The progress of drainage, and consequent cultivation, has gradually operated to render the air more mild and dry. It has, however, been observed, 'that immediately after the Witham drainage, the climate of the lowland district was rendered more agreeable than before; but, upon the drainage being completed, this effect disappeared, and it became much healthier than it had ever been. Still, however, the people are subject to agues occasionally. The north-east winds in the spring also are more sharp and prevalent than further inland.' There is also

another extraordinary circumstance in the north-west corner of the county: agues were formerly commonly known upon the Trent and Humber side; at present they are rare, and nothing has been effected on the Lincoln side of the Humber to which it can be attributed; but there was a coincidence of time with the draining of Wellin fen in Yorkshire; and this effect Mr. A. Young very justly conjectures to have been the cause of this remarkable change.

The face of the country presents many features of beautiful and picturesque scenery. The indefatigable author already quoted observes, that 'about Belton are fine views from the tower on Belmont. Lynn and the Norfolk Cliffs are visible, Nottingham Castle, the Vale of Belvoir, &c.; and on going by the Cliff-towns to Lincoln there are many fine views.' Various places are pointed out which cannot be here enumerated; but it may be sufficient to add, that 'the country round Grantham, in the vicinity of Louth, and that more particularly between Bourne and the former place, including the noble and very spacious woods of Grimsthorpe, abounds with that inequality of surface, that diversified interchange of hill and dale, wood and lawn, which constitute the picturesque and beautiful in natural scenery.' Of the soil of this county it has been observed, that it may be truly said to include all sorts of land that are to be found in the whole kingdom. The county naturally divides itself into the wolds, the heaths, and the fens. The last occupy the south-east parts of the county, and were formerly a swampy and unprofitable waste. The heaths, now enclosed, are north and south of Lincoln; and the wolds extend, somewhat diagonally, from Spilsby to very near the Humber; they are in length about forty miles, and their greatest breadth about ten. Both the heaths and the wolds are calcareous hills. The fens consist of lands which at some former period 'have been covered by the sea, and by human art have been recovered from it.' Some, however, have entertained the opinion that this fen-land was formerly a woody country; but concerning the grounds of this opinion we have here no room to enquire.

The principal rivers belonging to or passing through this county are the Trent, the Ancholme, the Witham, the Welland, and the Glen. The first of these has but very little connexion with Lincolnshire, more properly belonging to Staffordshire. It forms nearly the north-western boundary from North Clifford to Stockworth, and thus constitutes the eastern boundary of the Isle of Axholme. The Witham is the only river that strictly belongs to this county. It rises near South Witham, about ten miles north of Stamford, and pursues a line deviating but a little from the north by Grantham to Lincoln. It then turns eastward, and, joined by a stream from the wolds in the north, proceeds southward through the fens to Tattershall, where it is met by the Bain from Horncastle, and afterwards to Boston, soon falling into the great bay between Lincolnshire and Norfolk, at the mouth of the Fossdyke Wash. This river is defended against the incursions of the sea by a curiously constructed sluice, just before it reaches Boston.

It is the last of those numerous streams which contribute to form the great gulf between the two above-named counties; the Boston Deep being at its mouth nearly opposite to those of Lynn across the bay. Much of the present bed of the river, from Boston upwards, is a new artificial cut, made for the purpose of widening and straightening the channel, rendering it more commodious for navigation, and better adapted to receive and carry off the water of the contiguous fens. The coast north of Boston is not distinguished by any remarkable streams to the mouth of the Humber; the rivers which reach the sea at Wainfleet and Saltfleet being considerable, though the latter is navigable to Louth.

There are several valuable canals in this county, particularly an inland navigation from Boston by Brothertoft farm on the Witham, cut to Lincoln, and thence by Fossdyke Canal into the Trent; and thence again to all parts of Yorkshire, Lancashire, &c. There is also a canal from Witham to Boston, finished in 1796; and another from Grantham into the Trent, near Holm Pierpoint. The Ancholme cut is navigable from Bishop's Bridge to the Humber, at Ferraby Sluice. There is another from Horncastle to the river Witham, at Dogdyke, near Tattershall; and another from Louth to the Humber. There is another from Grantham to Nottingham, thirty-three miles, a very fine canal, completed in 1796, which cost £100,000. It passes near some fine beds of plaster; and lime is brought in large quantities from Criche in Derbyshire. Caistor Canal joins the river Ancholme in the parish of south Kelsey, and proceeds in a direct course nearly to the town of Caistor, being a distance of about nine miles. The Stainforth and Keadley Canal commences at the river Dun, about a mile to the west of Fishlake, and runs parallel with that river opposite to Thorn; from whence, in a line nearly due east, it passes Crowle and Keadley, whence it forms a junction with the river Trent. A branch from this canal, about a mile across Thorn Common to Haugman Hill, joins the river Dun. The total length of this canal is between fourteen and fifteen miles; and, running through a fen part of the country, has little elevation, and no lockage, except out of the rivers, and at the extremities. Lincolnshire being so completely a grazing county, there is but little else to notice with respect to its natural productions. Some of the cattle raised in this county are of the most surprising and almost incredible size. This county returns twelve members to parliament; viz. two for the shire, two for the city of Lincoln, two for Stamford, two for Boston, two for Grantham, and two for Grimsby. No other name need be mentioned to establish the biographical honor of this county than that of Sir ISAAC NEWTON, who was born at the manor-house of Woolsthorpe, in the village of Colterworth. The house is still standing.—The accomplished Anne Askew, who was born at Kelsey about 1520, and martyred at Smithfield 1546, going to heaven, as Fuller expresses it, 'in a chariot of fire.—The patriotic and loyal Cecil, lord Burleigh. Born at Bourn, 1521. Died 1598.—John Fox, the martyrolo-

gist, the celebrated author of the Acts and Monuments of the Church, in which he was greatly assisted by Dr. Grindal, afterwards archbishop of Canterbury. Born at Boston, 1517. Died 1587.—Mr. Alexander Kilham, founder of a new sect, or rather division, of Arminian Methodists, was born at Epworth.—Admiral Sir W. Monson. Born at South Carlton, 1569. Died 1642-3.—Francis Peck, an eminent antiquary, biographer, and critic. Born at Stamford, 1692. Died 1743.—The Patriotic Thomas Sutton, founder of the Charterhouse-School, London. Born at Knaith, 1532. Died 1611.—The two Wesleys, John and Charles, founders of the Arminian Methodists. They were born at Epworth. John, 1703. Died 1791. Charles, 1708. Died 1788.—The zealous and intrepid archbishop Whitgift. Born at Great Grimsby, 1530. Died February 29th, 1603.

There are here no manufactures of any great extent. Woollen and woollen yarn have been considered the staple trade of the county. Ships are built at Gainsborough; and 'a pretty fabric for brushes' is also manufactured there; also coarse hemp-sacking. There are also some factories for the spinning and weaving of flax and linen. Its chief trade, however, is in fat cattle.

LIN'DEN, *n. s.* Sax. *lind.* The lime-tree. See LIME.

Hard box, and *linden* of a softer grain. *Dryden.*

LINDEN TREE. See TILIA.

LINDSAY (Sir David); a celebrated Scottish poet, descended of an ancient family, and born in the reign of James IV., near Cupar in Fifeshire. He was educated at St. Andrew's; and, after making the tour of Europe, returned to Scotland in 1514. Soon after his arrival he was appointed gentleman of the bed-chamber to the king, and tutor to the prince, afterwards James V. He enjoyed several other honorable employments at court; but, in 1533, was deprived of them all, except that of lyon king at arms, which he held till his death. His disgrace was probably owing to his invectives against the clergy. After the decease of James V. Sir David became a favorite of the regent earl of Arran; but the abbot of Paisley did not suffer him to continue long in favor with the earl. He then retired to his paternal estate, and spent the remainder of his days in rural tranquillity. He died in 1553. His poetical talents, considering the age in which he wrote, were not contemptible; he treats the Romish clergy with great severity, and writes with humor: but he takes such liberties with words, lengthening or shortening them for measure or rhyme, that the Scotch have to this day a proverb, for an unusual expression, There is nae sic a word in a' Davie Lindsay. He wrote several tragedies and comedies, and first introduced dramatic poetry into Scotland. His poems are printed in one volume; and fragments of his plays in MS. are in Mr. William Carmichael's collection.

LINDSAY (John), a learned English clergyman, born in 1686, and educated at Oxford. He preached many years to a dissenting congregation in Aldersgate Street. He published, 1. The

Short History of the Regal Succession: 2. Remarks on Whiston's Scripture Politics, 8vo. London. 1720: 3. A Translation of Mason's Vindication of the Church of England; 1726: and some sermons. He died 21st of June 1768, aged eighty-two.

LINDSEY (Theophilus), a modern divine of the Unitarian persuasion, was born at Middlewich in Cheshire, in 1723. He received his early education at Middlewich and Leeds, and at the age of eighteen was admitted a scholar at St. John's Cambridge. Having taken orders, by the recommendation of the earl of Huntingdon, his sponsor, he was appointed domestic chaplain to the duke of Somerset, and in 1754 accompanied earl Percy to the continent. On his return he married the daughter of Mr. archdeacon Blackburne, and was presented to a living in Dorsetshire, which he exchanged in 1764 for that of Catterick, Yorkshire. In 1771 he zealously co-operated with his father-in-law, Dr. John Jebb, and others, to obtain relief in regard to subscription to the thirty-nine articles, and soon after, having rejected the doctrine of the Trinity, he resigned his livings, and came to London, where he opened the Unitarian Chapel in Essex Street, Strand; and conducted the service according to the plan of a liturgy, altered from that of the establishment by the celebrated Dr. Samuel Clarke. About the same time he published his Apology, of which several editions were printed. This was followed by A Sequel to the Apology, in which he replies to the various answers given to that work. He continued to conduct the services of his chapel in conjunction with Dr. Disney until 1793, when he resigned the pulpit, but continued actively to employ his pen. In 1802 he published his last work, entitled Considerations on the Divine

Government. He died November 3d, 1803, in his eightieth year. Besides the above works he wrote, On the Preface to St. John's Gospel; On Praying to Christ; An Historical View of the State of the Unitarian Doctrine and Worship, from the Reformation; and several other pieces. Two volumes of his sermons have also been published since his death, and a life of him by Mr. Belsham.

LINDUM, an ancient town of Britain, on or near the site of Lincoln, possessed by the Horesti; mentioned by Richard of Cirencester, with Alauna and Victoria, as the three principal cities of that people. If the conjectures of the moderns are just, that Alauna was Alnwick, Lindum Lincoln, and Victoria Perth, the dominions of the Horesti must have been very extensive.

LINDUS, in ancient geography, a town of Rhodes, situated on a hill on the west side of the island. It was built by Tlepolemus the son of Hercules, according to Diodorus Siculus; by Lindas, one of the Heliades, grandsons of Apollo, according to Strabo. It was the native place of Cleobulus, one of the seven wise men; and had a famous temple of Lindian Minerva, built by the daughters of Danaus. Cadmus enriched it with many splendid offerings. The citizens dedicated and hung up here the seventh of Pindar's Olympic odes, written in letters of gold. The ruins of this superb edifice are still to be seen on the top of a high hill which overlooks the sea. Relics of the walls, consisting of stones of an enormous size, still show it to have been built in the Egyptian style. The pillars and other ornaments have been carried off. On the most elevated peak of the rock are the ruins of a castle, which may have served as a fortress to the city. Its circumference is very extensive.
